Lures they fight for!

ABOVE is pictured a tandem catch—the result of an eight and one-half and a three pound Bass frantically fighting over a *Bass-Oreno* bait.

With a three-pounder on, imagine the thrill of having a second furious, animated mass of bronze rush—yes, *smash*—three times at your bait. Three times he misses in an attempt to dispute the three-pounder's right to the *Bass-Oreno*. Then, with a fourth fighting grab, he tries again and is hooked. A few moments of lively play and you slip your net under two bronze beauties—eleven and a half pounds of obstinate bass.

That's the thrill of bait-casting for game-fish. Thousands and thousands of red-blooded men and women are experiencing like thrills, through the use of the *Bass-Oreno* and other famous *South Bend Oreno Baits*—all tried and proven fish-getters. Over 100,000 anglers are using *South Bend Reels* for perfect casting. Ask for them at any sporting goods dealer's.

Send for "*Fishing—What Baits and When*"—our new book.

SLOW—SOUND HORN

(Continued from Page 19)

Yet it all is easily avoided—second nature, in fact, to mountaineers. The man who drives mountain roads merely turns off the ignition, and allows his car to stop in gear, at the extreme edge of the road if he is alone, or at any place he cares to if he is accompanied. Then the first action upon leaving the car is to place a good-sized chuck rock under a hind wheel. After which he can even release the brakes if he cares to—the rock does the braking for him. When he starts, if alone, he has come from a far side of the road, where the chuck rock will not bother the next motorist, because it is out of the line of travel. If he is accompanied his companion stands at the rear of the car and throws the chuck from the highway, and then catches up with the slow-moving machine and hops in. Very simple to the mountain driver. A bit inconvenient, perhaps, to the man accustomed to the cities or to the smooth white roads of the East—but there's exactly the point: Mountain roads are neither boulevards nor pretty gleaming turnpikes. They're something to travel on to get somewhere, and the sooner the prospective driver realizes it, the better.

In fact, there's very little tourist propaganda in this article—none of the glint of dancing lights atop the pine trees, the sparkle of the brooks where lurk the aristocratic trout, or the log fire at evening. It's just a plain out-and-out collection of hard-headed facts, built to appeal to the common sense of persons who like to get to the place for which they start—and to come back. You can get all the scenery you want, all the descriptions possible, out of the railroad and tourist folders. But what is the use of it all if you are not going to be able to enjoy it simply because you haven't the necessary education which can take you there? Mountain driving is as different from city or turnpike driving as automobile driving is different from the progress of Old Dobbin and the one-hoss shay.

There are certain things to know—which must be known—just as you must know how to throw in the clutch and put your foot on the gas before you can expect a machine to move. Yet the strange part of it all is—once the few necessary things are learned about mountain driving—it's the easiest driving of all!

Keep Your Eyes on the Road

In the city you look for the signal of the traffic patrolman, watch the man ahead of you, and keep an eye open for what may come upon you from the intersecting streets. That makes three things for the eye to watch. In the mountains there is only one—and that's the road. But, it must be stated, that road is a jealous thing, and one which requires constant attention. You don't just give it a glance now and then; you watch it! It is a proposition where you are using both eyes all the time, and with both those eyes fastened upon the brown twisting ribbon before you. For a time it seems difficult. Also, for a time, it appears that you are doomed to miss the very scenery you have come to see. But as the miles go on, you find that in some instinctive way your vision has broadened; it becomes second nature to watch every foot of that road, yet see everything about you at the same time. In fact, the usual procedure of country driving is merely reversed. You see the scenery in swifter glances, and the road in longer stretches of watching. And, you know, there is no law against your stopping every now and then, getting out of the car, and really seeing what you've come to look at, instead of watching it as through a railroad-car window.

But to the rest of the directions.

In the city one travels at a certain rate of speed because of the laws which govern that speed, and because of the motorcycle cop who is ever ready to signal you down and give you a red or blue admission ticket to the speeder's court. In the mountains is a speed cop who travels unseen, but who is at your elbow, nevertheless, whenever the desire seizes you to forget caution or to step on 'er. He's very influential. His name is Death.

Again let it be explained that mountain roads are not boulevards. Of course it is perfectly true that there are certain stretches of road that deserve this name, such as that masterpiece of mountain-highway engineering which runs from Golden, Colorado, up the six-mile stretch of Lookout Mountain to Buffalo Bill's grave, thence on to Bergen Park, to Morrison and back to Denver, a park road under the management of the city of Denver, perfectly aligned, with every curve marked, every grade broadened, every drain in place, and every possible thing done to make it a highway fully deserving of the name. Likewise is the Big Thompson Cañon road leading into Estes Park, the road connecting Trinidad, Colorado, and Raton, New Mexico, the high-line drive to Cañon City, the new government project to Mount Evans, and several others. But after all, though these roads run through mountains, they are not, in the strict acceptance of the term, mountain roads.

The real mountain highway is a graduation from the wagon and stage road of a day that is gone into the automobile road of to-day. The big stones have been removed, that crank cases may not be broken by contact with them; the roadbed made a bit smoother, and the turns widened slightly. That is about all. In some places the grades have been lessened slightly—but it is not unusual to strike one 10 or 12 per cent hill after another. The curves, in spite of their widening, are sharp and frequent—often as many as a hundred to the mile. The man who attempts speed on this sort of road deserves to have Death at his elbow.

To Go Downhill Safely

So, the first two things to remember in the mountains are caution and slowness. Caution for the turns of the road, and a good push on the horn to warn the other fellow coming down or up hill; for the stops; and for a constant certainty that if your machine is to run off the road at all it is to scrape a fender on the rock side of the mountain, and not go careening over the other side, where the drop is sometimes two or three hundred feet. The man who drives the inside track, with his wheels well in close to the wall of the mountain, may scrape a fender slightly now and then, but he won't be picked up from somewhere down in the cañon.

As to the slowness of progress, a person rarely drives the mountains in a wild desire to get somewhere at a certain moment—except, of course, the case-hardened natives who really live in the hills and who know each crook and turn backwards. Therefore, a speed of fifteen miles an hour on the actual mountain roads is all you'll need. More, once you're traveling at that speed on the down grade of, say, an 18 per cent declivity, something will begin to tingle up and down your spine, the pine trees will seem to whiz by, and you'll find yourself wondering if the speedometer isn't a bit off.

For, as has been mentioned before, the majority of mountain accidents come with the machine traveling downhill—due entirely to the fact that the driver hasn't the slightest knowledge of how to descend a grade. For which I shall be censured, and to which I repeat that not one out of ten drivers whose habitat is the flat country or the city knows how to go down a grade! Yet it is the simplest rule in the world:

Go down the same way you came up!

In other words, in the hills if it is necessary to make a grade on low gear, that grade should be descended in the same manner and at the same speed, with the engine running. It isn't wise to save gas in the mountains by turning off the ignition. The constant revolutions of the engine cause unexploded gas to back up, with backfiring and a spurt which may come at the wrong time. So the wise mountaineer keeps his engine running—and takes his time.

It may consume three times as many minutes to go down a hill in low gear as it might to attempt it on high and trust to the brakes. But one's sure—and the other isn't. The pressure of brake bands sufficient to hold a car to a safe pace on mountain grades is so intense that the friction often causes the brake bands to start burning within the first half mile—and remember, you're dealing with professional hills, not the kind where a quarter of a mile raise is a long jog. Between Empire, Colorado, and the top of the Berthoud Pass road, the crossover to Salt Lake and San Francisco, is a distance of nine miles. The Government now is building a road to this Continental Divide Pass which will not have more than a 6 per cent grade, but until that road is finished the 10 and 12 and 18 per cent grades still stand. In those nine miles, the altitude changes from approximately eight thousand feet to one of eleven thousand three hundred feet, with the main climb in the last six miles. In other words, in six miles your car must climb a half mile, straight up. More, when it reaches the summit it must drop down a half mile on the other side! Brake bands, not reënforced by the compression of an engine, cannot stand the strain. The result is that they catch fire, become glazed, and then—all in an instant—give way! Once that break comes, it is too late to shift gears. The machine shoots forward with suddenly doubled speed. A push at the gear lever only brings a horrible burring and a snapping of teeth, nothing more. So you do one of two things—go into the bank and smash the front end of your machine, or waltz gayly over the edge of the road to another Great Divide, from which no one ever has been able to send back a report on the scenery. Therefore the wise driver doesn't shift when he reaches the top—he merely goes on over the hump in low, and keeps in low until he is sure he has reached grades that permit him to shift to a higher gear.

As for going up the hill—even here are certain little rules that are necessary. In the first place, the man who goes into the mountains must either know his car or have someone along who does. And the sensible person will stop at the beginning of a stiff climb, down his pride and open up his hood. He will test the oil system, to be sure first of all that the crank case is full of the fluid, and secondly that the oil system is working and distributing properly. He will stand a moment and watch the fan belt, to be sure that it is not slipping. He will test his spark plugs for sure ignition, and then, as a last precaution, stop his engine, let out part of the radiator contents and refill with cool water. Then, his tests made, he will begin to ease his machine up the grade.

"Ease" is the exact word. The man accustomed to driving the mountain road will tell you some paradoxical things—among which is the fact that it is far easier on a machine, and especially on the cooling system, to send the old bus along easily and without a strain on second than it is to force that engine up a hill on high. Second gear is supposed to heat an engine. So it does under certain circumstances. But it also keeps an engine cooler under other circumstances than forced work in high! The same also pertains to low. When that engine must cough out each explosion the heat is lingering—no longer is it a quick, snappy combustion which departs almost the moment it occurs. It stays—and it heats. That's why the mountaineer grins and shifts into second, while the plainsman swears and tries to force his machine onward in high. The machine that is traveling at the lower speed stands the chance of not boiling until far after the other one.

For Mountain Work

Again, when you meet the man who tells you that the cheap small car is the one for the mountains on account of its lightness, listen to him if you want to, agree with him if you care to preserve his friendship—but take it all with a grain of salt. Small, light, dinky-engined cars were made for light work, not for the sort of thing that one encounters in the Rockies. Why, I don't know, but there seems to be some sort of God-given faith in one or two makes of small car which gives their owners the belief that they can go up a brick wall. Of course, if you want to walk from five to ten miles, straight up, carrying half the luggage and provisions of a camping trip on one shoulder, and helping to drag a machine uphill with your free arm—go ahead. There's no one to stop you. But that isn't my idea of a vacation.

However, it appears to be popular. I have seen these small machines by the dozen, stuck on any one of the half dozen passes in Colorado, so loaded down with camping paraphernalia, bedding, food, wood, mementos of the trip and what not, that the springs were nearly flat. In addition to

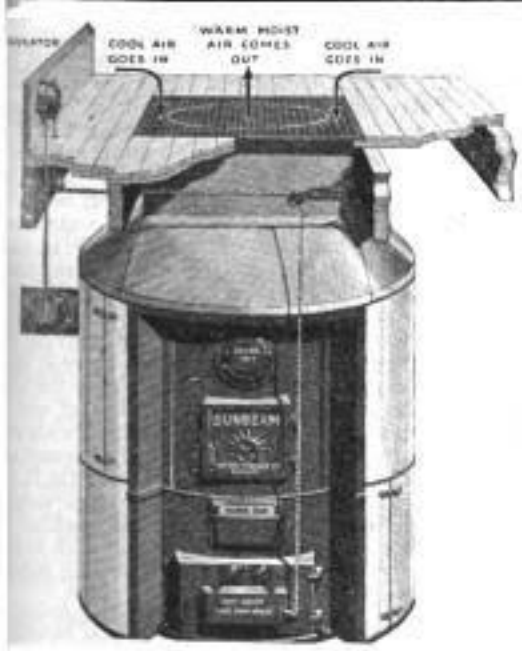
How can one small dealer sell a carload of Sunbeams?

WHEN you see some hamlet of a few homes and you hear that the Sunbeam dealer there sells a complete carload every season, you wonder how he can do it.

Yet there are hundreds of such instances, for the Sunbeam is made by one of the largest furnace manufacturers in the United States and, therefore, *can be sold at a quantity-production price.* Thousands of home-owners have learned that a Sunbeam Pipeless Furnace will heat a given number of rooms more evenly, more healthfully and with one-third less fuel than stoves or fireplaces. Other thousands are learning every year.

During a bitter, cold winter the Sunbeam will maintain an even, comfortable temperature throughout the whole house, or in mild weather it will give just enough heat to remove the chill without waste of fuel.

With a Sunbeam in your home you will not have to carry fuel for several stoves. Just fill it morning and evening—the rest of the day control it from upstairs.



There is no dust from a Sunbeam, no ashes in the house, no smoke. It is just the kind of heater for a home where there are children.

Sunbeam Pipeless Furnaces last a lifetime. All parts are over-size and are so accurately fitted that leakage is impossible. All that we have learned in thirty years of manufacturing has been put into the Sunbeam to make it a QUALITY furnace.

Don't wait until fall to get your Sunbeam. There are lots of dismal, wet days when you need a small fire, long before cold weather comes. It takes only one day to install a Sunbeam, so why not start saving one-third of your fuel right away?

SUNBEAM

PIPE *and* PIPELESS FURNACES

Why the SUNBEAM Costs so Little and "Warms like the Sun"

AS everyone knows, warm air rises and cold air falls; that is the simple principle upon which Sunbeam Pipeless Furnaces work. Heated air, mixed with vapor, rises through the central compartment of the large register placed in your hall or living room. A constant, gentle circulation of warm, moist air at an even temperature is maintained in every room, the cool air of the house being drawn down through the outer compartment of your register into the furnace, where it is heated and sent upward again.

The Sunbeam gives healthful heat; it requires little attention, as the draft is regulated from upstairs; owners all over the country tell us that their Sunbeams have paid for themselves the first year by saving one-third on the cost of fuel.

See your local Sunbeam dealer.

Just send for the "Sunbeam Book"

Fill out the coupon and mail it to us. There's not the slightest obligation involved. It may be the means of saving you a great deal of money.

Dealers can profitably write for details concerning these lowest priced furnaces

The FOX FURNACE CO.

Murphy Varnish—for over fifty years an invisible preserver of beautiful surfaces

Magic Newness for Home and Car

On your car or in your home—wherever the sheen of newness has faded and left a surface dull and drab from wear—Murphy Da-cote or Murphy Univernish will work a miracle in rejuvenation!

These popular products are the embodiment of the same high standards which have made three generations of master painters prefer Murphy Varnishes for their finest surfaces. They are Murphy professional quality in small cans for home use.

Da-cote is the Motor Car Enamel with a Pedigree—Murphy Varnish ground with finest pigments. Two million motorists say anyone can use it and do a good job at home. Da-cote flows on like cream and brush marks quickly disappear. It dries overnight and leaves a surface hard and brilliant as glass. Costs about two dollars. Also fine for baby carriages, porch furniture and wherever an opaque and lustrous enamel is required. It comes in black and white and ten popular colors.

Murphy Univernish

Clear and in Six wood Colors

Around the house, use Murphy Univernish. One coat brightens up floors and trim, snaps out color in linoleum and makes old furniture live again. Of course it won't turn white. Not affected by soap, boiling water, alkali or even ammonia. Wonderfully durable! Ask your dealer.

Murphy Varnish Company

NEWARK, N. J. CHICAGO, ILL.

The Dougall Varnish Company, Limited, Montreal, Canadian Associate

(Continued from Page 104)

this were from three to six persons who also had to be taken over the road. I also have seen the engines of these cars white-hot from the heat inflicted upon them by drivers who did not know enough to allow an engine to cool; and then every cylinder cracked wide open by those same drivers, who, realizing that the machine was about to catch fire, suddenly made a run for the nearest stream and literally soused the engine with ice-cold snow water! After having helped to tow, push, pull, crowbar and almost carry some hundred or so of these machines over the Continental Divide, owing to the fact that the road was either too narrow or too dangerous to effect a passage or because night was coming, and the poor, bewildered occupants were virtually lost in a strange land, I've come pretty well to the conclusion that I'll stay by the big or at least the middle-priced car.

Of course there is this advantage in the small car—the comparative ease with which parts can be obtained at the small-town garages and blacksmith shops. Parts for big cars in the mountains are few and far between. A breakage invariably means a wait of two to three days until a replacement can be received over uncertain railroads from the cities. Once upon a time, when I was new to the hills and didn't know enough to test my oil pressure and system before trying foolish things, I attempted a mountain pass. Halfway up I burned out a bearing. But there was nothing to do but to keep on going. I burned out another—and then a third. Finally I reached the top and clanked down the other side. There I met a man with a truck.

"Can you tow me to a garage, old man?" I asked.

"Sure. Regular price, though. Dollar a mile."

I agreed. Late that afternoon I paid my savior a bill of eighty-three dollars! It was that distance to the nearest garage!

Which brings another thing to mind—don't put your faith in garages. Put it in yourself. The closest garages in the mountains are ten to fifteen miles apart. The farthest distance I know is something like one hundred and twenty-eight miles! Which is a long distance to walk if you're out of gasoline, low on oil, your fan belt isn't working or there's a knock in the engine! However, if the proper conditions are observed the danger of parts' breaking on a large car as against that of a small car, where the strain is many times greater, is less than a ratio of one to a hundred. The efficacy of a small car in the mountains, especially if it is overloaded, as it must be to carry the equipment of a touring party, is largely a fable.

Mountain Peculiarities

For that matter, several things are fables when the mountains are concerned. One of them includes the supposition that all mountain roads are dry, sandy, gravelly affairs, that can stand any sort of deluge and five minutes later be their old, cheery, smiling selves again. It isn't true. Of course there are sections of the mountains where there is that sand and gravel and permanency to the roads. Then again there are sections where it is necessary to wallow through the blackest gumbo that ever stuck to an automobile wheel, while in still others there are grease clays and 'dobe muds which, once they become properly slicked up, can defy the efforts of almost any car that does not possess in its outfit a set of mud hooks. More, these sections are situated in cloudburst areas, where it seems a part of the climate for clouds to gather suddenly and to turn loose everything they have been picking up for the last six months. It happened that one day last summer I was driving in a section of mountain country where the roads for fifty miles were 'dobe. The weather was fine, the road as hard as flint and as smooth as polished steel. Then something began coming up out of the west. A half hour later my companions and I stood beside the machine and watched a wall of water, a hundred feet wide and fully four feet deep, rush down an arroyo and take the road with it. After the cloudburst was gone and the torrent had departed, we managed to cross; then, with chains attached to every tire, we managed to finish the rest of that fifty miles in an additional eight hours, an average of six miles an hour! Which should sew up the shroud of another fable.

Then, too, there is still something more to remember—winter doesn't finish its work in the mountains until months after it has removed itself from the lower countries. There is ice on nearly every high lake in early June, and snowdrifts that range from ten to fifty feet in depth.

Last summer, coming over a mountain pass, I saw a wabbling machine in front of me, which veered dangerously toward the edge of a cliff, shied off, spurted forward, slowed just in time to miss another machine moving upgrade around a curve, and finally came to a stop in a clearing on the mountain side where a sawmill had established a small sawdust pile. Into this sawdust the machine ran its nose, plowed there a moment and came to a coughing stop. I halted my car behind it.

"Better let one of us fellows take that machine down this hill for you," I urged. The man, his eyes staring, his lips moving nervously, attempted a laugh.

"I guess I can make it all right."

"Maybe you can—don't doubt it at all. But—how're your brakes working?"

"Fine."

"Been using compression any?"

"Huh?"

Whereupon I explained thoroughly the use of compression and felt the brake drums. They were almost red-hot. Again I explained the use of his gears, and he nodded in vague fashion. At last: "Are you absolutely sure you understand?"

"Oh, yes—I understand."

Mountain Fever

But there was something in the man's eyes that didn't look natural or sane. I begged him to let me take his family of a wife and several children in my car. No, he guessed he could get down all right. I offered to drive his car down for him, and let one of the other occupants of my machine handle the extra automobile. He didn't seem to understand me. At last I was forced to go on. Ten minutes later we heard a crash. The man's car had gone over the edge, somersaulted four times and crushed the whole family!

Perhaps in ordinary circumstances he was a sane, level-headed man. When I saw him he was suffering from mountain fever and as mentally irresponsible as it was possible for a man to be! The mountains, with their sheer ascents, their lowering cliffs, their steep grades and constant turns, had got him. He was a living exemplification of a combination of fear and desperation—so frightened that he hardly knew what to do, so desperate in his nonunderstanding condition that he would accept no aid! It is a condition that is rare, of course, but one that is plausible. The driver is in a strange country where nothing seems to go right. The slightest appearance of a hill causes his machine to cough and miss and heat. The grades are deceptive—10 per cent looks almost like a level stretch. On one side is the constant danger of a sheer drop of hundreds of feet and the mind is naturally attracted to it. There are curves, curves, curves, and constant meetings with machines that slink around them as though they had been lying in wait to force a victim off the road. There are meetings in which cars are forced to back, sometimes as much as a hundred feet or so, to a turnout, and backing on a grade is not an easy task. So withal it begins to eat in, deeper, deeper—until at last the driver loses his control and becomes panicky. The machine is constantly all but getting away from him, even if he runs on compression; in his nervousness he forgets that he is putting his foot on the gas lever and shoving up the speed. In a case like this there is only one remedy, but a sure one—stop the machine, get out, find the sturdiest of one of the innumerable dead trees that are always a part of the surroundings of a mountain pass. Drag it to the road and tie it on behind your machine. The extra weight of that drag will slow up the machine to such an extent that you move with snail-like progress and, during that lull, regain your composure.

But suppose you haven't a stout rope? Well—if you haven't, or if you don't know how to examine your engine, your brakes, your oil and cooling system; if you don't carry a container of oil and gas, a collapsible bucket for obtaining water from near-by brooks, a good set of tools, a few parts that may be substituted for those in most danger of breaking, a spade, a good extra tire, and a head that can assimilate simple rules and follow them——

Don't drive in the mountains!

THE PRINT OF MY REMEMBRANCE

(Continued from Page 34)

Myer called back, "Look out for your hat! Can't go down there for a hat!"

I said, "I wouldn't go down there for a suit of clothes!"

If I had to write of a man under sentence of death I believe I could do it with something resembling insight. Dickens had Fagin, the night before his execution, counting the nail heads on his cell door. As our horses gingerly crept over that trail I dramatized the roll or two down the sidehill before a fellow's breath would be out of him, and found myself computing the protective value of a ten-thousand-dollar insurance policy in a Massachusetts company and another accident policy somewhere else, and just what provision a widow could make of that money and of a fairly new house after the mortgage was deducted.

There were long stretches through the little brooks between these mountains where the chaparral dragged at your bootlegs and the higher switches slapped you on the head so that you kept it tucked into the shoulders, with the campaign hat pulled down to fend them from drawing blood. From the perspiration gathered in one of these levels we went again to other heights so cold that last week in March that we turned up the collars of our leather jackets lined with sheepskin; yet we rode through bright air so clear that the sun burned our cheeks more swiftly than August in the Mississippi Valley.

At noon we stopped a half hour for dinner and to rest the horses. It was astonishing to see an Indian put a coffeepot on two or three little stones the size of a hen's egg, slip under it a bunch of burning grass not larger than a shaving brush, feed it with a few splinters and boil two quarts of coffee quicker than I have ever seen it heated upon a stove.

The Gila River is filled with quicksand. Here and there is a ford. As we approached the river a trooper rode from the fort a mile away, took his station on the opposite bank to guide our string, which made the ford in Indian fashion.

Captain Myer called back, "Lift your feet out of the water! Hold up your horse's head or he'll lie down and roll! Follow your leader closely!"

At that hour of sundown, after a day in the saddle, I could do everything commanded except hold up my feet; they dragged inertly alongside the stallion and the river flowed into them over the bootops. When we pulled up at the little bungalows which were our destination two troopers helped me get my right leg over the back of the saddle and kept me from falling when it reached the ground.

A kindly fat old doctor who was there looked me over and without the formality of an introduction said, "Put this man in a hot bath." As he did so I put him into my play.

While in the tub a striker brought me a telegram from Colonel Sumner:

"How's the patient?"

I dictated the answer, "Not so beautiful as he was, but knows more."

Couldn't Fool the Yankee

When I came down the four steps of the little shack to go to the mess room the next morning I took each degree slowly and hung onto the banisters like a man half paralyzed. There is nothing like a good case of horse rheumatism to put a tenderfoot out of commission.

A week at San Carlos was interesting. One had the Apache at first hand; but as all that color was revised from the play before production, space for it here would only emphasize the fact that there are a good many chips and much rejected material in every workshop. But such discarded stuff is still valuable to have in the lumber room. I shan't talk of deceptive distances or tell any stories of men starting to walk a seeming three miles and learning that their visible objective is fifteen miles away.

Besides, one isn't always credited. On the trip home, an hour or two out of El Paso, is the station Alamogordo.

A shrewd New Englander asked, "What are those mount'ins to the northeast there?"

"Those are the Sierra Blanca—White Mountains."

A real Pinkerton, penetrating, unwavering look; a self-possessed stroke of the chin whiskers and then cold rebuke:

"Young man, the White Mount'ins air in New Hampshire."

In the territories on the way back and at home I was busy on the play, with an Indian uprising as my principal machinery. And in its first draft the play was so finished.

Early in the morning of February 16, 1898, James Waterbury, the agent of the Western Union Company at New Rochelle, telephoned me that the Maine had been blown up and sunk in the harbor of Havana. Knowing the interest the report would have for my neighbor, Frederic Remington, I immediately called him on the telephone and repeated the information. His only thanks or comment was to shout "Ring off!" In the process of doing so I could hear him calling the private telephone number of his publishers in New York. In his mind, his own campaign was already actively under way.

Authors and Artists First

One incident of that campaign illustrates the primitive man in Remington. He and Richard Harding Davis were engaged to go into Cuba by the back way and send material to an evening newspaper. The two men were to cross in the night from Key West to Cuba on a mackerel-shaped speed boat of sheet iron and shallow draft. Three times the boat put out from Key West and three times turned back, unable to stand the weather. The last time even the crew lost hope of regaining port. Davis and Remington were lying in the scuppers and clinging to the shallow rail to keep from being washed overboard. The Chinaman cook, between lurches, was lashing together a door and some boxes to serve as a raft. Davis suggested to Remington the advisability of trying something of the kind for themselves.

"Lie still!" Remington commanded. "You and I don't know how to do that. Let him make his raft. If we capsize I'll throttle him and take it from him."

Some months later, on learning of the incident, I tried to discuss the moral phase of it with him.

But he brushed my hypocrisy aside with the remark, "Why, Davis alone was worth a dozen sea cooks! I don't have to talk of myself."

It wasn't a difficult task to take out all the Indian stuff in my manuscript and to make the motive the getting together of a troop of cowboys. My impulse was prophetic of the Rough Riders. I wrote Denton's cowboy troop and the khaki jacket into the play at once, and changed such few speeches of the script as this introduction made necessary. On July eighth President McKinley nominated Col. Leonard Wood to be brigadier general, and Lieutenant Col. Theodore Roosevelt to be colonel of the First Volunteer Cavalry.

A few years ago I wrote some prefaces to precede certain printed plays of mine. If it wasn't for fear that watchful editors would strike out the statement I would quote the Boston Transcript to the effect that when Thomas is dead these prefaces will be put together in limp leather and printed as little classics. Perhaps if I don't tell the names of the plays or their publisher this statement will get by. In one of them I said:

"This play was salvage; that is to say, it was a marketing of odds and ends and remnants utterly useless for any other purpose." And elsewhere in these remembrances I've said that all is fish that comes to a playwright's pond.

Late in the winter of 1896, when the other guests had gone home after dinner, Mr. Joseph D. Redding, of the Bohemian Club, San Francisco, was at the piano in our living room at New Rochelle; listening to him were Mr. Will Gillette, my wife and I. Redding was running over the keys and talking through the music in that entertaining way which as musician and talker he has in such eminent degree.

Over one haunting melody he said, "Here's something I heard a little girl singing alone, hidden from the rain in a doby doorway in Santa Barbara."

(Continued on Page 110)

Why Jack Conover stopped paying high prices for custom-made shirts

"I get shirts that look as well, fit as well and wear as well, for less money, when I buy Emery," he says

JACK Conover lives at the most exclusive club in Cleveland.

A club where good dressing is an inborn trait of its members.

Like many members of his club, he bought nothing but custom-made shirts.

One day the club valet told him that he needed more shirts before packing for a trip.

"I didn't have time to have my shirts made," says Conover, "so I dropped in to one of the leading haberdasher's and they recommended Emery.

"I told them that they did not have my sleeve length in a ready made shirt and asked if they could have them lengthened for me.

"One of the firm measured my arm and said, 'We can fit you, Mr. Conover, —in Emery Shirts.'

"And then I had a wide variety of patterns to choose from and I picked a half dozen Emery Shirts that were equal—yes, better than custom shirts I had paid double the money for."

Emery Shirt patterns are always smart and correct. Emery fit is roomy, easy, comfortable—no skimpiness across chest or shoulders, under arms—anywhere. Emery fabrics wear well. Emery tailoring refinements are found only under the Emery label.

Emery Shirts are equal to custom-made in every way. Yet, they cost no more than ordinary shirts —$2, $2.50, $3 and up.

If there is no Emery dealer near you, we will see that you are served, on receipt of money-order and name of your dealer. Mention neck-band size, sleeve-length and color preferences. W. M. Steppacher & Bro., Inc., Makers of Emery Shirts, Philadelphia.

Why Emery Shirts are equal to custom-made

Pattern in each shirt perfectly balanced—stripes match in cuffs, front, etc.

Different sleeve lengths. Sleeve placquets (buttoning above cuff) to prevent gaping sleeves and make cuffs set right.

Pre-shrunk neckbands. Neck-band tab for inserting collar button in back.

Closely-stitched seams. Clear pearl buttons. Unbreakable buttonholes. And so on!

Emery Shirts

There is

It's Rubber, Made Porous by 196,000 Threads

There is no other insulation in any way similar to Willard Threaded Rubber Insulation. It preserves and protects the plates through their chemical and electrical changes—*until they are fully and naturally exhausted.*

Digitized by Google

"Something Different" Inside

You may or may not be engineer enough to understand how Threaded Rubber Insulation works. But you don't have to be an engineer to appreciate its almost universal acceptance by those in the industry whose business it is to know.

For years a majority of car and truck manufacturers have used only Willard Batteries. Today the builders of 195 makes of cars and trucks pay an additional price for Willard Threaded Rubber Batteries.

You will surely be well advised to follow the experienced judgment of these manufacturers and to decide once and for all that your next battery will be a Willard—*with Threaded Rubber Insulation between the plates.*

WILLARD STORAGE BATTERY COMPANY, CLEVELAND, OHIO

"It Clamps Everywhere"

$5

The LAMP with the CLAMP

READ-
Clamp it on bed or chair; or anywhere.

WRITE-
Clamp it or stand it on your desk or table.

SEW-
Clamp it on sewing machine or table.

SHAVE-
Clamp it on the mirror or any handy place.

Adjusto-Lite
A FARBERWARE PRODUCT
Reg. U. S. Pat. Off.

THE lamp of a thousand practical uses. More uses daily. The longer you have it the handier you find it. Clamps—stands—hangs—anywhere and everywhere—and stays where you put it. A necessity in home, office, store. All the light you need, where and when you need it. Hundreds of thousands are finding Adjusto-Lite indispensable. Prevents eye-strain—reduces light bills. No other lighting device like it.

Solid brass; handsome, durable and compact. Clamp is felt-lined—can't scratch. Guaranteed five years. Complete with 8-ft. cord and plug. $5

Get an Adjusto-Lite today. If your dealer doesn't carry it, order direct.

S. W. FARBER
141–151 So. Fifth St. Brooklyn, N. Y.

Prices in U. S. A., complete with 8-foot cord, plug and socket: Brush Brass finished $5.00; Statuary Bronze or Nickel finish $5.50. West of Mississippi, prices 25c per lamp higher.

TRADE FARBERWARE MARK

(Continued from Page 107)

There was a moment's silence when he finished the melody, and my wife said, "A little girl that could sing like that wouldn't be alone."

Gillette in his metallic tenor added, "Besides, it never rains in Santa Barbara."

Each of these lines was worth a smile to our firelight party; and just as I am telling the story to you I told it at a banquet table at the Santa Barbara Club in 1901. I hoped only for good-natured reception and was at utter loss to understand why men slapped each other on the back and roared with glee and rocked on their unsteady chairs. The toastmaster felt I was entitled to an explanation. A real-estate man present explained the laugh by telling that Gillette some years before had bought a considerable country estate at Montecito, a suburb of Santa Barbara. He had bought it on blue prints and photographs shown by the agent. One of these photographs showed a bounding, purling brook, snapped immediately after one of the infrequent rainstorms of that section. On the other three hundred and sixty-four days in the year this water course was dry.

That kind of thing amuses real-estate men.

On that winter evening, however, Gillette told us nothing of this dusty brook, but asked Redding to repeat his rainy music.

Those were the firelight times before the introduction of auction bridge and when people of sensibility sometimes sat about and played or listened to little interpretations of that Redding kind. I have more than once solved some knotty problem in play building by a mood invited by such musical half hours. That night as Redding repeated his melody I slowly hammered out these verses:

Her smile is of pearl and of coral,
Her eyes hold the dusk and the dew,
Her sigh has the breath of the laurel,
Her heart but the poisonous rue.

The heavenly star far above her,
The breeze of the infinite sea,
Who know all her perfidy, love her,
Then why call it madness in me?

And so on.

As much as the character of the music, the fact that Redding's romantic waif was or was not standing in an adobe doorway made the subject doby to me. So that when Colonel Sumner's daughter, Nan, told me that Tony, the *vaquero*, who brought the letters from her friends and who had such white teeth, played the mandolin and sang, and I saw him, I began weaving him into my story, and I gave him that song of Redding's. Later Vincent Serrano's mother put the words into Spanish. I never thought of Tony without humming its melody, and when the play was done, it being a melodrama and having the powerful old-fashioned advantage of the right to use identifying musical themes, Adios Amor, as the song was called when published, accompanied Tony through the play. By having it accompany also Lena, the unhappy German girl with whom he was in love, it knitted these two together more firmly in the minds of the audience than any dialogue could do. Nan Sumner called my attention also to Tony's naïve indifference to English profanity. He had learned good-bad all together, and was unable to make and untroubled by any distinction, so that when I got him into the play I was able to have him finish his lover's declaration after the song with "and damn to hell my soul, I love you!"

The Lambs' First Gambol

In its revised shape I submitted my completed manuscript to Charles Frohman. Although his influence had procured the railroad transportation that I had used in getting to Arizona, and he had been looking forward to the completion of the play, something in the script or in my reading of it, because he listened to the four acts as I read them, decided him against this production. With the war on, managers were timid and my melodrama seemed unlikely of early production. I amused myself with the conduct of The Lambs' first all-star gambol.

There are few social clubs to whose functions one can with propriety ask attention. But The Lambs, because of its theatrical membership and prominence, is among that few. For many years an occasional night had been taken in the club when members free from professional calls got together in an entertainment the backbone of which was some burlesque by some skilled man upon some current success. Programs from several of these intimate performances had occasionally been given to the public of New York. In 1898 it was decided to make a much more pretentious appeal by players, all of whom should be stars. Contracts for the exclusive services at one dollar per week for the last week in May were drawn between the club on one side, and on the other Nat Goodwin, Will Hopper, Stuart Robson, William Crane, Willie Collier, Jefferson D'Angelis, Chauncey Olcott, Digby Bell, Francis Carlyle, Wilton Lackaye, Harry Woodruff, Charles Klein, Eugene Coles, Joseph Holland, Harry Connors, Fritz Williams, Burr McIntosh, Joseph Grismer, Jesse Williams, Victor Herbert, Ignatio Martinetti, Victor Harris and some forty other men of almost equal prominence; a half dozen playwrights and as many musicians; also Victor Herbert's band and orchestra of fifty pieces.

Playing on Shipboard

The company, all told, included over one hundred men. It was computed that their joint salaries, according to what they were then getting upon the road, would for that week have amounted to one hundred and twenty-five thousand dollars. Theaters were leased for one night only in New York, Brooklyn, Washington, Philadelphia, Boston, Springfield, Pittsburgh and Chicago. Advance work for publicity was done in all these cities. Contracts existed for a special train of four sleepers, three dining cars and two baggage cars. Rehearsals were well under way when war was declared. Matters of equal importance from the amusement point of view were crowded from the papers by the war news. It would have been possible to cancel the tour and contracts and pay all claims incurred for some fifteen thousand dollars, and such a course was advised by Joseph Brooks, the manager at the head of the business group. As general amusement director of this gambol, which was to lift the debt from a new clubhouse recently built, the necessity of additional indebtedness if we gave up the trip decided me to go on with it. When Brooks quit I put the business management up to Kirke La Shelle, then handling the Bostonians. The club gave the week of gambols in the cities named and took in sixty-two thousand dollars.

This businesslike résumé of that venture is impressive, but the sentimental side of it will appeal to those acquainted with the players. I shall tell only of the first feature of the program: an old-style-minstrel first part, pyramided on the stage of the Metropolitan Opera House, and in which, with Herbert's band, there were one hundred men. The interlocutor, end men and vocalists, all in the regulation evening dress, at the end of the opening chorus were on their feet. The great auditorium of the Metropolitan Opera House was crowded from parquet to dome with one of the most select audiences ever assembled within its walls. When we remember that we were only in the first month of our war with Spain we can form some conception of the enthusiasm as this audience rose when the medley finished with the Star-Spangled Banner, and then the burst as every nigger singer at cue drew from the inside of his white vest, instead of a pocket handkerchief, an American flag of silk.

We had been under pressure to start promptly in order to make train connections for the next town, and I am not sure that anybody has ever explained just why the curtain was held. The facts are, however, that it was difficult for my wife to get to the Metropolitan at 8:15 owing to certain attention that our baby had to have at that time before it got to bed. She had promised to make haste, and I had promised to stand in the prompt entrance and if possible to hold the curtain until I saw her take her seat in the front row of the dress circle. Men on the stage were fretting, and the audience—there was twenty-seven thousand dollars in the house—was getting impatient, but the baby delayed them only four minutes.

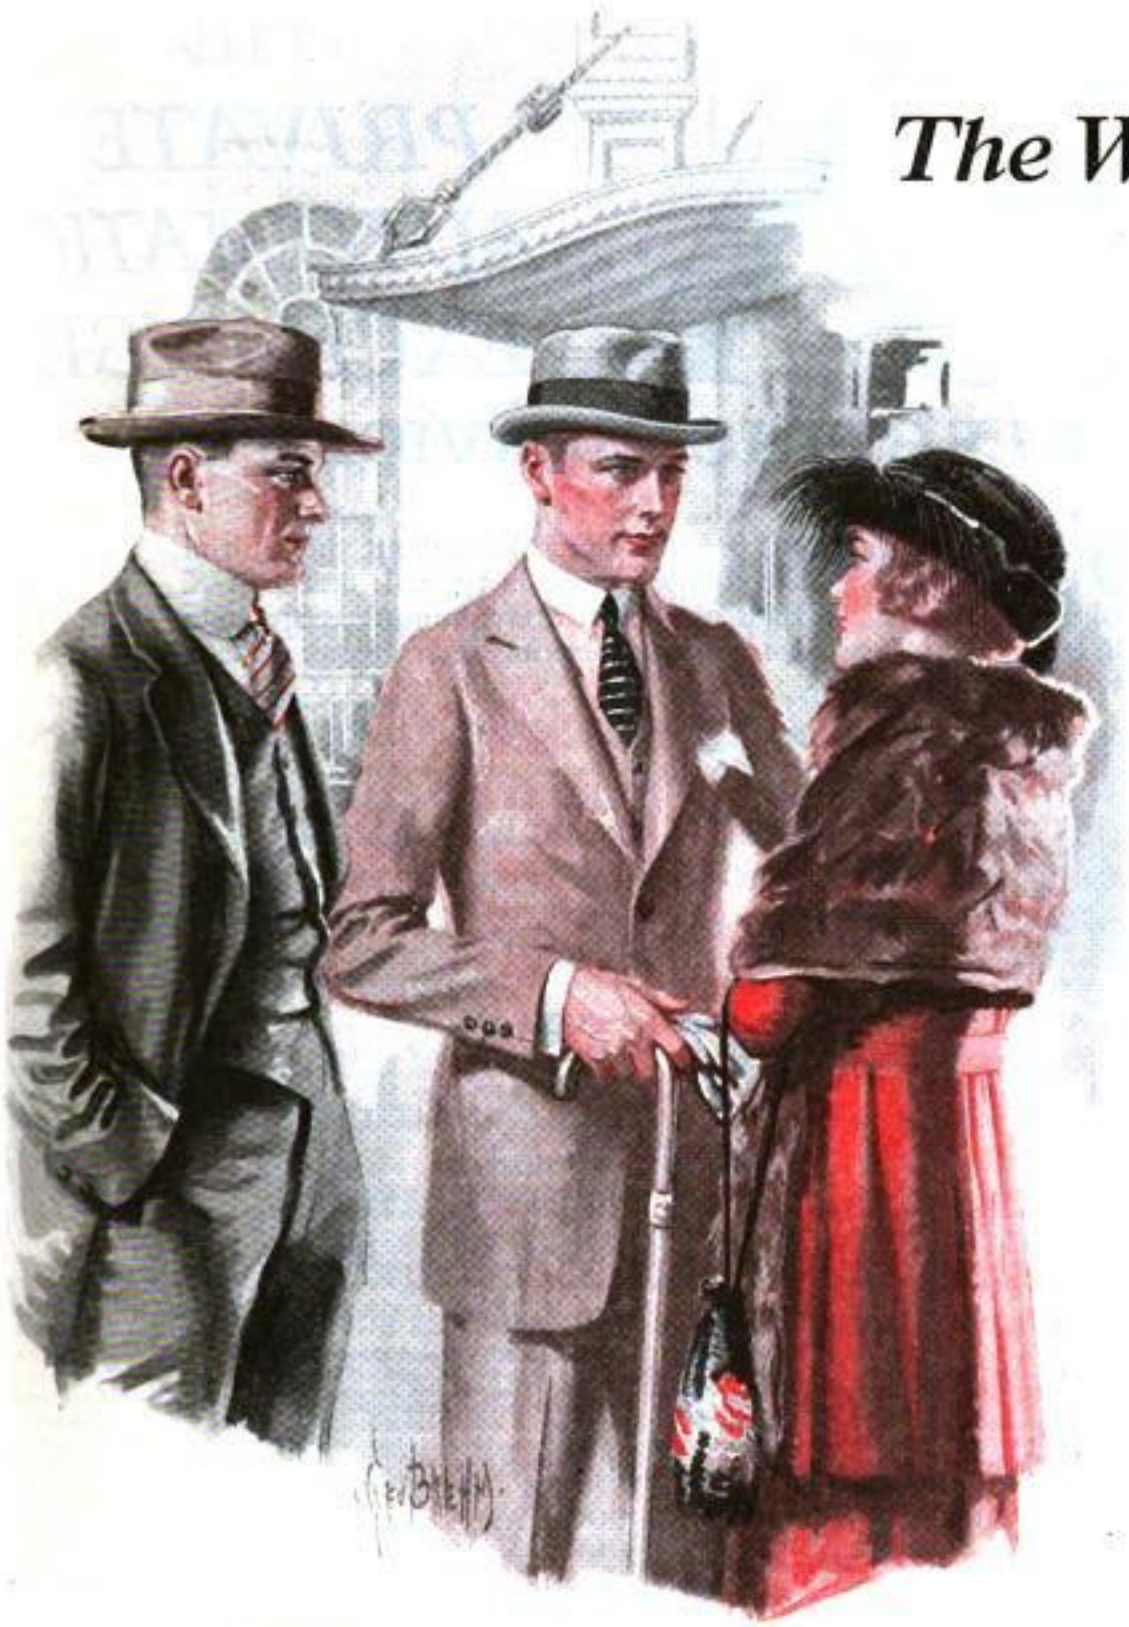
In June of that year, 1898, I made my first crossing of the Atlantic Ocean. With us on that boat were seven members of The Lambs Club—Chauncey Olcott, Walter Hale, Vincent Serrano, Rowland Buckstone, Joe Wheelock, Jr., Ruckstull and one other. First-class fare was fifty dollars; the lowest quotation now is two hundred and fifty. The old Victoria was a cattle boat with bilge keels—that is, an additional keel on each side, somewhat below the water line, to prevent her rolling. The cattle were where the steerage ordinarily is, and we never knew of them. The usual organizing person was among the passengers, bent upon getting up a concert for the benefit of disabled seamen. And the captain thought it would take the passengers' minds from the constant fear of Spanish gunboats—submarines were not yet in use. Our American actors couldn't recite, but they could play if they had a manuscript; so with their urging and advice and occasional assistance I wrote a comedy about twenty-five minutes long dealing entirely with the ship's company, which we called Three Days Out. In it Chauncey Olcott played an old Irish woman, Hale a romantic tenor, Buckstone an English financier, and young Wheelock, who looked like the bathroom steward, impersonated that official, borrowing and wearing his clothes for the performance; Serrano played a Spanish cattle raiser, Ruckstull was a walking gentleman, I was an American business man. We went aft near the steering gear to rehearse it in the open sunshine. Three days before we got into port we gave a performance which netted a handsome purse for the beneficiaries.

Charles Frohman was in London at that time laying his first plans for his extensive theatrical control that developed later. We had our card filled with all kinds of agreeable appointments, and I met then for the first time J. M. Barrie, Bernard Shaw, Alfred Sutro, Beerbohm Tree, George Alexander, Arthur Bourchier and Max Beerbohm.

Our first night in Paris was the evening of July fourteenth, the anniversary of the fall of the Bastille. Instead of the firecrackers and pin wheels of America, Paris expressed itself in street festivals and dances. In every *arrondissement*, or ward, there was a central gathering where music was furnished by a municipal band and where the neighborhood people danced on the clean asphalt of the street. It was into one of these circles only a few years before that Willie Collier and Bill (Old Hoss) Hoey walked, and catching the time of the music began an impromptu dance of the American model. To visualize this fully one must remember Hoey, with his full black beard and eccentric manner; and remember the natty, smooth-shaven Willie Collier of those days in his flat-brimmed straw hat; and then the pair of them surrounded by the gradually widening circle of astonished Paris tradesmen as those two American boys competed with each other in remembered and invented steps of vaudeville assortment. That would be a rare treat to-day for an American audience familiar with that character of dancing and gathered at Longacre Square. But at that time, for those simple pirouetting *bourgeoisie*, it was electrically eccentric.

Jean Jaurès' Theory

I shall offer no tourist's impression of Paris, but there is a notable remembrance of Jean Jaurès, the great socialist, pleading for evolution, not revolution. He was assassinated a few years later, but Ruck and I went to hear him then. He talked upon the theme I have furtively referred to in earlier chapters, and which in the past hard winter of unemployment more than one publicist advanced. Jaurès was sure that the trouble with capital and labor was not one of class warfare, but that both classes in some fashion were troubled by the machine in industry; by competition between owners of competing machinery, but principally by competition of the human creature against the insensate Frankenstein creation. His remedy was an ownership by the state of all the mechanical facilities of production.



Some day we shall discriminately tax them according to wise conferences between all nations.

When we came to recross the Atlantic, in August, there was still some fear of the Spanish gunboats.

As our trouble with Spain subsided I carried the play, Arizona, to Kirke La Shelle. There was no theater available in New York; he arranged for the production of the play at Hamlin's Grand Opera House in Chicago the following summer, 1899. I have said earlier that Kirke La Shelle had the quality of the captain, and I am sure that had he lived he would have been one of

The Well-Groomed Man

It takes more than good clothes to earn that reputation. You want the glowing, healthy color of the outdoor man. Pompeian Massage Cream gives your face the regular exercise it needs to keep the attractive complexion of perfect cleanliness and youth.

Clears the Skin: Pompeian Massage Cream thoroughly cleanses all dust and dirt from the pores. It helps clear up blackheads and pimples in the natural, sensible way—by keeping the skin clean and the pores open.

Easy to Use: After shaving or washing, apply the Massage Cream to your face. Rub it in gently. Continue rubbing and immediately it rolls out, bringing with it all the dirt and skin impurities. Result—a clean, healthy skin and clear, glowing color. For a smooth finishing touch, use Pompeian Fragrance—a delightful new talc.

Pompeian Massage Cream . .	60c
Pompeian Fragrance, a talc . .	30c

At all druggists'

Special Trial Jar of Massage Cream

Also Sample of Pompeian Fragrance, a talc

For 10c we will send you the 1922 Pompeian Art Panel—a beautiful picture for office and home. Also FREE TRIAL JAR of Pompeian Massage Cream, and a sample of Pompeian Fragrance, a delightful new talc. Send for your sample now. Please use coupon.

Make this Test:

Wash your hands thoroughly. Apply Pompeian Massage Cream on the back of the hand as in the above illustration. Rub gently, but firmly. The darkened dirt-laden cream that comes from the pores will astonish you.

Pompeian Massage Cream

GUARANTEE

The name Pompeian on any package is your guarantee of quality and safety. Should you not be completely satisfied, the purchase price will be gladly refunded by The Pompeian Company, Cleveland, Ohio.

P-A-X

THE PRIVATE AUTOMATIC EXCHANGE

for AUTOMATIC ELECTRIC SERVICES

When concerns such as these find P-A-X Services indispensable -(as they do)- there must be potential benefits in P-A-X Equipment for you!

OVER 1,000 successful organizations throughout the United States, of which the following list is typical, find P-A-X equipment essential to their needs for intercommunication, code call, emergency alarm, watchman's checking and other associated services:

FINANCIAL INSTITUTIONS SUCH AS:

Guaranty Trust Co., New York, N. Y.
Federal Reserve Banks, Kansas City, Chicago, New York City, others
Continental & Com. Nat'l Bank, Chicago
Corn Exchange Nat'l Bank, Philadelphia
First National Bank, Detroit, Mich.
Garfield National Bank, New York City
Mellon National Bank, Pittsburgh, Pa.
Central Union Trust Co., New York City
Maryland Casualty Co., Baltimore, Md.

MANUFACTURING AND INDUSTRIAL CONCERNS SUCH AS:

Fairbanks, Morse & Co., Beloit, Wisc.
Singer Sewing Machine Co., Elizabeth, N. J.
General Electric Co., Bridgeport, Conn.
Hoover Suction Sweeper Co., Canton, O.
Long-Bell Lumber Co., Quitman, Miss.
Libby, McNeill & Libby, Blue Island, Ill.
Lehigh Portland Cement Co., Oglesby, Ill.
H. K. Mulford Co., Philadelphia, Penn.
Packard Motor Co., Boston & Chicago, Ill.
Lufkin Rule Co., Saginaw, Michigan

OIL AND CHEMICAL REFINERIES SUCH AS:

American Zinc Co., East St. Louis, Ill.
Calumet & Arizona Mining Co., Bisbee, Ariz.
U. S. Helium Production Plant, Ft. Worth
Vacuum Oil Company—Various plants
Standard Oil Company—Various plants
Sinclair Refining Co.—Various plants
Atmospheric Nitrate Corp., Solvay, N. Y.
Cosden & Company, Tulsa, Okla.
Grasselli Chemical Co., Cleveland, O.
New Jersey Zinc Co., Palmerton, Pa.

RAILROAD AND STEAMSHIP LINES SUCH AS:

Illinois Central R. R.—Various cities
The Texas Steamship Co., Bath, Me.
Chicago & Northwestern Railroad
New York Central R. R.—Various cities
Pennsylvania R. R.—Various cities
Grand Trunk Ry., Port Huron, Michigan
Terminal R. R. Assn., St. Louis, Mo.
Oriental Navigation Co., New York, N. Y.
Louisville & Nashville R. R.—Various cities
Missouri Pacific R. R., Dupo, Illinois
Michigan Central R. R., Detroit, Michigan
Kansas City Union Station, Kansas City, Mo.

EDUCATIONAL INSTITUTIONS AND HOSPITALS SUCH AS:

Bellevue Hospital, New York City
Long Island Infirmary, Boston, Mass.
St. Mary's Hospital, Rochester, Minn.
University of Illinois, Urbana, Ill.
State University of Iowa, Iowa City, Iowa
Ohio State University, Columbus, Ohio
Mercy Hospital, Pittsburgh, Pa.
Hamot Hospital, Erie, Pennsylvania
Cass Technical High School, Detroit, Mich.
St. Mary's Hospital, Cincinnati, Ohio
U. S. Marine Hospital, San Francisco, Calif.
U. S. Naval Hospital, Philadelphia, Penn.
Joyce School, Detroit, Michigan
West Intermediate School, Jackson, Mich.
Henry Ford Hospital, Detroit, Michigan
Vassar College, Poughkeepsie, New York

MERCANTILE ESTABLISHMENTS SUCH AS:

John Wanamaker, Philadelphia, Pa.
Wm. Filene Sons Co., Boston, Mass.
A. De Pinna Co., New York City
Larkin Company, Buffalo, N. Y.
Lit Bros., Inc., Philadelphia, Pa.
S. H. Kress & Co., New York, N. Y.
The Hub, Chicago, Ill.
Sears, Roebuck & Co., Chicago, Philadelphia
National Cloak & Suit Co., Kansas City, Mo.
Montgomery Ward & Co., Chicago, Ill.
Buhl Sons Co., Detroit, Michigan

Our field engineer will survey your needs and make recommendation. Write, telephone or wire our nearest office.

Automatic Electric Company

ENGINEERS, DESIGNERS & MANUFACTURERS OF THE AUTOMATIC TELEPHONE IN USE THE WORLD OVER

Digitized by Google

(Continued from Page 110)

the most dominant influences in the American theater. Only to the theatrical reader will the following be significant, but the original cast of Arizona included Theodore Roberts, Edwin Holt, Mattie Earle, Mabel Burt, Robert Edeson, Olive May, Sam Edwards, Arthur Byron, Vincent Serrano, Franklin Garland, Walter Hale, Lionel Barrymore and Menifee Johnstone, and the four or five other characters were by people of less repute but of equal earnestness and ability. Few authors doing a melodrama have had better coöperation than that.

There was an incident of the first night that seems to me worth telling. I had rehearsed the piece myself, and in that work been busy. Having need for a squad of soldiers to bring on two men under arrest, a few days before our opening, I spoke to a group of supers that had been called.

"Any of you had military experience?"

Two or three replied affirmatively. To the most likely of these I said, "Where?"

"In Cuba."

"Can you train four men in the manual and the drill?"

He said, "Yes, sir."

"Pick your four and report when you have done it."

In a little while he was ready. At our dress rehearsal La Shelle and I sat apart in the parquet. Things had gone well. We were on the last act. Two sympathetic characters were to come on in the custody of the noncom and the squad. They did so, the seven of them marching to their proper places on the stage, with a smart "halt" and "carry arms."

I stopped the rehearsal and said to the young man, "Go back and make that entrance again."

While they were going out to do this La Shelle came across the parquet in the greatest earnestness.

"I thought that was splendidly done."

"So did I."

"Why did you send them back?"

"I want to see them do it again."

In a curtain speech the next night I told this incident, then reverted to a rehearsal of In Mizzoura some five or six years before in Chicago, when from a similar group of supers I had asked for a man who could heat and weld and put a tire on a wheel, and found exactly the proper helper for Burr McIntosh, the blacksmith. I ventured the belief that if I were to write a play about the stars and called upon a bunch of Chicago supers I could find among them a volunteer astronomer. I told the audience that this young man who had responded so promptly as a soldier and had drilled his squad so effectively would be on in the next act; he didn't know I was speaking of him, but if the audience thought as much of his performance as La Shelle and I had thought they would understand why I emphasized it. When the two prisoners and the squad came on a few minutes later they got the biggest round of the play. That young super was a lad named Sydney Ainsworth, who the following year was playing a responsible part in the play, and the next year with one of the road companies was playing the hero. He became a favorite leading man.

Getting Odds on a Sure Thing

On August eighteenth in that summer of 99 Kid McCoy was to meet Jack McCormack. McCoy had many admirers in our company, and, as I remember, the general odds were some four to one on him. The dressing rooms, which were under the stage of the Grand Opera House at that time, were buzzing with interest in the approaching battle as our men were making bets for the night. Harry Hamlin and I had tickets for the fight, but declined to take any of the attractive odds that were offered at the theater.

The meeting was only three or four blocks away. As the two men faced each other in the first round Hamlin was searching his pockets for some matches. A sound from the ring and a startled response from the audience reclaimed his attention. While McCoy had been gayly guying with some of the press men at the ringside, McCormack had knocked him out with the first punch. Hamlin and I were soon back in the theater. We seemed to have been only wandering from one dressing room to another. Lionel Barrymore, Arthur Byron, Robert Edeson and Walter Hale had not gone on. Theodore Roberts, Edwin Holt and Vincent Serrano came off in a minute or two from the first act, and we were able quickly to take all the bets offered on McCoy at the excessive odds. We disappeared. Later news came duly to the theater and found a sad family. At Rector's, after the performance, Hamlin and I confessed to having seen the fight before the betting and disgorged our ill-gotten gains.

One notable engagement made that summer takes my mind back a few years further to a set of incidents that seem amusing. In writing these reminiscences I have hit only the high spots. To give even a paragraph to each of some sixty-four plays produced would be an itemized bill of grief, unpardonable in any recollections. A couple of years before my trip to Arizona I had done a play for Mr. Daniel Frohman which I read to his scenic artist and stage manager and him, and which at that time was acceptable. Something prevented the production and I revamped it from a serious four-act play to a three-act comedy called Don't Tell Her Husband. T. D. Frawley had a stock company at the Columbia Theater, San Francisco, under the management of Gottlob and Friedlander. They wanted to produce the play under my direction and sent me in advance money for railroad fares, sleeper and expenses across the continent.

At the railroad office I met Crane's manager, Joseph Brooks, who, learning my destination, linked his arm with mine and said, "Just starting for California with the Crane company. There's an empty section in our car and glad to have you." He declined to take my money, saying it would vitiate his railroad contract if he made any subsales, but he added, "The boys play poker and they will be glad to win that from you."

Eleanor Robson's Early Career

We were four days crossing the continent. The poker players in Mr. Crane's company were himself, Brooks and my good friends Walter Hale and Vincent Serrano. Under a moral obligation to lose those one hundred and twenty-five dollars to them, I came in on every little pair only to call up that protecting fate that is said to hover over the weak-minded and the infantile. I landed at the old Baldwin Hotel with the hundred and twenty-five intact and some more contributed by the four gentlemen named. In the delightful grill of that old hotel, long since destroyed by fire, I saw Gottlob and Friedlander having dinner. Gottlob came over to my table. I told him the arrangement under which I had traveled and that had I lost the money I should have considered it a legitimate although circuitous application of the expense fund. Not having lost it, I returned it to him. It was worth one hundred and twenty-five dollars to see that new sensation in his business experience. He carried the money back to Friedlander. They held an excited consultation, regarded me curiously; later both joined me, and after many tentatives as to the kind of entertainment I would find most agreeable carried me off to a private box at a prize fight that was occurring that evening.

In Mr. Frawley's company, which contained such excellent players as Frank Worthing, Frank Carlyle, Frawley himself and Maxine Elliott, there was also the more experienced actress, Madge Carr Cook. Her little daughter was just beginning her stage experience, and as I remember took the part of a maid to carry on a card in our play. The girl's stage name was Eleanor Robson. She did so well with Frawley that a short time thereafter she was playing leads in Denver, and when Olive May had to leave the Arizona company during our summer in Chicago Eleanor Robson came to take her place. Not since the early days with Marlowe had I seen a young woman who had come on the stage with so many fine natural qualities, and before she opened in the part of Bonita I told La Shelle that she would be a star in a short while, and it would be wise to make an immediate arrangement with her. He agreed with me; but, deferring his negotiations until after the New York opening of the company, found that Eleanor Robson was then under a starring contract with Mr. George Tyler. New York will remember its artistic disappointment when after a few brilliant characterizations Eleanor Robson became Mrs. August Belmont and society and charitable enterprises gained what the stage lost.

My little play, Don't Tell Her Husband, was taken by Stuart Robson, who changed

Reflects a Good Shine!

HERE, men, is a regular shine, and a shine that lasts a long time.

No need to use Dyanshine each time you want a bright polish. Just apply it occasionally.

If the luster dulls, a few strokes with a soft cloth will quickly bring it back.

Barton's Dyanshine Shoe Polish gives back smooth color to scuffed or worn places. And it makes old shoes look like new.

It is easy to use. And you get fifty shines for fifty cents. You will find it unequalled for children's shoes.

Be sure you get Barton's Dyanshine. It is the original combination color restorer and shoe polish.

Available in Black, Cordovan Brown, Nut Brown, Light Tan, White Canvas, White Kid, Cordovan Suède, Walnut Suède, Black Suède and Cocoanut Suède.

Here's Real Summer Comfort for You

YOU never stepped into any summer underwear quite so comfortable—quite so roomy and cool as Hanes Athletic Union Suits. They're just exactly what a fellow wants—light and loose, yet durable beyond words—*and they are only $1.00.* SO WHY PAY MORE!

Read these important Hanes advantages and then think what each one means in extra comfort and extra wear.

FULL CUT on generous pattern. No skimping. Full standard sizes give perfect freedom to every move of arms, legs and body.

ARMHOLES taped instead of turned under. This adds strength, durability and comfort and prevents armhole from curling or ripping.

NECK either "V" or circular style, strongly reinforced with nainsook.

CLOSED CROTCH stays closed. Crotch lap button sewed on the seam—four thicknesses of material instead of two. No patch used.

WEBBING BELT guaranteed two-thread elastic webbing instead of single thread, gives more elasticity and greater strength. Specially sewed to prevent tearing or ripping.

PEARL BUTTONS fine quality throughout and sewed on to stay.

REINFORCEMENTS at every strain point, eliminate seam rips.

Get set *now* for your full share of summer comfort, in these *guaranteed* nainsook union suits. Tell your dealer you want Hanes.

The youngsters can also have Hanes comfort and wear. Hanes Athletic Union Suits for Boys—sizes 20 to 34; ages 2 to 16

P. H. HANES KNITTING CO., Winston-Salem, N. C.

the title to The Meddler, and played it for two years. The increased friendship between Hale, Serrano and myself at the poker table in the Crane car, together with our transatlantic trip, deepened my wish to have them in the Arizona company, where their grip upon the public was the result of their own merits.

There is a series of happenings in the relationship of those two friends that carries an interesting psychological study. After a time in the original company Hale quit the German-character part and played the heavy man opposite Serrano, now advanced to hero. Near the end of the third act it was Serrano's business to walk over to Hale, who stood well down left, and after looking him in the eye a minute slap him over the side of the face with a sombrero; a trick slap with the force of the blow falling more on Hale's shoulder than upon his face. In one of the early performances, however, a leather band around the sombrero had struck Hale's face and hurt him slightly, but enough to make him apprehensive thereafter. This fear wore on his health and one day on the street he fell unconscious. The doctor traced his difficulty to this fear of the blow. Hale left the engagement and returned to his earlier work as etcher and illustrator. He traveled with his talented wife, Louise Closser, for some time in Europe, came back to the theater and played several parts with distinction. After a total interval of some ten years he was playing in my piece, As a Man Thinks, in which John Mason was the star and Vincent Serrano was the hero.

On our opening night in Hartford, near the end of the third act, Hale forgot his lines and couldn't take them from the prompter. He was all right at the next day's rehearsal. But again at night the same lapse occurred. He was a conscientious artist, and in great depression came to me and wanted to surrender his part. I asked him to try another performance and let me look at it from the front. For the third time his lines escaped him. When the play was over Hale was positive in his decision to quit. I said:

"Walter, I think the trouble is that it is Serrano who comes down left and confronts you. Your position on the stage and your personal relations in the story are just what they were in that old cowboy play; but if you will remember that Serrano doesn't wear a sombrero and is not going to strike you with one, and that you are playing Mr. De Lota in a parlor story of New York, the difficulty will disappear."

He played perfectly that night and was never troubled in that manner again.

Since these papers have been running in THE SATURDAY EVENING POST many men have written me and more have spoken to me concerning the wonderful memory that I must have—"Or have you kept records of all that?"

I have not kept records and I have not more than the ordinary memory. But here are two sides of that interesting subject: Earlier in this chapter I have written of Mr. Robert Bruce bringing me some information that I needed about Henry C. Hooker, the Arizona ranchman. Until Mr. Bruce came in at that opportune moment I had never seen him.

Tracing a Cornetist

Now on the other side: I wished to write about a cornet player and his performance on a memorable night in 1901. It would be all right to refer to him impersonally, but my effort to get his name is a fair example of much of the work that has been incident to all that I have written. This cornetist was in a company supporting Mr. Peter Dailey in a musical play called Champagne Charlie, which I wrote for him and which was produced late in August in that year. Last October, 1921, I tried to get Dailey's manager, Mr. Frank McKee. He was out of the city, address unknown. After two later attempts to locate him, the question of the cornetist came up again just now as I reached the end of this chapter.

I stopped dictation and for thirty minutes my secretary and I pursued the following process: Walter Jordan, a play agent and sometime friend of McKee, is called; he gives McKee's residence; Information gives his telephone; we talk to McKee; he remembers the cornetist very well, but the enterprise was twenty years ago and he forgets his name. Peter Dailey is dead. The next important member of the company is that excellent comedian Eddie Garvey; Garvey would probably remember the musician. We try to locate Garvey. Miss Humbert, of the Packard Theatrical Agency, thinks Garvey is with Charlotte Greenwood's company on the road under the management of Oliver Morosco. Morosco's office is called in order to locate the company. They tell us that Garvey left the company two or three weeks ago; they haven't his address, but the engagement was made through an agent named Leslie Morosco.

Leslie Morosco, when called, knows Mr. Garvey's address and his telephone number, but is reluctant to give them to persons inquiring over the phone. Our identity is established, the nature of the business explained and THE SATURDAY EVENING POST referred to; then Garvey's number is given; fortunately Garvey is at home; he remembers the name of the cornetist and the man himself very well. He says that the cornetist was William Disston, of Philadelphia, where his father was a skilled maker of cornets. William Disston and Garvey were together in many of the Charles Hoyt productions, notably The Milk White Flag, and Disston's singular skill as a cornetist, almost equaling that of the famous Jules Levy, got him his engagement along with Garvey in the Peter Dailey company referred to in which he was featured on the program and gave a cornet solo. Garvey remembers the night in question, although he doesn't remember the exact date. He and Disston left the theater together. Disston was a convivial person, and the company being that week in Providence, Rhode Island, Disston and Garvey went to the rooms of the Musicians' Union, where there were some beer and songs and music until a late hour. They then started to their home, but in order to do so were obliged to pass the office of the Providence Journal. In front of this building about a thousand men were gathered, watching the bulletins in the windows. As the last one appeared Disston took his cornet from its case.

McKinley's Death

My own relation to that occasion was this: I was in bed in the stately old Narragansett Hotel. The night was warm. Two windows of the room were open. At about three o'clock in the morning I was wakened by the sound of the cornet. It came over the night air, carrying the strains of that impressive old hymn, Nearer, My God, to Thee. It took a moment to recognize this, and then the expertness of the playing convinced me that the player was Disston. I got out of bed and leaned on the window sill. As the cornet began a repetition of the hymn it was joined by a male chorus of some thousand voices, and there plainly came the words: "E'en though it be a cross that raiseth me." I knew then that President William McKinley, who had lain wounded for a week in Buffalo, was dead. I was surprised as I listened to the finish of the hymn to find that my cheeks were wet with tears. Nearer, My God, to Thee had been a favorite hymn with my grandmother. My mind went back to her and the death of President Lincoln—to the tears, the solemnity of that tragic time—and, in the middle distance, Garfield.

Walter Wellman, famous journalist, wrote of that night in Buffalo, where in the Milburn residence President McKinley died: "In his last period of consciousness . . . the surgeons bent down to hear his words. He chanted the first line of his favorite hymn, Nearer, My God, to Thee. A little later he spoke again; Doctor Mann wrote the words down at the bedside, and the last conscious utterance of William McKinley was:

"'Good-by, all; good-by. It is God's way. His will be done.'

"The President soon afterward lapsed into unconsciousness, and did not rally again. The end came at 2:15 A.M., Saturday, September 14th."

Three Presidents of the United States had been killed by madmen. All three shots I heard.

Editor's Note—This is the tenth of a series of twelve articles by Mr. Thomas. The next will appear in an early issue.

BEING INCONSPICUOUSLY OUT OF STEP

To be with the crowd, yet not of it—is the unique faculty of a gentleman. Though he attire himself as becomes a gentleman, his garb is not a uniform that parades gentility. Nor is it raiment of a common mold. His selections elevate him above the populace, without isolating him from the public. His sense of refinement rebels at flamboyance while his inherent democracy shies at aloofness. So he affects in his habit, quiet dignity and sleek restraint.

To dress in tune with one's fellow men, yet to not play the same note, is the measure of finesse in matters of appearance.

Upon Hirsh, Wickwire, men have looked for years as the arbiter in clothes for gentlemen. Keen appreciation of good clothes enables Hirsh, Wickwire to display in the smartest men's shops a full array of ready-for-you clothes. The moderate prices are surprising in view of their excellence. Your request will bring a prompt reply telling where you may buy them.

How was she to know?

FINALLY he appeared one evening—the man who stirred her heart—the man, at last, who captured her instant interest.

All the rest had seemed only casual, arousing never a single, serious emotion.

But he seemed so different! The moment their eyes met there seemed to be an understanding. They felt drawn to one another.

Through a mutual friend an introduction was arranged. Then they danced.

But only one dance!

He thanked his partner and went his way. She saw no more of him. Why he lost interest was a mystery to her.

How was she to know?

* * * *

That so often is the insidious thing about halitosis (the scientific term for unpleasant breath). Rarely indeed can you detect halitosis yourself. And your most intimate friends will not speak of your trouble to you. The subject is too delicate.

Maybe halitosis is chronic with you, due to some deep-seated organic disorder. Then a doctor or dentist should be consulted. Usually, though, halitosis is only local and temporary. Then it yields quickly to the wonderfully effective antiseptic and deodorizing properties of Listerine.

Fastidious people prefer to be on the safe and polite side. They make Listerine a systematic part of their daily toilet routine—as a gargle and mouth wash.

It is so much easier to be comfortably assured your breath is sweet, fresh and clean; to know you are not offending your friends or those about you.

Start using Listerine today. Be in doubt no longer about your breath—Lambert Pharmacal Co., St. Louis, Mo.

For HALITOSIS use LISTERINE

THE INSIDE STORY OF THE A. E. F.

(Continued from Page 15)

"Up to this time," writes General Pershing in his Final Report, "our units had been put in here and there at critical points as emergency troops to stop the terrific German advance. In every trial, whether on the defensive or offensive, they had proved themselves equal to any troops in Europe."

A final great German offensive was expected, and the outlook appeared desperate for the Allies. The enemy soldiers had been assured by their leaders that this attack would conclude the war with a triumphant German peace, and they were proportionately eager. The German plans leaked out, however. Indeed, they were known to the French in such detail that they were able to check the advance after comparatively insignificant gains.

Among these gains was some ground east of Château-Thierry, where the French on the right of the American Third Division failed to hold and the Germans penetrated eight kilometers. But the commanding general of the Third reported: "Although the rush of the German troops overwhelmed some of the front-line positions, causing the infantry and machine-gun companies to suffer in some cases a 50 per cent loss, no German soldier crossed the road from Fossoy to Crezancy except as a prisoner of war, and by noon of the following day—July sixteenth—there were no Germans in the foreground of the Third Division sector except the dead."

General Pershing speaks highly of this exploit in his report: "On this occasion a single regiment of the Third Division wrote one of the most brilliant pages in our military annals. It prevented the crossing at certain points on its front, while on either flank the Germans who had gained a footing pressed forward. Our men, firing in three directions, met the German attacks with counter-attacks at critical points and succeeded in throwing two German divisions into complete confusion."

The Allies now determined to take the offensive. There were more than 1,200,000 American troops in France from which they could draw for reserves, and every American division with any sort of training at all was made ready for the battle.

The First Division had been in the Montdidier sector for a couple of months, enduring exceptionally heavy sustained artillery fire all the while. Their losses had been large; they had captured Cantigny; they had gone through several punishing gas attacks; they had had no rest. Yet, on the division being assembled near Beauvais after its relief, it was ordered toward the Soissons front and had to do the distance by forced marches.

On the Soissons Front

They marched day and night. Along forest roads choked with trucks and artillery and wagon trains and moving troops they toiled forward. Through the mud and the blackness of night—with bleeding feet, hungry, aching, so utterly exhausted that death would have been a joy, as bringing relief—they tramped toward the battle. Men groaned and whimpered with pain, but they kept on. When the column halted soldiers went to sleep standing up. Every now and then came the clash and clatter of a rifle on the ground—another doughboy had passed out. The column kept on. And when at long last they reached their destination those battered, wearied troops jumped off without a rest.

The Second Division went through similar experiences. They had been badly mauled in their memorable victory of Bois de Belleau; they had repelled a long series of German counter-attacks; they had just been relieved by the Twenty-sixth; but now they headed across many miles of country for more fighting. However, the Second would always go a long way to get a good fight.

To the Tenth French Army were allotted these critical operations. It had five corps in line, and General Mangin's attack orders made the Eighteenth Corps a pivot of maneuver on the Aisne west of Soissons. To the south was the First Corps, which was designated to seize and hold the plateau south of the Aisne commanding the approaches to Soissons. The Thirtieth Corps was to cross the Savières and attack in the direction of Fère-en-Tardenois. Next came the Eleventh Corps, to conform to the movements of the Thirtieth and connect with the Sixth French Army.

The Twentieth Corps drew the toughest job, and on its success hinged the whole attack. It was to drive a wedge in the German front, clearing the plateau northeast of Hartennes and holding the southern outlet of the Crise River valley. The Twentieth Corps was made up of three divisions—the crack First Moroccan, the First and Second American divisions. Owing to the greater size of our divisions, American troops thus made up four-fifths of the Twentieth Corps, which was the spearhead of the attack.

The troops were assembled under cover of the Foret de Retz. The country over which they had to fight their way was exceptionally difficult and hazardous—a bare, high plateau, sloping gradually up from the Foret de Retz and then abruptly dropping off into the Crise Valley; a country cut up by numerous deep ravines, each one protected by villages or farm buildings. On its eastern edge, where it fell off into the valley, were strong points like Villemontaire, the final defenses to the valley, and the Soissons-Château-Thierry road. As the houses of the villages and farms were mostly of stone, they afforded excellent cover to the enemy, and there were numerous quarries. All the open spaces were covered with standing grain.

The Turning of the Tide

Crowded into the salient to the south of the Twentieth Corps were more than twenty German divisions of the army of the Crown Prince—the German High Command had anticipated a deeper penetration than they achieved in their attack of July 15–16, and this congestion of divisions was to provide for a wide expansion of front, which never came.

Without the usual artillery preparation, but preceded by a barrage, the troops jumped off at 4:35 o'clock on the morning of July eighteenth. Tanks accompanied them and their onrush rapidly overcame the enemy's first resistance. His line soon stiffened, however, and although all objectives for the initial day were attained, the fighting became very severe.

The First American Division had barely got into position for the attack when it was time to go. They went at it hard—with such vigor that the One Hundred Fifty-third French Division, on their left, failed to keep abreast. The Moroccans, on their right, kept in close touch—there are no finer assault troops anywhere—but the absence of support on their left exposed the First American to a heavy flank fire. Nevertheless they captured their objectives.

The Second Division had a harassing experience—their last unit did not arrive until five minutes before the zero hour. Yet, utterly weary as they were, the Second attacked with such speed and power that they gained Vierzy before nightfall.

This deep penetration at their most sensitive point precipitated a general withdrawal of the Crown Prince's army from the salient.

On July nineteenth the German resistance proved much stronger as a result of their reserves coming into line, but by evening the line ran from just north of Ploisy, south through Chasalle and Tigny. In this day's fighting the First American Division repeated its experience of the previous morning, and the Second Division progressed beyond the troops both to left and right, including the Moroccan division. Consequently they went through a hell of fire to hold their advanced positions, and the Second's casualties totaled more than 4000 men; but they had captured 3000 prisoners and sixty-six pieces of artillery. This division was relieved after the second day.

A wedge was directed against Berzy-le-Sec on July twentieth, and the First American Division formed the apex of it. Berzy-le-Sec was a strong position dominating the surrounding country and had originally lain in the territory assigned to the One Hundred Fifty-third French Division, but that division couldn't make the grade, and its failure to advance resulted in this objective being allotted to the First.

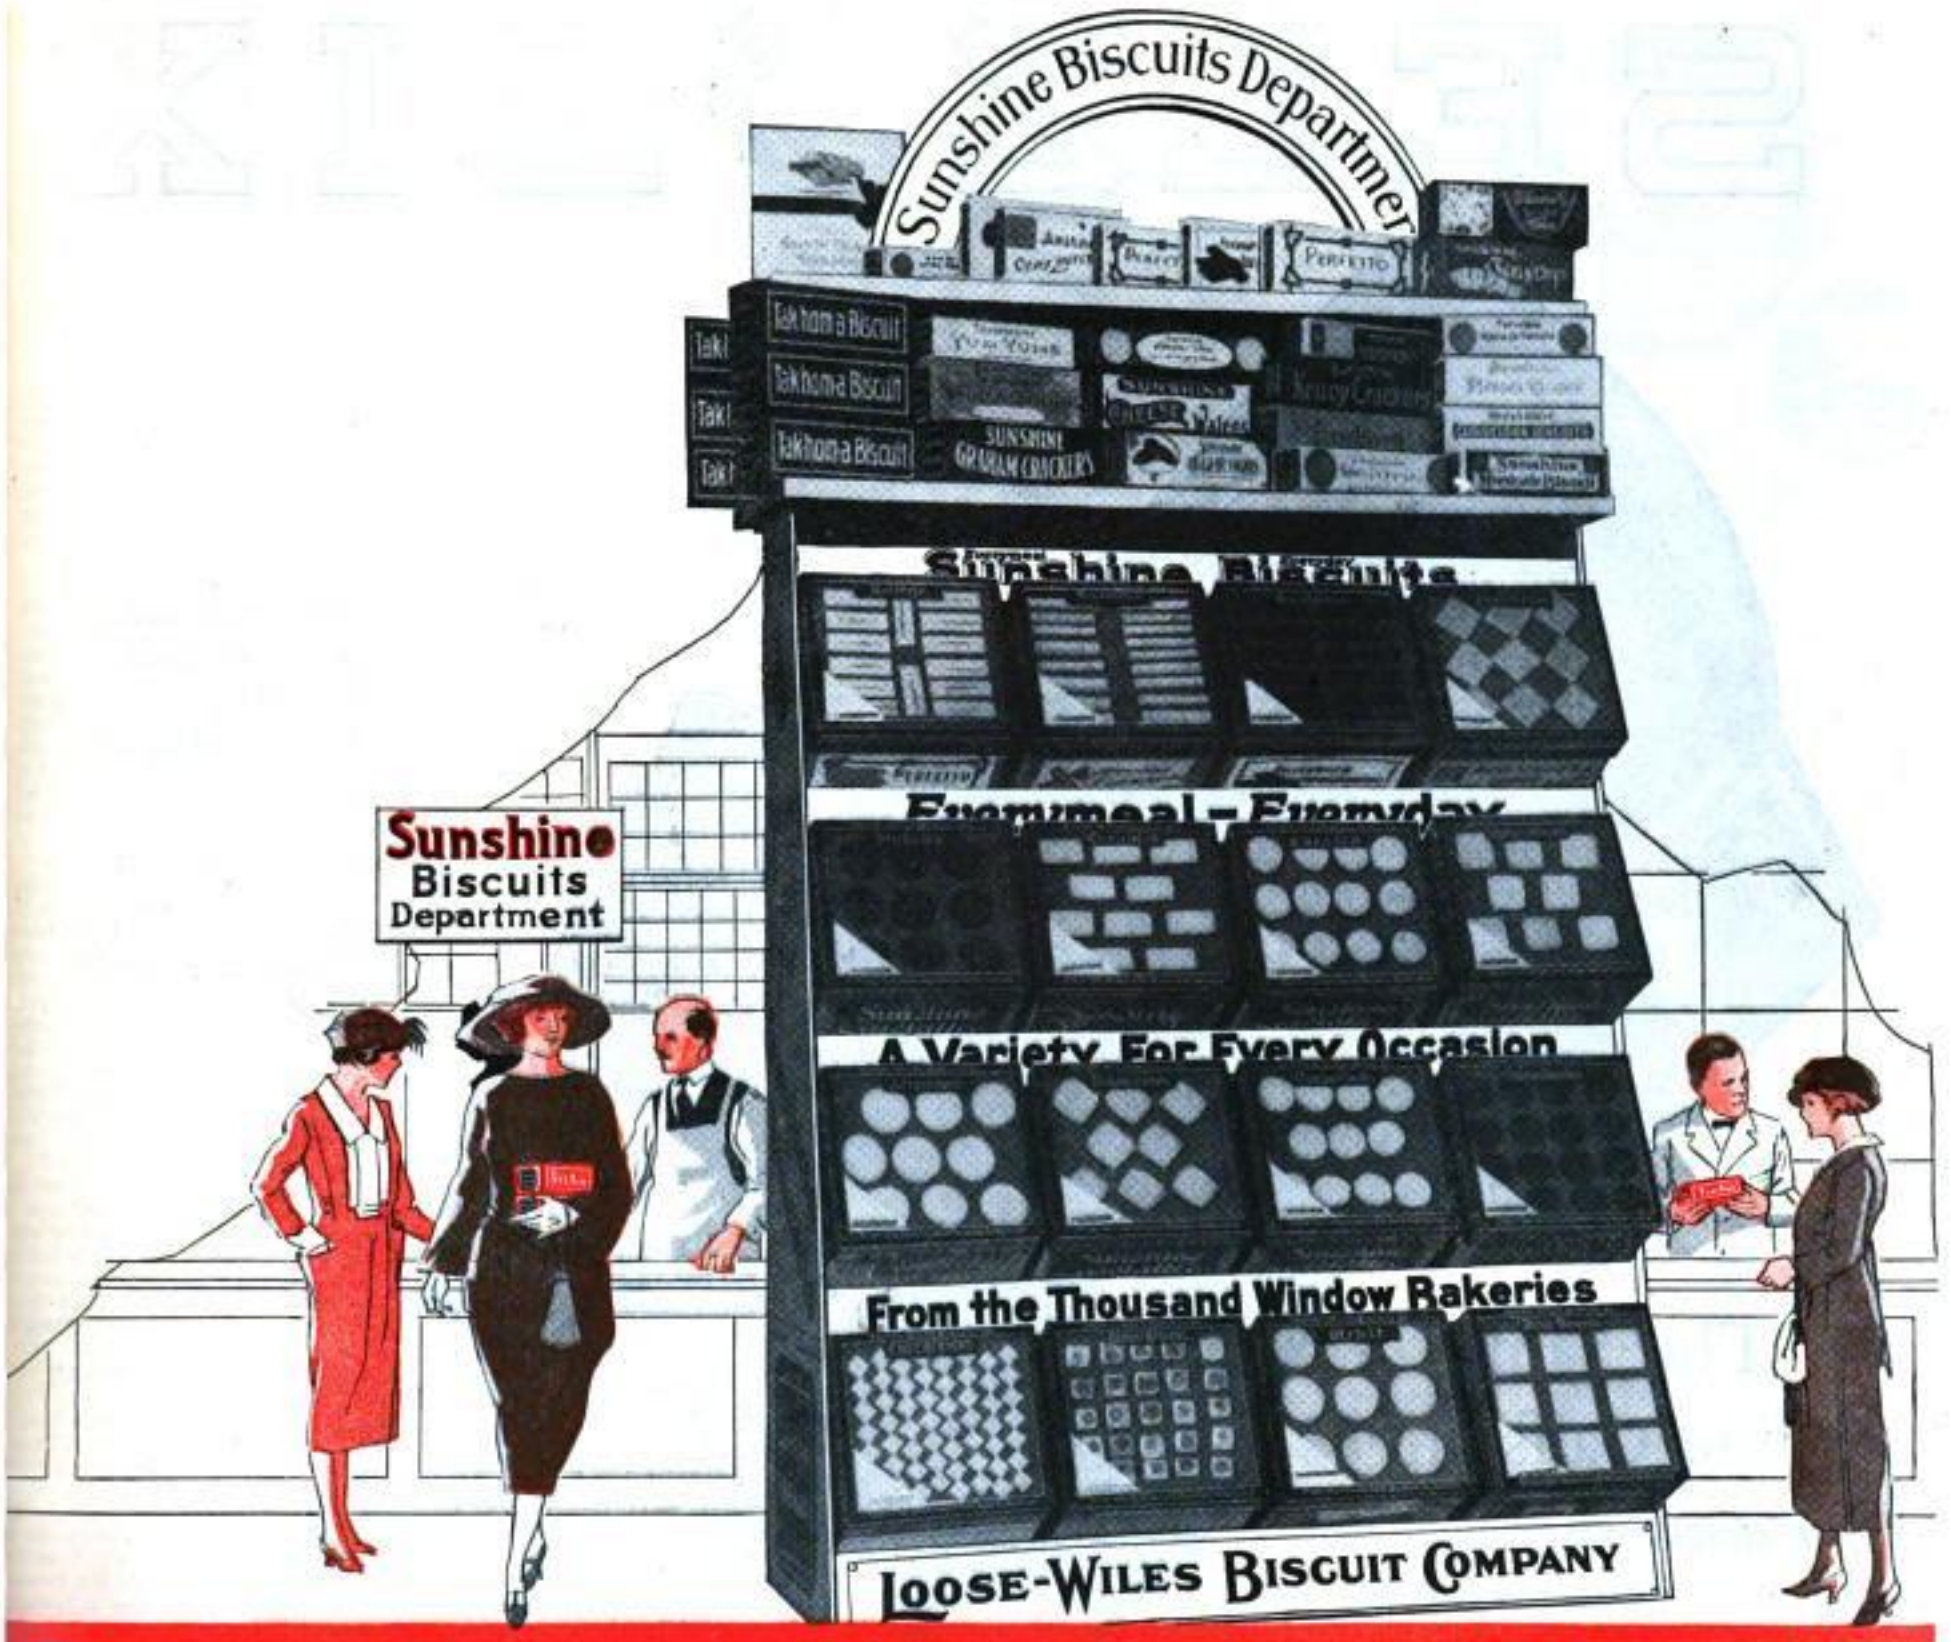
Once again the First and the Moroccans went forward together to substantial gains, but the troops on the left of the First were repulsed, leaving that flank entirely open. In this situation the One Hundred Fifty-third French Division was relieved the night of the twentieth and a new attack was launched at 4:45 on the morning of July twenty-first, and by 9:15 the final positions were carried, the most advanced being the Château of Buzancy, captured by a regiment of the First. Heavy fighting took place the next day, but there was no advance, and that night a crack Scottish division relieved the First.

The First Division emerged from the Battle of Soissons torn and bleeding, but covered with glory. It had suffered 8000 casualties, including 60 per cent of its infantry officers; but it had advanced eleven kilometers, captured 3500 prisoners and sixty-eight pieces of artillery. Among the prisoners were representatives from seven German divisions.

Other American units also participated in this general action—the infantry of the Fourth Division, which entered the fighting on the left wing of the Sixth French Army, and the Twenty-sixth Division, which attacked in the Bois de Belleau sector. Aside from the Twentieth Corps, the Tenth French Army made practically no advance. The only real penetration was achieved by the Twentieth Corps, composed of the Moroccans, the First and Second Americans.

Seldom in history has one day's fighting had the effect which the offensive of July eighteenth produced. The minds of the French had been filled with fears for Paris; now the Germans were withdrawing; the threat to the capital was removed; instantly their thought leaped to pushing the advantage. The change in morale simply cannot be measured in words. In a few hours the Allies passed from dark forebodings to confident exultation. The finest shock troops of the German armies had been overrun and captured in thousands; the same enemy divisions which had been battering their way toward Paris with minds aflame with victory were now doggedly fighting rearguard actions as they withdrew across the Marne; and the tremendous reserves the Crown Prince had gathered in the salient to exploit a decisive success were being hurried toward Soissons to stave off a general collapse, a catastrophe which would have made the French disaster at Sedan half a century earlier a mere trifle by comparison. It was the story of the First Battle of the Marne over again, but this time American troops had participated.

On top of this victory: "I have the honor to confirm to you my entire adhesion to the project of uniting in an army under American command those of your divisions whose state of instruction permits them to engage in the battle," wrote Foch on July twenty-second. "As we have agreed, this First Army will be formed in the region north of the Marne, around the nucleus already in this locality. . . . The sector extending from Nomeny to north of St.-Mihiel will be placed progressively under American command in the measure in which the units which can be sent there are available."



A Brightening Outlook

That these units would be available within a reasonable period looked very doubtful, however, for Foch went on to say that previous to this agreement General Petain had directed the Thirty-second American Division to the Tenth French Army, and he asked Pershing to accept this arrangement. When the American commander in chief grew urgent for more specific steps toward the formation of an army Foch replied: "I cannot fix a date on which the First American Army can be constituted."

The tide had turned at last. The Allies had seen defeat staring them in the face with all that defeat would entail from an implacable foe; and suddenly victory flashed into view as a reasonable certainty. From the depths of despair their morale soared to fine fighting pitch. On July twenty-fourth a memorandum was adopted at a meeting of the commanders in chief of the Allied Armies at Bombon: "We have reached an equality at least in the number of battalions, and in a more general way in the number of combatants. For the first time we have a superiority in

(Continued from Page 116)

reserves. Behind the Allied Armies the powerful reserve strength of America is pouring 250,000 men each month onto the soil of France.

"The Allied Armies are now arriving at the turn of the road; they have just taken the initiative in full combat; their strength permits them to keep it. The moment has come to abandon the general defensive attitude imposed up to this moment by numerical inferiority and to pass to the offensive."

"They have just taken the initiative in full combat." From this date until the end of the war no offensive where German resistance proved strong was undertaken by the French except when American troops were the head of the spear. Being incorporated in French armies, these divisions merged their identity in the Allied communiqués, but they were exceedingly prominent during the fight.

Telegram from Mr. Lloyd George to M. Clemenceau, dated August second: "I did not ask for the transfer of American divisions to the British front. The brilliant part taken by them in the second great Marne victory has more than justified the use General Foch made of them. What I asked was that a few American divisions at most, from among those recently arrived in France and who could not be put into the line without some training, should be sent to complete their training behind the British lines.

"My purpose was to form a reserve capable of being used in the critical situation of a break through in our front by the enemy. . . . I did not consider my demand excessive, for it must not be forgotten that the greater part of the American troops were brought to France by British shipping, and that because of the sacrifices made to furnish this shipping, our people has the right to expect that more than five divisions of the 28 American divisions now in France shall be put in training behind our lines.

"We are informed that a serious attack on the British front is still probable now. I do not wish to hamper you by asking for detailed explanations, but in the interests of that unity of command for which I made so great an effort, I urgently ask you to approve the very modest demand made by me from our commander-in-chief."

The First American Army

As Foch now had the means to undertake the offensive warfare he had always championed, a program of early operations was shaped: 1. Release of the Paris-Avricourt railroad in the Marne region. 2. Release of the Paris-Amiens road by a combined action of the British and French. 3. Release of the Paris-Avricourt railroad in the Commercy region by reducing the St.-Mihiel salient. This would bring the Allies within reach of the Briey region, enabling them to act on a large scale between the Meuse and Moselle. 4. Release of the mining regions in the north and to drive the enemy from the Dunkirk and Calais region.

"It was apparent that the emergency which justified the dispersion of our divisions had passed," General Pershing states in his Final Report. "The moment was propitious for assembling our divisions. Scattered as they were along the Allied front, their supply had become very difficult. From every point of view the immediate organization of an independent American force was indicated. The formation of the Army in the Château-Thierry region and its early transfer to the sector in the Woevre, which was to extend from Pagny, east of the Moselle, to north of St.-Mihiel, was therefore decided upon by Marshal Foch and myself on August 9." The First and Third Corps of the A. E. F. now held a continuous front of eleven kilometers along the Vesle, the first continuous front under American control—and this was in August of 1918! Until then all efforts by the American commander in chief to concentrate his forces had been frustrated. Even in July, when the Allied command sanctioned the formation of the First Corps in the Château-Thierry region, little was achieved in the way of practical results, because only one American division was operating under control of this corps, whereas eight American divisions were serving in the front line with French corps at the same time—about 40,000 men.

However, Pershing's persistence finally won, and the organization of the First American Army under his command was announced, with La Ferté-sous-Jouarre as headquarters. Though nominally assuming control of a portion of the Vesle front preparations were made for its secret concentration in the St.-Mihiel sector and plans were worked out for the reduction of this formidable German salient, a nut so tough that the French had abandoned all attempts to crack it.

At one stage of the preparations the St.-Mihiel operation had almost to be abandoned owing to Foch's request for American divisions destined for this attack for service with the French and British armies. The Allied commander in chief asked on August twenty-third for the Twenty-seventh and Thirtieth divisions to participate in an operation with the British, and for the Twenty-eighth, Thirty-second and Seventy-seventh divisions for the French armies.

Although this seemed to threaten the break-up of his newly formed Army, Pershing sanctioned the demand in part; but he suggested a substitution in the case of two of the divisions, and stipulated a fortnight's training for the Twenty-seventh and the Thirtieth.

Foch's disposition of American divisions led to another conference between him and Pershing at Ligny-en-Barrois on August thirtieth. General Weygand also was present.

Marshal Foch opened with the statement that the German Army was in complete disorder and no opportunity should be accorded them to reorganize. He announced the British proposed to attack in the direction of Cambrai and St. Quentin, while the French would continue their push in the vicinity of Mesnil.

As for the employment of the American forces he had plans which would have split them indefinitely. He proposed to fix American operations on the right of the Meuse to obtaining the line Vigneulles-Thiaucourt-Regnieville, which would disengage the Paris-Avricourt railroad; then he wanted four or six American divisions—180,000 men—to reënforce the Second French Army for an attack between the Meuse and the Argonne, and from eight to ten American divisions—300,000 men—for a French-American offensive from the Argonne to the Souain Road.

General Pershing remarked that this arrangement would cause a separation of the American forces. Some would be left in the Woevre; then there would be the Second French Army with some Americans on its left; then some more French; then some Americans on the Aisne, and once more the French. This dispersion, said Pershing emphatically, would destroy the project for which they had been working so long a time—an American Army.

Trying to Get a Sector

In reply, Marshal Foch said he had tried to see a way for bringing the American Army together, and he requested General Pershing to think the matter over; as for himself he had studied it very carefully and had sincerely sought for a means to avoid dividing the American Army, but he did not believe it could be found.

Pershing directed attention to the fact that Americans going to the Aisne would replace certain French divisions; why should not those French divisions take the place of the Americans who would be fighting in the French Second Army? Why should the Americans not take all the sector from the Meuse to the Argonne, thereby leaving troops of the French Second Army, which could then go to the aid of the French Fourth Army on the Aisne? The American commander in chief remarked that he did not want to appear difficult, but the American people and the American Government expected the American Army should act as such, and should not be dispersed here and there along the Western Front. Each time the Americans seemed on the point of accomplishing their organization some proposition was presented to break it up.

Marshal Foch asked: "Do you wish to go to the battle?"

Pershing replied, "Most assuredly! But as an American Army."

The Allied commander in chief said this arrangement would take a month, and they must act at once.

General Pershing replied that if Marshal Foch would give him a sector he would take it at once. Foch inquired where this sector would be.

"Wherever you designate," said Pershing.

The marshal observed that there were numberless details to be considered in this connection, and it was his opinion that the American Army would be in a bad plight if put all together without any assistance from the French.

Pershing answered that the French had always insisted the Americans should bring to France only infantry and machine-gun units, and that the French would equip them. This program had been followed at the repeated and most urgent insistence of the marshal himself, and the marshal had also promised to furnish these troops with what was necessary for their organization into American divisions. Now, said General Pershing, he demanded that the marshal fulfill his promise.

Foch declared the Allies must start the battle on September fifteenth; it was then August thirtieth; he was at General Pershing's disposition for consideration of any proposal—but they must act on September fifteenth.

Seizing this opportunity, Pershing stated he was ready to take all the divisions not needed in the Woevre and send them to the west of the Argonne as an American Army. He wanted all extra divisions put there. He did not approve of putting American divisions in the Second French Army.

"In that event," said Foch, "the French have not enough divisions to attack."

Pershing Stands Pat

Pershing said it was not difficult to send divisions from one army to another; this was what the marshal proposed for the American Army, and it would be just as simple to send part of the French Fourth Army to the aid of the French Second Army.

Foch objected. The Fourth Army could not furnish them.

General Pershing then proposed that the American Army be organized between the Meuse and the Argonne. Foch reminded him this was his first idea, but added that study of the project had convinced him it would be very difficult.

After some further discussion Pershing reiterated that the American people, the American Government, the Secretary of War and the President insisted the American Army should fight as such; that the Government, from the President down—and General Pershing himself—had been severely criticized for parceling out American troops among the Allies, and the President had sent a message to the embassies stating that the American forces must fight as an American Army.

General Pershing put these views into writing next day in a communication to the allied commander in chief in which he remarked that the American successes already obtained had far exceeded expectations when they made their arrangements in July; consequently—"There are a number of points which especially affect the American Army and which, I think, must be given the consideration which the American effort in this war warrants. The first of these relates to the method of employing the American forces.

"I can no longer agree to any plan which involves a dispersion of our units. . . . Briefly, American officers and soldiers alike are, after one experience, no longer willing to be incorporated in other armies even though such incorporation be by larger units. The older American divisions have encountered so much difficulty in their service with the French and British that it is inadvisable to consider the return of such divisions to French or British control. . . .

"It has been said that the American Army is a fiction and that it can not now be actually formed because it lacks artillery and services. Unfortunately this lack is evident. But our shortages in this respect are due to the fact that America brought over infantry and machine-gunners to the virtual exclusion of the services and auxiliaries. Permit me also to recall that when this decision was made, there was coupled with it a promise that the Allies would undertake to provide the necessary services and auxiliaries, and that you yourself have repeatedly guaranteed the formation of a real American Army.

"It seems to me that it is far more appropriate at the present moment for the Allies temporarily to furnish the American Army

Are You

World-Great Artists
now on
Double-Faced Records!

OF supreme importance to every family with a phonograph, is the recent decision of Brunswick to offer Standard Artists' numbers on double-faced records.

It marks the first step of Brunswick's nation-wide movement to place greatest artists and greatest music within the reach of every American home.

Brunswick Gold Label
Records!

JUST twice as much music as before! Two selections in place of one! An inexpensive way to quickly acquire a distinguished musical library. Start by obtaining three or four of these records from the new release each month.

Leopold Godowsky, Richard Strauss, Elly Ney, Giuseppe Danise, Mario Chamlee, Max Rosen, Bronislaw Huberman, Florence Easton, Tino Pattiera, Claire Dux, and other internationally acclaimed artists of the New Hall of Fame will contribute, continuously and exclusively, to the new Brunswick Gold Label Records. *Play on any phonograph.*

BRUN

PHONOGRAPHS

Digitized by Google

Guiding them, Mother,

to an intimacy with the great artists of Today?

—with Godowsky, Strauss, Chamlee, Easton, Danise, Huberman and the others upon whom the eyes of the musical world now are turned?

"IN selecting phonographic music for the home," recently said a world-noted educator, "parents should remember there is a *new* Hall of Fame of concert and operatic stars—great artists of today, succeeding those of yesterday.

"Chamlee, Danise, Easton, Dux, Pattiera, Huberman, Ney, Rosen, Godowsky, Richard Strauss—those are names coming most frequently from the pens of world's critics, both in Europe and America.

"To know them is to live in a world of musical art as it is today—to be familiar with current musical topics. Hence, one must view their recordings as indisputably essential to the modern musical education."

Play On Any Phonograph

YOU can now hear them in your own home, regardless of which make of phonograph you have. For all have chosen Brunswick as the most fitting means to perpetuate their art. And Brunswick Records can be played on *any* phonograph.

Thus the world's *de luxe* recordings, including those of the great Richard Strauss himself, are available to *every* home.

Note, too, that they come on *double-faced* records—a radical Brunswick departure, explained elsewhere on these pages.

Why Brunswick Was Chosen

BY means of exclusive methods of Recording and of Reproduction, Brunswick achieves perfect rendition of the so-called "difficult tones," reproducing even Soprano High C without "metallic" suggestion, discord or vibration!

For that reason, foremost living artists are now recording exclusively for Brunswick.

And for the same reason, you will find Brunswick in the homes of greatest musicians, both in this country and abroad.

Where To Hear Them

For a demonstration, at which you will not be urged to buy, call at your nearest Brunswick dealer's. The Brunswick plays all makes of records, and Brunswick records can be played on any phonograph. Hear, compare—then judge for yourself.

THE NEW HALL OF FAME
OF CONCERT AND OPERATIC STARS

RICHARD STRAUSS
Composer-Conductor

One of the triumvirate of greatest living composers, and the best known music writer in the world today. It remained for him to place the crowning emphasis of world's musical acceptance upon Brunswick, by choosing it as the most fitting means to perpetuate his own art. His recent recordings repay, in living tone inspirations, available to this and coming generations, the high honor and praise bestowed upon him by the music loving peoples of the world.

"Controlled Heat"

for the smallest home
for the biggest building

WHEN you enter a friend's home on a cold winter day, what is your first impression? Isn't it the *atmosphere?*

If it is comfortably warm there is a *coziness* and a *hospitality* that invites you to stay awhile.

Your friend also is cheerful and friendly because of the wholesome warmth you enjoy every minute of your stay.

But if the atmosphere is chilly your reception is chilly and your stay is a frigid and formal one of short duration.

Hoffman Controlled Heat means a cozy, comfortable heat that is always just right, every room just as the occupant of that room wants it, because Hoffman Controlled Heat is *Steam Radiator Heat* with the heat in the radiator controlled with *one finger.*

Just think of it—the *temperature* of *your room* under one finger control. Not too warm—not too cold and the pressure of one finger does it.

Baby's bath in the Nursery—temperature 80°. Living Room 70°. Bed Room 60°.

One finger does it.

That's Hoffman Controlled Heat—Comfort Heat.

The Hoffman "Watchman of the Coal Pile" goes right along with Hoffman Controlled Heat. He sees to it that you get full value for every pound of fuel burned.

But we have a booklet, "Controlled Heat," that tells you all about this Wonderful Hoffman Controlled Heat for big or little buildings. Just send a postal to our Waterbury Office and it will come to you free, in the following mail.

with the services and auxiliaries it needs than for the Allies to expect further delay in the formation of an American Army. I am writing faithfully my own ideas, which are those not only of every American officer and soldier, but also of my Government. . . . Since our arrival in France our plans, not only with the consent but at the initiative of the French authorities, have been based on the organization of the American Army on the front St.-Mihiel-Belfort.

"All our depots, hospitals, training areas and other installations are located with reference to this front, and a change of these plans cannot be easily made."

The American commander in chief then requested the return of the Twenty-seventh and Thirtieth divisions from the British front, and the Twenty-eighth, Seventy-seventh and Thirty-second divisions from the French; also the Sixth, Twenty-ninth, Ninety-second and Thirty-seventh from the French line for an operation toward Mezières suggested by Foch—a total of more than 270,000 men our Allies had borrowed—and suggested immediate concentration of all the American forces, with a sector from St.-Mihiel to the frontier of Switzerland.

"However, in your capacity as Allied commander in chief, it is your province to decide as to the strategy of operations, and I abide by your decisions."

The Belfort Ruse

"Finally, however, there is one thing that must not be done, and that is to disperse the American forces among the Allied armies; the danger of destroying by such dispersion the fine morale of the American soldier is too great, to say nothing of the results to be obtained by using the American Army as a whole. If you decide to utilize American forces in attacking in the direction of Mezières, I accept that decision, even though it complicates my supply system and the care of my sick and wounded; but I do insist that the American Army must be employed as a whole, either east of the Argonne or west of the Argonne, and not four or five divisions here and six or seven there."

This business was threshed out again at Bombon on September second, during a conference in which Foch, Pershing, Petain, Weygand, McAndrew and Connor participated, and it was then practically decided what disposition should be made for the St.-Mihiel operation and later for the one to the west of the Meuse. Foch wanted the St.-Mihiel attack carried out with reduced forces—it was to be an all-American attack—so that divisions would be available in requisite strength for the French-American offensive west of the Meuse. General Pershing opposed the proposal to undertake the reduction of the strong St.-Mihiel salient with an inadequate force, and this led to some warm discussion of what American forces were available in France. The marshal said there were twenty-two trained American divisions, out of a total of thirty American divisions already in France, and he suggested the use of eight or ten for St.-Mihiel about September tenth, leaving twelve or fourteen divisions for the Meuse operation. His expectation was, however, that fully twenty United States divisions would be available for the latter offensive.

Observing the French and English striving to gain the use of American troops, the Italians decided to try their luck too. Representations were made to Washington and all the political pressure they could bring to bear was exercised.

General Diaz supplemented this by a personal request to the American commander in chief.

General Pershing was in Paris, where he had had an interview with Lord Reading on September third, during which he explained to the British Ambassador to Washington his policy in regard to an American Army.

Then came General Diaz, who asked for twenty American divisions for employment with the Italian armies—about 800,000 men. A few minutes later General Diaz raised his figures—he asked for twenty-five divisions, or about 1,000,000 men. The American commander in chief evaded all discussion and remained strictly noncommittal.

All these matters were finally composed and preparations for the St.-Mihiel offensive went actively forward. Among these preparations was the famous Belfort ruse, whose utility has been so often a subject of debate.

General Petain wrote to the American commander in chief under date of August nineteenth: "I hear from everywhere, and especially from the armies and civil authorities of the east, that in their generous enthusiasm on account of the prospect of a great success over the enemy, numerous American officers and soldiers have talked in a public way of the projects of the High Command in the Woevre. . . . Under these conditions it is impossible that the enemy should not be forewarned, but we can attempt to deceive him. To this end, if you are in accord with me on this point, you could send American officers to make reconnaissances in the different sectors of Lorraine, of the Vosges, and of Upper Alsace, which are occupied by French troops. I would give to the Seventh and Eighth French Armies instructions which would lead them to believe that an offensive action by American forces is under consideration in these sectors. Thus the enemy's attention would be to a certain extent taken away from the Woevre."

Everybody had been talking, for that matter—the French engineers and trainmen who hauled American troops to the St.-Mihiel sector, the civil population of the towns this concentration embraced. Troops cannot be moved by the hundreds of thousands without exciting a lot of comment.

Thoroughly aware of this situation, General Pershing had already planned a subterfuge to be carried out in the vicinity of Belfort to neutralize the effect of these innocent indiscretions.

The American commander in chief replied to Petain: "The importance of the considerations which you have set forth relative to the necessity for secrecy in all operations had not escaped me. I keenly regret that indiscretions may have been committed, and I consider, with you, that we must attempt to deceive the enemy from the actual directions of the attack. I have given instructions with this in view to my General Staff."

Followed an elaborate preparation for operations in Upper Alsace. The commanding general of the American Sixth Corps received orders to proceed with as many members of his staff as he considered necessary to Belfort to prepare detailed plans for an offensive in that region. Mulhouse was named as the objective of the attack, and the front was to extend from Altkirch to Thann. "It is intended by the occupation of this line to insure the destruction of the Rhine bridges," said the orders, "and eventually to establish our line along the river itself."

The Indiscreet Officer

Seven divisions were designated for the first line, and three officers from each of these divisions were ordered to Belfort for the reconnaissance. "The work must be expedited, as it is desired that the attack be launched not later than September eighth." The last sentence of this order read: "You will, of course, appreciate the necessity for secrecy."

The officer courier to whom it was intrusted for transmission to its destination was told on leaving General Headquarters: "If you lose this, don't bother to return to these headquarters. Just keep on going." Yet an American officer did lose a copy of these instructions, and committed the indiscretion of talking about the projected attack. Court-martial proceedings were instituted against him, but he was never tried. Every attempt to convene a court was mysteriously frustrated and after the armistice the charge was dropped. It then became evident that his indiscretion formed part of the fake, but the other on the ground did not know it at the time and would certainly have given him a court had not General Headquarters thrown obstacles in the way.

The reconnaissance party went at their job conscientiously and made exhaustive reports of the enemy's positions, strength and so forth, and the probable requirements for a successful attack. Their orders were to examine all problems appertaining to exploitation of a successful attack, and they did it—did it thoroughly.

On the very day the St.-Mihiel attack was launched a report was submitted on the Belfort operation that went into details to the extent of submitting a bill

Digitized by Google

materials needed for the repair of a viaduct which could not be used by the American forces until the Germans were pushed back. The bill of material specified not only the lumber and iron needed, but also the number and size of bolts, nuts, and so forth, and called for "a liberal amount of track and trestle material to repair tracks behind the enemy's lines" after the Germans should have been forced to retreat. That reconnaissance party never contemplated failure, and planned their operations for a breakthrough to the last wheel and shovel. In view of their instructions, it was a highly creditable performance.

As to the results of this reconnaissance on the enemy, a staff officer reported on September first: "I believe, from all sources, that he is now fully acquainted with all that has been done here. The enemy's sources and channels of information from here via Switzerland are very numerous and take about two days for transmission. Various indiscretions have been committed, as was to be expected, which have made this information easy for him to secure. I do not believe, however, that the enemy takes this reconnaissance very seriously; he has too good a check on every carload and truckload of ammunition and supplies brought into Belfort, to be deceived by any mere 'paper-work' demonstration or reconnaissances of officers, unaccompanied by actual preparations of guns, munitions, material and subsistence. I might add that our own officers, both corps and division, have taken the work very seriously and have worked hard and in dead earnest. The French staffs have been very polite and helpful, but have given me the impression by their attitude of feeling: 'You Americans are very simple-minded indeed if you think you can fool either us or the Germans by any such game as this.'"

Howsoever this may have been, it seems reasonable to assume that the ruse gained some practical result, because on August twenty-eighth General von Gundell's German Army detachment numbered only eight divisions, on September eighth it had been increased to ten divisions, and a little later he had eleven divisions in this sector. So even though the Germans saw through the ruse they must have entertained sufficient doubts to prompt them to divert three divisions in order to play safe.

Editor's Note—This is the third of a series of articles by Mr. Pattullo. The next will appear in an early issue.

The Price of Coal

NATIONAL COAL ASSOCIATION
Commercial Bank Building
Washington, D. C.

J. D. A. Morrow
Vice-President

APRIL 3, 1922.

Editor, SATURDAY EVENING POST,
Independence Square,
Philadelphia, Pa.

DEAR SIR: In your issue of April 1, 1922, appears an article by Mr. Ellis Searles, editor of the United Mine Workers' Journal, entitled, The Coal Miners' Case. The third column of page 36 of that article contains the following statement:

The fact is the miner is the least to blame of all the factors of price. J. D. A. Morrow, vice president of the National Coal Association, of which organization two-thirds of the bituminous operators of the country are members, testified before the Interstate Commerce Commission a few weeks ago that the average retail selling price of bituminous coal throughout the United States in October, 1921, was $10.41 a ton. He testified, further, that the labor cost in the production of coal was $1.972 a ton. The total production cost, he said, including the labor cost, was $2.91. In other words, the mine workers received $1.972 as their pay for producing a ton of coal that sold at retail for $10.41.

I wish to engage in no controversy, but the foregoing is so grossly misleading and unfair to the producers and distributors of bituminous coal that I feel constrained to ask you to publish this letter as a correction.

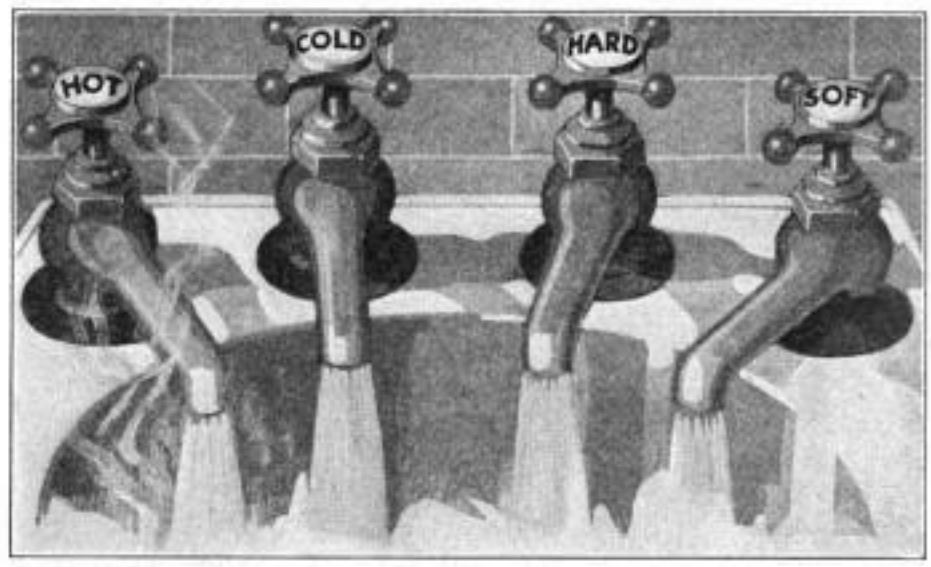
On March eleventh in a letter to John L. Lewis, president of the United Mine Workers of America, I called his attention to this misstatement of Mr. Searles, which had already been made public. My letter to Mr. Lewis read as follows:

I know you wish to quote sworn testimony accurately, and therefore wish to advise you that I made no statement that the average selling price of bituminous coal in the United States in October, 1921, was $10.41 per ton. The exhibit filed with the Interstate Commerce Commission, which represents the only information on this subject in our possession or known to the commission or anyone else, showed that the average price of bituminous coal f.o.b. mines, run of mine basis, for the seven months April to October, 1921, was $2.89, and that the miners received 67.8 per cent or $1.97 per ton out of the total cost of $2.91 for producing that coal. For the month of October, 1921, the average amount received per ton was $1.973 and the average cost per ton was $2.59. The same exhibit shows that in the month of November the average amount received was $1.967 and the average cost of producing that coal was $2.72. Similar figures for December show: Average price at which the coal was shipped $2.56. The average cost of producing was $2.91.

In view of the misleading and erroneous impression created by the statement of your organization, if the figures used therein are as I understand them to be, will you kindly see that a correction is published, which will accurately quote the testimony submitted to the Interstate Commerce Commission?

Mr. Lewis, under date of March sixteenth, replied as follows:

This will acknowledge receipt of your letter of March eleventh, requesting the correction of an alleged error appearing in a statement issued by the United Mine Workers of America quoting you as authority for certain figures.



I am requesting Mr. Ellis Searles, editor of the United Mine Workers' Journal, now in Washington, to give consideration to your request.

The National Coal Association, with which I am officially connected, is composed exclusively of coal mine operators. It has nothing to do with the retailing of coal and has no information about the retail prices of bituminous coal. It should be understood, however, that about 88 per cent of the total production of bituminous coal is bought in carload lots by the user and never passes through the hands of retail dealers. The cost to the consumer of nearly 90 per cent of the bituminous coal output therefore is simply the mine price plus the freight rate, which is paid by the consumer. While freight rates on bituminous coal range from a minimum of about 90 cents per ton to more than $7.00 per ton, George M. Shriver, vice president of the Baltimore & Ohio R. R. Co., testified before the Interstate Commerce Commission that the average freight charge from the mines to the point of consumption is $2.27 per ton. The average f.o.b. mine spot price for the last week of March was reported to be $2.05 per net ton. Thus, the total delivered cost to the consumer would average $4.32 per ton. The 12 per cent of the output which is used for domestic purposes necessarily is distributed at a higher cost to consumers because of the expense of retail handling.

Mr. Searles states in his article that the miner is the least to blame of all the factors of price, yet the present wage scale is the highest known to the history of coal mining in the United States. As a whole the bituminous coal industry to-day has no margin of profit which can be reduced to lower coal prices at the mines. The cost of supplies is decreasing. The Interstate Commerce Commission is now considering reductions in the freight rates on coal. The labor cost in the union fields is the single remaining item in the mine cost of bituminous coal which has not been deflated.

Yours very truly,
J. D. A. MORROW.

Use any kind of water with Williams' Shaving Stick

Some men have to use cold water for shaving, especially in Summer. Others prefer it. In some sections the water is hard. These conditions and many others were allowed for in determining the Williams' formula.

Use any kind of water with Williams' Stick. Use it your own way. Rub it in or not—just as you like. You are rule-free if the stick is Williams'.

See how quickly the Williams' lather forms and how it piles up on the face—how immediately it begins the work of softening the beard—how it softens the skin and prepares it for the razor. See how supple, smooth and refreshed the skin feels afterward. See how glove-like it remains all day.

A perfect soap in a perfect holder. Williams' Holder Top is the holder that *holds*—metal to metal. It cannot wobble loose. It cannot fall out.

When you're ready for a Re-Load, a push of the finger releases the wafer of soap from the patented ring. No jambing—no mushing of soap in the Williams' Holder Top. Williams' Re-Loads are instantly ready to insert and always cost you less than the complete package.

Send 10 Cents
for a trial length stick in a large, re-loadable box. For convenience use coupon below.

SETH THOMAS

Does your home run like clockwork?

OR is your schedule constantly spoiled by clocks that lose and must be set forward, or gain and must be set back?

Life is too short for such a needless annoyance. For a very little investment you can have your home run like clockwork—like Seth Thomas clockwork, which has meant accuracy for more than a century.

Ask your jeweler to-day to show you Seth Thomas Clocks. Their beauty speaks for itself; for their accuracy *he* can speak. He can direct you to friends in your neighborhood who have depended upon them a lifetime and find them still dependable after many years.

The perfect gift for Graduation, Wedding or Anniversary

One of many inexpensive, reliable Seth Thomas Tambour models, in cases that are an ornament to any room. 8-day movement; hour and half-hour strike; prices $20 to $30.

Above is one of fifteen Seth Thomas chime clocks, unexcelled anywhere. They chime quarter-hours and strike hour. $60 to $110.

An accurate, handsome clock on a mahogany bracket for any wall, $28 to $43. The candlesticks solid mahogany, colonial design, $11 to $13.

BUSINESS AS THE FARMER SEES IT

(Continued from Page 29)

Wherefore we arrive at the general principle that when wages are raised, then production must in some way or other be made to keep even pace with wage increases, else the additional earnings will be at once swallowed up by increased prices, and our scale of living may even be actually reduced under an era of advancing wages.

Russia played this game to the finish. As wages were forced up hours of labor were reduced, production declined and was gradually overtaken by increased demands on the part of those possessed of unaccustomed buying power, until money became worthless for the very good reason that nothing remained to be bought with it.

Nothing is clearer to the thinking man than the fact that we live by work and not by wages, and the corollary of this general proposition is that the way out for the laborer—and the only relief from high prices without a general lapse into a period of depression—lies not in higher wages and greater ease but in more work and in increased production—increased to the point at which, as he ought, the seller seeks the buyer. Then may the laborer hope to be able to buy his own product and pay for it, but not before.

Here also lies the economic consequence of standardizing to an eight-hour day, to a forty-four or a thirty-hour week, or even to a uniform rate of pay for all members of a given craft.

There is no such thing as a standard day. Eight hours is far too much for a day's work at certain kinds of employment, but in general it is not enough. The world was not brought to its present stage of development by any such fallacy as the notion that there is only so much to be done and therefore we must organize to make the work go around.

Our fathers worked as the farmer works. They, like him, followed the old-fashioned slogan "Make hay while the sun shines." The farmer learned long ago that if he ignored this law of Nature he would go without fodder, and he harbors no delusions about what constitutes a day's work when planting is to be done at critical and brief periods and harvests are to be gathered between showers.

Our fathers followed this same principle in developing this country, whether on the farm, in the shop or on the railroad grade, where with plow, teams and dump scrapers they laid most of the roadbeds of the United States after harvest and at other odd times and seasons, working as they did upon the farms from sun to sun. And they were vastly happier then in getting things done than are we, their descendants, who are more interested in wages than in results, and who came into the fruits of their labor as inheritance, yet are failing to reap the full benefits by reason of our foolish modern standards about work, based on the notion that labor is a curse to be avoided, not a privilege to be utilized.

Unnecessary Labor

Go anywhere over the country with the question, What are we doing with our inheritance? and the answer is that with all our modern improvements, the result of scientific knowledge and inventive genius, installed at enormous outlay of capital, yet in many points, as in railroading, we are barely keeping up repairs and making good the depreciation on improvements installed by our fathers in the days when labor meant work and men worked for what labor could achieve in tangible results, like clearings, ditches, railroad grades and private or public buildings.

The half day off has become a supposed necessity for everybody, young and old quite regardless of what is to be done at the time. Yet a half day off each week is a loss of over 8 per cent of the year, or a good round profit upon any enterprise, and this is of some consequence to the young fellow getting a start. Not only can, but the great mass of people would accomplish more and be better off physically as well as financially if they would work continuously for most of the year and only take time enough off to mean something, rather than to fritter away good hours week by week in ways that produce nothing notable and, as often as not, amount to little else than mild dissipation of time, which is the stuff that life is made of. Not only that, but men work easiest and most effectively when they keep themselves physically and mentally fit by working not half the time but every day. In this the writer speaks from long personal experience in physical labor, and as one who knows the workman's pace as compared with the injunction to keep moving.

Quite unmindful of the inevitable results, but with a perfectly laudable desire to help the under dog to make a living, industry everywhere has been burdened with a killing overload of unnecessary labor, those who made and enforced the rules not seeming to realize that the consequences, like everybody's chickens, will always come home to roost.

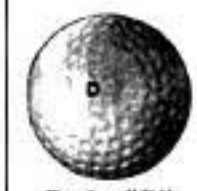
For example, when labor adopts rules requiring three men to do the work that could perfectly well be performed by two, the purpose is to provide the third man with a job by forcing the public to employ him. But the effect is to increase the cost of production 50 per cent at that point, or the equivalent of six or eight good profits. For this overload does not come out of the profits of the company, but is added to the production costs, and, being added at the very point of origin, it becomes at once a base for additional outlay and therefore profit on the part of every man who handles the product from factory on to consumer. In this way the initial overload in production becomes multiplied many times before it reaches the consumer. Therefore when the laborer goes into the retail market he often finds himself unable to buy his own product; nor will the remedy be found in higher wages. The remedy must be found in putting that third man at really useful and productive labor—that is, in making something else that the world wants, and enough of it to sell at a price that the world can afford to pay. It would be cheaper to support this third man by charity than as an idle wheel in industry, and not much more demoralizing to him.

A Blinded Policy

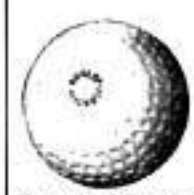
But this is not the full result of overloading with useless and nonproductive labor. The company probably has all it can do, especially in slack times, to get contracts in competition with the cheap labor of the world to keep the factory continuously busy and everybody employed. Clearly the business will fail to get contracts if it carries many of these useless overloads, and in proportion as it fails to sell its goods in the competitive markets of the world, in that proportion will all those men run the risk of being thrown out of employment by the necessary closing down of the factory.

And finally one of the results of pushing the campaign for increased wages to the upper limit of what can be forced from the industry is to secure such a real advantage over other forms of employment as to attract greater numbers to that particular job than can possibly be employed. The result is disastrous by producing an overload that of necessity throws a good part of the people out of employment.

The conspicuous example of this blinded policy at the present is the mining industry, in which the rates of pay have been forced to a figure so out of all proportion to the income enjoyed in neighboring enterprise—farming, for example, in the soft-coal region—that men have been drawn from the farms until crops have rotted for want of laborers to harvest them at the very moment when the mines were double manned and miners on half-time employment under conditions that made the consumer support two miners to do the work of one, and each at double wages, while both claimed to be on the verge of distress.



So again does the fallacy of overloading a productive industry defeat its own purpose, and miners went out on a nation-wide strike upon an issue that is economically impossible, especially when it is remembered that farmers in the same region are obliged to go without necessary labor in order to farm the land economically, and these same men, originally drawn from the land in many cases, refuse to work at anything like what the farmer can hope to get



A machine, capable of adjustment to any human stroke, governed by a falling weight (not a spring), with perfect "follow-thru" and exactly-measured force expended in each stroke.

The Serious Business of Making *Good* Golf Balls

Bedded in concrete on the grounds of Fort Dunlop, Birmingham, England, is a patented driving machine—one of the many devices used in maintaining and improving the qualities of Dunlop golf balls.

The ground in front of the driving machine is measured off in a manner similar to the field of a long-range gun. Accurate experiments, many times repeated, have given Dunlop engineers invaluable data on all the important things that affect the flight of golf balls—depth of markings, resiliencies of core and winding, arc-of-flight tendencies, distance factors and shape-retaining qualities.

Improved processes and long experience in the manufacture of golf balls have put into the Dunlop many extra items of *value* that benefit the player during all stages of the game. In price, the best grade of Dunlops is only slightly in excess of domestic brands and is less than most imported balls. The Dunlop *Warwick* (really much superior to the average ball) sells for 70c.

Dunlops can be obtained thru your usual source of supply. If you have any difficulty in obtaining them, we will appreciate it as a favor if you will write us direct. We'll do what we can to see that your needs are supplied.

THIRD OF NATIONAL SERIES

Friday Evening, May 19

CONN radio concerts have taken the nation by storm! Our programs of March 17 and April 14 by America's leading dance orchestras and nationally famed soloists have occasioned universal admiration for Conn enterprise.

Isham Jones, Joseph Smith, Frank Westphal, Hal Nichols, D. C. Rosebrook and their orchestras have already played; Benne Henton, Charles Randall, John Leick, Mabel Keith Leick and Fred Tait have given solos. More of their calibre are to appear.

Travelers on shipboard 1500 miles from the Atlantic and Pacific coasts, people in Northern Canada and in Central America will enjoy the same music which will be heard throughout the United States May 19.

Think of it—Conn Ltd. is entertaining people by wireless a quarter of the way around the globe

May 19 programs will be broadcasted from:

New York, Station WJZ; Pittsburgh, Station KDKA;
San Francisco, Station KDN; New Orleans, Station WAAB;
Detroit, Station WWJ; Denver, Station ZAF;
Chicago, Station KYW; Kansas City, Sweeney Station;
Seattle, Wash., Station KGB

Conn dealers are entertaining at radiophone concerts. Watch for local announcements.

Write to Conn Ltd. now for new saxophone book; FREE. Tells why the Conn is the world's finest, choice of the famous artists on the radio programs.

for his labor. Under these conditions it is economic suicide to declare industrial war under the slogan of "A living wage" from the standpoint of a double-manned industry loaded with idle ballast.

So insistent has organized labor been in getting a living wage, so sympathetic has the public been, so powerless the employer, and, until now, so insistent has the purchaser been to spend his money that the managers of our manufacturing, mining and transportation enterprises, rather than wrangle interminably over all these obstructions to business, have adopted quite generally the gentle art of passing it on to the consumer.

It has amounted to a kind of quasi conspiracy between labor and capital, and as long as prices were constantly rising the system was bound to work. As one contractor frankly expressed to his neighbor: "We don't care; we simply pass it on to you, the consumer, cost-plus fashion. You are the one that gets it in the neck. We are following the lines of peace and least resistance, and if anybody raises a rough-house you are the one that will have to do it."

And that is what the consumer is going to do, now that the period of deflation has set in and every value is shrinking upon the hands of every man that holds it even overnight or attempts to handle it in the ordinary way of trade. A third of our consumers are farmers, whose products enjoy no possibility of the overload that capital and organized labor have between them put upon almost every other form of enterprise, and this third is pretty well out of the markets until business, which is capital and labor combined, gets reasonable and unloads some of its unnecessary burdens.

Twin Follies at Work

This is one angle of the situation, and the other is that, outside of farmers, the great mass of the buying public is made up of the very same people whom we denominate as labor in all discussions concerning production. That is to say, to a very large extent the laborer is his own consumer, and when the employer seems to agree with him to pass it on to the consumer he is in reality tossing it back to the laborer, like two boys playing catch; only in this case the ball is a boomerang, for oftener than not the laborer meets his own product in the market and must needs turn his back upon it, which is but another way of saying that to this extent he is forced to destroy the market for the products of his own industry.

And that is the way in which these twin follies, "A living wage" and "Pass it on to the consumer," have operated to destroy some of our most important industries, and to cripple others, to the great distress of everybody in both cases.

For example, the building trades are practically extinct because capital will not invest at prohibitive costs, while rents are burdensome because of shortage of housing, and carpenters and masons and lathers and plasterers and plumbers walk the streets for odd jobs at common labor—skilled workmen who ought to be building homes at reasonable rates, as would be the case if everyone would work exactly as he would were he building a house for himself and needed to get it done before winter sets in, as was the case with our pioneer forefathers.

Transportation is absurdly overloaded, as any traveler can see who observes a maintenance-of-way gang as it keeps moving but accomplishes little else that is visible. It stirs a farmer all up on the inside to see such work and to know that he has to pay for it every time he markets a bushel of wheat or a pound of meat. It will stir everybody up when he comes fully to realize the way in which these matters turn the cheap wheat and cheap meat of the farm into expensive food for the laborer's table when all the chickens have come home to roost.

The burden of dead India is its caste system. How many know that it had its roots in craftsmen's guilds, and that, quite in addition to overload, we are sowing the seeds of it in this country every time a craftsman refuses to work without a helper, refuses to perform certain portions of his own trade because that belongs to the helper, or bends to rules that require him not to touch a saw, for example, if his union card reads "plumber"?

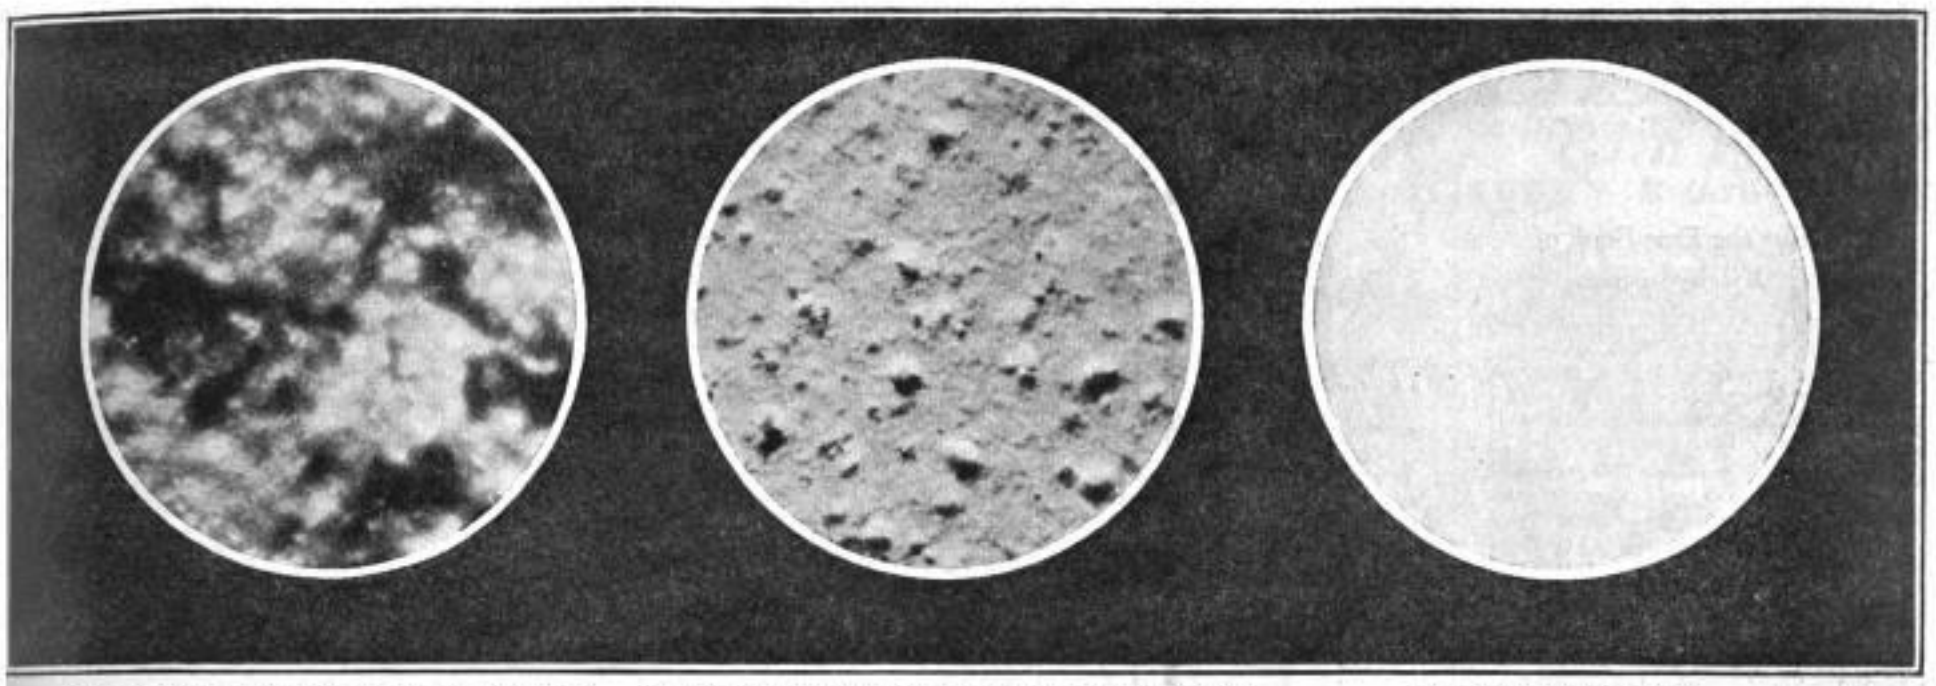
The Three Stonecutters

We talk about equality now, but these things cannot go on for many generations before they will pass from a financial and economic to a social and even religious demarcation between the various trades—castes—into which society will speedily become hopelessly stratified by the very influences now militantly operative.

It is a time to talk less about our rights and our liberties, and more about our responsibilities and our opportunities. It is a time for internal peace and for vision if our kind of civilization is to build a worthy structure on the foundation that has been so worthily laid, and we must stop talking so much about Washington and Lincoln until we set our industrial house so well in order that we can prove to ourselves at least that we are capable of governing ourselves and meeting our ordinary necessities. Then perhaps we shall be able really to take care of an advancing civilization.

A good deal is said by the agitator about industrial slavery. But is a man a slave simply because he is busy? Is the hunter after a good supper to be counted a slave? Are the birds building nests and the man building himself a home to be counted as slaves because they are working early and late? Is a farmer a slave to his job or to anybody when he is up early to plant while the season is on or wears out the daylight to harvest what his industry has produced? Is the wife a slave to her husband as she labors by his side, or to her children as she meets their multitudinous needs or watches all night by the bedside when the fever is on? Is anybody a slave when he works at a job he loves? No, there is the test. Do we love the job or hate it? Freedom and slavery lie not in the job, but in the attitude toward the job.

The story goes that three stonecutters were at work in the yards. The philosopher passed along and asked each the same question: What are you doing? "I'm gettin' seven dollars a day," replied the first. "I'm cutting this stone, as you see," replied the second. "We are building a cathedral," the third answered.



Which one of these three men will be most nearly typical of the American citizen one hundred years from now?

ORDINARY FLAT FINISH WHITE PAINT ORDINARY EGG-SHELL FINISH WHITE PAINT BARRELED SUNLIGHT

Paint surfaces photographed under a powerful microscope—each magnified to the same high degree.

Hidden from human eyes– revealed by the microscope

In the home of "Life Savers"
One of the many food product plants in which Barreled Sunlight keeps walls white and washable as tile

Hotel McAllister
Miami, Fla.
Where the lustrous washable surface of Barreled Sunlight has been found the most satisfactory coating for bathroom walls

A store interior that can be kept light and clean—painted with Barreled Sunlight

Save the surface and you save all

The real reason why paint collects dirt

The unusual photographs reproduced above reveal facts of vital importance to everyone who buys white paint for interior use.

They show clearly why ordinary flat or egg-shell finish white paints collect dust and dirt.

To the naked eye these paints present a smooth, even appearance. Under the high-power microscope they are shown to be rough to a startling degree. In every square inch of their surface are innumerable tiny pores.

That is why such paints catch and hold dust and dirt. That is why frequent repainting becomes necessary if a clean white appearance is to be maintained.

Notice in the third circle the photograph of Barreled Sunlight. Even when magnified to this high degree the surface of this paint is smooth and even.

This unbroken surface resists dirt—it offers no lodging place for dust particles. It can be washed clean like tile—even after years of service.

That is why Barreled Sunlight is being used today in buildings of every description—apartment houses, office buildings, stores, hotels, schools, industrial plants, etc. Ideal also for woodwork throughout the home and for the walls of bathroom, kitchen, laundry and closets.

Made by the exclusive Rice Process, Barreled Sunlight is guaranteed to remain white longer than any gloss paint or enamel applied under the same conditions. It is easy to apply. Flows readily and leaves no brush marks. Comes ready mixed in cans from half-pint to five-gallon size—barrels and half-barrels.

When painting over an unpainted surface use Barreled Sunlight Undercoat. If your dealer does not carry Barreled Sunlight, communicate with us for name of nearest distributor.

Is Your Kitchen Work Wearing You Out?

Actual tests prove that even in the so-called "modern" kitchen you take miles of useless steps each day.

You are forced to stand on your feet for hours—when you ought to be sitting down. Your nerves are kept on edge by a host of petty worries—when you ought to be enjoying yourself—relaxed—in an easy chair.

Hoosier Will Make Your Work Easier

Many HOOSIER owners tell us that while they thought they had "easy" kitchens before they bought the HOOSIER—they now see that they were actually wasting hours of time each day.

No woman can possibly realize the amount of useless standing, walking and lifting she is forced to do, until she actually uses the HOOSIER in her own home.

This statement is proved true by the two million women who formerly worked as hard as you do—but who have won freedom from their most trying kitchen drudgery by means of the HOOSIER.

There is No Substitute for the Hoosier

Do not make the mistake of thinking that built-in cases and cupboards can take the place of the HOOSIER. It is true that extra storage space is necessary in every kitchen—but built-in equipment is never so effective as when used in connection with the HOOSIER.

HOOSIER owners know that the HOOSIER will save more work and worry than any other kitchen equipment you could buy or build.

They know that the HOOSIER is equipped with *exclusive*, patented labor-saving conveniences—which can not be duplicated at any price. And that these conveniences enable you to do your work more quickly—and with less effort.

A Hoosier Model for Every Kitchen

No matter what kind of a kitchen you now have—there is a HOOSIER to fit it. Special HOOSIERS have been designed for the smallest kitchen of the coziest apartment. Some even fit in under the kitchen window. All will save work and worry—time and energy. Go to your HOOSIER dealer and select the HOOSIER which best fits your needs.

Buy the Hoosier on Liberal Terms —You'll Never Miss the Money

Why not join the ranks of the women who do their work the easy way? Quit being a kitchen drudge. You can afford the HOOSIER now. Every day you do without it, you pay an unnecessary toll in needless work and worry.

By our liberal payment plan HOOSIER pays for itself by making your work easier—long before you pay for it. Write for illustrated folder. Let us tell you how to get the HOOSIER on such liberal terms that you will never miss the money.

THE COVERED WAGON

(Continued from Page 21)

trail, down at Bridger? Had a new route over the Humboldt Basin been found, or something of that sort? How could that be? If so, it must be rough and needing work in places, else why the need for so many shovels?

But maybe the emigrants themselves knew about these singular matters, or would when they had read their letters. Yes, of course, the Missouri movers had left a lot of letters, some for their folks back East next year maybe, but some for people in the train. Banion, Woodhull—had they left any word? Why, yes, both of them. The trader smiled. One each. To the same person, yes. Well, lucky girl! But that black horse, now—the Nez Perces would give a hundred ponies for him. But he wouldn't trade. A sour young man. But Woodhull, now, the one with the wagons, talked more. And they each had left a letter for the same girl! And this was Miss Molly Wingate? Well, the trader did not blame them!

These American girls! They were like roses to the old traders, cast away this lifetime out here in the desert.

News? Why, yes, no train ever came through that did not bring news and get news at old Fort Hall—and so on.

The inclosure of the old adobe fur-trading post was thronged by the men and women of the Wingate train. Molly Wingate at first was not among them. She sat, chin on her hand, on a wagon tongue in the encampment, looking out over the blue-gray desert to the red-and-gold glory of the sinking sun. Her mother came to her and placed in her lap the two letters, stood watching her.

"One from each," said she sententiously, and turned away.

The girl's face paled as she opened the one she had felt sure would find her again, somewhere, somehow. It said:

Dearest: I write to Molly Wingate, because nd only because I know she still is Molly Wingate. It might be kinder to us both if I did ot write at all but went my way and left it all o time and silence. I found I could not.

There will be no other woman, in all my life, or me. I cannot lay any vow on you. If I ould, if I dared, I would say "Wait for a year, hile I pray for a year—and God help us oth."

As you know, I now have taken your advice. Bridger and I are joined for the California adventure. If the gold is there, as Carson thinks, may find more fortune than I have earned, fore than I could earn you gave me—when I as young. That was two months ago. Now am old.

Keep the news of the gold, if it can be kept, long as you can. No doubt it will spread om other sources, but so far as I know—and anks only to you—I am well ahead of any her adventurer from the East this season, d, as you know, winter soon will seal the trails gainst the followers. Next year, 1849, will the big rush, if it all does not flatten.

I can think of no one who can have shared r secret. Carson will be East by now, but he a government man, and close of mouth with angers. Bridger, I am sure—for the odd son that he worships you—will tell no one e, especially since he shares profits with me, I survive and succeed. One doubt only rests my mind. At his post I talked with Bridger, d he told me he had a few other bits of gold it Carson had given him at Laramie. He ked for them but had lost them. He sus- cted his Indian women, but he knew nothing. course, it would be one chance in a thousand d anyone would know the women had these ngs, and even so no one could tell where the d came from, because not even the women uld know that; not even Bridger does, ex- ly; not even I myself.

n general I am headed for the valley of the ramento. I shall work north. Why? Be- se that will be toward Oregon!

write as though I expected to see you again, hough I had a right to expect or hope for t. It is only the dead young man, Will ion, who unjustly and wrongly craves and out for the greatest of all fortune for a —who unfairly and wrongly writes you , when he ought to remember your word, to a land far from you, to forget you and e down his past. Ah, if I could! Ah, if I did love you!

ut being perhaps about to die, away from the truth only must be between you and And the truth is I never shall forget you. truth is I love you more than anything else everything else in all the world.

I were in other ways what the man of your se should be, would this truth have any ht with you? I do not know and I dare not Reason does tell me how selfish it would ask you to hold in your heart a memory ot a man. That is for me to do—to have mory, and not you. But my memory never ontent me.

It seems as though time had been invented so that, through all its aeons, our feet might run in search, one for the other—to meet, where? Well, we did meet—for one instant in the uncounted ages, there on the prairie. Well, if ever you do see me again you shall say whether I have been, indeed, tried by fire, and whether it has left me clean—whether I am a man and not a memory.

That I perhaps have been a thief, stealing what never could be mine, is my great agony now. But I love you. Good-by.

WILLIAM HAYS BANION.

TO MARGARET WINGATE,
Fort Hall, in Oregon.

For an hour Molly sat, and the sun sank. The light of the whole world died.

The other letter rested unopened until later, when she broke the seal and read by the light of a sagebrush fire. She frowned. Could it be that in the providence of God she once had been within one deliberate step of marrying Samuel Payson Woodhull?

Robert Kelsey

My Darling Molly: This I hope finds you well after the hard journey from Bridger to Hall.

They call it Cruel to keep a Secret from a Woman. If so, I have been Cruel, though only in Poor pay for your Cruelty to me. I have had a Secret—and this is it: I have left for California from this Point and shall not go to Oregon. I have learned of Gold in the State of California, and have departed to that State in the hope of early Success in Achieving a Fortune. So far as I know, I am the First to have this news of Gold, unless a certain man whose name and thought I execrate has by his Usual dishonesty fallen on the same information. If so, we two may meet where none can Interfear.

I do not know how long I may be in California, but be Sure I go for but the one purpose of amassing a Fortune for the Woman I love. I never have given you Up and never shall. Your Promise is mine and our Engagement never has been Broken, and the Mere fact that accident for the time Prevented our Nuptials by no means shall ever mean that we shall not find Happy Consumation of our most Cherished Desire at some later Time.

I confidently Hope to arrive in Oregon a rich man not later than one or two years from Now. Wait for me. I am mad with out you and shall count the Minutes until then when I can take you in my Arms and Kiss you a thousand Times. Forgive me; I have not Heretofore told you of these Plans, but it was best not and it was for You. Indeed you are so much in my Thought, my Darling, that each and Everything I do is for You and You only.

No more at present then, but should Opportuenity offer I shall get word to you addressed to Oregon City which your father said was his general Desstination, it being my own present purpose Ulltimately to engage in the Practice of law either at that Point or the settlement of Portland which I understand is not far Below. With my Means, we should soon be Handsomely Settled.

May God guard you on the Way Thither and believe me, Darling, with more Love than I shall be ever able to Tell and a Thousand Kisses. Your Affianced and Impatient Lover,

SAML PAYSON WOODHULL.

The little sagebrush fire flared up brightly for an instant as Molly Wingate dropped one of her letters on the embers.

XXXVII

"WHAT'S wrong with the people, Cale?" demanded Jesse Wingate of his stout-hearted associate, Caleb Price. The sun was two hours high, but not all the breakfast fires were going. Men were moody, truculent, taciturn, as they went about their duties.

Caleb Price bit into his yellow beard as he gazed down the irregular lines of the encampment.

"Do you want me to tell you the truth, Jesse?"

"Why, yes!"

"Well, then, it seems to me the truth is that this train has lost focus."

"I don't know what you mean."

"I don't know that I'm right—don't know I can make my guess plain. Of course, every day we lay up, the whole train goes to pieces. The thing to do is to go a little way each day—get into the habit. You can't wear out a road as long as this one by spurts—it's steady does it.

"But I don't think that's all. The main trouble is one that I don't like to hint to you, especially since none of us can help it."

"Out with it, Cale!"

"The trouble is, the people don't think they've got a leader."

Jesse Wingate colored above his beard.

"That's pretty hard," said he.

"I know it's hard, but I guess it's the truth. You and I and Hall and Kelsey—we're accepted as the chief council. But there are four of us, and all this country is new to all of us. The men now are like a bunch of cattle ready to stampede. They're nervous, ready to jump at anything. Wrong way, Jesse. They ought to be as steady as any of the trains that have gone across; 1843, when the Applegates crossed; 1846, when the Donners went—every year since. Our folks—well, if you ask me, I think they're scared."

"That's hard, Cale!"

"Yes, hard for me to say to you, with your wife sad and your girl just now able to sit up—yes, it's hard. Harder still since we both know it's your own personal matter—this quarrel of those two young men, which I don't need explain. That's at the bottom of the train's uneasiness."

"Well, they've both gone now."

"Yes, both. If half of the both were here now you'd see the people quiet. Oh, you can't explain leadership, Jesse! Some have it, most don't. He had. We know he had. I don't suppose many of those folks ever figured it out, or do now. But they'd fall in, not knowing why.

"As it is, I'll admit, there seems to be something in the air. They say birds know when an earthquake is coming. I feel uneasy myself, and don't know why. I started for Oregon. I don't know why. Do you suppose ——"

The speculations of either man ceased as both caught sight of a little dust cloud far off across the sage, steadily advancing down the slope.

"Hum! And who's that, Jesse?" commented the Ohio leader. "Get your big glass, Jesse."

Wingate went to his wagon and returned with the great telescope he sometimes used, emblem of his authority.

"One man, two packs," said he presently. "All alone so far as I can see. He's Western enough—some post trapper, I suppose. Rides like an Indian and dressed like one, but he's white, because he has a beard."

"Let me see." Price took the glass. "He looks familiar! See if you don't think it's Jim Bridger. What's he coming for—two hundred miles away from his own post?"

It was Jim Bridger, as the next hour proved, and why he came he himself was willing to explain after he had eaten and smoked.

"I camped twelve mile back," said he, "an' pushed in this mornin'. I jest had a idee I'd sornter over in here, see how ye was gittin' along. Is your hull train made here?"

"No," Wingate answered. "The Missouri wagons are ahead."

"Is Woodhull with ye?"

"No."

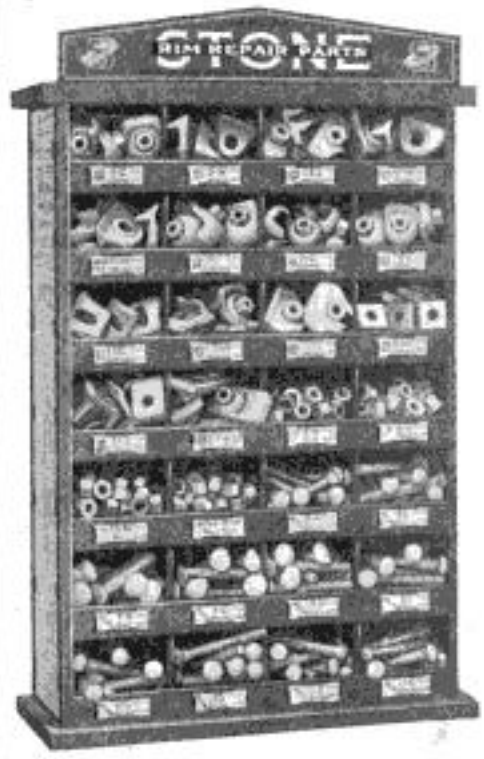
"Whar's he at?"

"We don't know. Major Banion and Jackson, with a half dozen packs, no wagons, have given up the trip. They've split off for California—left their wagons."

"And so has Sam Woodhull, huh?"

"We suppose so. That's the word. He took about fifteen wagons with him. That's why we look cut down."

"Rest of ye goin' on through, huh?"



"I am. I hope the others will."

"Hit's three days on to whar the road leaves for Californy—on the Raft River. Mebbe more'll leave ye thar, huh?"

"We don't know. We hope not. I hear the fords are bad, especially the crossing of the Snake. This is a big river. My people are uneasy about it."

"Yes, hit's bad enough, right often. Thar's falls in them cañons hundreds o'

STONE
Rim Parts
LUGS BOLTS NUTS

Here they are for YOUR car

Find the nearest accessory dealer who displays this Stone Cabinet. He will supply your every need in rim repairs—the lug, bolt or nut that fits right and tight on your rim—because it was made *for* that rim.

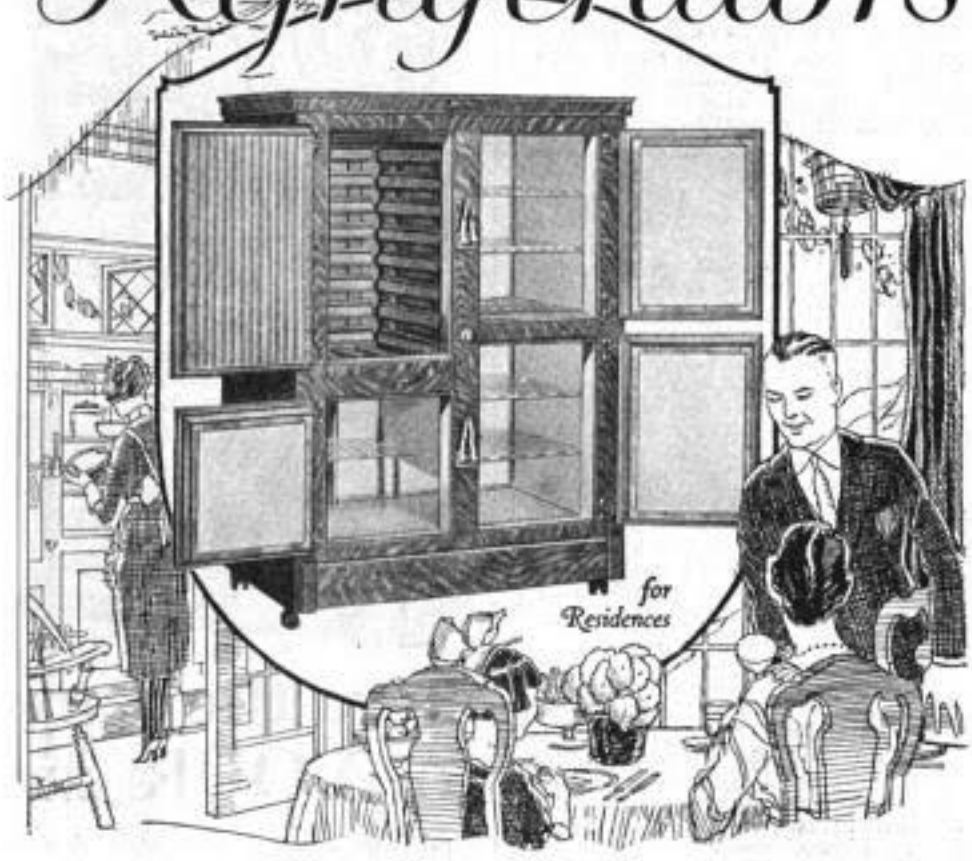
Don't wait until you *need* Stone Rim Parts. Always carry 6 Stone lugs, bolts and nuts; get them now. Be ready for emergencies.

Be sure to get STONE Rim Parts, at a cost of 5c to 30c each. Look for the GREEN Cabinet at your neighborhood accessory store.

In reliability, durability and fitting qualities Stone Rim Parts are supreme. Stone *oversize* lugs take up the wear-space—cure "squeaky" rims. All parts are galvanized malleable iron, smooth finished and *GUARANTEED.*

Dealers: *Get the handsome steel display cabinet, illustrated above. Get it FREE by ordering an assortment of Stone Rim Parts. Display board carrying smaller assortment also free. Write to your jobber for assortments and prices.*

STONE
Interchangeable
RIMS



Another Stone triumph! Changing tires is *easy* when your car is equipped with S. I. Rims. No loose parts. No hinged joints. Interchanges with 20 different makes and types of demountable rims. Dealers supplied through Jobbers.

feet high, makin' a roarin' ye kin hear forty mile, mebbe. The big ford's erroun' two hunderd mile ahead. That'd make me four hunderd mile away from home, an' four hunderd to ride back agin, huh? Is that fur enough fer a ol' man, with snow comin' on soon?"

"You don't mean you'd guide us on that far? What charge?"

"I come fer that, mainly. Charge ye? I won't charge ye nothin'. What do ye s'pose Jim Bridger'd care ef ye all was drownded in the Snake? Ain't thar plenty more pilgrims whar ye all come from? Won't they be out here next year, with money to spend with my pardner Vasquez an' me?"

"Then how could we pay you?"

"Ye kain't. Whar's Miss Molly?"

"You want to see her?"

"Yes, else why'd I ask?"

"Come," said Wingate, and led the way to Molly's little cart. The girl was startled when she saw the old scout, her wide eyes asking her question.

"Mornin', Miss Molly!" he began, his leathery face wrinkling in a smile. "Ye didn't expect me, an' I didn't neither. I'm glad ye're about well o' that arrer wound. I kerried a arrerhead under my shoulder blade sever'l years oncet, ontel Preacher Whitman cut hit out. It felt right crawly all the time till then.

"Yes, I jest sorntered up couple hunderd mile this mornin', Miss Molly, to see how ye all was gettin' along—one thing er another."

Without much regard to others, he now led Molly a little apart and seated her on the sage beside him.

"Will Banion and Bill Jackson has went on to Californy, Miss Molly," said he. "You know why."

Mollie nodded.

"You'd orto! You told him."

"Yes, I did."

"I know. Him an' me had a talk. Owin' you an' me all he'll ever make, he allowed to pay nothin'! Which is, admittin' he loves you, he don't take no advice, to finish that weddin' with another man substertuted. 'No,' says he, 'I kain't marry her, because I love her!' says he. Now, that's crazy. Somethin' deep under that, Miss Molly."

"Let's not talk about it, please."

"All right. Let's talk erbout Sam Woodhull, huh?"

"No!"

"Then mebbe I'd better be goin'. I know you don't want to talk erbout me!" His wrinkling smile said he had more to tell.

"Miss Molly," said he at last, "I mout as well tell ye. Sam Woodhull is on the way after Will Banion. He's like enough picked out a fine bunch o' horse thiefs to go erlong with him. He knows somethin' erbout the gold—I jest found out how.

"Ye see, some men ain't above shinin' up to a Injun womern even, such bein' mebbe lonesome. Sam Woodhull wasn't. He seed one o' my fam'ly wearin' a shiny thing on her neck. Hit were a piece o' gold Kit give me atter I give you mine. He trades the womern out o' her necklace—fer all o' two pesos, Mexican. But she not talkin' Missoury, an' him not talkin' Shoshone, they don't git fur on whar the gold come from.

"She done told him she got hit from me, but he don't say a word to me erbout that; he's too wise. But she did tell him how Will Banion gits some mules an' packs o' me. From then, plain guessin', he allows to watch Banion.

"My womern keeps sayin'—not meanin' no harm—thet thar's plenty more necklaces in Cal'for, because she's heard me an' Banion say that word, 'Californy.'

"Slim guessin' hit were, Miss Molly, but enough fer a man keen as Sam, that's not pertickler, neither. His plan was to watch whar the packs went. He knowed ef Banion went to Oregon he'd not use packs.

"Huh! Fine time he'll have, follerin' that boy an' them mules with wagons! I'm easier when I think o' that. Because, Miss Molly, ef them two does meet away from friends o' both thar's goin' to be trouble, an' trouble only o' one kind."

Again Molly Wingate nodded, pale and silent.

"Well, a man has to take keer o' his own self," went on Bridger. "But that ain't all ner most what brung me here."

"What was it then?" demanded Molly. "A long ride?"

"Yeh. Eight hunderd mile out an' back, ef I see ye across the Snake, like I allow I'd better do. I'm doin' hit fer you, Miss Molly. I'm ol' an' ye're young; I'm a wild man an' ye're one o' God's wimmin. But I had sisters oncet—white they was, like you. So the eight hunderd mile is light. But thet ain't why I come, neither, or all why, yit."

"What is it then you want to tell me? Is it about—him?"

Bridger nodded. "Yes. The only trouble is, I don't know what hit is."

"Now you're foolish!"

"Shore I am! Ef I had a few drinks o' good likker mebbe I'd be foolisher—er wiser. Leastways, I'd be more like I was when I plumb forgot what 'twas Kit Carson said to me when we was spreein' at Laramie. He had somethin' to do, somethin' he was goin' to do, somethin' I was to do fer him, er mebbe so, next season, atter he got East an' got things done he was goin' to do. Ye see, Kit's in the Army."

"Was it about—him?"

"That's what I kain't tell. I jest sorntered over here few hunderd mile to ask ye what ye s'pose it is that I've plumb fergot, me not havin' the same kind o' likker right now.

"When me an' Bill was havin' a few afore he left I was right on the p'int o' rememberin' what it was I was fergittin'. I don't make no doubt, ef Kit an' me er Bill an' me could only meet an' drink along day er so hit'd all come plain to me. But all by myself, an' sober, an' not sociable with Dang Yore Eyes jest now, I sw'ar, I kain't think o' nothin'. What's a girl's mind fer ef hit hain't to think o' things?"

"It was about—him? It was about Kit Carson, something he had—was it about the gold news?"

"Mebbe. I don't know."

"Did he—Mr. Banion—say anything?"

"Mostly erbout you, an' not much. He only said ef I ever got any mail to send it to the judge in the Willamette settlements."

"He does expect to come back to Oregon!"

"How can I tell? My belief, he'd better jump in the Percific Ocean. He's a damn fool, Miss Molly. Ef a man loves a womern, that's somethin' that never orto wait. Yit he goes teeterin' erroun' like he had from now to doomsday to marry the girl which he loves too much fer to marry her. That makes me sick. Yit he has resemblances to a man, too, some ways—faint resemblances, yes. Fer instance, I'll bet a gun flint these here people that's been hearin' erbout the ford o' the Snake'd be a hull lot gladder ef they knew Will Banion was erlong. Huh?"

Molly Wingate was looking far away, pondering many things.

"Well, anyways, hit's even Stephen fer them both two now," went on Bridger, "an' may God perteck the right an' the devil take the hin'mostest. They'll like enough both marry Injun wimmin an' settle down in Californy. Out o' sight, out o' mind. Love me little, love me long. Lord Lovell, he's mounted his milk-white steed. Farewell, sweet sir, partin' is such sweet sorrer, like ol' Cap'n Bonneville uster say. But o' all the messes any fool bunch o' pilgrims ever got inter, this is the worstest, an' hit couldn't be no worser.

"Now, Miss Molly, ye're a plumb disserpintment to me. I jest drapped in to see ef ye couldn't tell me what hit was Kit done told me. But ye kain't. Whar is yer boasted superiorness as a womern?

"But now, me, havin' did forty mile a day over that country yan, I need sustenance, an' I'm goin' to see ef ol' Cap' Grant, the post trader, has ary bit o' Hudson Bay rum left. Ef he has hit's mine, an' ef not, Jim Bridger's a liar, an' that I say deliberate. I'm goin' to try to git inter normal condition enough fer to remember a few plain, simple truths, seein' as you all kain't. Way hit is, this train's in a hell of a fix, an' hit couldn't be no worser."

XXXVIII

THE news of Jim Bridger's arrival, and the swift rumor that he would serve as pilot for the train over the dangerous portion of the route ahead, spread an instantaneous feeling of relief throughout the hesitant encampment at this, the last touch with civilization east of the destination. He paused briefly at one or another wagon after he had made his own animals comfortable, laughing and jesting in his own independent way, en route to fulfill his promise to himself regarding the trader's rum.

In most ways the old scout's wide experience gave his dicta value. In one assertion,

(Continued from Page 130)

however, he was wide of the truth, or short of it. So far from things being as bad as they could be, the rapid events of that same morning proved that still more confusion was to ensue, and that speedily.

There came riding into the post from the westward a little party of old-time mountain men, driving their near-spent mounts and packs at a speed unusual even in that land of vast distances. They were headed by a man well known in that vicinity who, though he had removed to California since the fur days, made annual pilgrimage to meet the emigrant trains at Fort Hall in order to do proselyting for California, extolling the virtues of that land and picturing in direct fashion the horrors of the road thence to Oregon and the worthlessness of Oregon if ever attained. Old Greenwood was the only name by which he was known. He was an old, old man, past eighty then, some said, with a deep blue eye, long white hair, a long and unkempt beard and a tongue of unparalleled profanity. He came in now, shouting and singing, as did the men of the mountains making the rendezvous in the old days.

"How, Greenwood? What brings ye here so late?" demanded his erstwhile crony, Jim Bridger, advancing, tin cup in hand, to meet him. "Light. Eat. Special, drink. How—to the old times!"

"Old times be damned!" exclaimed Old Greenwood. "These is new times."

He lifted from above the chafed hips of his trembling horse two sacks of something very heavy.

"How much is this worth to ye?" he demanded of Bridger and the trader. "Have ye any shovels? Have ye any picks? Have ye flour, meal, sugar—anything?"

"Gold!" exclaimed Jim Bridger. "Kit Carson did not lie! He never did!"

And they did not know how much this was worth. They had no scales for raw gold, nor any system of valuation for it. And they had no shovels and no pickaxes; and since the families had come they now had very little flour at Fort Hall.

But now they had the news! This was the greatest news that ever came to old Fort Hall—the greatest news America knew for many a year, or the world—the news of the great gold strikes in California.

Old Greenwood suddenly broke out, "Have we left the mines an' come this far fer nothin'? I tell ye, we must have supplies! A hundred dollars fer a pick! A hundred dollars fer a shovel! A hundred dollars fer a pair o' blankets! An ounce fer a box of sardines, damn ye! An ounce fer half a pound o' butter! A half ounce fer a aig! Anything ye like fer anything that's green! Three hundred fer a gallon o' likker! A ounce fer a box o' pills! Eight hundred fer a barrel o' flour! Same fer pork, same fer sugar, same fer coffee! Damn yer picayune hides, we'll show ye what prices is! What's money to us? We can git the pure gold that money's made out of, an' git it all we want! Hooray fer Californy!"

He broke into song. His comrades roared in Homeric chorus with him, passing from one to another of the current ditties of the mines. They declared in unison, "Old Grimes is dead, that good old man!" Then they swung off to yet another classic ballad:

There was an old woman who had three sons—
Joshua, James and John!
Josh got shot, and Jim got drowned,
And John got lost and never was found,
And that was the end of the woman's three sons,
Joshua, James and John.

Having finished the obsequies of the three sons, not once but many times, they went forward with yet another adaptation, allowing Old Greenwood, who stood with head thrown back and sang with tones of Hannibal:

Oh, then Susannah, don't you cry fer me!
I'm goin' to Californuah, with my wash pan on my knee.

The news of the gold was out! Bridger forgot his cups, forgot his friends, hurried to Molly Wingate's cart again.

"Hit's true, Miss Molly!" he cried—truer'n true hitself! Yan's men just in from Californy, an' they've got two horse-sacks o' gold, an' they say hit's nothin'—they come out fer supplies. They tried to git Will Banion—they did trade some with Woodhull. They're nigh to Humboldt by now an' goin' hard. Miss Molly, gal, he's in ahead o' the hull country, an' got six months by hisself! Lord give him luck! Hit'll be winter afore the men back East kin know. He's one year ahead—thanks to yer lie to me an' mine to Kit and Kit's to his general.

"Gold! Ye kain't hide hit an' ye kain't find hit an' ye kain't dig hit up an' ye kain't keep hit down. Miss Molly, gal, I like ye, but how I do wisht ye was a man, so's you an' me could celebrate this here, fitten!"

"Listen!" said the girl. "Our bugle! That's assembly!"

"Yes, they'll all be there. Come when ye kin. Hell's a poppin' now!"

The emigrants, indeed, deserted their wagons, gathering in front of the stockade group after group. There was a strange scene on the far-flung, unknown, fateful borderlands of the country Senator McDuffie but now had not valued at five dollars for the whole. All these now, halfway across, and with the ice and snow of winter cutting off pursuit for a year, had the great news which did not reach publication in the press of New York and Baltimore until September of 1848. It did not attain notice on the floor of Congress until December fifth of that year, although this was news that went to the very foundation of this republic, which, indeed, was to prove the means of the perpetuity of this republic.

The drunken hunters in their ragged wools, their stained skins, the emigrants in their motley garb—come this far they knew not why, since men will not admit of destiny in nations—also knew not that they were joying over the death of slavery and the life of the Union. They did not know that now, in a flash, all the old arguments and citations over slavery and secession were ancient and of no avail. The wagoners of the Sangamon, in Illinois, gathered here, roistering, did not know that they were dancing on the martyr's grave of Lincoln, or weaving him his crown, or buying shot and shell for him to win his grievous ordeal, brother against brother. Yet all those things were settled then, beyond that range of the Rockies which senators had said they would not spend a dollar to remove, "were they no more than ten feet high."

Even then the Rockies fell. Even then the great trains of the covered wagons, driven by men who never heard of destiny, achieved their places on the unwritten scroll of Time.

The newcomers from beyond the Sierras, crazed with their easy fortune, and now inflamed yet further by the fumes of alcohol, even magnified the truth, as it then seemed. They spent their dust by the handful. They asked for skillets, cooking pans, that they could wash more gold. They wanted saws, nails, axes, hammers, picks. They said they would use the wagon boxes for Long Toms. They said if men would unite in companies to dam and divert the California rivers they would lay bare ledges of broken gold which would need only scooping up. The miners would pay anything for labor in iron and wood. They would buy any food and all there was of it at a dollar a pound. They wanted pack horses to cross the Humboldt Desert loaded. They would pay any price for men to handle horses for a fast and steady flight.

Because, they said, there was no longer any use in measuring life by the old standards of value. Wages at four bits a day, a dollar a day, two dollars, the old prices—why, no man would work for a half hour for such return when any minute he might lift twenty dollars in the hollow of an iron spoon. Old Greenwood had panned his five hundred in a day. Men had taken two thousand—three—in a week; in a week, men, not in a year! There could be no wage scale at all. Labor was a thing gone by. Wealth, success, ease, luxury was at hand for the taking. What a man had dreamed for himself he now could have. He could overleap all the confining limits of his life, and, even if weak, witless, ignorant or in despair, throw all that aside in one vast bound into attainment and enjoyment.

Rich? Why should any man remain poor? Work? Why should work be known, save the labor of picking up pure gold—done, finished, delivered at hand to waiting and weary humanity? Human cravings could no longer exist. Human disappointment was a thing no more to be known. In California, just yonder, was gold, gold, gold! Do you mind—can you think of it, men? Gold, gold, gold! The sun had

Here, You're at Your Best

no matter what you wish to do

By a Traveler

A "Southern California Summer" is an experience that you, perhaps, have yet to enjoy. I have enjoyed many since I first heard of their almost unbelievable attractions. Ninety nights in June, July and August *under blankets* is the rule.

A friend once amazed me with that statement. I had never been to California. But I travel widely, and once went there—to see for myself.

I've spent seven summers there since then.

In no other land are there so many different diversions and strange sights. And nowhere else, it seems, do you *feel* as you do here.

You're at your best in golf and every other sport. It's in the air. And there's interesting change wherever you may turn.

Lunch on a great desert like Sahara. Dinner that evening in a famous restaurant in one of the world's large cities. The same evening, a visit to the seashore.

4,000 miles of paved highways, smooth as city streets, to take you to these places.

You fish in mountain lakes or streams, rest at mountain camps, ride horseback over wild trails, bathe at a seashore resort at the foot of a mountain range.

Such is this great summer playground from end to end.

Stupendous hundred-mile views are everywhere on clear days from many points.

And all these diversions within a radius of a hundred-mile drive over perfect roads.

Add these attractions to an ideal summer climate—warm days and nights that are *really cool* and you have not an imaginary summer wonderland, as this may seem, but one *in fact.*

Southern California is America's ideal summer as well as winter resort. Average mean temperature: June, 66 degrees; July, 70 degrees; August, 71 degrees; September, 69 degrees.—The 44-year record of the U. S. Weather Bureau.

Summer? An amazing summerland—you'll never spend a more delightful, restful, interesting summer anywhere. Best of all, you'll have this *complete change!* And in that feature is the *real value* of vacations.

Ask any railroad ticket office for further information, or mail coupon below.

Special, low-rate, round trip fares beginning May 15th—*No more War Tax.*

Plan now for this summer. Let the family have this great change and great trip.

End the

Re-pumping Nuisance!

Put on the new Trex Lock and pump your tires Only Once

All you need are your fingers, a small wrench and three minutes to attach a Trex Lock to your tire, and end the tire-pumping nuisance once for all.

ACTUAL SIZE

1. Positively locks the air in your tires; adds more mileage, through perfect inflation.
2. Eliminates trouble of re-pumping, and premature blow-outs due to rim cuts.
3. Fits any tire; any motorist can attach in three minutes.

Price $1 for each tire

You simply take out the ordinary valve insides and throw away. Then attach the Trex Lock onto the regular valve stem.

Many motorists think the old fashioned tire valve is "good enough"—until they figure up how much valuable time they waste week-in-and-week-out keeping the tires pumped—waiting in line for air—washing off the dirt and grease—and all the rest.

The Trex Lock means *full mileage* from every tire, with nothing to take care of. Fits any tire and is interchangeable; outlasts the car itself. All metal, double-locking the air passage; no rubber parts to rot or deteriorate. Needs no dust cap.

Displayed in our attractive orange and black boxes, each containing five locks, suitable for the four tires and spare tire on one motor car. Sold singly if you desire—only $1 for each tire. Backed by a guarantee.

Get a set for your car today. If your dealer has not yet put in his stock, write direct to us.

THE TREXLER COMPANY, Philadelphia, Pa.

Manufacturers of the famous Trex Tire Tool and other high-grade automotive products

AIR VALVE LOCK

arisen at last on the millennial day! Now might man be happy and grieve no more forever!

Arguments such as these did not lack and were not needed with the emigrants. It took but a leap to the last conclusion. Go to California? Why should they not go? Had it not been foreordained that they should get the news here, before it was too late? Fifty miles more and they had lost it. A week earlier and they would not have known it for a year. Go to Oregon and plow? Why not go to California and dig in a day what a plow would earn in a year?

Call it stubbornness or steadfastness, at last Jesse Wingate's strength of resolution now became manifest. At first almost alone, he stayed the stampede by holding out for Oregon in the council with his captains.

They stood near the Wingate wagon, the same which had carried him into Indiana, thence into Illinois, now this far on the long way to Oregon. Old and gray was Mary Ann, as he called his wagon, by now, the paint ground from felly, spoke and hub, the sides dust covered, the tilt disfigured and discolored. He gazed at the time-worn, sturdy frame with something akin to affection. The spokes were wedged to hold them tight, the rims were bound with hide, worn away at the edges where the tire gave no covering, the tires had been reset again and again. He shook the nearest wheel to test it.

"Yes," said he, "we all show wear. But I see little use in changing a plan once made in a man's best sober judgment. For me, I don't think all the world has been changed overnight."

"Oh, well, now," demanded Kelsey, his nomad Kentucky blood dominant, "no use holding to any plan just for sake of doing it. If something better comes, why not take it? That stands to reason. We all came out here to better ourselves. These men have done in six months what you and I might not do in ten years in Oregon.

"They'd guide us through to California, too," he went on. "We've no guide to Oregon."

Even Caleb Price nodded.

"They all say that the part from here on is the worst—drier and drier, and in places very rough. And the two fords of the Snake—well, I for one wish we were across them. That's a big river, and a bad one. And if we crossed the Blue Mountains all right, there's the Cascades, worse than the Blues, and no known trail for wagons."

"I may have to leave my wagons," said Jesse Wingate, "but if I do I aim to leave them as close to the Willamette Valley as I can. I came out to farm. I don't know California. How about you, Hall? What do your neighbors say?"

"Much as Price says. They're worn out and scared. They've been talking about the Snake crossings ever since we left the Soda Springs. Half want to switch for California. A good many others would like to go back home—if they thought they'd ever get there!"

"But we've got to decide," urged Wingate. "Can we count on thirty wagons to go through? Others have got through in a season, and so can we if we stick. Price?"

His hesitant glance at his staunch trail friend's face decided the latter.

"I'll stick for Oregon!" said Caleb Price. "I've got my wife and children along. I want my donation lands."

"You, Hall?"

"I'll go with you," said Hall, the third column leader, slowly. "Like to try a whirl in California, but if there's so much gold there, next year'll do. I want my lands."

"Why, there's almost ten thousand people in Oregon by now, or will be next year," argued Wingate. "It may get to be a territory—maybe not a state, but anyways a territory, some time. And it's free! Not like Texas and all this new Mexican land just coming in by the treaty. What do you say, finally, Kelsey?"

The latter chewed tobacco for some time.

"You put it to me hard to answer," said he. "Any one of us'd like to try California. It will open faster than Oregon if all this gold news is true. Maybe ten thousand people will come out next year, for all we know."

"Yes, with picks and shovels," said Jesse Wingate. "Did ever you see pick or shovel build a country? Did ever you see steel traps make or hold one? Oregon's ours because we went out five years ago with wagons and plows—we all know that. No, friends, waterways never held a country. No path ever held on a river—that's for exploring, not for farming. To hold a country you need wheels, you need a plow. I'm for Oregon!"

"You put it strong," admitted Kelsey. "But the only thing that holds me back from California is the promise we four made to each other when we started. Our train's fallen apart little by little. I'm ole Kaintucky. We don't rue back, and we keep our word. We four said we'd go through. I'll stand by that. I'm a man of my word."

Imperiously as though he were Pizarro's self, he drew a line in the dust of the trail.

"Who's for Oregon?" he shouted; again demanded, as silence fell, "This side for Oregon!"

And Kelsey of Kentucky, man of his word, turned the stampede definitely.

Wingate, his three friends; a little group, augmenting, crossed for Oregon. The women and the children stood aloof—sunbonneted women, brown, some with new-born trail babes in arms, silent as they always stood. Across from the Oregon band stood almost as many men, for the most part unmarried, who had not given hostages to fortune, and were resolved for California. A cheer arose from these.

"Who wants my plow?" demanded a stalwart farmer from Indiana, more than fifteen hundred miles from his last home. "I brung her this fur into this damned desert. I'll trade her for a shovel and make one more try for my folks back home."

He loosed the wires which had bound the implement to the tail of his wagon all these weary miles. It fell to the ground and he left it there.

"Do some thinking, men, before you count your gold and drop your plow. Gold don't last, but the soil does. Ahead of you is the Humboldt Desert. There's no good wagon road over the mountains if you get that far. The road down Mary's River is a real gamble with death. Men can go through and make roads—yes; but where are the women and the children to stay? Think twice, men, and more than twice!" Wingate spoke solemnly.

"Roll out! Roll out!" mocked the man who had abandoned his plow. "This way for Californy!"

The council ended in turmoil, where hitherto had been no more than a sedate daily system. Routine, become custom, gave way to restless movement, excited argument. Of all these hundreds now encamped on the sandy sagebrush plain in the high desert there was not an individual who was not affected in one way or another by the news from California, and in most cases it required some sort of personal decision, made practically upon the moment. Men argued with their wives heatedly; women gathered in groups, talking, weeping. The stoic calm of the trail was swept away in a sort of hysteria which seemed to upset all their world and all its old values.

Whether for Oregon or California, a revolution in prices was worked overnight for every purchase of supplies. Flour, horses, tools, everything merchantable, doubled and more than doubled. Some fifty wagons in all now formed train for California which, in addition to the long line of pack animals, left the Sangamon caravan, so called, at best little more than half what it had been the day before. The men without families made up most of the California train.

The agents for California, by force of habit, still went among the wagons and urged the old arguments against Oregon—the savage tribes on ahead, the forbidding desolation of the land, the vast and dangerous rivers, the certainty of starvation on the way, the risk of arriving after winter had set in on the Cascade Range—all matters of which they themselves spoke by hearsay. All the great West was then unknown. Moreover, Fort Hall was a natural division point, as quite often a third of the wagons of a train might be bound for California even before the discovery of gold. But Wingate and his associates felt that the Oregon immigration for that year, even handicapped as now, ultimately would run into thousands.

It was mid-morning of the next blazing day when he beckoned his men to him.

"Let's pull out," he said. "Why wait for the Californians to move? Bridger will go with us across the Snake. 'Twill only be the worse the longer we lie here, and our wagons are two weeks late now."

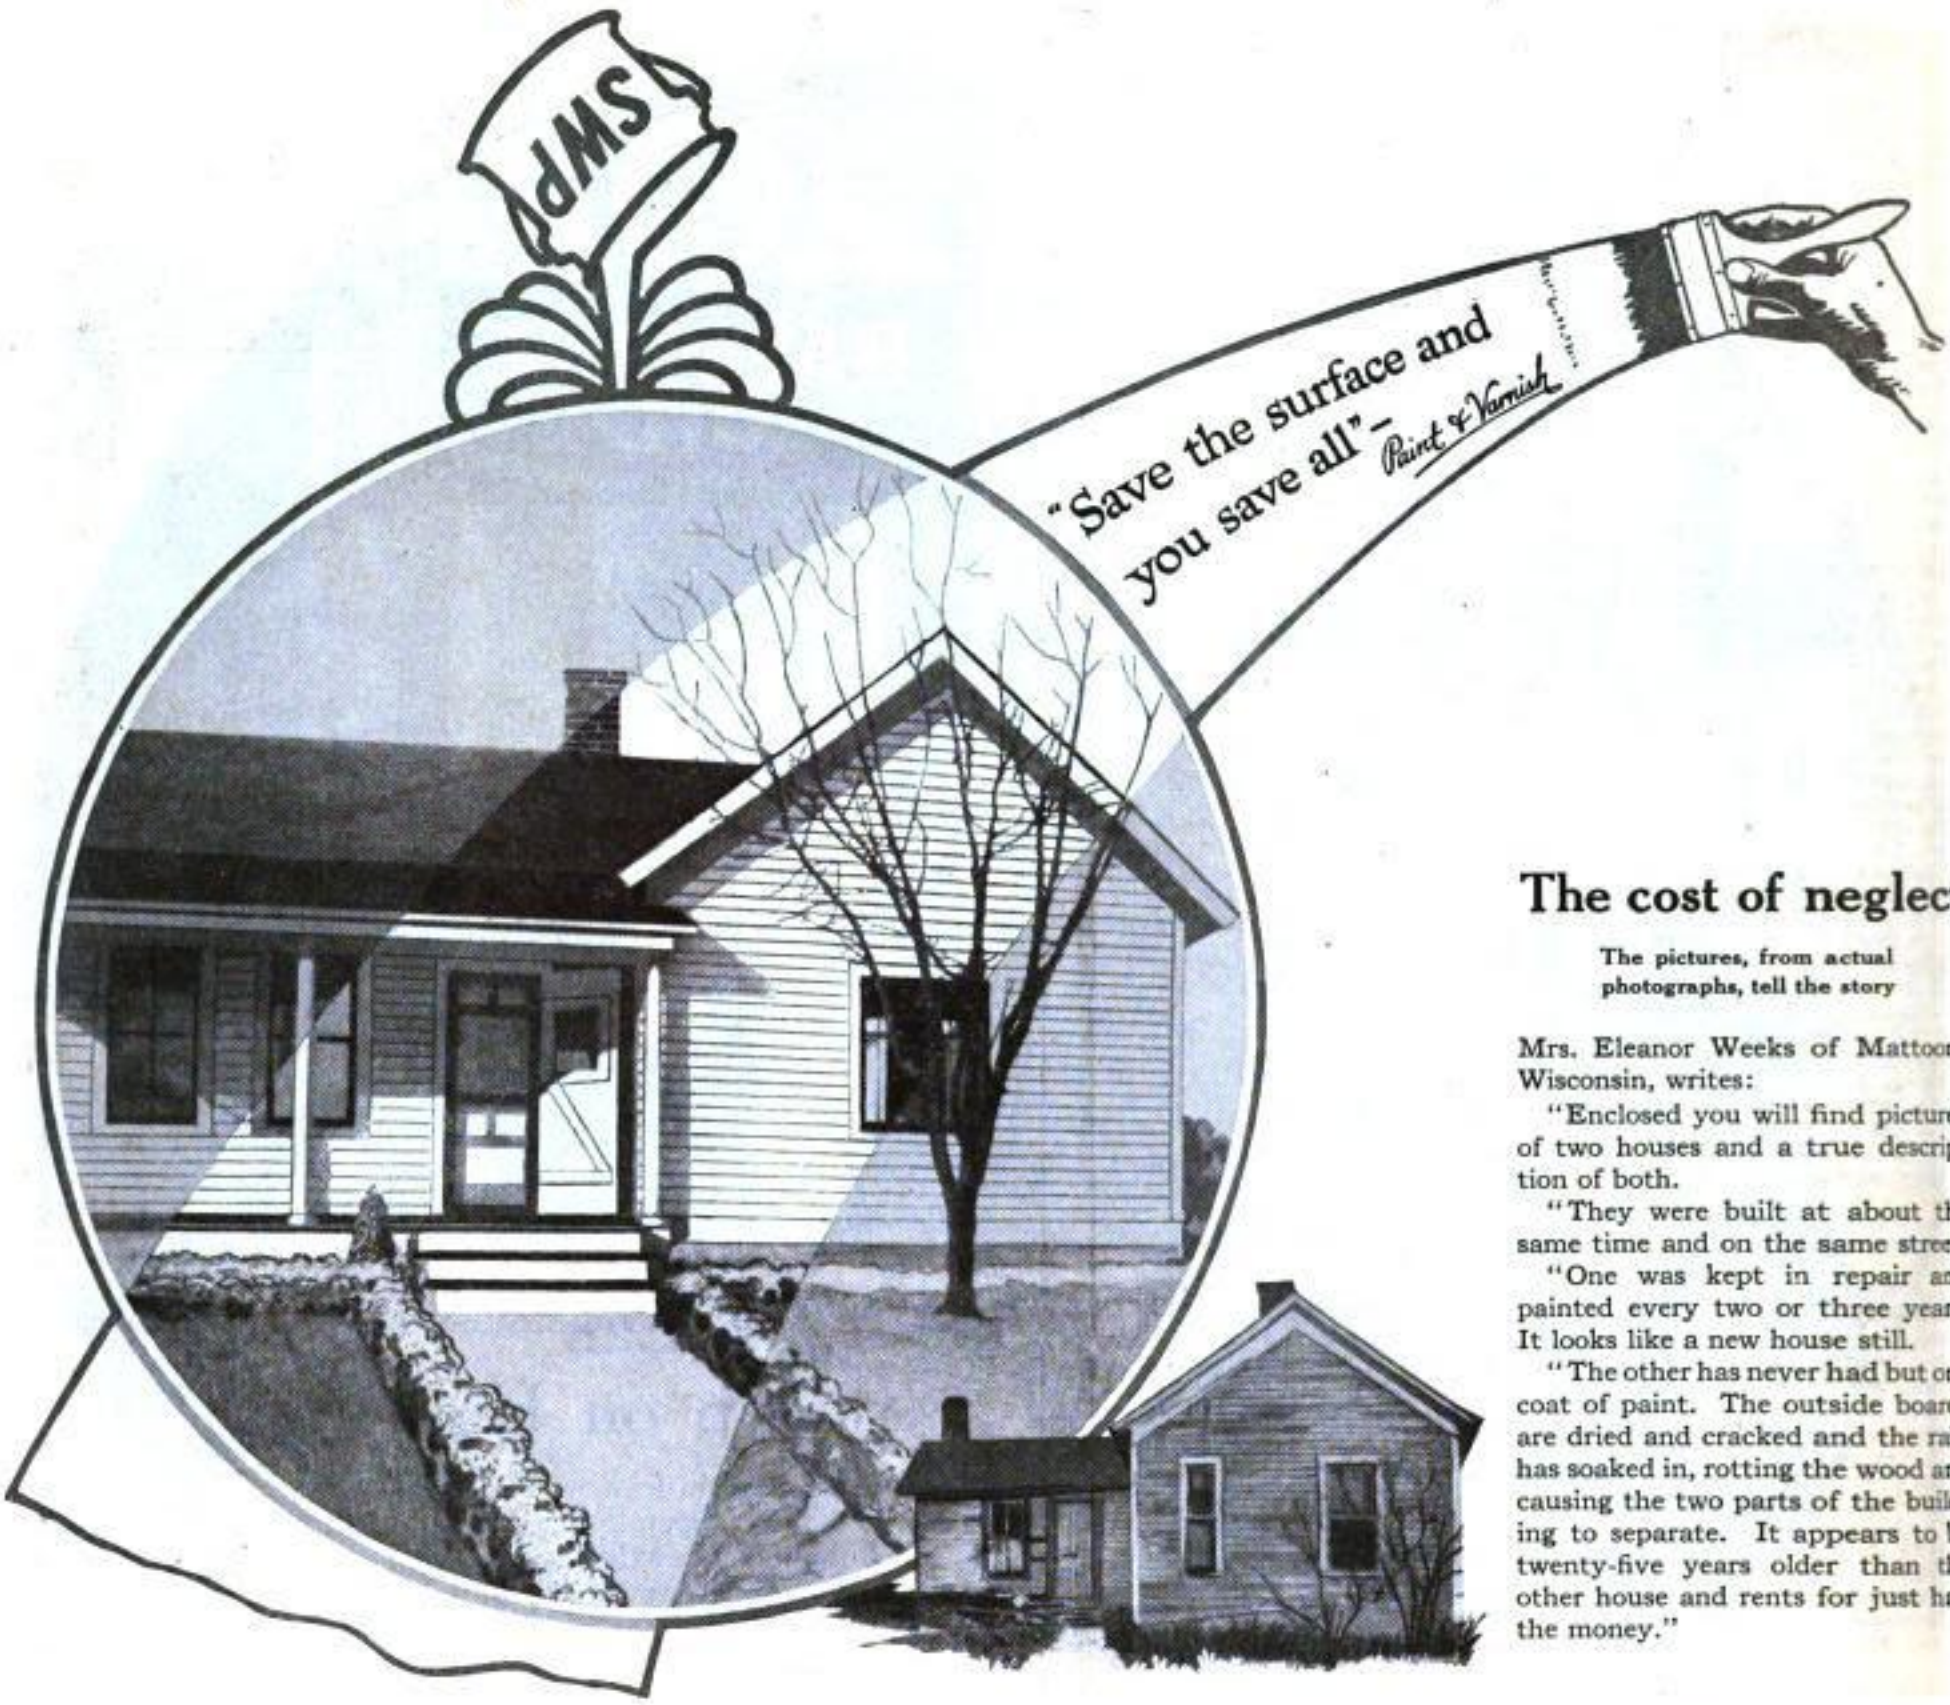
Bring Your Car Up on Havoline

The enjoyment you obtain from your *new* car when it has become an *old* car depends very largely upon the lubrication its motor receives during the first 500 miles of running. To insure a happy old age for the youngster, *feed it Havoline Oil and don't drive over 25 miles an hour.*

Havoline has been giving new cars a proper start in life since the days when side baskets were part of a car's necessary equipment. It has grown up with the automobile.



Havoline engineers have enjoyed the unique opportunity of studying problems of lubrication during the years in which the single cylinder motor has developed into the four, the six, twin six, and eight. That they have profited by the opportunity is attested by the unsurpassed quality of Havoline Oil. You can get no better lubricant for your car.

The better dealers throughout the country sell Havoline. You can buy it from the quart measure or can as you prefer. Look for the Havoline Sign. Ask for Havoline. There is a grade which will exactly meet the requirements of your motor.

The cost of neglect

The pictures, from actual photographs, tell the story

Mrs. Eleanor Weeks of Mattoon, Wisconsin, writes:

"Enclosed you will find pictures of two houses and a true description of both.

"They were built at about the same time and on the same street.

"One was kept in repair and painted every two or three years. It looks like a new house still.

"The other has never had but one coat of paint. The outside boards are dried and cracked and the rain has soaked in, rotting the wood and causing the two parts of the building to separate. It appears to be twenty-five years older than the other house and rents for just half the money."

You believe in paint—but *do* you paint?

YOU may intend to paint—later. The place looks pretty good yet, and you think another year won't matter.

But decay feeds upon the property of those who may believe in painting but who put off doing it. Paint saves the surface only when applied, and then only when it is the kind of paint that saves.

For every surface inside and outside your home there is a Sherwin-Williams finish—a paint, varnish, stain or enamel—that is made exactly right for such a surface. These finishes are scientifically made from pure materials and their reliability has been proved over a period of 55 years.

See the Sherwin-Williams dealer near you.

Send 50 cents (65 cents in Canada) for *The Home Painting Manual*, the most complete work on painting ever compiled. 170 pages of text; 27 color plate pages.

Sent Free.—Set of eight color plates, showing modern effects in interior decoration and attractive combinations for exterior painting. Address The Sherwin-Williams Co., 601 Canal Road, N.W., Cleveland, Ohio.

(Continued from Page 134)

The others agreed. But there was now little train organization. The old cheery call, "Catch up! Catch up!" was not heard. The group, the family, the individual now began to show again. But after their leaders came, one after another, rattling, faded wagons, until the dusty trail that led out across the sage flats had a tenancy stretched out for over a half mile, with yet other vehicles falling in behind. Silent and grim were young and old now over this last defection.

"About that old man Greenwood," said Molly Wingate to her daughter as they sat on the same jolting seat, "I don't know about him. I've saw elders in the church with whiskers as long and white as his'n, but you'd better watch your hog pen. For me, I believe he's a liar. It like enough is true he used to live back in the Rockies in Injun times, and he may be eighty-five years old, as he says, and California may have a wonderful climate, the way he says; but some things I can't believe.

"He says, now, he knows a man out in California, a Spanish man, who was two hundred and fifty years old, and he had quite a lot of money, gold and silver, he'd dug out of the mountains. Greenwood says he's known of gold and silver for years, himself. Well, this Spanish man had relatives that wanted his property, and he'd made a will and left it to them; but he wouldn't die, the climate was so good. So his folks allowed maybe if they sent him to Spain on a journey he'd die and then they'd get the property legal. So he went, and he did die; but he left orders for his body to be sent back to California to be buried. So when his body came they buried him in California, the way he asked—so Greenwood says.

"But did they get his property? Not at all! The old Spanish man, almost as soon as he was buried in California dirt, he came to life again! He's alive to-day out there, and this man Greenwood says he's a neighbor of his and he knows him well! Of course, if that's true you can believe almost anything about what a wonderful country California is. But for one, I ain't right sure. Maybe not everybody who goes to California is going to find a mountain of gold or live to be three hundred years old!

"But to think, Molly! Here you knew all this away back to Laramie! Well, if the scorah had started there 'stead of here there'd be dead people now back of us more'n there is now. That old man Bridger told you—why? And how could you keep the secret?"

"It was for Will," said Molly simply. "I had given him up. I told him to go to California and forget me, and to live things down. Don't chide me any more. I tried to marry the man you wanted me to marry. I'm tired. I'm going to Oregon—to forget. I'll teach school. I'll never, never marry—that's settled at last."

"You got a letter from Sam Woodhull to-day."

"Yes, I did."

"Huh! Does he call that settled? Is he going to California to forget you and live things down?"

"He says not. I don't care what he says."

"He'll be back."

"Spare his journey! It will do him no good. The Indian did me a kindness, I tell you!"

"Well, anyways, they're both off on the same journey now, and who knows what or which? They both may be three hundred years old before they find a mountain of gold. But to think—I had your chunk of gold right in my own hands, but didn't know it! The same gold my mother's wedding ring was made of, that was mine. It's right thin now, child. You could of made a dozen out of that lump, like enough."

"I'll never need one, mother," said Molly Wingate.

The girl, weeping, threw her arms about her mother's neck. "You ask why I kept a secret, even then. He kissed me, mother—and he was a thief!"

"Yes, I know. A man he just steals a girl's heart out through her lips. Yore paw done me that way with me once. Git up, there! You, Daisy!

"And from that time on," she added, laughing, "I been trying to forget him and live him down!"

XXXIX

THREE days out from Fort Hall the vanguard of the remnant of the train, less than a fourth of the original number, saw leaning against a gnarled sagebrush a box lid which had scrawled upon it in straggling letters one word—"California." Here now were to part the pick and the plow.

Jim Bridger, sitting his gaunt horse, rifle across saddle horn, halted for the head of the train to pull even with him.

"This here's Cassia Creek," said he. "Yan's the trail down Raft River to the Humboldt and acrost the Sierrys to California. A long, dry jump hit is, by all accounts. The Oregon road goes on down the Snake. Hit's longer, if not so dry."

Small invitation offered in the physical aspect of either path. The journey had become interminable. The unspeakable monotony, whose only variant was peril, had smothered the spark of hope and interest. The allurement of mystery had wholly lost its charm.

The train halted for some hours. Once more discussion rose.

"Last chance for California, men," said old Jim Bridger calmly. "Do-ee see the tracks? Here's Greenwood come in. Yan's where Woodhull's wagons left the road. Below that, one side, is the tracks o' Banion's mules.

"I wonder," he added, "why thar hain't ary letter left fer none o' us here at the forks o' the road."

He did not know that, left in a tin at the foot of the board sign certain days earlier, there had rested a letter addressed to Miss Molly Wingate. It never was to reach her. Sam Woodhull knew the reason why. Having opened it and read it, he had possessed himself of exacter knowledge than ever before of the relations of Banion and Molly Wingate. Bitter as had been his hatred before, it now was venomous. He lived thenceforth no more in hope of gold than of revenge.

The decision for or against California was something for serious weighing now at the last hour, and it affected the fortune and the future of every man, woman and child in all the train. Never a furrow was plowed in early Oregon but ran in bones and blood; and never a dollar was dug in gold in California—or ever gained in gold by any man—which did not cost two in something else but gold.

Twelve wagons pulled out of the trail silently, one after another, and took the winding trail that led to the left, to the west and south. Others watched them, tears in their eyes, for some were friends.

Alone on her cart seat, here at the fateful parting of the ways, Molly Wingate sat with a letter clasped in her hand, frank tears standing in her eyes. It was no new letter, but an old one. She pressed the pages to her heart, to her lips, held them out at arm's length before her in the direction of the far land which somewhere held its secrets.

"Oh, God keep you, Will!" she said in her heart, and almost audibly. "Oh, God give you fortune, Will, and bring you back to me!"

But the Oregon wagons closed up once more and held their way, the stop not being beyond one camp, for Bridger urged haste.

The caravan course now lay along the great valley of the Snake. The giant deeds of the river in its cañons they could only guess. They heard of tremendous falls, of gorges through which no boat could pass, vague rumors of days of earlier exploration; but they kept to the high plateaus, dipping down to the crossings of many sharp streams which in the first month of their journey they would have called impassable. It all took time. They were averaging now not twenty miles daily, but no more than half that, and the season was advancing. It was fall. Back home the wheat would be in stack, the edges of the corn would be seared with frost.

The vast abundance of game they had found all along now lacked. Some rabbits, a few sage grouse, nightly coyotes—that made all. The savages who now hung on their flanks lacked the stature and the brave trappings of the buffalo plainsmen. They lived on horse meat and salmon, so the rumor came. Now their environment took hold of the Pacific. They had left the East wholly behind.

On the salmon run they could count on food, not so good as the buffalo, but better than bacon grown soft and rusty. Changing, accepting, adjusting, prevailing, the wagons went on, day after day, fifty miles, a hundred, two hundred. But always a vague uneasiness pervaded. The crossing of the Snake lay on ahead. The moody river had cast upon them a feeling of awe.

They are not Keds unless the name Keds is on the shoe

One of the newest Keds for women and girls. White or colored trimming. Welt construction, composition sole.

Sturdy sport shoes, with or without heels. Heavy reinforcements and ankle patch. Smooth, corrugated or suction sole.

They not only brought comfort
—they created a new national habit

One of the most popular all-purpose Keds. For street, home, sport. High or low, sizes for everyone.

The pessimists said it couldn't be done, but facts show they were wrong! The big development of Keds, with a canvas rubber-soled shoe for everybody and for every need, has changed the summer footwear habits of a nation.

It is the most astonishing growth in the history of American footwear.

Light, cool, easy-fitting, Keds let feet cramped by months of stiff shoes return to their natural form and breathe. And then Keds have a snap in their lines and finish which makes them popular even on the verandas of exclusive clubs.

Why it will pay you to insist on Keds

Back of every pair of Keds are the skill and experience of the oldest and largest rubber organization in the world—growers, manufacturers and distributors of rubber and its products.

Uppers of fine white or colored canvas—soles of tough, springy rubber from our own Sumatra plantations—Keds make you proud of their appearance as well as enthusiastic about their comfort and wear.

There are many different kinds of Keds—high and low, plain and athletic-trimmed—styles for outdoors, for home, for every kind of sport.

You can get the kind you wish at your dealer's. If he hasn't them, he will get them for you. But remember, Keds are made only by the United States Rubber Company. If the name Keds isn't on the shoes, they aren't real Keds.

United States Rubber Company

Keds

Trademark Reg. U. S. Pat. Off.

Keds were originated and are made only by the United States Rubber Company. The name Keds is on every pair. It is your guarantee of quality and value.

"Clean Hands in Business"

It is Thirsty Fibre (millions of him in each ScotTissue Towel) who absorbs four times his weight in water and who is responsible for that essential, thirsty, absorbing quality that instantly absorbs the moisture from your hands and face. No other towel is like ScotTissue.

PHYSICALLY clean hands have always been associated with the thought of morally clean ones and the Scott Paper Company has devoted years to making physically clean hands easier to attain.

ScotTissue Towels are synonymous with cleanliness. The drying qualities of ScotTissue have been accomplished through Thirsty Fibre—the medium that gives ScotTissue and ScotTissue Towels alone that most distinctive, thirsty, absorbent characteristic so essential to a real drying towel.

Aside from its great drying power, you can be sure of a genuine ScotTissue Towel only by the imprint of the word SCOTTISSUE on every ScotTissue Towel. If the towel you use is not imprinted SCOTTISSUE, it is not genuine.

Thirsty Fibre—His Biography, a delightful booklet, will be sent free to all who ask for it.

Around the sage fires at night the families talked of little else but the ford of the Snake, two days beyond the Salmon Falls.

It was morning when the wagons, well drawn together now, at last turned down the precipitous decline which took them from the high plateau to the water level. Here a halt was called. Bridger took full charge. The formidable enterprise confronting them was one of the real dangers of the road.

The strong green waters of the great river were divided at this ancient ford by two midstream islands, which accounted for the selection of the spot for the daring essay of a bridgeless and boatless crossing. There was something mockingly relentless in the strong rippling current, which cut off more than a guess at the actual depth. There was no ferry, no boat nor means of making one. It was not even possible to shore up the wagon beds so they might be dry. One thing sure was that if ever a wagon was swept below the crossing there could be no hope for it.

But others had crossed here, and even now a certain rough chart existed, handed down from these. Time now for a leader, and men now were thankful for the presence of a man who had seen this crossing made.

The old scout held back the company leaders and rode into the stream alone, step by step, scanning the bottom. He found it firm. He saw wheel marks on the first island. His horse, ears ahead, saw them also, and staggeringly felt out the way. Belly-deep and passable—yes.

Bridger turned and moved a wide arm. The foremost wagons came on to the edge.

The men now mounted the wagon seats, two to each wagon. Flankers drove up the loose cattle, ready for their turn later. Men rode on each side the lead yoke of oxen to hold them steady on their footing, Wingate, Price, Kelsey and Hall, bold men and well mounted, taking this work on themselves.

The plunge once made, they got to the first island, all of them, without trouble. But a dizzying flood lay on ahead to the second wheel-marked island in the river. To look at the rapid surface was to lose all sense of direction. But again the gaunt horse of the scout led out, and again the riders waded in, their devoted animals trembling beneath them. Bridger, student of fast fords, followed the bar upstream, angling with it, till a deep channel offered between him and the island. Unable to evade this, he drove into it, and his gallant mount breasted up and held its feet all the way across.

The thing could be done! Jim Bridger calmly turned and waved to the wagons to come on from the first island.

"Keep them jest whar we was!" he called back to Hall and Kelsey, who had not passed the last stiff water. "Put the heavy cattle in first! Hit maybe won't swim them. If the stuff gets wet we can't help that. Tell the womern hit's all right."

He saw his friends turn back, their horses, deep in the flood, plunging through water broken by their knees; saw the first wagons lead off and crawl out upstream, slowly and safely, till within reach of his voice. Molly now was in the main wagon, and her brother Jed was driving.

Between the lines of wading horsemen the draft oxen advanced, following the wagons, strung out, but all holding their footing in the green water that broke white on the upper side of the wagons. A vast murmuring roar came up from the water thus retarded.

They made their way to the edge of the deep channel, where the cattle stood, breasts submerged.

Bridger rose in his stirrups and shouted, "Git in thar! Come on through!"

They plunged, wallowed, staggered; but the lead yokes saw where the ford climbed the bank, made for it, caught footing, dragged the others through!

Wagon after wagon made it safe. It was desperate, but, being done, these matter-of-fact folk wasted no time in imaginings of what might have happened. They were safe, and the ford thus far was established so that the others need not fear.

But on ahead lay what they all knew was the real danger—the last channel, three hundred yards of racing, heavy water which apparently no sane man ever would have faced. But there were wheel marks on the farther shore. Here ran the road to Oregon.

The dauntless old scout rode in again, alone, bending to study the water and the footing. A gravel bar led off for a couple of rods, flanked by deep potholes. Ten rods out the bar turned. He followed it up, foot by foot, for twenty rods, quartering. Then he struck out for the shore.

The bottom was hard, yes; but the bar was very crooked, with swimming water on either hand, with potholes ten feet deep and more all alongside. And worst of all, there was a vast sweep of heavy water below the ford, which meant destruction and death for any wagon carried down. Well had the crossing of the Snake earned its sinister reputation. Courage and care alone could give any man safe-conduct here.

The women and children, crying, sat in the wagons, watching Bridger retrace the ford. Once his stumbling horse swam, but caught footing. He joined them, very serious.

"It's fording, men," said he, "but she's mean, she shore is mean. Double up all the teams, yoke in every loose ox and put six yoke on each wagon, or they'll get swep' down, shore's hell. Some of them will hold the others if we have enough. I'll go ahead, and I want riders all along the teams, above and below, to hold them to the line. Hit can be did—hit's wicked water, but hit can be did. Don't wait—always keep things movin'."

By this time the island was packed with the loose cattle, which had followed the wagons, much of the time swimming. They were lowing moaningly, in terror—a gruesome thing to hear.

The leader called to Price's oldest boy, driving Molly's cart, "Tie on behind the big wagon with a long rope, an' don't drive in tell you see the fust two yoke ahead holdin'. Then they'll drag you through anyhow. Hang onto the cart whatever happens, but if you do get in, keep upstream of any animile that's swimmin'.

"All set, men? Come ahead!"

He led off again at last, after the teams were doubled and the loads had been piled high as possible to keep them dry. Ten wagons were left behind, it being needful to drive back, over the roaring channel, some of the doubled heavy teams for them.

They made it well, foot by foot, the cattle sometimes swimming gently, confidently, as the line curved down under the heavy current, but always enough holding to keep the team safe. The horsemen rode alongside, exhorting, assuring. It was a vast relief when at the last gravel stretch they saw the wet backs of the oxen rise high once more.

"I'll go back, Jesse," said Kelsey, the man who had wanted to go to California. "I know her now."

"I'll go with you," added young Jed Wingate, climbing down from his wagon seat and demanding his saddle horse, which he mounted bare-backed.

It was they two who drove and led the spare yokes back to repeat the crossing with the remaining wagons. Those on the bank watched them anxiously, for they drove straighter across to save time, and were carried below the trail on the island. But they came out laughing, and the oxen were rounded up once more and doubled in, so that the last of the train was ready.

"That's a fine mare of Kelsey's," said Wingate to Caleb Price, who with him was watching the daring Kentuckian at his work on the downstream and more dangerous side of the linked teams. "She'll go anywhere."

Price nodded, anxiously regarding the laboring advance of the last wagons.

"Too light," said he. "I started with a ton and a half on the National Pike across Ohio and Indiana. I doubt if we average five hundred now. They ford light."

"Look!" he cried suddenly, and pointed.

They all ran to the brink. The horsemen were trying to stay the drift of the line of cattle. They had worked low and missed footing. Many were swimming—the wagons were afloat!

The tired lead cattle had not been able to withstand the pressure of the heavy water a second time. They were off the ford!

But the riders from the shore, led by Jim Bridger, got to them, caught a rope around a horn, dragged them into line, dragged the whole gaunt team to the edge and saved the day for the lead wagon. The others caught and held their footing, labored through.

But a shout arose. Persons ran down the bank, pointing. A hundred yards below the ford, in the full current of the Snake, the lean head of Kelsey's mare was

(Continued on Page 141)

Save the Money That Now Goes Into the Scrap Heap

RUST is waste.

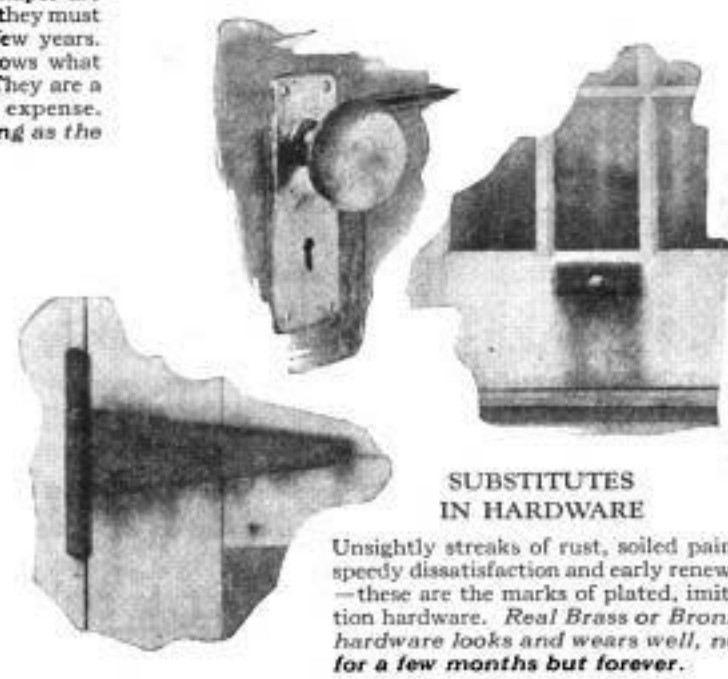
By materially shortening the life of your rainspouts and flashings, plumbing pipe and pipe fittings, your roof, your screens and your hardware, rust heaps high the scrap heap — *at your expense.*

Copper and Brass permanently resist rust and are therefore *truly Everlasting.*

Copper and Brass give you generations of expense-proof service. Substitutes give you trouble, repairs, upkeep and renewals.

No matter how you paint, plate or galvanize ordinary metal, nature will have its way—and the result is rust and ruin.

Copper and Brass are cheaper—
you pay for them only ONCE



SUBSTITUTES IN PLUMBING

The rust that quickly forms in substitutes clogs the pipe, eats holes and causes leaks, necessitating repairs and replacements. ***Brass permanently resists rust.***

SUBSTITUTES IN SHEET METAL

When leaders and gutters and other sheet metal shapes are not made of Copper they must be replaced every few years. The photograph shows what happens to them. They are a hardy perennial expense. ***Copper lasts as long as the house.***

SUBSTITUTES IN HARDWARE

Unsightly streaks of rust, soiled paint, speedy dissatisfaction and early renewal—these are the marks of plated, imitation hardware. *Real Brass or Bronze hardware looks and wears well, not* ***for a few months but forever.***

SUBSTITUTES IN SCREENING

Ordinary metal rusts even if you paint it yearly, and insects find even the small holes. ***When you have Copper or Bronze screening there is no painting, no renewals, and there is no paint-clogged mesh.***

SUBSTITUTES IN ROOFING

Note the rotted wood around the rusty nail. If you must use wood shingles, Copper or Brass nails will prevent this form of roof disease.

But the economical way is to have an *all-Copper* roof. No paint, no patching, no repairs, no replacements, when you use Copper.

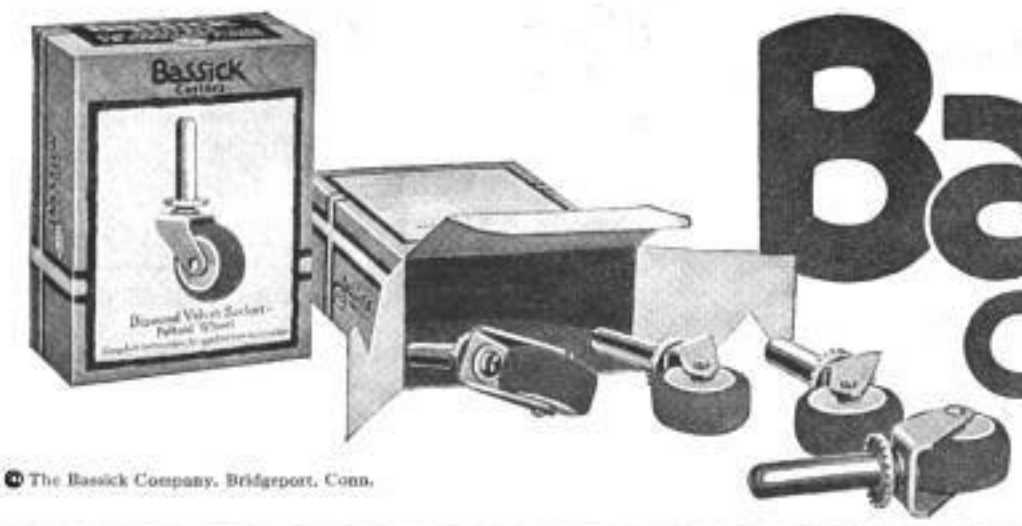
This is the
"Neglected Inch"
—the inch between the
furniture and the floor



You decide the life of your floors by the Casters you use

IT'S the inch between the furniture and the floor where the casters belong that determines the life and beauty of your floors and floor coverings. Scarred, marred floors and torn rugs result from neglecting that inch.

You push a bed and the casters refuse to swivel; you push harder, forcing the bed to move, dragging the casters broadside across the floor—you know the result: big, unsightly scratches on the floor, strained joints in the bed, all because the casters were neglected.

You cannot afford to be without the proper Bassick Casters on your furniture. The saving to your floors and furniture which they make possible during their first week of use pays their cost many times over. By their superior rolling and swiveling qualities they protect your floors and floor coverings, and add years to the life of your furniture. They make housework easier.

Go over your furniture today and find out just where you need Bassick Casters. If your dealer cannot supply you, write us for the name of one who can. Your investment in Bassick Casters is an investment in good floors, long lived and easy moving furniture.

Bassick Casters

flat, swimming hard, and steadily being swept downstream in a current which swung off shore below the ford.

"He's all right!" called Jed, wet to the neck, sitting his own wet mount, safe ashore at last. "He's swimming too. They'll make it, sure! Come on!"

He started off at a gallop downstream along the shore, his eyes fixed on the two black objects, now steadily losing distance out beyond. But old Jim Bridger put his hands across his eyes and turned away his face. He knew!

It was now plain to all that yonder a gallant man and a gallant horse were making a fight for life. The grim river had them in its grip at last.

In a moment the tremendous power of the heavy water had swept Kelsey and his horse far below the ford. The current there was swifter, noisier, as though exultant in the success of the scheme the river all along had proposed.

As to the victims, the tragic struggle went on in silence. If the man called no one could hear him above the rush and roar of the waters. None long had any hope as they saw the white rollers bury the two heads of the horse and the man, while the set of the current steadily carried them away from the shore. It was only miracle that the two bobbing black dots again and again came into view.

They could see the mare's muzzle flat, extended toward the shore; back of it, upstream, the head of the man. Whichever brain had decided, it was evident that the animal was staking life to reach the shore from which it had been swept away.

Far out in midstream some conformation of the bottom turned the current once more in a long slant shoreward. A murmur, a sob of hundreds of observers packed along the shore broke out as the two dots came closer, far below. More than a quarter of a mile downstream a sand point made out, offering a sort of beach where for some space a landing might be made. Could the gallant mare make this point? Men clenched their hands. Women began to sob, to moan gently.

When with a shout Jed Wingate turned his horse and set off at top speed down the shore some followed him. The horses and men, left alone, fell into confusion, the wagons tangled. One or two teams made off at a run into the desert. But these things were nothing.

Those behind hoped Jed would not try any rescue in that flood. Molly stood wringing her hands. The boy's mother began praying audibly. The voice of Jim Bridger rose in an Indian chant. It was for the dead!

They saw the gallant mare plunge up, neck and shoulders and body rising as her feet found bottom a few yards out from shore. She stood free of the water, safe on the bar; stood still, looking back of her and down. But no man rose to his height beside her. There was only one figure on the bar.

They saw Jed fling off; saw him run and stop, lifting something long and heavy from the water. Then the mare stumbled away. At length she lay down quietly. She never rose.

"She was standing right here," said Jed when the others came. "He had hold of the reins so tight I couldn't hardly open his hand. He must have been dead before the mare hit bottom. He was laying all under water, hanging to the reins, and that was all that kept him from washing on down."

They made some rude and unskilled attempt at resuscitation, but had neither knowledge nor confidence. Perhaps somewhere out yonder the strain had been too great; perhaps the sheer terror had broken the heart of both man and horse. The mare suddenly began to tremble as she lay, her nostrils shivering as though in fright. And she died, after bringing in the dead man whose hand still gripped her rein.

They buried Kelsey of Kentucky—few knew him otherwise—on a hillock by the road at the first fording place of the Snake. They broke out the top board of another tail gate, and with a hot iron burned in one more record of the road:

"Rob't. Kelsey, Ky. Drowned Sept. 7, 1848. A brave man."

The sand long ago cut out the lettering, and long ago the ford passed to a ferry. But there lay, for a long time known, Kelsey of Kentucky, a brave man, who kept his promise and did not rue back, but who never saw either California or Oregon.

"Catch up the stock, men," said Jesse Wingate dully, after a time. "Let's leave this place."

Loads were repacked, broken gear adjusted. Inside the hour the silent gray wagon train held on, leaving the waters to give shriving. The voice of the river rose and fell mournfully behind them in the changing airs.

"I knowed hit!" said old Jim Bridger, now falling back from the lead and breaking off his Indian dirge. "I knowed all along the Snake'd take somebody—she does every time. This mornin' I seed two ravens that flew acrost the trail ahead. Yesterday I seed a rabbit settin' squar' in the trail. I thought hit was me the river wanted, but she's done took a younger an' a better man."

"Man, man," exclaimed stout-hearted Molly Wingate, "what for kind of a country have you brought us women to? One more thing like that and my nerve's gone. Tell me, is this the last bad river? And when will we get to Oregon?"

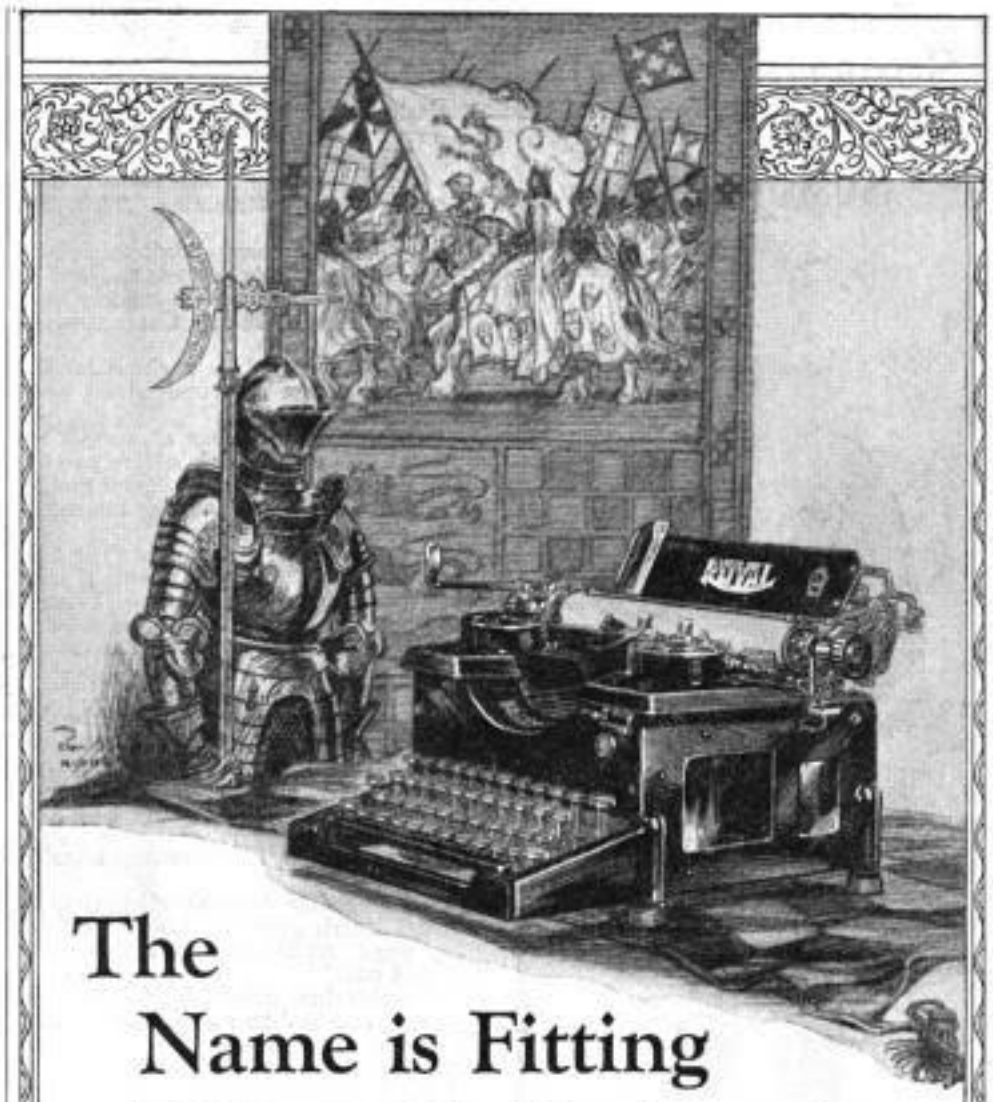
"Don't be a-skeered, ma'am," rejoined Bridger. "A accident kin happen anywheres. Hit's a month on to Oregon, whar ye're headed. Some fords on ahead, yes; we got to cross back to the south side the Snake again."

"But you'll go on with us, won't you?" demanded young Molly Wingate.

They had halted to breathe the cattle at the foot of lava dust slope. Bridger looked at the young girl for a time in silence.

"I'm off my country, Miss Molly," said he. "Beyant the second ford, at Fort Boise, I ain't never been. I done aimed to turn back here an' git back home afore the winter come. Ain't I did enough fer ye?"

But he hesitated. There was a kindly light on the worn old face, in the sunken blue eye.



"Ye want me to go on, Miss Molly?"

"If you could it would be a comfort to me, a protection to us all."

"Is hit so! Miss Molly, ye kin talk a ol'-time man out'n his last pelt! But sence ye do want me, I'll sornter along a leetle ways furtherer with ye. Many a good fight is spoiled by wonderin' how hit's goin' to come out. An' many a long trail's lost by wonderin' whar hit runs. I hain't never yit been plumb to Californy er Oregon. But ef ye say I must, Miss Molly, why I must; an' ef I must, why here goes! I reckon my womern kin keep my fire goin' ontel I git back next year."

(TO BE CONCLUDED)

The Name is Fitting

THE new Royal has all the refinements that would be expected of an aristocrat of typewriters. Its title has been earned, not inherited. It is self-made. Though mute, its actions are unmistakably those of a thoroughbred. It can't help being somewhat exclusive, for masterly craftsmanship has given it true distinction.

There are poise and dignity in the outward appearance of the new Royal that bespeak a fine character within. The cleanness and uniformity of its typing unconsciously suggest good taste, discrimination. Its marked quietness makes it a good companion for concentration. It has a respect for the feelings of others.

The Light-Running, Quiet-Running Royal combines the strength and durability of a fine machine with the responsiveness and accuracy of an instrument—the achievement that makes its name so fitting.

Our fifty-six page book, "The Evolution of the Typewriter", beautifully illustrated in color, will be mailed free on request. Address Department S.

(Continued from Page 7)

hospitality. Here it is different. It is hardly too much to say that hospitality doesn't exist. If you are asked to dinner it is either in payment of a like obligation or because you are entertaining. There are no other reasons."

Still, Glenn Thenamy didn't think he'd go. Besides, eight o'clock was too long to wait for supper—he couldn't call any meal after dark dinner. Morris Caner thought he was wise.

"Either you would be a circus for the others or you wouldn't understand what they were talking about."

Thenamy was conscious of a swift resentment. He objected instinctively to the suggestion that he could be found merely ridiculous, and to Caner's disparagement of Mrs. Heming's invitation.

"If you speak of it like that," he said formally, "you change my mind. A lady has wanted me in her house—I can't bother with how things are up here—and there is no reason why I should stay away. I'll go!"

"Good!" Caner spoke cheerfully. "It may interest you; certainly it will be different from anything you are apt to have seen. The truth is, you are so proper that I wanted to spare your blushes. The talk, to put it lightly, will be free—the talk and the lace stockings."

"I'm not a baby!" Thenamy sounded indignant.

"It's laughable to contradict you, of course," Morris asserted; "but in a great many ways you are exactly that, as you may find out."

When the time arrived for Glenn to go in to the Hemings' he was suddenly aware that clothes different from those he had with him would be expected. He was genuinely distressed, and explained his difficulty to Morris Caner with rueful curses.

"That doesn't matter with the Hemings," Morris reassured him. "You are doing them an injustice. Whatever may be said of them, they are not superficial in the sense of breeding."

As it was, Glenn was conspicuously too early. The drawing-room was empty but for himself. It was twenty minutes before Ava Heming appeared. He greeted her warmly, and then once more conducted his gaze elsewhere. Positively, he thought, it was like a meeting with one of those comic-opera girls right off the stage. James, he was told, would be down in a minute.

"I don't know if you'll like the people I've asked to meet you," she proceeded.

"I just will," he retorted vigorously, "since they are your friends."

"Good heaven," she cried, "what could make you suppose that? They are nothing of the sort! It would be too dull. Why, I hate them all, all but you! John Saylor I detest, and Vida—you'll have to tell me what you think of her—and the Ronalds. They are terrible people. Leva Ronald can't be trusted with—with a bread twist. Yet, don't you see, they amuse me. The whole situation has what you might call a kick."

"Don't pay too much attention to Ava," James Heming advised in the doorway. "She's got a shifty little spike hidden in her hand too."

He was, he said, glad to see Glenn Thenamy. The truth was, Glenn penetrated, that he was totally indifferent. All that he said, all his impatient movements, were perfunctory; they covered a totally other preoccupation. He was, and in the same spare hard way, as personable as his wife.

Glenn could plainly see what Morris Caner had meant by "sullen." Heming was more than that—he was sultry; and yet his evident hot temper was at the same time cold; a combination that had made his fighting skillful and dangerous.

The Ronalds came next—an emaciated man with a face and hair almost equally gray, and fingers that seemed as fragile as the dried stems of grasses. When he spoke there were no signs of animation, of recognition, in his voice or on his face. Mrs. Ronald, who was small and as pale as her husband, was, on the contrary, filled with a kind of rasping vitality. She talked a great deal, in a loud unassuring voice, clearly regarding Glenn Thenamy as an acquisition to her experience of people. She asked at once how long he would be with Morris, explaining that she wanted Glenn for dinner. He told her, however, with a polite sentence of regret, that he was returning to Kentucky immediately.

Privately Mrs. Ronald almost terrified him; her insistent voice seemed to come up from the dark emptiness of some cellar. She stood so close to him and gazed so directly into his eyes that he grew uneasy, embarrassed, and then annoyed. She asked him suddenly how he liked her perfume; and, aware of its sharp fragrance, he said that it was elegant.

"Mrs. Ronald has a theory about scent," Ava Heming told him. "She thinks that it makes you perceptible to the right people."

"There's nothing restrained in Ava's explanation," Mrs. Ronald added. She studied Glenn Thenamy. "You smell of apples," she announced.

"That's funny," he replied, "for the tobacco I use is called Green Pippin."

"Oh, yes," Mrs. Heming put in, "I had one got for you. It's much nicer than Morris'. You might accept it as a present."

An elaborate brass spittoon was produced with formality; and, simply, he acknowledged her thought. Mr. Ronald, it developed, took snuff. He had a snuffbox of gray Chinese stone, and Glenn, with practiced fingers, accepted its offered pungency. His mother, he said, had been very partial to snuff; but Mr. Ronald's was finer than any he had sampled before.

"Mine," Mrs. Ronald proclaimed, "had a taste for cocaine." Glenn looked at her, puzzled. "My mother!" she particularized. "The old bird flew high, in very fancy clouds."

His distaste for this, his disapproval, must have been marked, for she laughed delightedly. It was her little joke, he told her, with the unpleasant conviction that she had spoken seriously.

"Hers," she corrected him; "I haven't needed it yet."

There was a stir of arrival in the hall—the Saylors; and at the first glimpse of the woman entering through the hangings of the doorway Glenn Thenamy felt that at last here was someone he did understand. Mrs. Saylor, too, was small; but her smallness, in a wisp of dress, was as luxurious as possible. She had a great pile of naturally bright hair and the face of an expensive, an irreproachably flawless doll. On the surface she was unquestionably lovely; she was so lovely that, to meet her closely, brought almost a gasp at her visible perfection. But Glenn didn't stop there; with Mrs. Saylor he was thoroughly at home.

In fact, he hardly more than acknowledged her greeting, and turned, interested, to see her husband. That individual had a broad, disproportionately large face with a deep cleft in the chin, eyes maliciously green in tone and soft, blanched hands. His shirt held but one stud, a magnificent ruby set in a circle of diamonds, and on the little fingers of both hands were long intaglio rings.

James Heming promptly advised Glenn: "Don't ask Saylor to show the engravings on his rings. He'd like nothing better—even he could hardly volunteer—but you wouldn't enjoy them."

In the arrangement of the table Glenn Thenamy sat between Ava Heming and Mrs. Saylor. Heming was opposite his wife, with Ronald on the left. If Glenn gave Mrs. Saylor but little heed she had less for him. Except for a quick nod as he had been introduced, she was, it seemed, unaware of his presence. However, she spoke hardly at all, but addressed herself with a solid attention to dinner. Even at her shoulder, Thenamy thought, she appeared not to be made from living tissue. Her skin, the beautiful mold of her shoulders, had a look of wax. The powder was no drier than the delightful nose it adorned. It was plain she knew that her voice alone, of all her perceptible qualities, was ugly. It was thin, weak, the voice of a mechanical doll, without ring or underlying color.

Her husband Glenn had, as well, dismissed—part of the slush Mrs. Heming had spoken of. But this opinion, as the courses progressed, he was obliged to discard. Saylor was not so featureless as he had seemed. He looked, it was true, like one of the balls of dough Jenny put in soup; but out of that unpleasant exterior a caustic wit flashed and glittered. A great deal, as Caner had predicted, Glenn did not comprehend; and when a meaning was plain to him he half gazed about, incredulous that it could be meant. The faces of the women were masklike.

Glenn was slowly, steadily enveloped in the feeling that the menacing stale spirit he had found in the city was being concentrated into the room in which he sat. The smoke of the cigarettes against the glow of the candles assumed fantastic and sly shapes. He was intensely uncomfortable, wishing that he had, following Caner's advice, stayed away. In this, perhaps, he was no more than a baby.

Glenn didn't like champagne. It was no better, he told himself, than weak cider; but the food was supremely good. Again he wished for Jenny—she'd like those things in crumpled pie crust. But why wouldn't the servants just put the dishes on the table and get out of sight? He decided that, as a class, he hated servants; the smug girls and the tallow-faced men.

He withdrew from the conversation—the Hemings comfortably didn't pester him—and watched the expressions, studied the voices around him. Ronald, whose head might have been dipped in a dust box, was abstracted, contemptuous of the others. Not a man, Glenn decided, to whom he'd like to try to sell oil. After a minute's direct talk with Ronald he would want to knock his face in. Mrs. Ronald continued to bring her loud, empty tones out of an inner void. She drank continuously; the bottles in their white napkins were always at her glass. But it didn't affect her—pouring it into that cellar! Glenn Thenamy realized now that what Mrs. Heming said about the people there was true; she disliked them strongly. But then, everyone, including his wife, disliked Saylor. He knew this, Glenn gathered, and got a form of pleasure from it. James Heming listened to him with a vertical frown between his abrupt eyebrows. It seemed to Glenn that Heming was waiting for Saylor to pass what boundary of the permissible did exist. If the latter made a mistake, Glenn continued his thought, he would come up against an implacable barrier to his peculiar humor.

This, it became evident, he would not do; and Glenn turned from him to James Heming. He saw the mark of a special and personal enmity to Saylor in Heming's frowning attention. He wondered over that; and, wondering, his gaze rested on Mrs. Saylor. She practically never spoke to Heming, nor glanced toward him. The man, though, glanced swiftly but comprehensively at her when the dinner was otherwise occupied. He didn't, specially, speak to her; yet what he said had the effect of echoing her few remarks.

Glenn Thenamy speculated upon that. Mrs. Saylor, he considered, was so easily understood that he couldn't quite believe Heming was stupid enough to be interested—caught, really—by her. Why, his wife, Ava Heming, was worth a thousand bundles of such thin tinder! At least she was a thoroughbred. So was James Heming; Glenn was obliged to admit that of both of them. Here, he went on, they were out of place. That was it! So was he. Glenn had a strange ability—a consciousness of danger close, but hidden from him. On more than one occasion, whirling sharply, he had met, conquered, a threatening occasion swiftly and silently overtaking him from the back. He knew, as he put it to himself, when things were wrong. And that sensation was very strong upon him now. In some way, too, it threatened the Hemings. His valuable premonition of calamities extended to all three of them.

There wasn't anything that he could do, no evident steps for safety could be taken. The servant at his back had no intention, for instance, of shooting him. This wasn't the oil tracts of Kentucky. The oppression, however, persisted. He had an absurd impulse to warn James Heming, to make him a signal that would put him alertly on his guard. He wanted to send Mrs. Heming into cover. Glenn's attention swung back to Saylor, and he had a conviction with regard to him. If Saylor came into Bennings County he wouldn't last long—he would meet up with an accident. There would, to put it abruptly, be a coroner's inquest, or what locally had the appearance of one; there would be an inquest at which he, Glenn Thenamy, might be called on to make a few remarks—an explanation, in

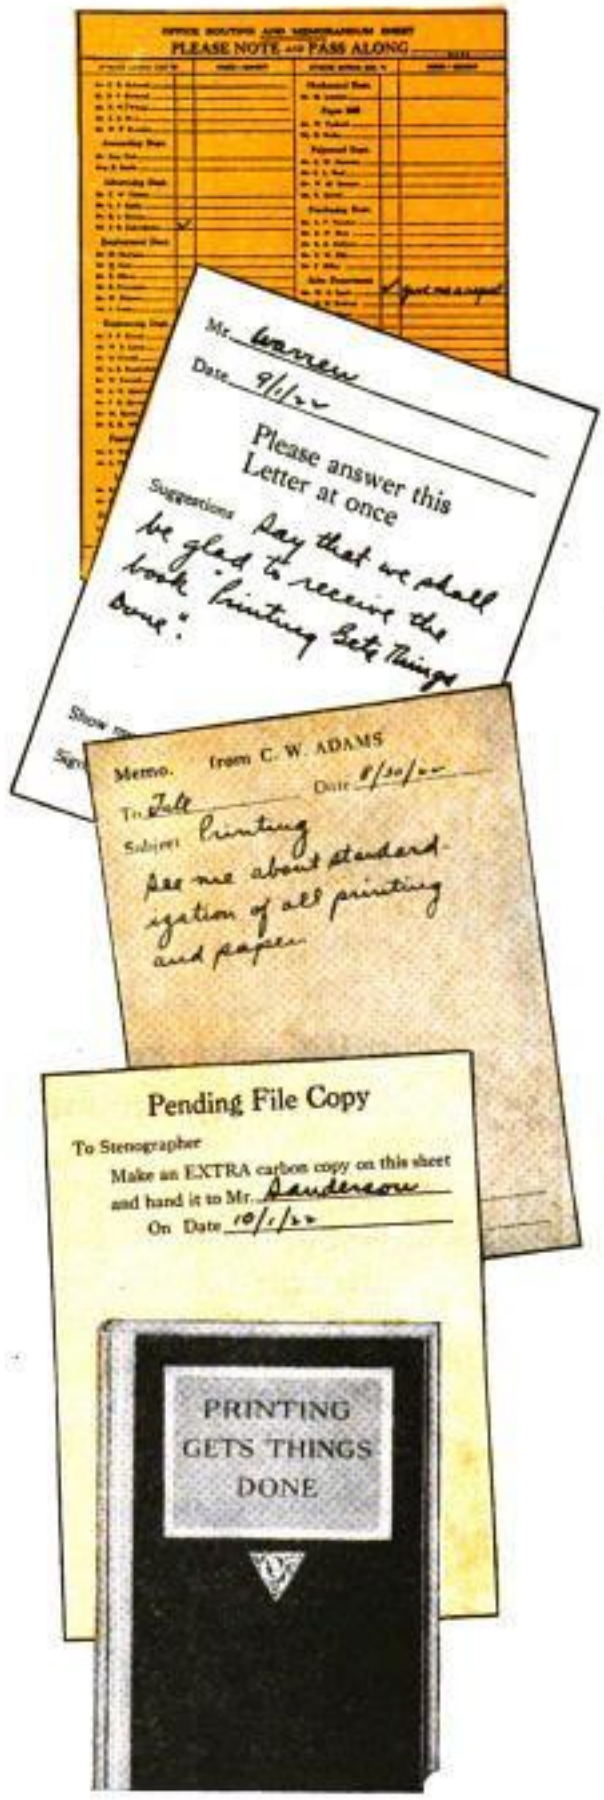
Send for our Book: **Printing Gets Things Done**

They Are Called Desk Workers

Is your office full of desk workers who are always moving about?

These men are not trying to kill time. They are trying to get work done with incomplete information or by instructions they do not clearly understand.



The answers to all the questions men run about to ask can usually be obtained from information on printed forms—if your office has the forms and uses them.

If you haven't the right forms or don't know how to get them used, send for our book, "Printing Gets Things Done."

This book tells how printing words on paper saves time, money, telephoning, and shoe leather. It shows specimens that get work done and effect important business economies. It shows how forms remind men of what they would otherwise forget—how a check-mark on a list may save half a day's time, how the knowledge that certain information is on a specified form, in a specified place, may be the difference between order and confusion in an office.

Some forms live but a day. Others serve as permanent and important records. The paper for this work should be low in price, yet clean, strong, and durable.

Hammermill Bond in white or in any one of twelve colors is remarkably well suited to this kind of printing. Your printer has Hammermill Bond in stock, or can quickly get it. Hammermill Bond, being widely used, is quickly accessible in every city and always uniform in quality.

HAMMERMILL PAPER COMPANY, ERIE, PA.

Look for this watermark—it is our word of honor to the public

HAMMERMILL BOND

The Utility Business Paper

IN this free book, "Printing Gets Things Done," you will find specimens of many time-saving forms. The forms shown here help to keep work cleared and permit an executive to know his business without attending to all of it.

When we first showed Allen A Summerwear to one of our metropolitan dealers, he said:

"You people have the nicest Spring Needle Knitted Underwear business in this country—and you deserve it. What do you want to go into the WOVEN underwear field for?"

Our answer is this:

If a man feels that the athletic style of underwear makes him more comfortable in hot weather, he ought to have the best garment of the kind that can be made.

Generous, easy fitting. And money's worth beyond question.

He deserves to be protected against substitution, imitation and goods inferior in any detail.

This is the meaning of the Allen A Brand.

Not only is it your sure guide to the same good underwear every time.

It is protecting your Allen A dealer in giving you the uniform and dependable service you expect in return for your custom.

Allen A
Summerwear
For Men & Boys

The first and only Summerwear that can satisfy the man who wears Cooper's-Bennington Spring Needle Knitted for Fall and Winter. Incomparable in comfort, fit and service. Silk, Soisette, Madras, Mercerized Net.

Look for the Master Brand —*Allen A.*

It carries with it the *personal pledge* of the maker's responsibility for uniform high quality and money's worth.

Allen A is the maker's Mark of Identification on the *genuine*

(Continued from Page 142)

fact. James Heming was wasting valuable time waiting for Saylor to make an error; there were occasions when it was wise to take an error for granted, to consider it done. This Saylor was an error in himself. But if Heming was infatuated with Saylor's wife, then the sullen James was making a mistake of heroic size. The trouble was that Glenn couldn't say anything, not even to Ava Heming—least of all to Ava. Heming would have to fall into the pit and scramble out if it was possible. It was too bad; and Glenn would speak about it to Morris Caner, his friend. Saylor turned to him.

"Kentucky?"

"Yes, sir, Kentucky."

"A state with only a leaden argument."

"They are covering them in steel."

"A hole."

"No, sir—a grave."

"The women used to be beautiful; they are no longer, if I can judge from Louisville; but ——"

"Still very noble."

Glenn thought he had better interrupt him. The continuation of Saylor's sentence, he was afraid, would be embarrassing to social occasion.

Saylor said, generally, "I didn't know that word 'noble' was still pronounced."

"It isn't needed a great deal," Mrs. Heming returned; "but perhaps it is still useful in Kentucky."

"Yes, ma'am," Glenn assented. "It is, right smart."

"He is about to recall the Alamo." This was Saylor.

"Not here; not with you around."

Glenn wondered if he might, with even approximate safety, kill him. Then he remembered that such a light blasphemy was common here. He had no wish to make himself absurd. The best thing for him to do was to shut up, and he drew effectively on a superlative cigar. Why didn't Morris stop his nonsense about the contract and buy her? If the ribbon on that sleeve broke he would dive under the table; he'd never reach the door, Glenn was certain of this. He caught an angle of Mrs. Heming's gaze, a compression of her mouth, which further enlightened him.

What—Glenn demanded heatedly of Morris Caner—kind of a way was that to do? He had left the Hemings' soon after dinner, and finding Caner in the drawing-room he had swept into a picturesque denunciation of the whole situation in the house next door.

"You can put all the oil in Kentucky on the fact that she knows it," he continued; "I saw that just before they got up. Mrs. Heming sees right through them to the wall behind. And she won't say anything, she won't do anything, not to the stir of a finger. That's where she's wrong, but she can't help it, being what she is."

"You take them too seriously," Caner told him. "You don't understand these affairs. Remember, everything here is different from Bennings. What there would matter a great deal, the most possible, is in the long run unimportant with us. Such affairs—you are right about that between Mrs. Saylor and Heming—go on all the time. It's the current relaxation. Reasonable people like Ava Heming pay no attention to them, and they die out when the fuel is consumed; they soon grow cold."

"You know more about it than I do." Glenn was unconvinced. "With most of them, perhaps; but not with the Hemings. I think I know them; they might have come right from my country. If they are careful this business will break them

He paused, then explained in a totally different and forceful language his precise opinion of Mrs. Saylor. This didn't, apparently, quite satisfy him, for he began again; but Morris interrupted him.

"It is a display of words that is remarkable. It seems to me you haven't formed any; but you are apparently able to go on. Yet what's the good? The things and their troubles are far out of the district. I am a little surprised at you, Glenn; for your entire philosophy of life has consented in avoiding whatever lay outside your own purpose."

"I'm surprised at myself," Glenn admitted moodily. "I'd like to have a snatch at Saylor—put some berries in his eye. I don't know which I mislike the more—him or his wife. They're a pair!"

"Well, get them out of your head. I see you have guessed, you old gimlet, that I have agreed to your criminal proceedings. No, you can't go home tomorrow; you'll leave Monday, and I shall be with you. I want to have one look at this place before my money sinks in it."

Glenn Thenamy rose, and his gravity brought Caner to his feet. Their hands met; but that was all; nothing was said.

As Glenn prepared for bed he listened subconsciously for the usual contentious sounds from the Hemings; but the silence there was unbroken. It was still in the opposite direction too—until Glenn was waked past the middle of night by a paroxysm of the dragging sobs. He sat up in bed, sharply disturbed; and the muffled crying was broken by a shrill high scream. There were others, incredibly prolonged; a volume of fear which, it seemed, must be beyond the capacity of a human throat. There was a crash of falling furniture and broken china, glass, the sound of running feet and terrified voices.

It was, to Glenn Thenamy, not wholly awake, utterly horrible, inhuman. He thought that he could hear a struggle—that was a chair thrown against the wall—then there was quiet again. It was interrupted soon after by the grinding of automobile brakes on the street and the closing of a door. He could not visualize the happening beyond in a rational manner. It seemed to him that the evil about him had attacked a man already spent, wasted, by its opposition.

The following morning he learned that the invalid had been taken, tied, to a hospital. Glenn was still shaken by it, but a fear of Caner's sense of humor, of being cheerfully derided, kept him silent about his inner feeling. He had an impulse, in spite of all Morris desired, to run, take a train, any train, headed for the South.

He sat by the spittoon, in a nervous constraint, until lunch and after, consoling himself with tobacco and the realization that his chair was squarely planted against a wall—no one much could come up from behind him. His mind shifted finally to Ava and James Heming. Morris was wrong, and it was a shame. A desire touched him to see Mrs. Heming before he left. He fought it off, but it grew; and when he finally recalled the fact that he owed her the courtesy of an acknowledgment of her hospitality he moved reluctantly.

The servant at the Hemings' door, obviously hesitating, at first thought and then was certain she wasn't in. He gave the effect of shutting the door on Thenamy, a possibility that Glenn resented with a contrary shove.

"Go find out," he directed curtly.

The other began to object, when Ava Heming appeared in the hall.

"Come in, please," she said, at once. "I have an idea that you want to tell me you are going away. I hope you were successful."

"Those are both right," he replied, inside. Standing and facing her he fell silent. Glenn wanted to say a great deal to her. He had a conviction that she would understand it and allow him, now, to proceed; in some intangible way he recognized that they were friends; but he was unable to think of an appropriate, a permissible beginning.

"Both James and I would have liked to see something of you," she told him.

"I like you too," he answered. "I have been thinking about you a right smart lot, but I don't just see how to put it in words. It's familiar."

"Aren't you nice! And, do you know, I have an idea of what you want to say. Thank you, but it's no good."

She drew in a deep breath, and suddenly he noticed that she was unnaturally pale. Her hand had been cold.

"James and I are too much alike, and he's been finding someone different."

"He is a fool!" Glenn declared concisely.

"We'll agree to that, but it doesn't help anything." She stopped. Then, with her gaze directly on Glenn's, she added, "Cort Saylor is upstairs with him now."

"The hell you say!" he replied conversationally, his mind reaching far beyond the fact.

"I don't understand it completely, but generally—yes. I suppose they are fixing this impossible situation."

"That is, Heming must be," he corrected her. "I wouldn't trust that Saylor to fix a corpse. But I wonder"—he spoke with a thoughtful drawl—"I wonder if that James of yours ——"

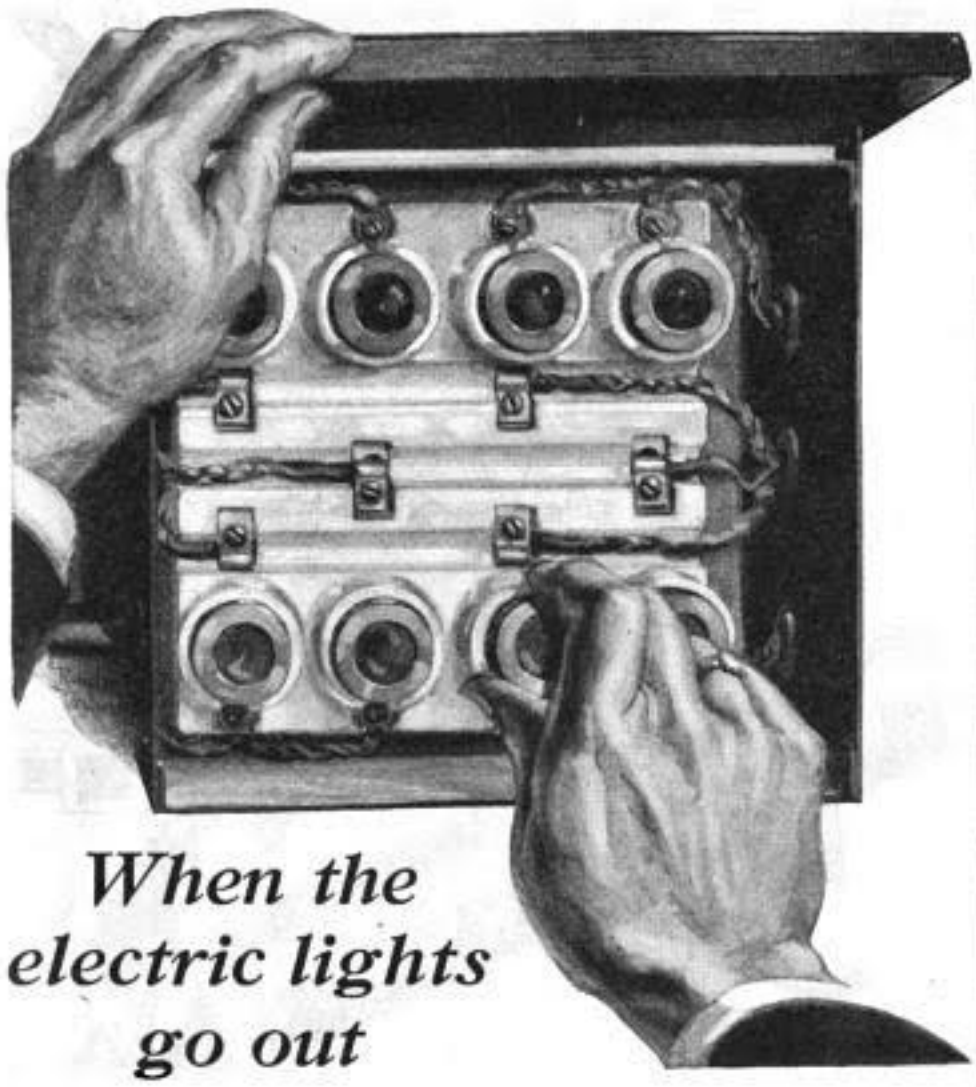
All the Wonderful Flavors of the Choicest Cocoa Beans Blended to Your Taste

Never was there a chocolate so luscious, so full of wholesome goodness as Zay-Tek Eatmors.

Rich, red-brown cocoa beans from Brazil and Ecuador; cream-colored cocoa beans from Ceylon and the West Indies, roasted and blended with fragrant vanilla beans, sugar and full-cream milk—these give the Zay-Tek flavor.

Only when you have tasted Zay-Tek Eatmors will you realize their deliciousness, their difference from ordinary makes of chocolate.

Zay-Tek Eatmors are just sweet enough to bring out the wonderful flavor of the Zay-Tek blend. They do not tire your taste nor cloy your appetite.



And the big red air-tight tube keeps them fresh and pure and firm, even in summer heat.

Buy a big red tube of Zay-Tek Eatmors today. You'll get a new idea of taste-pleasure!

PENNSYLVANIA CHOCOLATE COMPANY
Pittsburgh, Penna., U. S. A.

Make a glass of iced Zay-Tek cocoa. It stimulates and delights your taste with its delicious flavor. Try it today. Ask your grocer for Zay-Tek Cocoa in any one of these size cans—1-lb., ½-lb., ⅓-lb.

When the electric lights go out

WHEN the electric lights in your home go out suddenly, you say, "A fuse has blown out"—and it's a simple matter for someone to put in a new fuse and set the lights burning again.

The fuse is the safety valve of your electric wiring system. When wires are overtaxed by a current heavier than they should carry, the melting of the fuse breaks the current and stops its flow, preventing the burning out of all your lamps and eliminating a possible fire danger.

And what is a fuse? Just a little piece of lead alloy wire, which is inserted into the circuit of copper wire and which melts at a lower temperature than the copper.

This is just one of the countless uses of lead in daily life. Lead is all about you in your home. The glaze on your fine china contains lead. There is lead in the rubber stoppers in your bathroom, in the brilliant glass of which your electric-light bulbs are made. The cans of fruit and vegetables that come into your kitchen are sealed with a lead solder.

Most important of all is the use of white-lead as an ingredient in good paint. Paint protects the outside of your home—and the more white-lead the paint contains, the greater its protecting power. White-lead mixed with flatting oil makes a beautiful and durable finish for interior walls and woodwork.

Painted surfaces defy time and weather; unpainted surfaces decay—hence the slogan, nationally known and nationally heeded today, "Save the surface and you save all."

National Lead Company makes white-lead of the highest quality and sells it, mixed with pure linseed oil, under the name and trade-mark of

Dutch Boy White-Lead

Write our nearest branch office, Department A, for a free copy of our "Wonder Book of Lead," which interestingly describes the hundred-and-one ways in which lead enters into the daily life of everyone.

"He isn't mine," she interrupted him.

"—— of yours," he repeated, "can get it done right. I don't know how the land lays here, what his facilities are."

There was a sound of movement through the hall, and Saylor, no different in color and expression from last night, entered, followed by James Heming. The difference in him was tragic. He seemed noticeably older, his mouth was tight and the customary bad-tempered sparkle of his eyes lost.

The two men were surprised to see Glenn Thenamy; there was a momentary and awkward pause.

"Well," Ava Heming asked in a level, emotionless voice, "what have you decided? Can you both love one woman in peace, or has James, or you, Cort, been magnanimous? You'll be surprised to hear that I'm anxious to find out."

"Ava," her husband cried in tones at once brittle and outraged, "how can you?—before a stranger!"

"How can it matter?" she asked. "Everyone soon ——"

In the flood of suffering that inundated him it was apparent that James Heming, as well, forgot Thenamy's presence. He walked sharply up to her.

"Ava," he said, "Cort came here to tell me that—that Vida loves me."

"I care nothing for that," she replied. "I don't understand why you put it like that. Unless—James, how about you?"

He hesitated a long while, and then with tremendous difficulty—in a voice, Glenn thought, that sounded as though it were heard through a wall—he replied, "I—do not—love her!"

There wasn't a flicker of expression on Saylor's countenance; his hands were easily thrust into his pockets.

"Still," Ava Heming insisted, "I am in the dark. If you don't love her why don't you say so, simply that, and let's get over with it?"

"You see," Heming labored on, "I didn't realize my feeling until to-day. I—I thought I loved her. It's a terrible position, Ava. I won't insult you by saying now, when it's too late, what I find I have always, at bottom, thought of you. I'm caught—there are letters; no one could get around them."

"At last," she replied, "it's clear to me. Neither you nor Cort wants her, but Cort thinks he can persuade you to have the honor."

"It's a filthy fix," Heming acknowledged.

"I've always admired your mind, Ava," Saylor told her; "there isn't a grain of sugar, of sentimentality in it. With a sentence you have disposed of a situation which took James and me two hours to reach. You're right; I am happy to surrender my—my honor."

"What he threatens to do," Heming proceeded, "is based on a lie. You know that I am truthful, Ava. But I can't prove it. The whole thing—with her to help him; yes, it's like that—has me, as I said, caught. I can either take her, or—but I can't even speak of it to you."

"This Saylor, he's just an ordinary blackmailer," Glenn Thenamy said unexpectedly.

"Extraordinary," Saylor corrected him.

Glenn ignored this; he was addressing James Heming.

"I've been studying on him in here. At first he had me puzzled; but not now—I've got into him. I had a partner ten years ago, in those splendid offices in Lexington, just like him. Imagination," said Glenn Thenamy—"that's his principal trouble, and it's a bad one. This Saylor has too much brains for his carcass. Listen to what happened to Deacon. He did Wentley Pye out of a piece of money, and Pye stopped in to see us.

"I was in Deacon's office and heard all of it. Pye, a little somebody with a half-twisted face, did the talking for us. He told Deacon that he knowed how the money was got, and apologized for wasting our time any. But his father, a very religious man, was old and ailing, and trouble in the family might affect him serious. However, Deacon, he said, when father died, he, Wentley, was going to kill him prompt. Went asked Deacon as a favor not to harm himself in an accident, because he didn't want to be cheated.

"When Pye went out, and with his back to us, I said to Deacon—who had this imagination—that the only thing for him was to shoot Pye before lunch: shoot Pye, I advised him, and Pye's father will have to look out for himself. He kind of agreed with me; but when I met him again, early in the evening, I saw he hadn't done it. He was turning it over in his mind—maybe Pye didn't mean what he said. Pye did. I understood that, and so did Deacon ——"

"Yes," Heming broke in irritably, "but this can't go on here now."

"Wait!" Glenn insisted calmly. "From that minute it was all over with Deacon. He stopped talking and grew shadowy-like. He was always struggling between wanting to talk about Pye's threat and not wanting even to mention it. I told him again to do some killing, but then it was too late.

"After another month or so I was afraid Deacon would shoot himself—in the mouth, with the barrel tilted up, is surest—but instead he plumb disappeared. He left a good business that was getting better every day; Deacon left a nice house and a nice wife; he left a son coming twenty and a daughter going to be married the next week, and he disappeared—he fell off the earth."

"Well?" Saylor demanded. "Well?"

Glenn turned and faced him.

"Imagination," he repeated hardly. "You got it—you're rotten with it. I thought at first that if Heming didn't tend to you would, and take a wild chance. You were on the edge of death for more than six seconds. It isn't necessary, and I'm going to tell you why, clear and simple—imagination!

"You know James Heming pretty well and you realize he's uncertain in his emotions—uncertain and vicious. You can gather he's desperate now as well. I am going to speak for him, and explain why murder, as that, ain't necessary. There are a good many ways of getting killed in a city. For that it beats the country to nothing. A city is stuck full of accidents and you can take my personal word as will meet along with you. Him and me see to it. Sometime, not far off—it might be in the evening, and then again at noon—you'll stop. You may get ground up, you may have your head knocked into a splinter; perhaps you will drink—eat something downright unhealthy, fall out of a window. I don't know just what, but I will be with you, sneaking on your heels. If you like, have me bound over; that won't hurt anything with us; I can be bonded and loose. Heming hasn't mentioned a threat. He won't. There is a trick with a thin waxed string—huh! The only slip open to you is to make a mistake about me. Things like this have been a part of my life. I wouldn't give no more thought to you than I would to gutting a rabbit."

He stopped, leaning implacably forward and Saylor's hands, now out of his pockets, twitched at his sides. He studied Glenn but it was evident he found no reassurance there.

Glenn Thenamy's glittering eyes, lipless mouth, stained with tobacco juice were set in a bitter cruelty. He slowly advanced a steady hand until a flesh finger very lightly rested over Saylor's heart.

"So help me, my mother!" Glenn said softly.

He swung immediately back to James Heming.

"You fix your mind on coming South with me in the morning. Ava, she will come with you. I'll tell you honest, I like to see so much useful badness going to waste. I don't recommend Benn County, but for you it would be a sky sail this.

"It ain't safe, remember; more likely you'd be shot in a month. This Morris Caner is in will need managing. I haven't told him much. He's a nice and it would hurt him; but the truth James, that we're going to put fire to oil rigs. Anyone watching them will unlucky. Morris talked about titles to tract. Titles! The Bennings Courth was burned down twice just to get the titles.

"Mind, I don't uphold it; but there Ava here could cook and have a baby, a baby, who'd grow up a man and shoot man who shot you."

He glanced around contemptuously.

"Saylor, he left right quiet, didn't I"

"What do you think?" Ava Heming asked her husband. "There is nothing for me. I'll—I'll try it, with you."

Heming studied her with a hard determination on his aggressive face; with a swift and surprising humbleness thanked her.

Hamilton Beach Home Motor

Does six big jobs in the home

A polisher to brighten all silver. Sold in combination with the grinder for $1.50

Fans—it takes just a jiffy to slip the ingenious fan attachment on the same motor $3.00

Makes your Sewing Machine an Electric

Sew all your own lovely things to wear, without any weary foot-pumping. One motion of the hand places this Home Motor under the hand-wheel of your ordinary sewing machine and changes it to a speedy self-operating electric. No tools or screws or belts required. Your machine is absolutely unmarred. Then you sew as long as you like, without effort or exertion, at a cost for current of less than one cent an hour. Sews fast or slow; no broken threads. Home Motor complete with speed control pedal $18.50

A great triple-action cake mixer. Creams butter and sugar; mixes the smoothest cake dough. Also beats eggs, whips cream, makes mayonnaise, etc. $5.00

The little grinder-wheel sharpens all dull knives

The Electric Sweeper attachment, complete with bag, beating-sweeping brush, and trigger-switch handle

This marvelous Electric Sweeper $18.50

These are truly pictures of progress. They show how American inventive genius has lightened the labor of home-keeping, and simplified the difficult job of being a housewife.

One little motor, with its attachments, does all the household duties shown. Over 800,000 are already in use, sewing, fanning, whipping cream, sharpening knives, and polishing silver. Now, we announce an additional device for use with this same motor—an amazingly efficient electric sweeper with a motor-driven brush that sweeps and beats! It is so simple that only a moment is required to attach or remove the motor; and yet it is so competent a cleaner that, in actual laboratory and home tests, it has picked up screw-drivers and objects of similar size and weight.

So you can tell how easily it gets all surface dust, threads, hairs, lint, match-sticks, and embedded grit. Just phone your dealer for a free home trial. Its work will be a revelation.

The Home Motor and attachments may be purchased at most Electrical, Hardware, Sewing Machine, and Department Stores. It is sold by itself, or complete with all attachments, or with any one of them. Phone your dealer; or write for booklet 55 and his name.

HAMILTON BEACH MFG. CO., *Racine, Wisconsin*

Profitable Positions for Salesmen

Our dealers all over the country need men, and women too, who have the knack of explaining things to others. To those who have the ability to demonstrate how the Hamilton Beach Home Motor and attachments saves time, health, and labor in the home, we can likely offer well-paying positions right in their own home town. Or in a nearby one, if preferred. Just drop us a post-card. Tell us the size of your town, and mention the name of the dealer for whom you prefer to work. We will send full particulars, without obligation. Please address the Sales Manager.

Here's a Sure Way to Read Your Future!

Never mind the month in which you were born—*how much practical business training have you had?*

Here's a position calling for an Expert Accountant; it pays $100 a week. Do you know Accounting?

Here's a job demanding a really competent Traffic Manager, at a salary, to start, of $4,500. Have you ever mastered the modern science of Traffic Management?

Here's a *managerial* position; it pays a big salary. But—the man who fills it must know how to finance an enterprise—how to buy—how to manufacture—how to sell. Can you qualify?

* * *

Why throw away the best years of your life when you can fit yourself in a comparatively few months of home-study training under the LaSalle Problem Method for a responsible executive position—at a very substantial salary?

Thousands of men have found in this remarkable method the swift, sure route to success. Today they are earning large salaries. Chances are you are just as capable a man as any one of them—if you will man.

If a bigger income would look good to you, send today for full particulars—give yourself a fair chance in this world of competition! The coupon will bring you complete information promptly, together with details of our convenient payment plan; also your free copy of that inspiring book, "Ten Years' Promotion in One."

RAT BIS-KIT PASTE

All druggists or general stores have it. 25c.

The Rat Biscuit Co., Springfield, Ohio

FROM McKINLEY TO HARDING

(Continued from Page 4)

raise $17,000 cash. So I left Field at the breakfast table and wired the governor at Youngstown: "Have just read of your misfortune. My purse is open to you. Am going to Chicago to-night. Will meet you anywhere you say in Ohio." Later in the day I received a telegram from him saying, "Take the six-o'clock train. Will meet you at the depot in Cleveland Sunday."

I learned later that Mr. Walker had advanced McKinley $2000 every two years in a number of his campaigns to pay his assessments. McKinley repaid him $1000 a year out of his salary as congressman, which at that time was $5000 a year. He lived at the old Ebbitt House in Washington with his wife, in a couple of small rooms.

In 1892 Mr. Walker asked McKinley if he could help him to tide over a short time. He was a manufacturer and was suffering from the general depression which led up to the panic of 1893.

McKinley said, "I will give you everything I have, you have been my friend through so many campaigns. I own about $17,000 worth of stock in different industrial enterprises in my district." Walker answered, "Am afraid the banks will not loan on your collateral, but if you will indorse my notes for that amount I can get the money." McKinley agreed to indorse to the amount of $17,000, believing he could make good if necessary.

To return to February, 1893. The Buffalo Sunday morning papers announced that instead of being on Walker's notes for $17,000 the amount at midnight had arisen to $98,000.

On arriving in Cleveland about nine o'clock Sunday morning, McKinley and Myron T. Herrick met me as I stepped out of the car. McKinley was pale and wan, with black rings under his eyes. He put his hand on my shoulder but could not speak for his emotion. Tears rolled down his cheeks. We went directly to the Herrick home. On our way the governor was much depressed. I asked him how much he was in debt. He said, "I don't know. It may be $100,000, $200,000 or $500,000."

It seems that when the notes came due Walker would write McKinley at Columbus that a note for $2000 or so in such and such a bank would come due on a certain date, and he did not know whether the bank would renew in full or demand a reduction; that if McKinley would sign it in blank he would fill in the amount. With his sublime faith in his friend McKinley did so. Then Walker filled in the amounts until the governor was on $130,000 of notes instead of $17,000 as he supposed.

Friends to the Rescue

Sunday afternoon a number of friends including James H. Hoyt and John Tod, son of Ohio's war governor, met in the Herrick home and discussed the situation. McKinley could be heard pacing the floor in his bedroom. After a long discussion I suggested that Governor McKinley and his wife make an assignment to trustees of everything they owned. Mr. Tod, who had lost an eye and possessed a sepulchral voice, said, "Because McKinley has made a damn fool of himself why should Mrs. McKinley be a pauper?" Mrs. McKinley had some farm property left her by her father, Mr. Saxton, a former banker of Canton. I answered, "Because if McKinley is to stay in politics he must show clean hands and not be open to the charge he has put his property in his wife's name."

We made little progress. Finally McKinley came downstairs and said, "I wish Mark was here." I asked, "Where is he?" He said, "In Milwaukee to-day, but will be in Chicago to-morrow. I will have him meet you; any hour you say is convenient for him." McKinley wired Mr. Hanna to meet me in the Inter Ocean office at ten o'clock the next day.

On my way to the depot I stopped in the Cleveland Leader office and saw Mr. Covert, the editor. He helped me write a statement which was accepted by the Associated Press and United Press, to this effect: "Governor McKinley and his wife will give up everything they have in the world except the clothes on their backs. If that is not enough to pay his debts in full he will return from office at the end of his term in December and practice law in New York or Chicago until every cent is paid."

The first McKinley knew of the statement was when he read it in the Cleveland morning papers. My thought was to head off newspaper criticism, as I did not believe that the people of the country would nominate a man for President who indorsed notes in blank and then tried to shirk his responsibility! Such was the case, as I never saw an article criticizing the governor. The facts were never made public until now.

Mr. McKinley's Gratitude

Diverting for a moment from the thread of the story, an incident occurred three years and a half later, in November, 1896. Mr. Hanna gave what he called a jubilee party in his home to celebrate McKinley's election to the Presidency. Among the guests were Myron T. Herrick and wife, Mr. and Mrs. James H. Hoyt, Colonel and Mrs. John Hay, my wife and myself. After dinner I started out for a walk in the garden. McKinley said, "Wait a minute. I will go with you." As we walked the gravel paths the governor put his arm around my shoulder and said, "I have wanted to say something to you for over three years. When you put that item in the papers in February, '93, that I would pay my debts in full and closed the mouths of my critics, you did me a great service. I owe more to you than anyone in the world, except my mother, for I should probably have gone to the penitentiary instead of the White House!"

I told him he was wrong, as he never did a dishonest thing in his life.

To return to the meeting with Mr. Hanna in my office Monday morning. I told him of my suggestion that trustees be appointed to receive the McKinley properties. He fully agreed with me that it was the course to pursue. We drew up an agreement and signed our names to pay a certain sum to liquidate McKinley's debts. I have the paper now. It shows over $40,000 raised in Chicago. Mr. Hanna and Mr. Herrick secured a generous sum in Cleveland. Mr. Hanna wired me to meet him in Pittsburgh. We went to the Duquesne Club and met Philander C. Knox and some of his and Mr. Hanna's friends. When we left the club we had, as I remember now, $120,000 total subscriptions. Mr. Hanna went on to Philadelphia and completed the $130,000 needed. New York was not asked for a cent. There were over 5000 subscribers to the fund.

Mr. Herrick called upon the banks in Ohio holding the Walker-McKinley paper and asked them to contribute 10 per cent of the amount of notes which they held, which they agreed to do, and he paid them in full. With the $13,000 left over Mr. Herrick paid a mortgage of $10,000 due on the McKinley Opera House in Canton, and deposited $3000 in bank to meet current and future bills.

Previous to the subscriptions three trustees—Judge William R. Day, Myron T. Herrick and H. H. Kohlsaat—were appointed. To them Governor and Mrs. McKinley turned over all their property.

Judge Day, now Justice of the Supreme Court, told me that not one single claim was filed against the estate.

Governor McKinley never knew who contributed the money. The list of subscribers was refused him later when he asked for it, declaring he would pay them back with the money he saved out of his salary as President, and turned over as he received it to Mr. Herrick, who made some fortunate investments, which gave McKinley's estate some $200,000.

STATE OF OHIO
EXECUTIVE DEPARTMENT
OFFICE OF THE GOVERNOR

COLUMBUS, Feb. 26, 1893.

Dear Mr. Kohlsaat: The pen will not—can not speak what is in my heart this morning. your letter is so full of personal sweetness—expressions of Chicago friends whom you quote are so tender and generous that my heart overflows with thanksgiving.

Did ever man and wife have such friends and how can we ever repay them?

My mail is larger than ever before in my life and so abounding with kindness and sympathy and offers of material aid. I am standing up with courage. Yet, the support of my friends and their confidence in my integrity moves me deeply. I wish you might see my letters and telegrams.

Your thoughtful suggestion about my immediate wants is gratefully noted, but with my salary, which in a few days will be paid to me, I will be able to get along comfortably.

Give to my Chicago friends the warm and lasting gratitude of Mrs. McKinley and myself. God bless you, my unselfish friend, and give to your home and household His tender care.

Your sincere friend,
WILLIAM MCKINLEY, JR.

MR. H. H. KOHLSAAT,
Chicago, Ill.

During the winter of 1894 the work of securing McKinley delegates in the Middle West became too heavy for the small group of men Mr. Hanna had chosen to work with him. During one of his visits to Chicago he stopped at the Wellington Hotel. We dined together and he told me a young fellow whose father, Gen. Rufus Dawes, was Major McKinley's old commander, had been to see him and had offered his services. Mr. Hanna had asked the young man to come to the hotel that evening. While we were in Mr. Hanna's room he was announced, a rather pale slight figure, and somewhat diffident. We discussed plans with him as he displayed great interest in McKinley's success and offered his services free of all expense.

Looked Good, Was Good

After he left the room Mr. Hanna remarked, "He doesn't look much, does he?"

I said, "Any man who will work for nothing and pay his own expenses looks good to me!"

One would hardly recognize the pale slight figure of 1894 in the brilliant officer Brig. Gen. Charles G. Dawes, whose splendid record during the war won him the confidence of our Allies and justified General Pershing's faith in him. He displayed no diffidence when he appeared before a Congressional committee last spring and made "Hell and Maria" famous, and later in his lecture to cabinet officers and department chiefs whose coöperation he asked when he drew up the first national budget.

Charley Dawes, as his friends call him, devoted himself to the McKinley cause. He initiated a card-index system extending from the Alleghanies to the Pacific, and probably, next to Mr. Hanna, did more to win the nomination for McKinley at St. Louis than any other man.

Editor's Note—This is the first of a series of articles by Mr. Kohlsaat. The next will appear in an early issue.

HOW DO THEY GET THAT WEIGH?

(Continued from Page 9)

isplayed in cheap bakeshop and restaurant indows as you would shun the tax collecor if you could. They may look like anta Claus' dream of Merry Christmas, ut they are a snare and a delusion and here is no nourishment or virtue in them e you. Many a good digestion has gone hell on a cream puff.

Delicatessen shops are not for the fatten- few, any more than are the palatably d optically pleasing *pâtisseries*. The cold ues, so pleasingly pink and prickly with gared cloves, the languid pickled fish, e cranaring chains of smoked sausage d cute curls of dried beef are forbidden your longing eyes. However tempt- gly the pretzel and the Limburger linger your aching nostrils, no matter how lden red the herring salad gleams, you must have them. They may clutch at the nds of your throat with the old familiar ntasy, half pleasure and half pain, but u must pass them by without a sign.

The delicatessen store is at once one of greatest blessings and curses of our ne life to-day. To resist its convenience all occasions would be, in the increas- ly perfunctory housewife, abnormally tuous. But to use it constantly as a rce of food supply is little short of minal. And those who seek to grow fat healthy, lasting fashion must ostracize native haunt of the Bismarck herring the home of the *gefüllte* fish. I'm not good on percentages, but my guess is the number of people who are under- rished and consequently underweight he result of a habitual delicatessen diet onsiderable, and this not primarily use of the quality of the food procur- in such places, but because of its char- r.

Well, anyway, food alone won't put on ght for you. One difficulty which most s experience in their attempt to gain ht is that whatever they eat on they t off. And if, after a moderate trial of foregoing diet, you don't put on weight chances are that this is because you are getting sufficient rest.

ow it's a hard job to rest if you don't r how, but even if you have to work ght-hour day you may rest sufficiently low your weight to creep up on you. down whenever you can, even if it's in an elevator. Lie down after meals, though you have to get up again in minutes. If you are rich enough have breakfasts served to you in bed and your exercise in your car. Once you ver that silly idea that it's easier to the two blocks over to Aunt Mary's, ide it as a matter of course, you will to put on weight to rather more than heart's content, and tip the scales to st where you will come pretty near g them over if you don't watch out!

Too Much Hustle

, the evidence on any main street to ontrary notwithstanding, everybody t as yet possess a car; no, not even stall-and-installment plan. And a these people who walk are also en- in occupations which keep them ir personal feet for a good part of the Standing on one's feet, or anybody for that matter, is one of the first or getting thin. You seldom see a fat clerk in a store, or an enormous s or an overweight book agent. It hose who must exercise for a living want to point out how consistently ithfully the chance to rest must be upon.

in this connection let me call atten- the danger of overeating when you ertired. Don't do it. Always try a little before eating and after When you are exhausted, too much ill simply poison you. And don't rriedly. Food snatched in haste ut on flesh. Indeed, I can't lay too stress on eliminating the habit of ste from everything you do. Noth- help keep you thin more effectively he nervous tension which comes of bit of hurrying when hurrying is un- ry. I don't mean that one must zy in order to grow plump. But I enly aware of the fact that most ans take a false pride in hustling hustling is not accomplishing any- except the fraying out of their entire a system. There is a vast difference between sloth and poise, between self-regulation and sloppiness. I don't intend to suggest that you lie down on the job or on the family in order to put on weight; but I do insist that you quit worrying, quit hurrying; find out in a frank self-examination whether or not you are working under a high nervous tension, and if you are, deliberately overcome it. Get the habit of rest. Relax completely every time you get a chance, and if you don't get a chance make one.

Relaxing isn't so easy either, but it, too, can be learned. For example, when you come in from your day's work go at once to your room, loosen your clothing and lie down on your bed. Be sure to lie flat, with the head only very slightly elevated and the feet in a normal position. Don't stick them on the comforter, which will raise them. Be a sport and put the comforter out of the way. Allow your hands to rest on the bed on either side of you. Then relax. Relax completely. Let yourself go. First get rid of conscious interest in whatever you have just been doing. Then concentrate on letting the tension in your muscles go. You can do it. Think yourself out flat until you are so limp that if someone were to come in and pick you up you would hang on their hands as oozily as a jellyfish or an underdone poached egg. Remain in this half-baked condition for ten minutes and you will get up at the end of them feeling like a million dollars. Well, like a raise in salary, anyway. It is not how long one lies down that rests one, but how completely down one lies, if you get the notion. It is perfectly possible to cheat a lot of rest out of the busiest sort of life, and the sooner the fatter, take it from me.

A Perfect Shape for Fifty Cents

Even though you be rich and idle, don't get away with the notion that lying in bed for a week or two will start the good work any faster. It won't. Lying in bed protractedly will take off weight in most cases. And a moderate amount of exercise is, of course, essential to anyone's well being. But naps are a fine tonic which you will soon get used to taking. After a little while it won't be any harder for you to gather up a book or magazine and the nicest sofa cushions, and hog the box hammock or the best sofa for an hour or two daily, than it would be for you to stoop over and pick up a hundred-dollar bill on a deserted street. It will come kind of easy and natural, and the rest of the family can't crab, because it all comes under the head of health.

And now just a word about what not to take. Of course, genteel reader, the advice which immediately follows is not intended for you personally, yet I am sure an intelligent individual like yourself will understand that I have to put it in. For there are a lot of boobs around, and some of them might get hold of this copy of THE SATURDAY EVENING POST. Naturally I am aware that you would never dream of taking any of the patent medicines with which the market is flooded and for which many otherwise quite respectable papers carry advertising. But unfortunately there is a patent-medicine taker born every minute, and I want to warn these dumb-bells in time.

Of course, with licker so scarce and high, it is kind of a mean trick to demand that patent appetizers be cut out as well. But practically all so-called fat-making tonics are cocktails in disguise, excepting only cod-liver-oil preparations, and if you care to take a cod-liver-oil cocktail three times daily before meals you are welcome to for all of me. But lay off of the self-foolers. I have already said that you are to have no alcohol, and I mean it, even when it comes in an extract bottle and is labeled Whoosis Compound or something. A jag by any other name is just as bad for you.

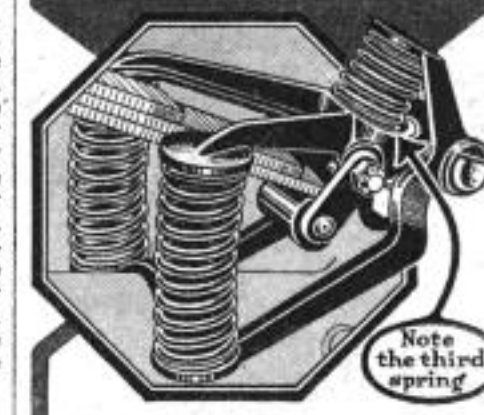
When it comes to using glands that some monkey or sheep has got through with—well, there is no accounting for tastes. Personally, the idea makes no appeal to me, but there are folks who will try anything once. For my part I say let's give all such glands a decent burial and try to pick up our own lives as though nothing had happened.

Now the average skinny person who is anxious to be less so is, as a rule, equally desirous of putting it on in some particular spot. "I'm all right in the hips, but my neck and face are something fierce," are the words of the national anthem of the thin, varied on holidays by that good old hymn commencing, "I'd like to put on just a little bit around the chest, but my stomach and my hips are fat enough." At first glance this desire seems reasonable, for surely there is a method of growing flesh quickly where desired and nowhere else. There must be a way to make a million dollars by wishing for it, by that same token. If you have time and patience and money a first-class physical-culture instructor can come pretty close to doing the job just the way you want it. But that is not what you mean, or what I mean either. What we are both looking for is something that will give us a perfect shape for about fifty cents.

For Local Plumpness

Needless to say, there is no such thing. However, if your face and neck need building up there are certain substances which will actually help along the good work. Coco butter is the safest of these, and can be bought at any good drug store. A small quantity will go a long way. One melts it and rubs it on night and morning. Faithfully. Rub in as much as you can absorb. Common olive oil applied in the same manner is almost as good. You are literally feeding fat into your flesh by doing this, and neither coco butter nor olive oil can possibly hurt your body; but they may grow hair if used on the face.

For plumping purposes a reliable cold cream is far better and is also beneficial, although slower in its fattening effect. Don't get a greaseless cream; get a skin food, and allow it to remain on overnight. Use it under your make-up, girls, in small quantities, and plaster it on under your chin. It will help do away with a stringy throat. Pat it in good and hard, until your skin can absorb no more, and only wipe off what won't pat in. Don't rub—pat. This is important, as rubbing may make wrinkles. But the patting will stimulate the circulation, and that in itself will help your face to fill out.



In an age when so much that we used to do for ourselves is done for us mechanically it is not unnatural to think that our physical welfare ought to be taken care of automatically; we are apt to feel that we should be able to grow thin or fat by dropping a nickel in the slot—a plugged nickel preferably. But science has, fortunately for our moral welfare, not yet advanced that far. It is all right enough to have out pianos played for us, our songs sung and our funny stories told for us by phonographs. I am not unwilling that our clothes should be washed by an electrical charwoman, our errands run by a telephone, or even that our breakfast food be predigested. But I thank God that there are still a few things we have to do for ourselves or go without.

And getting fat is one of them. I can tell you how, but I can't force you to persevere in the effort. Just how quickly you may expect results depends of course upon your individual physique. Some people take to fat far more readily than do others. But if at the end of four weeks' faithful following of the program you have not gained, either there is something lacking in your system which only a physician can discover or else you have not really been faithful after all.

I do not believe that there is any such thing as being naturally thin or naturally fat. Those cries are the cowardly admission of people who won't make a sincere effort to alter their condition and who enjoy blaming their ancestry for their own laziness. It has been an easy fashion to inherit one extreme or the other. This, when given the smallest scientific scrutiny, is the most fallacious of alibis. An unconsciously acquired habit of mind regarding one's physical condition is the most we can grant such a case.

Semper fidelis must, however, be your motto, which, very roughly translated, means "simps must be faithful." It would take a super man or woman to break the rules I have laid down and break them so discreetly that no harm would be done thereby. But keep to the rules and you will see what you will see. And, in the language of the Orient, where fat is fashionable, I wish you luck. May your shadow never grow less!

BURPEE-JOHNSON
FloatAforD
SHOCK ABSORBERS

The "third" spring assures comfort

Take a ride in a Ford equipped with FloatAforDs and you'll wonder how a car can be made to ride so easily. The secret is in the famous "third" spring. The two long spiral springs absorb the downward thrust with flexible ease while the "third" spring checks the jarring rebound and holds the car steady without sideway. FloatAforDs are on the job BOTH ways.

Notice that FloatAforDs do not bind the Ford springs. No tampering with the Ford suspension principles. That's the reason why we give you a positive guarantee against spring breakage.

FloatAforDs are low priced,—sedan and coupé the same price as open car types. They save gasoline, tires and parts replacements,—and immeasurably increase the life and running efficiency of the car.

10 Days' Trial—If not satisfied, these absorbers will be taken off and your money refunded. Types for Ford cars and trucks. Sold by all Ford dealers.

Before buying any shock absorber get—

REO SPEED WAGON

Why This Amazing Dominance?

When you consider the degree to which the Speed Wagon today dominates every class of carrying, it is no less than amazing.

In every phase of hauling and delivering the Speed Wagon is supreme.

Ask twenty owners or drivers, and each will give you a different reason for his own preference for Reos over all others.

One will emphasize the wonderful power and stability of the Reo motor.

Another will mention the clutch as superior in rigorous service to any other he has ever known.

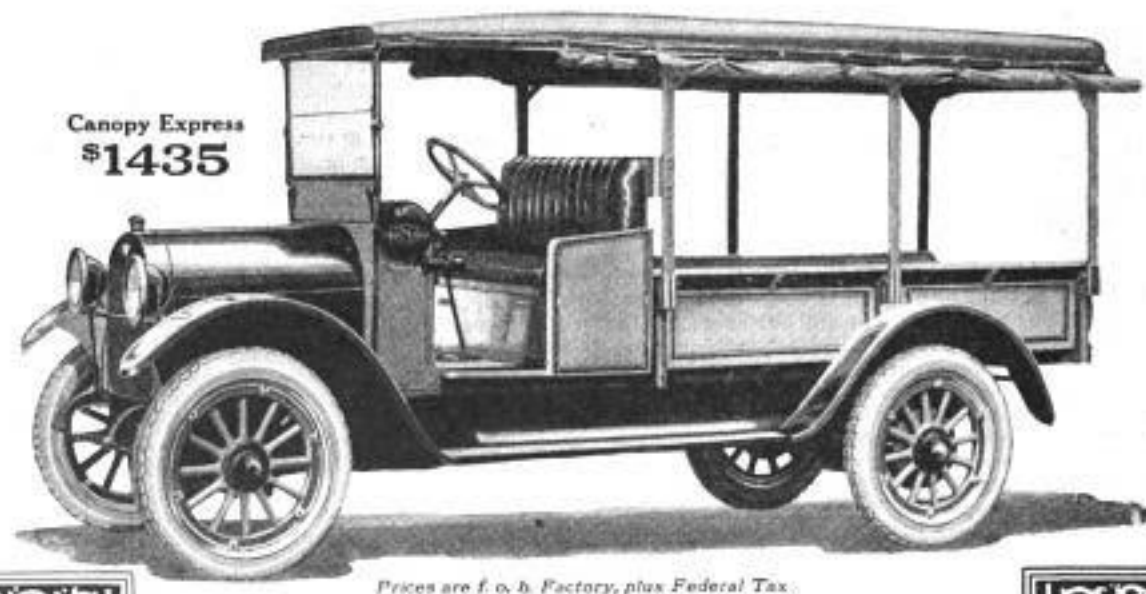
The next will dilate on the simple, certain, Reo control system and dual clutch-brake feature, as of paramount importance.

And so it will go, through each feature in turn. The rigid yet flexible chassis—the rugged axles—the superior starting device—the powerful steering gear—the extra stout wheels.

Drivers are invariably enthusiastic over the roadability and other qualities that appeal to the man who actually lives with his truck, six days a week.

Superintendents of service shops will tell you of accessibility; reasonable cost of replacement of parts; of Reo Service; and general freedom from trouble.

Sum it all up, and you have the real reason—a carrying unit that is as strong and dependable in one part as in another.



In a word, a machine that is perfectly balanced in design and construction, and that excels, not in one or two, but in all features—minor as well as major.

Is it any wonder that speed wagons perform every class of carrying—from 500 to 2500 pounds—a quarter-ton to a ton-and-a-quarter—and do the work quicker and cheaper?

THE TEST OF LOCHINVAR BOBBY

(Continued from Page 17)

im and brought him home. After that
e dog had longed for nothing better in
fe than to follow and serve Jamie. The
ve for a master had overcome the love of
e wild. But now Jamie had disappeared.
d ahead of Bobby lay the forest. The
d urge swept through him.

He turned excitedly toward the waiting
ss. Again their noses touched. No one
n prove whether or not dogs have a
nguage of their own. But no one who
s studied them can doubt that in the
uching of noses they somehow communi-
te their primal thoughts or wishes to
ch other.

Bobby after that instant of contact
irled about and cantered down the slope
ward the distant ridge. Lass hesitated
t at all in following. Side by side at a
d gallop they reached the plain. They
ssed it with an odd new furtiveness,
ring houses a wide berth, and at last
ining the ridge. Up this they toiled and
wn its farther side into the borders of
ake's Woods.

These woods marked the boundary of the
meval forest. Once they had been a
orite picnic ground for Midwestburgers.
t long ago they had been abandoned in
or of a resort on the lake, since when
y had been trodden only by occasional
ters or by boys seeking nuts. In the
ter of the grove stood the weed-hidden
l decaying structure that had once been
ancing floor. Toward this, now, Bobby
s heading at top speed. Yet by some
er mental twist he no longer plunged
nly through the undergrowth, as does
normal forest-running collie. Into his
t and into his expression had come some-
ng stealthy. His feet made no sound.
ran close to earth and took advantage
very bit of cover to mask his progress
n chance humans.

fe himself did not realize why he did
, nor what change had come over him
ght of this old lair of his. His loyal
rt still ached unspeakably for his lost
ter. Had Jamie appeared in the offing
dog would have rushed to him in an
asy of joy and would have followed him
fully away from this fascinating wilder-
, and even from the still more fascinat-
Lassie. But Jamie did not appear.
, next to Jamie, the dog loved this wild
he was returning to.

ass by instinct began to copy his
ive gait and his caution. No longer did
frisk along as heedlessly as a child on a
iland holiday. She, too, sped through
ndergrowth with hushed stealthiness,
e heels of her huge guide.

esently they came to the platform.
by skirted it, sniffing and peering, till
ound what he sought. And he halted
ont of a ragged aperture in the rotted
that formed the sides of the platform.
was the hole he had discovered in
yhood, the hole leading into the low
leaf-strewn lair beneath the flooring.

ouching with stomach to earth and
ing after each careful forward thrust he
his way under the platform. The
was as he had left it—dark, moldy,
s. The flooring above was a crumbling
. Yet it still served as roof, even as the
of many years' leaves served as warm
ing.

ass began a strange life, and one that
times almost made Bobby forget his
at loss of Mackellar. Lass, under the
ance of her worshiped new mate, took
e wilderness with as much eagerness
she had been born in it. And there the
dwelt as, aforetime, mated wolves had
t in these same forests.

the first evening of their woodland
angs of hunger began to rack them
as suppertime arrived with no supper
company it. Harking back to early
Bobby sallied forth to forage. Lass
iently trotted along beside him. At
nd of a hundred yards he struck a
rabbit scent. Instantly the hunting
of his youth returned to him. Noise-
, with couchant body, he flitted along
track. In another fifty yards he
ued his speed with a suddenness that
it made the close-following Lass col-
with him.

e stood, puzzled and hesitant, and
bed him creep forward like a cat for
little distance, then dart ahead with
whizzing speed of a bullet. As she
ht up with him she saw he was pinning
arth a plump and kicking rabbit.
Politely he shifted his grip on the prize, to allow her a chance to rend it with him.

That was their first meal in the wild, and for days thereafter they fared sumptuously. The hunting season was long past. From lack of molestation the rabbits had grown incautious. Bobby was a born tracker and with marvelous quickness Lass picked up the art of tracking and of stalking. The two waxed fatter from their feasting.

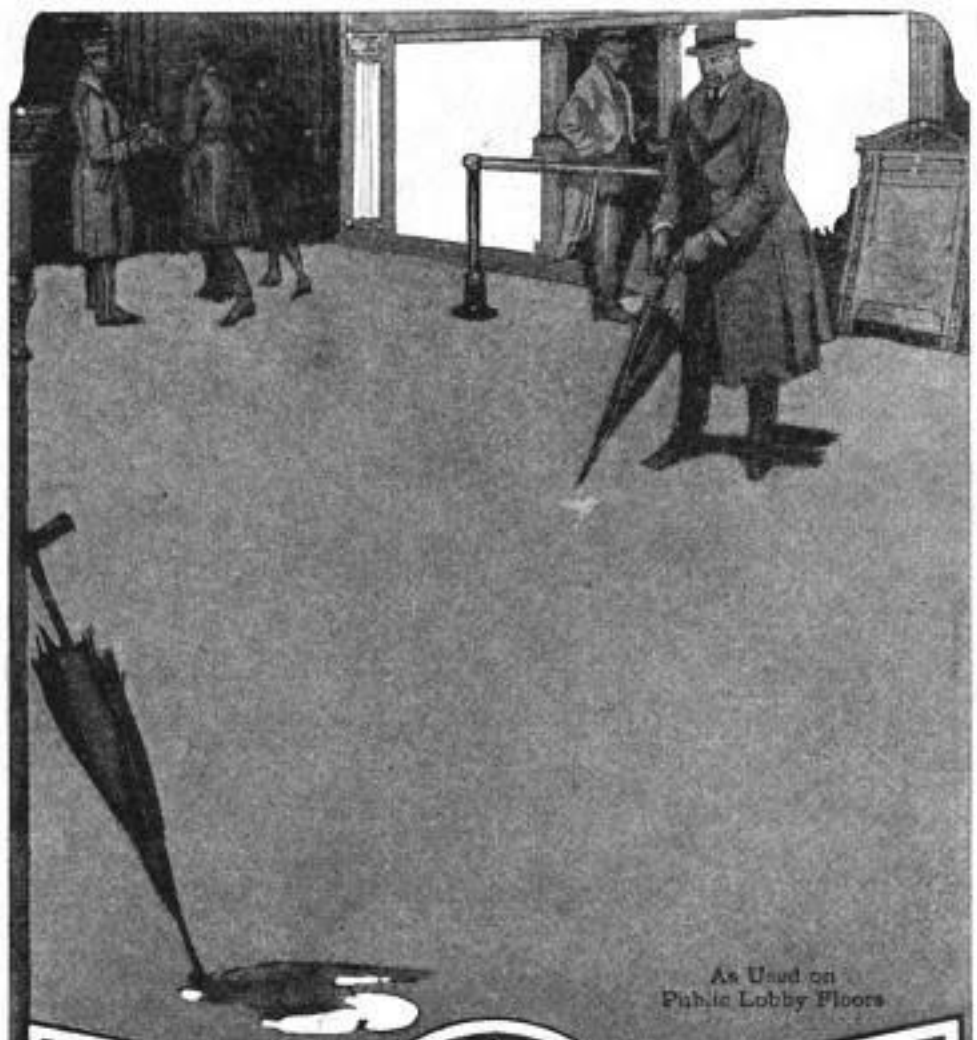
But in another month the rabbits for a mile or so around the lair seemed to have learned that the vicinity was not healthful for them, nor conducive to long life. And even as a rabbit-infested neighborhood becomes deserted soon after the opening of the hunting season, the once-populous stretch of Blake's Woods lost its long-eared population.

It became needful to range farther and farther afield in order to catch a single unwary rabbit. Bobby took this change philosophically and strove to add to the rations an occasional tracked partridge or a mouthful of baby quail. Lass hit on a less sportsmanly device.

The two did the bulk of their hunting by night, keeping close to the lair for the most part by day. In this respect as well as in a score of others they were throwing back to their wolf ancestors. The careless sauntering of some farmer or idler through the grove was enough to make them crouch to the ground, under the platform or under the nearest bit of cover, and lie there, moveless and tense, until the intruder had passed. Probably neither of them realized why they did this or why they returned in other ways to wolf traits.

This is the unsportsmanly device hit upon by Lass to gain food when rabbits waxed scarce: One night they had quartered the region for several miles in every direction without putting up a single rabbit or a catchable bird or squirrel. As Bobby stood irresolute Lass took the leadership into her own hands.

She cantered off with an air of definiteness in a direction whence a scent had caught her nostrils. Bobby, not understanding, nevertheless loped along at her side. In half a mile she slowed down at the edge of a farm clearing and with noiseless tread crept toward the half open door of a hen house. From within issued the odor that had drawn her thither—the smell of warm flesh and feathers.



Now Bobby's own first exploit in the wilds, as a puppy, had been the theft of a chicken. That had been while he was still his own god and before he had learned the laws of man and adoration for one man. Since then, again and again, he had seen puppies at Beldencroft scolded for chasing chickens.

On his own first return to civilization he had casually and skillfully bitten off the head of one of Mackellar's hens. And Jamie had told him sorrowfully, yet with much vehemence, how wicked and unworthy a deed it was. Jamie had instilled into Bobby's wise brain in that one lesson the fact that chickens belong to mankind and are not to be molested by dogs. On another day he had called Bobby back as the collie had started gleesomely after a lamb in a field, and had made him understand that lambs come under the same hands-off category as do fowls.

To-night as Lass wormed her way forward to the invitingly open hencoop door Bobby sprang in front of her. Urged by some impulse he was not able to comprehend or to resist he interposed his shaggy seventy-pound bulk between his hungry mate and the tempting prey. To Lass' vast annoyance and amaze he shouldered her gently back from the doorway and toward the fringe of forest. Thus it was that the two went supperless that night; because Bobby's mind, once having grasped the law, could not forget it or let him break it.

As if by way of reward, the very next evening came an astoundingly fine bit of luck to the pair. As they were issuing, famished, from the lair, at dusk, something came blundering and crashing through the bushes straight toward them. The wind was also blowing toward the dogs, and it told them this oncomer was no human. Wherefore instead of slinking back into their hiding place they stood inquiringly waiting its approach.

Through the undergrowth lurched an eighteen-month-old bull—fat, powerful, lumbering. From a farm three miles away

Truly Comfortable

If you think that you are wearing garters that are as comfortable as you can expect garters to be—try a pair of Pioneer-Brighton Wide-Webs and learn what true garter comfort really is.

Wide-Webs depend for their support, not on tightness, but on the happy combination of the weave and broad surface of the soft wide web. This means free circulation and free play for leg muscles.

They are adjustable. This means a perfect, comfortable fit from first to last. Ask for Pioneer-Brighton in the smart blue and orange box.

he had strayed, after trampling and goring nearly to death the man who had tended him since birth—the man who deemed him still a harmless calf. His temper and his nerves stirred up by this attempt at slaughter, and goaded on by fear of the other farmhands who had swarmed forth with pitchforks and staves to beat him away from his prey, the young bull had taken to the woods.

Now in teaching Bobby the law Jamie Mackellar had said nothing about cattle, and at sight of this ton of food Bobby became all wolf. He crawled forward in an oblique course toward the enemy, Lass as ever close behind him. The bull either saw their moving bodies through the dusk or else got a whiff of their scent, for he halted, lowered his head and pawed the forest mold. The dogs halted, too, and crouched alertly, watching.

Then with no further warning the angry bullock charged. Through the impeding underbrush he tore down upon the two moveless dark forms. The dogs had never been in a fight of this sort. There was no chance for rehearsal or for any sort of prearranged plan of campaign. Therefore cruel old Mother Nature taught them what to do, even as she taught the first starving wolf a million years ago.

By common consent they drew apart from each other to avoid the rush. The bull—as ever is the way of bulls—charged with his eyes tight shut. As he hurtled past the spot he was aiming for, Bobby had him by the hind leg just above the hock and was grinding with all the strength and skill of his mighty jaws through tough hide and tender flesh, in quest of the tendon.

Lass, less wise, had sprung for the throat. Her white fangs cleft through loose-flapping folds of skin, to no lethal purpose. A single jerk of the bull's neck flung her aside with a handful of skin and hair between her teeth. At the same time an agonized fling of the bitten hind leg sent Bobby rolling over and over in the bushes, the breath knocked out of him. But at once he was up again.

The bull, maddened by his hurts, glared from one crouching tormentor to the other. Then shutting his eyes again, he charged Bobby. And now—Lass having learned something from her first failure—both dogs were at the leg tendons.

For a moment the three combatants thrashed madly about in the twilight. Then the bull was free for another charge. Five times he rushed with shut eyes at the elusive collies. Five times his legs were slashed and nipped in that industrious quest for the all-important tendon. Then heaving and staggering he ceased his charges and stared doubtfully at the two. He had had enough, more than enough. He was through. He took a step backward.

Instantly Lass was slashing at his sensitive nose, and keeping just out of reach of the terrible short horns and butting forehead. While she held him thus in momentary confused pause Bobby found the way to the tendon he sought. The task was much easier now that the foe was standing stock-still and braced.

The bull spun about to crush him, but he made only half of the desired turn. From some dismaying cause his right hind leg gave way most agonizingly under him and he plunged to earth with an impact that shook the bushes. Fiercely the two dogs drove for the swaying throat. The rest was slaughter.

Hungry as she was, Lassie lay down and panted heavily for a few minutes before beginning the feast. Bobby, his beautiful head on one side and his deep-set dark eyes alight with sympathy, stood near her, waiting.

Of late she tired much more easily than at first. Nor, except for short exertions, was she so swift and so wirily vigorous. Soon Lass got back her breath and the mates feasted long and ravenously.

If search was made for the strayed bullock that search did not extend so far as an undergrowth-choked section of Blake's Woods. And for long thereafter the larder of the runaway collies was replete with tender food. The supply would have lasted still longer had not the crows flocked to it by day. Bobby drove these off fifty times between sunrise and dusk, but as often they clamored back greedily to the banquet.

Then, on a morning, there was nothing left of the bullock but a skeleton on whose few remaining shreds of flesh the crows alighted unchallenged. They were unchallenged because Lochinvar Bobby was risking exposure by foraging far from the lair, and by broad daylight; and because Lass lay drowsily in a far corner of that lair with seven sleek mouse-colored puppies, no larger than squirrels, nestling close to her furry body.

It was for this new family that Bobby had deserted his regular nocturnal habits to scour the forests by sunlight. Monstrous proud and self-important was the big dog this day, and he hunted in rare good luck.

Rabbits are almost as silly as they are timid. Because, for so many days past, their collie foes had not pursued them, they seemed to imagine the dogs had departed from Blake's Woods or else that they had lost their taste for bunnies. Back to their old feeding grounds trooped numbers of the cottontails.

Bobby found one of them—a good big fellow at that—before he had quested for an hour. Back to the platform he bore it in triumph. Ignoring the noisy crows, as being far beneath his notice on so great a day, he crawled through the hole into the dark lair and laid his prize in front of Lass.

Then he sniffed in interested curiosity at the seven wriggling and squeaking babies. Their presence bewildered him through all his vague pride. Dimly he felt he must care for them and feed and guard them. The responsibility which is ever present with wolf fathers and practically never with dog sires was heavy upon him.

Thanks to the ill-founded confidence of the rabbit folk, foraging was easier; this for a week or so. Then once more the bunnies vanished, and to find one of them Bobby was forced to range several miles afield.

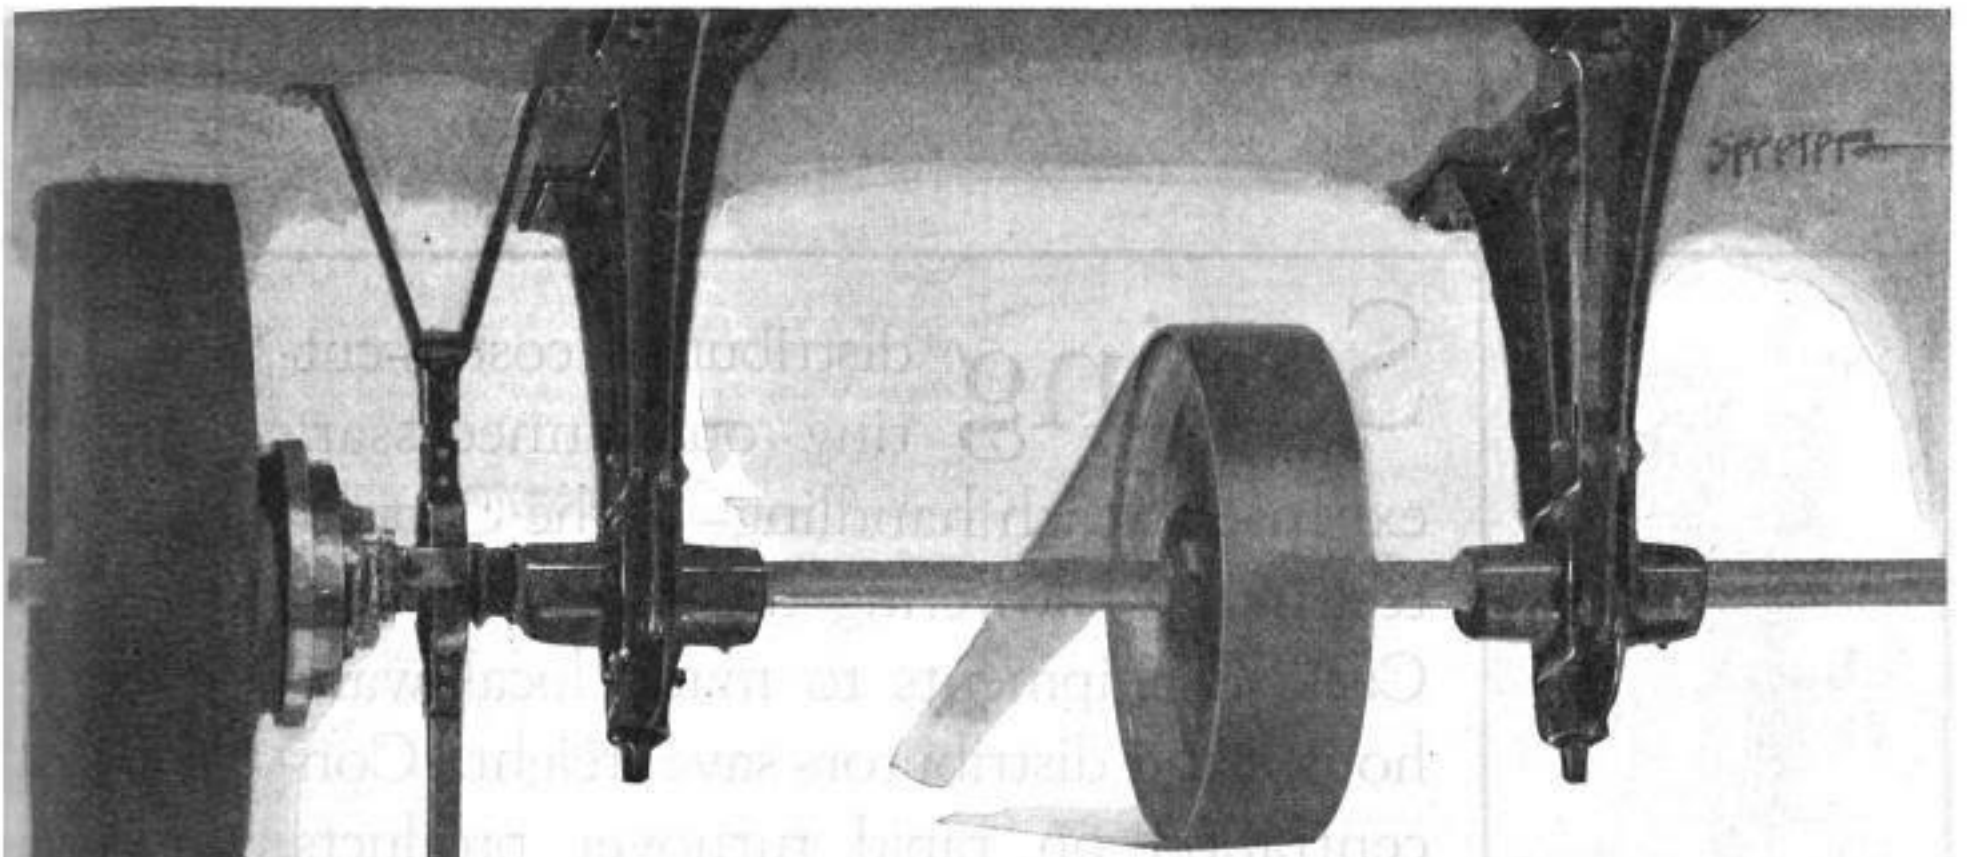
He hunted alone nowadays—or nowanights—for Lass stayed at home, seldom wandering farther from the lair than the furlong-distant spring puddle that served the pair for a water hole.

There was no longer any fun for Lochinvar Bobby in these nights of hunting, for they carried him far, and more than once they carried him into real or fancied peril by delaying his return to the lair until well after sunrise. But it did not occur to him to shirk his new duties. Apart from his utter devotion to his mate—a devotion more common among highbred collies than most people realize—he had that odd sense of responsibility toward the pups. And this sense, as I have said, was all wolf.

It was sweet to crawl wearily into the den, on his return from a thirty-mile run and to drop at Lass' feet the rabbit or partridge he had brought home. It was sweet to hear her tail beating glad welcome among the dried leaves of the nest when he drew near, and her little whimper of greeting as they touched noses. It was amusing as the weeks passed on, to watch the clumsy antics of the puppies—as large as rabbits—as they tumbled over him or over their mother or strove to play with one another after the manner of stiff-jointed patent toys.

Yes, if life meant new work it also meant strange new interests. And if again and again Bobby's heart was racked by longing for his lost master, yet his present ties held him back from returning to the haunts of men, now that Jamie had disappeared.

In the early springtime dusk the furry family would come out from the lair and chance an hour of fading daylight in the open, the sire and dam lying comfortably at ease amid the undergrowth while the babies gamboled awkwardly around them or essayed staggery little excursions for a few yards into the woods on either side.



Lass watched these exploring trips with real worry. Seldom did she allow them to continue for any distance before jumping to her feet and heading off the creeping wanderer and nosing it back into the family group. All her time and all her devotion were taken up nowadays by the fluffy babies of hers. She had scarce a thought for her once-idolized mate except when he brought food home. Nor would she follow him for a single mile from the precious pups.

Presently Bobby seemed to note the change of heart, and it saddened him. He was too big of soul to visit any resentment on the youngsters that had stolen Lass' devotion from him. Yet pathetically he strove to coax her to romps as of yore, and to the long forest rambles they had both enjoyed so keenly. And, failing, he betook to brood. He lost the gay dash that had been his; he took to moping, which is as bad for a collie as for a human.

One night he set forth as usual on his quest for food. He coursed the forest

Low cost power economically applied

The Dodge Heavy Oil Engine is a logical and important addition to the Dodge line.

It supplies the need for a simple prime mover using low grade fuel oils, exceptionally economical in operation and requiring no skilled supervision whatever.

The Dodge Heavy Oil Engine will put electric current on your switch board for a half a cent per K.W. for fuel or may be belted direct to any line shaft for group driving. It permits low insurance rates and may be located at any point in the plant where auxiliary power is needed.

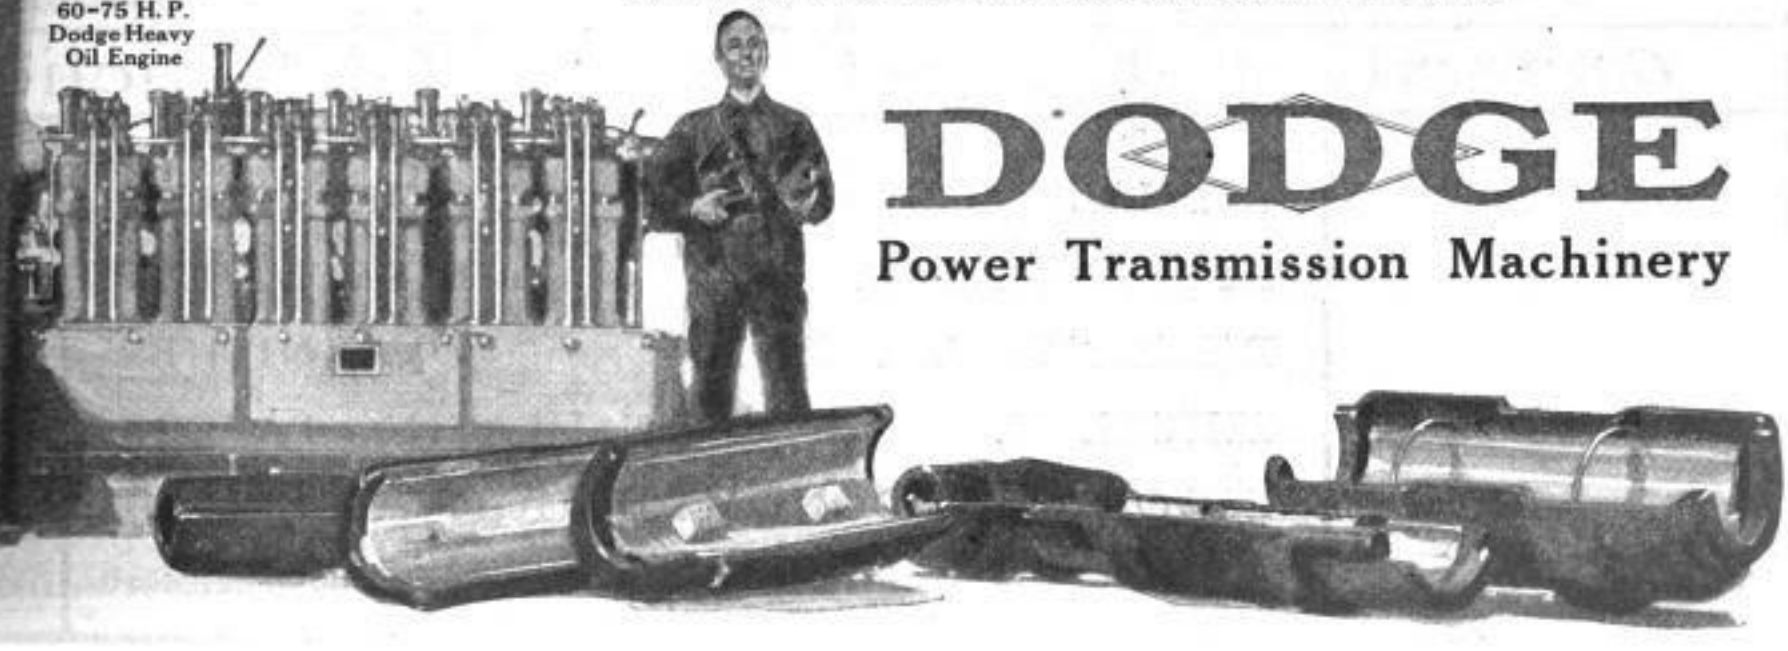
The Dodge Heavy Oil Engine is backed by the 42 years of Dodge prestige and reputation and is built in strict accord with the single high standard of performance by which we measure the products we build—let us tell you about this remarkable and economical source of power.

The Reliable Roadbed for Power

Any millwright can erect a line of Dodge hanger bearings correctly—once in operation they can be relied upon for *years* of continuous service.

Regardless of what his individual preference for type may be, the man upon whom production depends can specify Dodge hanger bearings and know that there is no surer means of safeguarding his manufacturing facilities.

Dodge line or countershaft bearings maintain a uniform and unbroken film of oil between heavy shafting and the bearing surface. Bare contact between a shaft and its bearing means friction loss, wear and disalignment of the whole power roadbed.



Dodge Capillary Bearings depend upon the infallible law of capillary attraction to insure constant and unfailing lubrication—their depreciation value is less than 2% per year.

Dodge Ring Oiling Bearings are the standard of some of America's most successful shops. Their ability to withstand severe service, high speed, heavy overloads and excessive vibration is acknowledged by production engineers everywhere.

Dodge products, including bearings, pulleys, hangers, clutches, collars, etc., are carried in stock by over 700 Dodge, Oneida and Keystone dealers who can handle your orders on the immediate delivery basis. Buy from them—we prefer it.

Saving distribution costs—cutting out unnecessary expense at each handling—is the Certain-teed way of lowering the price you pay. Carload shipments to many local warehouses and distributors save freight. Concentration on rapid turnover products, with a reserve supply near at hand, means relief from the burden of overstocking—an economy for both dealer and consumer. These outstanding economies of distribution, plus the millions saved through enormous standardized production, enable you to buy Certain-teed products of highest quality at a worth while saving.

(Continued from Page 154)

the hills beyond for twenty miles, drawing blank at every covert except one, and missing his prey there by a hair's breadth when the bunny dived into a bowlder crack whither the dog could not follow. Tired and hungry, at gray dawn Bobby turned back toward the ten-mile-distant lair.

He had not loped a half mile when he was thrown violently on his side. This by reason of planting one careless hind foot on the fange of a well-hidden fox trap.

Of old Bobby would have caught the scent of this trap and would have detoured it. But long dwelling with humans had blunted in a measure the wolf instinct that had been his as a masterless puppy, and he had stepped straight into the masked snare. The steel jaws caught his foot slantingly. They drove through the skin and they held fast, but they did not break the bone or so much as cut a tendon.

Nevertheless, the spring would not release its hold in spite of all Bobby's plunges. Nor did the slender steel chain. Nor did the deep-driven stake to which it was fixed. The dog was a prisoner.

Daylight came up before he ceased his mad thrashing about. Then rose the sun and slipped high and higher in the skies. The morning was half spent before the farmhand who had set the trap remembered to visit it. To his incredulous dismay the yokel found a gigantic tawny-and-white collie stretched at full length at the chain's farthest span, panting for breath.

The man chirped to him. Bobby did not reward the salute by so much as a glance. He seemed too worn out to move. The man took an appraising look at him, figuring mentally on the possible reward for so magnificent a dog, if the brute were not already too far gone to revive. Then he went to open the trap. Later it would be time to try to resuscitate its helpless victim.

As the steel jaws were pried free from the bleeding foot the inert Bobby came to life. Scarce had the edges cleared his paw when he was up. He sprang from the ground with lightning swiftness, and in practically the same motion he whirled across the short distance between the trap and the nearest line of bushes.

Into this shelter he slid as noiselessly as a ghost as the astonished farmhand made a belated rush at him. Still on pads of silence, oblivious of the pain and swelling of his torn foot, the collie sped at top speed across the miles of woodland that lay between himself and the lair.

A queer worry, a mystic instinct—urged him on. Twice he sprang across brooks, but though he was parched for thirst he did not pause to drink. And ever, as he ran, that same mysterious terror waxed stronger and more and more agonizingly compelling.

At last he was in Blake's Woods. Then he was at the mouth of the lair. At sound of his approach seven falsetto voices raised a hunger chorus. But Lass' welcoming whimper was not among them. Lass was not there. Even before he stooped to peer in at the opening Bobby's scenting powers told him she was gone. The hungry puppies had crawled out of their nest and were prowling about in the open.

For a moment Bobby stood there, his dark eyes clouded with misery. Then as over his collie brain and resourcefulness came to his aid. Nostrils to ground he began to course. Instantly he picked up Lass' trail. It was fresh. A mongrel puppy could have followed it.

There, not an hour ago, Lass had trotted. Her mate had not come home, her babies were hungry, and there was no one but herself to forage for them. Before she had gone a quarter mile she had caught the scent of food. True, it was food from which Bobby had once driven her, but he was not there now to push her aside from it. And in any case, mother instinct was a billionfold stronger than obedience.

Out of the woods and straight to the nearest farm she went. The first outbuilding she came to was the chicken coop. It was the work of a moment for her to butt in the crazy door of it, and of another moment to drive her teeth into the fattest fowl.

But as usual it proved easier to get into trouble than to get out of it. The chickens set up a most godless racket. A man came running from the adjacent barn just as the doomed fowl succumbed to Lass' pounce. Despite her futile efforts he grabbed the fighting collie by the nape of the neck and hauled her out of the coop.

The county law indemnifies a poultry owner for birds killed by stray dogs. Instead of braining Lass, as was his first impulse, the man shut her into an empty corncrib six feet aboveground and left her there until he could drive to the village and bring back with him the local constable as witness to the damage and to its perpetrator.

There in the dusty recesses of the crib, high on wooden posts with a tin pan at the top of each to keep out rats, the luckless collie ran from side to side, biting and scratching at the slats in furious attempts to get out. And there Lochinvar Bobby found her.

Bobby circled the crib, leaping high and seeking vainly to get a foothold on its sides. Lass whined plaintively, scratching at the thick slats and throwing herself at them in a frenzy of dread.

Then all at once Bobby ceased his frantically useless efforts. Again he stood moveless, seemingly deaf to his mate's whimpering cries. And at the climax of despair came his idea.

Man in dire extremity runs to his God for aid. To the dog all men are gods. That does not mean he worships them all or has any use for the majority of them. Still, they are gods and he knows it—infinitely wiser and stronger and more resourceful than himself. Thus it was that Lochinvar Bobby in his agony of fear for his brood turned to the only gods he knew of.

His personal god, Jamie Mackellar, was gone. But there were other gods, not strangers to him—gods for whom he had a mild liking, gods who had made much of him. These Beldencroft folk, rather than any strangers, would be likely to help him in his moment of stark need.

Without another backward look at the mate he was apparently deserting to her doom, Bobby went into action. Head down, feet flying, he flashed across the clearing, heading in a bee line for Midwestburg.

Jamie Mackellar at the end of eight weeks had been able to hobble about on a cane. As soon as he had come to complete consciousness, at Beldencroft, his first query had been for Bobby; and kennelmen were sent forth to hunt the city for the dog.

A policeman disbanded the hunt by telling one of the searchers that a big brown collie that morning had become confused in quest of a lost master in the thick of traffic at the Main and State Street crossing, and had been run over and killed by a motor car. The description seemed to fit Bobby, even to the mud-covered coat. Forgetting that scores of dogs, hunting their lost masters, are killed in that way, the kennelman went no further into the matter, but returned home and sent Jamie's fever soaring three degrees by telling him Bobby was run over and dead.

On a stiflingly hot noon in late June Jamie Mackellar was making his hobbling round of the kennels when a furry catapult hurled itself past the corner of the driveway and flung itself bodily upon him.

"Bobby!" blithered the dumfounded Jamie, in an ecstasy of incredulous rapture. "Bobby, lad!"

For an instant the deliriously happy man and the screamingly enraptured collie were all over each other. Kennelmen came running up. One of them telephoned the main house and Rufus G. Belden came hurrying down in person to verify the miracle.

"Bobby!" Mackellar was yelling as he squeezed the breath out of the squirming vibrant maniac that galloped hysterically about him, flinging itself again and again on his chest. "Bobby, boy, is it the wraith of you or did you lie when you said you were killed? Oh, but it's new life to see your worthless old self again! It —— What ails your poor foot, there, Bobby? It's all cut! I ——"

It was then that Bobby recovered from the mad delight of finding his supposedly vanished master, and remembered why he had come to Beldencroft. In an instant his wild exuberance was gone, gone so suddenly that Jamie broke off, astonished, in his own incoherent words of welcome.

Seizing Mackellar by the coat hem the dog braced himself and tugged. Then he let go and ran a short distance toward the highroad, looking back appealingly and making the air echo with his frantic barks.

As all dog men know, this behavior means but one thing. Jamie Mackellar not only knew dogs in general but he knew Bobby in particular. He knew that in the

THE Gracile DRAPE AND BURSON GRACE

BY Natalie Norris

THE penchant for gracile drapery raps for the attention of Madame and Mademoiselle this season and, whether the occasion speak for the evening gown or the fringed sport skirt, more attention than ever must be paid to the selection of stockings.

From behind the swirling Grecian drapery trim ankles constantly play peep and hide, and what is more annoying to their owner than to know that their slim grace is marred by unsightly, crooked stocking seams?

Long before Burson discovered the evolutionizing idea for knitting shapely hosiery, stocking makers knitted hosiery flat—making allowance for the contour of the ankle—then sewed the product of their looms with a seam up the back.

Next came the "tubular" hosiery, a pipe of knitted fabric which practically ignored the ankle. Now, some of these ordinary, seamless stockings, with just as many needles to the ankle as the leg—are made with a mock seam up the back, attempting to imitate real fashioned hosiery. Often the latter is difficult to detect until the hosiery returns from the laundry shy of its "pressed-in" shape.

"Neatness for drapery's sake—faultlessly neat" is the whisper which circles the new vogue to us from the salons of Paris.

BURSON is the correct and final word in the dress of trim ankles—whether your demand be for silk, lisle, mercerized, cotton or heathers.

BURSON means full-fashioned hosiery, *without seams*, giving the slim-ankled effect.

BURSON HOSIERY has nothing to fear from a *tubbing*—or the laundry. It is comfortable to wear. It remains faithful in its promise to wear long—and it retains its live elasticity and knit-in shape as long as you wear it.

Do ask to see it, and you will want to take a box home.

What It Costs the Ice Dealer to be READY

READINESS to serve is a very big item in the cost of ice delivery. It involves filling ice houses to take care of maximum need in event of a hot summer or providing capacity to *make* enough ice. If the summer turns out cool the preparation is wasted.

Then the ice dealer must be prepared to deliver ice the year 'round. More and more of his customers take *some* ice in winter. He keeps his wagons going to deliver it *as needed*. That is a heavy expense. The tonnage is too light to pay for his overhead; so in winter the ice dealer always loses money.

In the heat of summer it takes a lot of wagons and drivers to take care of rush demand. When people need ice, they need it immediately. Prompt service is expensive.

The making or harvesting of ice is not the main expense—its cost is a fraction of the total price charged the consumer. Delivering ice and being ready to deliver it as needed often eats up one-half of every dollar you pay to the ice dealer.

This emblem Depend on ICE in all weather **your protection**

It is the official badge of honor awarded to members of the National Association of Ice Industries who live up to its high standards of service to the public and the pledge required of them to give you

Pure Ice · Careful Weight · Good Service

The National Association of Ice Industries is organized to improve ice delivery, to extend the uses of ice, inform the public about proper refrigeration of food in the home, suggest ways and means of economizing ice, saving food and protecting health. The housewife should see to it that her ice dealer's wagon bears this emblem.

DEPEND ON ICE IN ALL WEATHER

very minute of their reunion Lochinvar Bobby would never have sought thus to make his master follow him away except for some tremendously vital reason. And every line of the collie's body, every intonation of his frenziedly pleading bark spoke of fearful need. Jamie limped after him. The dog at his master's first step galloped up the drive to the gates and turned again to bark entreaty.

"What's the matter?" asked Rufus G., blinking perplexedly at the eager dog and at the limpingly following Mackellar.

"He wants me to go somewhere with him, sir," called back Jamie over his shoulder. "And he wants it mighty bad. See, he's starting off down the turnpike. With a poor cut foot, at that!"

"And you're going to strain that bum leg of yours by chasing after a dog just because he wants you to take him for a walk?" scoffed Belden.

"If you'd get a look at those eyes of his, sir, or if you'd try to read his bark you'd know it was something bigger'n that," called back Jamie. "Bobby's never yet played the fool or made a fool of me. He needs me. I don't know why. But I'm going."

Belden grunted. Then, as Mackellar started down the road after the hastening Bobby, the great Rufus G. gave an order to one of the men. Two minutes later a touring car came to a halt behind the plodding Jamie.

"Here!" ordered Rufus G. from the tonneau. "Hop in. If you're going to be idiot enough to follow that beast across the continent you may as well do it without putting your leg out of business."

Jamie obeyed. Bobby had paused worriedly. Then he had run on for a few more tentative steps. As the car followed he understood. And no longer troubling to slacken his pace or to look back appealingly he set forth at a sweeping run.

Half an hour later the car stopped in a farm dooryard. The place was deserted, the farmer having taken his wife along on his drive to the village.

Bobby did not wait for his excited master or for the openly guying Rufus G. to get out of the car. Along the dooryard he sped, coming to a halt at the foot of a corncrib. Around this he galloped, whining. He tried to climb the six-foot ladder to its door, but he fell back. From the crib's interior came an answering whimper.

At sound of his mate's call Bobby flashed back to the car, whence Mackellar was descending, and caught Jamie again by the coat.

"He's got something in that corncrib he wants to show us," ventured Belden, seeking to mask his aroused interest. "A cat he's treed there, most likely. Or a skunk. He ——"

"No, sir," denied Jamie, mounting the ladder and peeping through the slat openings. "A collie."

He lifted the crib's door latch to get a better view of the captive. Lass saved him the trouble of opening the door, for she flung herself against it and catapulted out into space, almost knocking Mackellar from the ladder.

Striking ground as lightly as a panther Lass scarce waited to gather herself up before starting off across the landscape like a golden streak. She did not give Bobby so much as a glance as she whizzed past him. Only once in her flight did she slacken speed. That was when her flying feet bore her past the hencoop. The three slain fowls had been laid in a row on the ground outside the coop, for the constable to see. Barely checking her stride Lass lowered her head and snatched up one of these hens as she ran. Then she was off with the speed of wind for Blake's Woods.

Bobby had started after her as she began her race, but after a hundred yards he hesitated and came to an irresolute stop. He looked back at his master, his deep-set eyes abrim with appeal. Then he looked after his worshiped mate and took a step or two to follow her. But of a sudden he paused again, with a low cry whose pain went even to the heart of the wondering Belden.

With something ridiculously akin to a sob in his furry throat the great dog turned and walked slowly back to where Mackellar stood. There, shaking as if with a chill, Lochinvar Bobby laid himself down, his classic head across Jamie's boot.

He had made his choice, the choice that threatened to tear the heartstrings out of him. Man had conquered. Bobby was turning his back on his loved mate and on his brood and forsaking everything his wolf nature craved, for the sake of the man who was his god.

There he lay, quivering, and with that strange sobbing sound in his throat, his head athwart Jamie's muddy boot, his tear-filled dark eyes lifted to Mackellar's face in sorrowful adoration.

There was a pause. Even the voluble Rufus G. could not think of anything funny to say.

Then Jamie cleared his throat and said, "I—I think I understand, sir. I think I get it all. I—I know Bobby, you see. And I know a bit about collies at large. Likewise I remember the platform where Bobby used to live. And I'm going there. Bobby, boy, 'tis a fearsome thing to see a creature turn from its mate to its god! A fearsome thing, Bobby, lad; be the creature nothing but a dog! How many humans would have the religion to do it, d'ye spier? How many? But ye'll not have to make the choice, I'm thinking, Bobby. Not if I'm right in guessing what we'll find under yon platform. Ye're luckier, that way, Bobby, than a lot of humans. Or—or, aiblins, ye're not. Who but God knows? Come along!"

He laid a five-dollar bill beside the two remaining dead chickens. Then he set forth on his quest.

"Where are you going?" demanded Rufus G. as Jamie stumped off with Bobby beside him.

"Up yonder into the woods a piece, sir," said Jamie. "Don't bother to follow if it's too hard sledding for the car. I'll ——"

"Shut up!" ordered Belden with the exquisite courtesy of his kind. "I'm playing this hand out. Though it makes no manner of sense to me, any of it. Wait till Peters brings up the car. I'm with you."

Striking the rutted and overgrown old picnic road the car bumped its way into Blake's Woods. Bobby was cuddled close against Jamie's side in the tonneau. The dog kept staring up at his master with growing excitement as Mackellar gave directions to the disgruntled chauffeur.

At a turn in the underbrush Jamie jumped up, pointing eagerly and shouting, "I was right, Bobby, lad! I was right! See! And your mate goes with your bairns to Beldencroft too. I'll buy her if her owner ever shows up. See, sir!"

He was gesturing toward a gap in the bushes where showed a bit of the decaying platform, with a ragged hole in its side. At the mouth of this hole lay Lassie, her seven babies crowding around her furry sides, as very daintily she tore apart a large and obese hen.

Bobby awoke the echoes with a thunder of ecstatic barks.

"H'm!" mused Rufus G. in another ten minutes as he and Jamie loaded the pups into the tonneau, along with their effusively happy parents. "Talk about Scotch thrift! Here you lose Bobby for four months, and you get him back with 700 per cent interest—800 per cent, counting his mate. Lord, but I wish I could lose a block of railroad bonds that way for four months!"

Ask for the Speedometer with the color dials.

This new model speedometer incorporates an additional device which keeps an automatic ever visible lubrication record for your car. Because of our immense production facilities we can offer it to the trade at not a penny more than the old model. It sells at $15.00 and will save the Ford Owner many times that amount.

A lubrication chart is furnished with each speedometer.

"Look Jones, there's that new Stewart Speedometer."

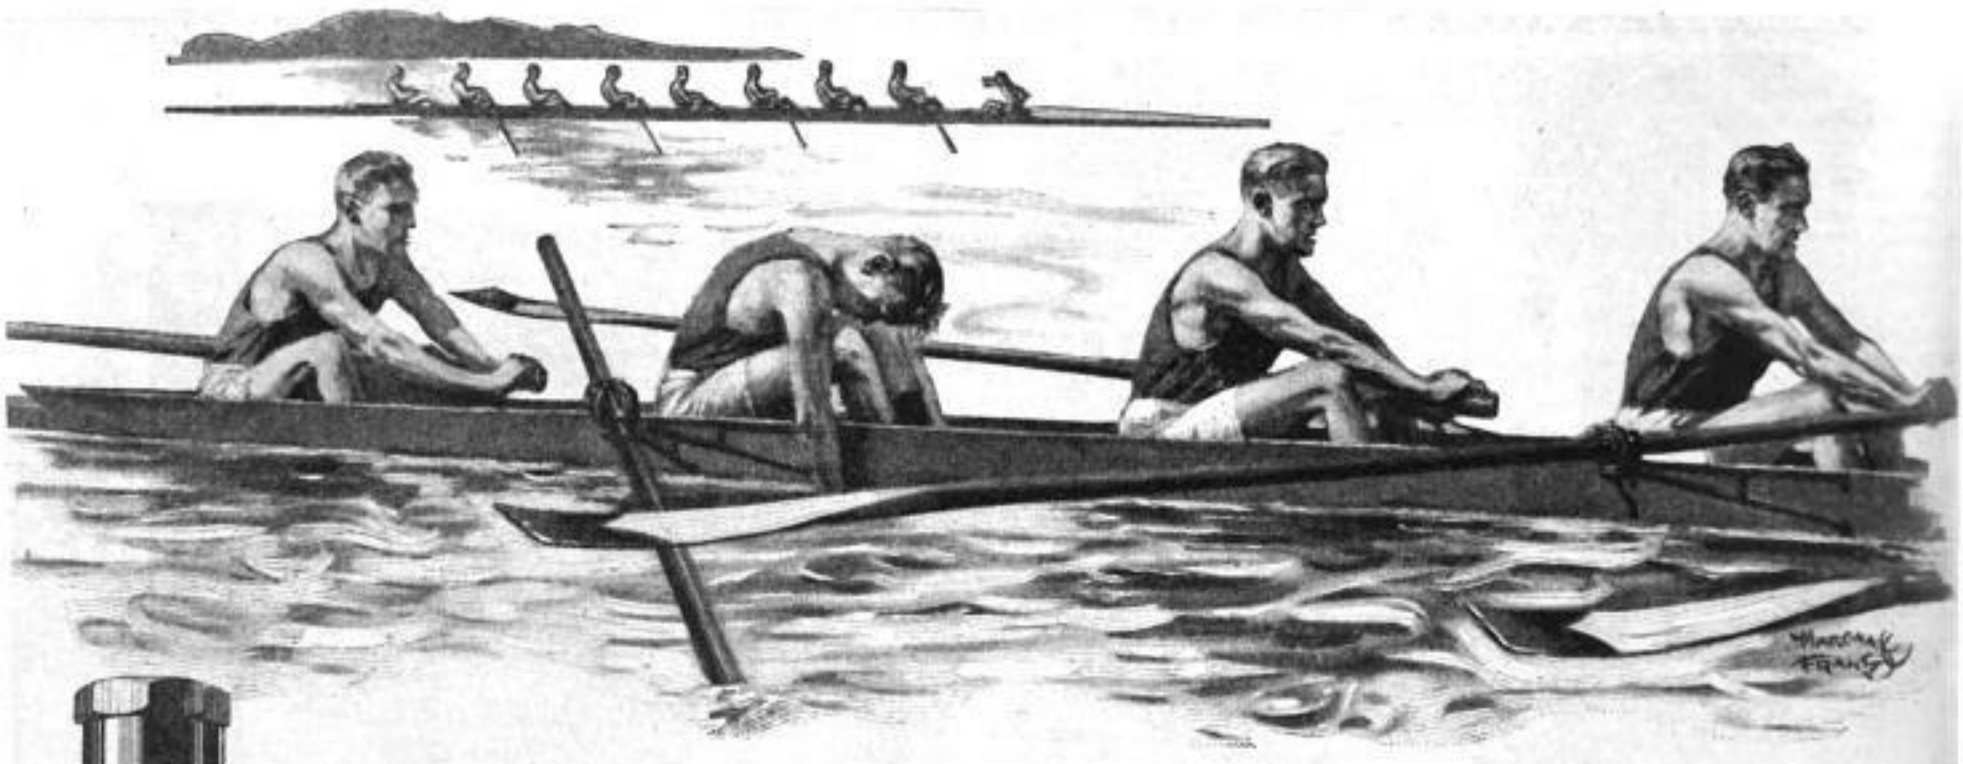
"Say! That's a fine idea. I'm going to find out more about it."

❦ ❦ ❦

"This is the new Stewart Speedometer, for Fords, Mr. Jones. Here's what the color dials will do for you. You've never before been able to get definite information on when to oil and grease the various parts of your car. The color dials automatically give you this information. They act as a mechanical book-keeper.

"There are five colors which appear at certain mileages in the season mileage odometer. Every time one of these colors turns up, look at the lubrication chart and it tells you just where oil and grease are needed. For instance: a red dial will appear every 1000 miles. Let's look at the chart. It tells you to change the oil—to grease the differential. It tells you how to do this. And the diagram shows where these oil and grease points are.

"It is not necessary to keep a record of any kind. The colors cannot possibly fail to turn up at the proper mileage. You can forget all about oiling and greasing until the color dials tell you it is absolutely necessary. All unnecessary lifting up of floor boards or getting under the car to ascertain if you need oil or grease is eliminated.



"You want to keep your car in A1 condition. To cut down your repair bills due to lack of lubrication. To increase the life of your car. To obtain a good trade-in price. The color dials do all this for you."

W
Spark-C

Number two is out!

AND if one cylinder in a gas engine does not explode, there is a similar effect. The other cylinders must fight against the missing one. They lose the power that it should give and must burn up some of their own power to carry the load of the dead cylinder with its compressed (and wasted) gas.

One cylinder missing irregularly is difficult to detect by screwdriver or open cut-out methods. It took an expert to find it before the Westinghouse Ignition Tester—Spark-C—was invented.

Now anyone, amateur or expert, can find ignition troubles almost instantly. All you have to do is place the point of the Tester against each spark plug and read in the "window" of Spark-C whether or not the plug is firing properly.

Spark-C Ignition Tester is easy to use, clean, safe, efficient. It will last indefinitely.

If you have a car, a motor boat, an airplane or stationary gas engine buy a Westinghouse Ignition Tester—Spark-C. Check up the ignition system now and periodically. It will help to give you the full power of your engine and save you considerable unfired gas.

Your automotive dealer or garageman has a stock of Spark-C or can get them from our nearest district sales office.

RITA COVENTRY

(Continued from Page 23)

"Isn't she beautiful to-night!" frothed
Irs. Fernis, looking after her. "I never
w her in that type of frock before, did
u? It makes her look so girlish—so de-
ure."

Perhaps because of the failure of her
fort to converse with Delaney she looked
: Parrish.

He had remarked the gown. It was the
sympathetic" shell-pink gown she had
ered on the day he met her at the dress-
aker's. He did not mention that, how-
er.

Delaney, too, was gazing after Rita.
ow he spoke.

"Yes," said he, almost as if speaking to
mself, "it's beautiful."

Mrs. Fernis had evidently gathered that
aise from Delaney was praise indeed, for
en Rita returned she said to her, "Mr.
elaney has been admiring your dress."

"Really?" She looked at him. "Have
u?"

"Yes."

"Then," she said half jestingly, "this is
red-letter day for me. I had about
andoned hope of ever extorting a com-
ment from you."

Delaney flushed and looked confused.
ter a moment's hesitation he said gravely:
Why, surely you know I admire you very
ich."

Though he had spoken before all three
them, and though apparently he had
de only a conventional remark, Parrish
d a curious feeling as of having over-
ard something he was not meant to hear.
felt a little bit embarrassed; and so,
dently, did Mrs. Fernis, for with the
nner of one who has by accident in-
ded she turned hastily to Parrish, say-
: "I'm simply famished, aren't you?
's go and get some supper."

As they moved together toward the din-
room she asked:

'Doesn't he strike you as being a very
ular young man?"

For once he found himself in full accord
h her.

He strikes me as being all of that,"
l be.

XXVIII

FTER supper, when all were in the
drawing-room again, Delaney played a
e of three compositions called In a Pic-
Gallery, which Rita announced he had
completed. In it he attempted a musi-
expression of the emotions created by
e paintings. The first represented one
donet's canvases—water lilies in the
ter's garden at Giverny; the second,
rtrait by Whistler; the third, a Spanish
set piece by Lawson. The music, like
paintings portrayed, was impression-
: Parrish did not think much of it, and
was astonished when the musicians
ered around Delaney and congratu-
him with an enthusiasm apparently
genuine.

He seemed much pleased.

Now let me sing you one of his new
," she said, and immediately the room
ne quiet.

rrish liked the song better than the
composition; it had a melody, and
ords—an old poem by Samuel Lover—
humorous:

'Tis time I should talk to your mother,
Sweet Mary," says I;
Don't talk to my mother," says Mary,
Beginning to cry ——

fter a rejection by Mary of a like
tion in regard to her father:

How shall I get you, my jewel,
Sweet Mary?" says I;
Your father and mother's so cruel,
That surely I'll die!"
Never say die, dear," says Mary;
Pray now to save you I see;
If my parents are both so contrary—
You'd better ask me!"

n encore Rita sang Delaney's ar-
ment of Bonnie Doon, but Parrish
are of the song only as a background
thoughts.

hat Sweet Mary song was new, eh?
noticed music manuscript on the
yet neither of them had used it.
new the words and music by heart.
w was the song? How long had it
en to learn it? Of course she was
study, but just when had she
it? He wished he knew just when,
how long it had taken. Delaney had come late; that showed they hadn't rehearsed this evening, anyway. When, then? Somehow he didn't like the idea of their rehearsing there together, alone. The first thing Rita knew, Delaney would begin to misunderstand her interest in his music. After all, he was just a piano tuner; he had no advantages, no breeding. And he read the Russians—the rotten Russians!

He wondered if Delaney had been in town ever since that night he had seen him outside the opera house; it looked that way. He had said in Atlantic City that he couldn't afford to come to New York at all; but he had come; and now apparently he was hanging around. Had the music publishers and the Discaphone people advanced him money? Were they in the habit of advancing money to unknown composers? He didn't believe so; young composers were traditionally poor; if funds had been advanced it must have been because of Rita's influence. It was not proper for a woman to use her influence in that way for a man. Not that sort of man, anyway. He would have to speak to her about it to-night, when the guests had gone.

After singing, Rita summoned Schoen to exhibit to Paldowski, Frémecourt and some of the others his tricks at the piano with an orange and a hairbrush, and he in turn was followed by Wildenstein, who played his own elaboration of a Strauss waltz.

"He is very vain of playing the piano so well in addition to conducting," Mrs. Fernis whispered to Parrish. She seemed to set great store by these little titbits of gossip about the musical celebrities.

Already some of the guests had left, and now as it was nearly one o'clock a more general exodus began. Soon only Parrish, Mrs. Fernis, Frémecourt and Delaney remained. Frémecourt was a notorious night owl and Mrs. Fernis was almost as notorious a hanger-on.

Leaving the others gathered around the piano, where Frémecourt was humming Bonnie Doon, Rita drew Parrish aside.

"I haven't seen you in days," she said, "and to-night I'd counted on a little visit with you, but"—she gave her shrug—"you see how it has been?" She ran on: "Aside from that, I do think the party has been a success, don't you? I mean, it's done Delaney good—they liked him—don't you think so?"

"They seemed to," he replied magnanimously. "Does he expect to be in New York long?"

"Yes, he's really getting launched. Liebmann is publishing Bonnie Doon, you know, and he said to-night that he would bring out Sweet Mary and In a Picture Gallery."

"That's all right," Parrish returned, "but what I'm wondering is: How can Delaney afford to stick around New York all this time? You know in Atlantic City he told us ——"

"Oh, it's dear of you to be worrying about that!" she put in, laying her hand with what seemed to be an impulsive gesture upon his arm, and raising her eyes, warm with gratitude to his. "Thanks, just the same, though—it's all been fixed."

"So I judged," said he.

"It isn't as if it were only sheet music," Rita continued. "There's the Discaphone. There'll be lots of money for him in that when he gets started. I'm going to sing Sweet Mary for them to-morrow, and next week I'm ——"

"Of course," he interrupted, "you've done wonders for him. That goes without saying. If it weren't for you he'd still be going around Atlantic City in his old checked cap—tuning pianos. No question about that. Probably all the rest of his life. But, Rita, there's another side of this thing, and you ——"

She looked quickly at the others.

"Sh-h!" she warned. "Come over here." Again laying her hand upon his sleeve she drew him farther from the group at the piano. Then lowering her voice to a confidential tone: "There's something I want you to do for me, dear. You can help me a lot if you will."

Her gaze was earnest and appealing. He nodded.

"Frémecourt will simply never go home," she whispered, "nor Grace Fernis. I'm always having to send those two away. I must get them out pretty soon. I have to practice those songs, and ——"

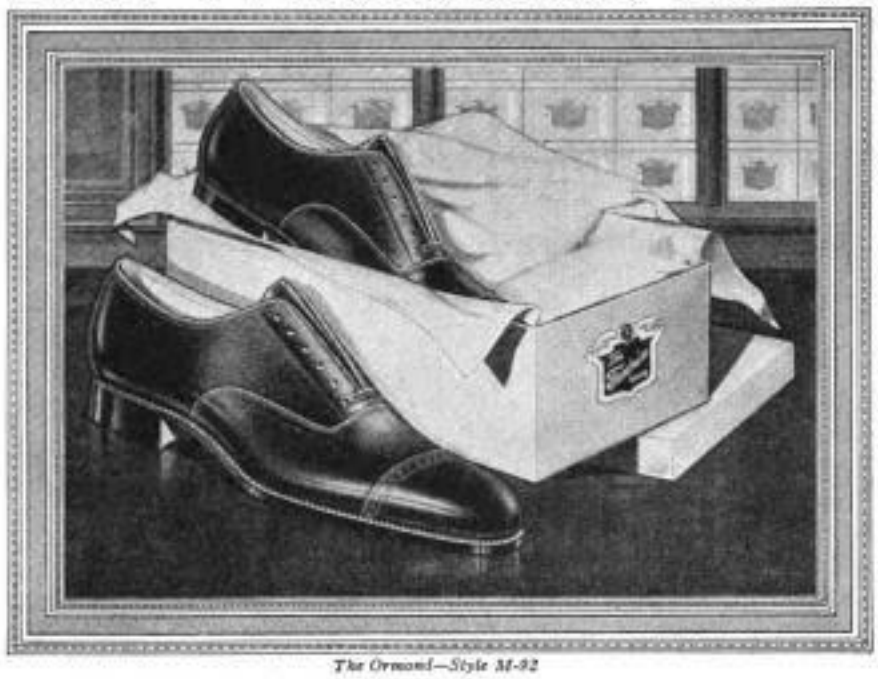
F. H. ROBERTS COMPANY, 128 CROSS STREET, BOSTON, MASS.

The Inside Counter Pocket Saves the Price of the Shoes

The calfskin inside counter pocket found in "Foot-Fitters" saves many pairs of socks, which with ordinary shoes wear out at the heel due to constant rubbing on the duck lining. This "sock-saver" also prevents blistering at the heel and makes the shoes easier to slip on.

Figuring the many months that a pair of "Foot-Fitters" will serve you, the inside counter pocket will more than save the price of the shoes by protecting your socks from wear.



There are six other points of supremacy which you can only buy in Edmonds "Foot-Fitter" Shoes—seven points in all which makes these reasonably priced shoes especially worthy of your consideration. Ask the "Foot-Fitter" dealer in your town to show you these shoes in either black or rich mahogany calf. He can prove that "Foot-Fitters" are better than we claim. If you have any difficulty in locating "Foot-Fitters" in your city, write to us.

He broke in with "You mean alone?"

"No, of course not. With Delaney."

He stared at her.

"Let me get this right. You mean—what you want me to do—you want me to go—is that it—and take them, and leave you with Delaney?"

She assented.

"Oh, you do!" he said roughly, his rage mounting. "You do, do you? Well, you guess again!" She looked at him fixedly without speaking while he continued in a tone poisonously sarcastic: "No, my dear, you've got it wrong this time! I'm not the one who's going. It's your little friend Delaney. Do you see? And what's more ——" His voice was rising.

"Don't make a row!" she broke in sharply. "Don't you see they're listening!"

He glanced toward the piano, catching Mrs. Fernis' eyes fixed upon them. Hastily she looked away.

"What do I care!" he exclaimed. "If you don't want them to listen get them out! There are some things you and I are going to settle right here, to-night. I'm going to have a talk with you now if it's my last!"

"All right!" she flashed, "on *that* basis ——" And leaving him abruptly she moved toward the others.

Mrs. Fernis, however, met her halfway.

"Rita, dear," she announced, "Frémecourt and I have just been saying we must go. It's getting scandalously late."

Quickly Rita walked across the room and spoke to Delaney.

"I'm sorry," she said, "but we'll have to put off practicing the songs. Come to-morrow morning about ten o'clock, will you?"

Standing at some distance from the door Parrish exchanged bows and good nights with the three. As he watched Delaney go he thrust his hands into his trousers pockets and planted his feet more firmly on the rug, trying half consciously to assume the posture of a host. It gave him a sense of triumph.

Ushering them out Rita pressed a push button near the door. Simultaneously a bell sounded faintly from a distant part of the house. Parrish heard her clear voice bidding them good night. From where he stood he could see her leaning over the balustrade looking after them. Presently he heard the soft metallic sound of the front door closing.

Rita called down to the butler, "Pierre!"

"Mademoiselle?" He came running up.

"*Laissez la lumière là-bas.*" And in English she added: "Monsieur will be going presently. I'll ring."

"*Bien, mademoiselle. Merci.*" He descended toward the lower hall.

"If it was as a precaution that you told Pierre to sit up," Parrish said with a contemptuous little laugh, "it was quite unnecessary. I wish I were the kind of man who can take a woman and drag her around by the hair. It's what you need! Evidently you know it too. But you can set your mind at rest—you won't have to ring for help."

She, too, laughed.

"Oh, you're Anglo-Saxon," she retorted lightly. "I wasn't worrying. It's a little courtesy, that's all. Doesn't it seem fitting that I should have you shown out with due ceremony when probably you'll be leaving for the last time?"

The flippancy hurt him as no display of anger could have.

"So," he said, "that's all this whole thing has meant to you, is it?" She was at the other end of the room; he took a few steps toward her. "If my going doesn't mean any more than that to you I might as well go now."

"I was only striking back," she said quickly. "Don't let's go on like this. Let's sit down and talk things over." She crossed, rang the bell again, and returning took a chair, indicating to him a place upon a near-by couch.

He sat in silence until Pierre reappeared.

"You were up late last night," Rita said to him. "I will see monsieur to the door."

"I thank mademoiselle." He bowed and retired. Parrish listened to the sound of his footfalls on the staircase.

"Well?" she invited.

"Do you think there's no end to what I can stand," he asked her, "or is it that you just don't care?"

"Certainly I care. Do you think if I weren't fond of you I'd be here now?"

"Oh, I suppose you are 'fond of me,'" he returned dryly. "I think one may fairly assume that much. It seems strange now that I didn't see all along that with you it was nothing more than fondness. Looking back, everything has pointed that way. But I just couldn't see it—or wouldn't. Naturally, I didn't want to see it, caring for you as I do. Oh, what a fatuous idiot I've been!"

"Caring for me as you do?" she echoed. "And just how much do you think you do care?"

The implication of doubt as to the depth of his feeling for a moment stupefied him.

"If I haven't shown you," he answered, "I guess there's no way for me to tell you now."

"But," she demanded quickly, "if a man loves a woman very deeply doesn't he ask her to marry him?"

Marriage! Was that it, then? Was that what she had been thinking of all this time?

Here was a situation! He had never explained to Rita, as he had to Alice, that he was not a marrying man. The topic had never suggested itself and he had never thought of bringing it up. It had not seemed necessary. Rita was such a different type. But women! You never could tell about a woman!

Her eyes were fixed upon his face.

"You mean," he said slowly, "you mean that—you—want—me—to marry—you?"

"No," she answered, speaking quite as slowly as he, and looking at him with a comical solemnity which he recognized for a burlesque of his own expression, "I don't mean—anything—of—the—kind."

He felt the hot blood in his face.

"Oh," he said, "then this is just a debating society!"

At once she became earnest.

"No, it's not," she answered, "and I shouldn't have done that. I can see how my question about marriage misled you. I asked it because I wanted to show you that you aren't so deeply in love with me as you may have thought yourself."

"Well, it doesn't show me anything of the kind," said he. "The reason I've not asked you to marry me is the same reason I've not asked anybody else. I intend to remain a bachelor. I've never intended to marry."

At that she smiled a little.

"There, at all events," she told him, "we are perfectly in accord. I don't blame you for wanting to remain a bachelor. I wouldn't marry the most fascinating man alive. In my case of course it is more than just an inclination. Opera singers ought not to marry—the women anyway. You can't serve God and mammon, and you can't serve your art and hot rolls for breakfast."

"A lot of them *are* married, though," said he.

"Yes, and I know just two who are really happy. They're the exceptions that prove the rule. But look at Prenslauer—her career is ruined; she lost her voice when she had her last baby. And some of the others have either got divorces or accepted their husbands' love affairs."

There had been growing upon him a disturbing sense of having been led, against his will, into an abstract discussion. He had not stayed here to talk of Prenslauer's baby or the troubles of singers with their husbands.

"This is all very interesting," he said, rising and taking a few restless steps, "but it's not getting us anywhere."

"Well, then," she replied amiably enough, "what is it you want?"

He stopped walking and looked down at her.

"I want to know exactly where I stand with you," said he.

Her eyes met his.

"That's just what I've been wondering," she said.

"You don't know?"

"I thought I knew, but ——"

"Evidently!" he put in.

"—— but there's such a difference between loving and being in love."

"Yes," he retorted, "and there's a difference between loving and hating. I ought to know! But that isn't getting us anywhere either."

"Being in love gets *me* somewhere," he insisted. "If one is not in love life is empty as an unfurnished house. I do believe anybody who is not in love is really happy. The day I met you I was lonely; you attracted me. I was longing to be in love again. The day was like spring, if you remember."

After 50,000 Miles,
What will your car be worth?

It's easy to figure: take the used car value at that time and deduct cost of renewal. That gives you the real value.

REGARDLESS of loose statements of everlasting newness, every experienced car owner knows:

there comes a time when a motor *must* be rebuilt—usually after 20,000 to 25,000 miles. A nation-wide inquiry shows the cost to be $450 to $800, and two or three weeks' time.

Those are the facts and figures—no one can conceal nor deny them.

But Marmon costs are lower

Up to 35,000, 50,000 miles and higher, without motor rebuilding—that's how the sturdy Marmon doubles the average, with reasonable care.

$265 for motor rebuilding—not double or triple—that's Marmon economy. And you get your Marmon back within four days—*not* two or three weeks.

The Reason: Six Cylinder Simplicity

When great authorities in any particular art agree on a single standard, isn't it reasonable to accept that practice as sound? It is no mere coincidence that all great engineers of international repute have agreed upon the most efficient type of automobile motor.

Rolls-Royce of England, Renault of France, Mercedes of Germany, Fiat of Italy, Hispano-Suiza of Spain, Marmon and other leading fine cars of the U. S. A.—*all have six cylinder motors.*

And of them all, Marmon is the simplest and the most accessible. Marmon engineers, when they conceived this high-efficiency six cylinder motor and this sturdy chassis, anticipated the inevitable trend towards mileage cost being more important than first cost.

Heaviest of all in vital parts

The simplicity of Marmon design, the accessibility, and the inherent sturdiness enables the Marmon to offer Standardized Service and its economies. Throughout, every essential part is heavier than usual. For example, the rugged Marmon crankshaft weighs 110 pounds, the heaviest of all. In a comparable six, the crankshaft weighs but 77 pounds, and in a well known eight, only 40 pounds.

Vibration is completely eliminated in the Marmon—no car is so perfectly balanced throughout. No car is built with greater precision.

Get the facts about Standardized Service

The low cost of only $265* for rebuilding a Marmon motor is offered in contract form by distributors to purchasers of new Marmons. It includes labor and replacement of all worn parts (except crankshaft bearings, which up to now have shown no wear; many have run over 60,000 miles).

Motor rebuilding is but one of the 16 average service operations, constituting 85% of all maintenance.

We describe Standardized Service in a book, "Modern Transportation Costs," and present it gratis to all who mail the coupon. Thousands have sent for it. Every car owner should read it.

Learn how Marmon distributors have reduced service to a fixed cost basis. They offer new low prices. They end all guess-work on upkeep costs.

CORRECT! Even to her umbrella.

India umbrellas are smart. Wonderfully smart. Their jaunty shape has a useful side too. It means a smaller umbrella when closed—a bigger spread when open. It leaves your vision unobscured. And you *can't* turn an India inside-out! Think what that means on a windy, rainy day.

For good measure, there are ten ribs instead of eight. At best dealers' everywhere.

ROSE BROTHERS COMPANY, Lancaster, Pa.

Chicago Office: 108 W. Lake Street

Ask your dealer to show you an Iver Johnson Champion single barrel shotgun. Accurate, dependable, moderately priced.

Keep an Iver Johnson revolver in the home for self-protection. It's accident-proof—you can "Hammer the Hammer." Quick, accurate, safe.

(Continued from Page 162)

"Do I!" he murmured with reminiscent fervor, and after a deep sigh resumed: "Then what you mean is—you were longing to fall in love with me—or with somebody—and now you're wondering whether you really did or not."

"That's a crude way of putting it," said she; "but love means more to me than it does to some people."

He seated himself near her, leaning forward, and was about to speak when in a reflective tone she supplemented: "When I'm in love I sing better."

The words struck him like a blow.

"My God!" he exclaimed indignantly. "Talking of love as if it were a gargle!"

Rita burst out laughing.

"Well, anyway," she declared, "I love you for that!"

"But that isn't what I want to be loved for," he protested. "And I don't want intermittent love—one day on a pinnacle, next day in the ditch. I'm worn out with your eternal changeableness. It's nearly killing me! This thing is going to be definitely settled to-night! I'd rather ——"

"There you are!" she broke in. "That's just it! That's going to help me to explain to you. Do you remember on the way to Atlantic City you were talking about wanting to understand me, wanting to know all about me, wanting to make a portrait of me, as you put it? You kept talking about getting the portrait finished. Well, what happens when a portrait is finished? The painter has learned all he can about his subject. His job is done. The portrait is framed and hung upon a wall"—she waved her hand toward her own portrait above the mantelpiece—"to gather dust. With a love affair it is the same. It is the development that is interesting—the gradual finding out. When that is over most love affairs are done. Not great ones, of course—but there aren't many great ones.

"You'd think," she continued, "that almost anyone would understand a thing like that, but men seldom do. In love they go by instinct, and their instinct is wrong. They hunt love as naturalists hunt butterflies. They don't see the beauty of freedom and movement. They want to catch the butterfly, run a needle through it and mount it on a cork where they can investigate it microscopically. But by that time the butterfly is dead."

"If you mean that a man wants to be sure of the woman he loves," said Parrish, "of course he does! That's the point: I've never been sure of you. I guess there must be a hole in my butterfly net!"

"Or perhaps the mesh isn't fine enough," said she, smiling.

At that he became angry again.

"Oh, this butterfly talk!" he exclaimed. "Generalities! What I want to know is—is there any use in my trying to go on, or am I through?"

"And that's what I've been endeavoring to tell you," she gave him back. "I know you want to pin me down, and I won't be pinned down. Love isn't an exact science; it's a fine art." And before he could break in she added: "And to be entirely frank—if you want me to be frank ——"

"Yes, yes," he urged.

"Well, I am afraid you are not an artist. In love, at least, you lack the light touch."

Again he felt an impact as of a heavy fist. Of all conceivable charges, that was the last he had ever expected to hear made against him. And by a woman! She had the effrontery to say he lacked the light touch in love!—he to whom men friends had so often come for advice in these matters; who had always handled situations of this kind so deftly; who, without being merciless, managed women; who, in his love affairs, had with invariable skill charted his course between the Scylla of loneliness and the Charybdis of responsibility! Preposterous! She was deliberately trying to confuse him. But she couldn't do it! He knew what had caused all the trouble. He had been feeling it all along, and now somehow he knew it. And he would tell her too!

"It hasn't anything to do with a light touch," he said; "it hasn't anything to do with me. It's Delaney! Ever since you first saw that whelp you've been different."

"Well," she returned, unperturbed, "what have you got against Delaney?"

"I hadn't planned to stay long enough to tell you," he answered bitterly, "but I'll tell you one thing I've got against him: He's not a gentleman."

"Perhaps not—as you mean it," she conceded without rancor. "I guess at that rate I'm not a lady either. But Delaney is a good deal more than a gentleman. He's an artist."

"Am I to infer that an artist cannot be a gentleman?" His tone was triumphant.

"It has been known to happen," said she laconically.

"Anyway, his being an artist can hardly make him a novelty to you," he said. "Certainly you know plenty of them. And as an artist he's not in your class."

"There you're wrong," she answered. "He is more truly an artist than I am. In the first place he creates instead of reproducing; and in the second he loves music purely for itself. I love it partly for what it can do for me."

"All right," he said; "granted you admire him. But you don't have to get sentimental about him, do you?"

"No, I don't have to, and I don't say I am sentimental about him; but if one must analyze, it might be interesting to have a man like that care for one even more than for his music."

"Yes, and you've been trying to make him care!" he charged.

"If I have, the effort has not been highly successful."

"You just fall in love with him," he prophesied vindictively, "and you'll get yours! He's a lot younger than you are. You can't hold him."

"I'm a good gambler."

"Maybe you are," he retorted; "but if you can hold him it will be the first case of that kind I've run across. I've seen dozens of them—where the woman was older—and I've never known it to fail. In the end he'll fall in love with some little girl young enough to be your daughter, and where will you be then?"

"Playing tragic rôles as I never did before. I shouldn't wonder if that sort of bump would be good for me."

He sank back on the couch, his eyes staring unseeing across the room, his mind filled with a whirling misery. Presently she stirred a little in her chair, and he became aware of her again. She did look younger in that dress—almost girlish—grotesquely girlish for one capable of such shocking stream of bizarre sophistication.

Slowly he rose and stood before her.

"Just like surgery—this—for me," he said, and smiled.

And as he smiled the dryness of his lips against his teeth was painful. His whole mouth was dry. When he opened it again to speak his tongue made a little clicking sound against the roof of his mouth, which vaguely irritated him.

"Diagnosis—that's what I wanted. Now I know. It's better to know. Well, I'm ready to be wheeled out."

With that he swung around and made his way toward the door on legs that felt weak and numb. He heard her make a little sound of pity—he didn't want her pity! Then her swift steps coming after him—he didn't want her following him!

"Don't come," he said without turning. "I'll let myself out."

But she kept coming. He heard her behind him on the stairs. In the lower hall he almost ran to get his coat from the chest where it was lying. He did not pause to put it on, but threw it over his arm and, seizing his hat and cane, made for the door.

She was back of him; he felt her pulling at his coat. "Let me help you on with it," he heard her say. Why didn't she stay upstairs as he told her to? She ought to know he wouldn't want her looking at him when he was like this!

As he reached for the doorknob she laid a detaining hand upon his outstretched arm. He dropped his arm abruptly and turned upon her.

"You leave me alone!" he heard himself say, and as she stepped back, looking startled, he realized that he had made a threatening gesture with his cane.

She was saying something as he shut the door behind him.

XXIX

FOR the next few days Parrish was a man drugged. He felt light-headed and as he went about was continually on his guard against revealing it. But he made the office every day. Several times he was aware of Bement's surreptitious scrutiny and it annoyed him. What if he was looking very well? Was that anybody else's business as long as he attended to his?

He was a little bit surprised that there was not greater. Though incessant, it was dull. Perhaps it would be worse when the drugged feeling wore off. His chief sensation was that of being crippled and not

Digitized by Google

accustomed to it; of greatly missing some important portion of his body which had been removed. His heart still was inside him; he could feel it pounding heavily; but he could not eat, and there were times when he feared to breathe deeply lest it bring on the sharp pain.

But presently there came a day when he began to understand a little and, as recuperation advanced, to gather comfort from a wan philosophy.

Well, at all events, it was over. This surgery had from the first been inevitable. Ultimately, no doubt, he would be better for it; in one way, even, he was better now—the uncertainty was gone. At last he could sleep.

As his mind cleared he found himself thinking of Alice. Not once during what now seemed to him to have been a period of illness through which he had passed had he heard from her; and now instead of attributing her silence to the condition of her sister's health or to annoyance with him because he had so long delayed writing to her, he began to be honest with himself and to search for deeper causes.

Could she have heard some rumor of what had been going on? At first that seemed to him hardly probable. She was far away, out of touch with New York and unacquainted with the people with whom he had lately been associating. And even those people, he liked to think, had for the most part been unaware of his affair with Rita. Busini had evidently suspected something, and perhaps the ubiquitous Mrs. Dennis had also, but he hardly thought there had been general gossip. Of course there was Atlantic City, but on that trip he had seen no one he knew. The people he knew could not be likely to go to that hotel.

The only friend of Alice's he had met since she left was Clara Proctor—at the Midnight Frolic—and then he had been with Bement. Clara, to be sure, had all but cut him.

That still puzzled him a little. But he had Clara never had liked each other. She was always trying to come between him and Alice; trying to inoculate Alice with her own cynicism concerning men, advising her to drop him because he didn't mean to marry.

As he thought of that there came to him a first glimmer of mirth—grim mirth—that he had known since Rita's door closed behind him. He had disliked Clara for interfering, but she was right: Alice should have dropped him; from a strategic standpoint it would have been the thing to do. Alice hadn't any strategy.

Strategy was not very well distributed among women; some had none; others too much. Real fineness didn't count as it ought in relations between men and women. Fine women, like Alice, lacking strategy or learning to use it, so often lost out, while men who were cold-hearted and unscrupulous got everything their own way. Perhaps the fine ones could get some satisfaction out of knowing they were square and honest, but that seemed cold comfort. Women! Why were people always generalizing about women? Such a stupid thing to do! Generalizations were stupid anyway. How true the epigram of the witty Frenchman who declared: "All generalizations are false—including this one!" When people generalized about women they were invariably describing not women, but their own relations to some certain woman. If a man proclaimed women selfish, heartless, cruel, it was a safe conclusion that the woman he loved for had ill-used him; and if upon the other hand according to him they were sweet, loving and forgiving, the woman he adored for was generous and kind.

Everything these days he reflected a great deal about women.

How helpless the average man against woman pretty and unscrupulous! To a lover it was well-nigh inconceivable that a woman's soul might not be so lovely as her face—that is, until she proved it to him. Given a beautiful face, his romantic fancy would endow her with every admirable and alluring quality of character. Strange, too, how beauty and charm—or lure—qualities having not the slightest bearing upon character—should be the two great magnets of love attraction. That meant that the qualities to attract were not the qualities to hold love. Something wrong there. If women were right with love, men would from the beginning be drawn to women for their sweetness, their fair-mindedness, their capability, their loyalty, in short, their goodness, instead of learning later to appreciate those qualities if lucky enough to find them. Yet under the distorted laws governing the love attraction all those qualities—the qualities of a good wife—might often be found in women who, for lack of attributes superficially attractive, were almost certainly predestined to a state of spinsterhood.

The whole thing was a mess!

Take his own case: How horrible to realize that he had so easily been drawn away from what was beautiful and fine by what was beautiful but not fine; how horrible that he could cast aside Alice's unselfish, unchanging love, for something spasmodic, spurious; and how horrible that the loss of that brief meretricious love could plunge him into a wretched state in which, though lonely, he avoided people, returning each evening to his apartment like a sick dog crawling into its kennel.

Sitting by the fire in his living room one night, unable to interest himself in books or magazines, he tried to analyze his situation. Rita's photograph still stood upon the mantelpiece; for several days its presence there had been disturbing him, but as if for want of energy to move it he had allowed it to remain. There, at all events, was something he was able to correct. He rose, took down the picture, and removed it from the silver frame.

His wretchedness was not a wretchedness of longing for Rita. He treasured no dream, however shadowy, of a renewal. He had put her—or she had put herself—definitely out of his life. Her destruction of his illusions, her blows upon his self-respect, made him detest her. If in the loss of her he missed anything it was a Rita he had imagined, a Rita who did not exist.

He looked at the photograph in his hands. She was beautiful with the beauty of a blue-ribbon cob exhibiting its gaits at a horse show, proud, sleek and sure. Self-confident, self-centered, self-satisfied, the expression of her face in the picture irritated him.

Suddenly, violently, almost as if slashing at her, he tore the photograph. He had aimed at the face, but by a narrow margin missed it. He tore again. This time the paper broke in a ragged line passing through one eye, across the nose and down the cheek. He threw the bits of the torn picture at the fire, but they hit the screen and fell back upon the hearth; he found it not unpleasant to scuff them into the hot ashes with the sole of his shoe. The silver frame he put away. He could give it to the cleaning woman.

But now in this morass of misery he did long for Alice. His longing for her was like his longing for his mother when as a boy he became ill away from home. There had always been that mother quality in Alice, that eternal watchfulness for his well-being; she was always thinking of him, worrying about him, afraid he would get tired or take cold. He thought with a strong nostalgia of the big comfortable chair in her apartment and the smoker's stand beside it: his chair, his stand, she called them.

And their tastes were so congenial—she always wanted to do what he wanted to; in restaurants she was delighted with what he ordered, and after dinner it was for him to decide what they should do—whether they should go to the theater or back to her apartment, where he could be comfortable and smoke while they talked.

How he wished she were at her apartment now! It would be so comforting to go to her; she was so understanding when one was downhearted. When the market was at its worst, after the war, and brokerage houses were failing, he could always get encouragement from her. And that time he had the grippe—she came to see him every day. How well he remembered the way she used to fix his pillows; she did it better than the nurse.

Trifling things always pleased her so. When he gave her some little present she did not thank him only once; with her a present seemed to renew itself over and over, and she would speak of it again and again. She remembered everything: not only birthdays but the most trifling anniversaries.

That reminded him—he had been meaning to get a present for her birthday. Her birthday would be coming pretty soon. Let's see, when was it? It came in the middle of March—March fourteenth. And to-day was—March fourteenth! Her birthday was to-day—and to-day was nearly over!

He hastened to the telephone and put in a call for Alice. It was only a little after ten o'clock. That meant nine in Cleveland.

MACGREGOR

Radite *Won't-Rust* Irons Retain Perfect Balance

IT isn't only that you can play these clubs in the worst kind of rain, wet, sleet or slush without danger of rusting—but there is a very practical golfing reason in their favor.

Constant buffing on the emery wheel to keep your irons shined up is bound gradually to wear away the metal enough so as to change in time the weight of the clubs as well as the balance, feel and actual resilience.

Yet with these Radite Irons your Pro need only to wipe them off after each round to keep them in the finest possible shape—shiny and sound. Not only is this a lot easier and more satisfactory for the Pro—but it is better for the clubs, for their original balance and weight are not changed even in the slightest.

Locker dampness—wet course—sea air—nothing affects Radite Irons. They always retain the same perfect balance. Ask your Pro or Dealer about them and let us send you descriptive catalog and further information.

BRIGHTON CARLSBAD SLEEPINGWEAR

Here's Style as Well as Comfort

GOOD looking, isn't it? You could even use this garment for a lounge suit on hot summer evenings.

It's the latest *Brighton-Carlsbad Pajunion*, a one-piece pajama that thousands of men know for real, relaxing comfort. Note the button and tab at the ankle to keep trouser leg down. There are a lot of little comfort features like this you'll find only in Brighton-Carlsbad.

Smart and modish, like all Brighton-Carlsbad Sleepingwear, yet generously cut for comfort. The armholes are roomy, sleeves loose and easy, no cramping across chest, and plenty of seat room.

Whether you wish a plain old-fashioned nightgown or an oriental-looking pajama, there's a Brighton-Carlsbad to suit your fancy. Silks from China or soft native cloths—there are hundreds of patterns to select from.

Ask For Them By Name

Tell your dealer you want the genuine "*Brighton-Carlsbad*." It's worth insisting upon if you want real sleeping satisfaction.

Our "**Nightie Book**," sent free, tells about our entire line for all the family.

H. B. Glover Company
Dept. 5 Dubuque, Iowa
Makers of Brighton-Carlsbad Pajunion Nightwear

How fortunate, how very fortunate, that he had thought of it in time!

While waiting in the library for the call to be put through he paced the rug, following the pattern with his feet. There was a place in the corner where he had to take a short step or else go over into the border. In the back of his mind was an incoherent wish that the rug had been a little shorter or a little longer, to match the length of his stride.

The knowledge that he was so soon to hear her voice made him happy in spite of his apprehension as to what her attitude would be. Again he speculated on the cause of her silence. Suppose she had in some way found out about Rita—what would she say, and what could he say? However, he did not believe that was it. It seemed far more likely that she was hurt by his neglect. But he wished he knew. It would be so much easier to commence talking with her if he knew. Why didn't the operator get her? Long-distance service ought to be prompt at this time of night. He was moving toward the telephone with the intention of asking for a report on his call, when the bell began to ring.

"All ready with Cleveland," said the operator.

"Hello—hello—hello," he called.

"Just a minute, please."

He waited. There came a little click and a soft electric hum upon the wire.

"Hello," he said again.

Then he heard Alice's voice, faint and far away.

"Hello—Alice. This is Dick." He paused; then as she did not answer he asked, "Can you hear me?"

"Yes."

"I called up to wish you a happy birthday. I couldn't get your present off to you in time. I was wondering whether I'd better send it or hold it here until you get back. I suppose you will be coming back pretty soon, won't you?"

"I don't know."

"Why not? Is your sister no better?"

"She's much better, thank you."

"Is she back from Lake Placid yet?"

"We expect her next week."

"That's fine! And after that you'll be coming home?"

"I don't know," she said again, and there was something ominous to him about the repetition.

"But I want to know," he persisted. "You must have some idea when you'll be coming."

"I haven't made up my mind."

"Alice," he said, "I miss you awfully. You haven't even written to me. I know it's my fault—I ought to have written to you—but I was horribly busy just after you went away; I kept putting off writing from day to day, and after a while I felt so guilty about it I didn't know how to begin. And I haven't been feeling well. And last week I was called on the jury—I had a devil of a time getting off. I've been sitting here alone all evening, thinking about you. Came home tired out. Last night I was home, too—and the night before—thinking about you. I'd give anything to see you. I do wish you were home."

He was not satisfied with what he had been saying; he felt that it did not sound genuine; he was throwing in words desperately, as if they had been bags of sand intended to stop leaks in a dike. Strangely the flood he feared was not a flood of reproaches but of silence; and now as he waited, giving her a chance to answer, the silence began seeping through again, forcing him to throw in more words.

"Hello! Alice!"

"Yes?"

He hastened on: "I'm wretched about the way I've treated you! I know I've made you unhappy, and that makes me unhappy. Can't you say something to comfort me?"

Again that awful silence.

"Alice! Are you there?"

"Yes."

Some quality in her voice—he did not know just what—told him now that she was weeping.

"Can't you just say something to me?"

The electric singing of the wire suddenly stopped.

"Alice!"

No answer.

He worked the hook up and down and when the operator responded made nervous inquiries of her.

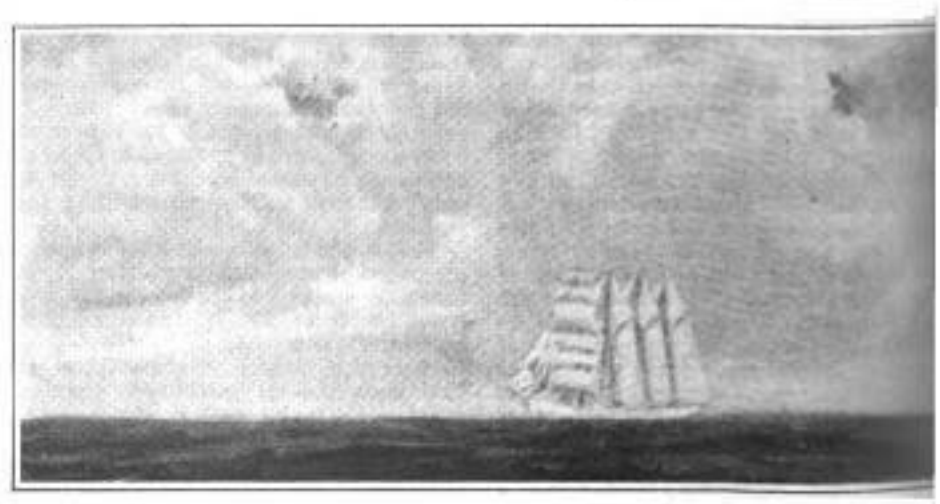
"Hold the wire, please." A curious little sound came through the receiver, telling him that the operator, like a disembodied spirit, was flying through the night to Cleveland to find out what was wrong; a moment later he heard her disembodied voice.

"The party disconnected," she informed him.

His first impulse was to call Alice again, but he abandoned the thought; there was no reason to suppose that further communication with her by telephone would be more satisfactory than the one-sided conversation just ended.

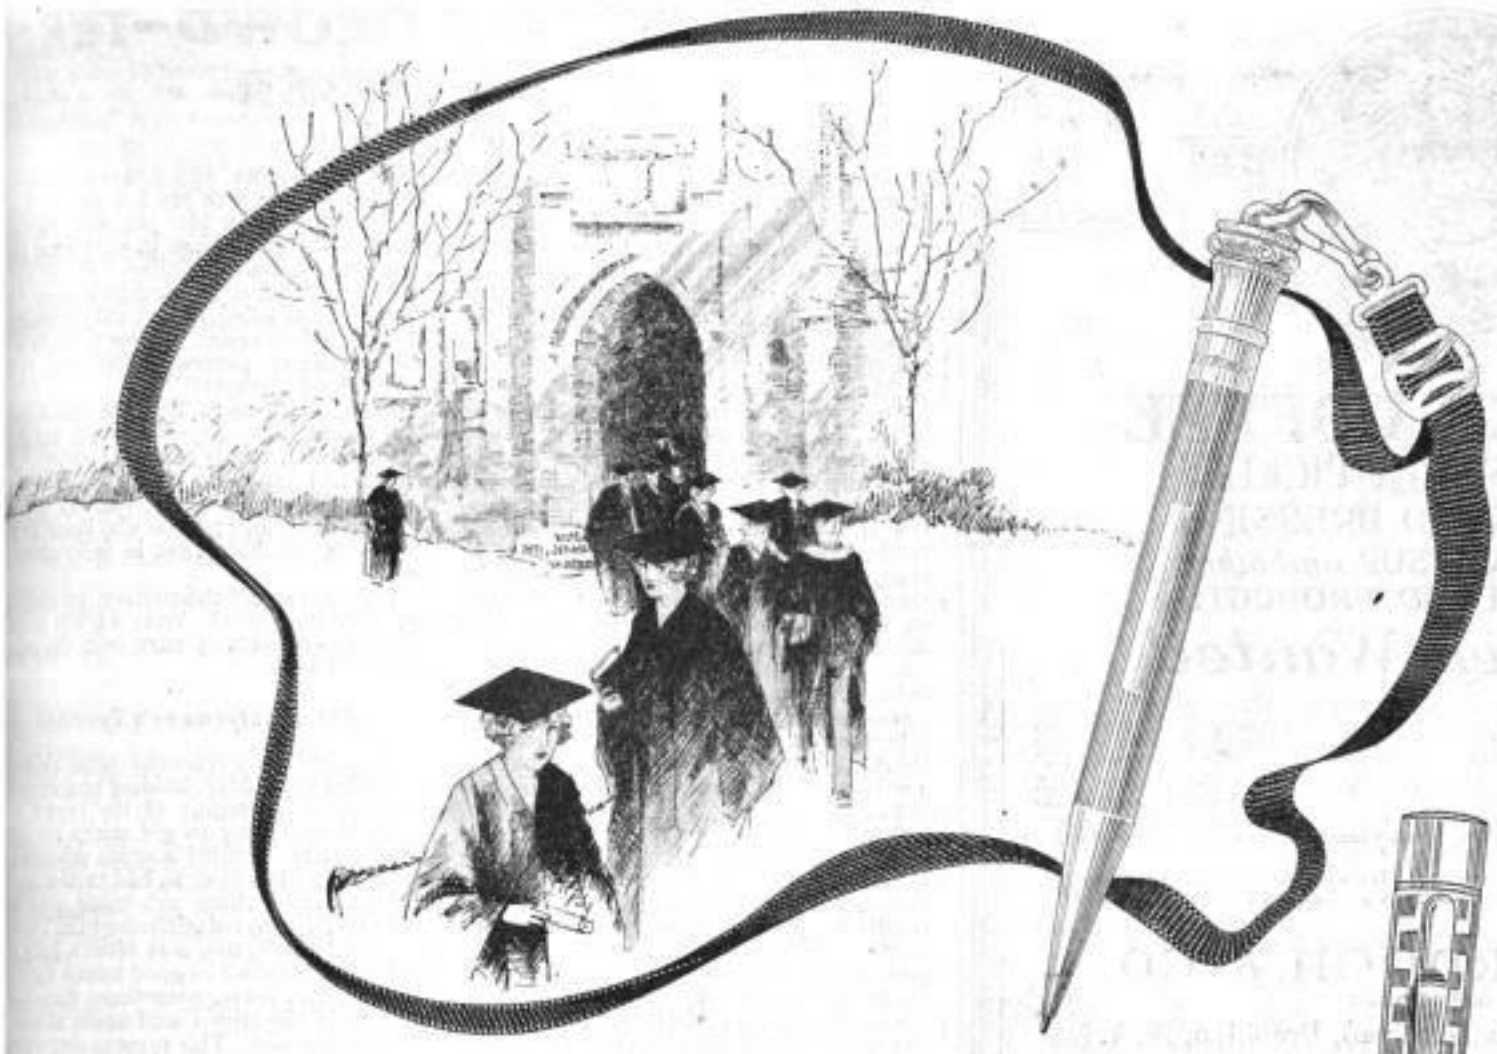
She had been crying. He was almost certain of it. Was it because she did not wish him to detect it that she had hung up the receiver—or was it a dismissal? Her silences, her short replies, lent color to the latter theory. She had never treated him like that before. If only she had reproached him instead of being silent; that would have shown him where he stood; as things were, he knew no more than if he had not called her up at all.

What if he had lost her! Now for the first time he fully envisaged that possibility. He had relied upon her gentleness, her devotion, her forgiveness. Had he relied too much? Ruthlessly he had traded on her finest qualities, treating her as he would not have dared to treat a woman of coarser fiber. His ethics had been the ethics of the jungle. He had been inconsiderate of Rita because he was afraid of her, and inconsiderate of Alice because of her he was not afraid. Why—the thought struck him like a thunderbolt—he had treated Alice as Rita had treated him!



Would he forgive Rita? Never! Would Alice forgive him? She must forgive him. He must find some way to make her forgive him. He deserved to lose her, but he could not bear to.

In the past he had been more aware of his need of him than of his need of her, but now their positions were reversed. He could not go on without her. He must win her back. He must see her. He would go at once to Cleveland.



Consulting a time-table he found that a train left for Buffalo at 11:10. He could just make it. By changing cars at Buffalo to-morrow morning he could reach Cleveland in the early afternoon.

Through the pantry door he shouted to Ito, then ran to his own room and began collecting the things he wanted packed. When the servant came he left the filling of the bag to him and telephoned for a taxi. In fifteen minutes he was on his way to the station, in half an hour he was on the train, and when a little later he retired for the night the train was roaring along beside the Hudson River. But he could not see the river. There are no windows in an upper berth.

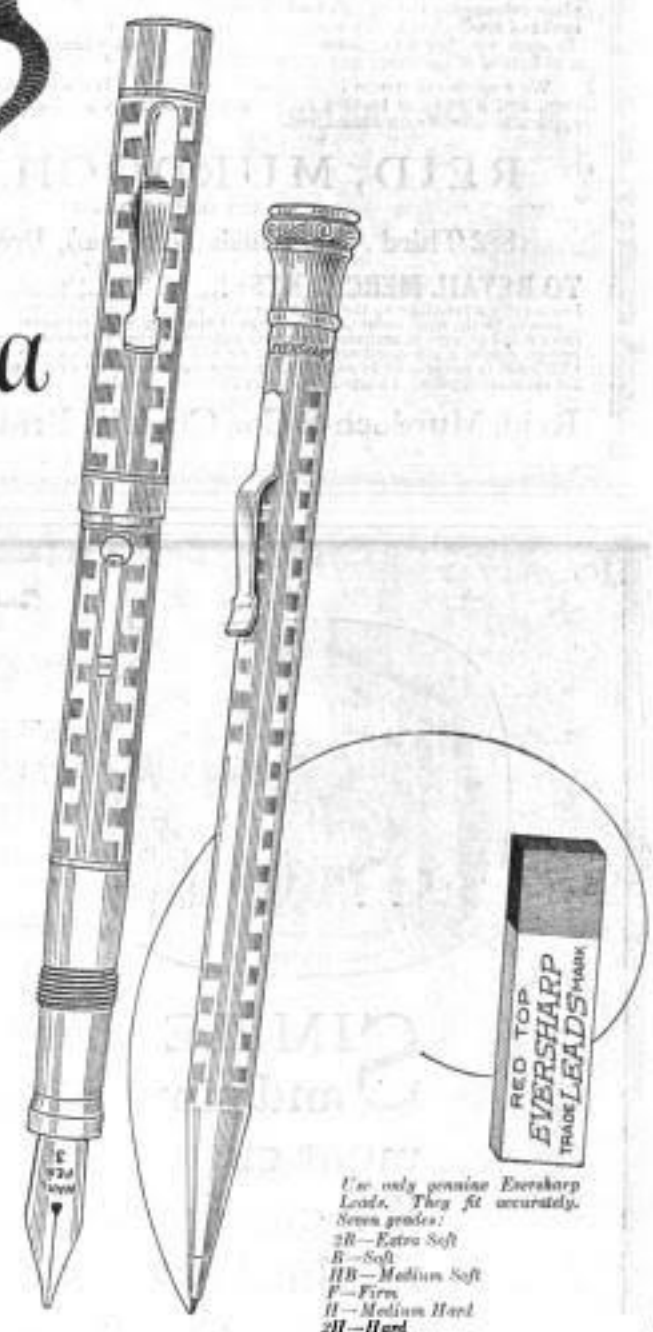
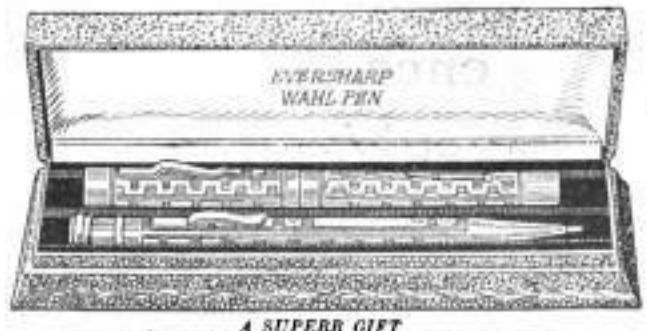
Gifts to go with the Diploma



Hand in hand with the certificate of ability should go Eversharp and Wahl Pen to help that ability make its mark.

Pencil sharpening, pencil waste are out of tune with modern teachings of efficiency. Everybody everywhere uses Eversharp. It becomes a part of you, induces clear thinking and that saving "jot-it-down" habit.

No other pencil can be like Eversharp; it has the exclusive tip in which the lead cannot slip; it works with exquisite precision. Many styles in gold, silver and enamel, priced from 65c to $65.



Wahl Pen, with the all-metal barrel that holds more ink, matches Eversharp in efficiency and design. 62 styles of pen points. Sold everywhere.

Made in U. S. A. by THE WAHL COMPANY, CHICAGO
Canadian Factory, THE WAHL COMPANY, LTD., Toronto

Use only genuine Eversharp Leads. They fit accurately. Seven grades:
2B—Extra Soft
B—Soft
HB—Medium Soft
F—Firm
H—Medium Hard
2H—Hard
3H—Very Hard
Also Indelible

EVERSHARP
matched by
WAHL PEN

A SUPERB GIFT
For the graduate, a Wahl Writing Set—an Eversharp and Wahl Pen to match in a neat, velvet-lined gift box.

MONARCH COFFEE
MONARCH SWEET PICKLES
MONARCH SALAD DRESSING
MONARCH CATSUP *and other*
MONARCH FOOD PRODUCTS

Salesmen Wanted

MORE than 2,000,000 pounds of MONARCH COFFEE were sold by 200 salesmen of the Chicago House of Reid, Murdoch & Co. in one month recently. A newspaper man asked a leading retailer why MONARCH COFFEE sales were so large and the grocer replied: "Simply because its drinking qualities please, and there's none better obtainable at any price."

Desirable territory is open in New England and Atlantic Coast States in which we will place salesmen. It long has been our policy to make additions to our organization from the ranks of retail clerks. We want men under 35 years with records of success in grocery stores. To such we offer an opportunity to make a worth-while connection where you will enjoy a wide field of endeavor and a splendid prospect for development.

We require references from present employers. We want capable, ambitious, energetic men, and if you are looking for a future with great possibilities, come and see us. Only applications in person considered.

REID, MURDOCH & CO.
ESTABLISHED 1853
882 Third Ave. (Bush Terminal), Brooklyn, N. Y.

TO RETAIL MERCHANTS: Because of our organization, the cutting of overhead expenses, and the style of packing, MONARCH COFFEE has a price advantage to the retailer readily recognized by alert merchants. We believe the retail grocer to be the most economical and logical distributor of food products. Correspondence is invited from retail grocers in territories not now covered by our salesmen. Particular care is given to mail orders, assuring you good service, and we will be pleased to quote you prices. Our MONARCH COFFEE is never sold in bulk. We have only one price to all retail merchants, and that is the lowest market price. In territory east of Pittsburgh, address as above; west of Pittsburgh, address:

Reid, Murdoch & Co., Clark St. Bridge, Chicago, Ill.

In Tacoma, Wash.
Many big concerns such as the National Bank of Tacoma—are enthusiastic users of our loose leaf and steel filing equipment.

SIMPLE methods and simple equipment cut office costs. We can show you the methods and suggest the equipment: thirty-three years experience.

SELLING TO A CROWD—THE AUCTIONEER

(Continued from Page 16)

into this picture, the desire to own the pigs is created, and by skillful handling of competing bidders price is lost sight of in the returns to be gained from the investment.

As he knows his goods, so the auctioneer must know his customers. He appears to be standing in his pulpit and urging the crowd to bid. Actually he is selling to individuals.

"Any schoolboy can stand up and call for bids and get two-thirds the value of an article," says one veteran, "but it takes a salesman to get that other third. To be a good auctioneer you must study and read human nature. No two bidders are alike. One is suspicious or has set a mental limit to the price he will pay for something he really wants; humor him. Another fancies that he is a shrewd buyer; compliment him on his judgment. Another will not take a dare; wave a red flag at him by pointing out his competitor. Others like the limelight and want to be pointed out as heroes when they make a purchase. Still others are timid and bid best when they think they are lost in the crowd—that the auctioneer is not personally soliciting their bids."

Another skillful auction salesman works on the assumption that most bidders like to remain hidden in the crowd, though he admits that other men get just as good results by playing upon individuals. His method seems to work best for him. A good many folks come to an auction thoroughly persuaded beforehand that the auctioneer is tricky, that the stuff to be sold has some hidden defect, and that bidding is stimulated by cappers. This belief that auctioneers use confederates to make fictitious bids is still common, but men who sell at auction day by day, year in and year out, say that crooked bidding is almost wholly confined to crooked grind-shop auctions.

Just as merchandise purchased by the individual customer in a man-to-man sale must be satisfactory if the sale is to hold and the purchaser turned into a regular customer, so the square auctioneer is genuinely anxious that successful bidders be satisfied. Then they will attend future sales and buy again. Very often, though traveling from town to town, he works in the same territory, and must create and maintain a reputation in fair dealing with people who buy at his sales as well as with those who hire him to sell property.

"I like the suspicious fellow; he makes the best buyer when properly handled," says one auctioneer. "Ignore his presence, talk away from him, let him see that you really do not care whether he bids or not, that he doesn't matter, because stuff is selling so cheaply or briskly. Presently he will bid in something cheap himself, decide you are square, and be a good customer thereafter."

A Contest of Wits

"It is not necessary to use cappers or trickery in honest auction selling. But what is honest auction selling? Is there such a thing as an honest crowd? The sale is a contest of wits between the crowd and the auctioneer. Of the two, in most cases, the auctioneer is more honest than the bidder. At every sale two or three persons conspire to buy a certain article at an absurdly low price, which they agree upon in advance. They reason that the auctioneer has to sell on the second bid, wait until the crowd is small, and then one bids a dollar for a twenty-five-dollar article, and another raises him a quarter, and gets it. Is that honest? Bidders think so—if it works. But the auctioneer is responsible to the man for whom he is selling. If enough such trickery by bidders were permitted average prices on the whole sale would not be satisfactory. So auctioneers have ways of protecting themselves. Sometimes cappers have been used to bid in articles that do not bring adequate bids, but the trained auctioneer can pick an imaginary bid out of the air just as easily, drop his hammer and say 'Sold to A. B.,' which is equivalent to bidding in the article for the owner. Imaginary bids are often picked out of the air in starting the sale, to give an appearance of briskness or to speed up the sale when it lags."

The auctioneer who makes a fuss conspicuously over a chipped pickle dish that somebody bids in for ten cents can be blind to the moth holes in an Oriental rug sold for a hundred dollars. If the purchaser complains he promptly says, "If you are dissatisfied, sir, we will put the rug up and sell it again." Nine times in ten the purchaser protests, "No, no! I'm satisfied. I'll keep it!"

Some auctioneers like the dissatisfied purchaser. They say that every knocker at an auction sale is really a booster. The dissatisfied customer buys again to get even or he growls about the way he has been treated, and people who listen to his grievance conclude that he lacks shrewdness.

They are smart themselves; no auctioneer could fool them! And confident in their own shrewdness they turn from the grumbler to the sale.

The Auctioneer's Technic

The old-time auctioneer often ridiculed or bullied the bidder, holding him up to the laughter or contempt of the crowd as a cheap skate trying to get things for nothing. But the skillful auction salesman of to-day considers that as bad tactics as it is bad manners—there are more courteous and effective ways of stiffening bids. The old-time auctioneer, too, was often a jolly soul and kept his crowd in good humor by witty remarks and jokes, sometimes directed at persons in the crowd and again at the articles being sold. The present-day auctioneer salesman uses wit and laughter to only a limited degree, and in its proper place for a definite purpose. If the crowd is small he may joke until it grows larger. If it is a solemn timid crowd he will cheer it up with a few jokes. Or in putting up a new article after heated bidding he may relieve tension by cracking a joke. A crowd may grow stale during an auction lasting several hours, and then the joke helps too. But laughter sells nothing. The moment good humor has been restored and bidding begins again the salesman must be serious. With a keen buying crowd jokes are a distraction.

Cheap wit or sarcasm at the expense of persons in the crowd is too expensive to be indulged in. The skillful auctioneer gets his laugh by making fun of the merchandise. Putting up a well-known piece of farm machinery he says, "You all know the Blank reaper—made out of old barbed wire and fence rails, liable to fall to pieces the first time you move it. This is the poorest Blank reaper ever made, and I am going to give it away for somebody to break up for kindling and old wire. The owner doesn't want it; he thinks it's good. I don't want it, and I know you don't want it. I want to give it away; don't bid too fast or too much!"

The experienced salesman selling to an individual customer knows when the time has come for action, and directs all his energy to quickly closing the deal. Many salesmen say that they know this by instinct.

The auctioneer, too, develops a sort of sixth sense, by which he knows when the last offer has been made by a bidder. The tones of bidders' voices carry a world of information to the auctioneer. Something tells him when they have reached the highest amount that can be secured for the article under the hammer. Sometimes two bidders carry the price above reason, in competition or because there is personal feeling between them. A good auctioneer is quick to see that, and set one against another, saying, "Don't let him bluff you; you can pay as much as he can; make him pay for it!"

One well-known real-estate auctioneer says that bidding is like stretching a rubber band. If stretched too far it snaps, but if relaxed before the breaking point it can be stretched again and again. Bids create a sort of tension as they increase, and the wise auctioneer knows when the breaking point is being approached and eases the strain upon his audience by some amusing remark: "That gentleman in the [illegible] tie—what do I hear from you!" The audience giggles, relaxes and rests a moment—but only for a moment, because

Digitized by Google

the diversion is too great, bidding interest is destroyed.

"The closing point in most auction sales is really a very fine balance of opinion about values," says a country auctioneer who has sold many breeding animals for good prices. "You will hear men say that no bull is worth twenty thousand dollars. There are four kinds of people who buy fine bulls. The farmer who raises meat animals can afford to pay one hundred to one hundred and fifty dollars for a bull. The common breeder from whom he buys such an animal can pay four hundred to eight hundred dollars. The medium breeder who raises bulls good enough to improve the common breeder's herd can afford to pay three thousand to five thousand dollars. Finally, the top breeder with a reputation for the best, selling to the medium breeder, can afford to pay twenty thousand dollars for a bull or as much more as a particular bull is worth to him in results. Now suppose ten farmers or breeders attend an auction sale. Each brings his own ideas of the value to him of the bulls to be sold. The auctioneer knows the bulls, and has his idea of their value to those prospective bidders. It is his business, naturally, to see more value—real value, mind—than they do, and point it out to them. Well, the bidding begins. One man's idea of value is pitted against another man's, corrected by the auctioneer's idea of value, and the price goes up, up, up, until it reaches the value to the man who can get the most value out of his purchase. If it goes above that there will be dissatisfaction, and if it stops short the auctioneer hasn't secured the best results for the seller."

A Town Under the Hammer

How an auction sale settles values was shown some months ago in "the world's largest real-estate auction," when more than fifteen hundred houses in a war-built shipyard town were sold for the Government. The property was first offered at private sale, but the highest price obtained was about two million dollars. So the auction sale was decided upon. Immediately there was propaganda against the auction—rumors that the houses were poorly built, had wet cellars, and so forth. The auctioneer who got the job came from another locality. There was propaganda against him as imported. When the auctioneer opened the sale he faced a crowd made up of people who thought the houses they were living in would be sold over their heads at prices greater than they could pay; also, of people who wanted to buy houses below their real value. They fought along enough sympathizers to wreck the auditorium and smash windows and doors. When the auctioneer began he was jeered every time he offered a house for sale.

But he persisted, telling the crowd how foolish it was to think that it could get the better of the United States Government by any such tactics, and after an hour of turbulence there was a queer change.

Houses were sold under the hammer, sold at reasonable prices. The crowd saw people getting bargains. Hostility changed to acquisitiveness. People bid, bought, and cheered the auctioneer every time the hammer fell. In one final outburst those who were most hostile tried to rush the auctioneer, whereupon he asked them if they had the interests of poor people so much at heart, they didn't raise the money and help some of them buy in the homes. Later, when a widow with seven children lacked money to keep her home, the auctioneer raised a fund himself. Sales steadily grew better but were reasonable to the end. The Government got almost twice as much for the whole property as had been offered privately—and when the sale ended the auctioneer was given a great demonstration.

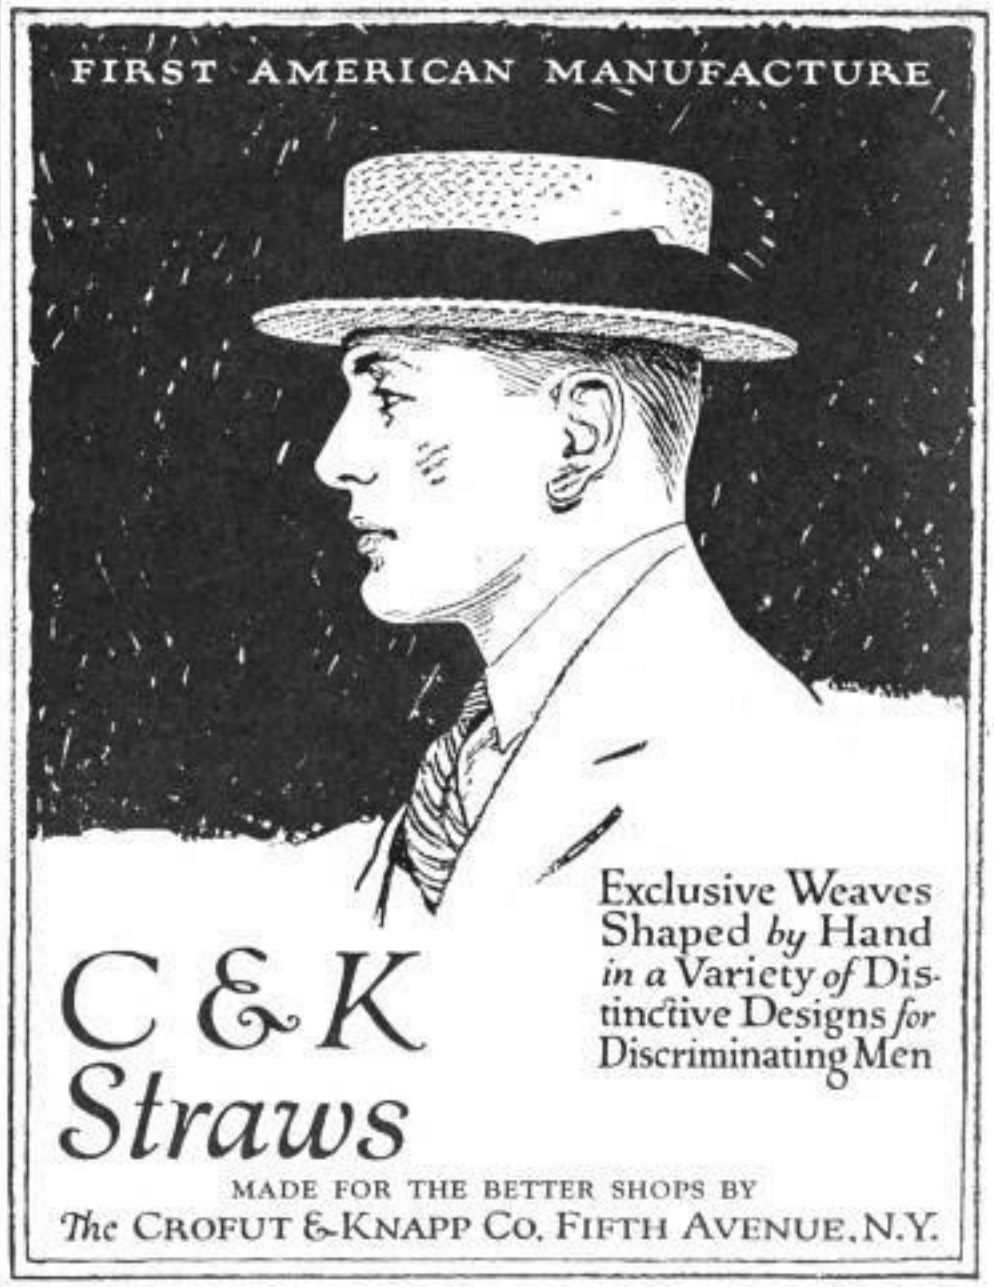
Sales of farm property are the greatest source of auction activity. Therefore the auctioneer's suggestions to country people who are selling out should be interesting:

Spring is a good season to auction off livestock—from February to April. Livestock has wintered far enough to show condition, and farmers who sold livestock the fall for lack of feed to carry it through winter are looking for animals. New buyers from other sections usually come into the neighborhood and start farming in spring, and need implements and livestock. October and November are also considered good months in some parts of the country, as livestock is in good condition, where later, in winter, it will look rough. Mondays, Saturdays and public holidays should be avoided.

Farm property put in the show window will bring more money than if sold without method. Tools and implements should be cleaned, broken parts replaced, and be touched up with paint, harness oiled and mended. Property of the same kind, like implements and furniture, should be brought together and arranged for easy inspection, and livestock tied or penned near it; if property is scattered the crowd will straggle, and the auctioneer have difficulty in keeping it interested. Finally, it is important to have a good lunch. After several hours of selling people grow hungry and lose interest. Good nature and bidding are restored by lunch. It need not be elaborate—plenty of hot coffee with sandwiches will do. In other days liquor was often served at country auctions, but auctioneers are all prohibitionists in this respect. Liquor will make a man bid, they say, but he cannot be held to his bargain. Liquor often made him troublesome, interrupting the sale and diverting the crowd's attention.

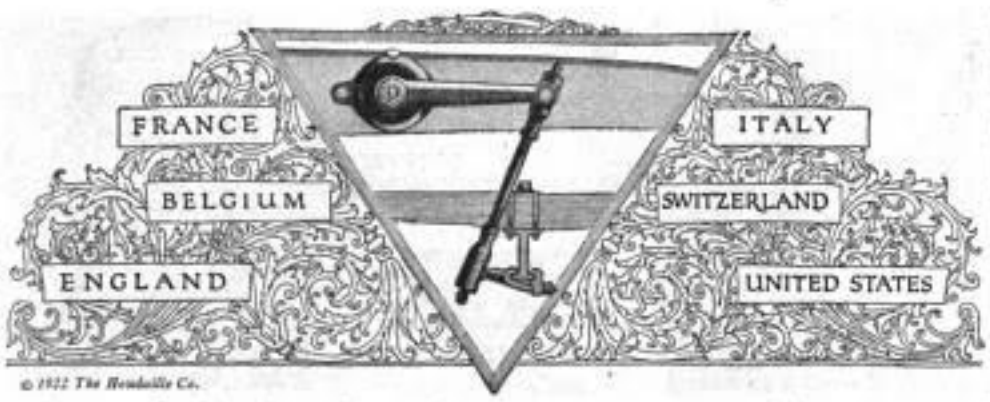
Auction selling for one kind of goods might not do for another. Farm property is sold one way, city real estate another, raw furs or art goods in still other ways. Generally the auction methods are shaped by the buyers' knowledge of values. The crowd that comes to see the furnishings of an exclusive city mansion sold off in liquidating an estate will be made up of a dozen dealers who closely gauge the value of whatever they bid upon, with a hundred or more persons, often drawn by curiosity, who have very sketchy ideas of value. Drawn into the bidding they often pay much more than things are worth, though some bargains are always picked up. This is also true of sales where books, paintings and other fine things are sold. The dealer is there with his canny appraisals, but people with vague ideas of value outnumber him, and as they are often collectors in rivalry for some exclusive article, bidding may run high.

Some years ago a state librarian sent an agent to an auction sale of rare books, with instructions to bid on thirty-odd items up to certain prices. Not a single item was secured, for other bidders paid more than the librarian could afford, the aggregate being nearly six hundred dollars. Thereupon the librarian sought the same books at private sale, and within a few weeks got them all for less than two hundred dollars.



The Electrical Bidding Device

When it comes to selling furs, carpets, tobacco, fruit, wool, Dutch bulbs and other commodities to professional bidders—men who think, dream and eat values—the auction becomes less exciting as a sporting event, perhaps, yet full of interest and speed nevertheless. Very often the bidding is in code, so that competitors will not know who is bidding or what particular lot he is bidding on. Such auctions are held in rooms fitted up for the convenience of the buyers, who sit at desks, like a lot of schoolboys, catalogues in hand, and excitedly wigwag code bids at teacher, the auctioneer on his rostrum. In this class falls the Dutch auction, common in the sale of Holland's bulbs, cheese, eggs and other products. The auctioneer starts each lot at a high figure, and begins lowering the price bit by bit until some bidder agrees to take it at a price, when the lot is knocked down to him. The up-to-date auction in Holland is conducted electrically, with a clock face around which a pointer travels from high to low. Buyers watch it, each sitting at a desk with a numbered push button. When the pointer reaches a price some bidder is willing to pay he presses his button and his number appears over the dial, and the eggs or tulips are his.



Endurance counts in auction selling, for very often the auctioneer is on his feet, talking continuously, for five or six hours a day and several days in succession, or ten or twelve hours in a big one-day sale. He must therefore have the health and good temper of the man selling to individual customers, plus the ability to keep a crowd interested and buying. Long before he feels fatigue his crowd will probably get tired and become indifferent. Then he has to liven it up with his own vitality.

Most of all, he must be able to talk continuously during these long selling periods; so voice training is part of the course where

Just as the brain and spinal column are protected by a liquid shock-absorbing system, so the liquid cushion of Hoo-Dye protects the motorist from "road shell shock" and fatigue.

Hoo-Dye operates with absolute certainty in softening the softest blow or holding as in a vise the car body to its mean line of travel over the worst roads at the highest speed. By its curb on springs' enthusiasm, it makes longer trips possible, and it turns what was a tiring journey into a day of restful relaxation.

In Europe and America the application of the hydraulic principle to the control of the motor body as developed in the Hoo-Dye Shock Absorber has opened a new era in motor car comfort.

The great majority of the finest foreign cars are Hoo-Dye equipped, and in this country it is the standard equipment on Cunninghams, while many thousands have been applied to Packards, Pierce-Arrows, Cadillacs, Studebakers, Mercers, Hudsons, Buicks and other of America's best cars.

If motoring wearies you or makes you conscious of your tired nerves, send for our book "How Motoring Shocks Affect the Nervous System" by R. Kendrick Smith, M. D., D. O., one of America's foremost physicians and osteopaths. For your own health's sake you should have a copy—send for it today and learn the health way of motoring. Ride easy with Hoo-Dye Hydraulic Shock Absorbers.

ALLEN'S FOOT-EASE

The Antiseptic, Healing Powder

Shake It in Your Shoes

Use It in Your Foot-Bath

USE IT IN THE MORNING

And walk all day in comfort. At night, sprinkle it in the foot-bath, and soak and rub the feet. It freshens the feet and takes the Friction from the Shoe.

IN PEACE AND WAR for over 25 years Allen's Foot-Ease has been the STANDARD REMEDY for hot, swollen, smarting, tender, tired, perspiring, aching feet, corns, bunions, blisters and callouses. Nothing gives such relief.

Ladies can wear shoes one size smaller, and shoes and stockings wear longer. Those who use Allen's Foot-Ease have solved their foot troubles.

Over 1,500,000 pounds of Powder for the Feet were used by the United States Army and Navy during the war.

In a Pinch, use ALLEN'S FOOT-EASE

Sold by Drug and Department Stores everywhere.

auctioneering is taught. To talk steadily through a sale the voice must be strong and pleasant; also, the auctioneer must have something to say. In taking on a student or an apprentice the auctioneer who teaches his kind of salesmanship puts the candidate through a physical examination for health, strength and sound lungs. Then his body is built up by exercise, and his voice trained for clear enunciation, carrying power, agreeable tone and endurance. The novice talks, speaking as plainly as possible and increasing carrying power. When everybody in a large room can hear him distinctly he practices talking a little faster, and faster yet, until he can hold the attention of a crowd not merely by steady speaking but by what he has to say. For the latter purpose he must be well informed about the goods he sells, and therefore the successful auctioneer is a leader and investigator in his line, whether it be livestock, city lots, secondhand furniture or Chinese porcelains.

The real test in this line, says one auctioneer, is ability to grind, which brings in that interesting institution, the grind shop, the more or less crooked establishment where flashy jewelry, bric-a-brac and other merchandise known as slum are sold for as much above their real value as the auctioneer can get. The grind shop is found in most cities, but in only a few well-chosen locations. It succeeds in well-traveled streets, where people are mostly strangers or working folk; or near depots and markets, where country people come—for these are its chief customers. Working people seldom complain when cheated, for fear that they will be held up to ridicule as suckers, while the farmer and stranger in town keep a bad bargain quiet for fear their names will get into the newspapers and be read back home. Good grind-shop locations are not numerous and bring good rents. If such an establishment began business among middle-class or professional people, accustomed to insisting upon their rights, it would soon be closed by the police.

Grind-Shop Methods

The grind shop originated in pawnshop sales of unredeemed jewelry, about the same time jewelry merchants discovered that legitimate auction selling solved certain problems in their trade.

The jeweler's merchandise tied up a great deal of money, and was often slow selling: so much so, sometimes, that he was driven into bankruptcy. Auctioneers were called in to sell bankrupt jewelry stocks, and jewelers learned that the auction could be used to forestall bankruptcy. It is widely used to-day to liquidate surplus stocks, the jeweler getting his capital back quickly, and purchasers getting honest goods at reasonable prices.

Pawnshop proprietors found that anticipation of bargains made people bid freely at sales of unredeemed jewelry; so the grind shop with its secondhand watches, brass jewelry and thin-plated silverware was quickly established to meet the demand. It is altogether unlike the legitimate jewelry auction—indeed, very harmful to the latter. The grind-shop auctioneer takes pride in trimming customers. He would rather sell a brass watch for three dollars, making a dollar and a half profit, than sell a good watch for twelve to twenty-five dollars and make double the profit. Curiously, this sort of establishment does not make great profits, nor do its auctioneers earn anything like the commissions that might come to them in honest selling. They are often gifted salesmen, but have fallen into the grind-shop habit and find it hard to break away. The grind-shop proprietor is usually a small merchant with no regular customers. He employs two or three auctioneers who relieve one another through the long business day, often lasting until midnight. The term "grind" grew out of the fact that the auctioneer talks continuously, even though there be nobody in the place. To be able to talk to bare walls in a good tone of voice without growing tired and all the time keeping up an appearance of selling and be ready to sell if a single rummy, a victim, drifts into the place, is considered great salesmanship and recommended as practice to auctioneers in other lines.

"Gather right inside!" chants the grind shop auctioneer, with nobody around except two or three shillabers, or confederates who upon the appearance of a single prospective customer will begin making fictitious bids. "Gather on the inside right on the inside! The sale is just starting, we are just starting the sale, come right in, be right in time, the big sale is just starting. And I am bid five dollars, I'm bid five dollars, I'm bid five, I'm bid five, five, five! Come right in, right on the inside, just starting the big sale. Come right in and look over the beautiful stock of diamonds, watches, jewelry, cut glass and silverware. Gather in, gather in, gather in! The first article I am going to offer is this big vase. It is worth fifteen dollars of anybody's money. It was made on the far-away shores of Japan, ten thousand miles away, and is all hand painted and beautifully ornamented in bright Japanese gold. Pure gold! Gold, ladies and gentlemen, gold! And it's worth twenty-five dollars! And I'm bid twenty-five cents, I'm bid a quarter, I'm bid twenty-five cents, five, five, twenty-five ——"

An Hereditary Title

Ten or fifteen people are a fine crowd in a grind shop if there are one or two real bidders among them. The shillabers, or by-bidders, as they are also called, are rarely even paid, in many cases, but simply use the auction room as a loafing place or are friends of the proprietor or auctioneer. The paid confederate is employed usually where buyers are hard to attract. There are fake auctions that make sales if only a single rummy drops in. The stranger is drawn by the small crowd and the grind, and thinks it must be an honest auction sale because there are so few people. The auctioneer obligingly offers to put up anything he wants to bid on. The shillaber runs bid, and make comments upon the value of goods. Articles are knocked down to them, and they step briskly up to the counter to pay for their purchases, throwing down a silver dollar and getting back two fifty-cent pieces in change. If a single customer can be interested he is kept buying as long as possible, probably paying three to five times the actual worth of everything purchased.

Yet the outstanding fact about the grind shop is its small turnover. Fifteen or twenty dollars an hour is considered satisfactory selling, and fifty dollars an hour fine business. Cheap auctions of this type are often conducted with twenty-five or fifty dollars' worth of merchandise, and some providential rummy drops in and buys the one brass watch unexpectedly. It is necessary to hurry a shillaber around to the nearest pawnshop to get another.

A final word about the country auctioneer, the word he is invariably known by—"Colonel." People have wondered why, and asked him, but he seldom knows himself. Recent investigation by a well-known auctioneer in the Middle West shows that the title was first applied to the late Col. James W. Judy, a famous auctioneer of the last generation. Colonel Judy was the pioneer in pure-bred livestock auctioneering, and his title of colonel was won in military service during the Civil War. Many another auctioneer was anxious to become known as a second Colonel Judy, and thus the title "Colonel" was given those who succeeded.

NERACAR

"MOTORING ON TWO WHEELS"

For the Entire Family

85 to 100 miles to the gallon

Neracar is Cheap—Clean—Convenient—Safe—two wheel transportation for the entire family—father, mother, brother and sister.

Cheap The first cost is $225. The upkeep is extremely low. One gallon of gasoline for 85 to 100 miles. No garage or parking difficulties.

Convenient Use the Neracar to the store or office. For work or play, to school or country club. You are independent and operate on your own schedule.

Clean The broad fenders protect the rider from mud, dust and grease. Can be ridden by either sex in whatever clothes befit the occasion.

Safe Maximum speed 35 miles per hour. The low center of gravity (below the hubs) makes for easy handling and balance, and practically prevents skidding. The low saddle position permits the rider's feet to rest on the ground at start or stop.

300 miles for a dollar

SPECIFICATIONS

CHASSIS: Automobile type construction with pressed steel frame.
MOTOR: Two-cycle 2½ H. P.
CRANK CASE: Aluminum. Shaft mounted on roller bearing front; ball bearing rear.
CARBURETOR: Single jet automatic float feed with flexible wire control to right-hand grip.
DRIVE: Friction, five speed. Countershaft mounted on self-aligning ball bearings.
IGNITION: High tension magneto.
ELECTRIC LIGHTS: Two head and one tail. Magneto generator.
STARTER: Kick starter direct to engine shaft.
MUFFLER: Pressed steel with baffle plates.
TIRES: 26 x 3" nonskid.
WIRE WHEELS: Mounted on ball bearings.
WEIGHT: Approximately 175 lbs.
SPEED: 35 miles per hour.

BALLIOL

(Continued from Page 13)

"Right. But he's not quite a pup. He's almost two."

"I'd the like of him in '78, when I was a lad. Bought him of Phil Mendoza, that had a shop in Seven Dials." Conor whistled two bars of the jig and tickled Balliol's nose with a cruel thumb. Then he said, "You'll be a son of Lord Bretherton of Sholes, sir. I mind His Lordship. They was spongin' the blood off me after I fought Billy Jevons in '79. His Lordship came up and said, 'Damn you, Conor, you've cost me thirty guineas!' A fine big man then. He'll be older now."

"I fancy you're thinking of my grandfather. My father was never at a prize fight in his life, and he'd have been at school in 1879."

The man tilted back his unwrinkled face and grinned. He said, in the same melody of sliding vowels, "God be above us all! But that's true. It'd be your grandfather, then. Eh! Doesn't time pass over us and we grow old easy? And childer put black shame on us and a laugh will be in every fool's mouth."

"You don't look an old man," said Noel.

"I can do my day's work still, and ask no man's help in it."

He stood up. It was a boy's motion. He took his hat from a round head and became old, so that Noel started. His curly hair was white to the roots. His eyes were of dull smoke, congealed and held between black lashes. The blue shirt rose on slabs of muscle as he breathed.

He said, "I'm sixty-three. But you'll see I'm still a strong man, sir."

He looked over Noel's head at the cars. Noel had to turn. The twins were staring. Nate Sears was rubbing his arms with cotton waste. At this group of young bodies the old man looked and began to whistle the gay little jig, treating its few notes kindly. He had been very still. Now his flat, handsome face wrinkled gently about the mouth. He whistled, and the sound hurt Noel's reason. Balliol pawed the Irishman's shoe.

"The pup likes me fine, sir," said Conor.

"I'm sure he does," Noel murmured.

"Eh," said Conor; "a pup's diff'rent from a woman, now. It's women that grow up to be clever and look out of windows at young fellows pitchin' snowballs under the trees." He sat down again and took Balliol against the amazing chest. The dog licked his chin. The old man spoke over the dancing red tongue. "Like in the tale. The girl looked out of the window and saw a young lad with black hair and red cheeks tramping the snow. Well, a dog's better. I've never been lucky with women. Is it a thing to be sad for? I don't know. Little dogs like me, and tall women run off from me. I'd best buy a dog, sir." He smiled.

Noel cleared his throat. The old man whistled, rubbing his chin on Balliol's head. From the big door at the top of the runway men were staring down. The fellows on the basin's edge were idling, their poles in their hands. These many eyes centered on Conor and the hot air was burdened. Everyone watched as if the whistle held them silent.

"What is that tune?"

"The name of it is Deirdre in Scotland, sir," Conor said.

He looked up. His eyes changed. The dull smoke dissolved and something glowed terribly, then was gone. Balliol barked, nuzzling his friend's neck. Conor let his head drop on the white fur and said, "Eh! I've no sons, sir. I like dogs. I had the like of this one in 1878. I bought him of Phil Mendoza, that had a shop in Seven Dials. I was known for a good fighter in them days, sir, and gentlemen would speak with me quite public in Piccadilly. But I'm not lucky with women."

Noel gently lied, "I've heard of you often."

"It's likely. I'll be gettin' home now. Good day to you, sir. You've the look of your grandfather, but you're not so tall a man."

He covered his white head and went strolling past the flat cars. The whistle rose and was shrill as a tortured violin. The boys sat immovable. Nate's hand was pressed on the side of his black shirt. Conor passed slowly into the village and turned through the gate of a tiny house in whose yard flowers bloomed.

A man rapped his pole on the planks and cried, "It'll end in a killin', Nate!" and men murmured all about.

Noel walked through the beginning of a discussion and mounted his horse. The twins smiled happily, enjoying this tense battle of attitudes. Nate Sears stared at Noel with another look.

"It's too bad."

"Yeh," said the engine driver; "it's too bad. He's a nice old feller and always treated her fine. But what can I do? I ain't sore on him. I like him. Did you see his pants?"

"No."

"Gun in his left pocket. Hear him whistle when he walked by us?"

"It's incredible," said Noel. "I say, you lads, do keep out of the old chap's way! It'd be such a pity if ——"

"He acts like we was laughin' at him," Nate Sears complained.

The twins said, "We ain't. Not much! A person that had any sense wouldn't laugh any place near him," and got down from the car to play with Balliol.

Noel let Balliol follow them along a rocky path that led to the whitewashed bridge over the mouth of the basin. The engine driver stalked by Noel's horse and drearily whistled this ominous jolly tune.

He confided, "It's awful hard on her, stayin' with this aunt I've got in Oil City. She's homesick. And misses the kids. 'Cause they was in school with her, and used to fetch notes from her to me, see? But she's scared of Conor. It ain't like he'd said a word either. We've been home a week and he ain't said a thing to nobody. It's awful unsatisfactory! You see why I wanted a gun?"

"Perfectly," said Noel, and pulled in on the bridge.

He saw, too, a house of red boards in the thin woods near the water. It seemed to cower against the base of a tree that floated its branches on the paling sky.

"That's our place," Nate Sears told him. "Dad built it. He used to run the engine, back before I did. Died of ptomaine poison from eatin' somethin'."

"How tall is that tree?"

"'Bout two hundred feet. Awful old, San Rawling says. Five feet thick at the roots. Yeh, it's a big one. Well, you tell San about this. So long."

He walked away and overtook the twins. Balliol sat on the bridge and looked up at Noel. Seeing his lord moody he whined and stood on his hind legs. Noel watched the Sears tribe pass under some petty trees and walk up an open patch of rough grass to their door. The colossal cedar shaded the roof of red tin. Its branches must swell twenty or thirty feet in all directions. It was superb. The house crouched below the tower of bark and dull-green boughs like a discolored pup at heel. The three brothers sat on the doorstep and were trivial.

Trivial people lost in a scented valley! Noel worried. This matter distressed him. It ought to be settled, healed up. The girl must be pretty. It seemed to be nobody's fault. He turned his horse. Conor was too old for reason, probably vain. People had chaffed him. He had an old man's sterile passion for this girl. That was all. Noel found his mouth pursed. He was whistling the jig.

Balliol sat on a bathroom stool and watched his master bathe. Noel slapped water over the edge of the tub and said, full of gloom, "Distinctly none of my business, dear heart, and I should muck it all up if I tried to interfere. And, after all, San Rawling will buzz in by midnight. Damn that tune!"

Balliol was alarmed when Noel began to walk about the library after dinner, whistling and neglecting his pipe. The dog sat in the center of the rug and watched his lord stalk to and fro. Occasionally Noel paused to toss out some sentence. "Ridiculous! Watched them bury two thousand men in Flanders. Getting into a sweat over this! Sentiment, you know!"

Balliol flapped his tail on the rug. His master's stiff shirt front creaked. Noel ran his hands over his dark hair and sighed. Balliol sighed, suffocating with sympathy. Why didn't the deity go to bed if he wasn't going to read a book or smoke? He found the jig doleful.

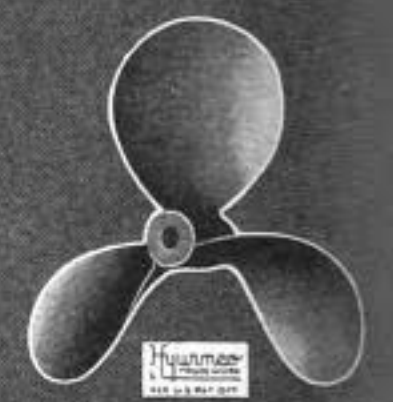
The god said, "Preposterous! And, really, there's no such thing as civilization. One sits under an electric lamp and looks out. Idiots killing each other about flappers. It's absurd!"

Lustrous Sheer Silk Stockings
$1.50 a pair

Every woman will love these lustrous silk stockings.

All can afford the luxury of silken clad feet at this moderate price. Just think—pure thread silk, 8 inch extra elastic hem top, four ply heel and toe, high spliced silk heel, back seam and fashioned marks, all the appearance of full fashioned hose, with *seamless* comfort in the foot. Price only $1.50 a pair (East of the Rockies).

Exceptional durability is assured by the Iron Clad trademark.



All popular colors may be had.... black, white, cordovan brown, gray, navy, African brown, silver gray and Russian calf; also Nude, the new shade. Sizes 8 to 10½.

Ask your dealer for Iron Clad No. 903—get several pair. If he doesn't carry them, order direct, enclosing remittance and stating size and colors desired. Your order will be promptly filled postpaid.

He kicked the rug with his shiny, black eet. Balliol was wary of those shoes. He loubted the quality of American blacking. They'd been much better licking at home. The god whistled and then flung himself own at the piano. He made the same ane come from the shimmering box. Balliol climbed a soft chair and peeped in the vibrating silvery wires.

"Deirdre in Scotland," said Noel, ghting his pipe. "Who the devil was this eirdre? Used to know. Where's the en-yclopedia?"

Balliol was pleased. His god settled into chair and pulled books from a shelf. The g came to sit at Noel's feet and sniff the ok.

Noel read out: "'In Keltic mythology. eirdre was the daughter of an Ultonian ief. At her birth it was prophesied that e would bring ruin on Ulster. King nchubor'—what a name!—'King Con-ubor had her secreted in a lonely fortress, nning to marry her. However, having en at a distance the beautiful Naisi, old-t of the sons of Usna, she fell in love with n. Naisi married her and, with his others, carried her off into Scotland. ter some time, King Conchubor lured fugitives back into Ireland. Naisi and brothers were treacherously slain at nchubor's orders, and Deirdre became old king's bride but presently destroyed rself.'

"Oh!" said Noel and sat staring at Bal-l over the book.

His pipe turned slowly in his teeth and ash sifted to the page. He started and mmed the volume back into its slot on shelf. Then he said "Oh!" again, and oked through the windows to the rail of veranda.

A new moon had set already. The valley s obscure under stars, but bulbs speckled village and a wind went with delicate rds among the nearer trees. The coach-n was playing a concertina behind the se. He debauched some melody on wheezy instrument. After a time some n tramped along the road and one of m sang in a high and whining tenor that t words to the veranda with a dreary stence:

Give me some covers, honey,
I'm feelin'—
I said I'm feelin',
Feelin' cold.
Oh, the cold ain't touched ye!
You're just a good man gettin' old.

he silly rhythm crawled like an aching cle. Noel shivered, went back into lit room and kicked the rug. He told iol, "My conduct is unworthy of the e of Briton! I shall be seeing ghosts tly. Did you ever know that there's st at home? In that room with the wall paper and regency furniture. s Ursula saw it distinctly one night she'd lost twelve rubbers of bridge. best go to bed. And absolutely no men in the whole bloody valley! ed her and, with his brothers, carried d to Scotland. Became the old king's but presently —— I dislike this ly, Balliol."

liol barked. "Oh, shut up!" said "You're not enlightening. I confide and you squeak like a beastly sea-But I don't like this. They're all so and simple. Now what would hap-t home?"

thing would happen at Sholes. It t conceivable that anything of this uld happen at Sholes. The owner of st public house in the little market was a retired prize fighter, of course, w tame! The man grew fuchias and nineteen grandchildren, with two ters yet unmarried.

udal," said Noel. "Ab-so-lutely ! Grandfather lost thirty guineas nor in 1879. And Conor's got a re-in his left hip pocket."

twins should have revolvers. What y good would Nate's revolver do the d they came on Conor suddenly in these glades among this pestiferous brush? The butler came in with a r of Scotch whisky and an icy bottle a on a tray.

d said, "Thanks. I was rather want-at."

butler beamed. He uncapped the and filled Noel's glass slowly. Cer-entered the room with his glazed front and bald head.

d asked, "You've been here some Cooper?"

n years, sir."

"Conor," Noel heard himself asking, "how long has he been here?"

"Quite a long time, sir. About thirty years, I think. This business between Conor and young Sears, sir," the sleek little man pronounced, "has disturbed the people considerably. Mr. Rawling's quite annoyed. The young fellows have bets on it, you see. I believe Sears is the favorite. He's a very fine shot."

"Do they kill each other very much hereabouts?" Noel demanded.

"Oh, dear, no, sir! Not often. Mr. Sanford Rawling has a way of—what one might call heading them off. But—of course—there's a woman in this business. Very disturbing. Thank you, sir."

Noel gave Balliol the empty soda bottle and watched the dog worry it. A wind breathed into the room and ruffled white hair between Balliol's ears. The whole business was silly, disturbing. And how very American to make bets on the slaughter! A thousand people sitting about and waiting for a charming old fool to kill a handsome young fool or be killed by him! And the twins were so pleased by their importance.

"Come along," said Noel; "we'll go to bed."

The clock struck half past ten. Noel walked up the shallow oaken treads of the staircase and Balliol climbed after him diligently, much enchanted. Then he saw his master turn and start down the stairs again.

Noel said, "They should have guns! That old ass is quite as likely to pot them as he is the big chap! It's preposterous!" in a loud jarring voice; and went striding to the closet beside the butler's pantry. From this armory of shotguns and revolvers the young man picked out two weapons and jammed them into the pockets of his dinner jacket. Then he said, "Come along, old thing! They deserve some protection. I do hate the way that old maniac whistles."

It was stifling under the trees in the village. Noel saw men lounging inside the stone smithy, whence blew a chilly air, flavored with horse. A baby cried in one of the cottages. A lad whose bleached hair shone ran across the road and bawled at a lit doorway, "Hey, mamma, it's a girl!"

Noel walked slowly. Before one of the last houses a girl was saying, "Well, I'll see you at the picshers t'-morrow night, Jimmy. I got to go in now," and her drawl threatened Jimmy with all the displeasures if he didn't protest. He did. She said, "Well—I can stay a minute." And the night put a question on the following giggle. If Jimmy hadn't kissed her, Noel thought, he was an ass.

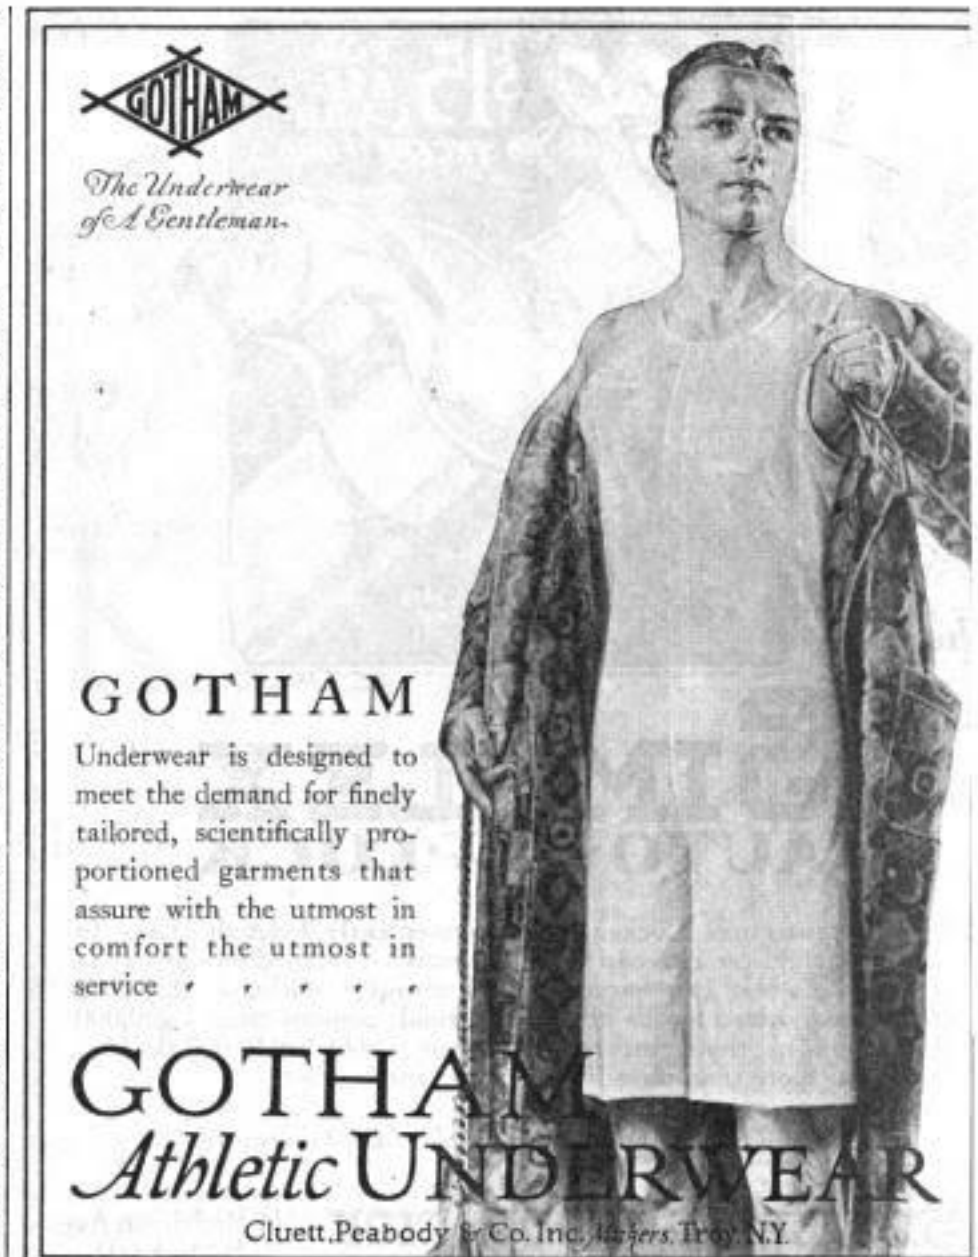
Birth and love went on in this tunnel of trees. The basin was a fog of brilliance under the stars. Points of glitter appeared between floating logs. Noel paused to look. The little lake seemed to palpitate as though the burden of wood made its bosom pant.

He stumbled on the ties of the narrow track and came to the whitewashed bridge, where dew was dripping from the handrails. The smell of pine was burdensome in the tepid air. Noel halted on the middle of the bridge.

The door of the cottage below the giant tree was ruddy. Nate Sears and the twins would be awake. Perhaps it was too hot for sleep. The twins had been sleeping out last night, on a blanket, by the water, from which rose a cooler influence in the panting darkness. Noel lit a cigarette and leaned on the rail.

Directly Nate Sears said underneath him, "Hey! What you doin'?"

"Where the devil are you?"



The twins chuckled. Noel stared down and made out a blot of blackness. He lit another match and beheld the Sears family sitting on a raft of four logs, dangling their legs in the water. Six blue eyes took his match flame and sparkled.

"We're keepin' cool," said Nate. "Got any more cig'rettes on you?" He stood up on the raft and stretched his white arms under the rail. Noel shoveled cigarettes into his palms. The big man drawled, "Thanks a lot. Hey, there's the pup! 'Lo, pup! Gimme a light, will you?"

Noel gave him a match and said, whispering, "I say. I've got two guns for the twins. I'll leave them in your cottage, eh?"

"You're a good guy. Yeh. Do that. He's fetched you guns, kids."

The twins said, "'S fine. Thanks a lot," and splashed their legs in the water. Noel thought how unsafe it was to sit with one's

trousers soaked and smoke cigarettes on a raft in a pool at night. But was anything safer for the Sears family? Nate pulled himself up on the bridge and touched Noel's arm.

He seemed to be barefoot. His soles made no sound as he followed Noel a few yards up the planks.

"Look here. A feller came over and told me, right after supper, that Conor's gone off up the valley. This guy seen him walkin' off up past the graveyard. I don't like that. Looks like he was sneakin' over to our side of the creek off where nobody'd see him. Gimme them guns and don't go near our place. 'S why I've got the kids out of the way. They don't know it."

Something in Noel rose against this disorder. He said: "This is simply preposterous! The fellow won't shoot me. Here, take these guns. I shall go talk to him if he's hanging about your place. This is utter rot. Simply abysmal."

"Look here," said the engine driver: "Gimme them guns and go home to bed. Sure this is all rot, like you say. Only I and the kids can't go and sit in the blacksmith's and let folks say we're scared of Conor. But I don't want the kids shot up; or me neither. I ain't tired of life, and she likes me better without any holes in my stummick or an eye plugged out. Conor's dippy about her and this is tough on him. He ain't reasonable. Gimme them guns and go home."

Noel handed over the revolvers. Then he said, "I shall certainly see if this ass is hanging about your house, and if he is I shall send him about his business. This sort of thing simply doesn't do. It's the twentieth century. Keep the twins quiet."

He stalked off, aware that Nate Sears called something after him softly, but not caring to hear. He walked from the planks of the bridge to the soft earth of the road, fuming. Conor must certainly be spoken to sharply!

Trees made the lit door of the cottage blink and twinkle. The monstrous cedar behind it was a blur. Noel strode into the shadow of some smaller growths, which he fancied birches, and looked up a stretch of meadow at the glowing door. Balliol whined uncomfortably in this gloom and Noel found the door depressing. With the cottage empty behind its genial doorway this lamp was a mockery of welcome. He stood listening for any sound of a man among the trees, any sight of a shape on the meadow. There was nothing. Balliol worried a branch of low brushwood and sniffled. What a silly business! But Conor might be lurking behind the house or in the shadow of the great tree. It towered upon the stars and assumed, somehow, a male shape.

It was a misty giant threatening the little house. Noel said "Stuff!" loud, and walked from the brush into the meadow. Balliol pattered ahead of him.

Then Balliol turned and barked, and a hand shut on Noel's shoulder.

Conor said, "Come back, sir! Come back! Come out of this! You shan't go near them, sir!"

His voice rolled and sobbed. He dragged Noel back toward the shadowy brush. Noel shook his hand off and cried, "Ridiculous! Look here! I'm frightfully sorry for you! It's a beastly shame. But you're ever so much older than this girl and she's married this lad and he's quite all right. You should stop to think ——"

"I'm destroyed with thinkin' of it! It's a sorrow in me till I can't eat nor drink nor sleep. Come away, sir, and let them be. Mebbe she'll think kinder of me, that's an elderly man and not bad in any way but unlucky with women, when she can't see their black heads nor the red in their cheeks—like blood on snow, as it is in the tale that old women tell. I'm an old man and a decent man and she never had an unkindness from me. What does it matter to you, sir? Oh, come away!"

Noel found his eyes hot. He said, "I'm frightfully sorry for you. Look here: Do go home to bed. I—it's —— But Sears is a decent lad and he's sorry for you, and I ——"

"God be above us all, day and night! Is it any better that he'll be sorry for me? With her ——" The music of the tearing voice stopped in a jerk. Conor dashed his hat from his head, which gleamed in this shadow. He screamed, "Whistle him back to you! Call the dog back to you, sir! Don't let him go near them!"

Balliol's white fur was wandering up the meadow. Noel stared. What madness! Even a dog mustn't go near the empty house which Conor thought held his enemies who weren't enemies.

He said, "Oh, that's all right, Conor! But ——"

"Call him back to you, sir! It's a fine pup! Call him!" Conor howled. Then he whistled terribly and ran up the meadow. His white hair raced. He was running desperately and calling, "Puppy! Here, here!"

"Mad," said Noel. "Mad as a ——"

Balliol barked. Then the earth rose. The lit door became a fan of spraying flame in a shivering world. Noel was shaken by a sea of motions. Through this vapor he saw the great tree bending slowly forward. A rippling shrill sound bit Noel's ears. He thought, "Shells! Shells!" Something lashed his face cruelly. He put up a hand and found that he hadn't a helmet. He flung himself down on the turf. Bits of stone seemed to be rattling about him. He smelled uptorn soil.

There was a mighty but soft noise with cracklings in its softness. Then there was nothing to be heard.

Noel sat up and found blood running from his temple, blinding his eyes. But he had something to do, not certain about it terms. There was certainly something He got up, found a slim trunk, a sapling near his hand, and clung to it. His ear ached with the noises. He leaned on the tree and called, blinking. He shouted "Balliol! Here! Come here, sir. Balliol Here!"

A horrible aching came into his knees He licked his lips and pursed them for whistle. Then Balliol jumped against his leg and whimpered. Noel sat down and felt the dog's fur with shivering hands He mumbled, "You're all right? Nothing hit you? You're all right?"

Balliol wriggled and twisted and began to bark. He danced on Noel's shirt with his happy paws and sniffed between his barks.

Ovals of light shone suddenly into the branches of the fallen tree and made the green boughs unreal, like strips of torn paper. Men shouted. He could hear Sanford Rawling giving orders.

"Find Mr. Bretherton! Look! Get into the tree and look for him!"

A motor had driven almost to the crushed branches. Noel saw his host standing by the machine, with lanterns dancing about. He got up and lurched along, with Balliol twisting in his arms. Then he collided with two bodies running close together, very wet.

"Here!" said Noel crossly. "Mind what you're about! I'm afraid Balliol's hurt."

The twins screamed, "Hey! Hey, Sandy Hey, Nate! Here he is! He's all right!"

"Oh, bring a light here!" Noel yelled "I want to see whether Balliol's ——"

Everything stopped.

He woke up in the library and saw Balliol lapping a bowl of milk on the pleasant green rug. Noel admired his dog's composure in trying circumstances. Balliol looked like a sensible fellow doing the reasonable and orderly thing. The Sears twins were eating bread and butter on a couch side by side and looking sympathetic while Sanford Rawling tied a medicated bandage about Noel's head.

The butler was holding a tray with a glass of sherry on its silver. Noel reached for the glass.

"Dynamited the tree. Made a mach with an alarm clock," said Rawling. "I was clever about things like that. Made toys for me when I was a kid. Feel right inside, Noel?"

Noel coughed. "Quite, thanks. He was quite mad. The tree fell on the cottage of course? I couldn't very well see."

He rose and strolled across the room to the mantelpiece for a cigarette. Someone was crying miserably near at hand. He saw Nate Sears sprawled on a chair in the bright hall with his head in his arms.

"Nasty business," said Noel. A horror trembled in him. He looked at Sanford Rawling and murmured, "About Conor I dare say ——"

"He can't have felt anything. The branch hit his back. Better go to bed Noel. You look all shaken up."

Balliol had finished his milk. He came trotting to nose his master's feet. No one didn't dare look at him. He lit a cigarette The first smoke rolled about the spark of the match and dulled it as if a mad eye glowed for a second and then was quenched in mercy.

THE CHAP UPSTAIRS

(Continued from Page 11)

She it was who made the next remark.

"Have you seen lots?"

"Seen lots?" he repeated dully.

"Wives," she answered.

He presumed it was one of those modern jokes or catches. He knew the one about "Isobel necessary on a bicycle," but "Lot's wife" was new to him. It was only civil to reply in kind.

"No," he said; "she was turned into a pillar of salt before I was born."

His humor was wasted, however, for Mary was occupied staring at the decorations of the room. She did not seem to hear. She had a pleased smile about her lips. To cure himself of noticing these details John assumed a businesslike air.

"You wished to see about—er ——"

"About the situation, please."

He screwed up his forehead.

"The situation?"

"Yes, please."

"Whose situation?"

"Yours."

"But I haven't one," he replied. "I have a position of sorts, but no situation."

"The one you offered," she explained.

"I didn't, did I?"

"Advertised for."

"My dear young lady, I've never written an advertisement in my life."

"But you have," said Mary. "I brought it with me." She started rummaging in the pocket of her skirt.

"I saw it on a piece of paper that Mrs. Carter—she's the old lady who keeps the all-sorts shop at Ponder's End—it's a post office, too, and you can buy string there, and buttons, and there are bottled sweets in the window—Greengage Bounders—Bulls' Eyes—Clove Balls and Pevensey Humbugs—Ponder's End is in the country—it's where I live and very pretty."

John Harvey was beginning to feel dizzy.

"I may be unusually dense," he said, "but were all these details printed on this piece of paper to which you refer?"

"Oh, no," said Mary, shaking her curly head so hard that the little Mercury cap fell off and lay unnoticed on the floor; "it was a piece of newspaper and was wrapped round some Demerara sugar I bought, because the blue bag had a hole in the corner and was leaking. It's in my pocket somewhere. I cut out the advertisement with my scissors—at least they aren't really my scissors—but then, no scissors are anybody's really own scissors—are scissors?"

A man's nerves need to be in good order if they are to remain under control after such an utterance. John Harvey stumbled to his feet and made pretense of looking for his glasses, mumbling as he did so, "Perhaps you would be good enough to convey to me the substance of this mysterious advertisement."

And as though it were the simplest thing in the world she answered, "You advertised for a wife, and I thought perhaps I would do."

John Harvey knocked over a pyramid of books and upset a vase of tulips. The spilled water trickled into his shoe and calmed him.

Mary had come to her feet to make her announcement and was picking out the creases in her blouse, smoothing her skirt and generally presenting herself to the best advantage. The ingenuousness of her actions was inconceivable.

"Good heavens!" gasped John. "Show me this advertisement at once!"

A mere glance at the cutting was enough to allay his fears. He turned to Mary with a gasp of relief.

"This is a mistake!" he exclaimed. "You've made a serious mistake. The advertiser's address is Number 9, Melbourne Court. Mine is Number 7. You can see for yourself I don't want a wife. Certainly not a newspaper wife."

But Mary did not move. The glad expectancy died out of her face, her mouth went down and her chin dropped.

"Will you please tell me what I ought to do?" she pleaded.

He shook his head.

"I really don't know. I—I have very little experience in these matters."

"Should I go up to the flat and ask there?"

Strange that the bare thought of such a thing should have put him out of temper.

"Certainly not," he replied, "unless you know the man who lives there."

"But I don't. Do you?"

"Not personally. I've heard him moving about, but I've never seen him."

"But he wants a wife," said Mary, "and as I've come all this way ——"

John Harvey put out a restraining hand.

"My dear young lady, I forbid you to go about from door to door being a wife at every one of them. It—it isn't decent."

He was surprised at his own valor; so, apparently, was Mary. She raised her eyes with a look of submissive admiration.

"What must I do then?"

He pointed at the chair and bade her sit down again. She was oddly willing to obey. As she marched toward it the absurd feather boa fell off and revealed the gentle lines of her throat and shoulders. The absence of the boa and the little Mercury hat made a remarkable difference to her appearance. She was beginning to look less like a picture and more like a human. But for the shortness of her skirt, the domino effect of boots and stockings, and a totally ridiculous piece of ribbon that imprisoned her hair in a knot at the top of her head, she might have passed muster in any company. It was as though a latent homogeneous sense was superimposing upon the characteristics of Los Angeles the simpler seeming of South Kensington. Already she had ceased to appear out of place in John Harvey's flat, a fact which he recognized with uneasiness and alarm.

He cleared his throat.

"Sit down," he said, "and let us consider what is best to be done."

"Yes, but it isn't fair to take up your time," Mary persisted. "You don't want a wife."

He hastened to assure her that this was so.

"No, you don't," she repeated pathetically. "Do you?"

"I have already told you I do not," he replied.

"But he does," said Mary with a nod at the ceiling.

"Then he must go without," said John Harvey. "A man who has the effrontery to insert such an advertisement has no right to expect applicants. It's a shameful proceeding."

"But if he was lonely ——" Mary suggested.

"That has nothing to do with it," he answered with heat. "I am very disappointed in the man who lives upstairs; and I had formed such an agreeable opinion of the fellow too."

"Had you? Why?"

He turned to answer. The knot of ribbon had disappeared from the top of her head. Her hair, with its crooked side parting, had fallen serenely over her ears. The change it wrought in her was magical and so surprised John that he lost track of what he was about to say.

"Won't you have some tea?" he said. "You're sure to be tired after traveling. It makes people tired. Do have some tea. There's a crumpet—I know there's a crumpet. We could share the crumpet if you care for crumpets."

Mary looked so pleased.

"I like crumpets," she nodded. "They ring bells for crumpets the same as for weddings."

All conversational roads between the sexes lead to or away from the altar. To cover his embarrassment John Harvey rang a bell—for tea. Roberts' satisfaction on receiving the order was too obvious to be tolerated. He inquired whether he should secure the services of a second crumpet.

"Do," said John severely. And then with an effort to relax he remarked, "Are you aware, Roberts, that they ring bells for crumpets the same as for muffins?"

"Weddings," said Mary correctively, and Roberts retired with a smile.

A silence followed Roberts' departure, broken at last by Mary.

"If I'm to stop, may I please change my shoes? I brought another pair in case there was a party."

John murmured an inaudible assent and went and looked out of the window. Night was falling and the window glass had the impertinence to reflect the room and its occupants. He could not avoid seeing what happened. Mary opened the parcel she had brought, and it was a bird cage with a pair of slippers inside it. She sat on the floor with her back toward him, and presently he saw her take out the slippers and put the deplorable boots and the pair of

white stockings into the bird cage. This done, she again wrapped it in the piece of oil cloth, stood up and shook out the folds of her skirt. By some astonishing process it seemed to have increased its length by four inches.

The reflection in the glass revealed a perfectly normal and very attractive young lady—simply clad in a white blouse, a black skirt, black silk stockings and black satin shoes. The rosette had disappeared altogether.

"I've finished," she announced, and turned for his inspection. "It was kind of you to ask me to tea."

He was too confused to talk sense.

"Tea is not a kindness," he stammered. "I gravely doubt if it is even a courtesy."

Mary shook her head at him.

"Do you always talk round the corner in that funny way?" she demanded.

"Really, I don't know. I have never been round the corner to see."

"And do you live here all alone?"

He admitted to the charge of solitude, but added that he had his books for company.

"No friends?" she queried.

"Very few."

She sighed.

"I haven't any friends either. I'm very lonely too."

At which he hastened to reply, "I never said a word about being lonely."

"But it is lonely to live all by oneself with nothing but books."

He refused to be drawn, and she proceeded:

"Still, I suppose in a great big place like London one can't really be lonely—and in a great big place like these flats one can't be lonely either. There must be something very sociable about living in flats."

The denial came from him in spite of himself:

"You're entirely wrong. There is probably no more lonely existence in the world than living in a flat." And in answer to the surprise she revealed: "You wouldn't understand that because you come from the country, where everyone knows everyone else, and everyone is part of everyone else. But here in London one is only part of oneself; often quite a small part too."

Tea appeared, which was tiresome, until Roberts disappeared.

"Would you like me to pour out?" asked Mary.

"If you would," said John. "Thanks."

Strange how pleasant it was to watch a woman performing this simple feat. He was quite captivated and followed the movements of her wrist and fingers with a curious sense of basking. The experience was so novel. As she passed his cup their eyes met.

"Do go on talking," she said.

"Ah, we were discussing loneliness."

"Yes."

"You wouldn't understand how it feels to live with people to right and left, people above you and below—about whom you know nothing. You meet them, perhaps, in a lift, on the stairs, hear their voices in laughter or raised in argument, and yet they're strangers. It's queer, isn't it?"

She nodded sympathetically.

"And you don't even know the chap—the man who lives upstairs?"

"No; he's a mystery to me."

"Ah, well," said Mary practically, "I don't expect you want to know him."

"It's curious you should say that. You're wrong. I do. I want to know him very much. Until—until to-day his life has interested me extraordinarily."

He seemed reluctant to proceed, but the kindliness in Mary's eyes persuaded him.

"In some curious way I feel there is a bond of union between us. Every morning he gets up at the same time as I do, and he has his bath at the same time as I have mine. I actually enjoy hearing the water splash when he turns on his tap; enjoy it. It gives me a solid sense of companionship."

He caught a smile flickering at the corners of her mouth and stopped abruptly.

"You are laughing at me. I can hardly blame you."

"But I wasn't; I wasn't, really," said Mary. "Do go on."

So he went on, and he told of the delight he had to hear the waste water go plonking down the pipe outside his bathroom window.

"It gurgles away so merrily as I rub myself down with a towel. In a way I think it hyphenates his mysterious existence with mine."

Mary nodded appreciatively.

"Yes; and then?" she said.

"And then he walks back to his bedroom. I imagine he must have linoleum in the hall."

"Why?"

"Because you can hear his footfalls so distinctly. Light footfalls they are, and absurdly enough I try to keep step. Left, right—left, right. But I never succeed; I never can step short enough. Then, click! The bedroom door shuts and a heavy-pile carpet muffles all the rest. We shut our bedroom doors at the same instant every morning; only he shuts his gently and I bang mine."

"Why?" she asked again.

"Because I think if I bang mine he'll bang his, and so we shall contrive some kind of early morning greeting. Bang—bang. 'Top of the morning to you, sir, whoever you may be.' Did you ever hear a stupider idea than that?"

"I think it's rather pathetic—very pathetic." And although there was obviously no reason for them a hint of tears glistened in her eyes.

"Pathetic?" repeated John. "I fail to see where the pathos comes in."

"So far as I can see," she returned, "it never goes out. Oh, it's very pathetic that anyone could have so little interest in life that they listen to a few poor footsteps overhead, some soapy water splashing down a pipe, and try to get someone they don't know to bang a door. It's very pathetic indeed."

"I wonder," said John. "Perhaps it is."

For the first time he looked at her without conscious uneasiness.

"Do you know, it has been extraordinarily pleasant to me to have met you in this rather unconventional way. I—er—I've never spoken to a woman with any comfort before."

"Haven't you?" said Mary.

He shook his head.

"Oh, well," she said, jumping to her feet, "I think I'd better be going."

He stretched out a hand to delay her.

"But not upstairs," he pleaded.

She hesitated—half hurt, half doubtful. Then, "Well—if—if you say I mustn't."

"Ah, that's good-natured of you," he warmly applauded. "I'm sure these rash marriages are a great mistake. Would you, I wonder, let me drive you as far as the station in my car? It would be a real pleasure."

"I suppose it would," she acknowledged ruefully. Then a sudden twinkle showed in her eyes. She beckoned him to approach.

"I say, do you think, from what you've heard of him—the chap upstairs could have been pleased with me?"

She raised her chin, their faces were only a few inches apart. It was John Harvey's first experience of a close-up, and it shook him to the bone.

"I think it's exceedingly probable," he replied huskily.

Mary Merrow backed a pace with a ripple of pleased laughter. The sound of it—the sex of it—awoke something elemental in John Harvey's nature that had never proved its being before. A sudden fury possessed him, and he stamped across the room to the door.

"And I think I'll go upstairs," he cried, "and tell that fellow precisely what I think of a man who acts as he has acted!"

"Oh! Please don't!" she implored.

"I feel it a public duty. A man has no right to take short cuts to the state of holy matrimony."

"Yes; but I was just as bad."

"Nothing of the kind. With you it's entirely different."

"Oh, is it?" said Mary, with the strangest smile. "Is it? Oh!" The last "Oh" sounded peculiarly satisfied.

He turned, came back and took her hand in his. "Are you really so keen on this marrying business?"

"I think everybody ought to be married," she said. "I think it's rather silly not to be married when you can be, and it's certainly very sad not to be when you can't be."

He sighed and her hand dropped from his.

"I suppose women look at things in a different way."

"Sometimes they have to," she answered with her smile again. "You see, I haven't any bath water running down a pipe outside my window."

The words were spoken innocently enough, but they had the strangest effect on John Harvey. He swiveled round and looked at her, his hands came up from his sides and floated about in the air as though they were trying to find something, he seemed to be

Why we want you to try ten cigars

We believe you can't judge a cigar properly by buying only one or two. Smoke ten El Nelsors before you decide whether you like them. A letter brings a box of fifty to you, postage prepaid. If, after the tenth, you are satisfied, send us $3.75. Otherwise, return the remaining forty at our expense.

Test El Nelsor under all conditions. Perhaps you light the first one outdoors. That is not much of a test.

The second you may smoke in the office in mid-afternoon. You don't notice it particularly.

After dinner you are surprised at the satisfaction the third El Nelsor gives. Another later in the evening tastes still better.

Then you order. You have become one of the thousands of smokers who during the last twenty years have felt they have been getting a bargain, an even-burning, delicately flavored cigar worth more than the 7½ cents we charge.

Consider that you are getting a cigar of long, high-quality Cuban-grown Havana leaves blended with Porto Rico for filler. Genuine Sumatra leaf wraps them up. Skilled adult cigarmakers working under the most sanitary conditions produce them.

Our offer is simple: Let us send you a box of 50 El Nelsor cigars, postage prepaid. Smoke ten at our risk. Then, if you decide the box isn't worth $3.75, return the forty unsmoked cigars within ten days. You are under no obligation whatever.

In ordering please use your business stationery, or give reference, and state whether you prefer mild, medium or strong cigars.

Order direct from us and get the benefit of the jobber's and retailer's profits.

Our catalog sent free on request shows other sizes and shapes, including a fine line of clear Havana cigars.

drawn towards her. It was only by a miracle he saved himself—and dived for the door.

"Roberts!" he cried. "I want a taxi."

But Mary did not move. Her brows had come down a trifle in something resembling a frown. "Not for me," she said. "I'm going upstairs."

The sentence rang with a note of desperate resolve.

John Harvey turned and faced her with clenched hands. Then with unexpected rapidity he whipped off his coat.

"Whatever are you doing?" the girl demanded.

"About this time," he answered, "the chap who lives upstairs generally comes in and sits on a chair that has a squeaky spring. I, too, am going upstairs."

The meaning was unmistakable.

"I shouldn't," said Mary. "He's sure to be late to-night."

"Why do you say that?"

"Because"—she hesitated, approached and put a hand on his arm—"because, you poor lonely and very old young man, I am the chap who lives upstairs."

"What nonsense! You ——"

"I am the chap who lives upstairs, and I hear your bath water splashing into the bath, and I hear your slippers flapping down the passage, and I hear your door bang out its greeting. And all these things have become part of my life in some awfully silly way, that only people who live the awfully silly lives you and I seem to live would understand."

He had sunk into a chair and was staring at her blankly.

"But the advertisement in the paper?"

"I put in that advertisement." She sounded very ashamed of herself.

"Those extraordinary clothes."

"I've often sat beside you at the cinema and seen how your eyes lighted up when the orphans came in."

He nodded, and she went on: "At first I was only mildly interested in you, then I got more interested, and at last dreadfully interested; and when a woman gets dreadfully interested it can't stop there. I didn't know how I could get into this flat and see it—and you—so I thought of this very elaborate and rather deceitful and a little bit disreputable plan."

She was staring at the carpet when the confession came to an end.

He rose and took a turn up and down the room. He stopped before her.

"Well," said he, "and now you've seen the flat and its owner are you sorry you came down from upstairs?"

"No—I'm glad," she answered.

"And are you an orphan?"

She nodded.

"Yes, please. But I had to buy those dreadful boots. Mine were too smart. I'm afraid I'm rather a rich orphan."

But he would not allow that.

"As yet we're both poor orphans," said he. "Our fortunes await us."

With a sudden inspiration he raised his head to look at the ceiling.

"You're listening," said Mary.

"No."

"Surely you believe I am the chap who lives upstairs?"

"I believe it."

"But you're still listening."

"No, I'm wondering," he replied. "I'm wondering if two flats could be converted into one. I'm wondering if a landlord would approve the idea of a spiral staircase that ——" He turned and looked at her fearlessly, possessively. "Shall we sit down and talk this thing out?"

And she answered, "Yes, if you please, Daddy Longlegs."

When Roberts came in to clear away the tea things a few minutes later they were sitting side by side on the sofa and he was calling her Pollyanna.

Corns?

—just say

Blue-jay

to your druggist

Stops Pain Instantly

The simplest way to end a corn is Blue-jay. A touch stops the pain instantly. Then the corn loosens and comes out. Made in two forms—a colorless, clear liquid (one drop does it!) and in extra thin plasters. Use whichever form you prefer, plasters or liquid—the action is the same. Safe, gentle. Made in a world-famed laboratory. Sold by all druggists.

Make Your Garden A Wonder Garden

It's easy. Market growers know the secret. Follow it and have the largest crops of fruits and vegetables, an abundance of the biggest and sweetest scented flowers of the most intense and vivid colors. Here is the secret!

The better grades of commercial fertilizers contain only 3 to 5 per cent nitrogen; 5 to 10 per cent. phosphoric acid and 2 to 5 per cent potash, combined in material that has no building value. Most fertilizers are far below this average.

Science has produced a tablet, rich in plant food, containing 11 per cent nitrogen; 12 per cent phosphoric acid and 4 per cent potash—clean and odorless.

For crops in rows, set the tablets a foot apart along the row. Three tablets, one every ten days, in the hills for Cucumbers, Squash, Melons and vines fairly jump.

In Flower Beds and Borders, place tablets a foot apart.

For Bush Fruits and Shrubbery, use three to five tablets placed in the soil about each plant.

Fruit or Ornamental Trees, place tablets two feet apart extending from the trunk as far as the longest branches.

Fine also for greenhouse benches and pot plants.

Four tablets dissolved in a gallon of water, used in place of liquid manure, is less trouble and gives better results than objectionable manure water. Makes velvety lawns.

Each tablet contains highly concentrated, immediately available plant food. They increase production, bring out color and improve quality. *Their use is highly profitable.*

The name of the tablet is Stim-U-planT. No matter how infertile the soil, Stim-U-planT is effective in feeding and rewarding crops. Market Gardeners use them in large quantities. Order by name—there is no substitute.

Price delivered: 100 tablets, 75 cts; 1,000 tablets, $5.50. If your dealer hasn't it, order from the makers—

LINCOLN

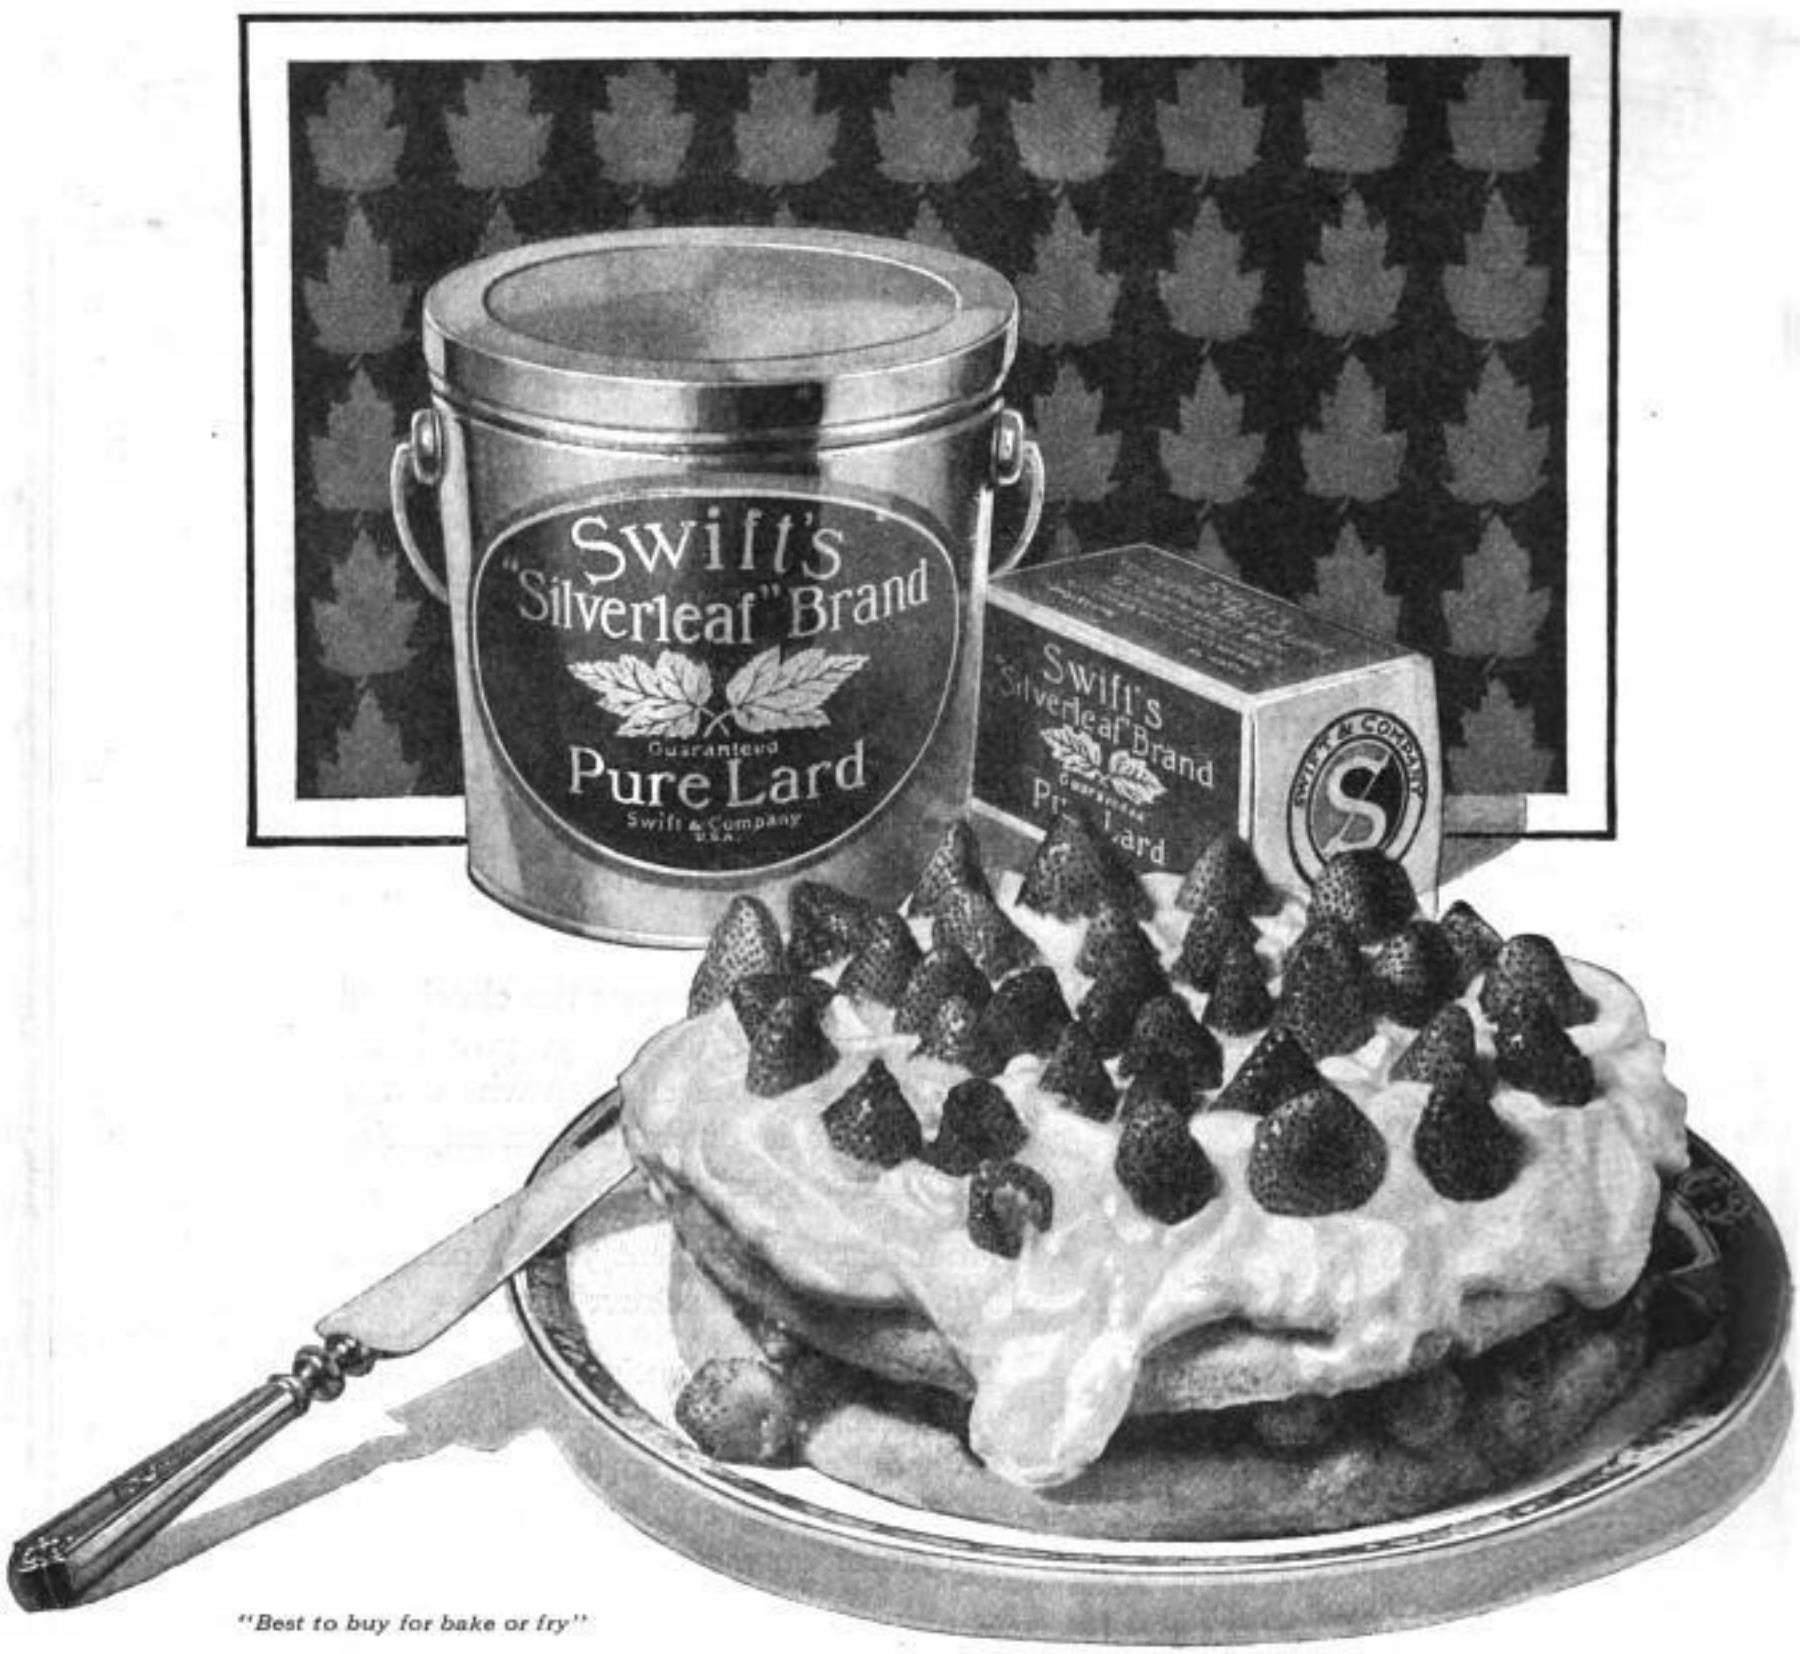
MOTOR CARS

Your first ride in a LINCOLN car will disclose to your delight that the developments and betterments which distinguish it are neither slight nor theoretical

The moment you engage the clutch and the car is under way, you *know* that here is a mechanism whose very character is different from anything you have ever known.

From that first moment your experience is one of constant revelations.

These revelations continue day after day, and month after month, until you have encountered the entire range of diversified road conditions with which a motor car must grapple.



You discover that not only does the LINCOLN annihilate distance with less apparent effort and with greater comfort to its passengers, but that it triumphs over adverse travel factors in a way that is more masterful and more confidence inspiring than you ever thought was possible in a motor car.

"Best to buy for bake or fry"

For a successful shortcake—every tim

Your shortcake crust is delicious when made with Swift's "Silverleaf" Brand Pure Lard.

It is just the right consistency for blending well with the flour, and really "shortens" the shortcake.

For dependable results use the lard that is always the same—Swift's "Silverleaf" Brand—uniform in quality—pure—just right to work with.

Comes in sanitary 1 pound cartons, and in tins of three convenient sizes,—2, 5, and 10 pounds.

Use this recipe. Sift together 2 cups flour, 4 teaspoons baking powder, 4 tablespoons sugar and 1 teaspoon salt. With a fork, work in 4 tablespoons of Swift's "Silverleaf" Brand Pure Lard, then add ¾ cup of milk. Pour the dough into a well-greased pan, and spread it out evenly about ½ inch thick. Bake 20 minutes in hot oven.

Split in two, spread with butter and fill with mashed strawberries. Cover the top with whipped cream and decorate with whole berries.

Armstrong's Linoleum

for Every Floor in the House

For Your Sun Porch Inset-Tile Linoleum

All your ideas about linoleum will change when you see the new kind of linoleum that good stores are offering as permanent floors for modern homes.

The sun porch in the picture has a floor of Armstrong's Inset-Tile Linoleum—one of the newest and most distinctive designs in which this improved linoleum is made.

Here is a typical case where the floor blends right in with the color scheme. The pattern is simple and the furnishings can be changed to suit the season.

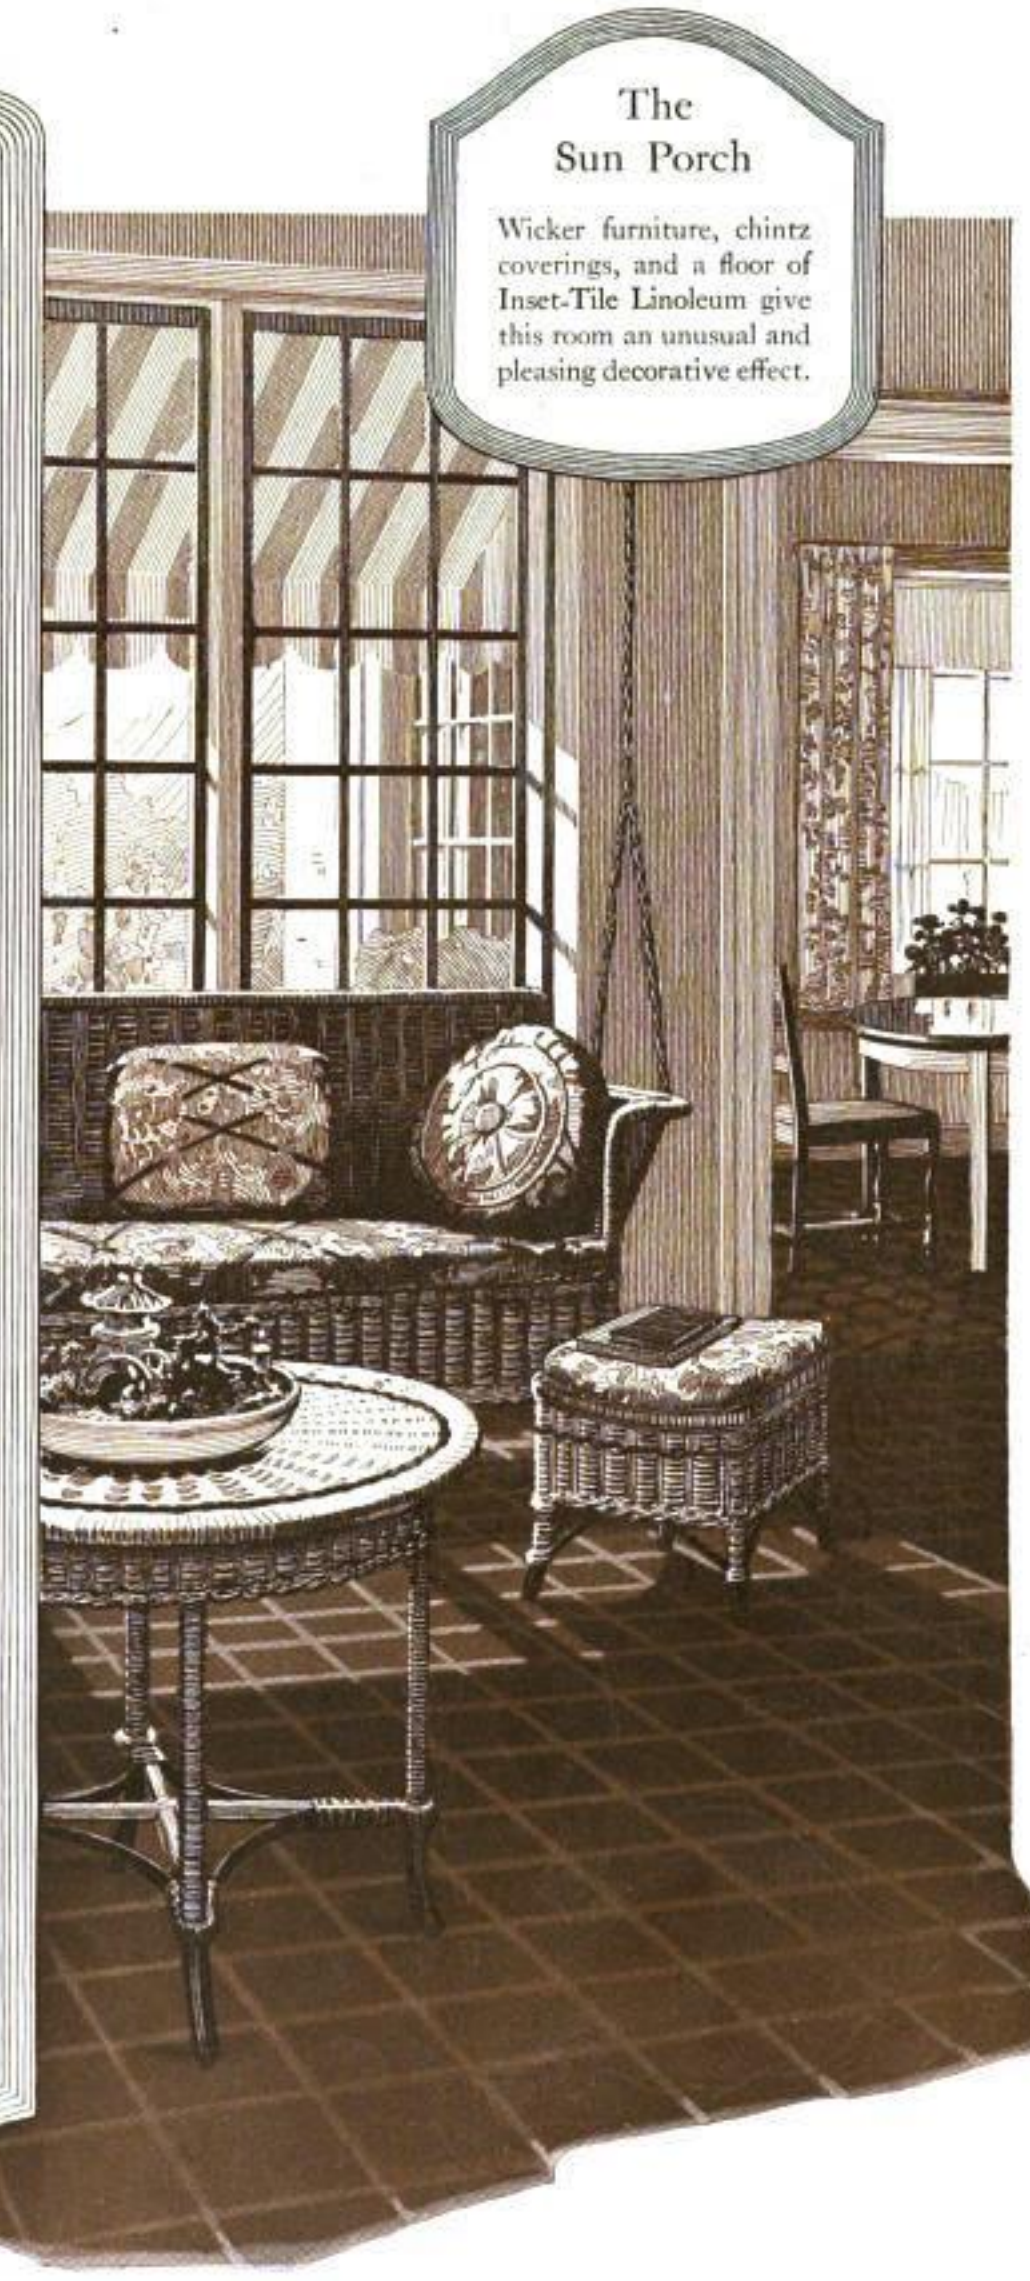
This floor is easily cleaned, and an occasional waxing keeps it in perfect condition.

A sun porch of average size, 12 x 14 ft., can be floored with the Inset-Tile Linoleum shown in the illustration at a cost of about $73.00 (slightly higher in the Far West). This linoleum is cemented down firmly over builders' deadening felt. A floor so laid always remains tight, smooth, and absolutely waterproof.

Write to our Bureau of Interior Decoration for advice as to proper patterns and colors for use in any scheme of home decoration. No charge for this service.

"The Art of Home Furnishing and Decoration"
(Second Edition)

By Frank Alvah Parsons, President of the New York School of Fine and Applied Art. Sent, with de luxe colorplates of fine home interiors, on receipt of twenty cents.



Armstrong's Linoleum Rugs

You can also buy rugs of Armstrong's Linoleum, suitable for kitchen, dining-room, or bedroom, and fully guaranteed to give satisfactory service. Send for free booklet, "Armstrong's Linoleum Rugs," showing colorplates of many pleasing and artistic designs.

ARMSTRONG CORK COMPANY, LINOLEUM DEPARTMENT

Do you wear a smile at breakfast?

THE way you start your day has a lot to do with the kind of work you do that morning. Also with the kind of day your wife puts in after you leave the house. To say nothing of how your youngsters get off to school —if your home is blessed with little folks.

And the clock that runs your household has a lot to do with all of these things.

A good clock that you respect—one that rings you up when you want it to—on time —will help you face your grapefruit good-naturedly.

It gets you off on schedule with a leisurely, cheerful outlook that is pretty sure to last through even a trying day.

Sleep-Meter has put many a home on an even keel. Any Westclox will do it for you if you'll give it the running of the house.

Pocket Ben puts the same good Westclox timekeeping features into your pocket. A husky, heavy-duty watch—a crackerjack timekeeper for the money—$1.50.

See the entire Westclox line at your dealer's. They all wear the Westclox mark of good timekeeping on their dials and on their six-sided, orange-buff tags.

THE NUMBER ONE BOY

By John Taintor Foote

ILLUSTRATED BY W. H. D. KOERNER

HANG FOO LOW is dead; at what age no man knows. Millions of Chinese will not credit this assertion, it being a fixed belief in the Celestial Republic—I all but wrote it Empire—that The Master of Souls is and ever more will be untouched by the shadow of the wings of death.

Against the abiding faith of millions I place urteen lines with a modest two-deck head hich appeared in a recent issue of the New ork Times. Fourteen lines! How fast the orld moves on! The squib, in the form of a Associated Press dispatch, dated Hankow, hina, is as follows:

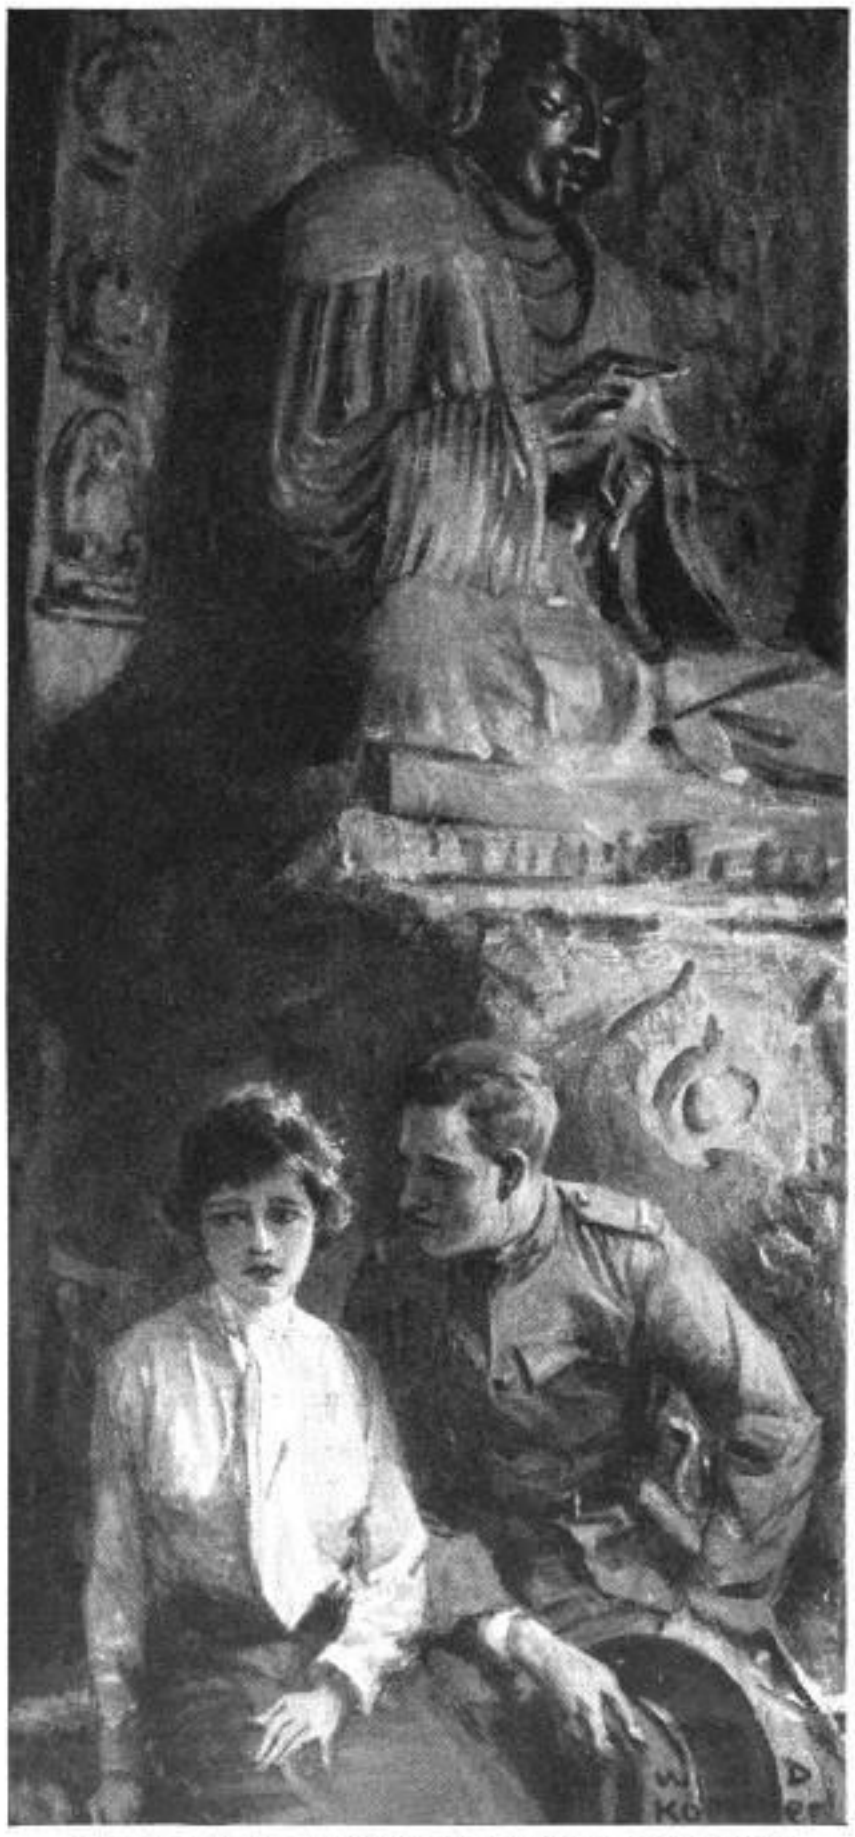
It is authentically reported that the Chinese ophet, Chang Foo Low, died here to-day. It was ossible to verify the report because the body, resumably spirited away by some of his followers, as disappeared.

In 1908 Chang Foo Low, the then leader of hinese Buddhism, voluntarily gave up his high osition as lama of the Peking temple to become wandering mendicant. Since then he has traved barefooted throughout China, relying on the arity of the humble for food and lodging. His ath occurred in the home of Kai Pee, a dealer in h, where the aged prophet had stopped for the ght.

This, then, is the obituary, so far as New ork is concerned, of the curious figure which ome across the Pacific twenty-five years o. All America, all Europe, saw that figure. was sketched vaguely at first and later with re or less faithfulness in the daily press. ter still, various scientific journals devoted ges to a discussion of the mysterious forces ich had turned a withered Chinaman into a ity—so far as Asiatic races were concerned—f a celebrity, at least in the eyes of what we ose to call civilization.

Having a tale to tell in which the above-ntioned forces were placed at the disposal two—shall I say three?—members of this sted civilization, I have been dipping into icles published in New York, London, Paris, nna and Berlin, over a period of ten years inning with 1890, which touch upon Chang Low.

hese articles can be divided roughly into classes, reportorial and scientific. The ter I find are quite similar in character. h a proper eye for news value the gentle- of the press consistently describe the lama prophet. He is always referred to as The at Prophet of China, and cases of his tri-hant functioning in that rôle are cited in ring his right to the title. The American s is more particularly concerned with his nostication of the Spanish-American War, Battle of Manila Bay and the assassina- of William McKinley. There is a story to effect that Chang warned the Chinese ign Office of this last deplorable event time before it occurred, with a request the information be conveyed to Washing- This was never done, perhaps through of civilization's mockery; perhaps, as the insinuates, because of a further prophecy he lama concerning the allied invasion of a, in which he named the United States ne of the powers which would engage in narch to Peking.



much for the press. Now for the scien- Not one of them more than mentions prophetic vision of Chang Foo Low. Obsly it is not considered worthy of discus- by scientific minds. The English and American societies for psychical research seem to have concluded that he was an authentic spirit medium possessed of tremendous psychic powers. Hypnosis is not referred to in the reports of either society, perhaps because only the mediumship of Chang Foo Low came exactly within the range of the societies' investigations.

On the other hand, nine out of ten scientists at large pronounce him the greatest master of hypnosis of which there is any record. I say nine out of ten because here and there is a doubting Thomas. Pachman, for example, is positively virulent as he hurls the Chinaman into the limbo of charlatanism and damns with long scientific German curses the "so great imbeciles who would dignify the tricks of a mountebank with serious consideration."

Drenioczkii, of Vienna, Harden and McTavish, of London and Glasgow respectively, attribute to Chang telepathic powers developed to a degree heretofore unknown. A similar opinion is held by several American investigators.

All this is quite confusing. I have no intention, however, of attempting to make it clear. It is certain that a mere teller of tales would fail in discovering the true source from which the extraordinary powers of Chang were derived when the best scientific minds of the world were unable to agree on the subject. This much, which is common knowledge, I know: Prophet, medium, hypnotist, fakir, or whatever we may choose to call him, Chang Foo Low for half a century was the direct and unquestioned voice of the Supreme Being to three hundred million souls.

And now it seems best to let my story proceed, its facts leading to whatever conclusion they may seem to warrant.

"It Will be Hard to Make You Believe. It Begins With a Dream"

In the year 1884, on a dismal afternoon of early spring, a carriage drew under the high white-pillared porte-cochère of a substantial home in the outskirts of Atlanta, Georgia. From the carriage there descended a lady dressed in black, and a boy, a little boy, whom she took by the hand as she prepared to go up the steps to the front door.

The boy was more than ill at ease. He was on the verge of panic. He cast a look of wild appeal at the negro coachman, who had turned to regard him with a not unsympathetic eye.

"Luke, Uncle Luke," cried the child, "I don't want to. I don't want to."

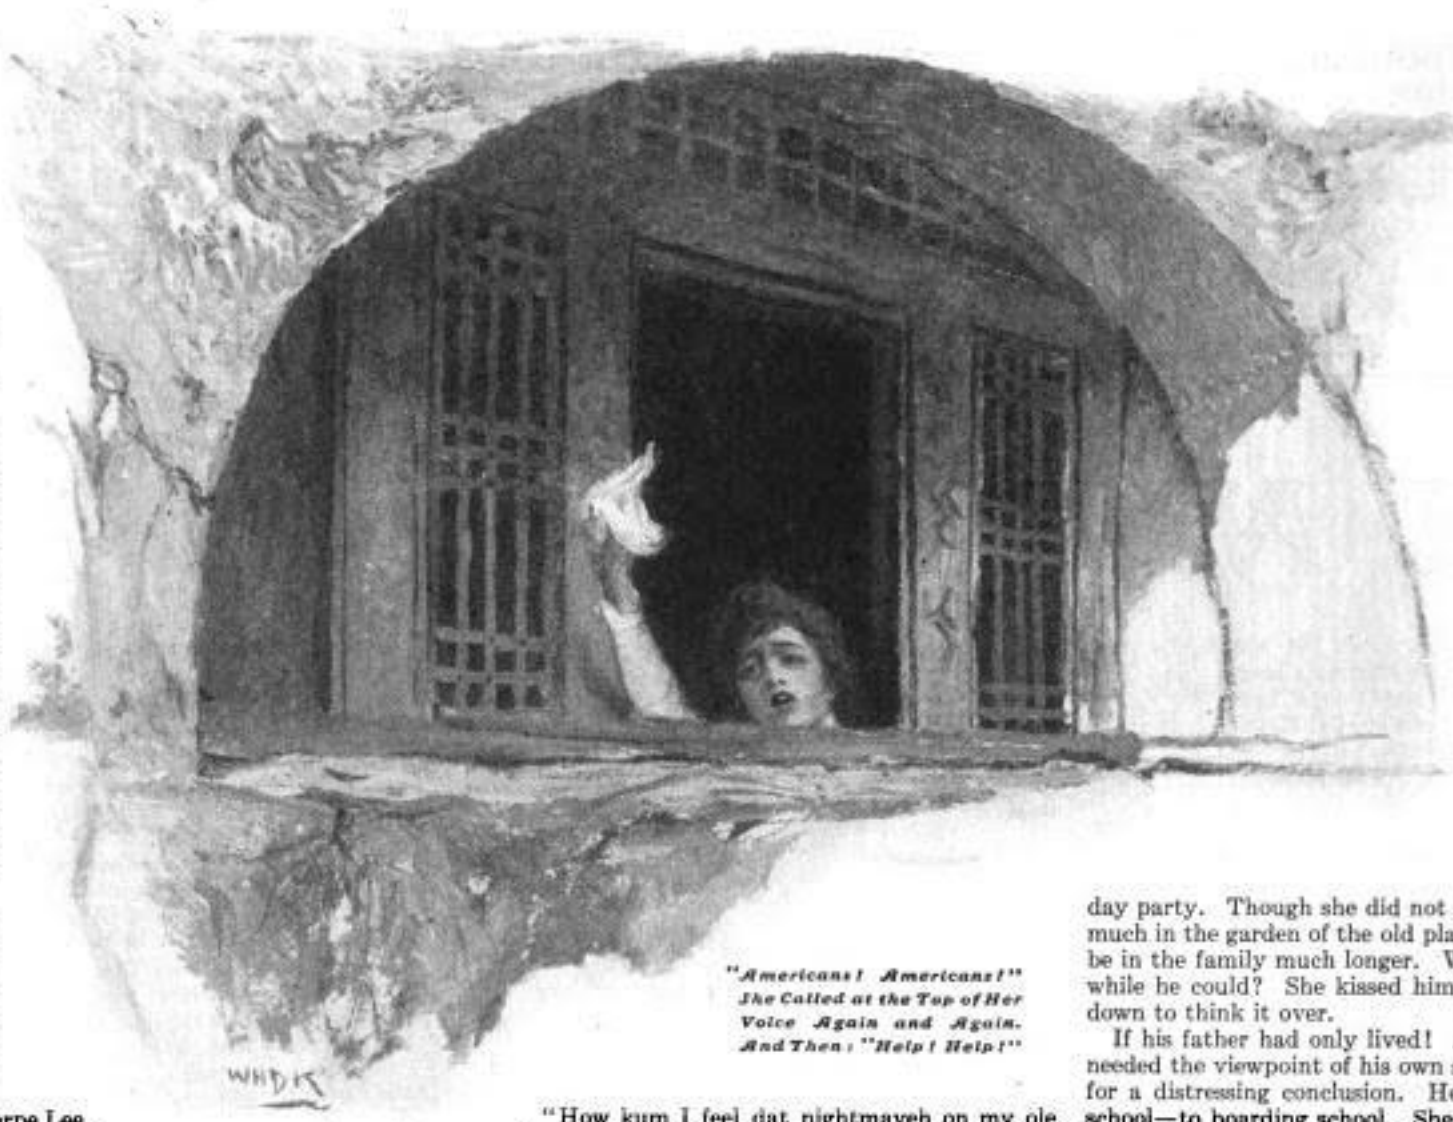
The appeal was in vain. Uncle Luke wiped the sympathy from his countenance, and waving his whip in the direction of the front door he issued the stern command, "March on in!"

With the sustaining aid of the lady's hand the boy attempted to obey. He mounted the steps and proceeded with a fair show of resolution to the frowning mahogany door with its silver name plate, bell handle and door knob. Suddenly he halted, his eyes filled with dread. They were observing a wreath of leaves and ferns with streamers of purple ribbon, attached to the frame of the door.

"Oh, mummy," he gasped, "take me home, please, please!"

His mother knelt on one knee, put her arms about him and looked into his face.

"Now, son," she said, "you don't have to go in if you don't want to, but you're going to be a soldier some day, aren't you?"



Digitized by Google

The boy nodded.

"Not for a long, long time, though, mummy; not till I'm growed up."

"Darling, darling, there's nothing to be afraid of. See, I'm not afraid. It's your own dear grandpa lying in there asleep. Just the earth part of him. Al the rest and the best part—his kind eyes, and smile and voice—are in heaven. He sees you this minute. He sees his grandson afraid to go in and look at the earth part of him for the last time. He doesn't care, of course—he's too kind—but you'll care some day. Now if I were you I'd walk in with mother and look at him for a moment and say good-by, and then Luke will take you home."

So spoke this young mother, constrained by the conventions of her day and race. These decreed that a final look at the dead by members of the family was obligatory.

"Americans! Americans!" She Called at the Top of Her Voice Again and Again. And Then: "Help! Help!"

At last James Calthorpe Lee, aged seven, managed to enter the ominous-looking mahogany door, clutching his mother spasmodically by the hand. He came of fighting stock, this youngster; but the redoubtable Light Horse Harry, or that austere yet flaming son of Virginia who all but won a hopeless cause, would have taken little pride in the bearing of their small descendant during the next few moments. Shuddering, terror-stricken, the boy was turned over to Luke when his ordeal was past, and so was driven home to the safe black arms of Aunt Selina, who, neglecting his infant sister for a time, crooned over him as in days gone by.

Also when night came Aunt Selina understood. Without a suggestion from him she saw him into bed and turned the lamp almost out, but not quite. How grateful he was for that! And then—a reassuring creak of a rocking-chair, a heavenly voice grumbling from the shadows.

"Ain' nothin' gwine make me move fum right hyar."

An hour or more went by. Aunt Selina, who had been dozing at her post, became suddenly wide awake. She was conscious of a peculiar feeling in the palms of her hands and the soles of her feet. It was a sort of prickling sensation, which presently affected her limbs and the skin of her neck and body.

"Got all crampy settin' hyar," she reflected. "Folks home mighty soon now. Reckon I'll get down to the do'."

The rocking-chair creaked again as she made a preliminary movement toward relieving it of some two hundred-odd pounds. It creaked no more, for Aunt Selina was sitting bolt upright, utterly moveless, the whites of her eyes shining in the faint light from the all but extinguished lamp. She was staring into the shadows beyond the foot of the bed. As she sat rigid a small white-gowned figure suddenly rose to a sitting position and also stared over the footboard into the shadows.

"Why, grandpa," said a relieved young voice, "I thought you were dead." For a moment the boy seemed to listen. At last he nodded. "Yes, grandpa," he said. He dropped his eyes to a lower level, stared, smiled shyly, and again nodded. For a moment longer he sat erect, then closed his eyes and fell back to his pillow.

"Lawd Gawd, Lawd Gawd!" moaned Aunt Selina, and though her teeth were chattering and her face ashy gray, she lumbered to the bed. Bending down she listened. The untroubled breathing of a sleeping child rewarded her. "Praise' be His name." Picking up the lamp she crept from the room, trembling, awe-stricken, dazed.

She was still shaking when her mistress with some out-of-town members of the family returned for the night.

"Chile, chile," she said when the boy's mother had been drawn out of earshot of the visitors, "his gran'pap done drap in on him while you is gone."

But the mother, having listened impatiently to Aunt Selina's account of what had occurred, said, "Nonsense! He had a nightmare."

"How kum I feel dat nightmayeh on my ole black hide? How kum I see ——"

"I don't want to talk about it any more, and I won't have that nervous child hearing such things. Now listen, Selina, and understand me. Much as I love you, if you ever repeat to anyone what you've just told me I'll discharge you that very day."

So Aunt Selina's lips were sealed. As for the little boy, if he had any recollection of a strange visitor he did not mention it next day. Always a quiet little boy, his added thoughtfulness for some time thereafter was not particularly noticeable. On the day following his grandfather's funeral he asked to be taken to his grandfather's home. Once there he went into the garden, looked eagerly about for a time, and then began to search the arbors, shrubbery and rose bushes. Next he pattered up to the great, still attic. He returned downstairs after a time, grimy with dust and strangely wistful.

From then on he was given to long silences and to playing by himself. Games with other children did not seem to amuse him. He seemed to prefer his own world of make-believe or thoughts, or whatever it was that kept him alone for hours at a time. And always until the place was sold he liked to play in his grandfather's garden.

His favorite diversion was to give a party in a small arbor in the garden which he called his house. For this purpose he had accumulated the proper utensils for dining in state with a single guest. Broken and cracked dishes and teacups, battered and rusted kitchen forks, knives and spoons—he had a complete service for two, which he kept under the steps of the back porch. Offered more treasures of the sort, he declined.

"But you could give a bigger party with more things," suggested his mother.

"I don't want a bigger party," he told her firmly. "Just us."

"Who is us?" asked his mother. "Whom do you have beside yourself?"

"Nobody," he admitted. "But, mummy," he added, brightening, "any day I might."

"You can to-day," said his mother quickly. "I'll ask Mrs. Harcourt to let Mabel go with you this morning, and you can have real things to eat."

He shook his head. "I don't want Mabel."

His mother looked at him thoughtfully. Mabel, a year younger than he, was the blond beauty of the neighborhood, as spoiled as she was lovely. Accustomed to instant adoration from all with whom she came in contact, his strange aloofness had proved surprisingly effective in winning her regard. Desiring passionately all things that she could not have, Mabel had begun by demanding his attentions. She had next made somewhat haughty advances. From these she descended to humble requests followed by violent and tearful pleadings.

"But Mabel is so sweet," urged his mother, who had become worried of late over what seemed like a touch of morbidity in her son. She had hoped he might be jolted out of it by other children. Who better for the purpose than the imperious Mabel? No time for mooning when she was about. Her court was kept busy ministering to her wants and obeying her commands. "All the other boys adore her," she reminded him, "and she seems to like you best."

"I don't want her," he repeated firmly. "Please don't ask her, mummy."

His mother did not insist. She had tried the forcing method, to have it fail. She had seen him miserable and distinctly out of it at his own birthday party. Though she did not like his playing alone so much in the garden of the old place, the garden would not be in the family much longer. Why not let him enjoy it while he could? She kissed him and let him go, and sat down to think it over.

If his father had only lived! A boy needed a man; he needed the viewpoint of his own sex. This paved the way for a distressing conclusion. Her son must go away to school—to boarding school. She clutched her heart. He was so little and shy and—yes, queer. The admission led to firmness. The queerness must not become settled; masters and boys would rub it off. She nodded with compressed lips. A month later Jimmy was sent off to boarding school, leaving behind him a moaning Aunt Selina with her apron over her head and a Spartan mother smiling through unshed tears.

In the ten years which followed, that mother's sacrifice was rewarded. Her son came home one spring, a lumbering St. Bernard with huge paws, calloused from baseball, which some day—incredible thought—might fit him. His voice, which he made no effort to constrain, caused a nervous tinkle in the glass chandeliers of the parlor. Little doubt that this clumsy, bellowing creature ran true to form—a normal, zestful young male.

During the next month Mabel came into her own. Once he had scorned her charms! They had been children, of course, but even so ——

"Poor kid," thought his mother as she saw her young St. Bernard anxiously learning to fetch and carry. "I'd like to shake her."

He was supposed to be cramming that summer toward examinations for the Point, but a vassal to Mabel Harcourt had little time and less thought for mere books. His mother, observing the lady in blue dimity with a hair ribbon to match, quite understood that.

And then something totally unexpected occurred—something that fretted Mabel's soul during many years thereafter. For the one and only time in a long career this resistless female of the species, who was destined to become the toast of Georgia, knew defeat.

It came about in the most unaccountable way, after what appeared to be her certain triumph. At an evening affair which included Mabel, lesser damsels, and the timid-bold, old-young specimens of male adolescence who squired them, dancing was found to be impossible because of the modest size of the home at which they had gathered. Forfeits, twenty guesses, and amusements of a similar character had aroused little or no enthusiasm, when the company was electrified. Post office! No one knew who had first suggested it, but post office! post office! With giggles and guffaws it became an accepted fact that the innocent game of childhood, now a daring venture, would be attempted.

Mail was awkwardly delivered and received in the dimness of a small reception room, the postmistress, a timid soul who positively refused to indulge in correspondence, announcing the addresses from the door. At last a particularly forward youth dared greatly and summoned the haughty and beauteous Mabel from her retreat in a porch hammock, to receive a post card.

It was a great moment. Would she come? She did, with a bored expression, and languidly entered the post office. The bold and envied swain presently emerged therefrom, and then, "A letter for Jimmy Lee," shrilled the postmistress.

Digitized by Google

Once before in this narrative we have blushed at the descendant of Light Horse Harry; and now again ——

All present turned to stare at Jimmy in his great good fortune. Deplorable to relate, he stood immovable, with glazed eyes and crimson ears.

Meanwhile the incomparable one waited alone, the dim seclusion of the post office hiding the chagrin she must have felt at the thought that her priceless favor seemed about to be scorned. At last by means of jeers and some shoving a reluctant cavalier appeared in the post-office doorway. A final push between his shoulder blades, and he had entered. The door closed behind him.

It is possible that the uncertainty of a moment before had roused the lady's ardor. It was characteristic of her that this should be so. At any rate as he stood there in a sort of agony soft arms stole about him and clasped him in something of an ecstasy; then warm lips found his own, not once but many times.

For a moment he trembled under her kisses, struck to helplessness by their shock. Next there rushed over him a blinding force totally unlooked for. Her kisses were returned—were overwhelmed. She bent beneath a frightening storm.

"Let me g-go!"

"No, no; one more—please!"

She surrendered again for an instant, then freed herself and opening the door walked out into an eager circle of inquiring eyes, airy and quite calm.

No other sign of life came from the post office. Investigation proved it to be empty. An open window leading to the lawn explained this phenomenon. Knowing the utter impossibility of facing anyone at the moment, Jimmy had fled through the window into the starlit night.

A great and deathless love had come to him. In the delirium caused by the knowledge of this fact he wandered, tireless and wild-eyed, for an hour or more before bending his steps towards home.

He undressed by instinct and flung himself on his bed. For a time he lay moveless in a bliss of recollection. This changed to a stupor in which he still was conscious of the drone of summer insects, the barking of a dog and the ticking of the clock on his mantel, even while he floated through soundless space with his arms about his Mabel. At last real slumber came, deep as the caverns of the sea, and now he began to toss and moan, struggling in a dream more poignant than any waking moment he had ever known.

"I must, I must!" he cried in a choking voice, and sat up in bed with his arms outstretched. Whatever his arms were seeking was no longer there.

It had been there, it had been there, right in his room not a moment ago. Wide awake now, he still knew that. But was he awake, or was he dead, or what? He got out of bed and went to the window. Roosters were beginning to crow at a gray mist not yet as tangible as light. Of course things looked unearthly in that mist; the two pines on the lawn were black velvet plumes and the box hedge seemed like a yawning crevice. But it was the same lawn on Peach Tree Street, Atlanta, Georgia. He stood at the window thinking, thinking—or, rather, trying to understand.

By ten o'clock that morning he had taken to his books. He told his mother that for the rest of the summer he meant to study until three o'clock each day and then play tennis.

His faithfulness to this régime was a delightful surprise to his mother. It was more than a surprise to another lady.

At their next meeting, which she was forced to contrive by happening along his route as he returned from the tennis club, Mabel made it clear that she was not offended by the enthusiasm with which he had entered into the spirit of the game of post office.

But Jimmy, avoiding all reference to that tender episode, confined himself to uneasy mumblings while looking up and down Peach Tree Street. He actually seemed to be on the qui vive for something more diverting than a luscious budding figure in white organdie below luminous purple eyes and spun-gold hair.

"Who are you looking for?" demanded the puzzled and angry Mabel.

Jimmy started.

"Why—why—nobody," he stammered.

This was the first reference ever made to his habit of anxious peering which dated from this time. The habit had grown to such an extent by the time he entered West Point that his plebe room-mate—one Robert Prescott—straightway nicknamed him "Old Look 'em Over." His class took it up, and later the entire corps. "Look 'em Over" he became, and "Look 'em Over" he remained during his four years at the Point. They called him this affectionately, for Jimmy was a good man on the gridiron and elsewhere, and popular with his tribe. Not so popular, however, with their womenfolk. Prescott's sister put it into words after Jimmy had been her escort at one of the dances during their final year.

"Of course he must be splendid, Bobby, or you wouldn't adore him so, but I must say he's the queerest thing I ever saw."

"Queer? You're crazy. What do you mean?" shouted the loyal Robert.

"He looked at me once," she explained, "when you introduced him, but never again after that. He'd talk to me and keep watching other girls. I could feel him doing it even when we were dancing."

"Oh, that," said her relieved brother. "That's just his way. We call him—well, it's just his way," he finished lamely.

"It's a way I can get along without," decided his sister promptly.

Many so decided, for Jimmy's activities with the sex were fully described by his nickname. Having looked them over he ventured no further.

Mabel belonged to a dim and distant past. She had made a final attempt to wipe out the one stain on a flawless record when he had returned home at the end of his first year. She was the breath-taking belle of Atlanta by then, and she stooped amazingly to a mere West Pointer. But Jimmy, after squeezing her hand in the moonlight one evening, became weird again, as she put it after meeting him the following day, and proceeded to peer himself out of danger.

Close after graduation came amazing good fortune, for which, as Prescott wrote him, they must thank God and Congress. Here they were, just commissioned, and war with Spain declared. Later they found that young officers,

Protecting the Small Investor

THE POSSIBLE AND THE IMPOSSIBLE

By Albert W. Atwood

DECORATIONS BY GUERNSEY MOORE

All authorities in the closest touch with savings and investment institutions warned the writer against expecting 100 per cent elimination of the gambling instinct, no matter what reforms may be effected. It can never be eliminated as long as promoters, reputable and otherwise, are able to point to the few great and striking successes in business. In almost every industry there are a few examples of enormous profits made on the basis of a small original investment. As long as there are any such cases to point to, the public will continue to take its chances in the stocks of new, unproved and undeveloped enterprises.

What the promoter of get-rich-quick investments always refers to is concerns like the Bell Telephone, Ford Motor and Standard Oil. Calling attention to the profits of some other company and by implication holding out the promise or hope of similar riches has been the characteristic mark or trait of tens of thousands of stock swindles or failures. Nearly thirty years ago a member of the Chicago Board of Trade, who was chairman of its clean-up committee at the time, wrote a book in which he called attention to this sign of the worthless promotions.

Like the sands of the sea have been the subsequent warnings in books, magazine and newspaper articles and in "education" on the part of government departments, blue-sky commissions, state security commissions, banks, insurance companies, chambers of commerce, better business bureaus, and the like. The public still goes on investing scores, probably hundreds of millions of dollars annually, largely on the theory that one lucky strike is worth a lifetime of savings.

THERE is, of course, only one perfect way to protect the investor from making fraudulent, bogus, worthless, get-rich-quick and unsuccessful investments, and it is utterly impractical. It would be in the form of a law, enforced universally, prohibiting any person in this country from investing in anything except government bonds, municipal bonds, savings-banks deposits, life-insurance policies and similar classes of property.

Such a law could not be enforced, and the results would be terrifying if it were. But until the investor is wrapped up in cotton batting and locked away in a steel vault, the losses in ill-advised investments will continue to be of prodigious extent. Protection is an impossibility, and no amount of organized or enacted protective measures will more than slightly affect the final result.

The reason is simple. The fundamental cause for the great losses in unwise investments is contained in the very phrase itself, "get-rich-quick." The basic trouble is the desire of people to make a quick fortune or killing, to take a business risk, to speculate, to gamble, rather than to invest. What must be fought is cupidity, greed and avarice, and that fight will last as long as the human race itself, for these qualities are latent to a greater or less extent in the hearts of the vast majority of men and women.

The Irrepressible Gambling Instinct

IN A PREVIOUS article, President Cromwell, of the New York Stock Exchange, explained the attitude of that organization toward various proposals for the protection of investors. It will be remembered that toward the end of his statement he said that a certain proportion of the public always seemed bound to go to the worst type of so-called brokerage houses in spite of every warning and every law. In gathering material for the present article the writer sought the opinion of officials of a number of the leading savings banks, investment-bond dealers, commercial banks, life-insurance companies, the United States Treasury, and other agencies through which legitimate investments reach the public.

Without an exception the view was expressed that there is a very large gambling element or instinct in people which cannot be suppressed and which finds an outlet not only through bucket shops and margined accounts in legitimate stocks but to a far greater degree, among a wider range of people and in more different sections of the country, through the outright purchase of what are so commonly known as get-rich-quick stocks.

The explanation seems to be that with people of small means it is only after the hardest kind of work that even a few hundred dollars are saved. Upon these few hundred dollars the rate of interest that goes with conservative investment amounts to little. The principal grows with painful slowness. The universal craving and almost universal struggle for independence do not appear to be furthered much. If only the few hundred would suddenly grow into a few hundred thousand! If only there were more action!

The Telephone Romance

THE unquestioned fact that the overwhelming majority of attempted lucky strikes turn out badly seems to make no difference at all. Even the fact that a large proportion of professional operators put not only all their money but their skill, education, training, physical strength, time and experience into the game they are playing, and yet fail, makes but slight impression. Professional oil producers who have spent their entire lives right on the ground in drilling, and who put everything they have into the work, are perfectly hardened to the fact that they are more likely to lose than to win.

Yet the investor who contributes nothing but a few hundred dollars, and whose pioneering and adventuring are solely of the indoor variety, goes on hoping against hope that he will strike it rich. He still intrusts his hard-earned savings to total strangers in the expectation of winning a fortune. When the slick salesman says, "If you get in on the ground floor you may make a fortune, for this proposition is absolutely sound, with the finest of prospects," the investor itching for a gamble almost always falls.

Nor is the investor deterred by the fact that the great fortunes have usually been made by those who gave everything they had of time and labor, and only in the rarest of cases by those who invested merely a little money. Almost every stock swindler in the country has urged the sale of his wares on the ground that early owners of Bell Telephone did exceptionally well. But the largest fortune made by any one man was less than $1,500,000, and these pioneers of the telephone took stock not so much because they wanted it as because it was the only payment they could get for their time, labor and other services.

If the holders of the $400,000 stock paid for the inventions and development to 1878 and the $317,000 stock sold by the treasury at par or less in the early days had sold at the top of the market the $717,000 stock would have realized less than $12,000,000.

"These are the facts of the great telephone romance," says an authoritative account put out in behalf of the company. "They have been multiplied, distorted and made the basis of misleading statements by promoters, reputable and otherwise, who were after the credulous investor. One of Professor Bell's original associates called the attention of the maker to one of these misleading prospectuses put out by a brokerage firm and the only satisfaction he got was the statement: 'We are brokers, not historians.'"

In the case of the Ford Motor and Standard Oil it woul be conservative to say that the large fortunes have com to those who took stock in return for their services. I many cases where large profits are pointed to, they coul have been obtained only by selling the stocks at the to of the market, which even the insiders rarely are able t do. And whether the promoter has in mind income or th accretion of principal or both, his argument is misleadin in nine cases out of ten, because many of the most succes ful companies have become so only after two or three fai starts in which the original investors lost all they ha put in.

But in spite of all the exaggeration and distortion historical facts, there is no doubt that a very few me hardly more than one in the million, have made fortun on the basis of small cash investments, and this is whe the great appeal comes in. How to combat the effect this argument, how to protect people from their ow desire to gamble and prevent them from losing the savings, this is the heart of the problem. Among others whom the question was put was the officer of an institutio which handles several billions of dollars of investments trust for several million people. This was his answer:

"If you put this argument on the ground of winnin the one successful lottery ticket, then I have nothing say, there is no answer. No doubt there are a few peop walking the streets of Paris who live in luxury becau they won the big lottery prize of their year. But wou any sane man argue for that reason that money should invested on any such plan?"

Inherent Merit Not Enough

"THE great fallacy in the minds of the inexperienced that there is some magic in the investment of mone Of course there is no magic about it, but the idea constantly fostered by the one-in-a-million venture th makes a phenomenal success. A man once told me th he could have bought vaseline in the early days for $50 But he didn't see what he could do with it; he thoug over all the possible uses, and none of them appeared be practical.

"But Chesebrough came along and made a fortune o of it. The point is that it is not enough to have a potenti good thing. The capacity to merchandise and put acro the product often plays just as large a part in success the product itself."

What the public nearly always forgets is that even th existence of a valuable product or of a mineral depos means nothing unless the owners can put it across or g it out economically, as the case may be. Such words "fraudulent," "swindling" and "bogus" are used a goo many times in this article, but they are substantiall inaccurate. The literal, accurate facts are well put by successful financier whose business brings him into contac with great numbers of investors:

"The absolutely fraudulent investments are but a pa of the total. Where there is one person who knows h

Digitized by Google

proposition to be a fraud, there are a number of others who are wildly hopeful and whose idea of realizing on the investment is merely visionary. If a man thinks he can find oil or gas or gold by digging in his back yard, you cannot accuse him of swindling, because he naturally believes that there is some there, and there might be a remote possibility that there may be.

"For example, a few years ago about $5,000,000 worth of stocks in McKeesport, Pennsylvania, gas fields was marketed around Pittsburgh. It is not fair to say that all of these were frauds—there was about $4,000,000 worth of gas in McKeesport in small pockets, but boring holes by the hundreds to reach the same pockets did not get anybody anywhere."

The securities commissioner of a state in the Northwest said that although the Geological Survey had reported again and again that oil could not be drilled in that state in commercial quantities, some men who saw oil oozing out of the ground formed a half-million-dollar company and rushed out to sell the stock. Yet who could say that this was actually fraudulent? It was simply a case of people being fools. As the Minnesota Securities Commission said in a report:

"Just as much money is lost through the failure of honest but misguided business ventures as through out-and-out frauds."

In discussing the subject of this article with a number of dealers in sound investment securities the question was raised by one of them as to why the word "small" should appear in the title. "It is not only the small or ignorant investor who gets stung," said this banker. "It is not a question of being a rube or a hick. Even bankers bite on impossible oil-stock schemes, and successful professional men are always doing it. Often the estates of even the very rich are filled with cats and dogs, and people bite on gold bricks in the most highly developed metropolitan centers of finance and investment. Indeed, the poor, ignorant Polack farmer in a remote rural district often has sense enough to put his money in the postal-savings bank and is thus saved from loss."

The Opinions of Experts

IT IS well recognized among investment dealers that campaigns to get small buyers, and aimed at their supposed inexperience, usually turn up a surprising number of medium and large investors, people who seem to be really ignorant of the subject, although having from $1000 to even $50,000 a year to invest. Further evidence of this fact is found in the sale not long ago to a man in a western state of a total of $85,000 of Treasury Savings Certificates, although these are issued by the Government primarily to meet the needs of the small investor.

All of which raises interesting questions, but not essential to this article. The small investor is written about here because he cannot afford to lose. He is the one who needs protection, not the supposedly hard-headed banker or merchant or surgeon whose income is large enough to warrant him making a fool of himself if he so desires.

In seeking how best to combat the get-rich-quick idea the writer interviewed among others John J. Pulleyn, President of the Emigrant Industrial Savings Bank, of New York City, one of the two or three largest savings banks in the country, with close to 200,000 depositors, and Frederick H. Ecker, vice president of the Metropolitan Life Insurance Company, in charge of the investments of a company which has more than 25,000,000

policies and $7,000,000,000 of insurance in force, the largest in the world. These two authorities made substantially the same statement, that in the last analysis the only effective argument to use with people against making a get-rich-quick investment is that it takes a long time to make up the loss of principal by a high rate of interest. To quote Mr. Pulleyn:

"The minds of many individuals seem to absorb only the higher dividend rates in the advertising and literature which they see. Many of them come to us with from $1000 to $10,000 to invest and ask for our help and advice, which we are very glad to give, because we have tried to make investors out of Liberty Loan buyers as well as savings-bank depositors. They thank us for our willingness to help them and then almost the next remark is a statement that they would like about 10 per cent return on their money.

"We can only say that safety of principal is the first consideration, coming before any question of the rate of return or profit, and unless they are willing to accept our dictum in that respect they are wasting their time in talking to us. Do we persuade any of them to our way of thinking? Indeed we do, and this is the way we go about it."

Bargains in Liberty Bonds

"WE APPROACH the subject through the general law of averages, which is the savings-bank approach. We have been in business seventy-two years, and we discuss the value of money over that period of time. We try to show how from our experience 4 per cent has not been such a bad average. When the Liberty Bonds were put out we told our people that they were worth par, and when they went down almost to 80 we started a campaign among our people, who sought advice on investments, to buy Liberties.

"It was an uphill fight at first, and we sold only $3000 or $4000 a day over the counter. But we managed to focus the attention of our people on government bonds, and after a while we were selling $50,000 a day. That, too, was during the period when get-rich-quick stocks were having such a vogue. One of the best arguments we were able to use was to tell investors that with all our opportunities to invest, with the $200,000,000 invested by us, the safest and best we could find were Liberty Bonds."

Charles E. Mitchell, president of the National City Bank of New York, which has perhaps the largest bond-selling organization in the country, expressed much the same idea by saying that "Over a period of decades the man who invests gets ahead of the speculator, with isolated exceptions." Frederick R. Fenton, secretary of the Investment Bankers Association of America, put the idea this way:

"Urge people to build an estate. Pound away on that story. What does a man really count upon to support his family in case he dies? Does he count upon the oil stock which may pay 20 per cent for one year, but more likely nothing; or does he expect his family to live upon the steady, conservative investments?"

Years ago when Ida M. Tarbell was preparing her articles on Standard Oil she inquired as to the value of certain get-rich-quick oil stocks of Henry H. Rogers, one of the greatest capitalists that Wall Street ever knew, and a power in Standard Oil. He told her the stock was worthless, and added:

"There is no man in the world that can honestly say that he can invest money and be certain of permanent large returns. The big dividends come from speculative ventures, and nobody should make them unless they are willing and able to lose all they put in. I had a thousand dollars sent me to-day from a woman who wants 20 per cent. I cannot place it so that I can be sure she will permanently get 6 per cent. I have no right to lose it, and I shall not do it; I shall return the money.

"Nobody believes me; they all think that if I would I could make a fortune for them. When I send this thousand dollars back the last thing this woman will do will be to thank me."

A famous speculator once said, "There is no such thing as an investment; either you get stuck or you don't." It was a witty, a smart thing to say, but it does not happen to be true. The savings banks and insurance companies alone prove that it is not true. There is no mystery about the safe, conservative investment of money. He who runs may read. Anyone may do it. But it takes extraordinary luck or genius to make a killing; there is mystery in that, and mighty few are those who do it.

It is a peculiar fact that a man who buys a risky and speculative stock which pays no dividends for five or ten years and then distributes 2 or 3 per cent, and never any more, somehow feels as if he had made more than if he had been getting 4 or 5 per cent interest on a bond every year.

It is a strange commentary on human nature that at the very time that men were attracting thousands of suckers in Boston, New York and Chicago, by offering impossibly large returns on their money, Liberty Bonds could be bought at bargain prices, and Treasury Savings Certificates were being put on sale with a guaranty from the United States Government to return the investor his principal and 25 per cent additional at the end of five years.

It is not that all people should be kept from taking chances. If they were the country could not grow, and its supply of oil, copper, lead, gold and silver would soon give out. It all boils down to whether investors really understand the chances they are taking and, more important still, can afford to take them. The final question is whether the investor can afford to lose the money if the project fails. If not, then he has no business departing from government securities, savings banks, and the like.

Investment in Life Insurance

A FAVORITE method of combating the get-rich-quick and visionary-investment evil has been to call attention to the great sums lost in that manner. Estimates of the amount lost or wasted each year have ranged from $100,000,000 to $750,000,000, and have been credited to many different authorities. But though figures on a subject like this are amusing, or perhaps tragic, they are obviously unreliable. No one in the country knows or has even the basis for a sound estimate concerning the extent of these losses. The line cannot be drawn between strictly legitimate losses in the regular course of business and those sustained by the stockholders of ventures tainted with fraud and get-rich-quick methods.

Then, too, though the stock swindles conducted on a large interstate scale might be estimated, there is no way of bringing together the losses in small local enterprises. Nor can anyone say whether such estimates should include the money thrown away in speculation and gambling on perfectly legitimate stocks in legitimate brokerage offices and bucket shops, or how much that amounts to. Nor can the line be drawn strictly between investors who lose in

EFFICIENCY AND BILL

By Josephine Daskam Bacon

ILLUSTRATED BY CHARLES D. MITCHELL

SOMETIMES I think, looking back, that maybe we never did take Bill seriously enough. Rissa always laughs very bitterly when I say this, and reminds me of the times she has tried to do so, and what happened. Of course I see what she means, but we are both his sisters, you see, and much older than he is. This rather leads us to pick out the things he is to take seriously, and try to take *him* seriously, and I admit that it doesn't always work out well. It isn't that Bill isn't willing. He will try anything once, he always says; not that everybody is willing to have him.

I remember when Rissa thought that he might be Sarles' secretary, one summer. Bill always spent his summers with us, and of course, when your brother-in-law is a busy throat specialist, and has extra hospital practice in town in the summer, you would be glad to help him out, as Bill agreed immediately. But that was the only time that I can remember Sarles not even being willing to argue with Rissa.

He just said, "My dear girl, really!" and that was all he would say.

Of course Bill might have kept all the accounts, and he began it once. Bill is always very obliging, and he likes new things. He got those large check books, with three checks at a time, you know, and he planned out what I still think was a very interesting way of keeping the house accounts on pink checks and Rissa's expenses on green checks and the children's on white checks. But though it sounded simple, I think you would really need more business experience than Bill had, to do it, because after he had thrown away all our old books, it all got mixed, somehow, and there were so many things, like Jenny Andrews, for instance, that came in two places, that Bill himself couldn't get them straight in the end. Jenny, you see, was the children's nurse, and Bill counted her in under "servants" and then again under "children," and we couldn't find out whether she had been added in twice, or not at all!

Bill asked Rissa if she wouldn't be interested to know just what the children cost, and she said she would, very much. Of course their clothes were easy, but Bill was very angry when I used some of their castor oil for Pêche Melba, the poodle, and the bottle broke. He charged it to "stable," and Joseph heard of it and said it was utterly unfair, as he had his own castor oil for Commodore and the pony. Bill offered to say "stable, etc.," but Joseph said that was no better. And you couldn't make a page for "kennel," exactly, with only Pêche Melba, who lives in the house, anyway.

But this was nothing—though Joseph does cherish grievances terribly—compared to the horrid time about the doctor. Little Clarry had a temperature and looked rather yellow, and we sent for a very nice young doctor, who came two or three times—really, to talk to Rissa, I always thought, because the child was only bilious. Bill was anxious to get this all down in his book, and he wrote on Sarles' typewriter, using his office paper, to ask the doctor why he didn't send his bill, as he needed it for his accounts. It seems that doctors never charge each other anything, and this one was quite vexed, and simply told Bill there was no charge and he needn't complicate his accounts unnecessarily. Bill didn't understand, and thought the doctor was making fun of his system, and wrote him what he admitted was rather a firm note. It made quite a little trouble for Sarles, and he told us he'd rather pay whatever it cost to run the family, hereafter, and let it go at that.

"'I Know a Woman Who Does That Sort of Thing Beautifully,' Says Peaches. 'Shall I Give You Her Address?'"

Bill got rather exasperating, and kept pointing out to Sarles that he would never know what his overhead expenses were. That was almost the only row they ever had. But when Sarles finally said that he'd rather have them overhead than underfoot all the time, Bill laughed and they were friends again.

This proved to Rissa that Bill had no business sense whatever, and she has always persisted in this belief, though Bill did well enough in insurance for more than a year. But she said that his heart was never in it, which was true enough—as Bill said, the insurance business isn't exactly the thing you would put your heart into—and also that going out and getting policies was one thing, but simply copying figures was another. But there, again, Bill didn't pick out that business; Rissa put him into it.

I must say that I felt worried when Bill left it suddenly and took a little apartment with George Hawkesworth, and then sublet it after a few weeks for nearly twice what they paid for it. It seemed like gambling, somehow. But when they went poking about in queer shops and picked up enough to furnish another, and then did the same thing with that, I couldn't help feeling that this wasn't just luck; it looked as if those boys really had a great deal of cleverness and taste. And George admitted to me that Bill did most of the picking out. George kept the accounts.

It was just then, unfortunately, that Bill did the absurd thing that Rissa couldn't seem to get over, quite. Although she has such a wonderful sense of humor—all her books are full of it—that I always wondered why she couldn't see the terribly funny side of it.

He had made a schedule of our butler, Houghton's, time, and decided that he was the best-paid man for the least work of anyone he knew. So he watched Houghton carefully, and borrowed his best English reference and actually engaged as a butler with a rich Western family who had just come to New York! And right at the telephone in our own library, with Rissa sitting calmly there, writing a novel, he answered his new employer and verified his own reference.

We might never have known of it, but Rissa and I called there one afternoon to tell Mrs. Plympton about the Help a Home Society, which is Rissa's great charity, and Bill nearly brought us in the tea! Her daughter, Marjory Blair, a lovely dark girl with big eyes, who wasn't a bit like her mother, and must have taken after her own father, Mr. Blair, was dreadfully upset when Bill refused to come in—he had seen us, you see—and it all came out, of course, and then we found out that Bill and Marjory had fallen in love with each other, and they were engaged as soon as Mrs. Plympton realized that Bill wasn't a butler, but a clever college boy playing a joke.

After the first shock had worn off we were all really very much pleased. Marjory was thoroughly nice; Bill seemed likely to be settled; Mr. Plympton was very rich and really good-hearted, though rather a common sort of man, and immensely proud of being connected with Mrs. Clarissa Etheridge Elton, the well known novelist. He had a great deal to do with insurance in his business—he manufactured electric elevators—and offered Bill a very good job in one of his offices.

He had a very big head and face, and I shall never forget how wide his mouth stretched when he laughed and said that the Plympton Electric Elevator Company, Inc., ever failed, Bill could easily support Marjory by buttling.

He had no vacancy in New York at the time, but he sent Bill out to Chicago; and those six months, with Bill working hard at Marjory writing her old friends in the West and going to concerts with him in the evening, were really about the most peaceful six months of Bill we ever had.

Then he came back. I remember that night so well. I was all alone in the house and I was a little startled when I heard someone knocking on the door and not ringing. But when I noticed that whoever it was was playing a tune on the door—it was the March from Aïda—I stopped feeling frightened, because that isn't what burglars are likely to do.

"Why, Bill!" I said. "How do you happen to be back? Where's Marjory?"

"I haven't any idea, Flops," he answered; "but I suppose she's in Chicago—she was when I saw her last."

"Oh!" I said. "Is—is anything the matter?"

"That depends on how you look at it," he said. "Do you suppose I could scare up a cheese sandwich or something? I haven't been hungry all day."

While he was eating I got it out of him, as far as I could though it didn't seem very reasonable or very much like Bill, even, which is quite a different thing. Marjory and he weren't engaged any more, to begin with.

"Why, Bill," I said, "what have you done? Why won't she marry you?"

He gave me one of his queer looks.

"It's me that won't marry her, Flops," he said.

"Why, Bill Etheridge, what do you mean?" I cried. "How can you say such a thing?"

"I can say it very easily," he answered, and he had that old, obstinate, laughing look in his eyes that I knew well.

"I won't marry any woman that I can't support."

"But—but you can support her!" I said, surprised and angry. "Aren't the Plymptons going to give you an apartment—buy it for you? Mrs. Plympton is getting the linen now; I saw her yesterday in Baltman's. And Rissa ordered the silver last week. And George Hawkesworth and Joe Madden and—well, there's no use telling you what they were going to get. But it was wonderful. As Aunt Ella and I the china!"

Digitized by Google

"You're all very kind," he said in a tired sort of voice and looked at me queerly.

"Why, Bill, what can you mean?" I begged despairingly. "Didn't you know—I suppose you didn't—that Mrs. Plympton is going to give Marjory a baby grand piano and Mr. Plympton is going to give you, for yourself, one of those new Buell runabouts you wanted? That's entirely aside from ordinary house furnishing—what more could they do? Why, rich people—with both of them rich—don't get any more!"

He smiled the strangest smile.

"You're perfectly right there, Flops," he said. "That's true—they don't. But I'm not rich, you see."

"You certainly aren't poor, Bill," I answered sharply, for I couldn't understand him at all. "Anybody that makes four thousand dollars a year now and will have five thousand when he's married, and the future that you have to look forward to, isn't—can't be poor!"

"I'm glad to see you come down to what I'm earning, Flops, and not my wedding presents," he said, with a rough little laugh that didn't sound like him.

I couldn't help but smile, bad as I felt.

"Of course I took that for granted, Bill," I assured him. "We all know about that. Won't five thousand support Marjory? Her mother had much less to live on when Madge was born—she's often told me."

"I don't know whether it would or not. Never shall know, probably," he answered calmly. "You see, Flops, I'm not making five thousand, or even four, as it happens."

"You're not? Why, Bill, has Mr. Plympton—he hasn't fired you?"

"He certainly has not," he said. "I've fired him!"

I stared at him.

"You mean you've left?"

"I mean I've left. And there's no use asking me about it, Flops, for I shan't tell you."

"Does Marjory know why?"

"No."

"You won't tell her?"

"Why should I? If she won't trust my judgment she'd better not marry me."

"Won't she marry you, then?"

"Not under present conditions, and I suppose she'd be a fool if she did. You see, I haven't any job. And Mrs. Plympton won't hear of it."

"Of course she won't," I said, pretty coldly, I'm afraid. "What sensible mother would?"

"Oh, I dare say," he answered in a kind of absent-minded way.

"I think I'll go up to bed, now, Flops. Is my room all right? You might tell Rissa about it."

"You can tell her yourself," I said shortly. "I'll see about your room."

But when I'd got the bed made—the maids were at the moving pictures—he stopped me as I was going out and put his arms around me and dropped his head on my shoulder.

"Don't you go back on me, Flops, altogether," he said. "I couldn't bear that. I—I just have to do it this way, my dear!"

I couldn't help but pat his arm.

"I'll never go back on you—really, Bill dear," I told him.

Of course Rissa was furious.

"We might have known it wouldn't last," she said bitterly. "After the life Bill's led, the idea of his taking up this idiotic, idealistic attitude! He acts like a schoolboy. Testing Marjory, I suppose, is what he thinks he's doing. Like somebody in Dickens! He's never bothered much about accepting things from rich people before!"

This sounds dreadfully, but, of course, Rissa wouldn't say it to anyone but me, and, of course, I saw what she meant. Bill's always been very easy-going. He was always so handsome and clever and amusing, and he always did have rather expensive tastes. So that many of his college friends were richer than he was. But Bill never chose them because they were rich; it was because he liked to do the same sort of things that they did, and did them very well—games of all kinds and what he calls stunts and jokes. And Rissa, though she has always grumbled at him, has never really refused him anything.

I might as well admit, I suppose, that Bill was what some people call spoiled. But, you see, mother died when he was ten; and maybe Aunt Ella and I didn't always manage right; she was too old and I was too young. Strangely enough, it was Sarles who wasn't so hard on him.

"Maybe he had his reasons, Rissie," he said. "Better now than afterward, you know."

Mrs. Plympton asked me to come and see her—she was always afraid of Rissa—and the poor thing was terribly upset.

"But what does Bill mean, Miss Flossie—what does he mean?" she kept asking me, her kind, nearsighted eyes full of tears. "What could Madgie do but give him back his ring? To leave Mr. Plympton like that, and not only quarrel with his bread and butter but Madgie's too? It's all very well to say he'll get another job, but why not our job? You know, Miss Flossie, Madgie has a great deal of spirit, and she feels hurt, and I feel hurt, and of course Mr. Plympton is very, very angry."

I couldn't blame him. Could you? And all the silver had to be countermanded.

He went back to the apartment with George Hawkesworth, and though Sarles got a very good job for him through a patient of his, in another insurance company, Bill wouldn't take it. He said that this time he was going to get a job for himself. Of course we were all worried, because, as you know, jobs haven't been so easy to get since the war. Even when they actually managed to sublet that apartment, and move on to another, it didn't seem like anything real or sensible. Bill asked me to go with him to pick out some things for a nursery one day, and when he told me that he was going to furnish this one for a young married couple with a baby, I simply gasped.

"But, Bill dear, what a waste of money!" I said. "Suppose you don't find one, then what will be the use of that darling little crib?"

"I read a poem once, Flops," he answered very solemnly, "that said, 'Every moment dies a man, and one and a sixteenth is born.' This is what keeps up the birth rate. If one and a sixteenth babies are born every minute, they must live somewhere, you know—and why not in my apartment?"

And as a matter of fact, they rented it at a hundred and seventy dollars a month more than they paid for it within five weeks. *(Continued on Page 126)*

Companies K and M, 336th Infantry, 83d Division, Advancing on an Enemy Position. Engineers of the 307th Regiment are Clearing the Way by Blowing Up Wire Entanglements

A PRIVATE in the Sixteenth Infantry saw a heavy shell hit a chow line one day in the Montdidier sector and kill and rend seventeen of his comrades. It had been hot work up there for a month—an inferno of light and heavy stuff and gas. Open fighting had just given place to stabilized warfare, and the trenches were a joke. He saw more of his comrades go west right beside him during the afternoon and, whilst moving, bent double, along a shallow runnel they called a trench on his way to the front lines that night, a German machine gunner dusted him for a painful hundred yards. In the blackest hours of early morning he and others of a patrol encountered a patrol of the enemy, who flung some potato-masher grenades, and everybody began to shoot.

This sort of thing went on day and night, taking heavy toll in dead and wounded. So when they were relieved and the chance came the doughboy sat him down to write home about the hell he had been through. Afterwards he came across an official communiqué of happenings about that date and his bulging eyes read this: "All quiet on our front."

Somehow or other he lost faith in official communications. He said, "They don't tell nothin'."

I am inclined to agree with him. A study of General Pershing's Final Report reveals some carefully worded references to negotiations with our Allies, but nobody could get an inkling, from these brief, guarded statements of conferences, of the hidden struggle constantly waged to gain the use of the American forces for the French and British armies.

The St.-Mihiel Offensive

FOR instance, the only comment the American commander in chief has to make on the various moves and conferences I described in the third article of this series is: "The plan suggested for the American participation in these operations was not acceptable to me because it would require the immediate separation of the recently formed First American Army into several groups, mainly to assist French armies. This was directly contrary to the principle of forming a distinct American Army, for which my contention had been insistent. . . . My position was stated quite clearly that the strategical employment of the First Army as a unit would be undertaken where desired, but its disruption to carry out these proposals would not be entertained.

"A further conference at Marshal Foch's headquarters was held on September 2, at which Gen. Petain was present. After discussion the question of employing the American Army as a unit was conceded."

So Pershing won out again. And preparations went rapidly forward for the assault on St.-Mihiel.

The St.-Mihiel salient was of immense value to the Germans. Its possession interrupted French communications in an east or west direction on the main Paris-Nancy railroad, and at the same time threatened the entire region between Nancy and Bar-le-Duc, and Bar-le-Duc and Verdun. From the defensive standpoint it covered Metz and the Briey iron basin, both of them vital to the enemy. Moreover, extensive operations between the Meuse and the Argonne were rendered very hazardous so long as St.-Mihiel remained in German hands.

The Germans captured the salient from the French in September, 1914, and held it successfully until the American assault four years later. Two attempts were made by the French to regain the position, but both met with failure. These took place in February and April of 1915—one against the west face and one against the south face of the salient—and their net results were limited to some slight local successes. The Germans held on to St.-Mihiel.

The position was very strong in natural defenses, its rugged heights making attack difficult and at the same time affording excellent observation stations. Often, when the First Division was in the Toul sector, I used to gaze up at the heights of Montsec and wonder whether the Germans would still be there in 1950. However, despite its natural defenses, St.-Mihiel would seem to possess some weaknesses in the eyes of strategists, "in that it might be attacked on both flanks and pinched out. Consequently the Germans had, throughout four years, strengthened it by a great mass and variety of artificial works, the main feature of which was an elaborate system of wiring. This wiring was found not only in the front lines, but was encountered to a depth of ten to twelve kilometers."

Pinching Out the Big Salient

PERSHING'S plan was to pinch out the salient. In his orders for attack occurs this sentence: "The general conception of the operation is thus the converging of enveloping forces in such a way as to cause the fall of the entire salient." And that is precisely what happened.

The depth of the St.-Mihiel operation having been limited by Marshal Foch to the line Vigneulles-Thiaucourt-Regnieville, the number of divisions to be used was reduced from the original estimates. General Pershing commanded the First American Army in this battle. Its strength totaled 500,000 men, of whom 70,000 were French.

The usual artillery preparation began at one o'clock on the morning of September twelfth, with more than 2900 guns. This great assembly of artillery completely dominated the German batteries and there was hardly any hostile fire when the infantry waves jumped off toward the south face of the salient at five A.M. Owing to lack of tanks and other weapons of destruction the barbed wire entanglements remained intact over large areas. There was only one way of getting there—the doughboys walked on top of the densely woven masses.

On the western face of the salient the artillery "fire of destruction" continued until eight A.M., at which hour the infantry assault was launched.

The whole operation moved with clocklike precision. Just after daylight next day—September thirteenth—elements of

the First and Twenty-sixth divisions made a junction near Hattonchatel and Vigneulles, and that point is eighteen kilometers northeast of St.-Mihiel. The salient had been pinched out, and by afternoon all objectives had been gained and the positions were being consolidated. The First American Army captured 16,000 prisoners and 443 guns, with comparatively light losses. The casualties during the actual period of advance were only 7000.

Though the French were complimentary, what chiefly impressed them was the fashion in which the American doughboys crossed the barbed wire. They marveled that soldiers could get over dense masses of wire that had not been cut by artillery or tanks. The French High Command sent an order to the commanding generals of three of their armies, in which the following appears: "It is desirable for a certain number of French officers, noncommissioned officers and soldiers to visit the terrain so that they can fully understand the manner in which the American infantry has been able . . . to overcome the obstacles encountered during the advance and not destroyed by artillery or tanks. The American units have themselves cut a passage with wire-cutters through the thick bands of wire, or they have walked over these wire entanglements with much address, rapidity and decision. It is interesting that our infantry soldiers should see for themselves the nature of the difficulties thus overcome, and that they should persuade themselves that they are also capable of doing as much on occasion." Then instructions were issued for organizing visits of selected officers and men to study the obstacles encountered and how they were overcome.

"Our divisions concluded the attack with such small losses and in such high spirits," says Pershing in his report, "that without the total rest they were immediately available for employment in heavy fighting in a new theater of operations."

Had any United States representatives in Paris presented to the French Premier and the French President a criticism of the manner in which the French commanders were handling the French troops it is very likely that the French would have taken such action as an affront. But on October 20th, a report on the operations of the American troops in France from May to August was submitted to the War Department in Washington by the French Military Advisory Mission.

French Criticism

SOME of the comments in that report are of interest:

"Morale of the troops—The morale of the troops is excellent. Its spirit of sacrifice and its offensive ardor are indisputable. The enemy reports testify to this fact.

"Officers—Their carriage is perfect. They seek danger, and are desirous of leading their men with enthusiasm. Unfortunately the losses among officers have been very high, and it often happens that at the end of a battle a battalion is under the command of a young officer, who perhaps faces fire for the first time.

"The zeal of the Americans is such that they often throw themselves into a hurried attack without sufficient planning. They hurl themselves on the places of resistance, instead of maneuvering. The result is that they suffer severe losses, and the objective is not always reached."

The report then went on to criticize the fashion in which Americans massed on the front lines and the insufficient use they made of automatic arms. These criticisms are based on the Battle of Soissons.

"As soon as there is a halt in the advance, how few units there are who think of entrenching themselves, even if only for a few moments, thereby curtailing useless losses! The infantryman must not count on the engineer." In this connection several instances were cited of American losses due to failure to entrench properly.

Next, the report criticized liaison and went on to point out weaknesses in the American system of supplies, not only as to munitions but as to food and water.

"Several times it has happened that the men have remained without supplies for a number of days. In spite of the endurance which the American troops always show on these occasions, the wear and tear on them in this case was such that they had to be relieved after two or three days.

"Cantonments—In spite of the manner in which American soldiers are willing to sacrifice their comforts, it would be well to see that there is sufficient room in the cantonments to avoid losses through sickness, once the bad season starts. It seems to have been forgotten that the strength of a U. S. infantry division is superior to that of a French infantry division.

Doughboys Under the Instruction of the French. Above—A Sergeant and His Gun Crew of the 26th Division Taking a Few Minutes' Rest

"Conclusion—The operations in which the American units have taken part in France show in every stage of the game admirable daring and spirit of sacrifice, and an earnest desire to do the right thing. There only remains for the American forces to more deeply absorb the principles which they have been taught, and to carry on the fight according to those principles, which are the result of four years of experience in war."

The criticisms of the French Military Advisory Mission dealt partly with the handling of the First and Second divisions in the Battle of Soissons, in which they constituted, with the dashing Moroccan division, the spearhead of the general attack. These two divisions covered themselves with glory that day, but certain delays and failures of liaison were pointed out by the military mission in Washington. In this connection the comments of the French general on the spot, who commanded all the troops in the attack, are worthy of note.

Addressing a colonel of an American regiment after the First and Second divisions had been relieved from his command, General Mangin said: "Good-by, colonel. You are now returning to the American General Headquarters and will probably see General Pershing. I want you to tell him for me that I and all of my staff officers have watched the First and Second American divisions very closely while they have been with me, and if there were anything in their conduct or the way they have been handled which needed correction I should tell General Pershing as a professional service. But there was nothing which I or my staff could find to criticize."

There was too much fighting on his hands for Pershing to bother with criticism during the fall of 1918, but after the armistice the American commander in chief dealt with this report.

"Without discussing what appears to me to be the impropriety on the part of the French High Commission in submitting such a paper to the War Department," Pershing wrote on December twenty-fourth, "I desire to invite attention to the inaccuracies and to the character of the comment contained in the paper in question."

Riposte

THEN he quoted some criticisms. They were of a minor character—a civilian would regard them as mere pinpricking.

"The manifest intention in the above quotations," he wrote, "is the discrediting of the work of the American staff.

"For the operations south of Soissons, the 1st. and 2nd. Divisions were at the disposition of the French. The 2nd. Division was moved by motor busses from the region west of Château-Thierry to the region south of Soissons. This movement was exclusively controlled by the French staff. It is true that the delay which occurred in orders reaching the lower units was inexcusable. This delay must, however, be attributed first to the orders and counter orders received from the French, and second, to the inefficient work of the French staff officers who were charged with every detail of the movement of the 2nd. Division by motor bus. In this movement the French were overanxious that they should not overlook any American in the account to be rendered for transportation. To this end the busses were held up while French staff officers made an accurate check of the number of American troops.

"5. Since the French High Commission has mentioned the action of our troops south of Soissons, it may be well to record here the fact that through the action of the French staff, certain American ambulances ordered to join our troops were stopped by the French and were not allowed to execute their orders. The excuse offered by the French staff was that all necessary ambulances were available from French sources and would be at the disposition of our troops. As a consequence of this action on the part of the French staff we were inexcusably hampered in caring for our wounded.

"6. Many of the individual officers of the various French missions attached to our forces have been of the greatest possible value, and their criticism and assistance have, in fact, been indispensable. On the other hand, instances have occurred in which criticisms have been based upon such a distortion of facts as to cause the belief that some French authorities have been willing to go to any extreme in support of their ulterior motive of bringing

A SONG IN THE NIGHT

By C. E. Scoggins

ILLUSTRATED BY GEORGE E. WOLFE

I WAS a caliph once. Yes, once in the very manner of the good Harun himself I befriended a homeless vagabond, fed him and clothed him and dazzled him with my wealth and kindness; but there must be some difference between ancient Bagdad and Milo, Indiana. It didn't work out just right.

It was June, I remember, because I was at the station to meet Martha, who was coming home from Vassar. It was June; out along Madison Avenue the elms were green, and people were beginning to sit on their porches in the evenings, and honeysuckle was in bloom. June, 1912, it must have been, because that year I was president of the Live Wire Club and we put up that big electric sign at the station—Milo Offers More.

No doubt you've seen it, passing through? It was new then, and that evening the station agent forgot to turn it on.

I remember Martha kissed me, before the whole crowd, as calmly as if we were already married. It made me feel a little blank; I don't know why. Maybe I'd thought she'd be excited about it, or shy, or something; but she kissed her mother, and then me, and then Andy her demon brother, and three or four of the girls, and got into her mother's car and drove off talking a mile a minute; and I stood there wishing something were different; I don't know what. Business was good, and Martha was lovely, and I was one of Milo's rising young men; but it didn't seem so very much to cheer about, after all. I suppose caliphs often feel that way.

So I noticed that the sign wasn't lighted, and you may believe I spoke about it.

In those days people moved when Howard Pressley spoke. Far down the train the conductor was already wailing "Bo-o-o-oard!" when it blazed out, every bulb doing full duty. Having seen to this I was turning away, when I became aware of an entirely illegal passenger who sat on the blind platform of the baggage car, blinking and shrinking in the sudden glare of that splendid slogan.

"Well, greetings, Weary!" I said with my unfailing wit.

The train moved. He relaxed and grinned.

"Does it?" he murmured.

"Does what what?" I inquired intelligently.

"Offer more," he said, waving a bland farewell.

Yet not, alas, farewell. Jerry the station cop knew the unlawful uses of the blind-baggage platform; Jerry the lynx-eyed knew I was not given to conversing with empty space. Violently the hand of the law fell on the ankle of the transgressor. Violently they rolled across the concrete into the parking space, and for a minute you couldn't see the taxicabs for the dust.

The vagabond came out of it. Unfortunately I was in his way. "Oof!" said I, and "Whoa!" said Jerry; and the train departed.

"Ho, hum," sighed the vagabond. "Welcome to Milo, Gus!"

I felt a little to blame. No, I will tell the truth: I had never seen a hobo in high laced boots and wide gray hat; he looked like a character out of a Wild West movie; he was grimy, but he was lean and broad-shouldered, and he had a jaw.

Have I said that life seemed orderly and dull? I was diverted.

"Gus," I said, "you take the words out of my mouth! If we'd known you were coming we'd have furnished a softer cop for you to fall on."

Jerry was not amused; a hobo by the railroad's brim a simple vagrant was to him. Said he vengefully, "Come along. Git goin', Gus!"

Selling real estate teaches you to think fast. I walked with them round the corner into the shadow; I spoke confidentially to Jerry and offered a certain soothing argument, and Jerry kept on walking.

Yes, ten dollars was all I thought I was going to pay for one Arabian Night's entertainment, Indiana edition!

"Here's my car," I said. "Hop in."

Now that I had my vagabond I didn't know just what to do with him. Feed him, I supposed, and learn the sad story of his life.

"Hungry?" I asked him.

Her Clear Eyes Widened and Her Dainty Brows Went Up. She Had Thought, of Course, That I Came Alone

His voice, a leisurely barytone with a sort of Western nasal quality, fitted his picturesque appearance, but his words were somewhat hackneyed.

"Old-timer," he said, "I take this mighty kind of you, but don't get me wrong. I ain't exactly a hobo."

"Of course not," I sighed. "I take it, though, you wouldn't refuse a meal?"

"I could eat a wolf," he admitted, "raw. But if it's all the same to you, let's go somewhere and shell out a few cinders first. Mamma! That engine burns lots of coal."

He seemed to find a certain humor in his grimy discomfort; maybe he was some special kind of hobo, after all. I drove round to the side entrance of the Park Hotel, prudently avoiding the lobby, and smuggled him up to my rooms.

"Gosh!" he murmured, gazing.

Right there, I can see it now, was where I got the caliph feeling—princely, you know, all generous and noble. Through his eyes I saw the true magnificence of my own bachelor quarters; by pleasing contrast I felt my own importance in the world. "There's the bathroom," I told him. "Go as far as you like."

What is there about bathrooms that makes people sing? He hummed, this vagabond, disjointedly at first, sputtering and splashing; then you could follow an odd, foreign-sounding melody. It took hold of you; it made you somehow wistful; but I got to thinking about Martha. I don't know why, and forgot to listen. Martha, and long summer evenings at the country club, where she and I would slip away alone. Down the fifth fairway where it drifts into the woods, our feet falling silent and our voices hushed, through a vale drowned in shadow to a velvet knoll under the moon. Martha, and the lights and laughter sweetly remote across the stillness. A new hot longing thrilled me. I had not meant to go to her this evening; she would prefer to rest after her trip. And yet ——

I looked at my watch. The bathroom door opened.

"Say," cried my vagabond, refreshed, "can I use a slug of this alcohol rub here on the shelf? This is the first time I been clean for a week, and I feel reckless."

He was naked, and, by Jove, he was a powerful specimen! No wonder the burly Jerry had found him hard to hold. His shoulders were thick and round, with little bulging veins that showed not an ounce of fat; his flanks were spare and hard, and his skin as white as a baby's. I had thought he was dark, but that was only soot and sunburn. He was indeed a special kind of hobo. From a sooty bundle he fished clean if rumpled underclothes, and he had a razor too.

"Old-timer," he cried zestfully, "now this is some way for a white man to live! What do these diggings set you back—or do you own this dump?"

That was his manner of speaking—crude; forceful, but crude. I was moved to maintain my status as a caliph. I mentioned, not too conservatively, the sum I surrendered monthly to the management, and he whistled so respectfully that I was almost consoled for not owning the Park Hotel.

I had a sudden pleasing fancy. I almost laughed. "Wait a minute!" I said, getting up. "You're about my size. Wonder if you could wear my shoes?"

"Huh?" said he.

"Hobnailed boots," I explained tactfully, "while admirable for—er—general touring purposes, aren't exactly appropriate for dining."

He grinned. Even in his rumpled underclothes I tell you, the fellow was picturesque, his white teeth showing boyishly in his lean brown face.

"For a fact," he observed, "I been missin' meals right regular lately. Maybe it's my boots."

Even as I opened my wardrobe door the idea grew on me. But I didn't laugh. Casually, in the true manner of a caliph, I tossed him my dinner jacket and its accessories; reserving for myself, as was fitting, the superior formality of tailed coat and white tie. Now that was all in order, wasn't it? Purple and fine linen, as I understand it, are part of a caliph's stock in trade. Very properly, too, the stuff baffled him and the cut of the vest dazzled him.

"Oh, mamma!" he murmured. "Jerry, Jerry, pinch me quick!"

But I didn't laugh. I was kindly, tactful. I skillfully adjusted his tie and turned to put the finishing touches to my own.

Then quite suddenly it came to me that there was nothing much to laugh about. My face seemed more than usual—well, not fat, but roundish; and my brisk dignified carriage did make my—you know—my front stick out a little. I looked like what I was in those days, a prosperous young business man. But he! In my very own clothes which fitted him badly enough, this fellow Hardy was distinguished. Yes, Hardy he said his name was; Gus Hardy. He had gone moody, pacing restlessly about the room; he carried his hands in his pockets and his wide shoulders loose; and his brown face, lighter across the forehead, gave him the look of one of those big-game hunters or explorers you see at banquets. I made mental note to wear a hat that summer, playing golf, so my forehead would stay white that way.

Yes, I perceived a difference between Bagdad and Milo, Indiana. In Bagdad everybody knows which is the caliph.

"Where did you get that sunburn?" I asked him.

He answered absently, gazing out the window, "Guatemala, I reckon."

I give you my word I didn't know where Guatemala was; only had a vague notion that it was one of those South countries. And he laid no emphasis on it; rather he seemed lost in some somber train of thought; yet when he spoke that word he wrapped it in glamour. He didn't. If you know what I mean, speak it in English at all. The syllables came clipped and liquid off his tongue, like the murmur of deep quiet water, and for a moment you saw a land far and strange.

Digitized by Google

That, of course, was my cue to command him, "Now tell me the sad story of your life. Begin!"

I led him to the dining room and planted him at a secluded table, and even then I couldn't think of a graceful way to get at it—looking across rose-lighted linen at that brown face and gentlemanly shirt front. The New York-like elegance of the Park Hotel did not lend an atmosphere; all the modern caliphs I could recall seemed to have operated in quaint greasy chop houses and saloons.

"Sorry I can't offer you a drink," I said. "Local option, you know."

He nodded absently, gazing about the room. It was a little late for diners; there were only the Andersons, and the Naylors with an out-of-town guest, and a few traveling men.

I tried again. "Pretty hot in Guatemala, eh?"

"Hot enough on the coast. In the mountains, no."

"You were in the mountains?"

"Quezaltenango. Railroading."

There it was again, the crisp liquid murmur of syllables that conjured up visions. "It doesn't sound like a place where there'd be a railroad," I said.

"There ain't, yet. Never will be, maybe. We're trying to find a way through."

And he seemed to think he had said it all.

"Jungle?" I prompted.

"Mountains. One of those places God forgot to finish—ten thousand feet up and no way to get down. The Indians say He had a lot of land left over and just dumped it there."

"Oh!" I said. "Indians. Hostile?"

He grinned absently, making a negative gesture with one forefinger—he was always doing something with his hands. "Mayas," he said, curling the word so quaintly that I had to ask him how it was spelled.

"Oh," I said, "Mayas!"

"Yeah. Ever see any of the Maya ruins? Quiriguá, for instance?"

He asked it simply, as if you might walk down the street any day and see Maya ruins.

I repeated after him, "Keereegwáh?" as if searching my memory; but the flatness of my own syllables humbled me.

"Old," said Gus Hardy. "Old when the Spaniards came; old when Christ was born; nobody knows how old. All courts, two hundred feet between walls, where they played a game like basket ball. Platforms for sacrifice, where they cut men's hearts out so their crops would grow. Palaces and temples—empty these two thousand years and more."

His eyes came back to mine, and I remember that they were intensely blue.

"Makes you feel queer," he said. "Makes you feel like a man lived about a minute—like a fly. Here's Quiriguá, a station on the white man's railroad. A United Fruit farm, with switch engines shunting around, loading bananas for the States; and over here this place that was a city when Pilate washed his hands. Big sandstone pillars sticking up, carved all over—some kind of writing, they claim—and a Maya king at the top. With whiskers," he said, and stopped, looking at me.

"Flat faces and slant eyes. And whiskers; but no Maya, no Indian has a hair on his face to-day. Where did they come from, those fellows? Where did they go?"

I could see the Naylors and the Andersons watching us, wondering, no doubt, why we wore evening clothes—while Gus Hardy wondered what had happened when the world was young.

"Stone temples around a court—standing there, still solid after twenty centuries of jungle rot. They didn't know how to build an arch; they had to make the rooms little and the walls thicker at the top so a slab of stone would reach; but they had mortar that's better than any we know.

"And some of those slabs are granite—granite, half a ton to a slab, and no granite formation in a hundred miles! No trucks, no wheel roads; nothing but man power. How did they do it—and why?"

He Looked Like a Character Out of a Wild West Movie

I doubt if I knew, even then, what we ate. With short crude strokes he wiped out for me the Central America of O. Henry and Richard Harding Davis, its funny little republics and palms and revolutions; building instead a grim old empire, fixing me with the flame of imagination on his brown face.

"Makes you feel queer," he said. "You go out through these banana groves, the light seeping sort of wet through those big flimsy leaves. Quiet, only a switch engine clanking somewhere, and the lazy whack of some nigger's machete. Quieter and quieter, the jungle choking you, and no sound but your horse's hoofs squashing along the trail. And you come out on this place—this place where kings walked alive. Hot, you know, and still; so still you can hear the jungle growing to swallow it again, creeping up under your feet, crowding in, smothering you. Like something alive and wicked, waiting, eternally waiting to swallow the things men do. And you run into a big idol squatting in the brush, half frog, half tiger—grinning; and you hear a switch engine whistle and you jump. I promise you, you jump."

His talk drifted. Chucho, Huehuetenango, Retalhuleu, I can remember yet the flavor of those names! Black beaches and the endless thunder of giant combers on the sand; steaming lowland, and plateaus in the sky where cloud seas flowed below you and the sun burned you through icy air. Distance and space and color, through which rode white men, laughing, conquering. The Mayas, survivors of an ancient race—you saw them trotting in from the hills on market day; the women with slant-eyed,

WHEN AMERICA GOES EAST

By PERCEVAL GIBBON

ILLUSTRATED BY H. J. SOULEN

THE morning sun was slanting into the courtyard of the house where the hanum, the one wife of Ferid Bey, sat yet at breakfast, when the bey himself came striding forth from his quarters with a musical tinkle of spurs.

The hanum, lolling in her chair beside the little table that bore her coffee and rolls under an awning of vines, lifted large heavy-lidded eyes and smiled at him languorously.

"Good morning, my dear," she said in French.

The bey smiled back and came across the courtyard towards her to take her long limp hand and bend above it. From doorways here and there faces peeped forth, swarthy, fez-crowned, viewing as with awe this strange and incomprehensible ritual of morning greeting.

"You are well, I hope," said the bey, and took a seat close to her. "I will ask you for a cup of coffee before I go on my business—on our business. Ah, there is no cup!"

He, too, spoke in French, but when he summoned a servant he neither rang nor called. He clapped his hands sharply. There came shuffling forth from the *ev*, the body of the house, an individual in a long dull-blue gown who bowed stiffly, averting his eyes from the hanum's unveiled face. To him the bey, without turning, threw an order as curt as a curse, in Turkish.

"There will be no difficulty, you think, about that business?" queried the hanum in her slow and creamy—there is no other word for that throaty contralto of the speaking voice—tones. "It would be terrible if this year we could not get to Bukharest. I am withering away in this place. Sometimes I wish we could emigrate altogether, like the peasants."

The Bey Came Across the Courtyard to Take Her Long Limp Hand and Bend Above It

The bey smiled, for truly she had no look of one who withers away. The daughter of the pasha of Adrianople and a purchased Georgian beauty, she showed in face and figure the best of both strains—the intemperate-blooded Turk and the specially bred sex-specialized Caucasian. She was tall and large in the frame, with a face of a perfect oval and the hue of marble that has ripened in the centuries; her every expression and attitude were mere different phases of graceful and languorous repose. She was dressed now in a white muslin frock with blue ribbons; her arms, long and smooth, and her neck, were bare. Her night-black hair was coiled low on her brow; and no veil hid her beauty.

"You cannot be allowed to wither, my dear," answered the bey. "And it is not only that; we need money for other things, besides our visit to Bukharest. We need it in every direction. But I do not think there will be a great difficulty. I shall go to the Jew."

"Ah! Not to—the bank?"

The blue-gowned servitor, still careful not to rest his eyes upon the countenance of the hanum, returned with the cup and presented it. He arrived at the precise instant necessary to save the bey from an outward and visible wince at his wife's mention of the bank. He filled his cup and sat back to sip it.

"My dear," he said, "the bank! If it were not for your honored father, the pasha, and, perhaps, for my own official standing, the bank would have swallowed us whole long ago. These Germans—you know what they are!"

He made a little grimace of disgust and contempt, such as a millionaire might use towards a man of letters. His wife watched him with great, lustrous, unwinking eyes. He was not more than thirty, a tall, beautifully built young man, with a hard gay face of faultless regularity. A smear of black mustache was brilliantined to perfection under the slight hook of his nose; his wide mouth, with its full underlip, was sensuous, sophisticated and cruel. He was recognizable at a glance as an item in that social scum which breaks in poison bubbles to the surface of that cesspool swirl of races which is Constantinople; gratifying Orient appetites with vices of the Occident; wearing a fez for social convenience and drinking wine for his stomach's sake.

He wore the fez now; for the rest he was cap-a-pie in riding clothes that would have passed muster on Rotten Row or in the Bois de Boulogne—cord breeches, black boots, silver spurs, and everything handsome about him. It was the pose of himself and his wife, to themselves as to the world at large, that they had put the customs and prejudices of their own people and religion behind them.

Fathma, the hanum, dressed from a Viennese fashion magazine; Ferid Bey modeled himself on the foreign officers and attachés he saw in Constantinople. Paris being out of their reach, they went once a year for a month of dissipation at Bukharest, where one may make a beast of oneself in good company. And they spent money; they strewed it abroad like water; and when money came to an end they borrowed. The hanum was thoughtful. "But the Jew?" she objected. "We owe him already much. Will he ——?"

The bey laid down his coffee cup and rose. He gave her his wide, light-lipped smile, the same smile he had carried with him through Armenia to Trebizond and back, what time his nickname was The Friend of the Vultures.

"I think he will," he said very deliberately. "And now I must go."

"I will see you off," she replied, and stood up.

They went together through the deep-arched gateway in the wall and passed through it to the road without, where against a clump of tangled fig trees a ragged groom squatted, holding the bridle of the bey's stallion. He sprang upright at their appearance and made a reverence.

The bey did not notice him by so much as a glance. With his wife's hand on his arm he stopped and looked around him, a frown that was not all of thought gathering on his brow. Beside him his wife stopped, too, unquestioning and passive, trying to follow his eyes and see whatever it was that he saw. To her all was as usual. Before them across the shining water of the Maritza and the farther stream of the Tundja, rose the walls and roofs of Edirne, which Westerners call Adrianople, swelling with domes and spiked like a porcupine with a bristle of slender minarets. Behind them was the great Turkish house, flat roofed, its walls crowned with high arched red tiles. The Rhodope Mountains showed in the sunlight like bulks of dull sapphire; the waters trickled, the leaves rustled; no more.

"I hate it!" said the bey suddenly. "But it is the only home we have. If we lost it ——" He stopped, biting his lip.

"Lost it?" echoed Fathma.

He looked down at her. She raised her great eyes to him, and for a space of seconds they remained staring into one another. His was the gaze of an avid animal; hers the willing prey. In full sight of the wondering and dismayed horse boy he caught her to him and kissed her on the full lips. He let her go with a little self-conscious laugh and beckoned the boy to lead the stallion over to him.

"And now, really, I must go to my Jew," he said.

The boy held the stirrup and he swung himself into the saddle handsomely. The stallion pawed and fidgeted coquettishly, long black mane and sweeping Arab tail aswish. Ferid Bey looked down upon the wife of his bosom.

"I ride against our enemies," he said. "I go as a knight!"

She smiled, not in mirth, but because he was smiling, and stood yet a while to watch him as he cantered toward the bridge that leads over the river and into the maze of the old city. Then she turned and lounged back to her chair in the courtyard for her usual morning's occupation—manicuring her nails and studying fortnightly copies of Paris and Vienna fashion plates.

Ferid Bey pulled the black stallion to a walk as he passed through the cemeteries which stand about the entrance to the city, and headed him towards that stench-tangle of alleys and densely inhabited plague holes which

Digitized by Google

is known as the Kalé Quarter. About him, as he rode, life seethed like water in a caldron, like a broken ant hill, like maggots in carrion. In the alley by which he went, moving over the heads of the throng which jostled and pressed aside to give his magnificence free passage, like an indifferent angel passing over a ruined world, every house was a shop. At the roots of it were caverns, within which squatted merchants—a Jew, a Greek, an Armenian, rarely a Turk; their dark faces looked out from their holes impassively at this fair specimen of the common enemy. It was like riding between the cages of a menagerie of daunted but untamable beasts.

It was at one of these shops that he pulled the stallion to a halt and bent forward above the animal's neck to peer under the low brow of the place. The alley was itself a place of day-long shadow; the shop at first glance was dark as the pit. But at the bey's brusque call someone stirred within it; a piece of the general blackness moved forward, and there came forward to Ferid's eyes the tall bent figure of Izak ben Ibrahim, the rich man.

There was a black skullcap on his head; his black gown enveloped him from his neck to his feet. Upon the bosom of it his great gray beard, matted with dirt, made him, as it were, a breastplate. His forehead rose in a noble arch from his heavy white brows, under which the eyes were still as sheltered pools; a splendid curve of nose swept down to bisect the drooping mustache that hid the mouth one knew to be strong and humorous. Altogether a splendid, formidable and tragic figure; the bey leaned aside and spat as it came into his view. The old Jew spread out long thin hands and bowed his reverend head between them in humble salutation.

"Come nearer!" ordered Ferid Bey, in Turkish. "I have something to say to you."

Izak ben Ibrahim moved near to the stallion's shoulder. Ferid Bey looked at the old face contemplatively for some moments from under gathered brows.

"I shall need some more money," he said suddenly. "At once," he added.

The old man made no answer for an instant, and then not in words. Not even by gesture; it was conveyed by a subtle but unmistakable alteration in the whole poise and manner of the man. What had been a proud and stately humility in him, a surrender to the accepted forms of deference and servility, became suddenly a slack and non-resistant helplessness, like the attitude of a scolded dog that rolls over and submits. A thousand spoken no's could not have made his refusal clearer.

Ferid Bey's face darkened. "What do you mean?" he demanded. "Are you playing with me? You will bring it to-night, within two hours of sunset, to my house. You hear? The same sum as last time!"

This time Izak ben Ibrahim spoke. "Excellency, I can lend nothing; I have nothing to lend."

"Oh?"

"It is truth, Excellency. I have nothing." The old man's words rang sincere. "My daughter's *chozan*, her betrothed, has come back from America. He was the son of a jeweler in this city; and now that my daughter is to be married I have given them my business for a dowry."

He shrugged the Jewish shrug of deprecation, shoulders humped to his ears, palms outspread. "I am an old man, Excellency; so I gave them the business. And"—he looked up; if he smiled his beard hid it—"and the debts," he added.

"You dog!" said Ferid Bey, almost mechanically. But he was thinking—thinking hard. "I must have a talk with the pasha about you, Izak. We have left you alone too long. But in the meantime, where is this Jew from America?"

A voice in the darkness of the shop answered briskly, "He is here!"

There was a sound of movement, and a second figure came forth to the light of the alley. Ferid Bey stared at it. It showed as the remains of a young man, a face miserably thin, an empty sleeve, a leg that dragged uselessly. It was dressed in worn khaki breeches and leggings and a thin alpaca jacket. On its head was a dreadful old bowler hat.

The newcomer paused in the doorway and took calm stock of Ferid Bey, sitting aloft upon his black stallion. He neither saluted nor bowed. The bey, according to custom, leaned aside and spat at sight of him; the broken youth in the doorway bent forward and spat likewise.

"What is your name?" demanded Ferid Bey.

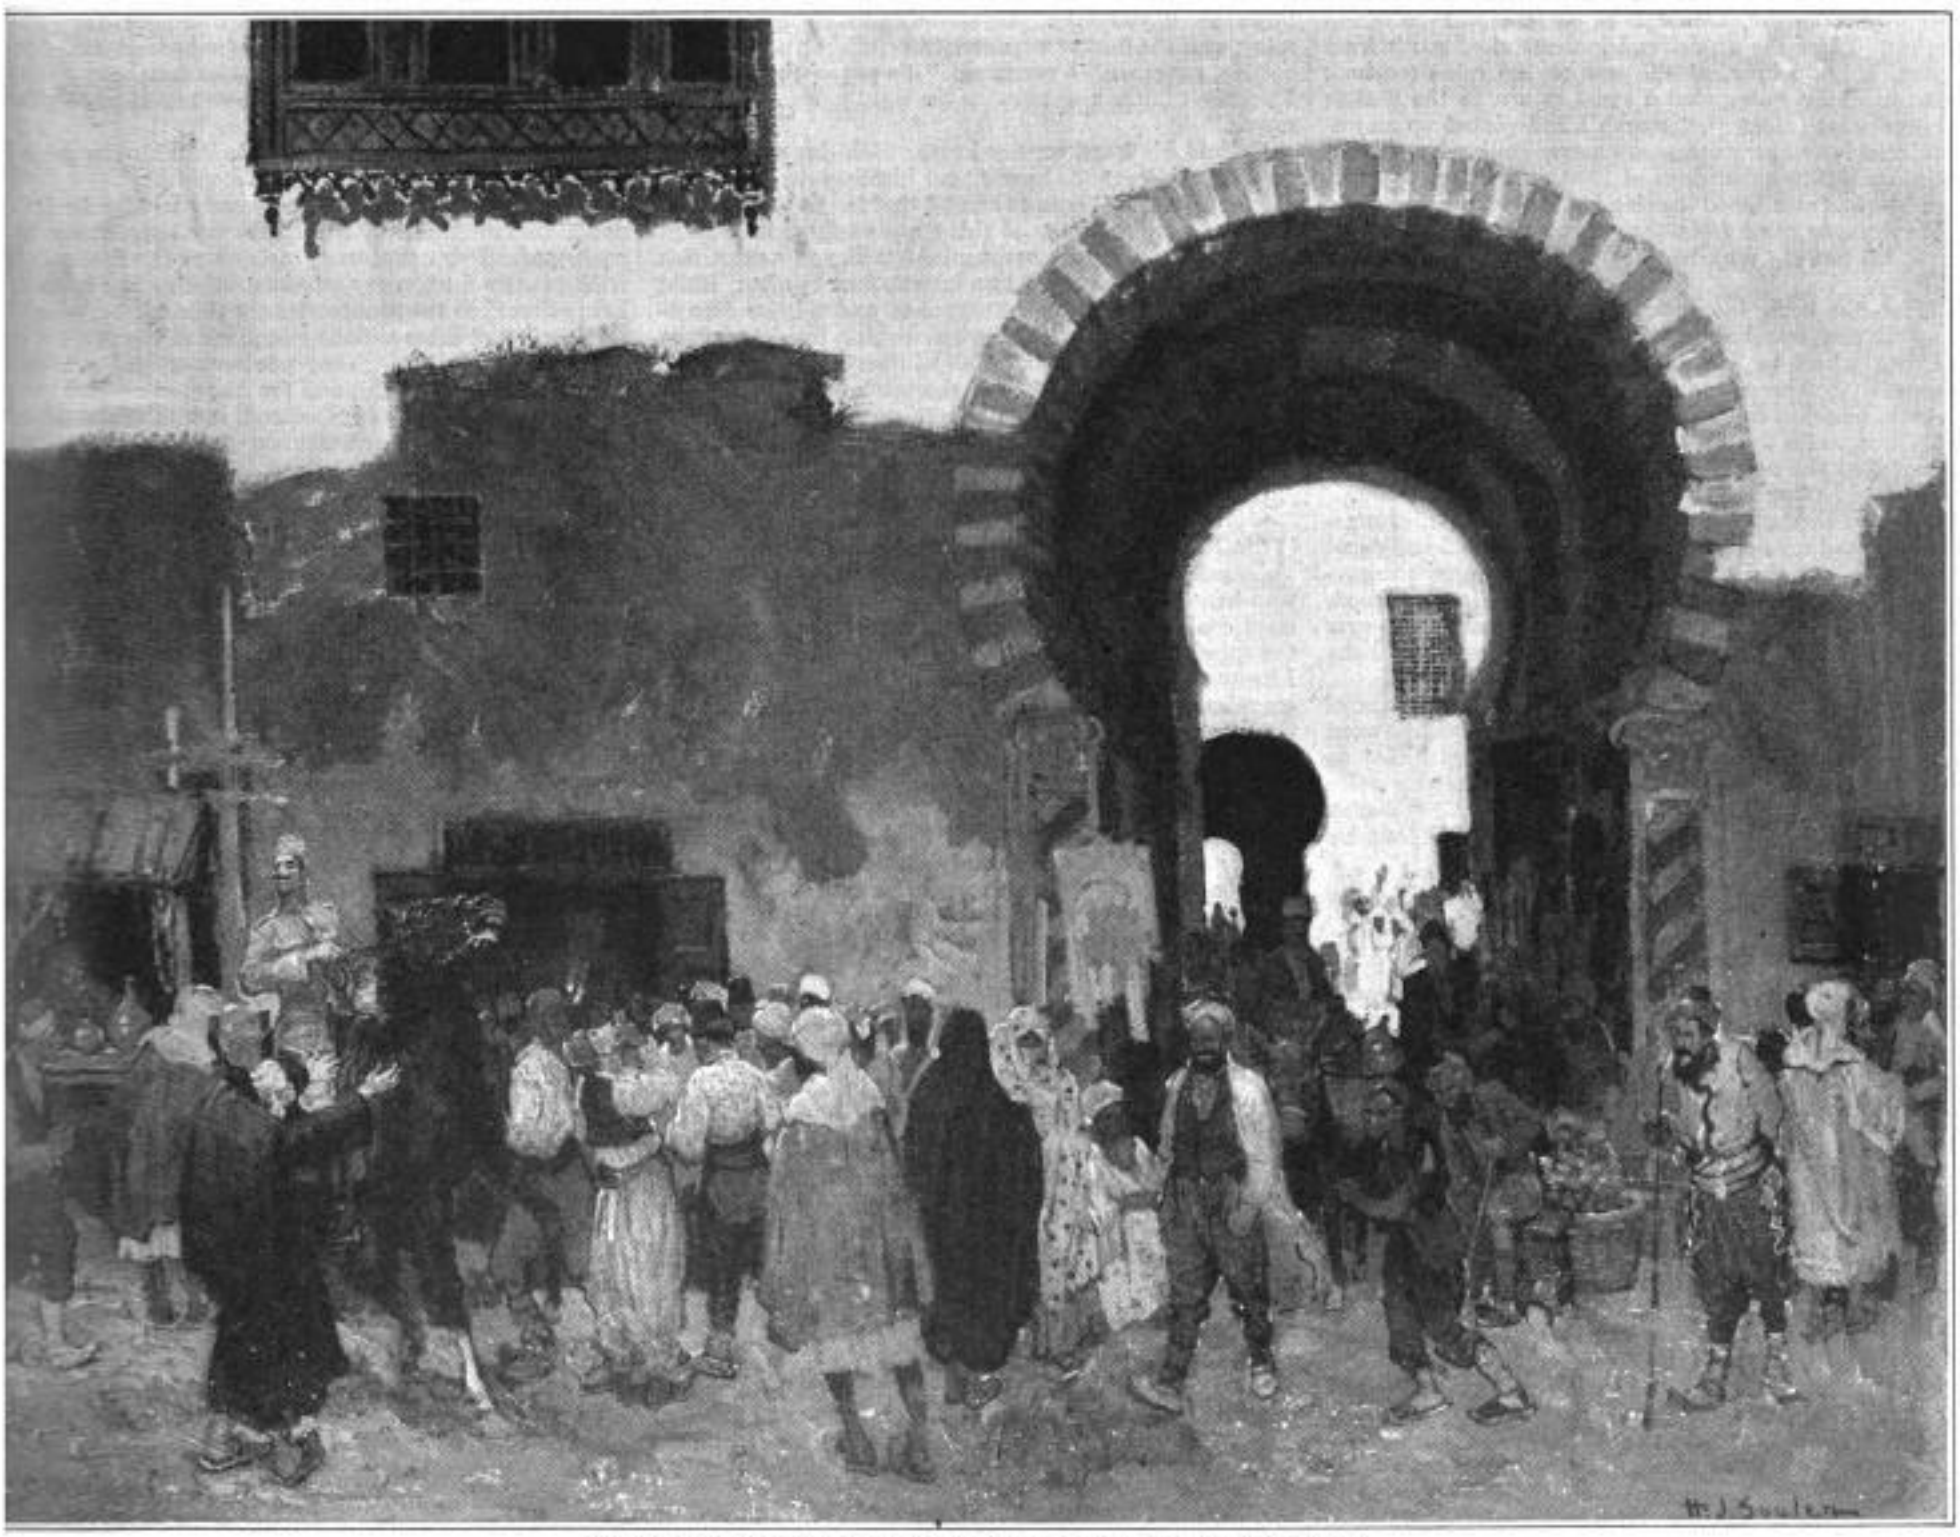
"Jacobs," was the answer. "What's yours?"

He spoke, of course, Turkish; but somehow by his tone and manner and by his choice of words he managed to make that prolix tongue serve the uses of crispness, even of slang.

Ferid Bey restrained himself. His need for money was vital.

"It will pay you to learn quickly who I am," he said, through his teeth. "Tell him!" he spat at Izak ben Ibrahim.

The old Jew spoke to the other in a low tone. The younger man nodded.



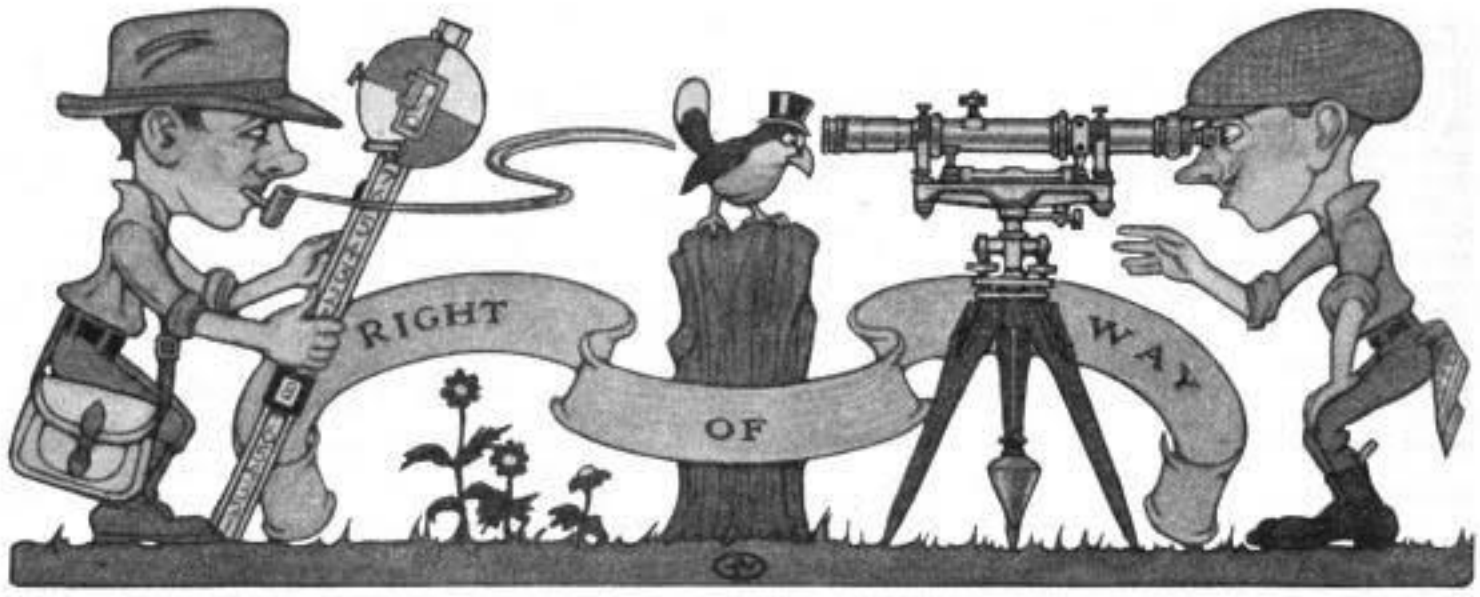
"Yes," he said aloud. "You are right. It will pay me to know you and where to find you."

He hobbled forth as he spoke, and seated himself on the low edge of the open shop front. With his one arm he lifted his crippled leg to cross the other.

"I'm starting in to collect the outstanding loans," he said calmly. "I'm beginning with you. You've had over two hundred and fifty thousand piasters of our money, and you've paid nothing—not even a single para. And now you want more!"

The pasha on his divan could not have been more at his ease, more assured and self-secure. A cold shiver ran up Ferid Bey's back. And this was a Jew—a Jew! He sat still in a mere trance of amaze.

(Continued on Page 104)



"Come Nearer!" Ordered Ferid Bey. "I Have Something to Say to You"

Highways and Highwaymen

By a Former State Commissioner

DECORATIONS BY GUERNSEY MOORE

FOREWORD: Every state in the Union now has or is organizing a department of highways; never before has road building been undertaken on so large a scale. Owing to the enormous sums being spent by the states and the Federal Government for highways the honest building of roads affects directly every taxpayer in the country.

What follows is not intended as an arraignment of any one political party. This article is written to show the political evils affecting highways that prevail in my own state, in the hope that should similar conditions exist in other states what is here said may prove of some public benefit.

I HAD been for two months in the hospital of a military camp, slowly pulling myself together, when word came from a man whom I barely knew that the governor of my state wished to see me.

One year before, I had been an engineer officer in France. After the armistice I had marched south from Sedan, only to hear, at the end of 126 rain-drenched, heart-breaking miles, that I must return to the States; for somewhere along that march I had picked up an uncomfortable temperature and a never-ending cough. In those tense November days of 1918, just before the end, someone had mentioned the election in my state, but when this summons came from the governor I could not even recall his name. Why he should wish to see me was a mystery.

Mysteries being interesting, I secured leave from the hospital and searched out the governor's rooms in the building where he gave audience to the people of our largest city. The anteroom was crowded; there was the smooth, bleached-faced politician; the impatient business man, anxious for the passage of some bill, was there; there also waited the poor sad-eyed women, eager to learn the chances of having husband or son released from prison.

I moved through the crowd to an inner door. Immediately I had my first surprise. I was expected and could go at once into the private office. As I entered the governor was bidding a group of men good-by. He turned, gave my hand a firm grip, and without smiling his eyes traveled from the top of my head to the soles of my hob-nailed boots.

"Sit down. You are Major Gray?" From years of campaign speaking in the open his voice had become worn to harshness, but beneath the rasp is a note hard to describe. If any two words can cover all that his voice conveys, they are "positive" and "sincere." "You've been recommended to me as an engineer who knows his business. I've got a job for you."

What the Governor Wanted Me For

I ASKED myself what political job a governor could give to one as far from being a politician as is possible, and made a snap decision to reject his offer.

"I'm looking for a highway commissioner," he continued.

I gasped. In our state one of the most sought-for positions within the gift of the governor is that of highway commissioner.

When I had caught my breath I answered: "You've made a mistake, governor; you're looking for some other Gray. I'm not your man."

"Why?" He shot the word at me.

"Because I'm no politician."

"Who said I wanted a politician?" he said sharply. Then his face was lighted by a smile. "Don't you know that if I wanted a politician I could get a thousand by just holding up one finger? I've been dodging politicians for weeks; I'm looking for a road builder."

"But, governor, I know and care so little about politics that I don't even know whether your term of office is for two years or four."

This deplorable ignorance surprised him. "You belong to the Poverty Party, don't you?" he asked.

"Yes, but I have sometimes voted for Property men when I thought them the better candidates."

"Well, that's only a little crime; and I know you can build roads; you'll do." He said this, his clear eyes fixing mine, as if the matter were settled.

"No, governor," I persisted; "it's out of the question. I wouldn't know how to make the right political appointments."

He laid his hand on my knee. "Politics again! It's politics, major, that's keeping our highway department in the mud. I would hate to believe that in the party which has made me governor of this state we haven't enough talent to supply your assistants, but if you accept this appointment I have just two instructions to give: Build for the state the best possible roads, and rid the department of peanut politics. I promise you a free hand; you can appoint any man you think will best serve the state."

His eyes so plainly showed the truth behind his words that I was astonished. To appreciate my surprise an explanation is necessary.

A Blow to the Politicians

THERE is in our state a political machine of which I had heard only hard words. There are thousands of people who believe it in closer league with the devil than is his chief coal heaver. The mere mention of the name chills the spines of thousands of honest citizens. The one thing I knew about our governor was that he stood high in this organization, and to my shame I record that this knowledge made me suspicious of one whom I now know to be the most directly honest man with whom I have ever been associated.

We discussed the appointment a few minutes longer.

"Think it over, major, and give me your answer Monday." Suddenly all harshness left the governor's voice, his face grew sad. "There's a poor woman outside whose son is condemned to death. I must talk to her now."

I left the governor, profoundly impressed by his vivid personality, but as to accepting the appointment I held grave doubts. I sought out a friend whom I knew to be politically wise.

"Commissioner of highways!" he cried. "Why, man, you didn't listen right."

I assured him that I had. He sounded a long-drawn whistle and drummed on his desk.

"Well," I demanded, "is this thing on the level?"

He turned on me quickly. "You can bank on anything the governor says. But in offering you this job, undoubtedly against the wishes of the party leaders, he's done a bigger thing than you can realize."

"Well, shall I take it?"

"It's a tough job to handle."

"Yes," I answered; "he told me frankly that it was the hardest one in the state."

"And that you could fill jobs without political interference? Well, the governor will try to keep that promise, but, strong as he is, it can't be done. As for your accepting, I just can't advise you one way or the other. I'm too surprised."

Upon returning to the hospital I spoke of the matter to the officer in charge.

"For your own sake," he told me, "I ought to keep you here. You're running into more trouble than you ever saw in the Argonne. Boche gas maims a fellow physically, political gas eats away his good name."

That night a friend of the governor called me on the phone and asked if I had made my decision.

"I have," I answered, "and please thank the governor for the honor he has done me."

It is pleasant to record that the press praised the governor for giving the place to a practical road builder. Even many of the Property papers commended his action. He had created, or rather broken, a precedent. Heretofore this highly technical department had been intrusted usually to a lawyer, always to a politician. Since the law was enacted making it a single-headed commission I am the first and only engineer who has been commissioner. I was told later of the astonishment my appointment caused at the capitol.

"Gray!" the lawmakers gasped. "Who the deuce is Gray?"

My name was given the Senate early in March; it was not until the middle of April that my appointment was confirmed. This unnecessary delay was the first political trick practiced upon my administration. My name had been referred to the Senate Finance Committee, where, in the keeping of those zealous guardians of the state, it was securely held. Although my predecessor had overserved his term by two months, and for five months had known that he would not be reappointed, it was explained that he needed time to clear out his desk. The truth is, that confirmation was delayed in order to give a Property commissioner time to advertise and get under way certain roads much desired by deserving men of his party.

One of these lay in a county near the capital city. Disregarding the fact that in another part of the county there was a road sorely needed by a large community of farmers, my predecessor advertised a highway to cost $43,000 a mile, that began at the city line, ran through an uninhabited section, between and paralleling two already improved roads. But this favored road—in no way connected with the state system—led to some property in which a senator was said to be interested, and who, strangely, was a member of that finance committee.

Political Methods in Practice

THE second road was an equally vicious example of political favor. Built in a sparsely inhabited rural county, it passes two, possibly three cottages, and serves a ridiculously small amount of traffic. But it aided an important assemblyman to reach more comfortably his hunting lodge in the mountains. You can readily grasp the neatness of this arrangement. Useful men—to the Property Party—in both Senate and Assembly were taken care of; the farmer and the farmer's crops could afford to wait; and it cost the state to please two deserving Property politicians the insignificant sum of $121,217.

This kind of thing has been practiced so long and so openly in our state—and perhaps in yours—that by now it is considered legitimate. The senator for whom this road was built would be surprised—yes, shocked—if it were said that his use here of political influence had been dishonest. He is looked upon by his neighbors as a monument, standing for all that is wise and righteous. As for the assemblyman—well, he, too, would be shocked. "Yes," he would tell you, "the state needed that road badly." In his home town he talks loudly of red-blooded Americans, and on Sundays he goes to church.

I saw the governor for the second time on April fifth. He asked me to be in the capital city by the eighth, as he expected the Senate's confirmation on that date. He spoke of the importance of securing an efficient secretary.

Digitized by Google

"As I told you," he said, "you are to make your own appointments, but I know one man for that job who could help you with the political end."

I am striving to write a true account of the experiences of a nonpolitical holder of a political office; I must then tell not half but all the truth. With a prayer for forgiveness, therefore, I write that in spite of the impression this man had made on me I still held some lingering doubts. Remember, please, that I had seen him but once.

"What kind of a ward-heeler is he going to name?" I asked myself.

"He's a young man from upstate," the governor continued. "I believe you'll like him; anyway, look him over. His name is Roy Field."

Looking backward it now seems absurd that I should have felt such relief at hearing that name. Here was no ward-heeler. Field was known to be as square as a die.

When I left the governor I was conscious of a feeling of security, of absolute trust in every word he had spoken. And here let me say that never have I left him after any one of our many interviews that I did not experience the same reaction. It was always as if I had been given something that I did not have before—added trust, a new enthusiasm to strive harder to do my work efficiently. I am not a young man; I am no hero worshiper, but I thank the fates that I can still be glad on the rare occasions when I meet a really big man.

An Ax-Grinding Reception Committee

MY SIGNATURE was not dry on the hotel register in the capital city when things began to happen. They must have been camped in the lobby awaiting my arrival. Agents for bonding companies, white-faced, stout gentlemen with friends—good party men, all—who needed jobs; truck salesmen; steam-roller men; road-scraper men; all these and more eagerly grasped my hand, smiled delightedly at the mere sight of me, and pulled me from this side to that to whisper in my amazed ears.

Confused, dazed, I fled to my room, where, behind locked doors, I stayed until morning. But they were a patient crew; I found them, their ranks swelled, awaiting my appearance at breakfast, and one persistent, sticky, asphalt salesman walked with me clear to the door of the governor's private office.

Behind that barrier I found peace. The governor's secretary and his assistant greeted me cordially, but neither could hide his interest in the strange innocent their chief had named for the big job. The governor was working at the mansion and would be a few minutes late. While waiting I read the announcement of my arrival in the local papers. It was given half-column, front-page space, but what depressed me more than I can tell was the gist of these notices. It can all be summed up in the single useful word, "patronage." Literally, in those sheets there was not one word of my ability or lack of it as an engineer, no question of what kind of roads would be built, no hope expressed that I might build good roads; instead, each paper had used some five hundred words to tell what juicy plums lay hidden in my Christmas box. Gleefully they recorded how many fat jobs I had to fill, ending with the grand patronage total I could distribute. Patronage! I hated the word then, I loathe it to-day! Then, when my spirits had struck bottom, the door opened with a bang and a brisk young man came into the room on springs. He was well built, well dressed, and every inch of his rather short figure was alive; his eyes twinkled. To each of the secretaries he spoke some quick word that brought a laugh. Humor, action, ability showed in every curve of this young man's stocky frame.

"Now, why the devil," I growled, "can't that fellow have been like this one? I'll bet he'll grow up soft, fat, timid, and all the rest of it."

The governor's secretary spoke in his usual tones to the newcomer. I was standing behind my newspaper, too busy to read.

"No, you don't know," answered the stranger cheerfully. "Well, it's too bad, from what I can see. Excuse me, George; excuse me gently." The secretary turned toward me, the stranger, smiling broadly, at his

"Commissioner"—I quailed at the new title—"this is an old friend of mine. He comes from my home town." He paused and I held my breath. "Let me introduce Mr. Field."

I grasped the outstretched hand. "Not Mr. Roy Field."

"Guilty, and entirely without an alibi!" Field nodded his round head rapidly before saying as if proclaiming a miracle: "So you're the new commissioner!"

"And you're the new secretary! There's no discussion about that, Mr. Field, you're simply it."

We were still talking when the governor came in. After telling me that my appointment had at last been ratified he bade Field steer me through the formidable task of taking over the department. Then he turned to the huge pile of letters on his desk with "Now go to it."

That one short sentence was all he considered necessary to his commissioner of highways. Not a word did he say, then or later, in favor of this road or that; no lengthy instructions to give as to what I should or should not do, and no mention was made of those appointments, seemingly so vital to the newspapers.

Surely a good beginning!

No sooner had I taken the oath of office than I found before me one of the most distasteful duties it was ever my bad luck to face.

"Come on, commissioner," Field said lightly, "now we'll go to the department and fire that bunch of earnest Property workers."

"Fire them! Don't you suppose they have vacated already?"

A smile spread across Field's cheerful face. "Vacated? Each one of those deserving Propertists is sitting glued to his little chair; they'll get their name on to-day's pay roll if it costs them the seats of their trousers."

I had of course expected that my predecessor would remain to turn over the office, but I had thought that his personal appointees would have left before my arrival. When, embarrassed by the prospect of the wholesale dismissals before me, I entered the department, I learned that all were present and accounted for; there wasn't a single A. W. O. L. in the building.

Rewards and Punishments

AFTER an hour's talk with my predecessor, during which he was generous with advice, I was finally left in charge. Field at once stuck his grinning head through the door.

"Well, commissioner, I hope you haven't forgotten any of the wisdom he passed on. Each word, you know, was a pearl."

I swore roundly. "My right ear's gone lame!"

Our highway department is a huge machine, but not too large for the great work it is doing. To accomplish its work the department has a personnel of engineers, inspectors, clerks, in all about a thousand employes. In addition there were the patrolmen. During the twenty months I held office the department spent and obligated for contracts the tidy sum of $41,000,000 of the taxpayers' money. Do you gasp at the patronage possibilities? Huge as is this sum it does not cover all the patronage.

One frank member of the Property Party, when I had been asked by a new governor to resign, explained it to me in this wise: "You see, we've got to get control of your department. The salaries you pay strengthen us, of course, for they will all now go to our party men; but, after all, salaries satisfy only individuals; it's building roads that counts. By building a road here or refusing to build one there we can please or discipline whole communities at one shot."

To manage efficiently an intricate business of this size, one hedged about by every conceivable political complication, is no job for an infant.

From the moment my appointment appeared in the papers, requests for jobs began to pour in. There were but two classes of applicants—the young engineer just out of college and the old engineer out of a job. I soon realized that the successful engineer of from thirty-five to forty-five years, especially those belonging to the Poverty Party, could not be persuaded to consider a political job.

It is a popular sport to criticize public appointments; if other department heads have one-half the trouble I experienced in securing first-class men they do not deserve your criticism. There is no sound reason why the man successful in private enterprises, assured of steady employment, should give up such a position for a temporary public office, where the only thing he may definitely count upon is vicious abuse from the opposite party and the partisan press.

The first employe I saw, after taking office, was the auditor. I had thought it necessary to appoint some friend of long standing to this position, but one look into Stephen Gillett's face determined me to make no change. Gillett is a $25,000 a year man, who from sheer love of his work filled the position for the inadequate $5000 that the state then paid.

Bucking the Political System

MY NEXT appointments caused surprise throughout the department and a good part of the state. I found the private secretary of my predecessor to be a young man who, during the four years he had served that loquacious gentleman, had acquired experience valuable to the department. I reappointed not only this man but the young woman who had acted as the former commissioner's confidential stenographer. Before the day had passed a politician, locally prominent, galloped into my office.

"What are you doing?" he exclaimed. "Do you want to disrupt our entire party?"

With difficulty I retained my patience. "These people have knowledge it would take a year for new employes to gain," I said.

"I don't care about that. Why, commissioner, the Property Party wouldn't keep a scrubwoman who was a Povertist! For the good of the party you've got to fire those people and appoint Povertists."

"For the good of the state they shall stay. I'm running this department for all the taxpayers, not for any party," I answered.

He left, boiling, and marched straight to the governor.

After listening to his complaint the governor asked him to return the next day. When he did so he found other Poverty leaders assembled.

The governor, as quoted to me, said to them: "Gentlemen, I have requested you to meet here to-day in order that I might ask you to keep your hands off the highway department and let that man Gray alone. During my administration I want the highways managed for the best interests of all the people."

It is quite impossible to convey to the average citizen, unacquainted with politics, what amazement this caused. After that interview a Poverty leader in one of the largest cities did not speak to our governor for three months.

When, after three days in office, I had found no suitable man to fill one of the most important positions I had to offer I appealed to the governor.

"Bob," he called to a clerk, "bring in that highway file."

Bob returned with a file two inches thick, holding not less than a hundred letters.

"Are all those recommendations?" I asked, amazed.

"They are the selected ones; we've thrown out as many more," the governor answered smilingly.

As he ran through the letters my amazement grew. Some had been written by the biggest men in the state, yet the governor had never before mentioned the letters, the writers or the candidates so ardently recommended. We went through that great stack of letters carefully, but none, we thought, named a man fitted for the work. During the reading the governor vetoed several candidates from personal knowledge; not one did

RITA COVENTRY

XXX

By Julian Street

ILLUSTRATED BY HENRY RALEIGH

ARRIVING at Cleveland in midafternoon, Parrish went to a hotel, and after a brief pause there took a taxicab and, giving the driver Alice's address, set forth into the unknown. After passing through a busy district of large retail shops and theaters, in which it seemed to Parrish people dashed across the streets with little regard for regular crossings, they came to an "auto row" made up of two and three story buildings of brick and tile, with here and there a mansion of an earlier day rearing its smoke-begrimed bulk in futile defiance of the outward march of trade; then more old houses, ugly and massive, some of them well kept, telling of wealthy families still holding on, others turned into dressmakers' establishments, art shops and rooming houses. A few minutes farther out, at a trolley crossing, was a thriving center—a small city within a large one—with banks, stores, and yellow taxis clustered around a railroad station; and after perhaps ten minutes more, during which the cab traversed a section where apartment houses and business buildings waged about equal warfare with old homes, another secondary business center, with its cross-town trolley line, banks, motion-picture theaters and shops. Then a parked circle with a bronze statue and a little lake behind it, a boulevard winding amid trees and shrubbery, and presently, after a long and rather steep ascent, fine heights, on which stood large residences in spacious grounds, with here and there an apartment building sharply breaking the skyline. More winding along a parked way: this one double, with street cars running down the middle and new houses built or building at either side; and at last, after what was beginning to seem to Parrish a very long drive although his watch told him they had been little more than half an hour en route, a right-angle turn into an intersecting highway which a street corner sign told him was Willowbrook Avenue.

Bound Up With His Almost Religious Adoration for Her as a Beautiful Spirit Was a Passion for Her as a Beautiful Woman

It was the kind of street he had, from Alice's descriptions, expected it would be: flanked by lots, not very large, and modest modern homes. One or two of the largest houses might, he thought, have cost as much as eighteen or twenty thousand dollars, while the least of them must have cost twelve thousand. The shrubs and trees in the yards were young, and on such residences as were embellished with vines the loftiest shoots did not reach more than half way to the eaves, though there could be no doubt that, like the owners of the houses, they were year by year progressing upward in the world. Inexpensive cars stood in front of several of the houses, and between many of them were little drives made of twin strips of cement, leading back to small garages.

Here and there children were at play with their sleds, laughing and shouting as they made the most of the thin coat of snow that lay upon the ground, and from the sizes of the children Parrish gathered an impression that the fathers and mothers of this neighborhood were young.

The house before which the taxi stopped was of stucco and brown-stained timber, low and substantial, somewhat in the style of a California bungalow, although there were upper windows, indicating a second story tucked away beneath the long slope of the roof.

A little boy and girl near the house stopped playing and advanced a few steps to inspect Parrish as he alighted from the taxi.

Passing up the walk he smiled at them, but their big blue eyes remained solemn.

"How do you do, Georgie? How do you do, Alice?" he said, with a mischievous desire to astonish them.

They did not reply, but continued to follow him with their eyes. The only sign of their having heard him was given by little Alice, who quickly reached up and placed her small red-mittened hand in her brother's.

Parrish ascended the steps, crossed the wide porch and rang the bell. Then, turning, he looked back at the little pair. They were still staring at him, but now Georgie, taking courage from the safe distance intervening between him and the strange gentleman, became vocal.

Nodding his head emphatically, as if in affirmation of a fact almost unbelievable, he declared: "I got a puppy. Name's Don. He can lick my face."

And before Parrish could make a suitable comment the high baby voice of the little girl chimed a corroborative echo: "He can lick his face." Like her brother she nodded as she spoke, widening her eyes, gravely bright.

"Is his tongue rough?" Parrish asked.

"Yes, it's rough," said Georgie. And "It's wuff," immediately echoed Alice.

The conversation was interrupted at this juncture when a maid opened the front door.

Parrish asked for Alice and gave the maid his card, which, having no card tray, she took in her hand.

"Come in," she invited civilly, opening the door wider after having looked at the card as if to see that he was not a canvasser. As he hung his coat and hat on the dark oak rack in the hall he saw her on the way upstairs inspecting the card again.

In the parlor he sat down in a morris chair by a wide front window. Out in the yard he could see the children at play. They were sweet-looking children, as Alice had said. He felt grateful to them; somehow—he did not quite know how—they had made easier his approach to the house.

The room was quite large with dark woodwork and patternless gray-green wall paper. The furniture was in the mission style, of oak—fumed oak, he believed it was called—and the cushions in the chairs were of brown leather. The best thing in the room was the spacious Khiva rug, and the only other rug was a black bearskin, with a mounted head, lying before the fireplace. Between the front window near the chair in which he sat, was a massive table with a cover of soft leather dyed to a maroon color and on this stood a lamp having a verdigris metal base and a translucent shade of glass, streaked green and white. Neatly arranged upon the table within reach of the morris chair were many popular magazines and several current novels. Against the wall was an ebonized

right piano with a book of songs for little children on the music rack, and beside the piano stood a tall wrought-iron lamp with a shade of wine-color silk. Aside from two hard-less landscapes in watercolor there hung upon the walls an etching of Rheims Cathedral, a sepia print of one of Rossetti's slender women, and at either side of the hall door a figure reproduced in black and white from Abbey's mural decorations in the Boston Public Library.

He had ample time in which to observe these details since the maid was gone for a long time. Outside, the daylight was beginning to fade, and the parlor, its windows shaded by the porch, was becoming shadowy. Overhead he could hear someone moving about. He wondered if it was Alice getting ready to come down.

Presently he heard a step on the stairs. But it was not Alice; it was the maid again.

"Miss Meldrum asks to be excused," she announced.

"She—she does?" He stood nonplused.

"She's not very well to-day."

"Oh, I'm sorry," he said, relieved. "Please tell her I'll come back this evening to find out how she is." He mentioned the name of his hotel.

Digitized by Google

Putting on his overcoat he wondered who it was he had heard moving about the room overhead. Of course it might have been the maid.

His spirits were at zero as he took his hat from the rack. He did not wish to leave the house; it was the one place in Cleveland where he wished to be, but he could think of no excuse for staying. Could it be possible that she would refuse to see him after he had come all the way out to Cleveland, sleeping in an upper berth and changing cars at Buffalo to get here in a hurry? Surely she could not be so hard on him as that! She was so sweet and gentle. On the other hand, though, he had known down in Virginia many an unreconstructed old lady, and some young ones too, who were the embodiment of gentleness until Yankees were mentioned, when they became more bitter than the most fiery of Confederate veterans. That under Alice's tenderness there might be an unrelenting strain was a possibility he had not until now faced. Oh, she must see him! She must!

As with great reluctance he opened the front door to leave the house, he found himself face to face with a stranger who was ascending the steps—a powerfully built man of about his own age, with ruddy cheeks and good-humored blue eyes. Reaching the top step the man brought a key ring jingling from his pocket; then, as the door was already open, he put back his keys and, looking closely at Parrish, nodded pleasantly.

"If I'm not mistaken," he said in a strong voice, "you're Mr. Parrish, from New York."

"Yes—Mr. Brooks?"

"The same." His smile was engaging. "I had to reach around in my mind for a minute to think what your last name was. You're known as Dick in this house."

Parrish smiled back.

"I was having precisely the same difficulty with you," he said. "Of course Alice always speaks of you as George."

The master of the house came in and shut the door behind him.

"Take off your coat," he said.

"Thanks. I was just going."

"Where to?"

"Back to the hotel. I came to see Alice, but the maid tells me she isn't very well. Thought I'd try again this evening." George had hung up his ulster.

"Yes," he said; "she's had a lot of headaches lately. That's why I came home early." Then, as Parrish had not moved to take off his overcoat, the other hospitably stripped the garment from his back, saying: "Here, you don't want to go yet. Come into my den—we'll have a smoke."

He led the way down the hall to a small room even more masculine in its equipment than the parlor.

Already Parrish was beginning to like this cordial Middle Westerner with his big voice, his close-cropped, wiry, wavy hair and his understanding eyes. Moreover, he was grateful to him for making it easy to remain.

"Hold on!" said George, stopping just inside the door. "That must be your taxi outside." When Parrish assented his host turned back, declaring: "I'll send him away. When you have to go I'll drive you down."

"You're very kind," Parrish said, following him; "but let me send him away."

"Put your money back in your pocket!" ordered George as they raced together down the walk.

"No, I can't let you pay for my taxi."

"Yes, you can too! Forget it! This is *my* town." He thrust money into the driver's hand and dismissed him, whereafter they returned to the house and settled themselves with cigars in the lamplight of the den.

"When did you get in?" George asked.

"This afternoon. I was due about 2:30, but my train was late."

"Ever been to Cleveland before?"

"Once or twice, on business, years ago."

"It's a good town," George assured him.

"I really don't know anything about it," Parrish answered. "I just went to a hotel and an office and a club."

"Been to the Athletic Club?"

"No, it was an old-fashioned club, very nice, right across the street from the hotel."

"Oh, the Union—I don't belong there. I'll be glad to give you a card to the Athletic if you'd care for it."

"That's very good of you."

After discussing the Athletic Club for a time George drifted to general talk about Cleveland; about how Cleveland grew, and why; the city's industries; the late Tom Johnson, and the cult of the three-cent fare; then, drifting to comparisons, he went on:

"I don't see how anybody can stand living in New York. Every time I go there it seems to me the place is worse. More people—more congestion, under the ground, and on it, and above it. And so many foreigners. Whew! That town makes me depressed about the future of the country. I have to keep reminding myself of Ohio and these other states out here."

"No doubt you're right," returned Parrish; "but you must remember that New York has a lot of attractions."

"Too many apartment houses," the other went on. "To live in a flat seems to me only a shade better than living in a hotel. I like to feel that I'm anchored to the soil. But I know what you mean, about attractions, and of course it's true. New York does offer a lot in the way of things that are improving—and entertaining—museums, the theater, concerts and opera—if you care for opera and that sort of thing."

"Yes, yes," said Parrish hurriedly.

"It seems to me," George continued, "that New York is essentially a battle ground where men try their strength. Business competition must be terrible, and there are more temptations, more ——"

"I'm delighted to hear that Mrs. Brooks is so much better," Parrish put in.

George beamed.

"She certainly gave us a scare," he answered; "but she'll be home pretty soon now—probably better than ever. It's a darn shame, her being sick. She didn't need to be, but she's one of those women who hates to leave her family, and she wouldn't go until she had to. That's the way with the Meldrums—they don't care about a whole lot of people, but, Lord, how they do tie up to the ones they're fond of!"

He seemed for a moment to reflect on this quality in the Meldrums; then, in a new tone, leisurely and expansive, he went on: "Well, I'm mighty glad to see you here, Parrish." He cocked his eye humorously. "I doped out that you'd be coming."

"I've been meaning to come for some time."

"I hope you'll stay till Margaret gets back. She and I are interested in you, you know—hearing so much about you. First thing Alice takes out of her bag when she gets here is your picture, and it's the last thing she packs before she leaves." And he added, with his infectious chuckle, which sounded as if a bag of marbles were being rattled in his chest: "If you're as much of a man as she claims you are you're quite some person."

"I'm afraid I'm not, though," Parrish answered gravely.

George chuckled again.

"Of course you're not! If you were as good as Alice claims you are, then you'd be as good as Margaret claims I am, and there isn't anybody that good." He shook his head ruminatively. "They're a great pair, those girls! Alice—she's a sketch! I don't know what I'd have done without her while Margaret was away. I don't mean only running this plant for me and taking care of the children—I mean the way she's worked to cheer me up—and the way she's amused me unconsciously too." He laughed reminiscently. "Friend of mine—perhaps you've heard of

THE COVERED WAGON

By Emerson Hough

ILLUSTRATED BY W. H. D. KOERNER

XL

THE freakish resolves of the old-time trapper at least remained unchanged for many days, but at last one evening he came to Molly's wagon, his face grim and sad. "Miss Molly," he said, "I'm come to say good-by now. Hit's for keeps."

"No? Then why? You are like an old friend to me. What don't I owe to you?"

"Ye don't owe nothin' to me yit, Miss Molly. But I want ye to think kindly o' old Jim Bridger when he's gone. I allow the kindest thing I kin do fer ye is to bring Will Banion to ye."

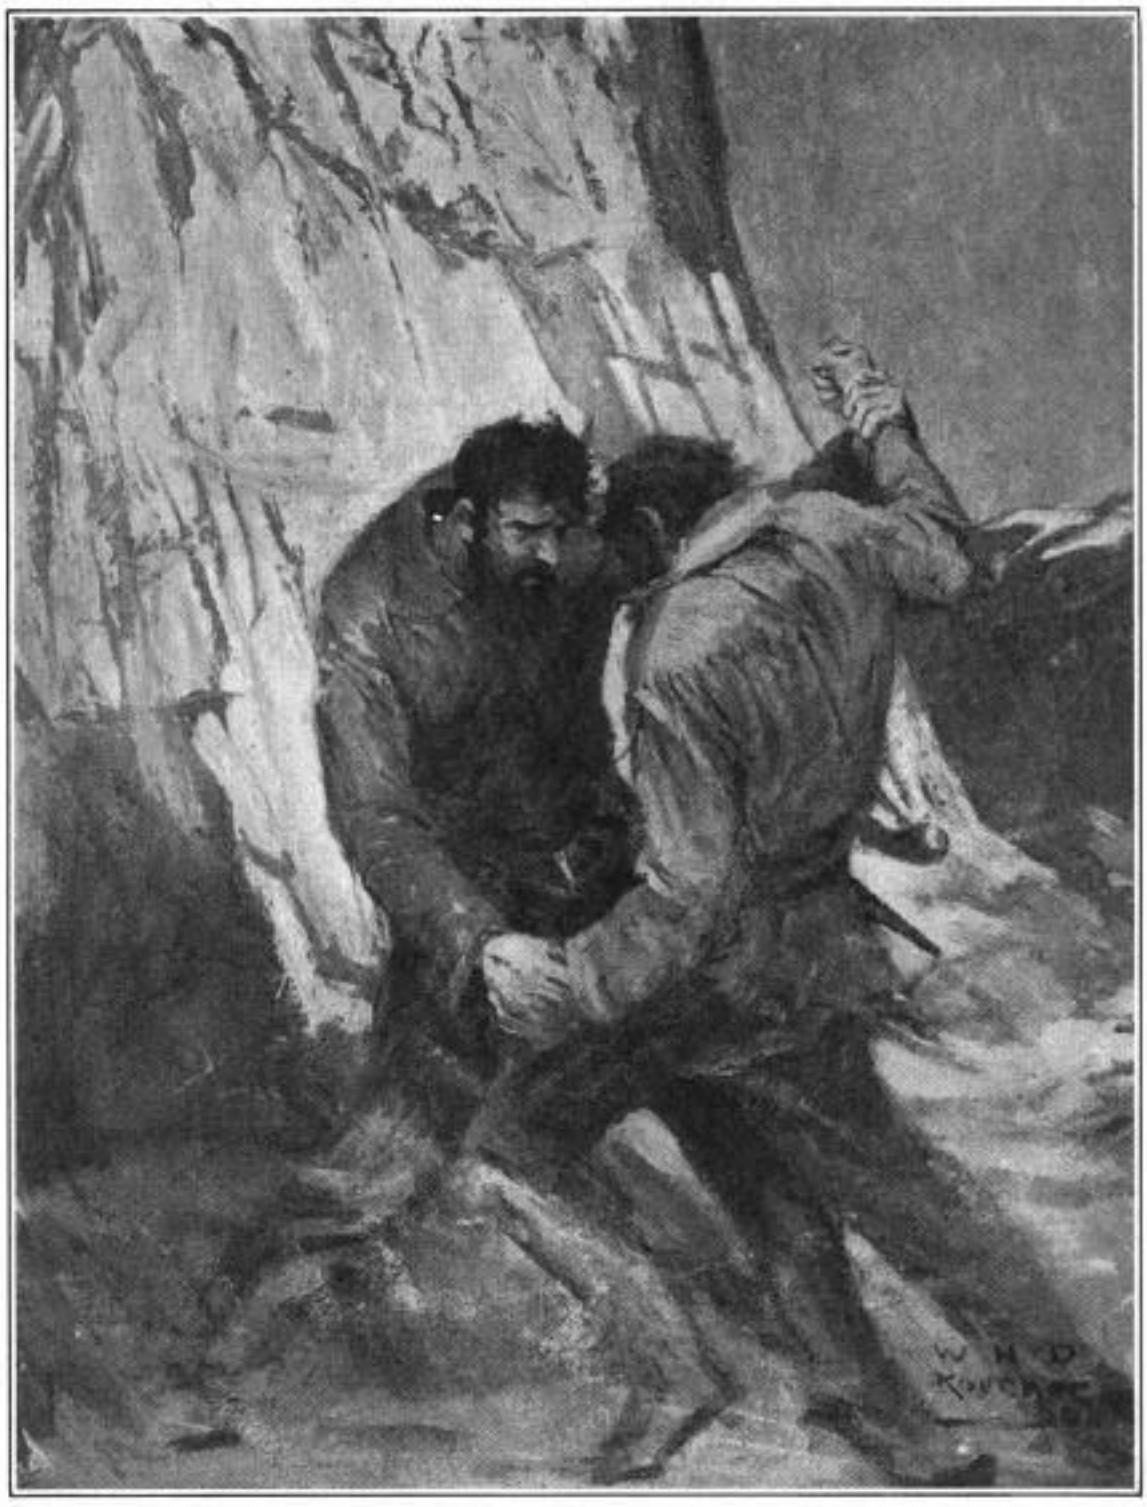
"You are a good man, James Bridger," said Molly Wingate. "But then?"

"Ye see, Miss Molly, I had six quarts o' rum I got at Boise. Some folks says rum is wrong. Hit ain't. I'll tell ye why. Last night I drinked up my lastest bottle o' that Hundson's Bay rum. Hit war right good rum, an' ez I lay lookin' up at the stars, all to onceт hit come to me that I was jest exactly, no more an' no less, jest to the ha'r, ez drunk ez I was on the leetle spree with Kit at Laramie. Warn't that fine? An' warn't hit useful? Nach'erl, bein' jest even up, I done thought o' everything I been fergettin'. Hit all come to me ez plain ez a streak o' lightnin'. What it was Kit Carson told me I know now, but no one else shall know. No, not even you, Miss Molly. I kain't tell ye, so don't ask.

"Now I'm goin' on a long journey, an' a resky one; I kain't tell ye no more. I reckon I'll never see ye again. So good-by."

With a swift grasp of his hand he caught the dusty edge of the white woman's skirt to his bearded lips.

"But, James ——"



Suddenly she reached out a hand. He was gone.

One winter day, rattling over the icy fords of the road winding down the Sandy from the white Cascades, crossing the Clackamas, threading the intervening fringe of forest, there broke into the clearing at Oregon City the head of the wagon train of 1848. A fourth of the wagons abandoned and broken, a half of the horses and cattle gone since they had left the banks of the Columbia east of the mountains, the cattle leaning one against the other when they halted, the oxen stumbling and limping, the calluses of their necks torn, raw and bleeding from the swaying of the yokes on the rocky trail, their tongues out, their eyes glassy with the unspeakable toil they so long had undergone; the loose wheels wabbling, the thin hounds rattling, the canvas sagged and stained, the bucket under each wagon empty, the plow at each tail gate thumping in its lashings of rope and hide—the train of the covered wagons now had, indeed, won through.

On the front seat of the lead wagon sat stout Molly Wingate and her husband. Little Molly's cart came next. Alongside the Caleb Price wagon, wherein now sat on the seat—hugging a sore-footed dog whose rawhide boots had worn through—a long-legged, barefoot girl who had walked twelve hundred miles since spring, trudged Jed Wingate, now grown from a tousled boy into a lean, self-reliant young man. His long whip was used in baseless threatenings now, for any driver must spare cattle such as these, gaunt and hollow-eyed. Tobacco protuberant in cheek, his feet half bare, his trousers ragged and fringed to the knee, his sleeves rolled up over brown and brawny arms, Jed Wingate now was enrolled on the list of men.

"Gee-whoa-haw! You Buck an' Star, git along there!" So rose his voice, automatically but affectionately.

Certain French Canadians, old-time *engagés* of the fur posts, now become habitants, landowners, on their way home from Sunday chapel, hastened to summon others.

He Fought Fast and Furiously, Striving to Throw the Body of a Man Almost as Strong as Himself, and Now a Maniac in Rage

"The families have come!" they called at the Falls, as they had at Portland town.

But now, though safely enlarged at last of the confinement and the penalties of the wagon train, the emigrants, many of them almost destitute, none of them of great means, needed to cast about them at once for their locations and to determine what their occupations were to be. They scattered, each seeking his place, like new trout in a stream.

XLI

SAM WOODHULL carried in his pocket the letter which Will Banion had left for Molly Wingate at Cassia Creek in the Snake Valley, where the Oregon road forked for California. There was no post office there, yet Banion felt sure that his letter would find its way, and it had done so, save for the treachery of this one man. Naught had been sacred to him. He had read the letter without an instant's hesitation, feeling that anything was fair in his love for this woman, in his war with this man. Woodhull resolved that they should not both live.

He was by nature not so much a coward as a man without principle or scruple. He did not expect to be killed by Banion. He intended to use such means as would give Banion no chance. In this he thought himself fully justified, as a criminal always does.

But hurry as he might, his overdriven teams were no match for the tireless desert horse, the wiry mountain mount and the hardy mules of the tidy little pack train of Banion and his companion Jackson. These could go on steadily where wagons must wait. Their trail grew fainter as they gained.

At last, at the edge of a waterless march of whose duration they could not guess, Woodhull and his party were obliged to halt. Here by great good fortune they were overtaken by the swift pack train of Greenwood and his men, hurrying back with fresh animals on their return march to California. The two companies joined forces. Woodhull now had a guide. Accordingly when, after such dangers and hardships as then must be inevitable to men covering the gruesome trail between the Snake and the Sacramento, he found himself late that fall arrived west of the Sierras and in the gentler climate of the central valley, he looked about him with a feeling of exultation. Now, surely, fate would give his enemy into his hand.

Men were spilling south into the valley of the San Joaquin, coming north with proofs of the Stanislaus, the Tuolumne, the Merced. Greenwood insisted on working north into the country where he had found gold, along all the tributaries of the Sacramento. Even then, too, before the great year of '49 had dawned prospectors were pushing to the head of the creeks making into the American Fork, the Feather River, all the larger and lesser streams heading on the west slope of the Sierras; and Greenwood even heard of a band of men who had stolen away from the lower diggings and broken off to the north and east—some said, heading far up for the Trinity, though that was all unproved country as far as most knew.

And now the hatred in Woodhull's sullen heart grew hotter still, for he heard that not fifty miles ahead there had passed a quiet dark young man, riding a black Spanish horse; with him a bearded man who drove a little band of loaded mules! Thus, progress, so came the story, was up a valley whose head was impassable. The trail could not be obliterated back of them. They were in a trap of their own choosing. All that was needed was patience and caution.

Ships and wagon trains came in on the Willamette from the East. They met the coast news of gold.

Men of Oregon also left in a mad stampede for California. News came that all the world now was in the mines of California. All over the East, as the later ships also brought in reiterated news, the mad craze of '49 ever then was spreading.

But the men of '48 were in ahead. From them, scattering like driven game among the broken country over hundreds of miles of forest, plain, beneh land and valley land no word could come out to the waiting world. None might know the countless triumphs, the unnumbered tragedies—none ever did know.

There, beyond the law, one man might trail another with murder stronger than avarice in his heart, and never be the wiser. To hide secrets such as these the unfathomed mountains reached out their shadowy arms.

Now the winter wore on with such calendar as altitude, latitude, longitude gave it, and the spring of '49 came East and West, in Washington and New York; at Independence on the Missouri; at Deseret by the Great Salt Lake; in California; in Oregon.

Above the land of the early Willamette settlements forty or fifty miles up the Yamhill Valley, so a letter from

Digitized by Google

Mrs. Caleb Price to her relatives in Ohio said, the Wingates, leaders of the train, had a beautiful farm, near by the Caleb Price mill, as it was known. They had up a good house of five rooms, and their cattle were increasing now. They had forty acres in wheat, with what help the neighbors had given in housing and planting; and wheat would run fifty bushels to the acre there. They had bought young trees for an orchard. Mrs. Wingate had planted roses; they now were fine. She believed they were as good as those she planted in Portland, when first she went through there—cuttings she had carried with her seed wheat in the bureau drawer, all the way across from the Sangamon. Yes, Jesse Wingate and his wife had done well. Molly, their daughter, was still living with them and still unmarried, she believed.

There were many things which Mrs. Caleb Price believed; also many things she did not mention.

She said nothing, for she knew nothing, of a little scene between these two as they sat on their little sawn-board porch before their door one evening, looking out over the beautiful and varied landscape that lay spread before them. Their wheat was in the green now. Their hogs reveled in their little clover field.

"We've done well, Jesse," at length said portly Molly Wingate. "Look at our place! A mile square, for nothing! We've done well, Jesse, I'll admit it."

"For what?" answered Jesse Wingate. "What's it for? What has it come to? What's it all about?"

He did not have any reply. When he turned he saw his wife wiping tears from her hard, lined face.

"It's Molly," said she.

He Put His Hands on Her Shoulders, Held Her Away at Arm's Length

XLII

FOLLOWING the recession of the snow, men began to push westward up the Platte in the great spring gold rush of 1849. In the forefront of these, outpacing them in his tireless fashion, now passed westward the greatest traveler of his day, the hunter and scout, Kit Carson. The new post of Fort Kearny on the Platte; the old one, Fort Laramie in the foothills of the Rockies—he touched them soon as the grass was green; and as the sun warmed the lunch grass slopes so that his horses could paw out a living, he crowded on westward. He was a month ahead of the date for the wagon trains at Fort Bridger.

"How, Chardon?" said he as he drove in his two light packs, riding alone as was his usual way, evading Indian eyes as he of all men best knew how.

"How, Kit? You're early. Why?" The trader's chief clerk turned to send a boy for Vasquez, Bridger's partner. "Light, Kit, and eat."

"Where's Bridger? I've come out of my country to see him. I have government mail—for Oregon."

"For Oregon? *Mon Dieu!* But Jeem"—he spread out his hands—"Jeem, he's dead, we'll think. We do not know. Now we know the gold news. Maybe so we know why Jeem he's gone!"

"Gone? When?"

"Las' H'august-Settemb'. H'all of an at once he took the trail after the h'emigrant train las' year. He'll caught him on Fort Hall, we'll heard. But then he go h'on with those h'emigrant beyon' Hall, beyon' the fork for Californ'. He'll not come back. No one know what has become of Jeem. He'll been dead, maybe so."

"Yes? Maybe so not! That old rat knows his way through the mountains, and he'll take his own time. You think he did not go on to California?"

"We'll know he'll didn't."

Carson stood in thought for a time.

"Well, it's bad for you, Chardon!"

"How you mean, M'sieu Kit?"

"Eat your last square meal. Saddle your best horse. Drive four packs and two saddle mounts along."

"*Oui?* And where?"

"To Oregon!"

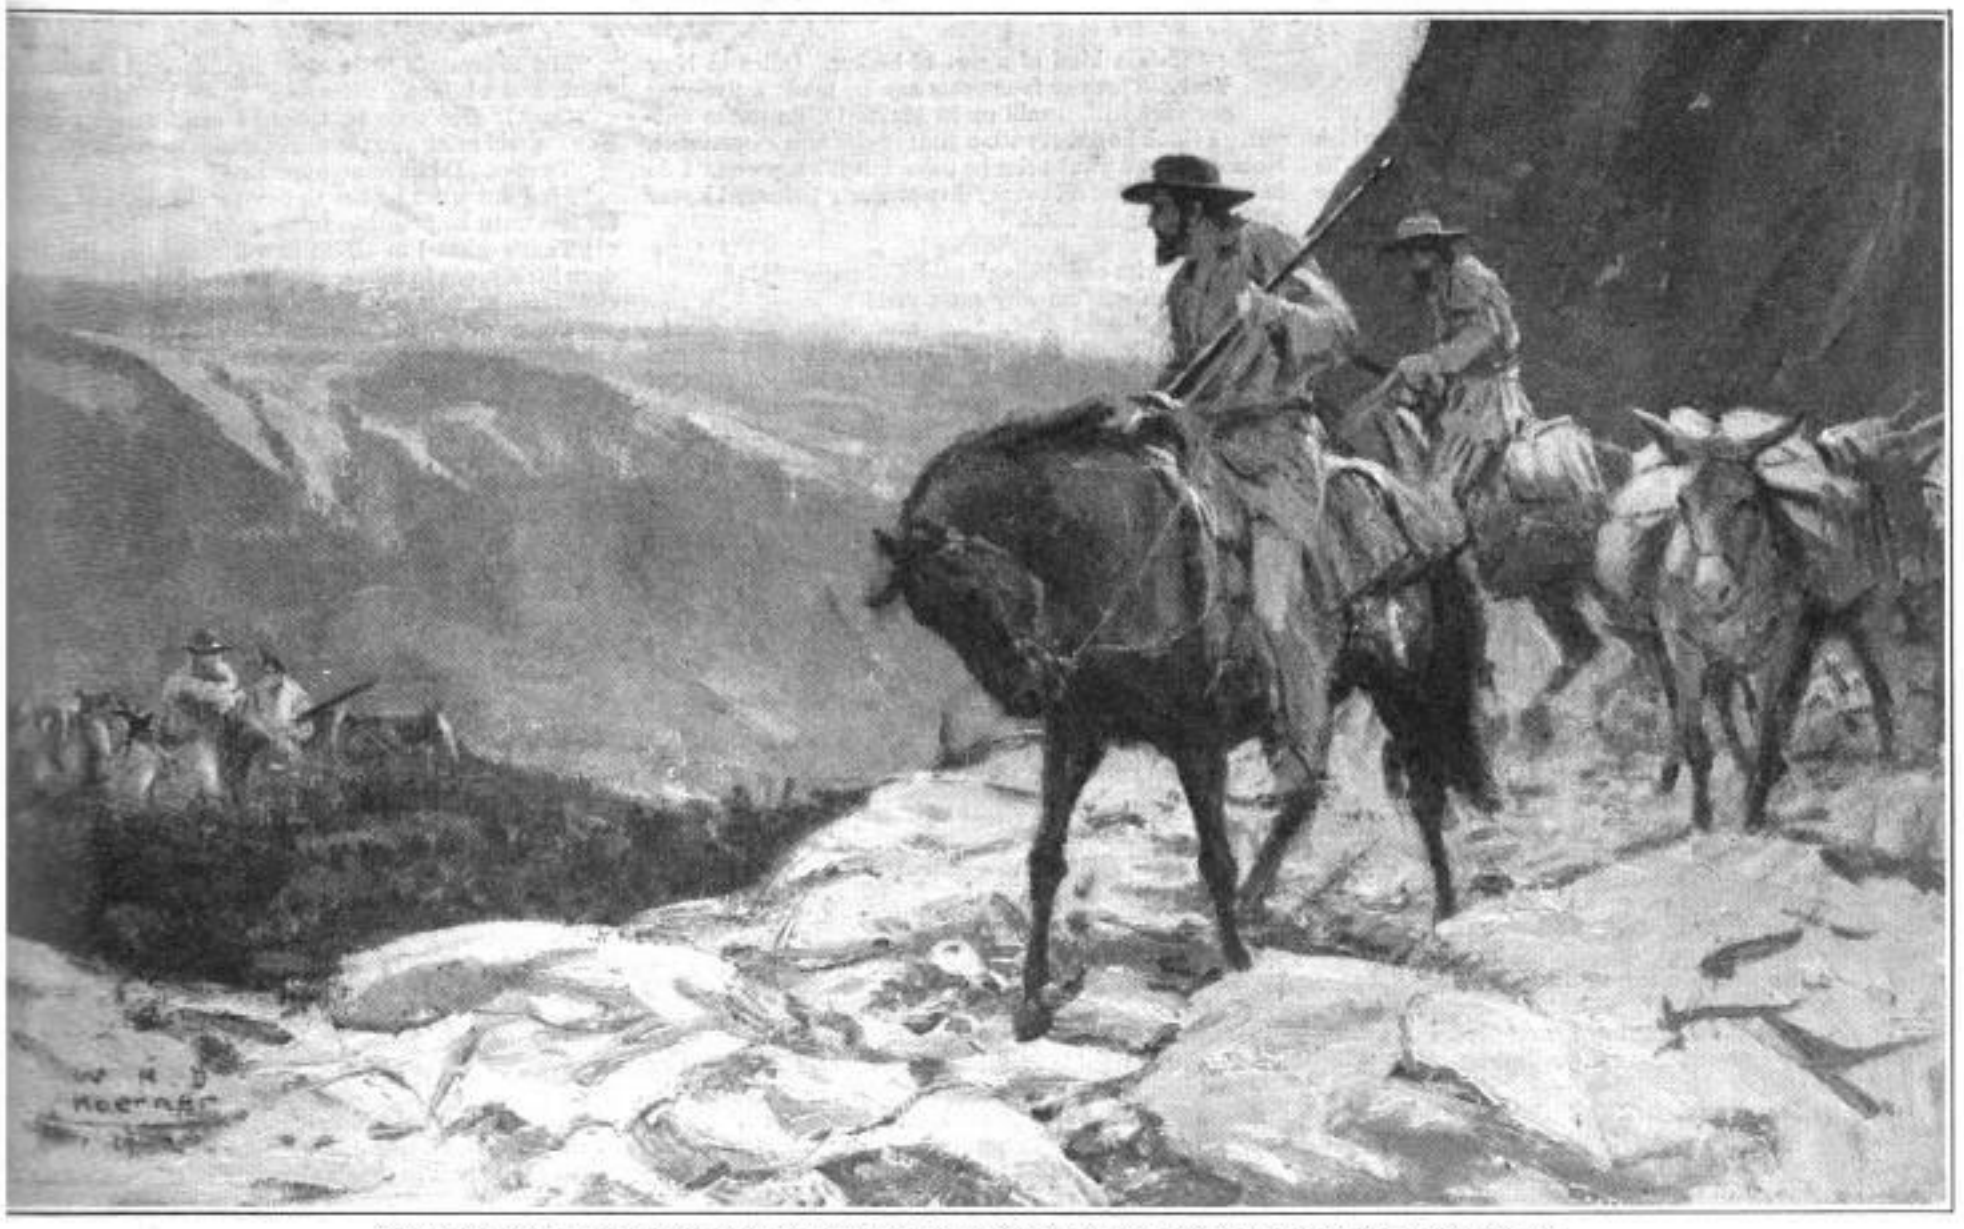
"To Oregon? *Sacré 'Fan'!* What you mean?"

"By authority of the Government, I command you to carry this packet on to Oregon this season, as fast as safety may allow. Take a man with you—two; pick up any help you need. But go through.

"I cannot go further west myself, for I must get back to Laramie. I had counted on Jim, and Jim's post must see me through. Make your own plans to start to-morrow morning. I'll arrange all that with Vasquez."

"But, M'sieu Kit, I cannot!"

"But you shall, you must, you will! If I had a better man I'd send him, but you are to do what Jim wants done."



"*Mais oui*, of course."

"Yes. And you'll do what the President of the United States commands."

"*Bon Dieu*, Kit!"

"That packet is over the seal of the United States of America, Chardon. It carries the signature of the President. It was given to the Army to deliver. The Army has given it to me. I give it to you, and you must go. It is for Jim. He would know. It must be placed in the hands of the circuit judge acting under the laws of Oregon, whoever he may be, and wherever. Find him in the Willamette country. Your pay will be more than you think, Chardon. Jim would know. Dead or alive, you do this for him.

TILL THE JOINT CRACKED

By Clarence Budington Kelland

ILLUSTRATED BY ARTHUR WILLIAM BROWN

"I'm Going Home and Darn Socks," Said Veronica. "I Think Better When I'm Pricking My Fingers With a Needle"

TED PETERS was examining the stock sheets which showed the contents of the huge warehouse, and he derived little if any pleasure from the perusal. The mill had been in operation now for some months. Difficulties and accidents attendant upon the starting of a new mill had proved to be fewer than expected, and were readily overcome. The mill was efficient and economical. Timber costs were as low as those of any competitor, and as for labor, there was a slight advantage over most. Ted knew he was doing as good a job of manufacturing as any woodenware concern in the country, but when it came to sales—well, if it weren't for hardwood lumber he'd have been seriously worried.

"Shipped three cars last week when we should have shipped ten," he said to Veronica, who waggled her bobbed head and looked serious.

"Why?" she demanded.

"We've got seventy thousand boxes of clothespins stacked in the warehouse, and about fifty millions of wire-end dishes," he said, continuing his own line of thought. "Nothing's moving, and when we do ship a car we get nothing for it."

"Why?"

"On the present market—our list less two fives—after we pay commission and freight, we're getting just about a dollar for five gross of clothespins. Believe me, we have to hustle to manufacture them for that. Don't believe there's a cent profit."

"Why?"

"And wire-ends! You expect clothespins to go to the devil. They're usually there. My experience is the mills run along for ten years and barely get by, and then comes a good year when there's a clean-up. One year out of ten. But dishes! No reason why we shouldn't always get a decent price. We'd be making a decent profit at the market now—if we could move any. But we can't."

"Why?"

"Pazzy Hickson," said Ted.

"And who, if it's a question a wife may ask without blushing, is Pazzy?"

"Pazzy," said Ted, "holds at this minute the world's championship belt for price cutting."

"That's what he is, not who."

"He's a kind of a sort of broker. Office in New York. Three or four years ago he made a five-year contract with a mill up in Maine for its entire output. I think he did it with a gun; or else he's a hypnotist. Nobody knows what price he pays, but it's a peach. I do know he's picking off twenty-five or thirty thousand a year without lifting his hand."

"How?"

"Selling wire-end dishes," said Ted patiently.

"If he can sell 'em why can't you?"

"Because," said Ted, "his confounded mill manufactures just enough to upset the market. The general price—and it's been maintained pretty well in spite of everything—is two fives off list. Well, Pazzy doesn't have to worry about market price. He don't care how much money his mill loses. So what does he do?"

"Yes, yes. What does he do?"

"Goes around selling for a price that equals about four fives off our list. Just laziness. If he'd cut one five it wouldn't be bad. He could sell all his stuff with that advantage, but he'd rather wear his pants shiny and have jobbers come to him—which they will for two fives. See? And when the market knows dishes are being sold at his price it's natural they shouldn't buy at ours. They're all laying back, taking less than they can get along on, and waiting for a bust."

"Which," said Veronica, "it looks as if they would get."

"It does," said Ted, "unless something can be done with Pazzy."

"Such as?"

"Pushing him off a mountain," said Ted.

"He'd never agree to it."

"Probably not, but it's the only thing I can see."

"Has anybody talked to him?"

"Talked! They've shouted!"

"What does he say?"

"Just grins—and rakes in his twenty-five thousand."

"Why not make it easy for him?" Veronica asked. "It must be some trouble to sell a lot of folks. If you went to him and bought his whole output at, say, four fives off, or maybe a shade under, you could have them packed under our imprint and sell 'em again—at our price."

"I've thought of it, but I'm afraid of the cars."

"Why?"

"Restraint of trade. Just now, when every industry needs to be let alone, or helped out, the Government gets as busy as a squirrel in a hickory tree investigating everything and everybody under the Sherman Law. Seems to me, when business is in the condition it's in now, they ought to kind of store the Sherman stuff—except where it's really raising the devil."

"You mean it would be illegal?"

"I'm afraid it would. You never can tell until they land on you."

"Isn't the Government silly!" said Veronica.

"It has frequently been considered so by our best minds," said Ted. "But we're prejudiced. We have to make a living."

"There must be some legal way," said Veronica. "There always is."

"If you can find it," Ted said, "I'll buy you a large stick of candy."

"Why don't all the manufacturers get together and agree on a price—a price that will give them a reasonable profit? Then everybody would be on the same footing?"

"Mr. Sherman's little caper again. Jail for a million years, and a billion dollars fine."

"Ouch! Don't do it, then. I can't spare you—yet. But I would bring you the nicest things to eat in your cell."

"Thanks. I'd have no appetite."

"Find out what he has to pay for dishes, and then sell for less until he promises to be good."

"That's what I'm afraid it will come to. But there's darn little profit in selling goods at a loss. Though a lot of clothespin mills seem to have done it for fifty years."

"I'm going home and darn socks," said Veronica. "I think better when I'm pricking my fingers with a needle."

"Ain't she domestic!" said Ted admiringly. "Though I must say she don't look it."

"What do I look?" she demanded with a frown of terrible ferocity.

"Lovely," he said.

"Just for that I'll abolish Pazzy Hickson for you," she said.

"Please do it to-day. You see we have twelve clothespin machines, and each of them is grinding out seventy five-gross boxes a day. That makes six hundred and four thousand, eight hundred pins every eight hours. Also we are making about twenty wire-ends every second—and they pile up. Stab your fingers hard, honey."

"To the bone," she said.

A young assistant bookkeeper came in with the afternoon mail and laid it on Ted's desk. The top letter bore the return address of his salesman in Boston, and Ted opened it with hopes of an order. It was a long letter, but it was not an order.

"At last," said the letter, "we've got a look in on the New World Chain Stores. Their trade is all cash and carry. As nearly as I can get the figures they will use upwards of twenty carloads a year. If we can land this I think I can grab off their clothespin line, special packages with their imprint. They buy pins f. o. b. the mill, drop shipments. There'd be no commissions to pay, and it seems to me, on this volume of dish business, you could see your way clear to making some concession on price. The fly in the amber is Pazzy Hickson. Saw him in town. He's fluttering around, and Pazzy always has his ear to the ground. If he's got wind of this we're ditched. Wire instructions."

Now a contract for twenty carloads a year was a matter not to be sneezed at. Besides the money involved was the

Digitized by Google

aspect of enlarging the wood-dish field by that much. It would benefit everybody dealing in woodenware. An absorption of twenty carloads by a previous nonconsumer would be an unmixed benefit to the industry. Ted made up his mind to have that business if it could be gotten. He wired, but not instructions.

"Will arrive morning train," his telegram read.

Immediately he called Veronica on the telephone.

"Sheath your needle," he said, "and hide the socks behind the dresser. We leave for Boston to-night. Pack what I'll need."

"Goody!" Veronica said. "I've been just dying to see a street car and eat French pastry!"

As they sat in their section that evening Veronica asked questions.

"What's our price on one-pound dishes, delivered in Boston?" she asked.

"Two eighty-seven, less two fives. Why?"

"And we ship about six hundred thousand to a car?"

"Correct, but ——"

"That makes up a minimum weight of twenty-four thousand pounds?"

"My dear, you're learning the business. But what's the weighty idea?"

"Um." Veronica pursued her own line of thought, chasing it up through her bobbed hair with slender fingers. Veronica always rumpled her hair when she was thinking. "And a car with the usual assortment of dishes from quarter-pounds to fives would run about ——"

"Say eighteen hundred dollars."

"And a hundred cars like that would cost a hundred and eighty thousand, wouldn't they?"

"Also a thousand would cost ——"

"Shush! What sort of man is this Pazzy Hickson?"

"He's the kind," said Ted, "who could sell corned beef and cabbage to a man with chronic dyspepsia. He's a salesman, lady."

"Is that all?"

"What do you want him to be—a piccolo player?"

"A business man. Is he that?"

"He's a reacher."

"Which means?"

"He would stretch his arm out of the socket reaching for something that looked good—without stopping to figure who was going to set the joint for him."

"And you said he was lazy?"

"All of him but his lower, or working, jaw."

"I think I sort of, kind of, after a fashion, like his specifications."

She peered out of the window for fifteen minutes and gaily waggled her head at her husband when he tried to become conversational.

"Play with your watch charm a little while, honey," she said, "or do mental arithmetic. I'm buzzing, and think I'm going to find a place to light."

He waited with what patience he could muster until she spoke again.

"Suppose," she said, "I went to the millinery shop, and there was a hat in the window and I wanted it so badly I ordered four—and when the milliner found out she couldn't get the two—after she'd agreed to sell me the four I wanted. What would happen?"

"The jury would pronounce you insane without leaving their seats."

"But if I did—and she did?"

"Why, you could go out on the open market and buy two more hats and make your milliner pay you the difference between what you were compelled to pay, and what she promised to sell you for."

"How lovely! Call the porter. I want to sleep on the idea."

In the morning they were driven to their hotel, and shortly afterward to the sales office of the Peters company. Billy Pett, the sales manager, was waiting for them.

"I've had a talk with the chain-store folks," he said with satisfaction. "The buyer's a buddy of mine, and he says I can have the contract—if we'll meet the price. On an equal basis we can have the business."

"What price has been quoted?" Ted asked.

"I saw a letter from Pazzy offering dishes at four fives off our list."

"Just a minute," said Veronica. "You and Ted are going to have a row."

"Eh?" said Billy, startled out of his complacence. "Why? What for?"

"Because I need a row to make me enjoy my lunch. It's going to be a public row. A noisy row. You're going to argue, and then, Mr. Pett, you're going to quit us cold. Throw up your job and go home with all your playthings."

"I am, eh? What's it all about, Mr. Peters?"

"Don't know. But if she says it's so—why, it's so."

"The row comes," she said, "just after you make sure of the chain-store contract."

"At four fives?"

"Yes, in your own name—as broker. You agree to deliver personally. Will they accept that?"

"Yes."

"Get it quick, and meet here. Ted says Mr. Hickson stops at the Parker House."

In an hour Pett returned with his bit of work accomplished.

"Now for the rumpus," said Veronica. "Listen, while I make it all clear."

She did so for fifteen minutes; then they took a taxi to the Parker House and strolled into the lobby.

"Is he here?" Veronica asked.

"He's over at that writing desk," Pett said, and pointed.

"Edge over where he can't miss a word, and start your wrangle," she directed.

It was a splendid, realistic, convincing wrangle. They began mildly arguing a difference in sales policy. The argument continued. It became acrimonious.

Finally Pett, at the top of his lungs, shouted, "I'm through! I can't sell goods with such backing. I quit. I'm out. Run your show any way you like, but you can't crack that kind of whip over me! I'm done!"

He turned on his heel and rushed away with a rage that was both pleasing and convincing to Mr. Pazzy Hickson, who had missed no word of the debate. He arose leisurely and followed Mr. Pett, overtaking him before he reached Tremont Street.

"Mornin', Pett," he said.

"Arr-rrh!" Pett responded savagely.

"How's business?"

"To blazes with business!"

"What's eatin' you? Climb out over the foot of the bed?"

"I've quit Peters."

"Shucks!"

"I've quit him, and when I quit, I quit. With business in my pocket too. I'm carting a twenty-car contract, and he wouldn't take it. Wouldn't cut a couple of fives. And I can land the Stump Brothers for another forty or fifty cars too."

Stump Brothers were a colossal woodenware house with branches all over the country, notorious for close buying and price cutting. They bought in enormous quantities, and then distributed just enough under the market to upset matters.

"I can land forty cars for delivery within twelve months. And he won't take that. I'm through."

"What you figger to do?"

"Buy a shoe-shining parlor," said Pett.

"Um. Mebby you and me can squeeze somethin' out of this. You've got the inside track with Peters' customers. You got sixty cars to start with. How if you and me tie up, eh? Come on where we can talk."

"I'm through working for anybody," said Pett. "I'm going to be my own boss. I can sell woodenware too. By gosh, I know what I'll do! I'll open a brokerage office. That's what I'll do! And I'll make Peters wish his neck wasn't so darned stiff. Before I get through with him he'll be glad to sell for a lot more'n four fives off."

"Say, Pett, you know I ain't interested in dishes except as a side line. Other fish to fry. Got this here contract and I'm ridin' it high and handsome. No trouble to sell—at two fives under you fellows. Jest sit and let her roll in—kind of."

"With about twenty trips to see the trade every year," said Pett.

"Oh, the's nuisance connected with it, I admit. Say, how many dishes d'you calc'late you can move?"

"Give me a price and I can move all there are."

"How does four fives off hit you?"

"Where'd I get mine?" Pett asked.

"Five per cent commission comin' to you."

"No more commission for me. From now on Billy Pett is Billy Pett's boss. But, say ——" He paused as if an attractive idea had presented itself.

"Go ahead."

PHILADELPHIA, MAY 20, 1922

The Vanishing Wilderness

BY THE simple process of pausing and looking backward a few thousand years every once in a while we may rather safely arrive at the general conclusion that times do change.

We are moved to these general reflections upon the mutability of human affairs by our growing conviction that the out-of-doors people are not keeping up with the times. We ought to take a look once in a while at our sporting methods, so far as they have to do with our fields of sport in America—the methods, manners and means which we employ to exhaust our own resources.

We go on improving the deadly appliances for killing off our fish and game, and that man is most beloved of his fellows who tells us where a new field of sport may be found, whether in the United States, in Canada, Africa or Alaska. Once found, we exhaust it as fast as we can.

Improved transportation is the greatest enemy out-of-doors ever had. The cheap car has helped kill more fish and game than the cheap shotgun or the cheap fishing rod or the improved rifle. We cannot go back to the flintlock or the bow and arrow, or the horse and side-bar buggy. If we intend to stick we have got to change. If we intend to have any out-of-door America left we have got to change mighty soon.

The immediate reason for these animadversions upon our wholly human fatuousness lies in a few casual columns of the sporting page of a daily newspaper. A paragraph mentions the safe arrival at Nome of a couple of airships which started somewhere in one of our Eastern states—to-day they are back safe. Elsewhere one reads the further casual mention that two or three of our airships safely arrived at Hazelton, British Columbia. Yet another dispatch says two Canadians have just left Halifax, Nova Scotia, for Vancouver, British Columbia, by air. Still another mentions ten-hour airship service between Seattle and Skagway, Alaska.

We might all of us just as well rub our eyes and wake up to the fact that the populations of the world are fluid to-day; that the interintelligences of the world are almost instantaneous; that the new transportation of to-day has altered the wilderness absolutely and irrevocably.

What are we going to do about it? Some day we shall rub our eyes, wake up and do something which will show our latent conviction that the out-of-doors life of a man is not meant to be wiped out absolutely; that it has its place in the economy of things as much as life under a roof; is as needful, as helpful, as vital.

If we hold anything we have got to fight for it—fight intelligently and with the methods of to-day, not of yesterday. These changes are coming. The mere forces of commercialism and self-interest cannot stop them. If you don't believe that, read the daily papers and see how short a distance it is from Washington to Nome to-day.

The wilderness must have defenses built for it, supported by the united intelligence of men in tune with to-day.

A Warning to Widows

THE ease with which the average widow without business training and with no banker to advise her can be wheedled into putting her husband's life-insurance money into wildcat stocks by the first slick salesman who approaches her is proverbial. Any lawyer or banker can cite a dozen cases in which the entire savings of a thrifty man's lifetime, amassed by years of sacrifice and self-denial, were swept away simply because a widow or orphan trusted one of the slick crooks who rob women for a livelihood.

Now comes Mr. Byron W. Moser, president of a St. Louis banking institution, with a simple and practical suggestion for minimizing this peculiarly contemptible form of swindling. Mr. Moser's plan is to attach to every life-insurance policy a warning against yielding to the blandishments of these crooks; and in order to make the warning as impressive as possible he would have it issued over the facsimile signature of the President of the United States and reënforced by confirmation of the policyholder. The originator of this idea is free to concede that the wording of the following tentative form drawn up by him may be improved; but he is convinced that it is well considered in scope and substance:

A GOVERNMENT WARNING TO BENEFICIARIES OF LIFE-INSURANCE POLICIES

United States Government statistics, as well as figures and facts obtained from insurance companies, banks, trust companies and other reliable sources throughout the United States, show that millions of dollars are lost annually by those who make unwise and unsafe investments. The sad part is that most of the money is lost by those who cannot afford to lose it. This is especially true of widows and others who receive insurance money after the death of the policyholder.

In many cases friends of the family, whose intentions are the very best, advise widows to invest their insurance money in securities that they think are safe, but often as a result every dollar of the money is lost. In other instances unscrupulous salesmen induce the beneficiaries to invest in worthless securities, and all the money is lost. As a result the widow is compelled to go to work or to ask support of her family or of her husband's family.

This warning is issued in the hope that all insurance companies will attach a copy to every policy issued hereafter and inclose a copy with every check sent out in settlement of a death claim.

(Signed)_____
President of the United States.

To_____
(Fill in name of beneficiary.)

I have read the above warning and it is my wish that you be extremely careful with the insurance money. I have taken this insurance to protect you—not to help someone else to get rich.

(Signed)_____
(To be signed by policyholder.)

Mr. Moser's plan is so simple and has such obvious merit that the life-insurance companies might very well ask presidential coöperation in carrying it out.

Protection to the Farmer

CONGRESS has been in the throes of tariff legislation. In the past, tariff legislation has always included a considerable amount of politics. A British historian of legislation once stated that no tariff had ever been framed in any country on a foundation of trade data. We have a tariff commission. It has issued a number of reports. But the first draft of the projected legislation gives evidence that the proposed duties deviate from the injunctions of experience. In other directions we observe divergence between what is presumably designed and what is actually undertaken.

An illuminating illustration is to be observed in the duties to be levied on raw agricultural materials and their manufactured products. Accepting the position that import duties are to be erected to give the home market to the American producer, it follows that the rate of duty to be placed on the principal product must correspond to that on the raw material. It would be absurd to set a high duty on sheep and a low duty on mutton and wool if the sheep raiser is to be given the home market. But precisely that has been done with some commodities. The situation may be illustrated with four materials—wheat, flaxseed, wool and vegetable oils.

In the emergency tariff bill the duty on wheat was fixed at 35 cents a bushel, and on flour 20 per cent ad valorem. In January of this year the price of standard patent flour in Canada was seven dollars a barrel. Six bushels of wheat were required to make such a barrel of flour. If the six bushels of wheat had been imported the duty would have been 210 cents. At the ad valorem rate on flour the duty was 140 cents. Early in April the price of the same flour in Canada had risen to eight dollars a barrel. This made the flour duty 160 cents as against 210 cents for the wheat. If the tariff were compensatory the duty on the flour should be at least 210 cents a barrel, the same as the duty on the wheat required to make the barrel of flour.

In the emergency tariff bill the duty on flaxseed was fixed at 30 cents a bushel, and on linseed oil at 10 cents a gallon. A bushel of flaxseed is equivalent to two gallons of linseed oil. This makes the duty on the seed 50 per cent higher than on the oil.

In the emergency tariff bill the duty on clothing wools was set at 30 cents a pound, equal to 60 cents a pound scoured. This is equivalent to nearly 90 cents a pound wool in the cloth. The duty on wool in the fabric was set at 45 cents a pound, half the figure on wool in the raw state.

The results in the cases have been, naturally, to repress the importations of wheat, flaxseed and wool, and stimulate the importation of wheat flour, linseed oil and woolen cloth. Each unit of finished goods imported seizes as much of the home market of the farmer as though the corresponding volume of raw material had been imported and passed through manufacture here. The lower duty on the finished manufactured goods therefore defeats in part the object of the duty on the raw material, the protection of the farmer. Indirect protection afforded by duty on finished goods has the same meaning for the farmer as duty directly on raw material. The duties should be the same for corresponding quantities of raw materials and finished goods—that is, compensating.

In the case of vegetable oils a different procedure was followed in the emergency tariff bill. Duties were levied on cottonseed, peanuts and soy beans, also on the expressed oils. No duties were placed on copra and palm kernels, but were levied on the expressed oils. The duties on the expressed oils are fairly compensatory to those on the seeds and nuts. Why the correct procedure was followed with the common vegetable oils and not with linseed oil is not stated.

It is to the interest of the farmer to export his products in the manufactured state whenever possible. Whenever agricultural products are imported they should be in the raw state if possible. Manufacturing operations give employment to labor and capital. The larger the volume of manufacture the greater the efficiency. Each million barrels of flour imported makes the grinding of domestic wheat more expensive. Wheat ground in this country leaves the mill feed here. We require in this country a large volume of linseed oil in excess of our production of flaxseed; we must import seed or oil. If we import seed and grind here the meal is a contribution to the country; it equals an importation of fertilizer. In no way is the farmer preferentially benefited by the importation of competing agricultural products in the finished state rather than raw; quite the contrary.

Whatever may be the merit of protection to the farmer, this is to be attained only by direct duties on raw materials and equitably compensating duties on goods manufactured from those raw materials. Tariff legislation must be consistent if established trade and manufacture are not to be disrupted.

The Young Man in Journalism

A Consideration of Newspaper Composition and the Use of Words

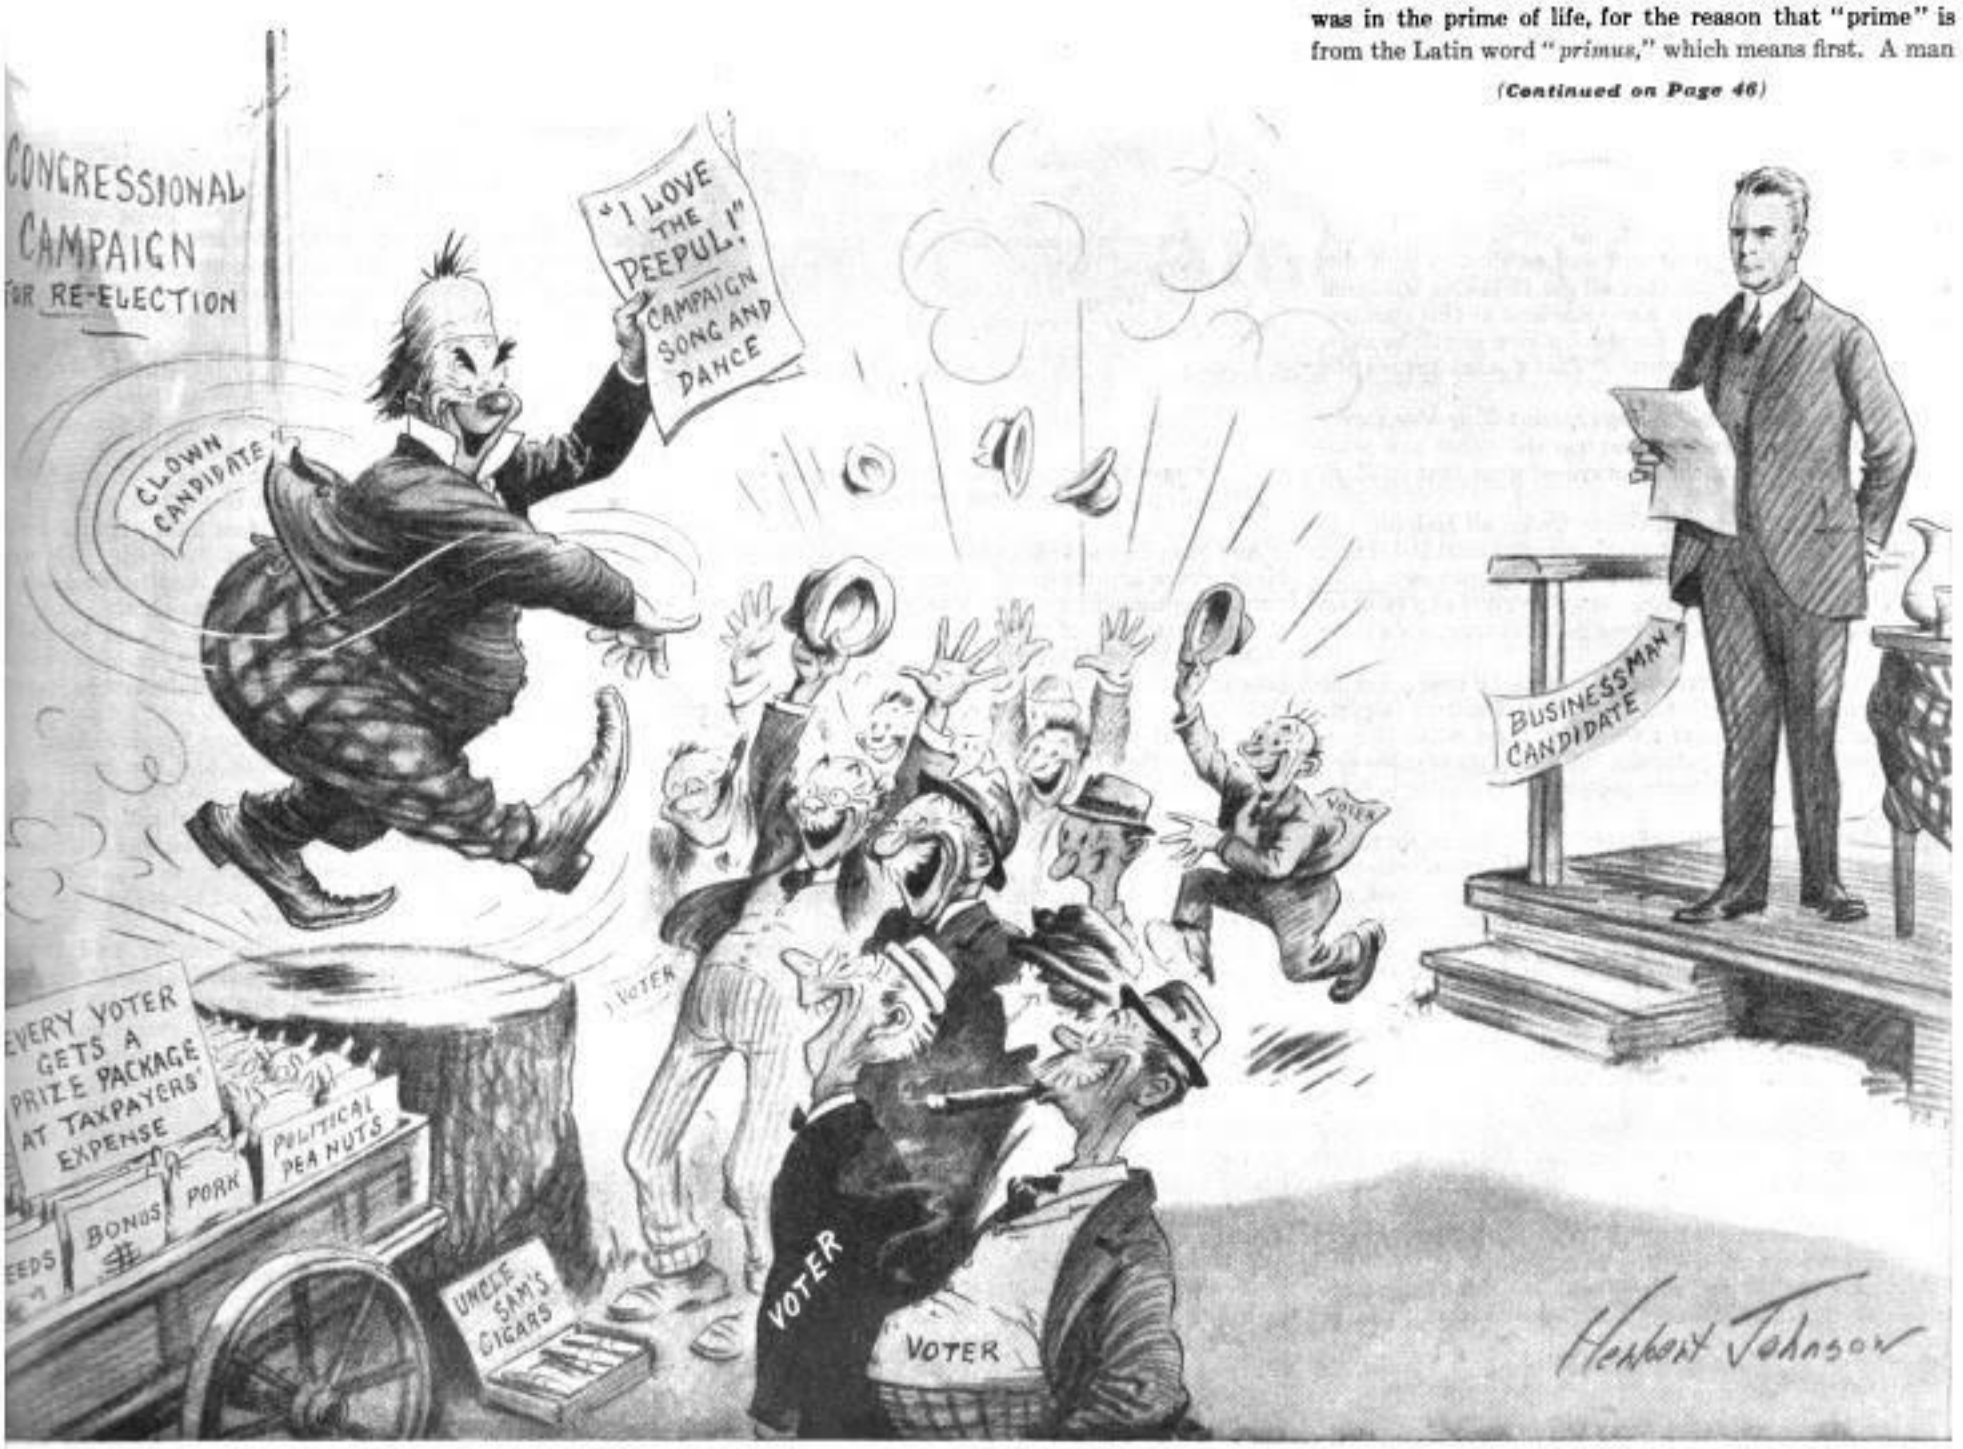
By CHESTER S. LORD

THE young man just starting in journalism is asked to write in the simplest words and the shortest sentences at his command. He is told that the reader wants facts rather than elegance of expression and that the plainest language is the best newspaper style.

By plain language is not meant the language of the child's primer, but rather the use of good Saxon concrete nouns and active verbs in sentences not embellished with verbose phrases. Nevertheless, when editors tell the young reporter to use the plainest language they mean, usually, that they will be satisfied with it in his routine reporting. But they encourage also the study of how to produce rich effects by the use of familiar words, how to write not only with steadiness and strength but also with those little embellishments of incidental word and phrase that lift the work out of the commonplace. And they unceasingly urge the necessity of good writing—for not anywhere is good writing appreciated more than in a newspaper office.

To write the simple language requires much study and practice—more, indeed, than to write the other kind. It is natural for people, children especially, to use simple words, but the schools and colleges have taught, until within a few years, the writing of rather high-sounding prose. Textbooks have reflected Doctor Johnson's ornate paragraphs, Macaulay's massive profundities, Washington Irving's beautifully rounded florid sentences, and Sir Walter Scott's superlatives. For years and years they were commended to students of literature for imitation. The effect of this teaching remains. We find it difficult to write with the same simplicity with which we talk.

Old-School Standards



THE editor gave fine advice to the cartoonist from whom he wanted an article. Said the cartoonist: "He just offered me one suggestion inasmuch as I was not a regular writer—that I refrain from trying to write and simply tell in my own words as though I were telling it to my wife." That's it—refrain from trying to write if you wish to write in simple language and simple style.

Write as you talk if you are a good talker; hundreds of articles of advice have urged to that kind of composition. But almost all talk is without study, is commonplace, is not the expression of consecutive thought, is disjointed construction. It is notorious that dictated articles have less finish than those penned, although they may have more kick. Emerson says, "The speech of the street is incomparably more forceful than the speech of the academy."

The newspaper editors of fifty years ago urged their staffs to a nicety of literary expression. Writers were yet under the influence of the Victorian Age of literature and the study of literature was popular. The proper use of words had much attention, and so did the construction of sentences. William Cullen Bryant had inspired the staff of the Evening Post of New York to excellence in the creation of English prose. Manton Marble, a fine writer himself, insisted on good writing in the World. The New York Tribune took pride in its correct use of language. Almost all publications had a printed index expurgatorius or a catalogue of "don'ts." Richard Grant White's book, Words and Their Uses, was on nearly every editor's desk and was the subject of much criticism as well as praise.

Mr. Dana had no patience with slovenly writing. He knew his Greek and Latin and half a score of other languages so well that the derivation of an English word came to him almost instantly, and he objected to its misuse. The plea that a word was in common use did not appeal to him. He did not heed the dictionary definition. He knew the origin of the word as well as did the maker of the dictionary. I have mentioned in a previous article that he objected to saying of a middle-aged man that he was in the prime of life, for the reason that "prime" is from the Latin word "*primus*," which means first. A man

BUSINESS VERSUS BALLYHOO

Digitized by Google

BUMPED

By GEORGE KIBBE TURNER

ILLUSTRATED BY ARTHUR D. FULLER

THEY'RE bumping—said the fat foreman—since this war come on, more than ever they were. For it's all over now—with the station agents and the clerks and all in under the seniority rules. But the worst I ever saw began when them engineers started in on that Englishman.

'Tis in the fall they bump them mostly—when they take off them temporary summer-vacation runs; and all the crews on them have to place themselves regular again—some always bumping somebody else out of their job because of seniority. And it was so this time. And the time of year naturally made it worse.

All that hot seething weather they had that summer helped start the thing along, of course—as you'd know yourself if you sat much in the cab, feeling your hide peel off your back and roll up with the heat like burning shavings in a bonfire. It gets on your nerves, that's all, as the lobster said, when they asked about boiling him—and always does. And toward the end of summertime they get so—them engineers—that if you pick a hair off their coat collar they'll reach over and smash you. But mostly, each knowing how the other one feels, they sit still and simmer and boil softly inside—until something suddenly starts up the boiling—and they blow! And this time it was this Englishman I was telling you of, this Halpin, his name was—Oliver Cromwell Halpin—that done it.

It seems they none of them liked him overmuch, he taking everything up and down—in the English perpendicular style, as a feller says to me once—whatever that means! Always a kind of stiff and sorehead. And this particular summer finally they all got to jawing with him about who it was won the war—England or this country.

"Bulldog grit—the old English bulldog grit!" he says, starting taking all the credit. "That's what turned the trick."

"You heard what our fellows were telling them over there," says Tom Nugent—who was the josher and practical joker around the lobby always—"what that A. E. F. meant?"

"What's that?" says old Oliver Cromwell Halpin.

"After England failed," he says, giving him that old one.

But it made him as mad as if it was brand new.

"We'd show you," he says, "if we ever got at you once. Let the English and the Yankees get at it once, we'd show you!"

And that made him friends, of course, all over. For he was like all the English—not so much to start the talking, but never seeing a signal set against them when they're once under way. And naturally, with this line of conversation, he got more and more popular in the lobby—especially that weather.

And then this Nugent—who started it, you might say—run across another engineer, an old boy that had been on a summer run up in the mountains for his health, and was coming back to place himself in the regular runs again, according to his seniority.

"Will you do something for me?" says Nugent to him, the idea striking him all of a sudden.

"What?"

"If it was fixed right, would you bump Old Ironsides," he says—"the Duke of London—up to the other end of the line? You're longer in the service than he is," he says.

"I dunno," says the old feller—half smiling and half serious—for this Englishman was held in the same high estimation now by one and all. But finally he done it; and the idea was popular.

"It'll get him and his English bulldog grit out from our conversation for a while," they says.

And sure enough the run he had to choose to get the next-best choice had its end at the other end of the division.

But somebody must have told him just how it come, for he didn't blame the one that done it—he went right back of him and held Nugent responsible for putting him up to it.

"Bumped!" he says. "I've been bumped! I've been pushed out of my 'ouse and 'ome. They wouldn't be allowed to do this in England. An Englishman's 'ouse is his carstle."

And they all laughed—one starting, and the rest following—for they couldn't help it.

"Larf," he says. "Larf. I'll larf you. I'll show you something about bumping, maybe, you don't know! I'll show you," he says, walking up and standing in front of Nugent, "how an Englishman bumps! You wait," he says. "I travel light. Only me and my daughter." For his wife was dead. "I can go. But wait till there's some of you who pull up with your five and six children, and go marching."

"I Seen the Grandest and Most Ravishing Girl at the Dance Last Night"

And then he went off to the other end of the line; took his furniture and his daughter and everything. And most everybody thought no more about it—except they saw he never noticed any of them, passing them on the road.

But after that there was a kind of a funny thing happened; the old devil went and bid in a new run that everybody knew was just temporary, and paying way under what he was pulling down already.

"What's the idea?" they was asking one another.

"I'll tell you what's the idea—if you want to know," says little Jockey Kernochen, who always had the news on him. "He's getting ready to come back."

"Where?"

"On the return bump, when this summer run is over; and he has the right to."

And sure enough the minute that temporary run was done—and he was out of one—back he come and bumped Nugent out of his. He said nothing—just bumped him.

It was a great surprise to Nugent, for being so much younger in the service and so much farther down the line—nobody'd ever have dreamt he'd bump him. And if it was a jolt to Nugent, that was nothing to what it was to his wife, for they had been fixed comfortable where they was, and now they had the choice either of moving out of town to the other end of the line, like the Englishman had done, or staying there and taking up with a poor and discommoding run with less money.

But finally they chose to stay, for one reason because where they were, at that end of the line, their boy Tommy—who they was trying to put through medical school and make a doctor—could be boarding with them. But Nugent's wife was near crazy. It ain't the easiest thing, nor the best for your temper, being the wife of a josher and practical joker for twenty-five years, and this thing of having Nugent bumped into a night run with less money didn't make her temper any smoother.

It didn't improve it much neither when her boy, Tommy, come in and told her one morning what he did.

"Gee, ma," he says, "I seen the grandest and most ravishing girl at the dance last night. A wonder—you never seen such a dream!"

"What was her name?" she says to him.

"Halpin."

"Halpin!" she says. "What Halpin? What's her first name?"

"Maude," he says.

"Don't you never see her again!" she says to him, blazing. "Let alone speaking to her!"

"Why not?"

"She's the daughter of that man that bumped your father," she says to him.

"Oh, ma," he says in a sad, disappointed voice, "she can't be. He's up at the other end of the division, living now."

"They've moved back now, haven't they," she says, "naturally? Now that he's took your father's run?"

And after a while he saw she must be right. She convinced him.

"I wouldn't have believed it," he says. "She was so young and quiet and innocent looking."

"There's something wrong with her, you can count on that," she says, "with a father that deliberately done what he done to us—bump us, for no reason at all!" For Nugent, her husband, hadn't never told her how he'd started it all with his advice, fooling. "He's the worst enemy your father's got," she says. "We know that. He's thinking and considering all the time how to damage him."

But just that minute, when she was saying this, old Oliver Cromwell's mind was starting getting off her husband and onto bigger things—bigger game, you might say. For bumping naturally don't affect just one man or one family on a railroad—each one bumped out of his job having the right to bump somebody lower'n him in time of service; and before this little first move of the Englishman for his rights was done, eleven engineers and eleven families had been bumped out of their runs, and some of them had had to leave town entirely. And so their bumper was no more popular than he ever was—much less so! And they were making all kinds of cracks at him.

He said nothing back much, but it gave him something to think about on his runs—a new zest in life, as the advertising feller says about the breakfast food. And any man could see there was something on his mind. He went muttering and speaking to no one. And just as soon as them temporary summer-vacation runs started up in the mountains at the other end of the line, and he started loose again and bid in one of them, there was quite a lot of suspicion—though naturally they couldn't foresee just how much was coming.

"What! Move again, pop?" says his daughter. She was quite a girl now, well grown up and handsome.

"Do what your old pop says," he told her. "He knows."

So off they moves to the other end of the division, in the summer-resort country; and nobody thought much about them any more till in the fall when the summer season ended—all at once the blow fell, and he pushed back into the regular line again.

Then all together they started raving and roaring: "Bumped! Bumped! He's come back again!"

You'd think he'd sat and planned all summer with terrible and diabolical cunning to get every man in the service that had ever laughed at him. Though of course it wasn't so—they got it as it come to them, each bumping the other down; for now, being one of the oldest men on the line, Old Ironsides had jumped back up almost to the top of the list when the end of the summer left him free to choose—and they all went bumping down under him. There was some twenty-seven men and families he got this time; and thirteen had either to pull up and change the end of the line they lived on or split their family life all to smithereens with their new runs.

"What'll we do?" they was all saying to one another. "What'll we do to him?"

And the local chairman of the brotherhood went in and talked to him.

"We'll try reasoning with him first," he says, "and see what that'll do."

MADE BY THE MAKERS OF CAMPBELL'S SOUPS

Every grocer in America

should be prepared for the big demand for Campbell's Beans next week—the first big outing of the season. People will buy Beans for picnics, boating trips, motor trips, camping, house-parties and the family table. Campbell's Beans are famous not only for their delicious quality, but because they are slow-cooked and easily digested. Their rich tomato sauce is another reason for their enormous popularity. Advertise Campbell's Beans! Display them in your windows and on your counters! Your customers will be glad to learn the special advantages of buying by the case—to have them on hand whenever wanted.

12 cents a can

But it didn't do nothing.

"Did you stand there larfing," he says to the local chairman, "with the rest of them—when that pig-nosed Nugent kicked me out of my good home—or didn't you?"

"I don't think I did, no," says the local chairman, knowing full well he had. "I didn't mean to, anyhow."

"The bulldog breed," he says, staring at him. "The bulldog breed. An Englishman's 'ome is his carstle," he says, "and they don't push and bump him out of it for nothing," he says, "nor larf when they're seeing it done."

"Well," says the local chairman, "you've had your turn and bumped," he says. "Now let bygones be bygones."

"Not till one and all apologoyze to me," says the Englishman. "Nugent first, in person, and then the remainder—in writing—for what they done to me—like ruffians."

And the local chairman seen at once how likely that would be. "If you won't do it for nothing else," he says, still going on reasoning with him—trying to—"do it for the union. You know how sore the other side—the management—is on this seniority rule always, and this will only make more trouble—for all of us."

"It's my right under the rules," says the Englishman, "when a new run is put on, to go and bid it in, ain't it, if I've got the seniority?"

"It is," he says.

"And if it's a temporary run," he says, "and I find myself out of a job when it's over, then I've got a right to bump back into the line, where my seniority entitles me to, ain't I?"

"You have," says he.

"Then what're you hollering about?" he says. "Them's my rights and I know them. And I'll keep using them, round and round, till I see fit to stop."

"Suppose the union took action against you?" says the local chairman, getting warmed up.

"Let them," he says, "if they can! I know my rights. And I stand on them when it comes time. For an Englishman knows his rights and holds to them—the bulldog breed. And I'm of the bulldog breed, I am," he says. "I know my rights. But I always keep inside them too. You never yet found anything against me as a member of the union, and you won't," he says.

And the local chairman could not deny it, for he knew 'twas so.

"Then you'll not stop?" he says.

"You heard my terms," he answers. "They can take them or lump them. But I'll say this to you open: If they don't take them and apologoyze I'll keep right on my rights, bumping. And the next time it will be terrible."

They got in a bad row then, and the local chairman left him, seeing now just how much good reasoning done. He'd got to try something else than reasoning with him, he saw that plain.

"There's one thing, anyway," says the boys to him when he come back, "he can't turn himself loose again probably—not till next fall."

"You can't never tell," says the chairman. "There might be some temporary run come up again, and he'd go off and grab it, and then come back and pounce down on us. In my opinion," he says, "he's thinking nothing else but ways of bumping—day and night. We've got to get some way to get at him as soon as we can—before this goes much further—and some of the boys may do harm!" For they were crazy now, of course, all along the line.

But if the men were hot the women were sizzling—and none worse than the wife of Nugent, who started the thing, you might say. For this time, being toward the bottom of the list, anyhow, and all the best runs spoken for, when Nugent was bumped he was bumped to the other end of the division—to get anything good whatever. And they left their boy boarding in town so as to keep near the city and his medical school.

"But whatever you do," says his mother, leaving him, "don't you never pay no attention to that daughter of that old bulldog Englishman." For she had a sneaking underground suspicion that he was still seeing her some. "If you do," she says, "and your father hears it, 'twill be all day with you."

"What could he do?" he says, for he had a mind of his own.

"He'd murder you first," she says, "and then he'd take you out from your medical studies. If you cross him this way you'll be no doctor, for he'll draw off the money altogether, and you know what that'll mean to you—and to me!" she says. For she'd set her heart on having him a doctor—with his gold sign on his own door and the thin-soled shoes on his feet in place of the brogans.

So she warned him and went away to the other end of the run—sore and scared and suspicious of her own son. For let alone her own feelings, and the chance of his losing his doctoring, she saw—even if he got it—what it would mean to a young doctor, coming up and getting mixed up with the daughter of a man like that—a social outcast, a leper, you might say, with every man's hand against him, threatening him; and him going along with his head down, threatening back, what he'd do to them the next time!

And about now the superintendent of the division sent for the local chairman of the brotherhood again on the thing, for they'd talked it over between them more than once before.

"What have you done," he says, "about this matter of the Englishman?"

"Nothing," says the local chairman. "I tried reasoning with him, and I tried threatening him—with what they'd do to him in the union. But it made no more impression on him than a horsefly on the skin of a locomotive."

"I done the same," says the superintendent. "I can see reasoning won't do no good."

"No," says the other man, sad and ugly. "No."

"What does he say to you?" says the superintendent.

"Nothing. He just stands on his rights—like the bulldog breed."

"With his head down below his knees, waiting."

"For another blind charge against us," says the local chairman. "He has no care for the union nor public opinion. He enjoys fighting them," he says, "like the bulldog breed always does. And the worst of it is, you'll never get him. He always fulfills the rules of the brotherhood exactly."

"The same with me," says the superintendent. "He's the best engineer we've got on the line so far as obeying the rules goes—to the letter T. Everything is right," he says, "down to the way he combs his hair on Sunday. You might know that. For he's an Englishman—one of these fussy ones—on every little thing. The kind that won the Battle of Waterloo with their shoes all shined by rule and stiff new white collars on every dead man."

"What'll we do?" says the union chairman.

"We've got to do something," says the superintendent, "that's plain and sure. It's bad enough to run a railroad with this seniority plan at best—especially now it's got in

SHEER, unalloyed joy in motoring is reserved for the woman who drives a Cadillac.

With every mile of its swift, easy flight the conviction grows that hers is the unique and utterly enviable automobile experience.

Where else could she secure the strong, silken power, the comfort, the distinguished and arresting beauty, that so charm her in her Cadillac?

Where duplicate its dependability, which makes continuous, extended enjoyment of motoring pleasures so definite and so serenely certain?

Could any automobile be more responsive, more refreshingly easy to control and to drive?

Is there any equal anywhere for the flawless performance, on the shopping trip or the vacation tour, that she knows is hers in the Cadillac?

Every woman who has had even so much as a single ride in the Type 61 Cadillac is unalterably convinced that it is the great motor car of the world.

And when she becomes an owner, her delight in the Cadillac is quickened by the knowledge that all of her associates concur in acceptance of its leadership.

all departments. It's like trying to play a quiet, sensible game of chess," he says, "with live jack rabbits for chessmen," he says, "at best—running a railroad the way we have it now—with all your chessmen self-movers. But in all my experience yet, I never had the thing go all loose and crazy on me before."

"What I fear," says the local chairman, "if this goes on, and he starts out again—what I fear is murder—or some big accident. It's all over the service—half the engineers and brakemen and conductors on the division are planning now to get him in wrong and get him fired under the rules. By and by," he says, "what I'm afraid of—they'll give him some phony signal or something, and one of his trains will hang its end out back of a switch or he'll run over a signal that's been turned wrong for him or something, and we'll have murder and sudden death of large numbers, in some great catastrophe," he says. "For you've no idea how hot the feeling runs to-day against him. And if he started blowing it higher by one more bump," he says, "God help us!"

"You're right. You're right," says the superintendent, nodding. "I have the same fear always in the rear of my head. It's terrible."

"It is," says the local chairman.

"But look," says the superintendent. "Let's go over it again. You've had him in," he says, "and I've had him in, and tried reasoning with him. And that was no good."

"No."

"And threatening him."

"And that was worse."

"Yes," says the superintendent. "So far as I can see, we've got to try something else; and that's what I called you in for to-day."

"What else?"

"Kindness," says the superintendent. "We've got to try kindness."

"What—on him?" says the local chairman. "I'd rather kill him!"

"I would myself, personally; especially nights," he says, "when I get to thinking how he's tore up this division. But as long as we can't do that we'll have to do the next best thing, and try kindness."

"Kindness!" says the chairman. "How—what way?"

"I'm going to boost him."

"Boost him?" he says.

"Yes—kick him up the stairs—out of the engineers for good. I'm going to raise him to be an official so he'll be out of the engineers for good and all."

"That seems kind of funny, when you look at it," says the local chairman. "You'd think it was a reward of violence and villainy."

"That's railroading to-day, all over," says the superintendent. "They look to you for results, and you've got to get them—no matter how. And if a man gets cantankerous and blocks you, you've got to move him somehow out of your way under the rules—down if you can, but then if not, up. And this ain't the only time this thing has had to be done in order to get a railroad running again neither. You know that."

"How'll the other boys take it?" says the local chairman.

"They'll like it better than having him around with them all the time in the lobby—threatening them with another bump. They'll all like it better if he's once settled and satisfied."

"But what about having him over them?"

"He won't be over them in any way, shape or form," he says. "I'll see to that."

So the superintendent sent out for the Englishman and brought him in.

"What do you say to being an official of the road? What do you say to going on up?" he says, and named the place. "You'd get 10 per cent more than you get now, with 10 per cent easier work."

And then he waited, watching him to see what he'd say. And for a while the old bulldog look still stayed in his face, and his jaw muscles were set, and he could almost see the word "no" in his mouth. Then all at once something seemed to come over him—a sudden change—and he answered back he'd take it.

"Good," says the superintendent. "Good. I'm glad you see it that way," and shook hands and let him go.

And yet he didn't like that sudden look that came on his face either; he had a fear of it—for, of course, under the rules anyone being promoted to be an official has the right left any time to come back again, when he wants to, to the job he has gone from.

But the Englishman says nothing, and goes tramping home to his daughter.

"Up we get again!"

"What's this?" she says with her lips parted, for she was a big, soft, nice-spoken girl, that spent her time waiting on him and looking scared to death of him, the way those Englishmen's wives and daughters mostly do.

"We're going to move again," he says.

"Move again?" she says, a sharp tone, like he'd never heard before, coming in her voice. "What, another bump!" she says, her bright-colored cheeks getting brighter and her big blue eyes bluer and wider yet.

"Not yet," he says. "Not yet."

"But, father ——" she says, seeing there was more trouble coming probably.

"'But, father'—what?" he says, loud.

"You ain't going to get into another how-de-do—bumping everybody again," she says, near crying.

"Why not?" he says. "We'll show them. Bulldog grit—old English bulldog grit," he says. "We'll show them English bumping. For their bumping ain't over yet—by no means. I can tell you that."

"But, father ——" she says.

"Don't but-father me," he says. "Go and do as you're bid."

So she did finally, crying; and they started once more moving out of town.

"We've got to do it," she says to young Nugent, for she was meeting him now, just as his mother had suspicioned, nights in the park.

For it was there if anywhere—and in the dark too—they both fearing it would get back to their folks. For the wars of the families of that Romeo and Juliet you hear about in the theater was nothing beside the feeling of these two main families in this bumping now. And every hand was out against the girl with her father—though she was a grand, fine, handsome girl, soft and most appealing looking, with those big, round blue eyes—and especially to young Nugent—and even more so now she was down and out, and hated.

"Let's end it all," he says to her. "Let's elope. I'll get me a job somewhere on some Western railroad."

"What—and end all your doctoring, for all time?" she says. "On account of me!"

"And well pleased to," he says.

But she wouldn't have it. "Something will come," she says. "Something will come for us. I know it. Maybe now, with his new position, I can get people to forgive him his previous bumping."

And then she broke down, for the feeling against them was terrible, and she knew it. And so she went and left the boy, and he stayed there with his studying—and couldn't even run up and see her for fear of her father learning of it probably. And the end of the world came close at hand for the time being to both of them.

But only for two months or so, after all. For bang, in the spring, down the old man came again and bumped the line once more. He went to the superintendent and says he'd have to have his old run back again. And, of course, under the rules he must have it when he asked for it. And if the previous bumps up to this time had been terrible, this one was past believing. Either thirty-seven or thirty-eight—I disremember which—were bumped now; and many of them were pushed once more out of the town; and feeling ran high and harsh and terrible.

The men threatened violence and sudden death to the father in the lobby, and the children spit toward him on the sidewalks, and the young girls elevated up their noses and their best new hats when they met the daughter on the street. If they were on the edge of mankind before, they were pushed over it into the depths of social ostrichism—as the Sunday paper says. And the hate between the two families of the girl and boy grew more terrible than the pestilence. For once again the Nugent family had pulled up and come back to town on this bump. And now the mother of the boy—watching those things as women do—more than suspicioned now what was going on underneath between her son and that girl.

"You know what your father'll say when he hears it," she says, going finally to him in secret.

"Let him say."

"He'll stop the money for the doctoring," she says.

"Then no doctor will I be," he says. "For I'll never lose her. I'll marry her at last, in spite of all—doctor or no doctor!"

And that struck her terrible, for she had set her heart on seeing him a doctor, with his little black bag in his hand and his black shiny shoes on his feet—all genteel.

And she went and thought it over and talked it with this local chairman of the brotherhood, to learn what was going to happen, for she knew him well, of course, and she'd heard he was still all the time trying to stop that thing—for it was terrible all over, the feeling and all.

She come to him, so it seems, just after he'd been talking again to the superintendent of the division—and both were in despair.

"We can't fire him from the railroad," says the superintendent, "for we have no case at all against him. He keeps strict within the rules and in his rights, for he knows them."

"Like a lawyer," says the local chairman.

"And if we framed him up and fired him," says the superintendent, "he'd go way up over our heads, to the top, under the rules—and get us overruled."

"'Tis the same in the union," the local chairman says.

"By heaven," says the superintendent, "what'll we do? If something don't happen soon to pacify him he'll bump the railroad off the map."

"Home and family life is all destroyed," says the local chairman, still sadder than him. "All up and down the division. There ain't any. 'Tis all you can do to prevent the women raging up and disfiguring him with their teeth."

"We'll have to do something soon," says the superintendent.

"We will," says the local chairman.

It was just after that that the brotherhood chairman ran across this Mrs. Nugent and she was asking about it, and he was telling her.

"We're in despair," he says. "We don't know where to turn. And I wish to God your husband had never started him out upon this thing."

"I wish that more than anyone," she says, for by this time she had learned of how it was—her son and others having told her.

"He ought never to done it," he says. "He should never have roused him—and the bulldog breed. 'Tis the worst of all when it's started," he says, "for it runs straight ahead, in a line, to the end of the world," he says. "And neither it nor anybody else knows where it's headed for until it hops off in some terrible and destructive catastrophe."

"You're right," says she. "I know it."

"We've tried threatening," he says, "and it's no good. And we've tried reasoning, and that's useless. And we've tried kindness—and that's worst and most contemptible of all. So what'll we try next—we dunno."

And suddenly he thought he saw something strike her.

"Have you tried love?" she says then.

"Love?" he says, shouting.

"Yes."

"What—with him?" he says. "That bestial three-cornered crocodile!"

"No—with someone else," she says, speaking softly to herself. "Run off," she says to him then—"run off and let me see what I can do. But don't ask no questions—nor say nothing till you hear from me."

And he done so, wondering.

"Tommy," she says, again calling her boy to her, secret, "you've acted terrible to your mother—and you're breaking her heart hour by hour," she says. "Let alone your deceiving of her and your poor father. But let that go," she says. "That's done. And I'm here to tell you something that might help you in your folly—with this big pink English girl—the daughter of that four-pronged devil."

"Have it out, mother," he says. "What is it?"

"It's all around," she says, "that he's just lying back again, getting ready to bump us yet again when the summer comes and the fall comes, with the change of runs at the end of the vacation time."

"I heard it," he says.

"Yes," she says. "And if it comes there will be murder no doubt. But if it should not come—why, then the one who was known to have stopped it would be a hero—just like the victor over a mad, crazy bull."

"I get the idea," he says, "I think."

"Now, then," she says, "the way you're going on," she says, "contrary to all the best ideas of your parents, there'll be no doctoring for you the minute your father hears of it."

"Never mind him," he says ugly. "He started it all in the first place."

"So," she says, going on, disregarding him, "there's only one way you can square it and have the girl and be a doctor and keep your mother's heart from breaking and spilling all her lifeblood all these years for you for nothing."

"What is it?" he says, short and anxious. "Have it out—for God's sake!"

"If she can fix her father some way," she says, "so he'll stop this terrible thing—this bumping," she says, "all might yet be well after all, for all of us."

"How could she?" he says to her.

"That I don't know," she says. "Only this—if she loves you truly she'll find a way somehow," she says, "if she's no woman worth the name."

"I don't see," he says, "how anybody could fix him—let alone a delicate, timid, refined girl. Four of them great Mallet engines couldn't budge him when he's once stopped still."

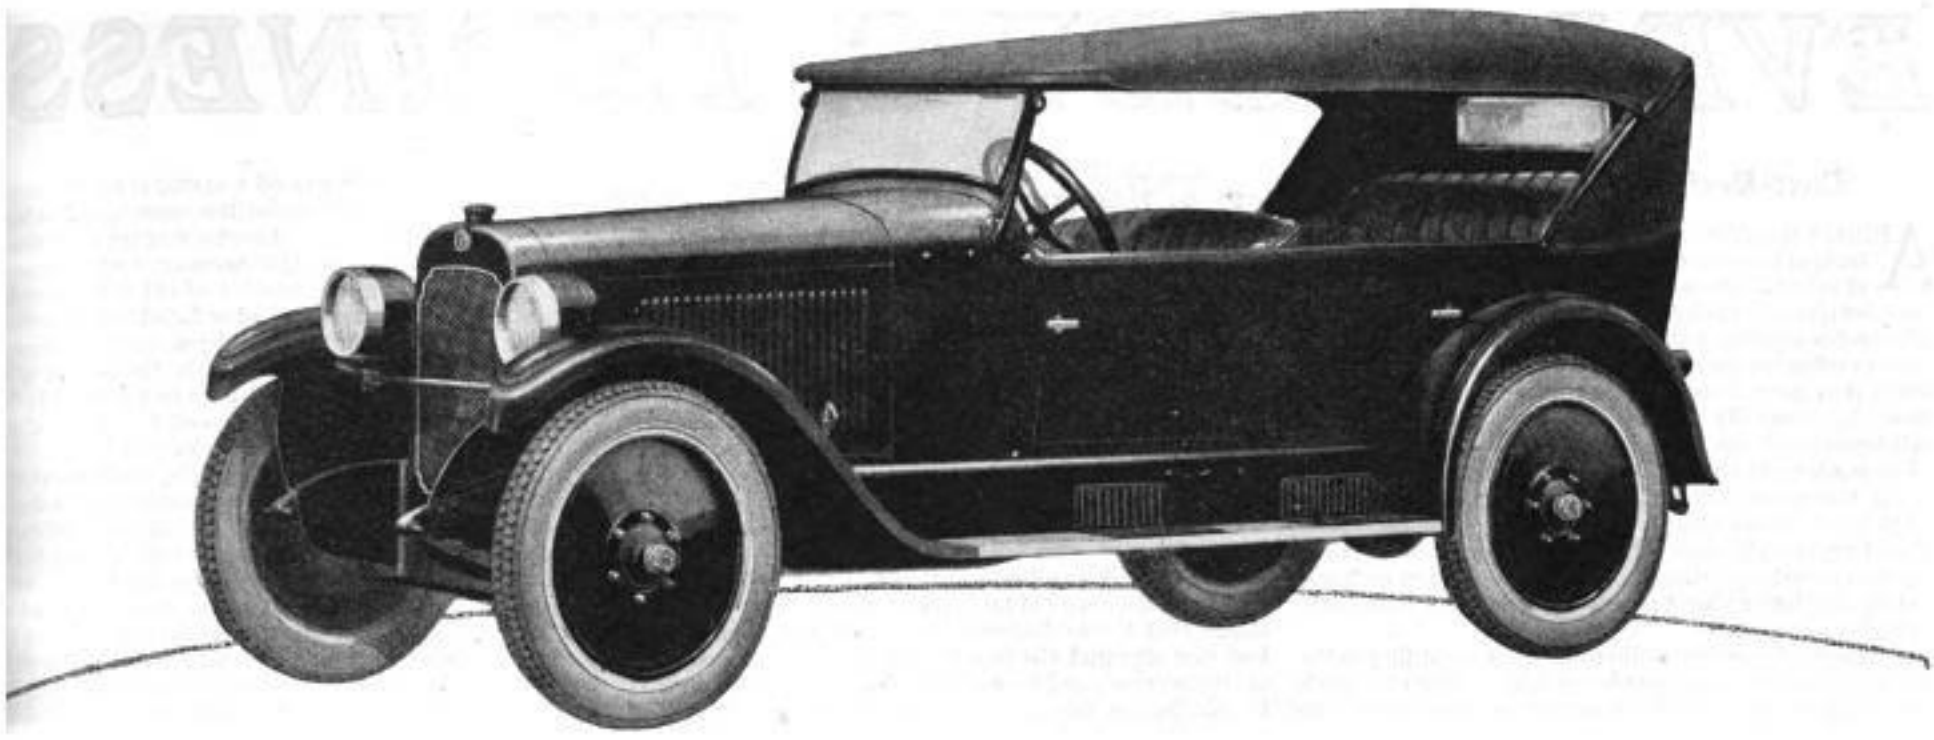
But, nevertheless, he went out and told the girl what his mother said the next time he met her in the park.

"It's useless," he says, "I know. But I had to tell you. So let's run off together and elope—let's end it. I'll give up the doctoring, and we'll go West, and I'll get a job firing."

"Give it up—just when you're right in sight of getting it?" she says. "No! Never!"

"We've got to," he says.

"And you no doctor! Never!" she says. "No. I will not."



"What, then?" he says, and waited a minute, while she stood silent.

"Do you love me greatly," she says, "Tommy?"

"Don't you know I do?" he says, flushing up. "Ain't I just been offering to give up my life for you?"

Chalmers Fine Performance Proves Its Higher Value

In performance, the New Series Chalmers Six is simply wonderful.

That is made perfectly plain in the reports coming in every day, from owners and from dealers all over the country.

We knew that Chalmers engineers—working on the basic six-cylinder soundness which the Chalmers has always embodied—had made the six mean more than ever before.

Now we are receiving from many points enthusiastic confirmation of all we felt had been achieved by a solid year's refinement.

"On high gear I have climbed hills where I have always had to shift with other cars I've driven," says one man.

Another writes, "I couldn't help but notice the extreme quietness of the motor, timing gears, valves and differential"—thus putting his finger right on real evidence of fine construction.

"To pull down to two miles an hour in high, and then pick up to 30 miles an hour within a city block, without bucking or spitting—that's what I call flexibility," says a third.

"One of the most satisfactory tests is the way she will lug a hill at eight miles an hour on high," another says. "No matter how hard I make it pull, the motor will not overheat."

Size and beauty, equipment and finish, are always indications of value. It is conservative to say that the Chalmers Six leaves nothing to be wished for in those features.

But the way a car performs tells how it is engineered and how it is built.

On that—which is the final proof of value—the warmth of the letters we are receiving is conclusive.

EVERYBODY'S BUSINESS

Cost-Reducing Ideas

By Floyd W. Parsons

A PROPER system of cost accounting is the basis of business success. Though no system of calculating costs can of itself make profits, it can show definite ways to effect savings, and savings really are only profits wearing a different cloak. No survey in any plant or office can be more than a haphazard examination unless it is carried on in accordance with the indications shown in a carefully prepared cost-accounting report. A well-formulated cost system not only calls attention to obsolete equipment that is being used at an excessive cost, but it points out individuals and departments that are below the required standard of efficiency. The right kind of cost report will show what is happening now, while a slipshod report only shows what has happened in the past, and in this latter case there is no chance for immediate correction.

Hundreds of companies distribute rent according to the direct wages of the men employed in one office or department of a company, while in correct cost accounting the rent should be distributed according to the space actually occupied by each worker. One employe may receive five dollars a day, and still take up twice as much space as an executive who gets five times as much. Each and every charge should be made against the product benefited, and where more than one item or product is benefited the charge must be divided and distributed in proportion to the betterment conferred.

The methods employed in the main offices of a company are invariably a reliable reflection of the kind of management in charge. In the concern here referred to many of the practices were unique, to say the least, and it seemed that very few bets had been overlooked. One day the manager walked into the stenographic department, and after looking the ground over decided to install a new system. A week or two later all the typewriting machines were equipped with a measuring and recording device which gives the linage record of each operator. For a couple of weeks these records were studied and an average figure was found to represent the daily work of each typist. With these data in hand, the management was able to plan a new system of payment for the typists. In the scheme proposed and now in operation the typists are paid on what is known as a point system. Five average lines are considered as the equivalent of two hundred and forty spaces, or one point. The wage basis of this system is 100 points at $1.70. Each operator is guaranteed her former wages, but if her linage record per week exceeds the standard the girl is paid a bonus for her increased production, the additional payment being based on the prescribed rate of $1.70 for each 100 points turned out. For example, if a typist produces 1000 lines of forty-eight spaces each per day she would earn a daily wage of $3.40. A number of the speedy operators regularly exceed this performance. More than 90 per cent of the typists employed now receive a weekly bonus, and the production of each girl has shown a material increase since the new scheme went into operation.

Long ago the company found that much dissatisfaction was caused through permitting dictators to see letters that had just been typed and had not been checked for errors. Instances were found where bad feeling had grown up between dictators and typists because of the return of letters that contained seemingly inexcusable typographical errors. At first an effort was made to try to solve this problem through educating dictators to talk distinctly when using the dictating machines. In some cases the trouble resulted from not having the speed of the machine for transcribing exactly the same as that of the machine which received the dictation. In other cases the cylinders had not been properly shaved, while in still other instances the correspondents talking into the machines held the mouthpieces too far from them. As a final remedy the company employed a correspondence supervisor, whose duty it is to proofread all copy turned out by the typists and see that no letters get back to the dictators until they are perfect.

In actual operation this scheme has proved wholly satisfactory. The first carbon of each letter typed is made on a yellowish tissue paper which is marked "Correspondence supervisor." All corrections are inserted on this sheet, which, with the original letter and all the other carbons, is returned to the operator for correction. The unique plan followed in this scheme is the use of numbers as substitutes for corrections. About thirty common errors are printed at the head of the yellow tissue, and each one is numbered. After using this method for a short time the typist becomes thoroughly familiar with the meaning of each number, and the errors are corrected with a minimum of delay.

Not only does the company take care to prevent misunderstandings brought about by letter writing within the limits of its own personnel, but it exercises even greater caution in seeing that letters written by employes do not create wrong impressions or foster ill will among those with whom the company does business. All the concern's employes understand that each letter sent out is actually a sales letter and that business can be destroyed more rapidly through the improper wording of communications than it can be built up through extensive and expensive advertising. It was for this reason that the management adopted the policy of turning over the correspondence of dissatisfied customers to one of several letter writers whose business it is to patch up differences through the exercise of tact and courtesy. Experience had shown that it was dangerous to permit the employe who had first dictated the letters that caused the trouble to continue corresponding with the disgruntled customer. It is only human for a person to make excuses and try to cloak mistakes. Nothing is more effective in handling trouble of this kind than to admit the company's fault, unless the customer's complaint is wholly without any basis in fact.

Once a week the general manager presides at a meeting of department heads that is far from lacking in animation. Suggestions that are both practical and interesting are here discussed freely and openly by any and all of the employes present. The company's present methods are criticized wherever possible, and new ways are proposed for doing things. The majority of the concern's new practices originate in these weekly forums. The records of recent meetings showed many valuable discussions. Some of the points brought out are worth repeating.

Try to imitate a correspondent's letter-writing style. This is a form of flattery that nets results. The average person's letter-reading tastes are generally the same as his writing tastes. Study each letter before you reply, and try to note the writer's eccentricities. Make your reply fit the man's individuality. If he writes a brief letter stating only the fewest possible facts, answer tersely. If the correspondent goes into lengthy details, give him a reply in kind, for he will appreciate a letter that discusses all the minute phases of the matter in hand. Try not to use multisyllabled words to a fellow who writes in monosyllables. If the correspondent throws in a little slang he won't mind your doing the same. If he is epigrammatic pick out one of his clever sayings and repeat it in your reply, acknowledging his authorship. He will be tickled by your noticing his cleverness.

Many companies suffer losses of time and money in sending telegrams. Nearly everyone includes in such messages many words that might be left out. Dozens of simple rules for writing telegraphic messages are commonly overlooked. The wire companies allow one signature free. For instance, if a telegram is signed "The Smith Company, Johnson," the one word "Johnson" is counted and charged for. On the other hand, if the signature is reversed, "Johnson, The Smith Company," the telegraph company charges for the last three words. Many senders of telegrams overlook the saving that results from spelling out figures. For example, 1670 counts as four words, while sixteen seventy counts as two words and is more likely to be transmitted correctly. If one writes the "C., B. & Q. Railroad" the name of the line so written counts for four words, whereas one can write "Burlington," which, of course, counts as only one word.

The management is rather opposed to a policy of issuing frequent general orders, believing that such a plan is inferior to a method that places a large responsibility on each worker. Such general orders as are issued are printed on a special form of yellow paper. Departmental orders are printed on blue forms, while announcements and notices which are not considered to be orders are typed on pink forms. In every department of the company colors are used actually to signify something. For instance, red slips attached to letters mean "Give this immediate attention." Not long ago the general manager organized what is known as a flying squadron, which consists of ten of the company's most capable stenographers and clerks. These workers report directly to the office manager and are not permanently connected with any particular department. Each day they are assigned to some special work, according to the needs of the moment.

One interesting department of the company is that which is devoted to research. The expert in charge of this bureau not only himself initiates subjects for investigation, but conducts an analysis covering any promising problem that other employes suggest for examination. One report covered the waste of pins, clips, pencils and rubber bands. As a result of this report a general order was issued that caused a saving of approximately 35 per cent in the quantities consumed of the four articles mentioned. About a year ago a legal situation arose that made it necessary for the company to order the copying of a number of old written records. The ink on these old records had so faded that the writing was barely legible. The research department immediately started an examination that ended in the drawing up of specifications for all ink thereafter to be purchased by the company. The investigation showed that many of the inks at present on the market are likely to fade.

The research department has even been called in to help decide the question as to how long certain papers should be retained in the files before they are taken out and stored away as dead matter. As a result of such a study freight receipts are kept in the active file for ten months, while similar specified lengths of time have been established for various other classes of matter. It was the research department that worked out a plan for rest periods for workers in certain departments, with the result that there has been a decided increase in the productiveness of the employes affected. In addition to a 10 per cent increase in output, the rest periods have proved a decided benefit to the health of the workers.

Other innovations for which the research department is chiefly responsible were a system to prevent the raising of amounts on bank checks; a scientific placing of desks to increase efficiency through eliminating distraction; a bonus system for the rank and file of office workers; a sick-leave-with-pay scheme for the lowliest workers; and dental and medical dispensaries to serve every employe. To prevent the raising of checks the company now uses a code word of ten letters, the consecutive letters representing the figures from 1 to 0. If a check is made out for twenty-five dollars the second and fifth letters of the word are placed on the back of the check. If the check is changed the fraud is easily detected when it comes back from the bank by glancing at the letters on the reverse side.

The bonus system is based not only on individual production but on the employes' accuracy. A certain sum is credited to a worker if no error is made during the first week of a month, while a larger bonus is credited for each consecutive week during the same month if the employe's record continues clear. This plan has reduced mistakes to less than half of the average number that formerly occurred.

In the scheme providing payment of wages to mine employes, the worker is allowed one day sick leave with full pay after he has been with the company one month. After two months' service he is allowed two days, and so on up until he has been in the company's employ for eight months, when, of course, he is allowed eight days' sick leave. After eight months, and up until the end of the first year, the sick-leave allowance is one and a half weeks. After the first year one week is added to the allowance for each completed six months of service. After an employe has been ill and again returns to work he is credited with whatever balance of leave remains due him. The system has materially reduced labor turnover and absenteeism and because of its absolute fairness and impartiality has increased the spirit of good will in the company's employe.

The dental dispensary has proved to be one of the best moves the company has ever made. The service has more than paid for itself in time saved through the prevention of toothache alone. More than 90 per cent of all the employes examined have needed dental attention.

The company has refused to follow the example of many concerns which employ a young and inexperienced physician to provide medical attention for employes. The management accepts the view that a cheap doctor would be the most expensive kind in the long run. The aim is not only to eliminate unhealthful surroundings that menace the health of workers, but to correct the evils in all processes that retard production through causing fatigue and lack of concentration.

The management makes every possible effort to encourage thrift on the part of its workers. As a part of such a plan it has prepared a family budget book which it has distributed to all employes who have shown any interest in the matter. A large percentage of the workers own stock in the company. Such stock is sold to employes on a liberal part-payment plan. Interest at the rate of 5 per cent is charged on deferred payments for stock, but in no case may the interest charged be greater than the dividend credited. Even in the face of slackened business, the company has not yet reduced wages. The president says: "Wages went up last and they must come down last." In reducing working forces the company follows the policy of always dropping the newest men first. It believes that soft handling of employes is unwise, and tends to injure morale; but it holds unswervingly to the idea that success depends on confidence, and that confidence can exist only where there are straight dealing and fair play.

The Peerless almost immediately exhibits its superiorities to those who have never driven it before.

It reveals at once those fine shades of behavior which can only issue out of sound manufacturing principles and scrupulous manufacturing practice.

You *know* that the Peerless is a great car because it reveals its greatness as positively as a man of character reveals magnetic personality.

It does with dash and spirit, with effortless ease and certainty, all of the things you value most in a motor car.

Supreme motoring comfort, after all, has its chief source in the obedient ebb and flow of a wealth of power.

The Peerless conveys that sense of power-abundance and power-control in every phase of its performance.

Smoothness is a much abused word in motoring parlance—but Peerless smoothness is a real and a permanent thing which manifests itself at every speed and under every conceivable circumstance.

Disparaging no other good car, it would be difficult for you indeed, to find a better investment, or more solidly satisfying performance, than you secure in the Peerless.

THEODORE F. MacMANUS

Always Look for the Gold Seal

It is pasted on the face of every genuine *Gold-Seal* Rug and on every two yards of *Gold-Seal* Congoleum By-the-Yard. Note the liberal money-back guarantee and don't forget that this seal (printed in green on a gold background) identifies the genuine *Gold-Seal* Congoleum. Refuse imitations. Be sure to look for the Gold Seal.

CONGOLEUM COMPANY
INCORPORATED

Philadelphia New York Chicago Boston San Francisco
Dallas Minneapolis Atlanta Kansas City Pittsburgh Montreal

It's so easy to make a kitchen attractive—

"That's a fine new rug you've got there," said the iceman.

"Yes, John, and you have no idea how pleasant and attractive it makes my kitchen."

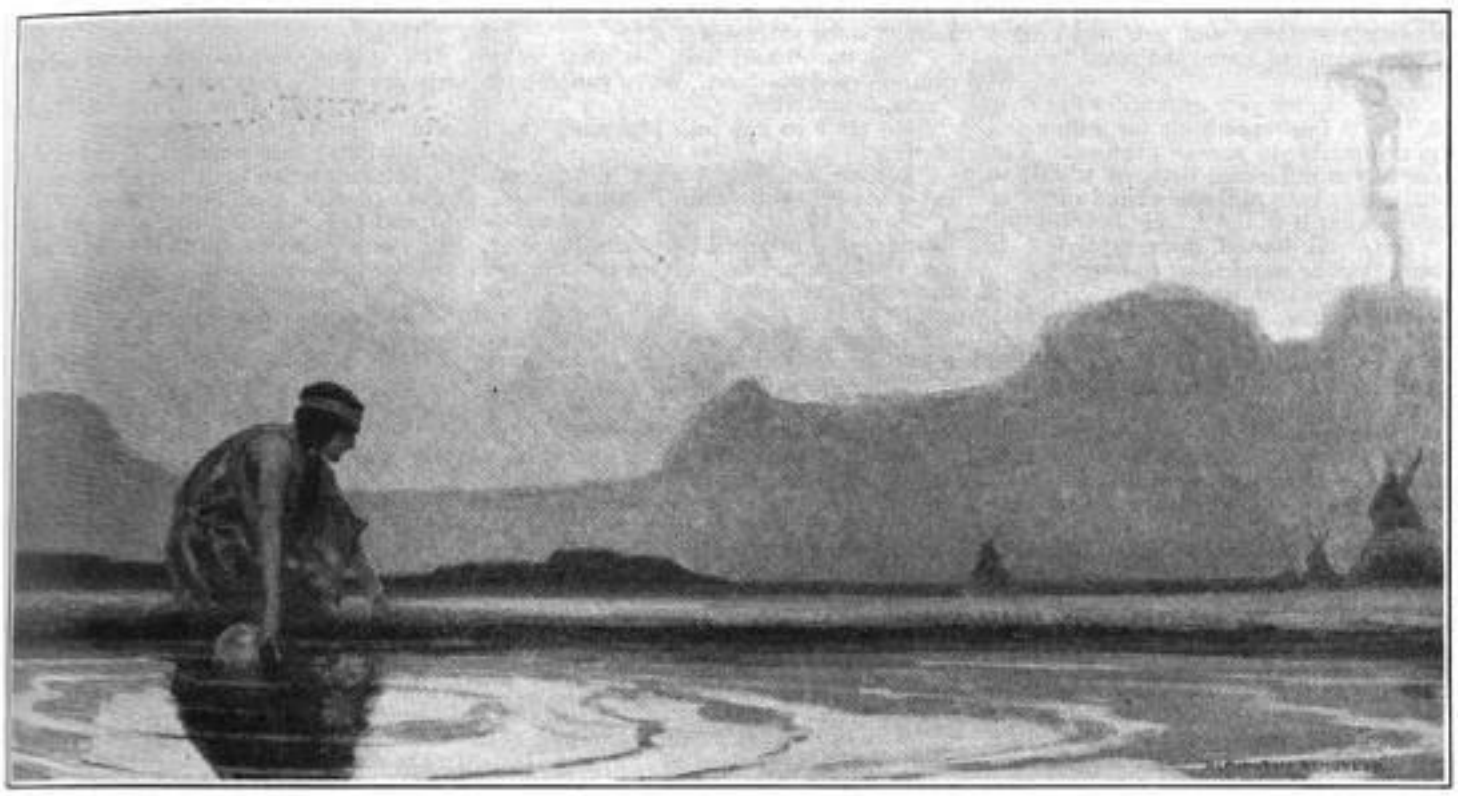
No wonder she is enthusiastic. For the darkest kitchen is at once made bright and cheerful when the floor is covered with a colorful, easy-to-clean *Gold-Seal* Congoleum Rug.

A few moments with a damp mop whisks away every speck of grime from the firm, waterproof surface. Your rug will lie perfectly flat without fastening.

And with all their artistic charm and labor-saving qualities, *Gold-Seal* Congoleum Rugs are decidedly inexpensive.

Note the Low Prices

6	x 9	feet $ 8.10		1½ x 3	feet $ .50
7½	x 9	feet 10.10		3 x 3	feet 1.00
9	x 10½	feet 14.15		3 x 4½	feet 1.50
9	x 12	feet 16.20		3 x 6	feet 2.00



The pattern illustrated is made only in the four large sizes. The small rugs are made in designs to harmonize with it.

Owing to freight rates, prices west of the Mississippi and in Canada are higher.

SENSE AND NONSENSE

— And Repeat

"Nihil dictum quod non dictum prius"—as the feller says.

TOUGH on us guys, to be heirs of the ages—
Meaning us novelists, poets and sages;
We who now strive on our typewritten pages
Somewhere or other to score!
Not to be wondered at much if our attitude
Touching the past isn't one of great gratitude!
Each phrase we write is a chestnut or platitude;
Somebody said it before.
Moses, it may be, who, vide Leviticus,
Showed as a wise, if he wasn't a wilty cuss,
Juvenal, Plautus or Terence or Cato,
Lucan or Horace or Martial or Plato,
Balzac or Byron or Fielding or Pope
May have put out the original dope;
Dante, Boccaccio or Lytton or Lamb,
Oliver Goldsmith or Omar Khayyam,
Not to be wondered at if we feel sore;
Somebody said it before!

Couth a moment of rare inspiration;
Swiftly we write in a glow of creation,
Ending, at last, with a sense of elation;
Then—and it cuts to the core—
Some clever critic devoid of civility
Cites book and verse with a fiendish ability,
Showing, to teach us a proper humility,
Somebody's said it before.
Habakkuk, Daniel, Hosea, Elijah,
David, Ezekiel, Micah, Abijah,
Vergil, perhaps, or Agrippa, Cornelius,
Cyrus or Ovid or Marcus Aurelius,
Benjamin Franklin or Bunyan or Brooke,
Dibdin or Dickens or Cowper or Cook;
Here we've been sucking La Rochefoucauld's brain,
This is Voltaire or Rousseau or Tom Paine:
Some of those previous persons of yore—
Somebody said it before.

Well, we can't help it! To them be the glory—
Those who forestalled us in song and in story.
Still, we can make their stuff seem not so hoary
If we can do nothing more.
There is the trick! If a fellow can learn it he
Should, with the jazz and the pep of modernity,
Write for his time if he can't for eternity.
Who was it said that before?
Solomon, likely, perhaps Jeremiah,
Balaam or Bildad or Job or Josiah,
Seneca, Sallust, Tibullus, Ausonius,
Statius, Gallus, Catullus, Petronius,
Thomas à Kempis or Chaucer or Clough,
Shakspere—who really wrote mighty good stuff—
Burns, Scott or Wordsworth or Shelley or Poe,
Thousands of others and ages ago.
Well may we grieve in the light of this lore;
Somebody's said it before!

—*Kennett Harris.*

Deduction

IT HAD been raining hard in Aberdeenshire. The roads were flooded when Jeems McTosh drove in his dogcart to the village where he traded. A friend, Davie McNutt, hailed him from the sidewalk:

"Hi, Jeems! Are ye weel the day?"

"No bad, Davie. Hoo's yoursel'?"

"Oh, middlin'. Hoo's the goodwife, Jeems?"

Jeems jerked a thumb over his shoulder at the back seat. He replied, "She's ahint there."

"She's no there, Jeems," said Davie.

"Aye, she's ahint there," Jeems insisted. But his friend was stubborn.

"I'm tellin' ye she's no there."

This time Jeems looked around to make sure, and the back seat was empty. The man reflected, scratched his head. Then he said, "Dod! She maun ha' been the graund splash!"

The Summer Woods

THERE is no sound of people here; the trees stand calm and tall,
And sunlight, like a magic dust, lies filmlike over all;
And small, pale breezes hurry by, and turn to nothing where
Blue flowers grow beside a spring, with sprays of maidenhair.

All life seems dormant; Nature sleeps a dim, enchanted sleep,
And in the thickets, densely screened, wee forest creatures creep
So quietly that not a stir can mark their passing by.
There is no ring of laughter here—no semblance of a sigh.

The fairy folk are weaving spells not very far away,
For all at once lost dreams seem real; a broken yesterday
Is new again, and youth steals back on shining, sandaled feet—
And hopes are born to life again, and love seems madly sweet!

Can cities be, can sorrows dwell, when there is keen content
In watching as vague bits of light and shade are swiftly blent?
Can there be toil, and vain regret, and striving for a goal,
When just a peeping bit of sky brings solace to the soul?

Do dryads live in slim birch trees, do pipes of Pan still sound—
And can that be the print of hoofs upon the mossy ground?
There is no sound, and yet one hears a silver elfin call,
And sunlight, like a magic dust, lies filmlike over all.

—*Margaret E. Sangster.*

Scrapping the Similes

MY LOVE ain't like the red, red rose;
My love ain't like the sea;
My love ain't like the mountain top;
My love ain't like a tree.

Unlike the sable night my love;
Dissimilar from the day;
My love ain't like the jocund June,
Nor eke the merry May.

My love ain't like the fragrant morn
With dewy freshness pearled;
My love ain't like another thing
In all the gol-darned world.

—*Franklin P. Adams.*

Ideal and Real

ROMANTIC dames that yearn for caveman love,
For cruel ardor and for fierce caresses
Of supermale who conquers and oppresses,
And does by brutal strength his mastery prove,
Oft wed, at last, some tepid lovey-dove
Who prates of bridge and golf and ladies' dresses,
And never makes a gesture that distresses,
Nor steps one moment from convention's groove.

While Mr. Goodman makes a model mate,
Fetching or carrying gladly at her choice,
She dreams about a lover fierce and bold,
Until the visions of a happier fate
Are shattered by her spouse whose timid voice
Cries, "Hurry, dear, the toast is gettin' cold!"

—*Thomas Lomax Hunter.*

An Enlarged Copy

A CERTAIN judge, who is not over five feet in height and weighs under a hundred pounds, happens to have a son who tips the scales at two hundred pounds. The judge is very proud of his offspring, and one day took him to call upon an old friend who had never seen him.

"Ah," said the friend, looking from son to father and smiling, "I see—a block off the old chip, eh?"

Cramping Their Style

JOHN GOLDEN tells a story of two young vaudeville actors from New York who went over to London to set the English capital on fire. They gave a dress rehearsal of their clever act before one of the big booking agents, who listened to it solemnly from the pit one foggy afternoon.

When they had finished he said, "Very good, boys, but"—glancing at his wrist watch—"it runs twenty-five minutes, and that's pretty long. However, if you'll cut it down to eight minutes we may bill you."

"Eight minutes!" cried one of the team, glaring down at him. "Why, good Lord, we bow eight minutes!"

Don't Be Discouraged~

"POWDER never will conceal that skin trouble, but if you will use Resinol Soap every day as directed, you'll be surprised to see how quickly your complexion improves. I know because I tried it."

Recommendations like this have placed Resinol Soap in hundreds of homes where it is now the favorite.

Its generous, pore-searching lather invigorates and tones up the skin while cleansing it, and the action is so mild it will not injure the tenderest skin.

Why not begin today the use of this delightful toilet soap and let it help to cleanse the clogged, inflamed pores,—smooth the rough surfaces,—reduce the oiliness,—and restore the glow of skin health?

Trial free on request, Dept. 5-G, Resinol, Baltimore, Md. At all drug and toilet goods counters. *Ask for it!*

TILL THE JOINT CRACKED

(Continued from Page 23)

"Why not let me handle your stuff—all of it? Take all the trouble and annoyance off your shoulders, and you won't have to do a thing but spend the cash?"

"As how?"

"Why, sell me your output for five fives off. See? I'm responsible for selling and I'm responsible to you for payments. You rake in the difference between what you have to pay your mill and what I pay you. Dunno what it is, but I'll bet it's plenty."

"Um." It looked more attractive to Pazzy than he was willing to admit.

"What's your output?"

"Consid'able. Suthin like a car a day."

This, as Pett well knew, was not fact. He knew exactly what Hickson's mill had produced the year before, and it was little over half of this.

"Three hundred cars, eh? Didn't know it was so much. Makes it worthwhile. About five hundred thousand gross business. My five would make me better than twenty thousand."

"So 'twould. So 'twould. Can you move that many?"

"Like rolling off a log. I can grab a bunch of Peters' customers with that price, and with the sixty cars I've got—oh, mister!"

Pazzy considered. He thought he knew the market. He was certain what the market would do as soon as Pett began a general onslaught on other folks' customers with three hundred cars to sell. The bottom would drop out. He would then be able to buy all the dishes he wanted at the figure he wanted to pay—and leave Pett holding the bag. Pett was responsible, he knew. Pett would contract to buy three hundred cars at five fives. Suppose there was a market bust—Pett would have to pay more for his dishes than he could sell them at. It made Pazzy safe—out of the fifty thousand dollars or so that he knew Pett had saved. Therefore Mr. Billy Pett was duly elected to hold the bag.

"I'll go you if I lose," he said. "Dig up a lawyer to draw the contract, and we'll start to-day."

"Suits me. Only wish you could deliver more than three hundred cars."

"Call it three hundred, and we'll be safe," said Pazzy.

It was three o'clock in the afternoon when Pett rejoined Ted and Veronica with the signed contract in his pocket. He was pleased with his success but dubious of consequences.

"Now," he said, "we've got to sell dishes for Pazzy—when we can't sell them for ourselves. We've got to keep his stuff moving. I can see how we can push along a car a week for him—by taking on Stump Brothers. But for the life of me I can't see how we're going to unload three hundred cars. We're going to get stung."

"How about it, Veronica?" Ted asked.

"How many dish factories are there?"

"Seven."

"Including ourselves and Hickson's?"

"Yes."

"That leaves five. You and I are going to take a little trip around the country—visiting dish factories. Don't worry, Mr. Pett. It ruins the appetite. We start for Michigan to-night, Ted."

Which they did, stopping over in Albany next day to see a customer, and taking the Wolverine on to Detroit in the evening. There they took the Pere Marquette north, and the following morning called upon old man Steffens, of the M. W. P. Company, who received them cordially.

"How's your dad, Ted? Him and me have fit and chawed each other these thutty year. Hope he's enjoyin' the fruits of his wicked life."

"He is—in California."

"And you're running the business. Um."

"With my wife's help," said Ted.

Old man Steffens peered at Veronica over his spectacles and grunted. Veronica smiled.

"You don't set much store by my help, do you?" she asked.

"Wa-al, I've seen wimmin that wasn't so perty," he said.

"You never can tell," said Veronica, "by the pattern of the wall paper how many lath are under the plaster."

"Huh."

"How's business, Mr. Steffens?" Ted asked.

"Rotten. If it keeps up—and dog-gone Pazzy Hickson—I'm a-goin' to spend a lot of money knockin' the bottom out of the market. That dicky-bird's got to be learned some jedgment."

"And that," said Ted, "is what we've come to see you about. We're gunning for Pazzy ourselves."

"He can't be got with bird shot," said Steffens.

"We've just bought an elephant gun, but we need help to load it," said Veronica.

"As how?"

"Suppose you could buy some dishes at, say, four fives off the current list and sell them at your regular price—would it look good?"

"It would. More profit than I kin make manufacturin' jest now."

"Will your customers accept Pazzy Hickson's dishes?"

"Dishes is dishes," said Steffens.

"Fine! Now here's the idea: I'm raising my price to list," said Ted. "As soon as we get back I'm notifying our trade, and giving them forty-eight hours to buy at the present price of two fives off. That's sure to stir up some business. If you and the rest of the crowd were to do the same, it would pull in quite a bunch of car orders."

"Mebby."

"But I don't care whether it does or not," said Ted.

"Why?"

"Because I can deliver a hundred and fifty cars at four fives off. Pazzy Hickson's. Listen, I've got him contracted to deliver three hundred cars this year and next, at four fives off and a five per cent commission."

"Eh? How many?"

"Three hundred."

"But ——"

"Surest thing you know. Some of 'em 'll have to go cheap to the chain stores and Stump Brothers. That'll take maybe a hundred cars. It won't disturb the business. If you'll turn over orders to us at your price, and the rest of the manufacturers will do the same, we can move the whole three hundred. Get the idea?"

"It'll clean Pazzy up. Take him off the market as a disturber."

"A heap more than that," said Veronica. "It'll —— Now, Mr. Steffens, suppose Pazzy comes to you in a month and tries to buy some dishes, will you sell him?"

Mr. Steffens considered briefly, then slapped his knee.

"I get you!" he said. "Who thought this up? Say! Did you do it, young woman?"

"I cannot tell a lie. I did it with my little bobbed head."

"By gosh!" said Steffens. "When I git home I'm a-goin' to shear the hair off'n all three of my daughters. My price goes to list to-day. You go and handle Jim Warren and Toot McBean. I'll take care of the other two factories."

A week later Ted and Veronica arrived once more at home. They had sent out a notice of rise in price, and found awaiting them, as they anticipated, orders for some twenty cars of dishes. These they sent to Pett, with the specifications, who forwarded them to Pazzy's mill. Old man Steffens sent along orders for twenty-six cars, and the other mills, they having fallen readily into line, contributed orders for a hundred cars more. Thus Pett had on hand orders for a total of a hundred and forty-six cars without taking into consideration the chain stores and Stump Brothers, which made up eighty more. For a period of three weeks he sent these through in driblets to Pazzy's mill.

As the total began to mount Pazzy experienced first delight, then bewilderment, and finally apprehension. Moved by the latter emotion he dropped in at the little office Pett had taken in Boston.

"Say," he demanded, "what's up? Where's all this business comin' from?"

"Comes easy," said Pett. "Didn't I tell you I was a salesman?"

"You be. Young feller, you've stole customers from every factory in the country! Why, you've even pried Giner's away from old man Steffens! It can't be done. Be them orders bony fide?"

"All you've got to do is ship," said Pett.

"Right now you've turned in orders fer two hundred and twenty-six cars, young feller."

"And I'll have the other seventy-four to clean up my contract in thirty days," Pett said. "I guess we made a lucky deal."

"What's this about prices goin' up?"

"Everybody's announced a rise."

"Um."

"Not going to have any trouble delivering, are you?" Pett asked.

"Who? Me? I should say not," Pazzy said. "Don't you worry, sonny."

But Pazzy was worried. It looked as if he had contracted to deliver a hundred and fifty cars more than he manufactured, and he was busy figuring out where he could get them. Also he didn't like the looks of the rise in the market.

"What you sellin' for?" he asked.

"Different prices. Mostly two fives off," said Pett.

"The devil you be!" Pazzy took time to consider this, but he was not a man to show his uneasiness. "I'll say you kin sell dishes," he added, but in his compliment was a note of something that was not pleasure.

He had to have dishes. He knew he had to have dishes, and with an energy he had not displayed for years he started out to get them. He wired old man Steffens.

"How many cars dishes can you let me have at four fives?"

In three hours came the reply: "None."

In turn he wired each of the other factories to the same effect and received the same reply.

He next wired: "What price can you make me twenty cars?"

"List," came the answer from each.

The thing was serious. Pazzy's keen nostrils scented a rat. He spent railroad fare to visit Steffens and argued for half a day, but not a car could he buy for less than straight list with no discount. He did some figuring. He was contracted to deliver at list less four fives, with a five per cent commission. Taking an average of seventeen hundred dollars for a car—if he should be compelled to buy at the market—he would have to deliver to Pett at $1315.44. He figured this several times to be sure he had made no mistake. That meant a loss of $384.56 on each car. Multiply this by a hundred and fifty—he hated to look at the figures! It made a frightful total of fifty-seven thousand six hundred and eighty-four dollars.

He had to have dishes!

He had to have dishes for two years, because he had contracted to deliver for two years, twice fifty-seven thousand six hundred and eighty-four dollars!

By this time Pazzy Hickson was frantic. He wired and wrote and visited, but not a car of dishes could he buy anywhere at less than a straight two dollars and eighty-seven cents for one-pounds delivered in Boston. For a month he struggled, and while he struggled the market remained stable. He was eliminated as a disturber. Business did not pick up notably, because 1921 was not a buying year, but jobbers who had been sitting back waiting for a drop became convinced of the market's stability, and bought according to their necessities. Things were looking up.

As a last resort he called on Pett.

"Pett," he said, "it begins to look like I can't quite fill your contract."

"Eh? What's that?"

"I may run a few cars short."

"You can't run a car short. I've sold every blamed one, and we've got to deliver. What's the matter?"

"I—er—I figured I could pick up enough from the other manufacturers to make good," said Pazzy.

"Which," said Pett, "is exactly what you've got to do."

"But they won't sell me," said Pazzy; "not at any kind of a price."

"Then," said Pett, "you're stung. It's up to you, and you're good for it. I'm going to have those cars, and you can bet your bottom dollar on that."

"Hain't there no way to fix it?"

"Not with me," said Pett with a tone so final that Pazzy recognized the hopelessness of trying to do anything with the young man.

"But somethin's got to be done. As it is I stand to lose fifty thousand and better a year."

"You built the coffin for yourself."

"But can't you think of anythin'?"

Pett thought. The hour was striking, he believed. The moment had arrived.

"Did you try Ted Peters?" he asked.

"A dozen times."

fresh
from the factory

Freshness is the essence of smoking tobacco quality. It takes time—and lots of it—to cure tobacco properly. Nothing can hurry it—but once it is properly aged, blended, cut and packed for smoking, the sooner you smoke it the better it is.

To insure TUXEDO reaching you in fresh condition, The American Tobacco Company has changed its entire plan of distribution on Tuxedo. Nothing is overlooked that will clip minutes from the schedule on which TUXEDO is delivered from our factory to your pipe.

We have always guaranteed the quality of TUXEDO—now we guarantee its condition when it reaches you. This means that every pipeful is good and every pipeful alike.

You need never smoke stale tobacco again.

(Continued from Page 36)

"Um. Might try him again. I tell you what—I'll run up there with you. I'm interested, because I've got to have those cars. I'll go along and see if we can't talk him into something. We used to be pretty friendly."

"'Twon't do no good," said Pazzy disconsolately.

"Worth trying anyhow."

Consequently Billy Pett and Pazzy packed their bags and journeyed northward that night, arriving in Checkerberry early the next morning. Checkerberry is not a cheering place to reach in the early hours. Its station is remote from the town, surrounded as far as the eye can reach by low scrub and cut-over lands. It is a singularly inhospitable prospect, and Pazzy felt to the marrow of his bones the chill of it.

They drove to the hotel, breakfasted, and were in Ted Peters' office waiting for him when he arrived. He surveyed them coldly.

"Didn't expect to see you here, Pett," he said. "How are you, Pazzy?"

"Mr. Peters, we've come to talk business."

"So I judged. Excuse me a moment. I see my wife passing." He stepped to the door and called Veronica, who entered and was presented to Pazzy. "I like to have my wife handy when I talk business," Ted explained. "Go ahead."

"We want to buy some dishes," said Pett.

"I'm here to sell them. Got a warehouse full."

"How many can you let us have?"

"Anything up to seventy million."

"Er—what concession will you make on a big order—say, fifty cars?"

"To you?" Ted asked directly of Pazzy.

"Yes."

"Not—a—cent," said Ted.

"I—say, listen, Peters—I——"

"You've let yourself in," said Ted, "and you're getting what's coming to you. For years you've mussed up this industry. You've sat back and raked in a nice profit, and gummed the works for everybody else. Now you've got to have dishes to make good, and you're not going to get them from me. That's final."

"You—don't want to bust me, do you?"

"I'd be sorry to see any man bust, Pazzy."

"Then—can't you do somethin'—to help out?"

"I know the box you're in pretty well, Pazzy. You've oversold about a hundred and fifty cars, haven't you? You stand to drop better than fifty thousand a year for two years?"

"That's the truth," Pazzy said hopelessly.

Veronica leaned forward. "I feel sorry for Mr. Pett. I always liked Mr. Pett, Ted. I've wanted you to patch things up with him."

"Pett and I didn't see things just alike. It was nothing but a business disagreement. Sorry it happened, dear, but it did happen."

"But, honey, if it was Mr. Pett who was going to lose all that money—you—you'd help him out for old time's sake?"

"I might."

"Pett stands to lose a lot of profit," said Pazzy.

"Look here, Hickson, I don't want to stamp on you, but you've been a thorn in the side of the dish business too blamed long. The sooner you're out of it the better."

"Mr. Hickson has some kind of a contract with a mill, hasn't he?" Veronica asked innocently.

"He has."

"If—suppose he didn't have that contract—he couldn't disturb things any more, could he?"

"No."

"How much is his contract worth to him?"

"About thirty thousand a year, isn't it, Pazzy?"

Hickson nodded.

"Well," said Veronica, "suppose he gave up that contract—er—assigned it, if that's what you call it, to Mr. Pett. Would that change matters any?"

"Mr. Hickson wouldn't consider that," Ted said in a patronizing way, as if speaking to a child.

"It would be better for him to lose thirty thousand in profits he's never had than to lose fifty thousand in money he's actually got," said Veronica. "Wouldn't it, Mr. Hickson?"

"Do—— You don't mean you'd deliver dishes to Pett if I got out?" said Pazzy.

"I'd think it over."

"Will you?"

Ted sat back and reflected. "Yes," he said finally, "I would."

"How about it, Pett? Will you take that dog-gone contract off my hands and let me out?"

Pett shook his head. "Not unless I can see my way to come through clean. Will you help me out, Mr. Peters?"

"If you'll leave the market alone."

"You can bet I will," said Pett.

"Then, so far as I'm concerned," said Ted, "it's a go. You transfer your contract to Pett and clear out of the dish business for good, Pazzy, and I'll give things a boost up."

"I'll do it—and be plumb tickled to death," said the harassed Hickson. "Dictate an assignment and let me out of here."

They made short work of Pazzy Hickson's exodus from the woodenware industry, and he left the office with a feeling he had gotten off easy. Pett remained to discuss details.

"I'm afraid," Ted said after the door closed behind Pazzy, "that I've lost a good salesman permanently, and I hope I've gained a competitor."

"Eh? What d'you mean?"

"That mill of Pazzy's will always be a threat until it gets out of the hands of those old wampuses who've been running it. It's a good mill, and could make a bundle of money—run on the same basis the rest of us do."

"I never could get their idea," said Pett.

"Well, here's my idea—or rather Veronica's. She thought it up. Bow for the gentleman, my dear. Doesn't she look modest? I've been dickering with the old birds, Pett. They want to get out of business. Couldn't do anything so long as Pazzy held that contract, but I did get an option on their plant. Ninety-five thousand dollars. It's worth more. I took the option in your name."

"My name!"

"Exactly. If you've got the ginger I think you have, you'll make good. You've fifty thousand planted—so you told me. They'll take fifty thousand down. You can borrow working capital, and I'll back you for twenty-five thousand if you need it. In two years you ought to clean it up and own a fine business. And the threat of that mill would be removed forever."

"Mr. Peters ——" Pett's voice faltered. "Say, by gosh, you're a prince! It's a go. When do we start?"

"Now," said Veronica, who was always for promptness.

That night in their room Ted and Veronica took stock of this, their latest enterprise.

"We've got rid of Pazzy," said Ted. "That comes first."

"We've moved a bunch of dishes at a profit," Veronica added.

"We've put Pett in that mill."

"And," Veronica said in conclusion, "we've had the dickens of a lot of fun. If you can't have fun you might as well quit playing tag. And I love tag."

Model 47 Super-Sport $1825

Announcing the New Oldsmobile EIGHT Super-Sport

Again Oldsmobile has set a new high mark for motor car style! Here—on the famous Smaller "8" chassis—is a 4 passenger car that for sheer beauty and ultra-distinctiveness is unrivaled.

It fairly sparkles with originality. The color is absolutely new—an exquisite cream buff shade that is as rich as it is striking. Its upholstery is of superb maroon, hand-buffed leather; its equipment is absolutely complete; there is nothing more you could require.

The attractive body of the Oldsmobile Super-Sport is mounted on the famous Smaller "8" chassis. Its motor is the powerful, flexible Smaller "8" motor. All of this assures you that same unexcelled driving comfort, that same mechanical all-'round excellence and the same smooth power flow that have brought the Oldsmobile Smaller "8" such unprecedented popularity.

With the addition of this striking car to the 1922-23 line, Oldsmobile offers a most complete series of both fours and eights for your selection.

Olds Motor Works, Lansing, Michigan
Division of General Motors Corporation

SUPER-SPORT EQUIPMENT

Tuare Steel Wheels—Demountable rims.
Fenders—Bicycle type.
Steps—Cast aluminum, rubber treads.
Bumpers—Front and rear, triple bar spring steel.
Curtains—Same heavy material as top, all open with doors.
Stop Signal—In combination with parking light.
Windshield Wings—Bevel plate glass, friction lock adjustment.
Ventilator—Cowl type, operated from dash.
Spotlight—On left front fender apron.
Steplights—For both rear doors.
Cuno Cigar Lighter—On instrument board.
Windshield Wiper—Conveniently mounted.
Rear View Mirror—Bevelled plate glass.
Rugs—In both compartments.
Foot Rest—Sedan type, very restful.
Snubbers—Gabriel on rear springs.
Motometer—Boyce De Luxe, monogrammed.
Robe Strap—Tubular, leather covered.
Tire Carrier—For two spare tires.
Top Boot—Detachable top clamps.

Look for this Guarantee of Value

Forty-two years ago I started building Emerson Shoes which men and women could buy with confidence—shoes that would bring the wearer back for another pair.

Today a million men and women are wearing them.

I feel that I have won this great public confidence in my shoes because I brand my name and a fair and square retail price on the soles of my shoes during the process of manufacture.

I thus assume full responsibility not only for the wearing qualities of my shoes but for the price I ask you to pay.

Visit the local Emerson Store or Agency in your town and see our wide variety of smart styles for Spring and Summer.

If you do not find one in your vicinity write for catalog of Value Guaranteed Shoes.

Look for the Emerson Shoe with the fair price branded on the sole.

HONEST ALL THROUGH

ROCKLAND, MASS.

THE COVERED WAGON

(Continued from Page 21)

"You can do thirty miles a day. I know you as a mountain man. Ride! To-morrow I start east to Laramie—and you start west for Oregon!"

And in the morning following two riders left Bridger's for the trail. They parted, each waving a hand to the other.

XLIII

A ROUGH low cabin of logs, hastily thrown together, housed through the winter months of the Sierra foothills the two men who now, in the warm days of early June, sat by the primitive fireplace cooking a midday meal. The older man, thin, bearded, who now spun a side of venison ribs on a cord in front of the open fire, was the mountain man, Bill Jackson, as anyone might tell who ever had seen him, for he had changed but little.

That his companion, younger, bearded, dressed also in buckskins, was Will Banion it would have taken closer scrutiny even of a friend to determine, so much had the passing of these few months altered him in appearance and in manner. Once light of mien, now he smiled never at all. For hours he would seem to go about his duties as an automaton. He spoke at last to his ancient and faithful friend, kindly as ever, and with his own alertness and decision.

"Let's make it our last meal on the Trinity, Bill. What do you say?"

"Why? What's eatin' ye, boy? Gittin' restless ag'in?"

"Yes, I want to move."

"Most does."

"We've got enough, Bill. The last month has been a crime. The spring snows uncovered a fortune, and you know it!"

"Oh, yes, eight hundred in one day ain't bad for two men that never had saw a gold pan a year ago. But she ain't petered yit. With what we've learned, an' what we know, we kin stay in here an' git so rich that hit shore makes me cry to think o' trappin' beaver, even before 1836 when the beaver market busted. Why, rich? Will, hit's like you say, plumb wrong—we done hit so damned easy! I lay awake nights plannin' how to spend my share o' this pile. We must have fifty-sixty thousand dollars o' dust burried under the floor, don't ye think?"

"Yes, more. But if you'll agree I'll sell this claim to the company below us and let them have the rest. They offer fifty thousand flat, and it's enough—more than enough. I want two things—to get Jim Bridger his share, safe and sound, and I want to go to Oregon."

The old man paused in the act of splitting off a deer rib from his roast.

"Ye're one awful damn fool, ain't ye, Will? I did hope to finish up here, a-br'ilin' my meat in a yaller-gold fireplace; but no matter how plain an' simple a man's tastes is, allus somethin' comes along to bust 'em."

"Well, go on and finish your meal in this plain fireplace of ours, Bill. It has done us very well. I think I'll go down to the sluice a while."

Banion rose and left the cabin, stooping at the low door. Moodily he walked along the side of the steep ravine to which the little structure clung. Below him lay the ripped-open slope where the little stream had been diverted. Below again lay the bared bed of the exploited water course, floored with bowlders set in deep gravel, at times with seamy dams of flat rock lying under and across the gravel stretches, the bed rock, ages old, holding in its hidden fingers the rich secrets of immemorial time.

Here he and his partner had in a few months of strenuous labor taken from the narrow and unimportant rivulet more wealth than most could save in a lifetime of patient and thrifty toil. Yes, fortune had been kind. And it all had been so easy, so simple, so unagitating, so matter-of-fact! The hillside now looked like any other hillside, innocent as a woman's eyes, yet covering how much! Banion could not realize that now, young though he was, he was a rich man.

He climbed down the side of the ravine, the little stones rattling under his feet, until he stood on the bared floor of the bed rock which had proved so unbelievably prolific in coarse gold.

There was a sharp bend in the ravine, and here the unpaid toil of the little waterway had, ages long, carried and left especially deep strata of gold-shot gravel. As he stood, half musing, Will Banion heard, on the ravine side around the bend, the tinkle of a falling stone, lazily rolling from one impediment to another. It might be some deer or other animal, he thought. He hastened to get view of the cause, whatever it might be.

And then fate, chance, the goddess of fortune which some men say does not exist, but which all wilderness-goers know does exist, for one instant paused, with Will Banion's life and wealth and happiness lightly abalance in cold, disdainful fingers.

He turned the corner. Almost level with his own, he looked into the eyes of a crawling man who, stooped, one hand steadying himself against the slant of the ravine, the other below, carrying a rifle, was peering frowningly ahead.

Jed Wingate

It was an evil face, bearded, aquiline, not unhandsome; but evil in its plain meaning now. The eyes were narrowed, the full lips drawn close, as though some tense emotion now approached its climax. The appearance was that of nerves stretched in some purpose long sustained.

And why not? When a man would do murder, when that has been his steady and premeditated purpose for a year, waiting only for opportunity to serve his purpose, that purpose itself changes his very lineaments, alters his whole cast of countenance. Other men avoid him, knowing unconsciously what is in his soul, because of what is written on his face.

For months most men had avoided Woodhull. It was known that he was on a man hunt. His questions, his movements, his changes of locality showed that; and Woodhull was one of those who cannot avoid asseverance, needing it for their courage's sake. Now morose and brooding, now loudly profane, now laughing or now aloof, his errand in these little hills was plain. Well, he was not alone among men whose depths were loosed. Some time his hour might come.

It had come! He stared now full into the face of his enemy! He at last had found him. Here stood his enemy, unarmed, delivered into his hands.

For one instant the two stood, staring into one another's eyes. Banion's advance had been silent. Woodhull was taken as much unawares as he.

It had been Woodhull's purpose to get a stand above the sluices, hidden by the angle, where he could command the reach of the stream bed where Banion and Jackson last had been working. He had studied the place before, and meant to take no chances. His shot must be sure.

But now, in his climbing on the steep hillside, his rifle was in his left hand, downhill, and his footing, caught as he was with one foot half raised, was insecure. At no time these last four hours had his opportunity been so close—or so poor—as precisely now!

He saw Will Banion's eyes suddenly startled, quickly estimating, looking into his own. He knew that behind his own eyes his whole foul soul lay bared—the soul of a murderer.

Woodhull made a swift spring down the hill, scrambling, half erect, and caught some sort of stance for the work which now was his to do.

He snarled, for he saw Banion stoop, unarmed. It would do his victim no good to run. There was time even to exult, and that was much better in a long-deferred matter such as this.

"Now, damn you, I've got you!"

He gave Banion that much chance to see that he was now to die.

Half leaning, he raised the long rifle to its line and touched the trigger.

The report came and Banion fell. But even as he wheeled and fell, stumbling down the hillside, his flung arm apparently had gained a weapon. It was not more than the piece of rotten quartz he had picked up and planned to examine later. He flung it straight at Woodhull's face—an act of chance, of instinct. By a hair it saved him.

Firing and missing at a distance of fifty feet, Woodhull remained not yet a murderer in deed. In a flash Banion gathered and sprang toward him as he stood in a half second of consternation at seeing his victim fall and rise again. The rifle carried but the one shot. He flung it down, reached for his heavy knife, raising an arm against the second piece of rock which Banion flung as he closed. He felt his wrist caught in an iron grip, felt the blood gush where his temple was cut by the last missile. And then once more, on the narrow bared floor that but now was patterned in parquetry traced in yellow, and soon must turn to red, it came to man and man between them—and it was free!

They fell and stumbled so that neither could much damage the other at first. Banion knew he must keep the impounded hand back from the knife sheath or he was done. Thus close, he could make no escape. He fought fast and furiously, striving to throw, to bend, to beat back the body of a man almost as strong as himself, and now a maniac in rage and fear.

The sound of the rifle shot rang through the little defile. To Jackson, shaving off bits of sweet meat between thumb and knife blade, it meant the presence of a stranger, friend or foe, for he knew Banion had carried no weapon with him. His own long rifle he snatched from its pegs. At a long, easy lope he ran along the path which carried across the face of the ravine. His moccasined feet made no sound. He saw no one in the creek bed or at the long turn. But now there came a loud, wordless cry which he knew was meant for him. It was Will Banion's voice.

The two struggling men grappled below him had no notion of how long they had fought. It seemed an age, and the denouement yet another age deferred. But to them came the sound of a voice:

"Git away, Will! Stand back!"

It was Jackson.

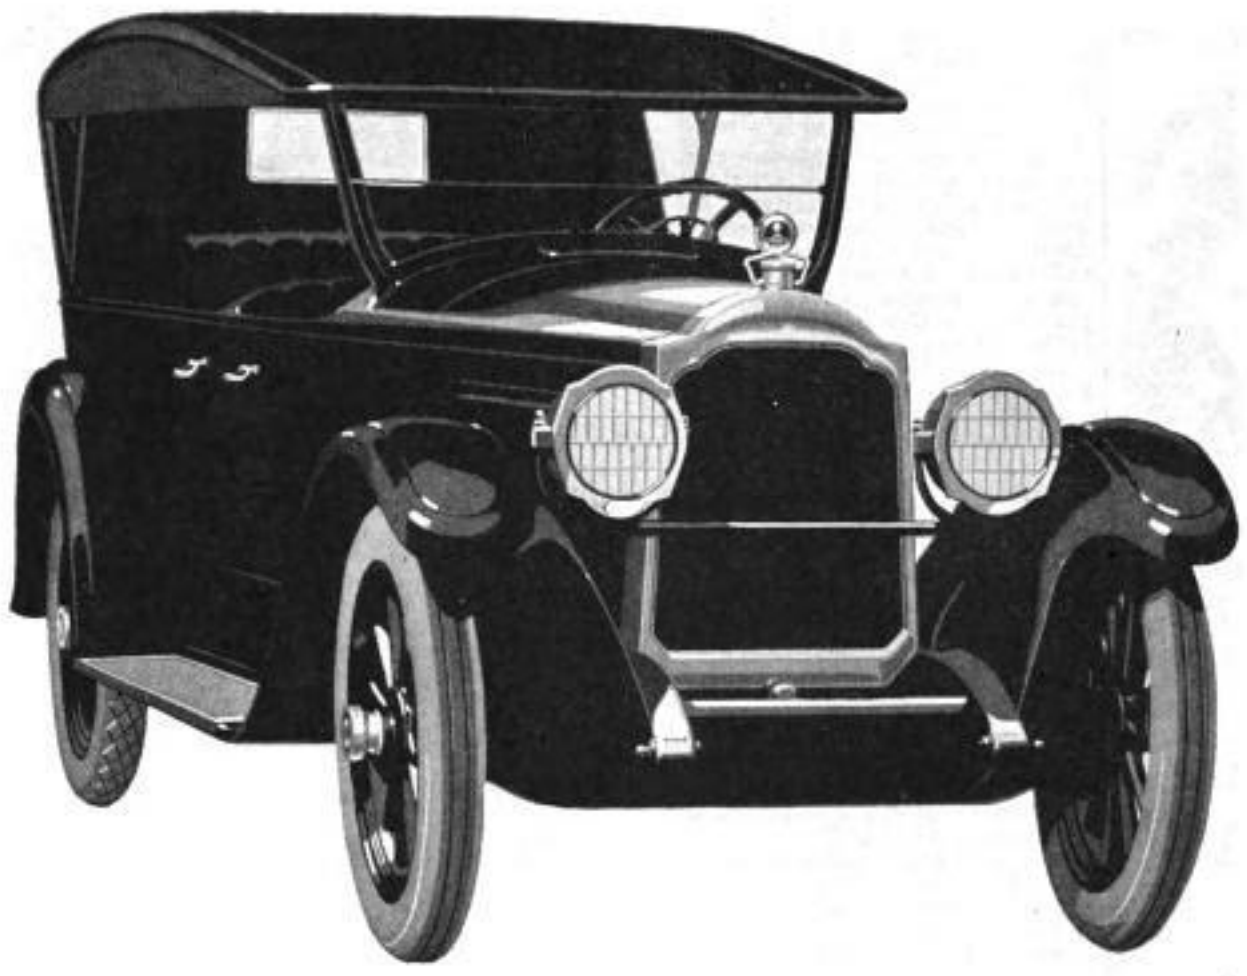
They both, still gripped, looked up the bank. The long barrel of a rifle, foreshortened to a black point, above it a cold eye fronted and followed them as they swayed. The crooked arm of the rifleman was motionless, save as it just moved that deadly circle an inch this way, an inch back again.

Banion knew that this was murder, too, but he knew that naught on earth could stay it now. To guard as much as he could against a last desperate knife thrust even of a dying man, he broke free and sprang back as far as he could, falling prostrate on his back as he did so, tripped by an unseen stone. But Sam Woodhull was not upon him now, was not willing to lose his own life in order to kill. For just one instant he looked up at the death staring down on him, then turned to run.

There was no place where he could run. The voice of the man above him called out sharp and hard:

"Halt! Sam Woodhull, look at me!"

He did turn, in horror, in fascination at sight of the bright angel. The rifle barrel to his last gaze became a small, round circle, large as a bottle top, and around it shone a fringed aura of red and purple light. That might have been the eye.



Steadily as when he had held his friend's life in his hand, sighting five inches above his eyes, the old hunter drew now above the eyes of his enemy. When the dry report cut flat and hard in the confined air of the valley and the body of Sam Woodhull started forward the small blue hole an inch above the eyes showed that the murderer's man hunt was done.

XLIV

WINDING down out of the hills into the grassy valley of the Upper Sacramento, the little pack train of Banion and Jackson, six hardy mules beside the black horse and Jackson's mountain pony, picked its way along a gashed and trampled creek bed. The kyacks which swung heavy on the strongest two mules might hold salt

SEVEN
PASSENGER
SINGLE-SIX

ASK THE MAN WHO OWNS ONE

Nothing more deeply significant has ever happened in Packard history than the production of this exquisite group of cars.

They bear the unmistakable stamp of that beauty of embellishment, and manufacturing precision, which has always been proverbial in Packard.

Packard has improved upon Packard—but, more deeply significant still, by a more complete mastery of its own superb resources, Packard has produced value without precedent.

The incomparable charm of these new Single-Six cars will make you eager for ownership—and the value they express will leave literally no choice but Packard.

Packard dealers are demonstrating these new cars. Single-Six five passenger touring, $2485 at Detroit. New price of the Twin-Six touring, $3850 at Detroit

THE GREATEST
Sandwich
IN THE WORLD

FOR motor trips, camping parties, picnics of every kind. Nothing "*catches on*" as quickly as the Underwood Deviled Ham Sandwiches in the luncheon kit.

Popular at lunch time. Popular too with the hostess who prepares them. For all you have to do is open a can of Underwood's Deviled Ham and spread it like butter on thin crustless slices of fresh white bread. Then you *have* "*the greatest sandwich in the world.*"

Made from salted, sugared, hickory-smoked hams, boiled en casserole, then chopped fine and mixed with the famous Underwood Deviled Dressing.

Keep one or two cans in the pantry ready for that party you plan on the spur of the moment. Get them from your grocer today. Or if he cannot supply you send 25c in stamps for trial can—enough to make a dozen sandwiches.

WM. UNDERWOOD COMPANY
53 Fulton Street Boston, Mass.

Look for this seal of quality on Underwood's Sardines in Oil, Tomato Sauce, and Mustard Dressing; on Underwood's Clam Chowder, Clam Bouillon, and Clams in Bouillon.

"In business over 100 years."

or lead or gold. It all was one to any who might have seen, and the two silent men, the younger ahead, the older behind, obviously were men able to hold their counsel or to defend their property.

The smoke of a distant encampment caught the keen eye of Jackson as he rode, humming, care-free, the burden of a song.

"Oh, then, Susannah!" admonished the old mountain man, and bade the said Susannah to be as free of care as he himself then and there was.

"More men comin' in," said he presently. "Wonder who them people is, an' ef hit's peace or war."

"Three men. A horse band. Two Indians. Go in easy, Bill."

Banion slowed down his own gait. His companion had tied the six mules together, nose and tail, with the halter of the lead mule wrapped on his own saddle horn. Each man now drew his rifle from the swing loop. But they advanced with the appearance of confidence, for it was evident that they had been discovered by the men of the encampment.

Apparently they were identified as well as discovered. A tall man in leggings and moccasins, a flat felt hat over his long gray hair, stood gazing at them, his rifle butt resting on the ground. Suddenly he emitted an unearthly yell, whether of defiance or of greeting, and springing to his own horse's picket pin gathered in the lariat and, mounting bareback, came on, his rifle high above his head, and repeating again and again his war cry or salutation.

Jackson rose in his stirrups, dropped his lead line and forsook more than a hundred and fifty thousand dollars—some two-mule pack loads of gold. His own yell rose high in answer.

"I told ye all the world'd be here!" he shouted back over his shoulder. "Do-ee see that old thief Jim Bridger? Him I left drunk an' happy last summer? Now what in hell brung him here?"

The two old mountain men flung off and stood hand in hand before Banion had rescued the precious lead line and brought on the little train.

Bridger threw his hat on the ground, flung down his rifle and cast his stoic calm aside. Both his hands caught Banion's and his face beamed, breaking into a thousand lines.

"Boy, hit's you, then! I knowed yer horse—he has no like in these parts. I've traced ye by him this hundred miles below an' up agin, but I've had no word this two weeks. Mostly I've seed that when ye ain't lookin' for a b'ar, thar he is. Well, here we air, fine an' fitten, an' me with two bottles left o' somethin' they call coggnac down in Yerba Buena. Come on in an' we'll make medicine."

They dismounted. The two Indians went to the packs. They grunted as they unloaded the two larger mules.

The kyacks were lined up and the mantas spread over them, the animals led away for feed and water. Bridger produced a ham of venison, some beans, a bannock and some coffee—not to mention his two bottles of fiery fluid—before any word was passed regarding future plans or past events.

"Come here, Jim," said Jackson after a time, tin cup in hand. The other followed him, likewise equipped.

"Heft this pannier, Jim."

"Uh-huh? Well, what of hit? What's inter hit?"

"Not much, Jim. Jest three-four hunderd pounds o' gold settin' there in them four packs. Hit hain't much, but hit'll help some."

Bridger stooped and uncovered the kyacks, unbuckled the cover straps.

"Hit's a true pack!" he exclaimed. "Gold! Ef hit hain't, I'm a putrefied liar, an' that's all I got to say!"

Now, little by little, they told, each to other, the story of the months since they had met, Bridger first explaining his own movements.

"I left the Malheur at Boise, an' brung along yan two boys. Ye needn't be a-skeered they'll touch the cargo. The gold means nothin' to 'em, but horses does. We've got a good band to drive north now. Some we bought an' most they stole, but no rancher cares fer horses here an' now.

"We come through the Klamaths, ye see, an' on south—the old horse trail up from the Spanish country, which only the Injuns knows. My boys say they kin take us to the head o' the Willamette.

"So ye did get the gold! Eh, sir?" said Bridger, his eyes narrowing. "The tip the girl give ye was a good one?"

"Yes," rejoined Banion. "But we came near losing it and more. It was Woodhull, Jim. He followed us in."

"Yes, I know. His wagons was not fur behind ye on the Humboldt. He left right atter ye did. He made trouble, huh? He'll make no more? Is that hit, huh?"

Bill Jackson slapped the stock of his rifle in silence. Bridger nodded. He had been close to tragedies all his life. They told him now of this one. He nodded again, close lipped.

"An' ye want courts an' the settlements, boys?" said he. "Fer me, when I kill a rattler, that's enough. Ef ye're touchy an' want yer ree-cord clean, why, we kin go below an' fix hit. Only thing is, I don't want to waste no more time'n I kin help, fer some of them horses has a ree-cord that ain't maybe so plumb clean their own selves. Ye ain't goin' out east—ye're goin' north. Hit's easier, an' a month or two closter, with plenty o' feed an' water—the old Cayuse trail, huh?

"So Sam Woodhull got what he's been lookin' fer so long!" he added presently. "Well, that simples up things some."

"He'd o' got hit long ago, on the Platte, ef my partner hadn't been a damned fool," confirmed Jackson. "He was where we could 'a' buried him nach'erl, in the sands. I told Will then that Woodhull'd murder him the fust chancet he got. Well, he did—er ef he didn't hit wasn't no credit to either one o' them two."

"What differ does hit make, Bill?" remarked Bridger indifferently. "Let bygones be bygones, huh? That's the pleasantest way, sence he's dead.

"Now here we air, with all the gold there ever was molded, an' a hull two bottles o' coggnac left, which takes holt e'enamost better'n Hundson's Bay rum. Ain't it a perty leetle ol' world to play with, all with nice pink stripes erround hit?"

He filled his tin and broke into a roaring song:

"There was a ol' widder which had three sons—
Joshuway, James an' John.
An' one got shot, an' one got drowned,
An' th' last un got losted an' never was found ——

"Ain't hit funny, son," said he, turning to Banion with cup uplifted, "how stiff likker allus makes me remember what I done fergot? Now Kit told me, thar at Laramie ——"

"Fer I'm goin' out to Oregon, with my wash pan on my knee!" chanted Bill Jackson, now solemnly oblivious of most of his surroundings and hence not consciously discourteous to his friends. "Susannah, don't ye cry!"

They sat, the central figures of a scene wild enough, in a world still primitive and young. Only one of the three remained sober and silent, wondering, if one thing lacked, why the world was made.

XLV

AT THE new farm of Jesse Wingate on the Yamhill the wheat was in stack and ready for the flail, his deerskin sacks made ready to carry it to market after the threshing. His grim and weather-beaten wagon stood, now unused, at the barnyard fence of rails.

It was evening. Wingate and his wife again sat on their little stoop, gazing down the path that led to the valley road. A mounted man was opening the gate, someone they did not recognize.

"Maybe from below," said Molly Wingate. "Jed's maybe sent up another letter. Leave it to him, he's going to marry the most wonderful girl! Well, I'll call it true, she's a wonderful walker. All the Prices was.

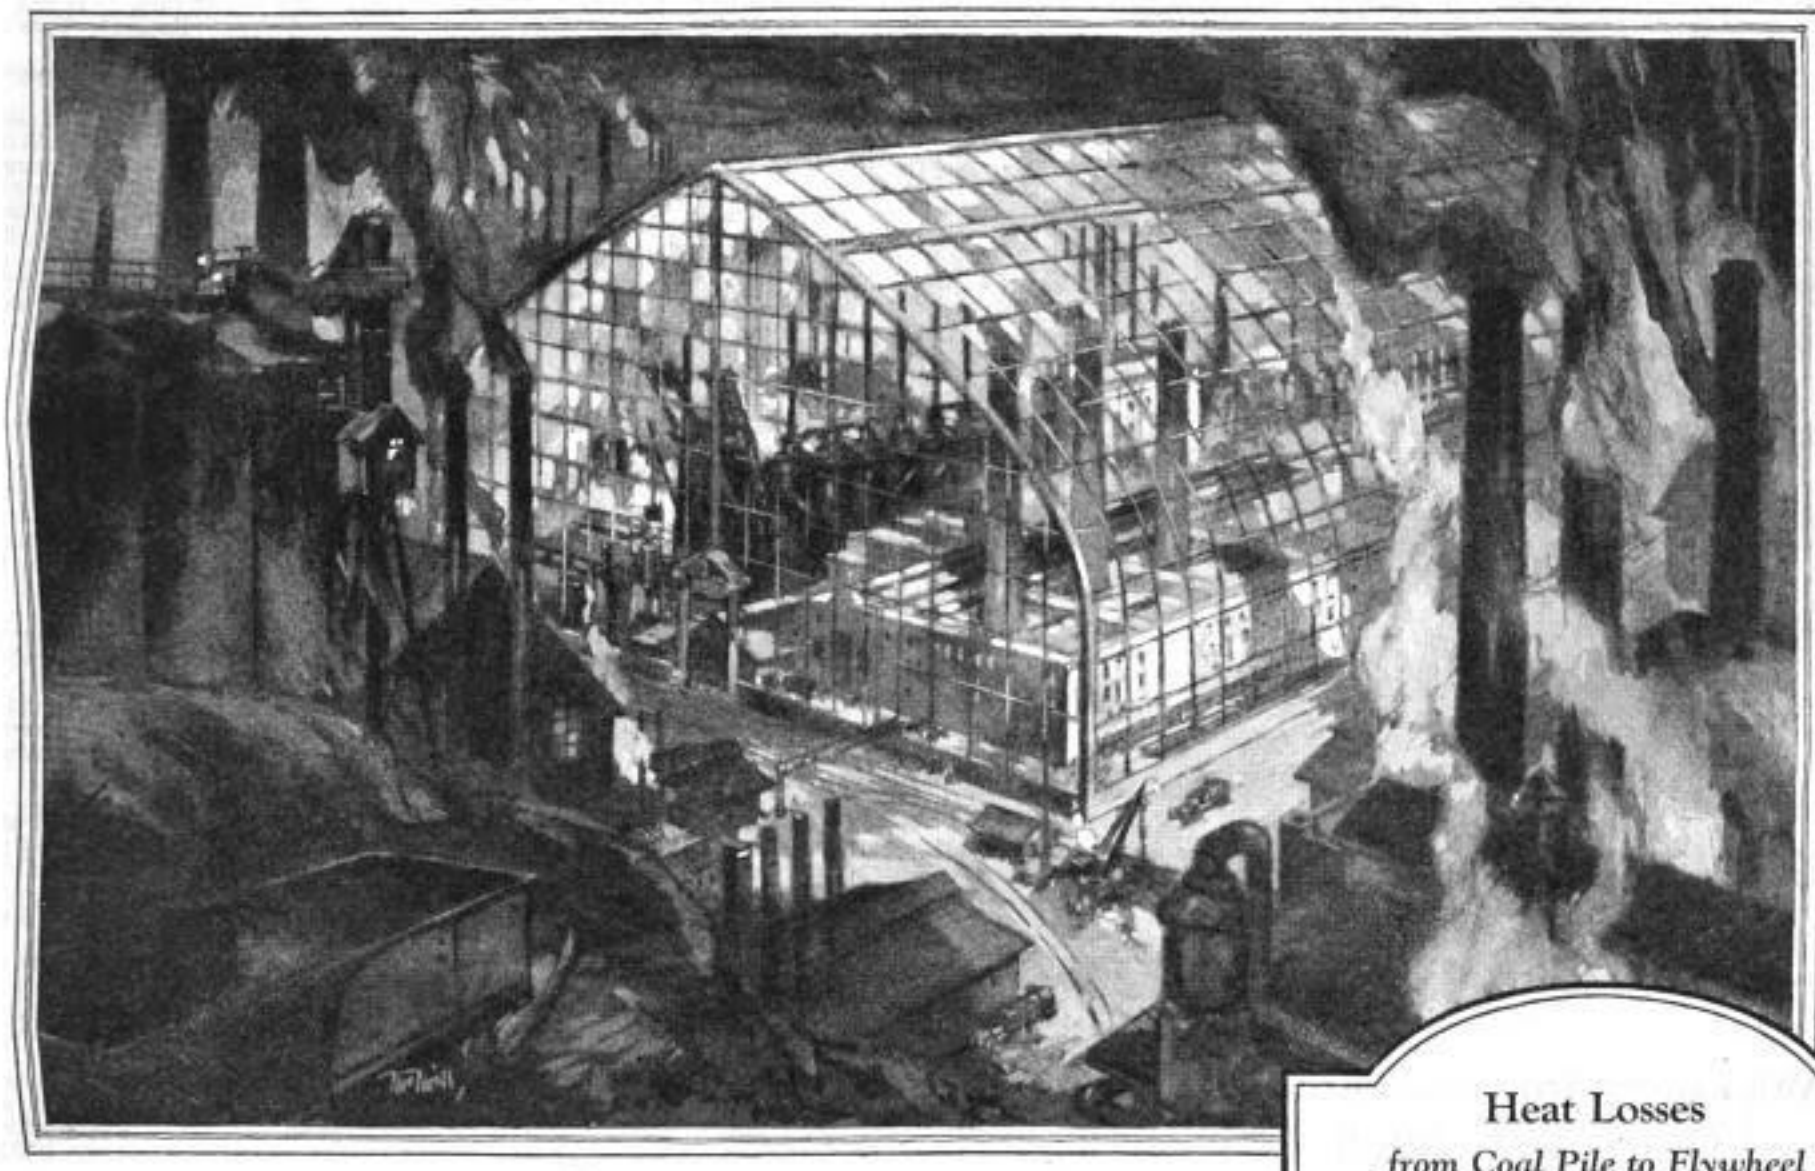
"Or maybe it's for Molly," she added. "Ef she's ever heard a word from either Sam Woodhull or ——"

"Hush! I do not want to hear that name!" broke in her husband. "Trouble enough he has made for us!"

His wife made no comment for a moment, still watching the stranger, who was now riding up the long approach, little noted by Wingate as he sat moody and distrait.

"Jess," said she, "let's be fair and shame the devil. Maybe we don't know all the truth about Will Banion. You go on in the house. I'll tend to this man, whoever he may be."

But she did not. With one more look at the advancing figure, she herself rose and followed her husband. As she passed she cast a swift glance at her daughter, who had not joined them for the twilight hour. Hers was the look of the mother—maternal, solicitous, yet wise and resolved withal, woman understanding woman.



And now was the hour for her ewe lamb to be alone.

Molly Wingate sat in her own little room, looking through her window at the far forest and the mountain peaks in their evening dress of many colors. She was no longer the tattered emigrant girl in fringed frock and mended moccasins. Ships from the world's great ports served the new market of the Columbia Valley. It was a trim and trig young woman in the habiliments of sophisticated lands who sat here now, her heavy hair, piled high, lighted warmly in the illumination of the window. Her skin, clear white, had lost its sunburn in the moister climate between the two ranges

Your plant—is it hothouse or hardy?

A SHORT time ago abnormal demand was the industrial hothouse in which most any plant could thrive.

Margins were so broad and demand so active that factory and plant wastes became incidental to the more important urge for production.

But today—there is no hothouse of easy markets. To survive, every plant must be hardy, and every hardy plant can survive.

How to cut costs now in 1922

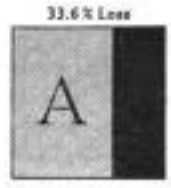
First of all, wastes must be eliminated.

This is no time to have bare or poorly covered hot surfaces and pipes wasting fuel, when each square foot of such surface wastes from 500 to 1,000 lbs. of coal per year.

Again—even a small plant, through leaky furnace and baffles, wastes tons of fuel that could be saved by a few dollars spent on corrective heat treatment.

Even such a detail as packing can by intelligent selection be made to serve as a saver of power, of wear and tear, and to materially reduce maintenance costs on engines, compressors, and pumps.

Read the notes in the panel at the right. Think of them as a basis for a meeting with a Johns-Manville man, along with your engineer. You owe it to yourself to know what you can save and where. Let us help you find out.



JOHNS-MANVILLE Inc.
Madison Avenue at 41st Street, New York City
Branches in 50 Large Cities
For Canada: CANADIAN JOHNS-MANVILLE CO., Ltd., Toronto

Heat Losses
from Coal Pile to Flywheel

The area of each of these squares represents what is left of the energy in a ton of coal at each step in power production after the unavoidable heat losses have been deducted at each stage.

The shaded portion of each square represents losses that are preventable at each step, and hence is clear saving when salvaged.

33.6 % Loss

Available heat at furnace.

A Johns-Manville insulation in sheet and cement form reduces radiation from furnace and boiler.

Johns-Manville Refractory Cements, which resist high temperatures and expansion and contraction, provide for tight and durable fire brick settings.

Aertite Boiler Wall Coating applied to outside of brick walls of boiler prevents the infiltration of air into the fire box and combustion chamber.

27.1 % Loss

Heat available for conversion into steam.

B Moulded or poured Monolithic Baffle Walls prevent short circuiting of gases, and curtail heat losses up the stack.

10.2 % Loss

Available heat for delivery to prime mover.

C Johns-Manville gaskets and rod packings that pack without leakage between flanges or around rods eliminate all steam and water leakage.

The proper discharge of condensation conserves an enormous quantity of live steam. This is the job of the Johns-Manville Steam Trap.

Johns-Manville Sectional Pipe Insulation and other insulating materials of proper efficiency minimize radiation from conveying lines.

D Insulating lagging reduces radiation from cylinders, etc.

Sea Ring Packing—automatic in action—saves a large percentage of power usually expended in overcoming friction between rod packing and rod or plunger.

For details on all Johns-Manville Power Plant materials, send to Madison Ave. at 41st Street, New York City.

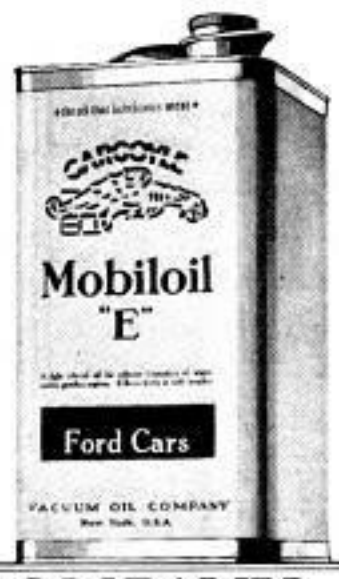
"At Conneaut, Ohio, the oil still ran out of the upper petcock"

Surprised on Saturday —sold on Sunday

Why one Ford owner ordered a drum of Gargoyle Mobiloil "E" when he drove back from Cleveland



THE OWNER of a gasoline service station in western Pennsylvania relates this experience: A neighbor drives his Ford to Cleveland every Saturday. When Gargoyle Mobiloil "E" was suggested he said, "It's too high priced." The service station man, Mr. H., replied, "I would like to take a run with you some time and furnish the gas and oil as my share of the trip."

On Friday night the Ford owner came around. Mr. H. drained the crank-case, put in Gargoyle Mobiloil "E" and filled up the gasoline tank. The next day they started.

At Conneaut, Ohio, about eighty miles out, the owner said, "You'd better look at the oil, as I always add a quart here." But the oil still ran out of the upper petcock. *Surprise No. 1.* They drove on to Cleveland. Still no additional oil was needed. *Surprise No. 2.* Sunday evening they started home. At Conneaut they looked at the oil. Only a quart of Gargoyle Mobiloil "E" was added. *Surprise No. 3.*

The Ford owner insisted that this trip had always required three quarts of ordinary oil. He said to Mr. H., "You'd better get me a drum of this Gargoyle Mobiloil "E" so I will always have it."

A week's fair trial of Gargoyle Mobiloil "E" may surprise you as much as it did the gentleman who drove to Cleveland.

IN BUYING *Gargoyle Mobiloil from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container.*

The Vacuum Oil Company's Chart specifies the grade of Gargoyle Mobiloil for every make and model of car. Gargoyle Mobiloil "E" is the correct grade for Fords. If you drive another make of car, send for our booklet, "Correct Lubrication."

of mountains. Quiet, reticent, reserved—cold, some said; but all said Molly Wingate, teacher at the mission school, was beautiful, the most beautiful young woman in all the great Willamette settlements. Her hands were in her lap now, and her face as usual was grave. A sad young woman, her Oregon lovers all said of her.

She heard now a knock at the front door, to which, from her position, she could not have seen anyone approach. She called out "Come!" but did not turn her head.

A horse stamped, neighed near her door. Her face changed expression. Her eyes grew wide in some strange association of memories suddenly revived.

She heard a footfall on the gallery floor, then on the floor of the hall. It stopped. Her heart almost stopped with it. Some undiscovered sense warned her, cried aloud to her. She faced the door, wide-eyed, as it was flung open.

"Molly!"

Will Banion's deep-toned voice told her all the rest. In terror, her hands to her face, she stood an instant, then sprang toward him, her voice almost a wail in its incredulous joy:

"Will! Will! Oh, Will! Oh! Oh!"

"Molly!"

They both paused.

"It can't be! Oh, you frightened me, Will! It can't be you!"

But he had her in his arms now. At first he could only push back her hair, stroke her cheek, until at last the rush of life and youth came back to them both, and their lips met in the sealing kiss of years. Then both were young again. She put up a hand to caress his brown cheek. Tenderly he pushed back her hair.

"Will! Oh, Will! It can't be!" she whispered again and again.

"But it is! It had to be! Now I'm paid! Now I've found my fortune!"

"And I've had my year to think it over, Will. As though the fortune mattered!"

"Not so much as that one other thing that kept you and me apart. Now I must tell you——"

"No, no, let be! Tell me nothing!"

"But I must! You must hear me! I've waited two years for this!"

"Long, Will! You've let me get old!"

"You old?" He kissed her in contempt of time. "But now wait, dear, for I must tell you.

"You see, coming up the valley I met the clerk of the court of Oregon City, and he knew I was headed up for the Yamhill. He asked me to serve as his messenger. 'I've been sending up through all the valley settlements in search of one William Banion,' he said to me. Then I told him who I was. He gave me this."

"What is it?" And she turned to her lover. He held in his hands a long package, infolded in an otter skin. "Is it a court summons for Will Banion? They can't have you, Will!"

He smiled, her head held between his two hands.

"'I have a very important document for Col. William Banion,' the clerk said to me. 'It has been for some time in our charge, for delivery to him at once should he come into the Oregon settlements. It is from His Excellency the President of the United States. Such messages do not wait. Seeing it of such importance, and knowing it to be military, Judge Lane opened it, since we could not trace the addressee. If you like—if you are, indeed, Col. William Banion'—that was what he said."

He broke off, choking.

"Ah, Molly, at last and indeed I am again William Banion!"

He took from the otter skin—which Chardon once had placed over the oilskin used by Carson to protect it—the long and formal envelope of heavy linen. His finger pointed—"On the Service of the United States."

"Why, Will!"

He caught the envelope swiftly to his lips, holding it there an instant before he could speak.

"My pardon! From the President! Not guilty—oh, not guilty! And I never was!"

"Oh, Will, Will! That makes you happy?"

"Doesn't it you?"

"Why, yes! But I knew that always! And I know now I'd have followed you to the gallows if that had had to be."

"Though I were a thief?"

"Yes! But I'd not believe it! I didn't! I never did! I could not!"

"You'd take my word against all the world—just my word, if I told you it wasn't true? You'd want no proof at all? Will you always believe in me in that way? No proof?"

"I want none now. You do tell me that? No, no! I'm afraid you'd give me proofs! I want none! I want to love you for what you are, for what we both are, Will! I'm afraid!"

He put his hands on her shoulders, held her away at arms' length, looked straight into her eyes.

"Dear girl," said he, "you need never be afraid any more."

She put her head down contentedly against his shoulder, her face nestling sidewise, her eyes closed, her arms again quite around his neck.

"I don't care, Will," said she. "No, no, don't talk of things!" He did not talk. In the sweetness of the silence he kissed her tenderly again and again.

And now the sun might sink. The light of the whole world by no means died with it.

A 50 Horsepower, Six Cylinder Sedan

Four Doors—All Steel—$1395

Here is the closed car that you have been waiting for—the first all metal, six cylinder, 50 horsepower sedan that has ever been offered at—or even near—$1395 f. o. b. Detroit.

The New Jewett Sedan is of all steel construction with four tightly fitting doors that close with snap and precision. The entire back is one solid stamping without joints or gaps in the metal. That means there can be no rattles, squeaks or annoying vibration.

The interior is as beautiful as Artist-Designers could make it. There are wide, thickly upholstered seats for five full grown adults. And you will find, not only the necessities, but the luxuries of the high grade, well appointed closed car. That means comfort and pride of ownership.

Then, up under the hood, there is a mighty Paige built six cylinder motor that develops full 50 horsepower. Because it is a six it is a mechanism of inherent balance, overlapping impulses. It will sweep you along at sixty miles an hour or throttle down to three in traffic. That means giant energy and smooth vibrationless riding qualities.

And, underlying and supplementing every other detail, is a chassis that bears the stamp of engineering genius. The frame, clutch, transmission, drive shaft and rear axle are perfectly coördinated units—as strong as tested metal and fine craftsmanship can make them. That means long life, endurance and true economy.

Need we say more about this remarkable motor car value? It is sold and served by Paige dealers everywhere.

THE YOUNG MAN IN JOURNALISM

(Continued from Page 25)

in the prime of life must be a very young man, he said, a man in the first part of his life.

Likewise, he stirred us up one day by criticizing the use a writer had made of the word "manufactured" in describing something made by machinery. "'Manufacture,'" he said, "comes from the Latin '*manus*,' the hand, and '*facio*,' I make; 'manufacture' means to make by hand, not by machinery or in any other way."

He objected to the use of "dexterity" in the sense of skill, adroitness, aptitude, either physical or mental. "*Dexter*" is the Latin word meaning the right, and correctly speaking, "dexterous movements" means right-hand movements, was the plea.

"Where is your Latin?" he asked a writer who had said that a political convention had indorsed a candidate. "You cannot indorse a man; you indorse a note or a document by writing on its back. 'Indorse' is from the Latin '*in*,' on, and '*dorsum*,' the back. It is incorrect to use it in the sense of general approval." Someone spoke up to say that under that strict meaning you might indorse a man by hitting him on the back with a club, and the critical lesson ended in laughter.

These criticisms of Mr. Dana's were made and heeded forty or fifty years ago. But like many other words of Latin origin they have come into general use in the ways to which he objected. Usage is amplifying the service of many Latin roots, is giving them wider and more general meaning. "Dexterous" and "dexterity" have come by common consent to mean alert, nimble physical or mental service of various kinds. We use the word "manufacture" for the making of anything, by machinery or chemical processes or almost any way. We indorse men's sentiments or conduct, the action of conventions or anything to which we wish to give the stamp of approval. "Prime" is in constant use to express vigor, beauty, power, fullness of perfection, maturity. These uses attest the constant change, the expansion of our language. There is less inclination to hold the language to rigidity of root meaning.

Standards of Good Usage

There were other busy minds in the old Sun office when it came to considering the use of words. Thomas Hitchcock, who wrote so entertainingly on finance, signing his articles "Matthew Marshall," was one of them. Never did the word "leniency" get into the news columns but he spotted it and went after the unfortunate offender. "'Lenity' is the word. Why do you persist in saying 'leniency' when you mean 'lenity'?" he demanded. In vain the victims trotted out the dictionary, which didn't make any great distinction between the words, but Hitchcock was never convinced that "leniency" had any place in the language. Another word that disturbed him was "agreeable" when used in the sense of causing a pleasant sensation of mind or body. Agreement, he urged, was concurrence between persons, not things. A man could not agree with the warmth of his grate fire, hence it was wrong to say that this warmth was agreeable.

And there was dear old Doctor Wood, who because of his skill in abbreviation came to be known as the Great American Condensor. We wonder how many hundred times in his editing he changed the word "audience" to "spectators" or something else. "An audience," he wearily repeated, "is a gathering of hearers—'*audio*' is the Latin verb meaning to hear. People who see pantomimes, prize fights or circuses"—there were no movies in those days or he would have included them—"are not audiences." And how many times did he change "on" the street to "in" the street, "last" to "latest," "observe" to "notice," a "divine" to a "clergyman," "per cent" to "proportion"—"per cent means by the hundred," he snapped. Wood accepted Richard Grant White's book, Words and Their Uses, without question.

Fifty years ago, and goodness knows how many years before, nearly every office had long printed lists of prohibited words. They have been repeated constantly ever since in many articles on newspaper English and the use of words. There seems to be a fascination in writing about them. You might think that by this time they were ground into the very souls of newspaper writers. But they seem to be unheeded. We were told we must say a man accepts a post, not a position; that it was wrong to speak of a part of the country as a section; region was the proper word; that folks did not locate in a region, they went to live there; that you lend money, do not loan it; that a residue of anything is a remainder, not a balance; that nine times out of ten you give a thing, do not donate it; that you shouldn't say "party" when you mean "person"—and so on to great length. Yet all these words that were so unwelcome to the critics of fifty years ago continue in common newspaper use to-day. They are misused, many of them, but why?

Writing for newspapers differs from other literary work in this: The newspaper writer has little opportunity for revision. Almost all articles for daily sheets are written at a single sitting. The writers of editorial matter have several hours in which to compose, and usually they have a proof sheet for revision. The writers of short news articles may read and correct their manuscript. But in the big offices as soon as the reporter who is writing an article of any considerable length has finished two or three pages they are grabbed by an office boy, hurried to a copy reader, who revises them as best he may and rushes them to the composing room to be set up. The writer does not see his pages again, does not read them over, even, after writing them. All big news reports—stories of great disasters, football matches, public meetings or demonstrations—are prepared with this haste.

Will Irwin's Classic

The playhouse and opera critics write under these same trying circumstances, with no time for leisurely thought or revision. It is difficult, indeed, to write of a great performance in a whirlwind of hurry, with less than two hours for deliberate consecutive thought. The French critic's way of presenting a news paragraph in the edition following the performance, and reserving a carefully prepared review for a later-date publication, commends itself; but the American newspapers continue to print long comments on first-night performances two or three hours after the fall of the curtain. The opera critics have the advantage of attending rehearsals of new operas and may prepare parts of the article in advance, but rehearsals are spiritless, for performers have not the inspiration and response of the audience.

Intensity of thought and concentration must engross the writer. He must prepare himself by study and practice to throw every atom of his mental vitality into the work, to write immediately, and without expectation of revision, exactly what should appear in the newspaper. Mind discipline is a great help in newspaper work. The man must school himself to work under all conditions of mental anguish, physical distress, heart sorrow or unhappiness of any kind. He cannot surrender to moods or to whims or to physical sensations. He must continue hour after hour, day after day, with the same hurry-up speed. As in crowded Broadway if you cannot keep up with the procession you must be trodden on or take to a side street, so must the active newspaper man everlastingly keep going. It is largely a matter of mind discipline, of study and practice, of intense mental concentration and swiftness of thought.

In illustration of how men write under great anguish of mind may be mentioned the experience of Will Irwin and the San Francisco earthquake and fire. Irwin was a San Franciscan and he wrote in the big news room of the Sun office the greater part of the running story of the disaster as the fragments of news came along over the congested wires. He believed that his wife and his son were in the destroyed zone, visiting an aunt. Every effort was made to get word from them, but not any came. He not only wrote the story of the destruction of San Francisco but also that classic of journalism The City That Was while

MODEL NO. A-181

Barbara Brown
—a Brown bilt Shoe

Model A-181 is a Smoke Elk Sport Lace Oxford; plain toe; mahogany calf saddle strap; a one-inch rubber heel; Goodyear welt; an exceedingly attractive sport shoe.

Women who take pride in having their feet neatly and correctly shod, find that Barbara Brown Shoes have real distinction, and enhance the natural beauty of the feet.

Brownbilt Shoes for Women are described as "Barbara Brown" Shoes. They are all made from dependable leathers and by shoemakers who are expert craftsmen.

Your local dealer can show you the latest models in these attractive Brownbilt Shoes—at $7.00, $8.00, $9.00 and up.

MODEL NO. B-136

Burton Brown
—a Brown bilt Shoe

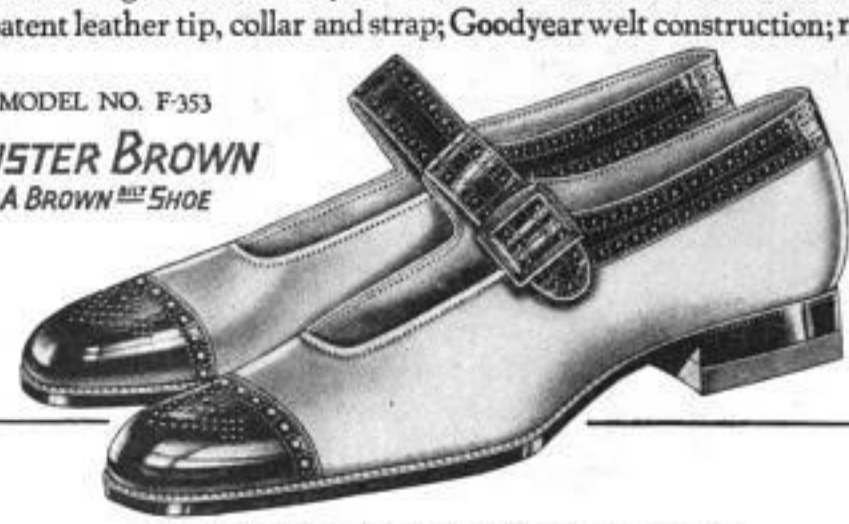
Model B-136 is a Brown Norwegian Grain Lace Oxford; pinked and perforated; Goodyear welt; 7/8 inch rubber heel.

Brownbilt Shoes for Men are always described as "Burton Brown" Shoes. They are bench-made by skilled shoemakers from thoroughly dependable leathers. They combine solid comfort, correct style and sterling quality.

Men who demand real value in their shoes will look for the name "Brownbilt" stamped in the shank of the shoe—it is the mark of worth.

Ask your local dealer to show you the latest models in Burton Brown Shoes—at $7.00, $8.00, $9.00 and up.

For Boys BUSTER BROWN For Girls
—A BROWN BILT SHOE



YEARS OF STUDY and years of tests were required to perfect the Brown Shaping Lasts. Because they are made upon these perfect lasts, Buster Brown Shoes insure proper protection for the pliable bones of the growing feet, and provide correct support for each tender muscle.

The boy or girl who wears Buster Brown Shoes regularly will therefore have sturdy, healthy, shapely feet—free from twisted toes, weak ankles, broken arches, corns and bunions. Buster Brown Shoes are economical shoes to buy—because they are made from dependable leathers, by skilled shoemakers. The soles are cut from the heart of the hide, and are all of Goodyear welt construction.

Good stores everywhere sell Buster Brown Shoes at $4.00, $5.00, $6.00 and up, according to size and style. No. F-353 shown below is a White Cloth Pump; patent leather tip, collar and strap; Goodyear welt construction; rubber heel.

(Continued from Page 46)

under the mental strain of belief that his wife and son were lost. Every little while he stopped, ran his hands through his hair and muttered to himself something that sounded like "My God, if I knew only where they are!" And then he resumed the grinding out of the narrative. Three days after the disaster word came that they were in San José.

Please do not undervalue the priceless benefits of practice—of practice that will give skill in saying exactly what you want to say the first time you say it. In leisurely writing you may rewrite and change and make perfect, but in newspaper writing you have one dash only at it, without much opportunity for revision. Your reputation as a newspaper writer hangs on that one effort. You can cultivate the gift of ready speech just as many a finished orator has done.

It has been said of President Wilson that early in his youth he appreciated the advantages of ready speech and set about to improve himself in its use. He practiced speaking long and constantly. In the seclusion of his room he conducted imaginary debates, talking to himself first on one side and then on the other of some public question. On his student walks he addressed the crags and peaks, the winding rivers, the silent meadows—all for practice in the quick use of language, the shading of sentences and the putting of emphasis on climaxes of thought and conclusion. And he became one of the most interesting and convincing speakers this country—or any other country for that matter—ever has known.

Now the newspaper writer is virtually producing language in the same manner as does the extemporaneous speaker. If he dictates his articles, as many of our best writers do, there is little difference, for he does little revision. The value of practice is known to every speaker. It follows that practice is equally helpful toward perfection in newspaper writing. But the young newspaper writer must practice writing at top speed. Let him practice in the line of work that he happens to be doing. If a reporter, for example, let him absorb the facts narrated in a fifty-line report in any newspaper, and then by a mighty effort of mental concentration reproduce the facts of that article with all possible speed, in different language and construction, and with full purpose not to imitate it. An hour a day of this practice will help to facility of expression, to quick construction and, best of all, to the inestimable benefits of mental concentration.

Vigorous Writing

The young writer should seek to rise above the commonplace. It was said of Machiavelli that "having adopted some of the maxims then generally received, he arranged them more luminously and expressed them more forcibly than any other writer."

The young writer should study the art of making his words exude the very spirit of the occasion—the art of describing joyous events with joyous words and shadowing melancholy happenings with the language of gloom. He should seek the faculty of making obscure truth pleasing: of making repulsive truth attractive."

Let him follow the counsel of a distinguished critic who says: "Choose concrete nouns rather than vague, abstract, woolly ones. Use straightforward speech rather than circumlocution. . . . Remember that the first virtue, the touchstone of masculine style is the use of the active verb and concrete noun. When you write in the active voice 'They gave him a silver teapot,' you write as a man. When you write 'He was made the recipient of a silver teapot,' you write jargon."

Avoid overworked words is common advice to young journalists. An article in the Writer has much to say of ways by which the constant use of the word "said" may be prevented. "Said" sometimes becomes monotonous, especially in the dialogue of fiction, but almost always another verb may be found to express the author's meaning. The Writer printed a list of three hundred and eighty-two verbs found in about fifty magazine stories which had been used instead of "said." Frequently the use of a verb helps to make more concise as well as to avoid the use of the word "said." "'It hurts,' said John in a complaining tone," is not so good as "'It hurts,' John complained." Again, "'Please help me,' said the beggar in pitiful beseeching appeal," is better expressed by "'Please help me,' the beggar pleaded." The language is rich in verbs.

Another overworked word, and a slow word too, is the word "show." It does seem as though the average newspaper writer cannot think of any other word when he writes that this action or this event or this conclusion or this computation shows that, and so forth, when he might say attests, evinces, betokens, bespeaks, implies, indicates, proves, or any other suitable verb of the twenty-five or more he may find in a thesaurus.

Overworked Phrases

Looseness of speech is found in the use of explanatory phrases that might be expressed by a single verb. The verb is the heart of language life, the soul of expression. Why, for example, do we write "He reflected on the situation" when "He cogitated" would be better?

He spoke reprovingly to the boy. He chided the boy.

He spoke in a mocking, deriding manner. He jeered.

His breath came convulsively and brokenly. He gasped.

They exchanged idle words and gossip. They babbled.

He gave utterance to the thought. He echoed the thought.

He was filled with wonder. He marveled.

He busied himself with the affairs of his neighbors. He meddled.

He uttered a suppressed groan. He moaned.

She spoke in low, indistinct words. She mumbled.

His was an exhibition of empty talk. He palavered.

I am aware that these things are elementary—exceedingly elementary; but they are of import to young newspaper writers. Slovenly, disjointed, confused diction must retard progress. Some of the schools of journalism are giving practical instruction in the editing of copy, are giving useful drill in copy reading. But the common lecture in the college English course—the little essay on some distinguished author that tells of his life, his habits, his intellectual yearnings and his midnight inspirations, with a few comments on his style and diction—is of little use in teaching a young man to write.

We were told in the days of fifty years ago that overworked phrases are quite as dispiriting to the reader as overworked words. The style books have told us so ever since. As after repeated use a drug ceases to have effect on the human system, so words and phrases wear out after constant repetition and have but feeble effect on the mind. It is easy to compile scores of these commonplaces, excellent indeed when first uttered but inexpressive because so familiar. The mind does not reflect their true value. How much better to say that a thing is beautiful than that "it is a thing of beauty and a joy forever"; or that a thundercloud was black rather than that it "was black as the ace of spades." Yet in recent comment on disarmament a New York morning newspaper editorial writer weakened an article of less than fifty lines by including the expressions: "Too ready to lay his cards on the table"; "Mr. Hughes has boldly taken the bull by the horns"; "striking ruthlessly to the very heart of the problem"; "America's signal contribution to the success of the conference"; "leaves nothing to be desired in the way of." Every one of these expressions is at least fifty years old.

Familiarity with a topic usually results in diminished interest in that topic. It is our nature to seek things new. We tire of the commonplace and the obvious. If you wish to make your words effective lift them out of the commonplace. Many a fine thought has been weakened or lost by feeble diction.

Study—persistent, laborious, intelligent study—is the key to success in writing. Occasionally a genius startles with a spontaneous facility for the use of words and sentences, but the nine hundred and ninety-nine others of us newspaper plodders must achieve our purpose by the hardest kind of hard work. We must study the derivation of words, the various uses of words. If we are to keep up with these snappy times we must hunt for strong, masculine nouns and rapid-fire verbs and staccato adjectives and sudden adverbs. Almost always we can find a better word

Does your food fail to meet two vital needs?

Yet a recent discovery makes it easy today to have your diet give you just the elements you need

MANY a dinner that seems good to you is really a crime committed against your own body tissues. Although the food is good in itself you do not get full benefit from it because something is lacking.

This needed factor is richly supplied by Fleischmann's Yeast. Because thousands of men and women are adding this fresh yeast to their meals they are finding a vigor and strength often unknown for years.

Just supplement your everyday diet with Fleischmann's Yeast and see how much better your appetite and digestion will be. You will also find that waste matter is eliminated regularly and naturally by adding Fleischmann's Yeast to your meals.

What laxatives can never do

Doctors are agreed that laxatives never remove the cause of the trouble. Indeed one physician says that one of its chief causes is probably the indiscriminate use of cathartics. Fleischmann's Yeast as a food is just the natural corrective you need. A noted doctor says fresh yeast should be much more frequently given in cases of intestinal disturbance, especially if there is a constant need for laxatives.

Because Fleischmann's Yeast is a food it does for you naturally and permanently what habit forming drugs do only artificially and temporarily. One cake of Fleischmann's Yeast gives you ten times the amount of yeast-vitamin found in many of the so-called yeast-vitamin preparations to which drugs of various kinds have been added. Be sure you get Fleischmann's fresh yeast. It comes only in the familiar tin foil package.

Popular ways of eating Fleischmann's Yeast

Many like to nibble Fleischmann's Yeast from the cake a little at a time. Some prefer it spread on crackers or bread. Others take it in boiling hot water; still others like it in milk, fruit-juices, coffee or cocoa. It is very nourishing with malted milk drinks. You will grow to like its distinctive flavor just as you grew to like the taste of olives or oysters.

Begin today by eating Fleischmann's Yeast—2 or 3 cakes regularly each day. *Place a standing order with your grocer. 200,000 grocers carry Fleischmann's Yeast. If your grocer is not among them, write to the Fleischmann agency in your nearest city—they will see that you are supplied.*

Send for free booklet telling the fascinating story of "The New Importance of Yeast in Diet"—what it has done for others—what it can do for you. Address THE FLEISCHMANN COMPANY, Dept. 610, 701 Washington St., New York.

Defenseless!

Why ordinary flat finish white paint collects dirt which Barreled Sunlight resists

White woodwork in the home *that stays spotless—painted with Barreled Sunlight.*

The Carter Knit Underwear factories *are among the many well-known textile plants painted with Barreled Sunlight.*

Hotel Ambassador, Atlantic City, *one of the many famous hotels in which Barreled Sunlight is now used.*

Save the surface and you save all

Why do most white paints collect dirt so readily? They seem defenseless against every smudge, every bit of dust they come in contact with.

It is not difficult to understand when you realize that the surface of ordinary flat or egg-shell finish white paint is not actually smooth. It is, in reality, honeycombed with tiny invisible pores. These microscopic holes catch and hold dust and dirt. Washing only drives much of this deeper into the surface. A spotty, graying finish soon results—and repainting is necessary again.

Barreled Sunlight is a paint which produces a lustrous white surface that is actually smooth and unbroken. It resists dirt, dust, smudges of all kinds. It has no pores or holes in which the tiny particles can cling. It can always be washed clean like tile.

That is why Barreled Sunlight is being used today in buildings of every description—hotels, apartment houses, office buildings, stores and industrial plants. Ideal also for woodwork throughout the home, for walls of kitchen, bathroom, laundry, etc.

Made by the exclusive Rice Process, Barreled Sunlight is guaranteed to remain white longer than any gloss paint or enamel applied under the same conditions. It is easy to apply. Flows freely and leaves no brush marks. Comes ready mixed in cans from half-pint to five-gallon size—barrels and half-barrels.

If your dealer does not carry Barreled Sunlight communicate with us for name of nearest distributor.

than the one that first suggests itself. Almost always we may shorten and simplify a sentence if we study it.

The word spoken may be forgotten. The word written stands for all time. The orator may move his hearers by eloquence, by gesture, by facial expression, by the tricks of public speaking, even though his words be feeble or not well chosen or his conclusions be not convincing. His words may be forgotten—certainly will not be remembered unless recorded—but they have been reënforced by his arts of eloquence, maybe by audacity of speech, by his personality, and the net result is favorable. The orator's bluff may serve him well at times, but the words of the writer must stand on their merits in lasting type. Type furnishes little emotion. There are few typographical tricks that cause heart flutter or mental spasm.

Just plain words alone—words, words nearly every one of which is already familiar to the reader—must make the writer's reputation. How important that every word be studied!

The young journalist cannot be urged too strongly to study the use of words. Every word has its correct use; many words are used incorrectly. You will find it an interesting study. If you doubt its interest, be so good as to open your dictionary to any haphazard page and read intently for fifteen minutes. You will find words the existence of which you had not known, the uses of which you had not understood. Observe the derivation and thus the primary meaning of the word and you cannot miss its proper place. You cannot put time to better purpose if you seek excellence in English composition than by studying the English dictionary a few minutes every day.

When a writer is sure of his information, is sincere in his attitude, and is eager for its presentation, words and sentences usually come to him with ease. It is when he is shaky over his facts or insincere or dishonest that his words become feeble, lack convincing quality, do not ring true. It is interesting to observe how often dishonest journalism convicts itself through timidity of diction.

Some of our modern English is practical and easy to understand. The words "scrapped" and "junked" seem to have been put permanently into the language by the Washington disarmament conference. A well-known journal says, "The newspapers were kidding him," and likely enough we must accept "kid" as a verb. The Navy now says of a man when he departs that he "shoves off." It is proper to say of a dissatisfied person, according to the dictionaries, that he is "peeved," but the use of the word is rather new. Food is known as "eats" and the pleasures of the pipe and of cigars are called "smokes." A recent headline said, "Flivvers furnish booze to soldiers." Another newspaper transforms "hocus" into a verb: "Complained that she hocused him." Another journal says of some occupation of youngsters that "it gives them no time to go on the loose."

Editorial Writing

A new invention brings out a new crop of words. We have "automobile," "garage," "speedometer," "limousine," "taxi," "taximeter," "motor boat," "motorcycle," "chauffeur"—all useful and necessary additions to our elastic language. The airplane has brought as many more, and so has wireless transmission.

Editorial writing requires a different literary touch than is used in news narration. It is harder to catch the knack of it. The special article or news report gives information only; the editorial article seeks to persuade, explain, amuse. It must attract the reader's attention and it is the writer's art of combining chat, information and opinion that wins this result. Its opportunities for literary perfection are boundless. Every trick of language, argument, invective, ridicule, sarcasm, humor, frolic, pathos, every element that enters literature may be indulged in, and the more striking the more successful.

The editorial page is the most important part of the newspaper. It gives the sheet its greatest distinction, its widest influence, its chief reputation—gives the editor his proudest satisfaction. It is here that the editor reveals to the public the true measure of his ability and inspires the confidence and the respect of his community, if at all. The editorial article is a little essay on a current topic. You may glorify the topic by giving it conspicuous importance in the strongest language at command; or you may minimize it by inane, flabby comments on its weakest features and by ignoring its essentials. You may give it fine literary flavor or you may drool over it. The tricks of the trade come with practice.

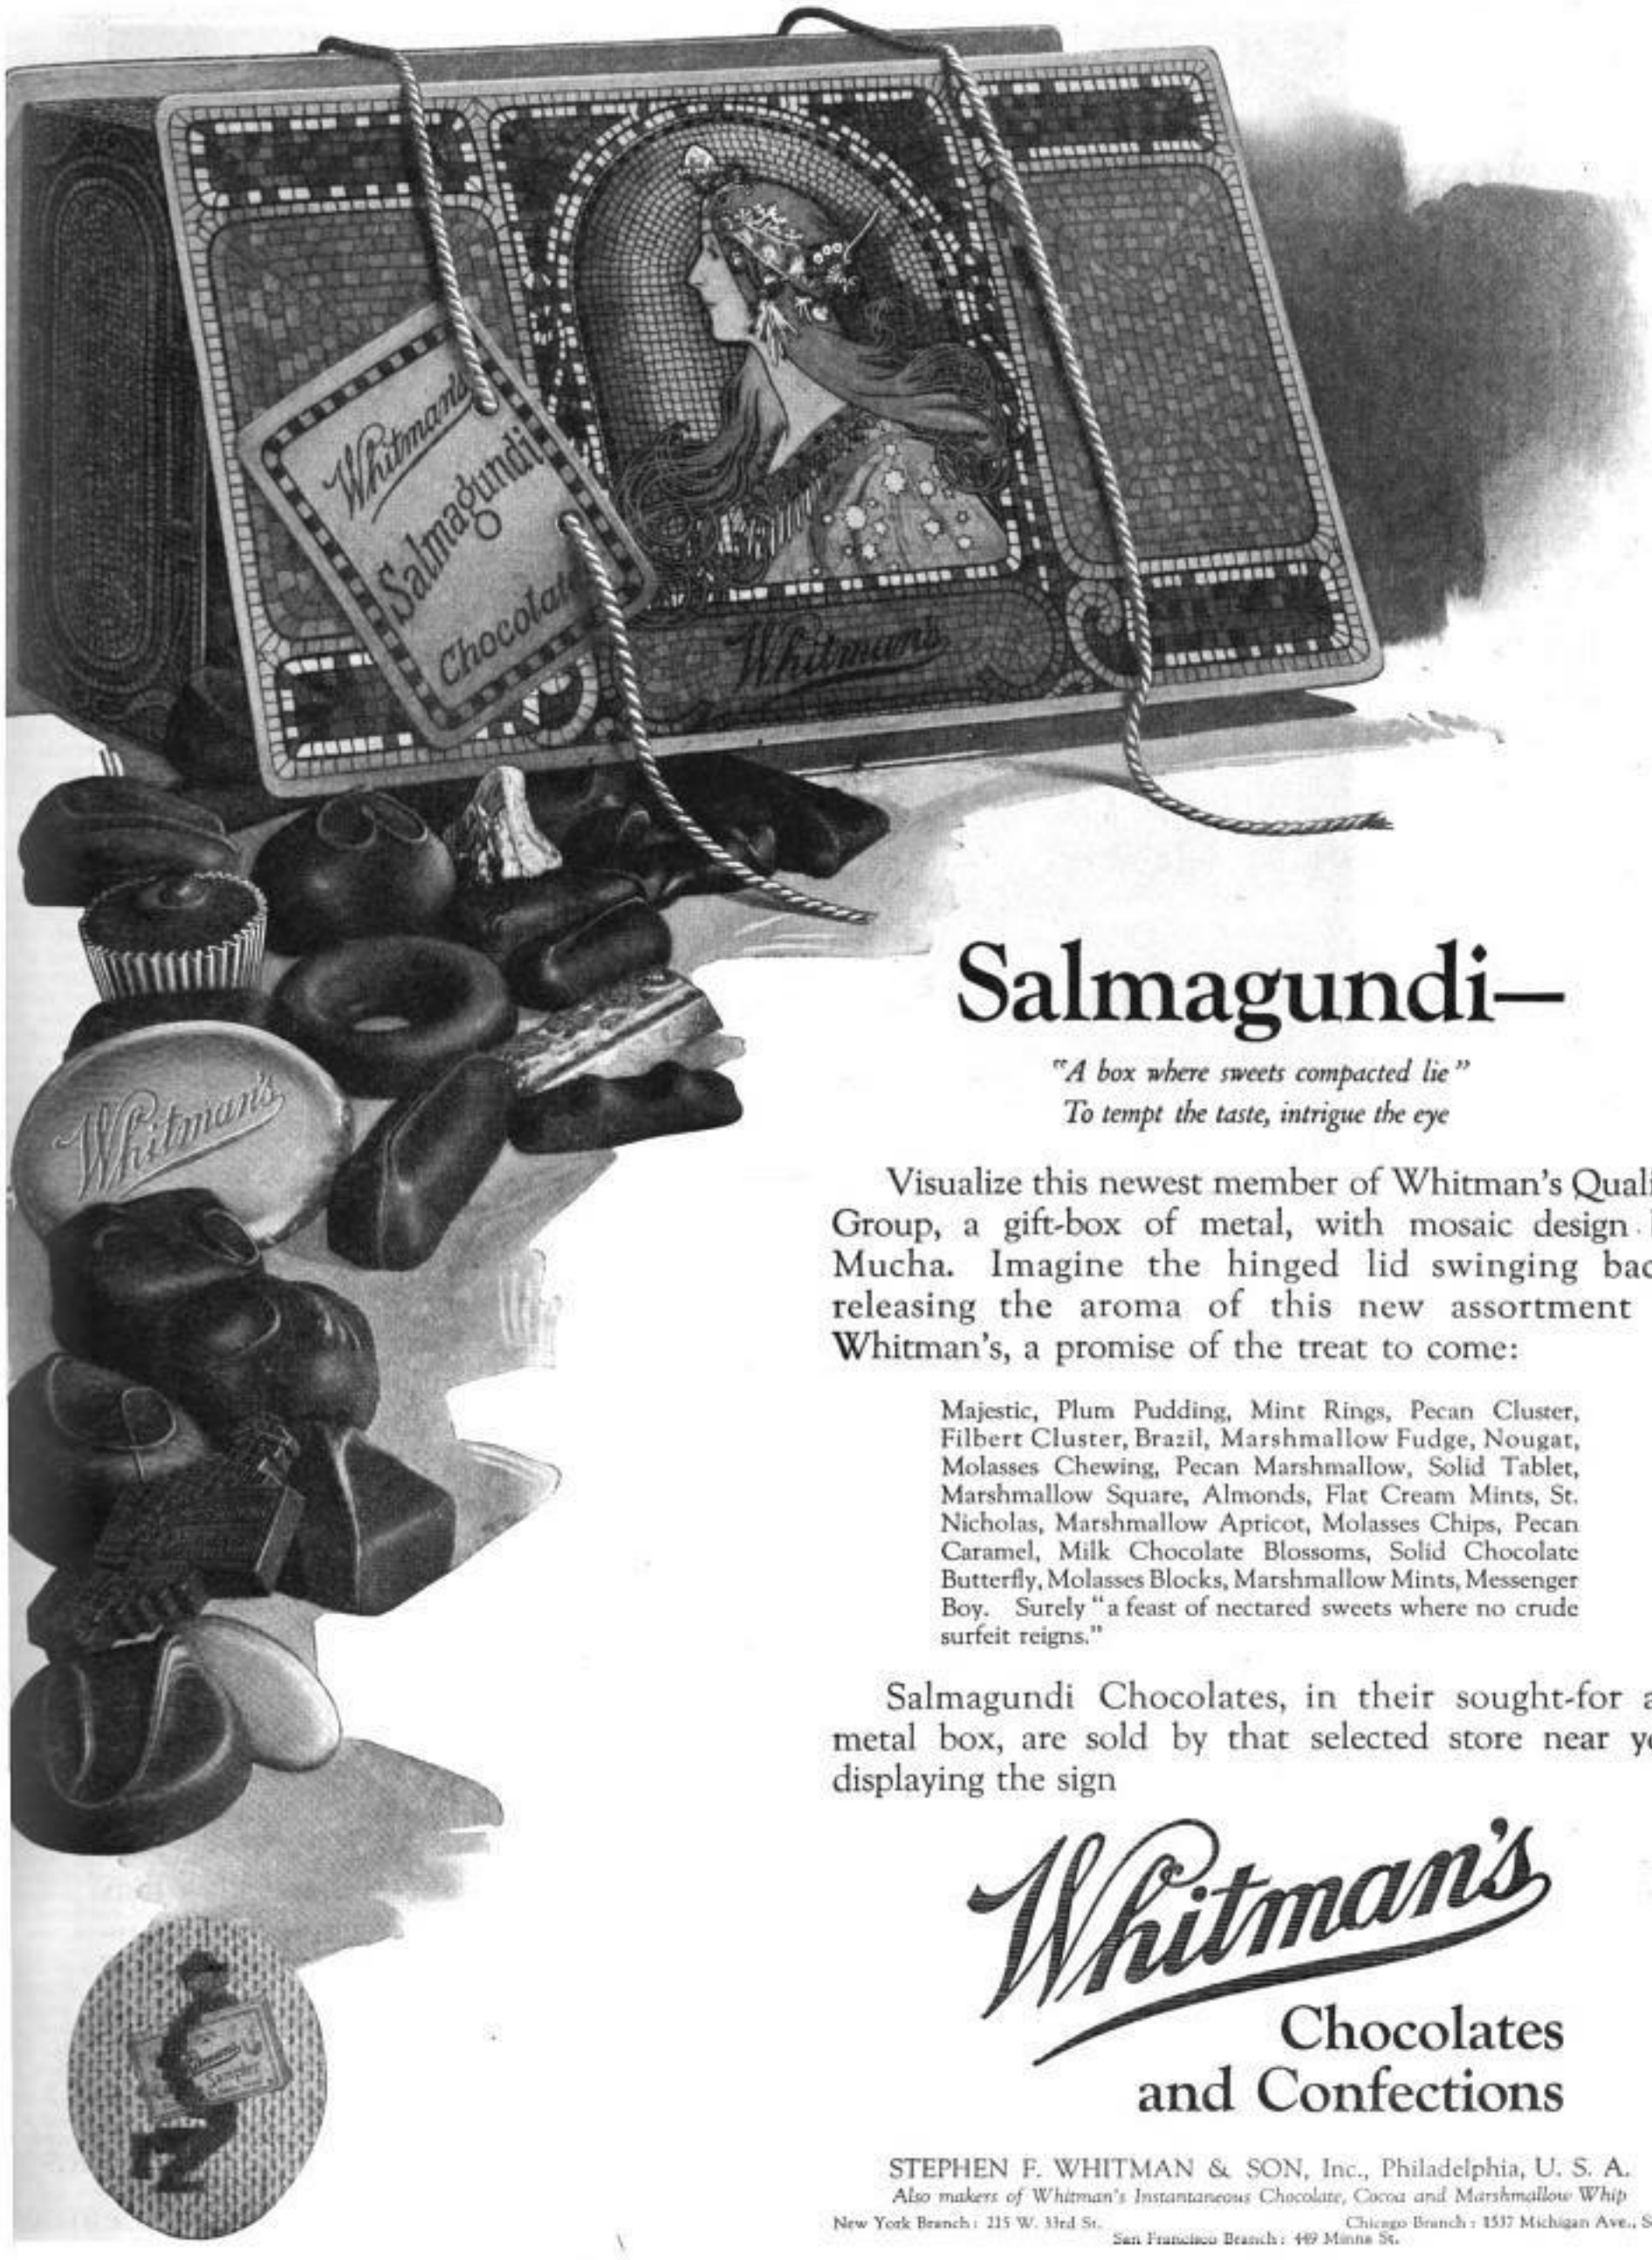
Editorial writing is fascinating. To wield influence always gives satisfaction. For centuries it has been the ambition of orators and writers to influence men's thoughts, to direct men's actions. Creative work is perhaps the most enjoyable of all work. In the newspaper it has come to be the most important. An original editorial article summons all the creative ability of the writer. It is the product of his years of study and experience. The news department may be conducted without an excess of book learning, for news getting has become so systematized it is difficult to invent a new way of treating the news. But before you have been an editorial writer many months you will have called into precious use all your reasoning powers, all your philosophy, all the principles of life and of conduct you may have observed.

News events may be so presented as to have quick influence. Many readers glance at headlines and scan news columns and are influenced without giving them a scrap of intellectual reflection. But the editorial writer must have real merit to influence other men.

He must possess the art of composition, of ready speech, of carrying conviction. He not only thinks for his readers but also he seeks to persuade to his way of thinking.

Lafcadio Hearn's Advice

In large cities, where the newspapers are opulent and large staffs are employed, the editorial writer is expected to produce one article only each day. But the number of opulent journals is small, and in almost all American newspaper offices the editorial writer furnishes several articles. Always he is hurried. He has little time for the study of his subject or for proper thought. This hurry tempts to a condition of routine thought, to the utterance of the obvious, to imitation. Hurried writing usually is slovenly writing, and that is a reason why so much of our editorial writing is mediocre. This everlasting hurry is a serious drawback to good newspaper making; but it is also an incentive to quick thinking. What has been said of the politician, that he must act often before he has read or thought, is singularly true of the editor. He must understand the political, commercial, social questions of the hour, must be prepared to hop right into instant discussion of them. He must train himself to use quick judgment and to reach quick conclusions.



Sir Arthur Quiller-Couch in a lecture to the Cambridge students urged them to study writing and to practice it—to write and rewrite with intent to gain facility in diction and in the fashioning of sentences and especially to seek to make their prose "accurate, perspicuous, persuasive, and appropriate." He would insure greater accuracy by the study and practice of the use of words. Thought and speech being inseparable it follows that we cannot use the humblest process of thought—cannot resolve to take our bath hot or cold or decide what to order for breakfast—without forecasting it in some form of words. Words, in fine, he urges, are the only currency in which we can exchange thought, even with ourselves.

Does it not follow, then, that the more accurately we use words the closer definition we shall give to our thoughts? "The first aim of speech is to be understood, and the more clearly we write the more easily and surely we will be understood. Not to be understood is to be a sloven in speech."

Lafcadio Hearn urged the students of the University of Tokio to study the construction of sentences—to write them over and over again until they were nearly perfect, saying: "A thing once written is not literature. . . . No man can produce real literature at one writing. . . . To produce even a single sentence of good literature requires that the text be written at least three times. . . . For literature more than any other art the all-necessary thing is patience." He advised the students to write a practice piece and put it away for a week; then to revise it and put

"IPSE DIXIT"

SOMETHING like twenty-five hundred years ago lived Pythagoras, the wisest and most learned man of his time. He was the first to reason that the earth was a globe and with the other planets revolved around a central body. He made discoveries which elevated mathematics to a science. He was a leader in medicine, music, ethics and government.

News of his wisdom and his learning spread far and wide. The size of the town in which he lived was doubled by the people who came to study his doctrines. Such was the faith in his word that when his followers made an assertion upon any subject, if they were asked how they knew it to be true, they would reply simply: "*Ipse Dixit*"—"He himself has said it!"

The world accepts its ideas—and its commercial products—largely on such faith. The unknown product, though it have a guarantee written in the strongest terms, fails to inspire the confidence that the known product commands, though it have no guarantee at all. A name of recognized worth is its own promise and its own pledge. Reputation is the best of all salesmen.

It is the business of advertising to make character known, and by so doing to create reputation. It is the power of advertising to make people feel, when they see the name of a recognized manufacturer upon a product: "He himself has made it—it must be good."

(Continued from Page 50)

it away again, and to continue the process of revision until they could improve it no more.

Tolstoy rewrote his important work three or four times. Rossetti revised The Blessed Damozel in repeated editions until the last was quite unlike the first. Tennyson changed his productions over and again. Gray was fourteen years in perfecting the Elegy. It has been suggested that Sir Walter Scott's later novels, written at great speed, are inferior to his earlier and more leisurely work. Samuel Butler's masterpiece, The Way of All Flesh, was under construction for twelve years.

All literary history furnishes examples of great authors who toiled long over their manuscripts. Macaulay gave more time to the revision of his essays than to their writing. Their superiority over his history, as literary products, is revealed by study of both. The history was written more hurriedly. The essays are the product of nearly one hundred years ago, but they yet serve to illustrate the beauties of thoughtful language and intense thinking. We look elsewhere in vain for more adroit phrasing or impressive thunderclaps of climax. Some present-day writers criticize Macaulay for his long-drawn sentences, his reiteration, and his wandering from the narrative. Yet he was imitated by writers for fifty years. His style was the vogue. And Macaulay, as well, had both praised and criticized his great predecessor, Dr. Samuel Johnson, who had been the vogue for a hundred years.

The men of greatest reputations as critics, Sainte-Beuve, Edmund Gosse, Macaulay, Saintsbury and others, put intensive study into what they wrote. If they were to review a book they made a study of the subject of the book and of the life and mentality of the author, and sometimes their productions were of more use to the world than was the book itself. Their works are not so much read in this busy money-making age, but they are among the greatest contributions to thoughtful literature, and the student of journalism will read them with great profit. For your own work is to be thoughtful work—work intended to persuade readers to your own way of thinking.

The Style of Other Days

The English language is reaching afar. There are those who predict that eventually it will be spoken everywhere. Already it is the language of more than two hundred million people. It will carry the tourist over the globe by established routes of travel—through the streets of Japan and the bazaars of India and the South Sea Islands of the Pacific. Tennyson said to Sir Edwin Arnold: "It is bad for us that English will always be a spoken speech, since that means that it will always be changing, and so the time will come when you and I will be as hard to read as Chaucer to-day."

Indeed, the language is changing constantly. We are eliding letters, lopping off terminations, cutting out phrases and polishing circumlocution. It is not so old a language as many others, and opportunity for its improvement exists. Compare, if you please, a modern narrative with the beginning of Chaucer's The Tale of Melibeus:

A young man called Melibeus, mighty and riche, begat upon his wif, that called was Prudence, a doughter which that called was Sophie. Upon a day bifel, that for his disport he is went into the fields him for to play. His wif and his doughter eek hath he laft in-with his hous, of which the dores were fast shut. Three of his olde foes have it espyed, and setten watch and laien in await the dores to the walles of his hous, and by the windowes be entred, and beetyn his wyf, and wounded his doughter with fyve mortal woundes in fyve sondry places, that is to sayn, in her feet, in her hondes, in her eares, in her nose, and in her mouth; and lafte her for deed, and went away.

And imagine, if you may, how a modern newspaper copy reader would condense the following bit of Washington Irving prose that was printed in school readers sixty years ago as an example of graceful writing and felicity of expression:

It was one of those somber and rather melancholy days in the latter part of autumn when the shadows of morning and evening almost mingle together and throw a gloom over the face of the year I passed several hours of a day rambling around Westminster Abbey. There is something congenial to the season in the mournful magnificence of the old pile; and, as I passed its threshold, it seemed like stepping back into the regions of antiquity and losing myself among the shades of former ages.

More than ever is there present-day need for the use of plain, easily understood English. We live in a money-making age—an age of industrial development, in which machines are doing the work that brains used to do, in which vocational and technical education is demanded of schools and colleges, and in which the cry for technical literature is insistent. Only experts understand the technical words and language of their specialty, hence the cry for writers who can translate technical language into plain English that any reader may understand. Dean West, of Princeton, has deplored the inability of many professors to teach orally or in writing in any other than the dialect of their specialties. Lacking in literary training they are unable clearly to say what they think.

Someone asked William T. Stead, the English journalist, whether he would have an astronomer or a newspaper writer prepare an article on sun spots, and Stead's instant reply was that the astronomer would write it for astronomers in language that no one else would understand, but the reporter would tap the brain of the specialist and so serve out his knowledge that the ordinary reader would understand. The tendency of present-day writing is to translate technical language, scientific terms, professional formulæ and medical expressions into plain, common-sense English.

Newspaper English

And let not the young man contemplating a journalistic career be persuaded that newspaper English is not good English. The men who wrote for the daily press of the Spanish-American War, for instance, of the great political movements of Europe of later years, of our great industrial developments and of the world-wide war in particular are the very men who are rewriting these things into history. When they wrote this information for the newspapers distinguished college professors and critics called it journalese; when it appears in the reviews and in books they speak of it as literature.

In praise of newspaper writing as good training for writers, Anatole France has this to say:

It is inveterate prejudice to believe that one spoils his pen in writing for the newspapers. On the contrary, one gains in that way suppleness, as also ease and that readiness without which the phrase does not move gracefully and never smiles. It is a good school, say what one will.

In his illuminating book of essays called Unicorns, the late James G. Huneker says of the excellent writing to be found in the modern newspaper:

If style cannot be imparted, what then is the next best thing to do, after a close study of the masters? We should say, go in a chastened mood to the nearest newspaper office and apply for a humble place on the staff. Then one will come to grips with life, the pacemaker of style. . . . It is in the daily press, whether New York, Paris, Vienna or London, that one may find the soundest, most succinct prose, prose stripped of superfluous ornament, prose bare to the bone in fighting trim.

But why speak of newspaper style when there isn't any such thing? Almost every kind of writing is used by newspapers. All kinds of literature are printed in them—the scholarly essay, the article of argument, the expository editorial paragraph, the story of fiction, the language of verse, the consideration of art, music, the play, all sorts of description of all kinds of happenings in every part of this jolly old earth—and all are written without uniformity of diction or construction. There is no style the newspaper discards. The experienced editor seeks diversity of writing and of topic in every column. He studies to that end.

Some writing is so plain that you do not notice it. It is like the well-dressed man whose clothing is so simple and appropriate that it is not attracting attention wherever he goes. Mérimée said of Stendhal that he despised mere style and insisted that a writer had attained perfection when we remember his ideas without recalling his phrases; and of Saintsbury, the English critic, it was remarked that "he always thought it of more importance to utter the thought than to care about the form of utterance. . . . If he had given more attention to style we should have been deprived of some of the benefits of his knowledge."

The finest drink you ever tasted~ ROOTBEER made from

One 25¢ package makes 80 glasses

You've never tasted anything so good and refreshing as the rootbeer you make from Hires Household Extract. And no other drink is so easy to make.

Simple directions for mixing are enclosed in the package. Bottle with tight corks or get Hires Patent Bottle Stoppers from your grocer. Forty-eight hours after mixing, your rootbeer is sparkling and ready to drink. If you like it tell your friends how delicious it is, how easy and economical to make. Be sure to

Something Absolutely New!

DAYTON Steel Racquet

PATENTS PENDING IN THE UNITED STATES AND FOREIGN COUNTRIES

YOU can now buy a TENNIS RACQUET that will not warp or break, that requires no press, is unaffected by climatic changes—can be used in the rain—stored in an exceedingly dry or damp place for an indefinite period without deteriorating in the least.

The Dayton Steel Racquet has a steel frame and is strung with resilient steel strings. It is made in standard weights with standard wooden handles, and is perfectly balanced.

The steel frame, smaller in cross section than a wooden frame, offers much less resistance to the air, and is much easier to control than the ordinary racquet.

$10.00

$13.50 if strung with gut

Invented by William A. Larned

The Dayton Steel Racquet is the invention of William A. Larned, *seven times national champion*. It is the result of more than 20 years' experience and has the enthusiastic approval of all who have used it.

The Dayton Steel Racquet is distributed by A. G. Spalding & Bros., Wright & Ditson, Wright & Ditson-Victor Co. and Alex Taylor & Co., and can be obtained in any store where their goods are sold.

Whether you have been paying more or less than ten dollars for tennis racquets, you will find the Dayton Steel Racquet more satisfactory and more economical than any racquet you have ever used. Write for booklet.

THE DAYTON STEEL RACQUET COMPANY, Dayton, Ohio

Indeed, some great newspaper narratives are of so absorbing interest in themselves—great disasters like the sinking of the Lusitania or the Titanic—that the reader's attention is entirely concentrated on the facts and he does not notice the diction or the construction. No matter how disjointed or horribly written the narrative may be, he finishes it with the impression that he has read a great article. Nevertheless, every article is the better for good telling. Perhaps no greater newspaper accomplishment exists than the ability to write well. It is of increasing value as the young man goes on to higher work.

A little discreet exuberance of expression is tolerated by many editors. Sensational newspapers do little harm as long as they stick to the truth. You may print your editions in red ink and job type with headlines a foot high, if you like, without other offense than to exaggerate the importance of your announcement. Typographical eccentricity merely attracts attention. It serves the same purpose as does the orator's violent gesture or the messenger's breathless announcement: excites curiosity, arouses interest.

Now there is such a thing as harmless exaggeration. It enters largely into our private life. Our dreams of wealth, of success, of happiness are usually far beyond the fulfillment. We exaggerate our prospects, our ambitions, our promises to ourselves. But this form of exaggeration is beneficial, for it is a spur to ambition and a prod to effort.

The editor is tempted to exaggeration because a little exaggeration makes it a little more interesting. He sees that the exaggerated novel sells while the novel true to life languishes; that the actor who gesticulates and shouts has the loudest applause; that the painter who outdoes Nature makes more money than the artist who is true to Nature. Indeed, some philosopher has said that an easy road to success lies through exaggeration. The man who exploits his own importance attracts more attention than the modest man. The merchant who exalts his wares sells more than the man who does not. Sensational clergymen fill churches while prosy ones preach to empty benches. It was Sydney Smith who remarked: "It is not the first man to say a thing who deserves the credit for it, but he who says it so long and so loud that at last he persuades the world that it is true." Macaulay wrote: "The best portraits are perhaps those in which there is a slight mixture of caricature, and we are not certain that the best histories are not those in which a little of exaggeration, of fictitious narrative, is judiciously employed." But the editor must use exaggeration with great discretion, must not pervert the truth. Gross exaggeration becomes downright lying.

The Cleveland-Blaine Campaign

In my article in THE SATURDAY EVENING POST of February fourth was mentioned the exciting election-night scenes of the Cleveland-Blaine campaign, the mobs around the newspaper offices and the tumult incident to a very close contest. Returns up to midnight indicated Blaine's election. It was mentioned also that while Blaine was being congratulated in his Augusta home news of his possible defeat was flashed and that he was overcome by the disastrous turn of affairs; also that he sent a telegram to his New York campaign managers.

Thomas H. Sherman has written for the Portland Press-Herald an exceedingly interesting narrative of the events of that evening in the Blaine home. He was Blaine's secretary, and was with him throughout the campaign. "Mr. Blaine sat by my side," he says, "while the returns were coming in. In my youth I was a telegraph operator, and we had a private wire leading into Mr. Blaine's library. At about midnight, when the returns apparently showed Cleveland's election, Mr. Blaine said to me, 'Even if I should carry New York by about a thousand votes, I would be counted out.' At midnight he said: 'I am going to bed and going to sleep. I do not want to be disturbed, no matter what comes.' Mr. Blaine had been through a very hard campaign. He had been traveling all day, having reached Augusta just before the polls closed in time to vote. He said good night to a few of his intimate friends who were in the parlor and went upstairs to bed. He slept soundly until about nine o'clock next morning when I went up to his bedroom with a handful of dispatches and the latest returns. By that time it was certain he had been defeated. When I went into the room Mr. Blaine was in bed. He said, 'Well, Tom, how do you feel this morning?' I replied: 'I can't say how I feel until I know how you feel.' It seemed impossible that a man could pass through such a racking campaign without being visibly affected."

Mr. Blaine's Coolness

"'Bless you,' Mr. Blaine said, 'it doesn't affect me a pulse beat. I am sorry for the party and for my friends, but personally I am not disturbed.' No one who was close to Mr. Blaine could have said to Mr. Lord that this announcement 'was like a bucket of cold water down his back' and that 'he nearly went into a collapse.' It was not true. Mr. Lord must have confused this incident with something else. To Mr. Lord this Blaine-Cleveland election was one of many; on me it made such an impression and all the incidents connected with it are so clear in mind that I could not be mistaken about this matter. Furthermore, Mr. Blaine did not telegraph the Republican managers to postpone the announcement of his defeat. Whatever these managers may have done was on their own initiative. To my knowledge Mr. Blaine neither advised it nor knew about it, and as I handled all of his correspondence and telegrams I would be likely to know had he done anything of the kind."

Mr. Sherman's narration rings true. My information came from persons in whom I had every confidence, but Mr. Sherman was with Mr. Blaine, and he should know. It would not have been to Mr. Blaine's discredit had he been overcome. For several hours he had supposed he was the President-elect—had been awarded the highest honor the nation can give. Then came sudden news of defeat. A strong man, indeed, must he have been to remain unmoved. Of more importance is the definite information that Mr. Blaine sent no message to his New York managers, for it removes any suspicion or assumption that he had to do with the attempts to influence press announcements of the result or that he suggested any manipulation of the returns.

For the Protection of Building Investments

Buildings were for ages regarded as man's best monuments. But within the last 40 years, building practices have been revolutionized by the introduction of plumbing, heating, electric, refrigeration and other systems which are dependent on piping exposed to corrosive attack from within.

And these arterial systems are mostly inaccessible—buried in walls and floors—which, when failures occur, entail record breaking replacement costs.

So one is forced to ask: What is the monumental value of these modern structures with their bewildering network of pipes? In other words, what will be their upkeep cost and their investment value? *To answer these questions, look to the piping.*

For the protection of your investment, painstaking architects and engineers choose Byers pipe. They prefer to stake their good names upon a half century of *performance* of Byers pipe rather than on the unsupported promises of cheaper materials. Hence the widespread use of Byers pipe for buildings of every character.

Big life insurance companies so thoroughly appreciate the close relation of investment value to quality of pipe, that it plays an important rôle in their decision to lend money on buildings.

HIGHWAYS AND HIGHWAYMEN

(Continued from Page 17)

he urge or even request me to appoint. I eventually filled the place by a man of my own choosing, one not named in that mass of political appeals.

Among the personal appointees of my predecessor was a man whom we will call Mr. Shift. He came into my office during the first afternoon and asked if he might have time to complete his report of last year's work.

"Why haven't you completed it during the three months and more of this year?" I asked.

Shift assured me his report contained such invaluable data that it required great thought and time.

"How much time?"

"Not more than two weeks, commissioner."

"Any report that takes two weeks to write I'll not have time to read. The state will worry along without your information."

He left, of course my enemy.

The commissioner is allowed three confidential inspectors. I had decided to appoint young lieutenants who had served in my battalion overseas. To my surprise I learned that my predecessor, two days before leaving office, had filled one of these positions, and that this man was a Povertist. For a member of the Property Party to do anything for a Povertist is not considered good form. I sent for this inspector. The man was past sixty and entirely unfitted for the work. I asked for his resignation. Not until months later did I learn why my predecessor had made the appointment. This man was a particular friend of the Povertist leader mentioned as not speaking to the governor for three months. My predecessor knew that I would have to discharge this inefficient man, and hoped thereby to create a break between the governor and an important leader. This shabby trick was styled, by a member of the Property Party, "a clever piece of work."

Weeding Out the Payroll

As it happened, my discharge of this man came as a climax. The leader had hoped to name the highway commissioner; failing in this he had confidently expected to have a personal friend made second deputy. I knew nothing of this, the governor mercifully shielding me from all political intrigue. Without consulting anyone I had appointed as second deputy a young man I had known at Plattsburg and who had won distinction overseas with the engineers.

How much personal annoyance and trouble it caused our governor to have a nonpolitical highway commissioner I shall never know, for, true gentleman that he is, he has kept silent; nothing that I have found out about it has come from him.

Some pruning, I found, was necessary. During the war years highway activities had been far below normal, and, like an overworked garden, the department had become weedy. On my second day in office I entered, unannounced, a room not previously visited. The three occupants, after hastily slipping the newspapers that they had been reading under cover, became unnaturally diligent.

"This is the historical department," one of them said. "We collect and tabulate data of new road construction."

"Does it require three of you to do that?"

"Oh, yes, commissioner; there is a lot of detail to our work."

"Enough to require an assistant engineer, a junior engineer and a stenographer?"

"Indeed yes. We really should have another stenographer in here."

I looked at my watch. "It is now eleven o'clock; at noon to-day this department is out of business."

I filled the places of those three employes by one bright girl, who carried on the work better, and of course at less cost.

A few days after taking charge, my second deputy came to me, fighting mad. He is usually as cool as ice. I waited with interest to learn the cause.

"I won't sign this pay roll," he said, showing me the maintenance pay roll. "There's a fellow carried here at $4000 a year, and I've never even seen him!"

"Nor have I. We'll investigate."

Then Field and Gillett joined us they added an interesting tale. The man had come to the capital city years before in the interest of a newspaper then agitating an investigation of the department. Through his activities, they managed to raise quite a smoke, but so far as I could learn nobody went to jail. After the dust of this investigation had settled this man secured a place in the department, apparently as a permanent fixture.

"Why," I asked, "has not this man reported to the maintenance deputy?"

"He has nothing to do with maintenance. He's supposed to collect evidence to defend suits brought against the department in the Court of Claims."

"Where is this man now?" I asked Gillett.

"Probably in the lobby of some hotel downtown."

"How long has this thing been going on?"

"Six years."

Getting Up Steam

I turned to the second deputy. "Sign that pay roll under protest, major; it's the last one you'll have to sign with that man's name on it. He's fired."

Field and Gillett left without further words, but with a look that I did not understand until I read the papers some days later. Surprise, satisfaction, anxiety were mingled in their faces.

By the end of two months the department was going at top speed, many broken-down war contracts had been put again in work, and other contracts for both new construction and reconstruction were in force. We were doing as much or more actual work in a month than had been possible during a year under wartime conditions, and this larger activity was being carried on at an actual saving in salaries at the headquarters office alone of more than $9000 a year.

I confess that I did not do all the pruning possible; there are employes in the department who have been there for so many years that to turn them out would mean for them certain starvation. I found one man, hopelessly paralyzed, whose only employment for six years past had been to trim the edges from blue prints, requiring perhaps one hour of work a week. I took this case to the governor.

"We're not running a charitable institution," I told him.

"Has he any dependents?"

"Yes, governor; a sister, nearly seventy."

"Well, what are you going to do?"

"It's tough," I said, "but I'm going to fire him."

The look that I had seen when he spoke of the mother whose son was condemned to death came again to the governor's face. He laid his hand on my shoulder.

"Oh, don't do that. Have a heart, commissioner."

He turned to his always pressing work. That man is, I believe, still on the pay roll.

During the summer months there were formerly almost a thousand patrolmen employed upon the lighter repairs. They worked, or were supposed to work, scattered over 7200 miles of roads and, in consequence, proper supervision was impossible. This bad condition was made worse by a vicious system. When I took office the department was sending out printed slips to county committeemen of the party then in power, asking these political gentlemen whom they wished employed on roads in their localities. This was the favorite garden of the peanut politician for raising patronage; they gleefully filled the places with the ancient and honorable has-beens of their party. Could you conceive of a more inefficient method of maintenance than the employment of these scattered Methuselahs, who get their jobs not from the engineers under whom they work but from someone having no official connection with the department?

Shortly after the war the Federal Government gave to all the states a number of army trucks; with these I solved the problem. I abolished the patrol system, but continued repair work with men supervised by a foreman, using the free-given trucks to transport both men and materials. I also abolished the printed slips, the foremen and men on the gangs being appointed by the department engineers strictly upon ability to do good road work.

A few days before I took office, and a full three weeks before there was any necessity

Digitized by Google

for them, my predecessor gave orders that all patrolmen for the coming year should be immediately appointed. They were! I found dyed-in-the-wool Property patrolmen grinning at me upon my arrival in the capital city. These patrolmen cost an average of $3.50 a day. They were employed for three weeks at a useless expense to the state of more than $50,000. Remember this, Mister Taxpayer, the next time you pay your tax bill.

Though at the time of my resignation I was roundly criticized on the floor of the Senate for inaugurating the gang system, my successor has continued it, slightly modified. But they have returned to the vicious custom of the printed slip. Recently a Property paper printed the choice information that a list of men recommended for state highway work had been sent to the highway commissioner by the local county Property committee. Whether or not these men will do efficient work or willingly obey the orders of department engineers is a matter that the taxpayers may worry about; certainly it is of no concern to the Property Party.

During my first months in office hardly a day passed that I was not visited by at least one delegation. These meetings, with all classes of people from every part of the state, were interesting, but they used up time and in nine cases out of ten were a useless expense to the delegates. They came not always to plead for a road, but often to ask only what chance and in what distant year they might hope to see work started on some badly needed highway.

Mischievous Politics

My first delegation came from the far end of a rural county; one behind the other they filed solemnly in. As each man entered he glanced shyly at me, then, plainly embarrassed—why, I could never understand—he turned his head away, and not one of those husky farmers gave my hand a firm grip. After all had entered they stood silently about the room.

"Well, gentlemen," I said, "all this is new to me. How do I begin?"

A raw-boned, leather-cheeked man moved awkwardly forward and, without speaking, without looking into my face, handed me a letter.

"What's this?" I asked.

"That's a letter from Jim Smith."

"Who's Jim Smith?"

"Why, commissioner, don't you know Jim? Jim's our county chairman!" The raw-boned man actually looked for an instant into my eyes.

"He's the biggest feller in our county," someone in the crowd said. "We thought we hadn't oughter come unless we had a letter from Jim."

Without opening the envelope I tore the letter to pieces. "You don't have to bring letters from any politician to talk to me," I told them. "Now let's get down to business."

Their spokesman, with work-hardened finger, pointed out their town on the county map, and showed me that they needed a short stretch of road to connect them with the state system and the outer world. Their request, though given so diffidently, was entirely reasonable; they had evidently been neglected in the past. I told them so, and said that if possible I would put their road under construction that season. Their gratitude took me by surprise.

"Why, gentlemen, you don't have to thank me. To hear you and to build roads for you are the things you pay me to do."

As they filed out I heard from the outer office: "Gosh! Say, he ain't no politician!"

The modesty of farmer delegations was a constant source of wonder to me. After the third or fourth group of countrymen had overwhelmed me with thanks I detained a bright-eyed old fellow who did not seem so painfully shy.

"Why is it that you gentlemen are so grateful for these interviews?" I asked. "You pay for them, you know, through your taxes. I am not doing one thing for you that you haven't a right to demand."

"Wal now, I'll tell ye. It's because you ain't givin' us no political slush, no high-falutin promises. You tell us fellers yes or no; an' that ain't usual in this town." He pulled thoughtfully at his cigar. "Besides, you don't keep a feller waitin'. I've been here before, but I've allus had to set outside there, sometimes a hull hour, before I could see the commish."

The next day I had door stops put on my office door, and thereafter it was kept wide open so that anyone waiting could see that I was engaged and not needlessly wasting his time.

Before the end of the first year I practically put a stop to these expensive visits by publishing in the fall a list of the roads the department could build during the coming season. This had never been done before, and my bulletin created comment; one paper stated in plain language that the reason for withholding such information in the past had been to give the party in control opportunity to deal out new roads as a reward for votes, and not as a benefit to which the community had a right.

In what ways do politics most injure the taxpayer, who must pay for the roads?

To get the full weight of the answer you should know that in our state, as in many other states, the cities pay the greater part of the taxes. Our largest city—the same conditions exist in Illinois, Rhode Island, New York, Louisiana and several other states—pays more than fifty cents out of every dollar spent by the state; also it is not centrally located, and never sees, much less uses, the miles of roads built in other parts of the state.

At the first conference with my division engineers I learned that we had $5,500,000 to spend solely for maintenance and reconstruction during the coming season.

"Fine," I said. "With but 7200 miles it gives us over $760 for each mile, and many roads of course are new. We ought to put the entire system in tiptop shape with all that money."

I saw the engineers smile, all nine of them.

"Well, what's wrong about that?" I demanded.

After some hesitation one answered, "If we had twice that much we still couldn't touch miles of roads that need rebuilding this year."

I could not credit this statement until I had gone deeply into our record, and there at the bottom of the barrel I found injustice, waste, and hidden beneath these crouched our old friend, Politics.

These records show that the average life of certain types of road pavements is but seven and a half years; that the state has built mile after mile of highways that were costing $1000 a mile every year to keep in usable condition, and that the total cost for maintenance and reconstruction on many roads has run over $4000 a mile a year.

Years after it was definitely known that certain types of pavements would go to pieces under motor traffic the state had continued to build such types. Why? Politics.

More Miles, More Votes

Under our laws certain roads are paid for jointly by the counties and state, but once constructed the state thereafter shoulders the entire expense of upkeep. I found—especially in rural districts—that it was politically expedient to build roads that would not and could not stand up. The man with a political pull from such districts would come to the commissioner and ask for a road—say ten miles long. He would be, or should have been, told that there were not sufficient county funds on hand to build a durable road more than five miles long.

"That won't be no good for my constituents, commissioner. Build us a cheap, narrow road; anything'll do so long as you stretch her out."

"But it won't last."

"No more will you, without votes. Give us ten miles and I'll deliver the votes."

Many of these gentlemen, I regret to say, have been accommodated. There are highways scattered all over our state, built on this more-miles-more-votes design. Our division engineers recently certified that we have over 1200 miles that will require rebuilding during the next three years, which to do properly will cost the staggering sum of $25,000,000.

At the very start the cities—especially our largest city—are hit below the belt by cheap roads. The department, until the day I took office, was building a large mileage of waterbound roads, a type that cannot withstand the action of pneumatic tires. These roads have been officially accepted as completed one day and given a bituminous treatment the next day or the next week, this treatment being paid for from maintenance funds; which means that one city paid seventy cents out of every dollar this new surface cost, while the county in which the road lies paid in some cases less than one cent of that dollar.

The second blow comes in the third year, when this cheap road requires oiling. It is oiled, and again the cities pay the piper. The knock-out is landed at the end of five to seven years, when our political acquaintance again steps into the ring.

"Commissioner," he growls, "that road what was built some time back is a disgrace to the state; it's gone all to pieces, and my constituents ain't goin' to stand for it no longer. We want that road rebuilt, and done right. It ain't got no foundation, and it's too narrow."

The road is rebuilt and widened, and is now given a deeper foundation. But once more the state pays all the cost, and there isn't a referee sufficiently interested even to count ten over the unconscious city.

To put an end to this very real evil would, I thought, bring down blessings upon my head. I announced through speeches and the press that so long as I was commissioner I would build only durable roads that I intended to build the maintenance into the road, that though this would give a shorter mileage the state would have a longer yearage, which would mean an enormous saving to the taxpayers.

The howl of criticism that followed was amazing. I was loudly attacked as a man having extravagant city ideas, all because I refused to build roads—paid for from fifty-year bonds—that would go to pieces in less than ten years.

I held to my policy—which, by the way, is the chief reason I now have time to tell you these things.

Why has a prosperous state allowed its highway system to become so run down?

Two reasons: No governor, before the one I served under, has had the courage to allow his commissioner to ask for an adequate maintenance appropriation, fearing the criticism resulting from a large budget. But to keep these roads in service the state must buy carload after carload of crude patch, hot patch, patching emulsions and other materials. The cost of buying and placing these materials on a worn-out road amounts to pouring the taxpayer's money down the well-known rat hole.

The Highway Map

The highway map of our state is a joke, an expensive political joke. Aside from having, in every one of our counties, roads as permanent as pickles, there are isolated stretches of half a mile to five miles of improved highways in no way connected with finished parts of the state system. The extra expense of caring for such fragments when to reach them foreman and men are forced to travel over miles of dirt roads runs into the tens of thousands each year. Of course these roads, beginning nowhere and ending nowhere, serve but a few people; they were built in favored localities at the request of some man or group of men having a strong political pull. In many counties there are improved roads closely paralleling each other, while some sections of the state, not politically strong, have been defiantly neglected.

To stop this evil I let no contracts for any new road unless it connected with some already completed one. But this did not go deep enough. These scattered roads could never have been built for favored politicians if we had had a definite and fixed highway system. Under our laws county roads previously designated can be changed at the will of the county supervisors. Federal aid roads can be designated or changed by the commissioner with Federal approval. You can see the easy chance for juggling. To put a permanent stop to isolated road building I set about making a map that would show a definite and connected system of roads, hoping to have the routes shown adopted and fixed by law. To select the best routes possible, our division engineer, aided by his county assistants, drew a map for his division; later I connected and coördinated these maps into one for the entire state. These engineers, having an intimate knowledge of their own counties, were well qualified to make a good map. They did make a good map, but our work and the taxpayer's money were wasted. This composite study of our highway needs was promptly thrown into the scrap heap by a partisan horde in legislature.

When it became certain that a Power commissioner was to manage the highway

George W. Wells' Dream of Better Vision

ONE night, thirty years ago, George W. Wells told a group of friends the great dream of his later years. He spoke of the priceless value of fine vision and the evil effects upon the mind and general health of eyes imperfect and overtaxed. He realized how poorly the optical knowledge of that day met the needs of humanity.

He explained that a quarter of all people over six years of age are handicapped by visual defects, that millions at that time did not realize their needs and that most glasses were not correctly made and fitted.

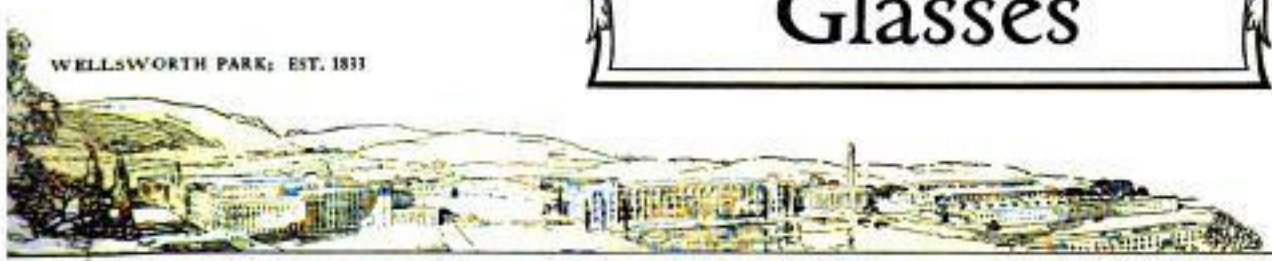
Speaking as the greatest manufacturer of glasses in the world, he told how little help he was able to get from scientists here and abroad in solving the problems of lens making.

"From now on," said he, "we shall spare no expense on scientific research and experiment until those who most need glasses—a quarter of the whole public—shall have glasses of true scientific merit."

The great task so inspiringly conceived has been aggressively pushed by his three sons. It remains an inspiration to the Wellsworth Scientific Staff to the present day. Discoveries have followed one after another, some of them being profoundly revolutionary. Instruments for testing eyes and apparatus for grinding and polishing lenses have been perfected.

No European country enjoys the blessings which are at hand in almost any American community for those who need glasses.

The remarkable facts to be brought out in this series of advertisements will barely indicate the facilities, skill and scientific knowledge which are being applied by Optical Specialists today throughout America.



And this wonderful progress is largely due to the foresight, energy and courage of the late George W. Wells—America's pioneer in the science and art of eye correction.

The benefits of this policy for the correction and comfort of your eyes are available to you, no matter where you live, through the services of Eyesight Specialists in your community.

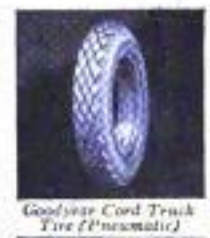
THROUGH YELLOWSTONE PARK ON GOODYEARS

Actual photograph (Copyrighted by J. E. Haynes) of a part of the Goodyear Cord-equipped fleet of the Yellowstone Park Transportation Company



***"More than 160,000 tourists visited Yellowstone National Park in the seasons of 1920 and 1921. More than 50,000 of them were transported over the regular park tour by the Yellowstone Park Transportation Co. Our fleet of 124 eleven-passenger busses and 24 seven-passenger touring cars in these two seasons traveled 1,164,213 car miles, every foot of the way on Goodyear Cord Tires. In a total of 4,856,855 tire miles, only six blowouts occurred. This record of dependable performance is due to the quality of Goodyear Tires and to the Goodyear Conservation Service behind them."*—W. M. NICHOLS, Asst. to the President, Yellowstone Park Transportation Co.**

WHEN you visit Yellowstone Park this summer, you will have the opportunity to experience personally those qualities of Goodyear Cord Tire performance that make possible such a record as Mr. Nichols has here related.

You will note for yourself that powerful dependability of service which these tires have demonstrated in 4,800,000 Goodyear tire miles along the scenic route of the Yellowstone Park Transportation Company.

You will enjoy the inbuilt, deep, resilient buoyancy with which the great pneumatics smooth the mountain grades and cushion the car and its passengers against the inequalities of the road.

You will travel the levels and the heights, as more than 50,000 have ridden before you, secure in the tractive action of these big, strong Goodyear Cords, with their wide, thick, gripping tread. They hold the road and carry the car forward full distance at every turn of the wheel.

Goodyear Cord Truck Tire (Pneumatic)

Goodyear All-Weather Tread Solid

Goodyear Hollow-Center Cushion Tire

And if your personal or business interest prompts to a little study of transportation as you ride along, you may associate the delight of this easy, swift, safe travel with the lasting economy of these tires that deliver so much mileage at so little cost.

Goodyear Cord Truck Tires are recommended for both commercial passenger and industrial transportation, as all 'round equipment on trucks up to three-ton capacity and on the front wheels of heavy duty trucks, under specified conditions of design and load.

For every hauling need there are special Goodyear Truck Tires—Goodyear Cords, Goodyear All-Weather Tread Solids, Goodyear Cushion Tires. Call upon your Goodyear Dealer for the benefit of his unbiased judgment in specifying the particular Goodyear Truck Tire that will serve you longest and best.

(Continued from Page 58)

department consternation spread among the Property legislators. A joint Legislative Highway Committee was immediately created. Just what this committee was supposed to do that first year no one knew for certain; but our highway map gave those gentlemen an excuse to carry on during the second year—important, as a gubernatorial election was approaching. They conceived a wonderful idea: They would themselves make a map! The public might think that they had been elected to make laws, that they were not so well qualified to make maps as were the engineers, trained in that work and living in every county of the state.

What did it cost the taxpayers, this political map? I am told that it cost not less than $25,000. But no definite sum can be given; the true amount is hidden in the item "General Legislative Expense."

Is it any wonder the business man helplessly cries, "Oh, what's the use?"

Though all these ways of wasting the state's funds are bad, the practice of spending money for political surveys was by long odds the most inexcusable. Before I had been commissioner a week several requests were made for surveys of roads that, owing to lack of funds, could not be built.

Upon inquiry I found that to make useless road surveys was a long-established custom. A senator, an assemblyman or a supervisor is running in a certain county; he goes to the commissioner and asks for a survey of a road to construct which, he both he and the commissioner know, there is not enough money. In a few days, nevertheless, the people of the candidate's district will see a corps of engineers on that road, sighting through instruments and waving flags.

The politician now lends the light of his presence to the surveyors and says to his delighted constituents: "Yes, neighbors, I'm having this road surveyed. Elect me and I will see that it is built."

A Million-Dollar Joke

You might think this is a good joke on these simple folk were it not a serious matter for all the people. The records show that in our state there has been spent for surveys never used and on roads which have not been built more than $1,000,000. It was because I could not see the joke in these surveys that I placed a sign on my desk, reading:

"Do not ask for a survey unless money to build the road is in hand and conditions permit prompt construction."

Shortly before the last election, in spite of this sign, a supervisor tried to bluff me into making a useless survey. A few days after election, when a Property governor had won, he came swaggering into the office. "Well, commissioner," he said, "I guess that survey of mine will be made now."

I found that nineteen-twentieths of the politician's boasted power is in reality only the cheapest sort of bluff. I don't believe that I ever visited any road we were building that someone did not tell me how hard the senator or assemblyman had worked for its construction, while as a matter of fact no one had ever been consulted. I chose roads from the one and only standpoint of serving the greatest number of taxpayers.

Occasionally, however, I found an example of genuine political power. I told one of our engineers to design a certain state road. The line of the old road in one mile of its length had two dangerous railroad crossings; I ordered the new road located along one side of the railroad. The property owners along this mile, with one exception, were pleased at the change and agreed, free of all costs, the necessary new rights of way. Shortly before the plans were completed an influential politician called upon the division engineer.

"This is all wrong," he declared; "you must build that road along the line of the old road."

"But I'm acting on orders from the commissioner; he has told me to eliminate those two grade crossings."

"I don't care what the commissioner says; he won't be there forever; if you want to hold your job you do as I say."

The engineer and the politician came to high words and the latter left the office in a rage.

When the affair was reported to me I thought the politician's presumption rather amusing, but shortly after, when the property owners rescinded their gifts of rights of way, I saw that the man's influence had been great. This did not cause a change in the plans, but it did spur us to investigate. That politician had a brother-in-law living on the old road.

Did he win out? He did not.

I confess that I rather enjoyed the continuous battle I waged against politicians seeking their own ends at the state's expense, but I could never steel myself to a calm endurance of the unfair, untruthful attacks to which all men in public office are apparently subjected.

Nine out of every ten newspapers in our state are controlled by the Property Party, being kept alive through the hundreds of thousands of dollars paid them every year for publishing session laws that nobody ever reads. When a Poverty man is appointed to any office these sheets are ordered to begin immediate efforts to discredit the new appointee; to make sure that the job is thoroughly done the Property Party maintains a publicity bureau in our capital city from which boiler-plate is sent broadcast each week. It is all very well to say that the public does not believe this vicious stuff. If that is true why is it done? I think that fully half the people believe everything they see printed and that there is no other one thing that creates so much mistrust and unrest as this malicious partisan propaganda.

The Saving Remnant

Literally the Property sheets in our state stop at nothing! After I had dismissed the man carried on our pay rolls as superintendent of maintenance, I learned for the first time that he was a Povertist. You would suppose that to get rid of a useless jobholder of my own party would not cause any criticism. But the Property papers shrieked condemnation. As has been said, this man was supposed to assist the attorney-general in legal actions brought by contractors against the state. The papers seized upon this supposition and twisted my efforts to save the state an unnecessary salary into a purpose to make it easy for contractors to win their suits.

The false statements made in campaign speeches, often by prominent men, in addition to the unbridled abuse from the press, are the irritating features of public office to which the business man is unaccustomed and to which he is unwilling to subject himself. When I spoke of this to another official, who was being treated even more abusively than I, he shrugged his shoulders:

"If Washington, Lincoln and Wilson had to stand it, why should you and I complain?"

Although the term is fixed by law for five years the present commissioner is one of a long succession to serve during the past ten years. Though on account of these constant changes and other political interferences our highway department can never be managed with great efficiency it is, in spite of all, a good organization. That it holds together at all is due to just one thing—the conscientious service given to the state by its loyal though underpaid engineers, who from the division engineers down to the youngest junior assistant are honestly devoted to their work.

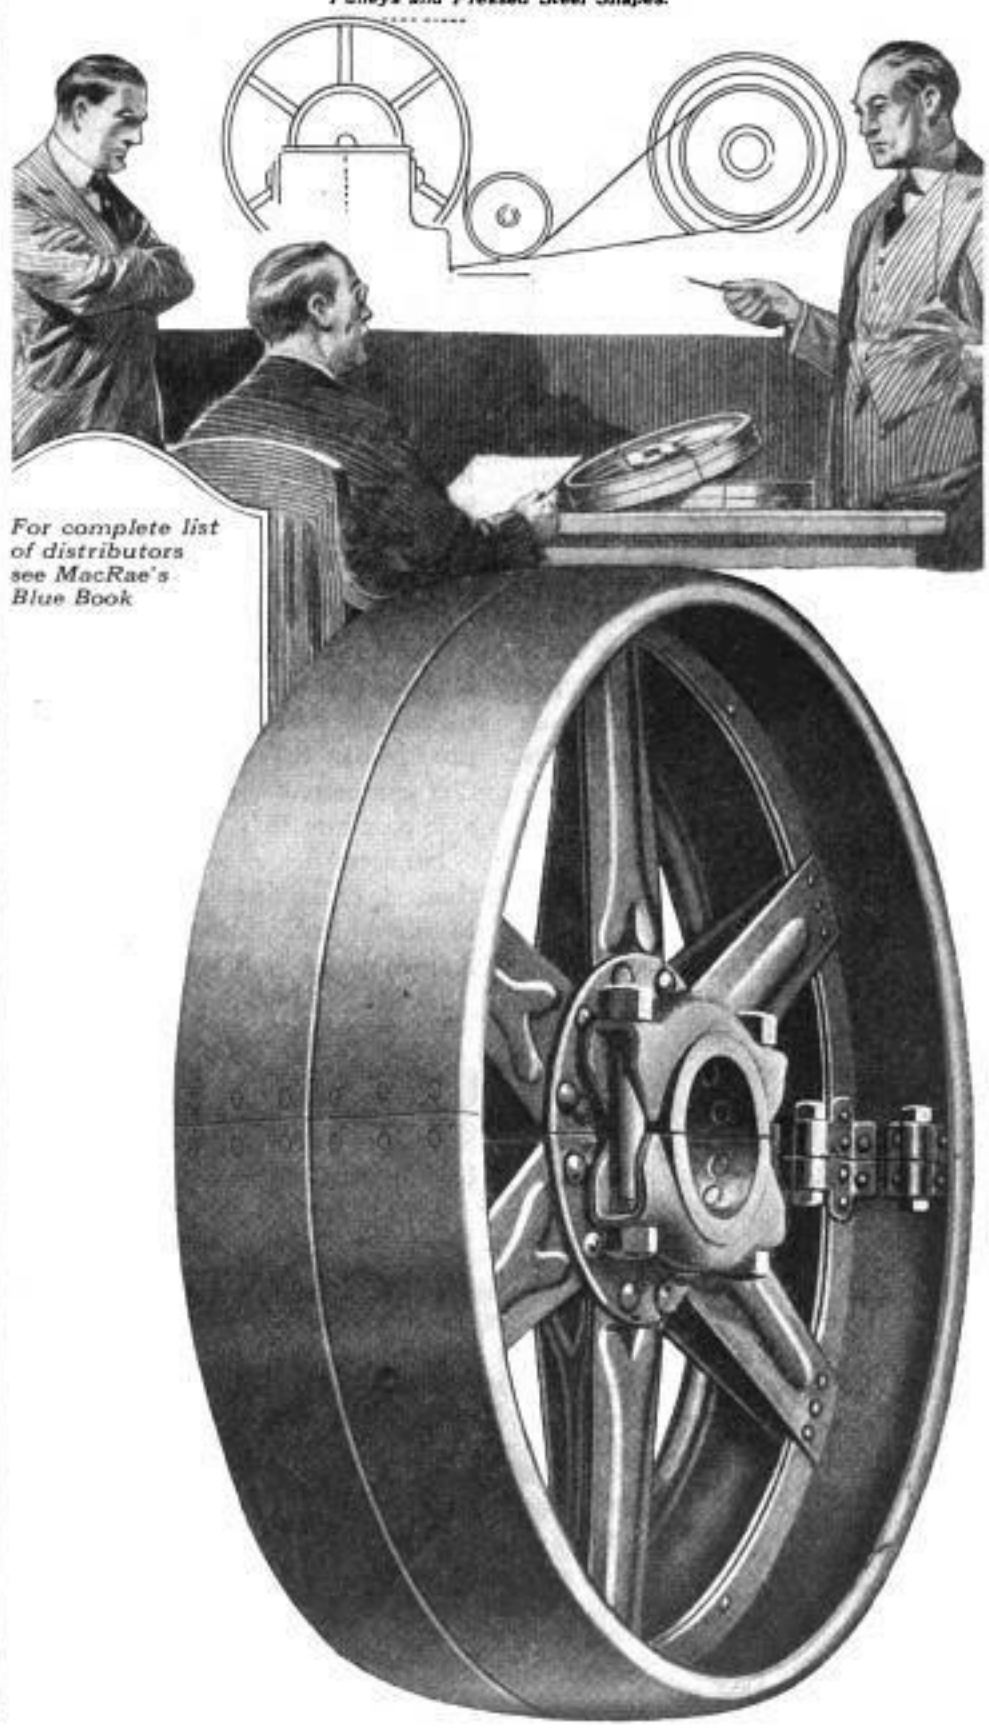
The idea, so prevalent, that there is a vast amount of graft in the building of the roads is happily a wrong one. Not only are the department employes earnest in their efforts but the contractors are an honest lot of men who take a real pride in their work and who strive to give the state a good job. I have had contractors come to me and plead to have a road built stronger that, through legal restrictions, I was forced to construct as originally designed. When I showed them that my hands were tied I have known contractors to do extra work upon their roads at their own expense.

During my twenty months in office I awarded a total of 326 contracts and, as said before, spent and obligated $41,000,000, but I can truthfully record that on no contract did I, my inspectors or any of my assistants discover any attempt at dishonesty.

The greatest trouble—and it is a serious one—that our, and probably your, highway department has to contend with is the conscienceless politician who would willingly cripple, even wreck this great activity of a state in order to strengthen the power of his party's political machine.

Wake up, Mister Taxpayer, and put an end to these evils!

AMERICAN
STEEL SPLIT
PULLEYS



Let your engineers and ours work together

"UNUSUAL" problems in transmission call for unusual pulley service. We are prepared to render that service. Never are we so eager to "sell" as we are to make certain that the "American" Pulley will actually solve a given problem. May we also say that our many years of specialization often enable us to recognize a problem met by us before in what seems to others a new and "unusual" condition.

Service, however, is only one chapter in the story of "American" Pulley success. A book entitled, "Getting Maximum Pulley Efficiency" gives the complete account. That book will help you to a greater saving in transmission of power, as it has many others. A copy will be mailed at once, on request.

The American Pulley Co.
Philadelphia, Pa.

Manufacturers of Steel Split Transmission Pulleys, Steel Sash Pulleys and Pressed Steel Shapes.

"Sensible underwear helps me to keep fit"

LOTS of fellows exercise regularly and then take all the good out of it by dressing improperly—especially their underwear.

"Don't forget your skin has to breathe. It's no use to open your pores once a day by exercise, if you smother them afterward.

"That's why I wear the Topkis Athletic Union Suit. Look how loose and easy it hangs. Hardly touches my body. My skin gets fresh air, even when I'm fully dressed.

"Mighty comfortable, too. It really fits. Roomy arm-holes; long, extra-wide legs. A contortionist could wear Topkis without ever feeling a pinch or a pull.

"Does it wear? I'll say so! I wear Topkis all year 'round, and it sure stands the gaff. Material keeps sturdy. Fit is laundry-proof. Buttons stay on. Topkis gives me more for a dollar than I ever got in higher priced suits."

Topkis Athletic Underwear is made of best nainsook and other high-grade fabrics. Thoroughly pre-shrunk; full size guaranteed. Get *your* correct size. If you wear a 38 coat buy 38 Topkis.

No good dealer will ask more than a dollar for the Topkis Men's Union Suit—although many will tell you it's *worth* more.

Men's Union Suits, $1.00.

Men's Shirts and Drawers, 75c per garment. 75c for Boys' Union Suits, Girls' Bloomer Union Suits, and Children's Waist Union Suits.

Ask for TOPKIS Underwear. Look for the Topkis label.

New illustrated booklet tells you how to judge underwear. Write for free copy.

TOPKIS BROTHERS COMPANY, Wilmington, Delaware
General Sales Offices: 350 Broadway, New York City

Athletic Underwear

Successful Management

A YOUNG man who has reorganized and started on the upgrade a number of sickly companies told me one afternoon that only a few hours before he had attended his first meeting of a board of directors of a well-known corporation, to which he had just been elected, and as he entered the room he had been advised by one of the officers to throw away all his preconceived ideas, because "this business is different."

By way of comment on this incident he went on to say: "I have been in all kinds of industries, all the way from groceries to automobiles, and in every place they say 'This business is different.' But they are all pretty much the same. Any of these jobs goes back to picking the right individual, a fellow who can do the trick, who can apply the ordinary rules of business conduct to something he knows nothing about.

"I say that every job goes back to the individual. Would you not rather have a good mayor and a poor charter than a good charter and a poor mayor right here in New York? It takes common sense to run a large business, primarily, although tact is a great help. I think the ablest man I ever worked under had no tact. He rubbed everyone the wrong way, but in spite of this his sheer ability was so great that he went far. He was a gentleman, but he was inherently disagreeable. If he had only been agreeable you would have heard of him from one end of the country to the other. The man who has both common sense and tact goes very far.

"Now take the labor problem. I am a frightful reactionary as regards all these industrial-democracy schemes. I don't believe in them at all and I come right out and say so. Some years ago I went out West to take charge of the X works as chairman of the board of directors. They were employing eight thousand men, and the spirit among them was very bad indeed. The first thing I discovered was that the employment manager was a clerk picked at random for the job, and was getting twenty-five hundred dollars a year. I immediately got a man who knew something about that kind of work and paid him six thousand dollars a year."

The Open Door

"The first day I was there I got a wooden wedge and drove it under my office door so that the door would stay open and everyone in the outside corridor could see me at my desk. Then I put up big signs all over the works saying that I would hear grievances. Gradually workmen would come into the corridor and timidly peer into my office. If the door had been shut they never would have come in, but as I continued working at my desk while they looked in, and did not get up to shut the door, they finally screwed up courage to come in.

"Usually their complaints were without justification and there was nothing I could do. But they went away satisfied, because their grievances had been heard. One other immediate effect this practice of mine had was the opening of other closed doors. Some of the vice presidents and subordinate officers became less exclusive and more willing to hear complaints.

"A great deal has been said recently about the importance of foremen in the labor problem. Of course I study the foreman situation as soon as I go to a company; but there is another point of contact between the worker and the company about which less has been said. The worker knows the company only through the foreman and the cashier or paymaster. A workman finds what he thinks a mistake in his pay envelope and turns back to the cashier's window to have it corrected. If he gets bawled out it makes bad feeling. Perhaps the paymaster is overworked, perhaps he has to deal with unreasonable people, but a manager who wants smooth industrial relations needs to watch that point very closely.

"All this sort of thing is humdrum and wholly unromantic. There is no panacea about it. But these are some of the points which need attention on the labor side if the company is to succeed.

"I can't cover everything in a brief conversation, but you will make no mistake if you say that accounting is really the most important end of any business, the vital end from the investors' standpoint at least. When I go into a big corporation I at once ask about the accounting end. They tell me with pride, 'Yes, we have a fine accountant; we pay him ten or twelve thousand dollars,' or perhaps it is more. But it soon develops that they don't really know what they are talking about. The man may be all right, he may know his business, but the management's attitude toward him is all wrong. He is usually looked upon as a mere bookkeeper. Whenever the controller of a company is referred to in that way by the rest of the officers the investor should be suspicious."

Stale Figures

"Personally I believe our system is all wrong, and that something more like the English method is needed. We should have a system in which the controller is not an employe of the management or directors at all, but a direct representative of the shareholders, reporting to them independently of the management at annual meetings. What is needed in this country is a set-up in our corporations—that is, by-laws which will give the controller almost complete independence of the management and a great amount of real authority.

"But that is not enough, nor is that the worst of it. Accounting is just as important from the managerial standpoint as from that of the shareholders. The vital defect in most corporations is that their accounts are what I call 'historical.' Here is what happens constantly: Figures come to the management or to the board of directors which are about six weeks old. Expenses show a big jump and inquiry traces it directly to a certain foreman. He is called up before the superintendent or manager and asked to explain why his costs are so high. But by that time the foreman has forgotten all about it and he can't give a satisfactory explanation.

"Figures have no use except to prevent the same mistake from happening twice. Most corporation accountants are just recording history, which has no value to speak of in running a plant. They get out perfectly wonderful analyses of what has happened, after the trouble is all over with. Such men aren't worth a dollar a year.

"When I went with one big company the accounts were five or six weeks behind, but as the result of much persistence I got able to get them only a week old. What did I care whether the business was groceries or automobiles? Successful management, as I saw it, consisted in catching trouble before it became too serious, in preventing mistakes from happening a second time."

It is true, no doubt, that the number of men capable of handling large affairs without conspicuous flaws of policy is small. It has been said that the work of most men consists in constructing out of ideas a sort of go-cart for wheeling along what intellects more rapidly than they would otherwise go; and that is not easy.

How Can the Home Compete with Jazz Halls and Shallow Plays

in point of attractiveness to growing boys and girls?

The Plan Urged by Foremost Educators

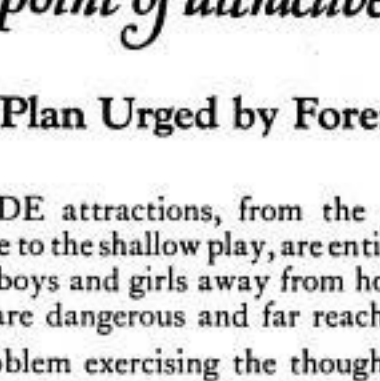
OUTSIDE attractions, from the jazz craze to the shallow play, are enticing our boys and girls away from home. The effects are dangerous and far reaching.

It is a problem exercising the thought of serious minded people the country over.

Now a new solution has been offered. A world-famed musical institution fosters it. Foremost educators and publicists urge all parents to adopt it.

Its object is to put music in every home, and thus to provide an effective counter-attraction to the perilous outside influences of today.

Something to think about, mothers



A recent investigation among one hundred girls, between 14 and 18, of good homes, revealed that more than sixty spent their evenings at places unknown to their parents—places that they could not have obtained parental consent to attend; dances and theatres, not *questionable* in the strict sense of the word, but none the less dangerous.

It revealed that of these sixty, only a few enjoyed a musical home-atmosphere. But that of the remaining forty, music was the center of attraction, which led these girls to entertain their friends *at home*.

Virtually the same condition applied to boys of equal age and number. And educators say a nation-wide investigation would present an almost exact parallel.

Hence world's authorities are urging parents to turn to music as a safeguard of the home.

And for that purpose, the self-playing piano the instrument most strongly advocated. For it provides self-expression and automatically brings to the home all music, from the hits the moment the world's latest compositions.

*Recent investigations showed that of the 40 per cent of boys and girls who spend their evenings and entertain their friends, AT HOME, **music is the center of attraction which so prompts them.***

The Virtuolo may be obtained in various instruments, as follows:

Home Companion Virtuolo	$495
Colonial Virtuolo in Conway Piano	595
Petite Virtuolo in Hallet & Davis (4 ft. 4 in. high)	685
Puritan Virtuolo in Hallet & Davis (full size)	750
Empress Grand Hallet & Davis Piano, reproducing Virtuolo, on which may be played exact reproductions of world-famous artists	2250

Remarkable new terms of payment. *You play as you pay*

But price, unfortunately, has heretofore restricted the enjoyment of these instruments to children of the financially prominent.

Now amazing new plan to place one in every home

Now a new plan of manufacturing and financing has been developed. A plan which places the new Virtuolo Player Piano made by the makers of the Hallet & Davis Pianos—supreme in musical centers throughout the world—within the means of everyone.

Only the world-spread manufacturing capacity and powerful financial position of the Hallet & Davis factories make it even remotely possible.

The plan is *new*. It is propounded from a new idea. It is unique both in point of price and the amazing terms of payment offered.

It puts a new light entirely on the matter of providing the proper musical environment in every home. It has been carefully evolved to meet every family status and condition.

For confidential information, detailing the entire plan, simply mail the coupon. But you are urged to do so without delay, so as to participate in this new method of ownership.

Confidential Information Service

In keeping with the universal plea for *Best Music in Every Home*, a new plan of pricing and financing has been developed by one of the oldest and strongest player-piano makers in the world—The Hallet & Davis Piano Company, producers of the world-famed Virtuolo, "the instinctive player-piano." It places this Supreme instrument within the means of those in the most moderate circumstances. Mail coupon below for confidential information—free and postpaid.

TO RETAIL PIANO DEALERS AND AGENTS

On account of the new plan detailed on this page, hundreds of additional retail outlets for Hallet & Davis lines will be required to effect quick distribution of the Virtuolo. Your district may be open; write or wire immediately.

The TIRE in *Perfect Balance*

Here is the tire in *perfect balance* with the spirit of the times, the spirit which demands a full measure of service at a minimum first cost;

The new Diamond Fabric with the Double-Diamond tread. The tire built especially for Fords and other popular sized cars.

in Balance with the driver's ideas of a tire in its fine appearance, easy riding qualities and reliability;

in Balance with cars as they are built today, their weight and their speed;

in Balance with itself, each part equal in strength with every other part—the tread thick enough for the body—the double diamonds firmly fortifying the sidewalls;

in Balance with your idea of price, giving quality and value to the last cent.

THE DIAMOND RUBBER COMPANY, INC.
Akron, Ohio

[Owners of Fords and other *popular sized* cars, this is your tire. See it at the nearest Diamond distributor's or dealer's.]

Diamond DOUBLE DIAMOND TREAD Tire

THE NUMBER ONE BOY

(Continued from Page 5)

fresh from the Point, were most valuable when teaching the rudiments, and Prescott and he after an endless round of drilling rookie companies, found themselves at Tampa, Florida, just short of the fighting, when peace was declared.

This bitter blow was forgotten when Providence finally saw fit to send them both to the Philippines, attached to a seasoned, supple, hard-bitten gang—the Seventeenth Infantry Regulars. Thank God again for Aguinaldo, good old Aguinaldo—"Agg," as they affectionately called him. They were disappointed, however, when—although they grew accustomed to the distant plop of Mausers, followed by droning whines like the passing of giant bees—both remained unscathed. This was tough. Heaven only knew when there would be another chance to get a decent wound. Next came a long period of garrison duty in Manila, as dull as ditch water, and then another magnificent stroke of fortune. The allies decided to go to the relief of the besieged legations at Peking. The Seventeenth marched joyfully to transports, which straightway steamed under forced draft for the coast of China.

"Think what it means, Yank," said Jimmy to Prescott, who hailed from Massachusetts. "English, French, Germans, Japs, and us. Us. You and me, and the good old Seventeenth, waltzing around among the pagodas with the pigtails. I ask you, honeybunch, ain't it, in the words of Aunt Selina, pow'ful grand?"

Prescott stared back along the transport's wake—a white lane in the flat blue pasture of the China Sea.

"It sure is," he agreed soberly.

Jimmy snorted at such moderation.

"Let me explain. This is a boat. You're on it. Round about is an ocean. Straight ahead is the big doings. The boat with you in it is moving slowly but perceptibly over the ocean to the big doings. Now do you get it?"

"Thanks, awfully," acknowledged Prescott. "But look here, I've got a darn queer feeling. I've got a feeling that something's going to happen."

Jimmy looked at him quickly, then wrote him with mock ferocity in the middle.

"You're right, old codfish ball; as right as rain. A whole lot's going to happen."

II

PEKING emerged from the shadows of night in dread of the coming dawn. Soldiers with rumbling guns that shook the earth had arrived on the plains before the city at the end of the previous day. There were many, many soldiers. This had been seen from a hundred roofs before the dusk had blotted them out.

The soldiers had landed on the coast from great ships at the time of lotus budding. The Boxers had said that all would vanish before they reached Peking. Now the lotus was in bloom; many Boxers had joined their ancestors; the soldiers were still outside the gates of the city.

It was not so bad to kill a foreign devil gladly now and then. Such things were pursued with polite regret and then forgotten. But to kill hundreds, to drive the remainder into the legations, and then to attack those so sacred legations furiously day after day! How distressing! How very distressing!

The Boxers had promised to rid China forever of foreign devils. Many had believed them for a time. Now it was certain that foreign devils were like the sands of the Hoang-ho-Kiang in dry seasons. The Boxers—Children of Folly, asses in the skins of men—Witness the soldiers and devil guns that were out in the morning mist beyond the wall.

The Master of Souls had warned them—months ago. Why had he not been heeded? With the lips of Gautama Buddha he had spoken. Even as he had spoken, so each thing transpired. There remained to be accomplished his last foretelling: that the streets of the capital would be red with Chinese blood; that the Forbidden City, even the Forbidden City, would know the shuffling feet of foreign soldiers. Fools in their folly were the Boxers, wise beyond all was The Master of Souls, who followed Gautama Buddha. To his temple! To the temple of Gautama Buddha! There to touch the forehead in the dust one could learn what was to be. To the temple then, before the sun had lifted, while there was time, while the soldiers—the devil soldiers—out on the plains in the blind white mist remained so still.

From street to street in the half light of early dawn the whispers ran. Whispers and the pattering of feet. The Room of Celestial Bliss in the Peking temple, where the huge figure of Gautama Buddha with its face of unutterable calm broods changeless through the centuries, was the goal of the pattering feet. In the Presence itself tranquillity might be found. On then, son of a pig with the soul of a worm! On, on with speed, for many follow.

It became a race, a race of thousands toward a fancied haven. Hundreds only were rewarded. The Room of Celestial Bliss was carpeted with prostrate figures, so that no more might enter, by the first scant waves of the sea of yellow faces which presently filled the entrances, corridors and courtyard of the Peking temple. The vast untroubled silence of The Room of Celestial Bliss remained unbroken. The prone and moveless figures seemed like rows of dead; but round about the temple a murmur grew, a giant murmur. No voice was raised in a place so sacred. Only lips moved, yet the murmur grew in volume and at last took form:

"Master of Souls! Master of Souls! Master of Souls!"

A flicker of relief played for an instant over the countenance of the head priest of the temple. It had been difficult to maintain the outward calm of a high servant of Buddha in the face of such overwhelming and unaccountable piety. Here was an excuse to place the burden of leadership in firmer hands.

"They name the Holy One," he said to an anxious circle of priests and acolytes. "Who then will enter The Room of Silence and respectfully inquire?"

His only answer was unwinking stares and a slight drawing back of the circle about him. For centuries uncounted The Room of Silence had been the private study of the lama of the temple. It was not recorded that any priest had ever entered there without a summons. Lamas of the past had been pale stars in the firmament of heaven. The present occupant of The Room of Silence was the blinding sun at mid-day, Voice of Buddha, Finger of Poon Koo Wong—the immortal Chang Foo Low. Let half the city press upon the temple and call his name; why should sons of worms intrude upon his awful meditations? It must not be forgotten that, being displeased, he could, with a look of his eye and a wave of his hand, rob the presumptuous of both speech and movement.

The head priest waited a vain moment for a volunteer, then cleared a path for himself through the crowd of lesser lights with a contemptuous gesture.

"Wait here, my brothers. I myself will seek the Holy One."

A relieved chorus greeted this statement:

"Hopefully we wait, O Servant of Buddha."

The head priest glided into a dim corridor, paneled in scented wood. Down this he strode with unhurried calm. Turning at right angles he followed another corridor, darker than the first. Having arrived at a carved and gilded doorway, with hangings of heavy yellow silk, he paused for a moment to summon his utmost composure. Behind those curtains was The Room of Silence. Within the room was the calmest soul, the most tranquil mind, in all China.

The Room of Silence had known furnishings of extreme splendor in the past. Each century had contributed to it a quota of treasures. The immediate predecessor of the present lama had meditated amidst an overpowering exhibition of *objets d'art*. Of this great collection only the following articles now remained: One red lacquer table, one carved ebony chair, one blue-and-yellow rug woven of camels' hair. But the cabinets, carvings, vases, tapestries, fans, screens, rugs, and so on, which had vanished, still served in The Room of Silence by proxy. They had been sent years before, with the proper felicitations of the new leader of Buddhism, to the then young Empress of China. Her Majesty had been pleased to accept the gift graciously. She had been further pleased to have conveyed from the royal strong room to the Peking temple a plain iron-bound box, the lifting of which required the strength of two strong men. A slight, a very slight gleam from the gold contained therein was reflected in the countenance of Chang Foo Low when the box was opened in his presence. The dream of a lifetime had come true. The treasure would purchase books. Books, books, books—from the ends of the earth, in every tongue—more than could be read in the longest of lifetimes—books, books, books!

He had begun their accumulation at once through notes of exquisite politeness addressed to agents in Bombay, Constantinople, Budapest, St. Petersburg, Valparaiso, Rome, Madrid, Copenhagen, Stockholm, Vienna, Berlin, London, New York. In return had come, each day for many years, precious packages, which the lama with fond deliberation always opened himself. The contents of these packages were here in The Room of Silence now, rising from the floor halfway to the lofty ceiling, north, east, south, west—books, books, books.

Their discriminating collector sat in the midst of them in the center of his blue-and-yellow rug, in his carved ebony chair, at his red lacquer table. The long lemon-colored fingers of his left hand were dipping into a jade bowl of cold rice in a purely mechanical fashion, for the fingers of his right hand held open and caressed the pages of—a book. He did not look up from his reading when the head priest pushed aside the yellow curtains and entered.

"Holy One," the head priest ventured. The eyes of Chang Foo Low slowly lifted. "Mountain of Infinite Wisdom ——"

The lama spoke:

"I am a servant of Buddha, like thyself. Small grains of wisdom may be acquired by much reflection."

The head priest bowed humbly at the reproof and came at once to his excuse for the intrusion.

"The people fill the temple and crowd upon it like locusts at the time of visitation."

"When the belly is full of fear the heart remembers God," said Chang dryly.

"Only those before the Presence worship in humility. Those without boldly call thy name."

"So does man seize the shadow for the substance." The lama's fingers rose from the jade bowl to his mouth with some kernels of rice. "I will speak to the people," he decided after a moment's thought. "They must return to their homes." He closed his book and rose from the table.

"They mean us harm?" asked the head priest quickly.

The lama picked up the rice bowl and went to a window opening on an inner court. He flung the contents of the bowl on the pink stones of the courtyard and smiled faintly at a sudden rush of wings.

"No more than these," he answered, nodding at the pigeons which had dropped from the roof to peck and coo among the bright white grains. "If they remain they will themselves be harmed. Come, my brother." He led the way from The Room of Silence to the eastern entrance of the temple and moved out upon the temple steps, washed by the sea of yellow faces—clearer now in the growing light.

A curious spectacle followed. Portions of the sea of yellow faces began to sink, patches here and there. The patches grew until only small islands of those still standing remained. At last these, too, saw the tall figure in its flowing yellow robe and crownlike headdress, and sank to the level of the rest.

The lama moved forward to the very edge of the steps and lifted his hands, palms down, above the kneeling people. His voice rang out, the clear, liquid Chinese syllables falling on the silence like bells:

"The blessing of Buddha on thy heads, the peace of his spirit in thy hearts. Return now to the homes which honorable industry and the will of Poon Koo Wong have provided, and there remain. Let no man, woman or child venture into the streets, for peril will be found therein. Go then, swiftly, like homing pigeons, for to gather in numbers, here or elsewhere, is to kiss the sword of death."

Instantly they attempted to obey him; but such vast numbers could not disperse in a moment, and while they milled and pushed and jostled the light was growing stronger. Chang Foo Low turned somber eyes, first to a noticeable radiance in the east, and then toward the watchtowers which marked the sluggish windings of the city wall.

Brighter and brighter grew the sky, but the flat plain beyond the wall still wore a smoking blanket of mist into which yellow zealots, crouching along the ancient ramparts, strained slanting eyes in vain. Why were the foreign soldiers so still? The stillness was disconcerting. A sound—any sound—would be better. Li Fung, craftiest of Boxer leaders, seized a rifle from one of his men and fired into the mist. All along the wall a stuttering fire broke out, nervous, scattered, unaimed. It died away, to leave a more impressive silence than before.

Ching Lo, the orator, took advantage of the silence. For a hundred yards from where he stood the guardians of the wall heard him recount their splendid deeds and splendid aims. The Land of the Dragon had been cleared of foreign devils. The men had honorably kissed the sword. The women having first sung a love song to the heroic sons of China had felt their white necks snap like lily stems. Some, to be sure, were left in the legations. But how thin was the line of bayonets about them! A few days more and then —— It was well to remember that the wealth of the foreign devils was colossal. All, all that wealth was in the legations. Out there in the mist were soldier devils, to be sure; but observe the wall—how strong, how unassailable. Reflecting upon this and recalling the numbers and courage of the wall's defenders, one should spit thus—at the foolish sons of pigs who had come to save the legations but would presently join their ancestors.

"Hai, hai, hai!" ran approval along the wall. Laughter followed as Nang Poo, the humorous, shouted a pun about a great grunting in hell as the pig soldiers joined their ancestors.

Slowly the light grew stronger. The higher roofs of Peking changed to rose and gold and swam clear of the mist against a band of emerald sky that swept the western horizon. Far out on the plain a tongue of orange flame leaped out and up, ripping a fiery gash in the gray curtain of mist. The bark of the field gun from whose throat it sprang crashed hammerlike against the silence. A shell wailed high above the wall and exploded in the square before the temple of Gautama Buddha. Another shell followed, and another. The ancient temple shook at each explosion. The younger of the acolytes fell on their knees, whimpering like puppies. The older priests drew timidly nearer the figure in the yellow robe standing motionless before the ever-brooding Buddha.

But Chang Foo Low heeded them not. His lips were moving in a silent prayer of thankfulness, for the temple and the court and the streets in all directions were clear of worshipers by now. The shells were scattering earth and clouds of dust, not mangled human flesh.

His prayer finished, the lama turned from the altar and approached the group of moaning acolytes. With chattering teeth they eyed him dumbly, awe of his presence swept away by an ecstasy of fear.

"It is not well," said Chang sternly, "to show fear for a miserable body in the presence of The Blessed and All-wise. Get to your cells, young brothers. There meditate upon the weakness of the flesh and the power of the spirit."

The acolytes pattered in all directions like a bevy of frightened quail. Many of the older priests followed them more slowly, feeling the need of self-communion perhaps, while three-inch shells shrieked above the temple roof. A scattered few remained. These withdrew respectfully to the entrance leading to their quarters as the lama turned again to the Buddha.

"Great Buddha, Voice of Heaven," he implored, "let the peace of thy spirit fill the hearts of those within this holy temple. Bring its walls out of peril. Save its altar from dishonor. I, Chang Foo Low, least of thy servants, ask now for aid from those who dwell in serene tranquillity within The Seventh Sphere. Bring to them knowledge of my need; open their ears to my message; throw the might of their protection about these walls to the glory of Him who, loving good, yet in His unfathomable wisdom created also evil. Buddha,

Daven-O

An Added Room—Subtracted Rent

With a Kroehler Daven-O in your home, you can have all the comfort of a handsomely furnished living room, the convenience that an extra sleeping room affords, and the economy of reduced rentals. The Kroehler Daven-O takes the place of an additional room and subtracts from the family budget the rental which that room would cost.

By day it is a handsomely upholstered, luxurious piece of living room furniture, just like any other fine davenport in appearance, with bedding completely concealed. There is ample room, when folded, for thick, removable mattress and bedding.

At night it is converted, with one simple motion, into a full-sized, comfortable bed, with patented, sagless, folding metal bed frame and springs.

Made in overstuffed styles and Colonial and Period designs, with any wood finish; upholstery of plush, tapestry, velour, genuine leather or leather substitute. Made to harmonize with any decorative scheme. Handsome styles, at prices to meet any requirement. Sold by leading furniture dealers everywhere, for cash or easy payments. Ask for demonstration. Look for Kroehler trade mark. Send for free booklet.

(Continued from Page 65)

Buddha, Buddha, to The Seventh Sphere I call!"

While the voice of the lama, drowned at intervals by the crash of bursting shells, filled The Room of Celestial Bliss, the morning breeze had sprung up and gone silently to work. Jagged holes began to appear in the curtain of mist that had hidden the wall from the searching guns. Field glasses leveled through these rents found the wall at last. As the final words of prayer echoed and died among the gilded rafters a bugle spoke far out on the plain. The whine of shells above the temple ceased.

It was only an interlude in the chorus of the guns while battery commanders found new ranges, but the group of listening priests fell upon their faces. Who could remain standing in the presence of a miracle? With their own ears they had heard the instant answer of high heaven to the winged words of Chang.

For a short moment the silence held. Then it was violently broken. A sound even more terrifying than the whine and crash of shells ripped it to tatters. Nothing is more heart shaking than a woman's sudden scream. The priests scrambled hastily to their feet as a mad-eyed, chalk-faced creature sped into The Room of Celestial Bliss, shrieking as she came. Three Boxers leaped through the entrance behind her like hounds at the heels of a doe.

Almost in the center of the room they pulled her down or, rather, she collapsed, for the reaching fingers of the leader of the pack had scarcely touched her when she sank to the floor. A yellow hand twisted into the masses of her hair and jerked back her head. A thin knife gleamed above a cream-colored throat.

"Stop!"

The knife remained poised.

"Do not strike."

The knife wielder became aware of the advancing Chang Foo Low. His companions visibly quailed at that awesome figure, but their leader, a pock-marked coolie with an evil twisted mouth, met the glance of The Master of Souls without a tremor.

"Release the woman."

The knife wielder did not obey.

"She is a foreign devil," he said boldly. "It is well to take her life."

The high serenity of the lama remained unbroken. His eyes explored the pock-marked face before him for an instant.

"Who are you to talk of taking life? Within the hour you will be with your ancestors."

Softly, almost gently the words were spoken, but the head of the Boxer's victim fell forward as his hand was snatched from her hair. Down on the floor beside her he groveled, his terror-stricken eyes lifted to the immutable face of Chang.

"No, no, great prophet, I have done no wrong. Spare me."

"I cannot spare you. It is written." A long arm in folds of yellow silk swept up and became rigid. "Go!"

Three eager hounds of hell had burst into the Peking temple a moment before. Three cringing dogs, the boldest of them now the most subdued, skulked to the entrance through which they had come, and disappeared, leaving their quarry behind at the feet of Chang Foo Low.

She was half kneeling, half sitting, shaken by gasping sobs; her head bowed, her face covered by her hands. Chang looked down at her and waited. As he waited the guns out on the plain began to speak again but the exploding shells no longer shook the temple. They were dropping near the wall, a mile or more away.

Minutes passed while the lama stood silently observing the huddled female figure on the orange-colored marble of the temple floor. Gradually her sobs became less violent. She no longer shook and quivered with each intaken breath. Presently her hands dropped, palms upward, to her lap. Slowly her eyes rose—great burning eyes. They traveled up the yellow robe of the lama and so came at last to the minutely wrinkled yellow countenance above. Some of the horror, a little of the fear left her eyes as they explored the calmest face in China, the calmest face in all the world. Her lips moved.

"If I—could speak—your language—I would thank you." It was a broken whisper utterly lost in the chorus of distant guns, but in clear unhurried English came the reply:

"Do not thank me. Thank Buddha. I am only his unworthy servant."

She had just passed through a fearful ordeal. She was still in desperate trouble, but youth is astonishingly buoyant. At the reassuring sound of her own language her face lost its deadly whiteness. It warmed until it became the pale ivory complement of her dark hair and eyebrows.

"You speak English?"

"I speak such tongues as I may need."

Puzzling over this she made an uncertain effort to rise. Then at a sudden recollection she relaxed into helplessness.

"That man! That man! That creature with the knife!" She again covered her face with her hands.

"Fear him not; you are safe."

She wept silently for a moment, fought for self-control and had almost won it when it abruptly fled. She clutched at the lama's robe.

"He may come back."

"Not to harm you, my child." The certainty of his tone seemed to reassure her. Chang put his hands under her elbows and helped her to her feet. "That poor whirling soul fears for his own miserable life. I told him that within the hour he would be with his ancestors."

"You are going to have him—killed?"

"No, my child. Within the hour some hand will strike him down. I, Chang Foo Low, saw the shadow of the wings of death upon his brow."

She had been staring at him half fearfully. The serenity of his face was wonderful and he had just saved her life. But his eyes were like no eyes she had ever looked into before. Far beyond her gaze, somewhere in their fathomless depths, terrible things might lie. Now as she heard his name her face cleared.

"Are you Chang Foo Low? I read about you in America. You are the great prophet. They call you The Master of Souls."

"The mouth of folly has so named me," said Chang. "How did you get here, my child? Where do you belong?"

"I have been with the other Americans, besieged in the legation," she answered. "I walked past the guard by mistake last night. Those Boxers cut me off. I hid under a cart until morning. When I tried to get back they saw me and chased me. When they were almost on me I ran in here."

She looked vaguely about her and discovered the group of motionless, silent priests. Her troubled eyes roamed over the altar with its silk tapestries, small jade Buddhas and heavy golden ornaments. Far above the altar the huge face of the great Buddha swam in ageless, shadow-filled tranquillity. Its supreme aloofness was terrifying. Her eyes dropped quickly to Chang's.

"Oh, what shall I do? How can I get back?"

He regarded her thoughtfully for a moment—her clasping and unclasping fingers, her lifted, appealing face.

"Whom do you know in the American Legation guard?"

"Colonel Bradley."

"Would Colonel Bradley send for you? Would he risk his soldiers to bring you back if he knew you were here?"

"Oh, yes!" she cried. "He'd risk anything. He'd come himself. You see I'm ——" She broke off, her sudden eagerness gone. "But there's no way to tell him."

He turned from her abruptly and crossed the temple to the western entrance. She saw his yellow robe gleam in the sunlight beyond and disappear. Was he going to attempt to deliver a message to the legation? Any Chinaman would be shot in his tracks the moment a guard laid eyes on him. She turned and ran toward the entrance to overtake him and explain. Before she reached it she saw the yellow robe returning.

"The streets are clearing," he said when he had joined her. "The Boxers are at the walls. I will let Colonel Bradley know where you are."

"Oh, thank you," she said, "but how? No one could get near the legations."

As she waited for a reply she saw his eyes close, one hand rose to his forehead. The other stretched out and up. His face slowly changed. It became a mask—a death mask—made of pale, wrinkled parchment.

"Wh-what is the matter?" she stammered.

She received no reply. At last his lips began to move, but the muffled Chinese words she heard did not seem to

To Marmon Owners:

Don't Trade Your Car

If you ask us to trade in your 1920 *or* 1921 Marmon for our latest model, this is our reply.

IF you want, for instance, to change from a touring car to a sedan, we gladly assist you. But if you want to change from a 1920 or a 1921 touring car to a 1922 touring car, we advise you against it.

Our reason: Any Marmon of the 1920, 1921 or 1922 series is the finest car of its class you can own. You can keep it new-like for less—one-half to one-third less—than any other fine car. These qualities are designed in the car and usage cannot detract from them.

The Proof:

All know that after 20,000 to 25,000 miles the average motor needs rebuilding. But your Marmon motor accumulates 35,000 miles and up before rebuilding is even thought of, if you give it reasonable care.

To rebuild the average motor costs $450 to $800. It takes two to three weeks. But not so with a Marmon. Our book of "Modern Transportation Costs" shows the cost to be a maximum of only $265*, and the time of "lay-up" only 4 days! Read the details covering the rebuilding of the later models of Marmon motors, furnished by any Marmon distributor.

On the 15 other average service operations covering 85% of all expenses, you will note unusual economies and time savings. So don't consider making any change, except for body style. You now possess the finest transportation at the lowest cost per mile.

Reasons for Marmon Economy

Your Marmon ranks with the world's finest cars—it embodies the accepted principles of the foremost engineers.

Its simplified six cylinder motor brings to America those same economies demanded in Europe. As you know, the world's finest motors are sixes, such as Rolls-Royce of England, Renault of France, Fiat of Italy, Mercedes of Germany, and Hispano-Suiza of Spain.

It is not a mere coincidence that the foremost automotive engineers of both Europe and America have agreed upon the principle of six cylinders as affording greatest simplicity and resultant economies and efficiency.

Marmon, throughout, brings *today's* international engineering standards—sturdiness, simplicity, dependability, economy and performance.

* * * * *

We offer you the latest form of economy—Standardized Service. It not only saves you money, but removes all guess-work as to upkeep costs.

You get economies never before offered by any fine car. You get all this *extra*—for you have, as you know, a car of distinction, wonderful performance and dependability.

It is a proven car—a nine year development—keep it, keep it *new*. A finer car is inconceivable.

MARMON

The Foremost Fine Car

** Prices on Pacific Coast, 10% additional*

Mail Now

To NORDYKE & MARMON COMPANY, Indianapolis,
this coupon for the most interesting booklet you have ever read on the subject of automobile maintenance economies. It shows why we are able to make this revolutionary announcement and why the Marmon is first to adopt Standardized Service. The booklet is sent free to all who ask. Simply fill out the coupon and mail it.

GENTLEMEN: Kindly send me a copy of "Modern Transportation Costs," describing in detail your new system of Standardized Service.

The New Mueller Combination Sink Faucet makes kitchen work easier

IT GIVES you all the advantages of the old-style faucets—plus a score of new time-saving and labor-saving uses, as illustrated above. It saves the hands from doing the rough work. It lessens the kitchen drudgery.

With it you can draw hot, cold or tempered water for any need, from either the spout or spray—without a minute's delay.

You can wash fresh vegetables quickly and thoroughly—water and spray your plants—scald greasy utensils—easily wash and rinse the dishes—and keep the sink spotlessly clean.

It will last a lifetime and can be quickly installed on any sink. Price, $15 in United States; $18.25 in Canada.

Telephone your plumber today and ask him to install a Mueller Combination Sink Faucet E-3025 in your kitchen. Write us for free book on "Dependable Plumbing."

It pays to specify Mueller Faucets whenever you build or repair. They have successfully stood every known test for over three generations.

(Continued from Page 68)

from them. She backed away from the eerie swaying figure with its closed, bloodless eyelids. Slowly they opened.

"I have sent for Colonel Bradley," he said.

She continued to back away from him. His face had become lifelike again, but in his eyes for an instant after he had opened them had been something nameless, terrifying. And why did he say he had sent for Colonel Bradley? He was tricking her. She turned and made for an entrance. Out into the light of day she would go, whatever happened.

"Stop," she heard.

She was close to the entrance now. A few steps more would take her from this place of terror. It seemed safe to halt and turn.

"The streets to which you go are filled with the spirit of madness, murder, rape. Here is the spirit of wisdom, gentle and pure.

"I am the servant of that spirit. Poor foolish child, keep your lily body safe in this temple of the Lord Buddha until your future husband comes to claim it."

His last sentence was so astounding that for a moment her astonishment was greater than her fear.

"Future husband! How did you know that? I didn't tell you."

"How I know is not important, but you must believe that I have sent for him."

"When did you send for him?" she found the courage to ask.

"Approach," said Chang, "and I will tell you."

She had recovered somewhat from her unaccountable fright of a moment before. What he had said about the streets was true, and he had saved her life. But she glanced uneasily at the priests still standing before the door to their quarters. A few rapid steps by one of them would cut her off from the entrance if she returned to Chang. As the thought entered her mind the lama spoke abruptly in Chinese. The priests turned and departed like shadows from The Room of Celestial Bliss.

"I am alone," said Chang. "I am an old man. Come."

She came slowly from the entrance and halted some little distance from where he stood.

"Closer."

She obeyed reluctantly.

"Look in my face—in my eyes."

She raised her eyes to his. Nothing terrifying was in them now. They were luminous, compassionate and unaccountably soothing.

"You are the daughter of a young and untaught people," she heard. "Your eyes see nothing but material things. Your ears hear nothing but audible sounds. I am an ancient priest of an ancient people—knowing a little of the wisdom of the ages, but much you cannot understand. Now I, Chang Foo Low, lama of the Peking temple, servant of the high spirit of Buddha, tell you that I have sent for Col. William S. Bradley, of the United States Legation guard." A hand rose out of a yellow sleeve and passed before her face. "Shut your ears and hear. Close your eyes and see. . Do you believe?"

Her eyelids quivered and closed. For an instant she was in a dark and soundless chamber somewhere within her own brain. In that soundless chamber she heard an urgent though silent voice: "You believe. You believe."

She opened her eyes and spoke aloud. "I believe."

"That is well," said the lama softly. Now tell me, why did you leave the legation and go into the streets?"

As he asked the question she became aware that an unaccountable faith in this old Chinaman was growing within her. To this faith was added an eager, trusting friendliness. She had led a life so far of extraordinary repression. However deeply he might require a confidant no one heretofore had been able to break down her reserve. Now in a dim unearthly temple in a heathen land she confronted a withered Oriental on whom she had never laid eyes before, and felt her abiding reticence fall from her like a discarded shell. She took an impulsive step toward him as she answered his question.

"I did it unknowingly. It was quiet around the legation last night. The Boxers had gone to the walls to fight the allies. I couldn't think in the legation. It was so crowded, and I wanted to think."

"Women do not think; they feel."

"In my country they must think too." A little of her impulse to confide in him had its way. "You see, I've been worried about—something. I wanted to go out under the stars and think it all out for myself."

"When a maiden's mother has gone to her ancestors," said Chang softly, "she has only the stars to guide her."

Quick tears sprang to her eyes.

"How did you know my mother was dead?" she asked brokenly. "How did you know I wanted her so these last few days? You are a good man—a great man—I know it now. Tell me, please, father, or whatever they call you—how did you know?"

"Gossip has the wings of the swallow," Chang evaded.

"Gossip?" She thought for a moment. "No," she decided, "I understand how you could have known I am to marry Colonel Bradley—many could have told you that. Only—my pillows know that I need my mother. I've told them softly—late at night. No one heard."

"Someone heard."

"No one," she assured him.

"The spirit of motherhood within you heard and answered. What did it say?"

She gave him a bewildered look.

"I don't understand."

"You heard the message"—his hand curved to his chest—"here. Shall I repeat it?"

She nodded dumbly.

"Oh, woman's heart of you, my daughter you will sicken, you will die if you beat on the breast of an old man."

She flinched, paled, then cried out at him, "You don't understand! You don't understand!"

"I understand this: Colonel Bradley should be your father, not your bridegroom."

"Listen, please listen!" she implored, wringing her hands.

"I listen," said Chang.

Gone, entirely gone, was her habitual reticence. Words poured from her, broken, impulsive. A strange confidant in strange surroundings! For some reason she did not find him strange.

"I was born in Australia," she began. "My parents were Canadians. We lived in Sydney until my mother died. My father was a poet. He taught school for a living. When my mother died it broke his heart and touched his mind a little. He became a wanderer, looking, always looking, for my mother. He died in the Hawaiian Islands. I was with him. He said 'Julia'—that was my mother's name—and smiled a radiant smile and closed his eyes. I was left alone, a child in a strange land, without money, without friends."

"Bitter with salt tears is the cup of the orphan," said Chang.

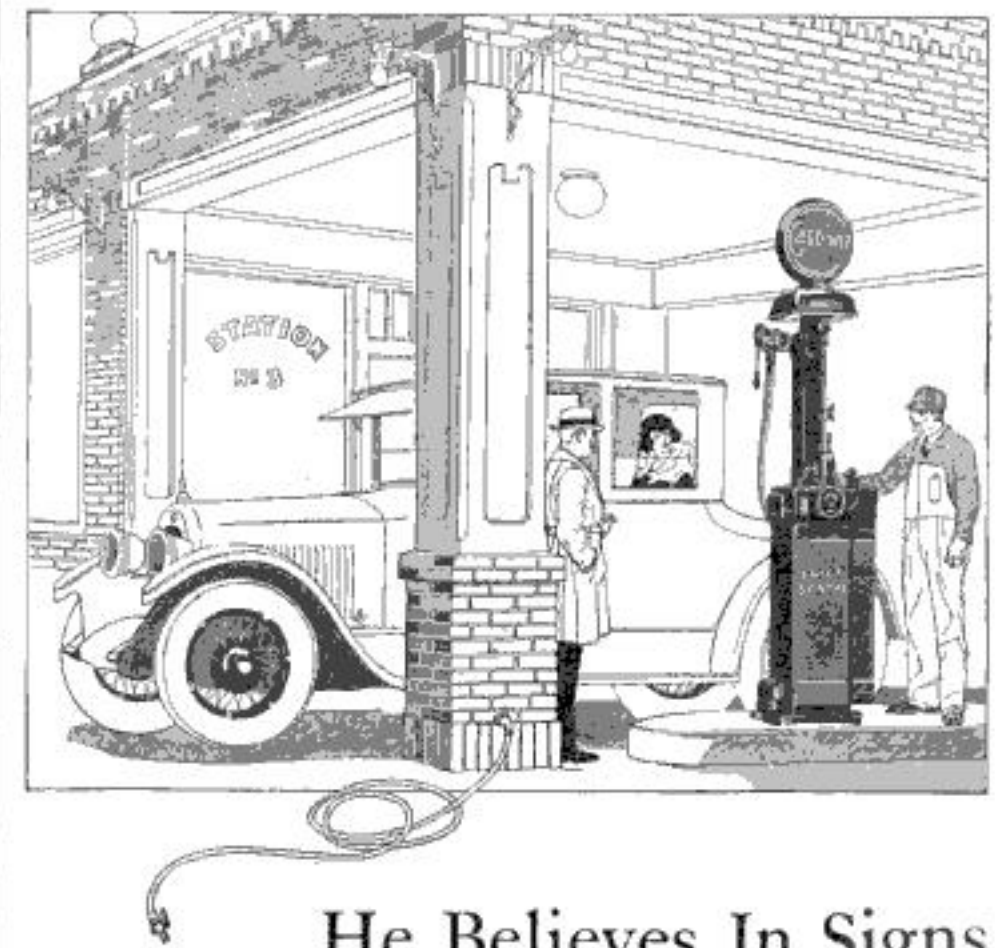
"They put me in an institute for homeless children in Hawaii—a place with dirty walls, filled with the odors of cooking. At nights rats ran about, squeaking and fighting. I wore a blue denim dress, a pair of sandals, and that was all—no underclothes, no stockings, not even a ribbon for my hair." She paused as her voice began to shake.

"The hand of charity feeds the body and starves the soul," was Chang's comment.

"One day an American officer came to inspect the orphanage," she went on more steadily. "He stood in the courtyard, clean and straight, and asked questions. His boots were polished like mirrors. He wore a shining sword." She was staring unseeingly into the impenetrable shadows which wrapped the Buddha. Now her eyes returned to the lama's face. "To me he seemed like God."

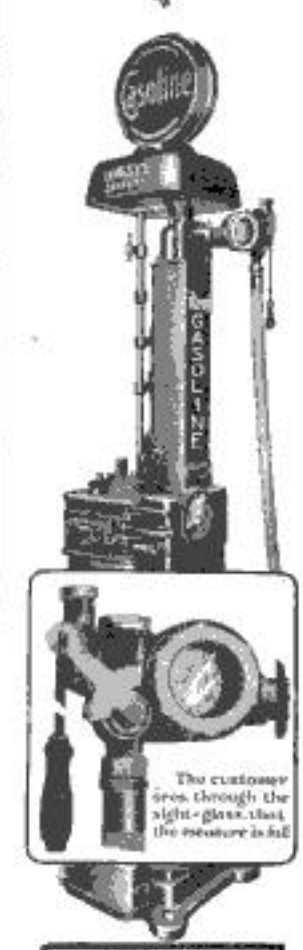
"Poor child, poor child. So turns the wheel."

"That officer was Colonel Bradley. I looked at him first through a window as he stood outside in the sunshine. Then I ran out to him and fell at his feet and clasped his shiny boots and asked him to save me."



At no time while she had talked had she detected the slightest alteration in the lama's face. Now there came a change. Quick interest disturbed the serenity of his expression. He leaned slightly toward her as he asked a question.

"What did he do?"



"He said, 'Take her away,'" she answered. "And the matron loosened my arms from around his boots and lifted me up and would have dragged me inside, but suddenly—he had not looked at me before—I saw that he was staring at me."

He Believes In Signs

"Jack, why do you always look for a Bowser when you need gasoline?"

"Because I always get full measure and quick service from a Bowser Pump. And the Bowser water separator gives me pure, dry gasoline, which means more power and less carbon trouble."

"Oh, I'll tell Dad to always look for a Bowser."

IN the new Bowser Chief Sentry Pump the sight-glass shows the customer that the measure is full. The Bowser measures with mechanical precision. A tally bell counts each gallon when completely delivered. Operated by hand or power this service is unusually fast.

NOTE: It will pay filling stations and garages to learn more about the Bowser complete gasoline and oil service. Write today for information regarding the new Bowser Piston-Type Visible Pump.

Bowser Products
For Handling Gasoline and Oils Wherever Sold or Used

- Filling Station Pumps and Tanks for Gasoline.
- Portable Tanks for Oil and Gasoline.
- Storage and Measuring Outfits for Paint Oils, Kerosene and Lubricating Oils.
- Carload Oil Storage Tanks.
- Power Pumps.
- Dry Cleaners' Underground Naphtha Clarifying Systems.
- Richardson-Phenix Oil Circulating and Filtering Systems and Force Feed Lubricators.

(Continued from Page 71)

"You were beautiful then as now?" Chang interrupted with the same unaccountable interest.

"Beautiful! I was a thin, dirty, wild-eyed child."

"Ah!" sighed the lama. His face became so deeply meditative that she stood in silence before him for a time, not daring to disturb his thoughts. "Just is the wheel," she heard him mutter. And then at last, "Go on, my daughter."

"That was five years ago. Everything I have had since then has come from Colonel Bradley—food, clothes, education. He took me from that place in Hawaii; he took me back with him to the United States; he sent me to school—a convent school in America. I spent my vacations with him. Last year he was ordered to China. He asked me to come with him as his wife. I asked to be allowed to graduate before we married. He consented. I graduated in June and arrived in China just as the Boxer troubles began. We will be married when the allies relieve Peking."

The somber eyes regarded her for a long moment.

"Fate has spread a cunning net for you, poor fluttering dove."

His tone matched his eyes. Her hand went to her throat.

"Don't frighten me, please. Colonel Bradley is an honorable, generous man. He has denied me nothing."

"Nothing? Think."

"Well, yes," she faltered. "One thing. He never let me meet young men. He never let me go to parties if boys were to be there. They weren't allowed to come to the house. It didn't seem fair. I"—her lips quivered—"that's why I wanted mother so lately," she confessed. "I wanted to ask her about that before I married."

She was silent for a moment. The far thunder of the guns on the plain and the nearer though still distant explosion of shells along the walls had continued without interruption while they had talked. Now there came a lull in the gunfire, and then an explosion at which the temple, the ground on which it stood, all China, in fact, seemed to tremble.

"What was that?" she cried, seizing him by the arm.

He lifted a hand and laid it for a moment on her head.

"The first stroke of your wedding bells," he said. At her bewildered look he added, "They have blown up the Chin Mien gates. The allies are in the city."

Her eyes widened and darkened. From outside came a faint murmur which grew into the sound of many running feet. At last as she listened the sound of them was supplanted by a spiteful crackle like an endless string of ignited firecrackers. Interspersed with the crackling sounds came sudden muffled screams, to which were presently added hoarse unintelligible shouts.

A narrow, sunken window caught her eye. Its inlaid teakwood sill was six feet or more from the floor, but a huge seat of carved black marble was just below it. She went slowly to the window, listening to the growing clamor outside. She hesitated a moment, then stepped upon the seat. Stretching to her full height her chin was just above the window sill.

"I see the soldiers!" she cried. "Gray soldiers with spiked helmets." For a moment she continued to stare from the window into the streets of Peking—Peking, which now was paying the price of ignorant fanaticism. "Oh, the bayonets! How horrible!"

She shut her eyes and turned from the window. When she opened them she gave a sudden gasp, but managed to smother a scream. One of the Boxers, trying to escape a fate which had turned her sick with horror, had stolen into the eastern entrance of the temple and was fleeing across The Room of Celestial Bliss toward an entrance on the farther side. He was a tall coolie with an evil, twisted mouth. His pock-marked face was the color of a toad's belly. Even in his terror he still clung to the long thin knife which had been at her throat earlier that morning.

He was almost to the entrance. He had not seen her! He was gone! A thin stream of fire spurted from the shadows in the eastern entrance. A sound that reminded her of a heavy trunk crashing against pavement whipped at the walls and ceiling. The running Boxer faltered in his stride, his long knife tinkled as it struck the floor. Round he spun and round again, then toppled forward on his face. One of his legs drew up vaguely and as vaguely straightened. A pool which looked like ink crept sluggishly from beneath his body and began to spread over one of the squares of orange marble on which he lay.

The girl stared at the prone, still figure and the torpidly spreading pool. "The shadow of the wings of death upon his brow." The words reverberated through her brain like the tolling of a bell. She looked fearfully toward the lama, still motionless before the altar. Once more she felt afraid of him. Had he in some way caused the shot to be fired? An instant later she learned that he had not. Gray-clad figures with spiked helmets appeared in the eastern entrance. It was a German corporal with a squad of men. A thin wisp of smoke was still drifting from the muzzle of the unterofficier's rifle.

Into The Room of Celestial Bliss they strode without a glance at the dead Boxer. As the corporal saw Chang Foo Low he halted. He was in the act of raising his rifle when his round blue eyes caught the gleam of the golden vessels on the altar. He grunted, lowered his weapon and swung toward the treasure. One foot was on the first of the three broad steps that led up to the altar, one huge hand was already stretched toward the largest of the gold vessels when the lama, pouring forth a stream of rapid German, advanced upon him and with a gesture ordered him back.

The avaricious gleam in the round eyes of the corporal changed to a look of surprise. He lowered his hand to bring the rifle with its long bayonet level at his hip, then drew the weapon back in preparation for its forward lunge.

The girl at the window sprang from the seat and rushed toward the German.

"Stop!" she cried. "Stop!" An instant later she had seized the rifle. "He is a good man. Don't touch him."

The corporal looked doubtfully at her for an instant. Who this wild-eyed young woman might be was totally beyond him, but she was white and of the upper class apparently. His eyes swung to the unmoved countenance of the lama. They took in his impressive robe and headdress. Perhaps there was some reason why it would be better not to stick this old swine whose eyes remained like placid amber lakes as he stood without a tremor before a poised bayonet.

The corporal barked an order. One of his men moved forward and placing a rifle across the breast of Chang forced him backwards a dozen steps from the altar. The corporal again reached for the massive vessel. Again the lama protested in German and attempted to get past his guard.

"Don't move! Don't move!" pleaded the girl. "They'll kill you."

For a moment he obeyed her. Then, as the men followed the corporal in a frantic grabbing of ornaments and rich altar cloths, his lean arms rose above his head.

"Better I were dead!" he cried. "They take the holy things of the Lord Buddha. Woe to China! Woe to China!"

The rifle fire had died to a splutter outside. A shouted command came faintly to the girl's ear. The words were indistinguishable, but they were no longer strange and guttural. She ran to the marble seat and climbed upon it once more.

A column of troops was pouring from a side street into the temple square and pressing on toward the Forbidden City. They were not in gray; they were in khaki, with broad-brimmed hats and a roll of yellow blankets behind their shoulders. On their biscuit-shaped khaki-colored canteens she could just make out the letters U.S.A. She stood on her tiptoes so that her face showed clear in the window. Clinging with one hand to the window sill she waved with the other.

"Americans! Americans!" she called at the top of her voice again and again. And then: "Help! Help!"

There were nine hundred men left in that regiment. Just one of the nine hundred saw that waving arm and caught a glimpse of a white face below it. Not a syllable of what she said reached his ears above the tramp of feet, the creaking of arms and equipment, and the desultory rifle fire. But Acting-Captain James Lee darted from the left flank of a line of men marching in open order and ran toward the nearest entrance of the Peking temple. He had entered Peking numb with the pain of the first great loss he had ever known. He had marched along its streets in a sort of bitter dream. Now, still in a dream, he was running toward the temple alone. He had said no word as he sprang away from the column, and no officer or man had happened to see him go.

Plunging into an entrance he ran down a passageway filled with faint, strange odors. When he came to a huge dim cavern of a room in which vague figures moved he halted suddenly.

"Who called in here?"

"I called," cried a voice—a girl's voice from somewhere in the darkness. "Those men are looting the temple."

Jimmy peered in the direction of the voice, but could see nothing. With narrowed lids he advanced cautiously. At last his eyes grew accustomed to the gloom. The vague figures revealed themselves as German soldiers busy at what looked like an altar which stood before a tremendous idol towering thirty feet or more from the floor. As the nature of the Germans' activities became clear to him he walked over and confronted them.

"What's going on here, Heinie?"

He addressed the man whose insignia showed him to be a corporal. The unterofficier was swathed in embroidered tapestries, his rifle with bayonet fixed was slung by a strap back of his shoulders. Both his arms were devoted to a load of gold vessels and jade ornaments. He regarded the American officer with round, unwinking eyes and made no reply.

"Do you speak English?" snapped Jimmy.

"Ya, I shpeak id."

"What are you doing in here?"

The German nodded at the figure of the dead Boxer.

"We shood dot shvine. Now ve tage dese drinkets."

"Nothing doing," said Jimmy. "Put 'em back."

A dull amazement claimed the heavy features of the corporal.

"Vor vy?" he asked at last.

"Never mind why. Put down that plunder."

The rest of the squad had now gathered about them. The altar was stripped bare.

"Nein," said the corporal positively. "De Cherman Army vill burn und lood und shlay in China. Der order vos gifen py der Kaiser himselluf."

"Huh," said Jimmy. "So I've heard. Well, the Kaiser's a long way from here. Put those things where you got them."

A deep flush appeared on the Teutonic face of the corporal. He said something to his men, who turned angry eyes on the American officer.

"You are nod my officier; I vill nod obey."

His squad, like the corporal, had slung their rifles and loaded themselves with plunder. One only, Jimmy noticed, standing guard over a tall old Chinaman in a long robe and queer headdress, had his weapon in his hands.

As Jimmy's service revolver came out of its holster the sweep of its muzzle carefully included this guard.

"Put 'em back quick," he said.

There followed a slow and sullen piling of treasures and tapestries upon the altar of Gautama Buddha. When all was restored there came another crisp order:

"Assemble your men, corporal."

The order was obeyed.

"March 'em out of here."

"*Vorwarts!*" There was a rhythmic shuffle of reluctant feet.

"Halt your squad," said Jimmy.

The shuffle ceased promptly at the corporal's command. Perhaps the American officier would spare at least one of the golden trinkets in appreciation of the fact that the discovery of the so rich altar had been theirs.

"Take that dead Chink out of here."

To the muttering of German oaths the body of the Boxer, its long queue trailing along the floor, was half carried, half dragged from the temple. Before departing from the spot where it was finally flung the corporal kicked it heavily twice. Mentally he was applying his boot to the person of a never-to-be-sufficiently-damned officier of the United States.

And now, thought Jimmy, holstering his gun, who had called, and what was she doing in a place like this? Before he could attempt to find out, the old Chinaman in the long robe and strange headdress moved forward and spoke.

"Young and honorable soldier, you have saved the altar of the Lord Buddha. In his name I thank you."

Jimmy stared. Rarely had he heard more perfect English. Never had he heard such a voice. And the face! Was there ever such tranquillity in a face before? Once while hunting he had been lost in a Louisiana canebrake. Unutterably weary and forlorn he had stumbled upon a cypress-girdled bayou lying like a fairy mirror in the magic light of the high untroubled moon. It was only a stretch of stagnant water. He had known that. Yet its calm radiance that night had slowly filled him until at last he had lifted moist eyes to the everlasting stars, then settled down purged of the egoism of discontent to wait for morning. He had something of the same feeling now in the presence of this Chinaman. He felt inexpressibly young and callow. It showed in his nonchalant, almost flippant acknowledgment of the thanks he had received.

"Don't mention it." Abashed as he heard the tone in which the words had been uttered, he floundered into worse. "You know"—he nodded toward the altar—"I believe I'd hide those things for a while if I were you. You see ——"

He stopped suddenly. What an ass he was making of himself!

But the serene recipient of his advice bowed courteously.

"You are wise as well as brave. I go to see that it is done."

Chang moved across the great room to a pillar on which a bronze gong was hanging. This he struck twice. Almost instantly a group of priests appeared in a doorway behind the altar. At the lama's direction they gathered up the ornaments and tapestries and followed him from The Room of Celestial Bliss.

But Jimmy gave the proceedings only a glance. He was peering at the figure of a girl standing on a marble bench just below the window in which he had seen a blurred white face and a waving arm.

"You called just now?" he ventured.

"Yes, lieutenant."

"What are you doing here at a time like this?" Jimmy was peering, peering.

She stepped down from the bench and advanced toward him.

"I have been cut off from the American Legation by Boxers. I ran in here. I am expecting ——"

She never finished her explanation. Jimmy, for the last time in his life, was still peering as she came to him.

"Who are you?"

She halted abruptly and regarded him with startled eyes.

"My name is Elizabeth Darrow. Why do you ask in such a way?"

He continued to stare at her, to drink in every smallest detail of her with his eyes—her straight slight figure with its suggestion of boyishness, the creamy look of her throat and face, the peculiar swirl of her dark hair as it curved low across her temples and rippled just above the lobes of her ears. And then her eyes—her wistful gray eyes—that seemed to ask a perpetual question.

By now she was more than confused—she was growing angry.

"Why do you stare at me like that?"

"Don't you know?"

"Know what?"

"You don't know," breathed Jimmy. "I've always thought you would."

"Always thought I would?" she repeated in bewilderment. "What are you talking about?"

Jimmy advanced a step and leaned toward her.

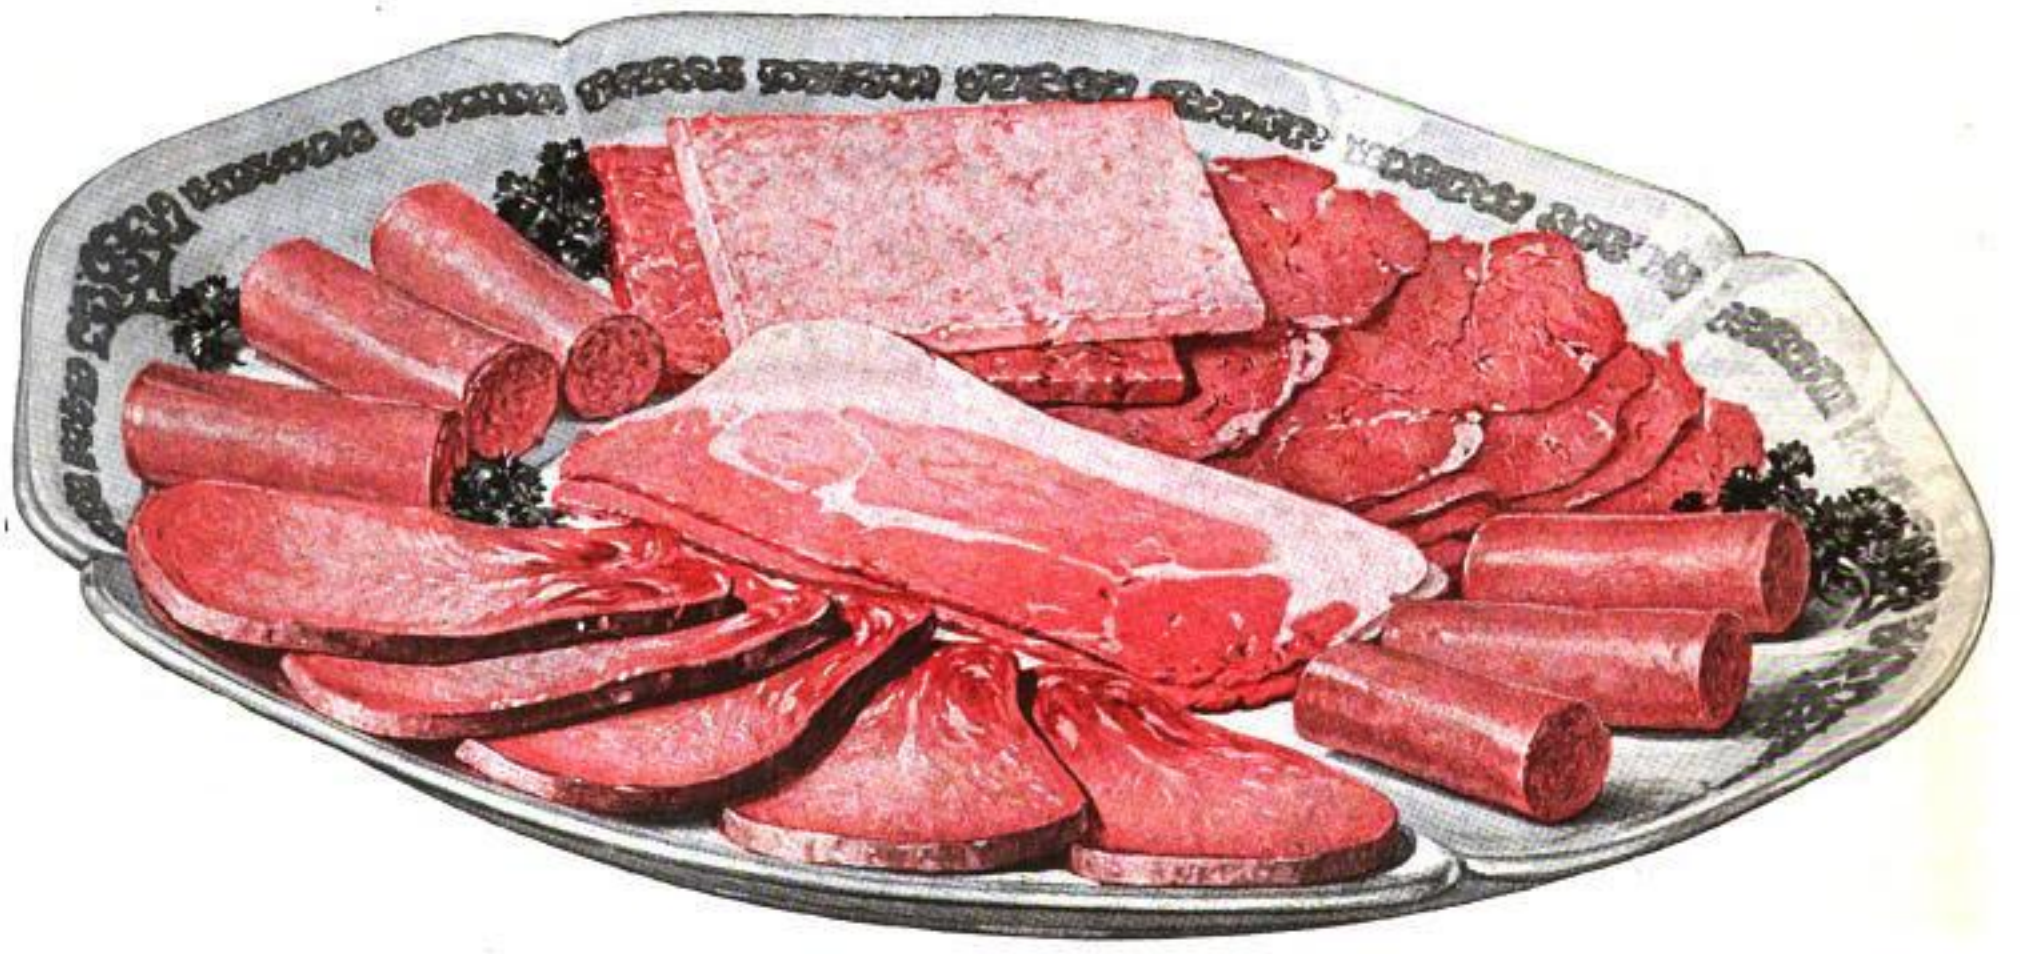
"Don't you know me?"

She looked at him intently.

"I'm afraid I don't," she said hesitatingly—"that is, I don't remember meeting you. I don't know your name."

"My name is James Lee," said Jimmy slowly. "I'm a poverty-stricken second lieutenant; twenty-two years old—all that doesn't matter. I never heard your name till now. I don't know who your people are or where you came from, but I know this—I've looked for you all my life. I've loved you ever since I was old enough to think about such things."

She shrank back, the ivory of her face becoming a faint rose. At first she had thought him peculiar, then his insistence and what was possibly a stirring of a long-buried memory as she studied his face, had half persuaded her that she had met him before—perhaps in childhood. But she never forgot faces—and what he had just said settled it. She knew him now for exactly what he was.



"The lama of this temple," she said, "who just thanked you for what you did, is Chang Foo Low, the great prophet of

China. He is a very wise and wonderful old man, but he seems to have been mistaken about you."

"Mistaken?"

"He called you an honorable soldier."

"Why do you say that?" asked Jimmy.

"I suppose there are girls," she explained, "who accept advances from strange men. You must have known a good many. But I'm not one of them, lieutenant." Her humiliation drove her to add recklessly, "Thank you for coming when I called. I won't keep you any longer."

"You want me to go?"

The rifle fire and shouts and groans outside had ceased. She looked hurriedly for the lama. He had not yet returned. She heard the reassuring sound of regimental bagpipes somewhere in the distance, but in this ancient gloomy chamber over which the terrifying aloofness of the great Buddha seemed to hang like a pall it took all her pride to say, "We're safe now—I think."

There had been in Jimmy's face something bitter, reckless, hard, when he had first appeared in The Room of Celestial Bliss. It had remained as he dealt with the looters. It had been lessened by astonishment as he had confronted her. Now it left him altogether. He smiled, and Jimmy had a warm and friendly smile.

"Let's put it in the form of a resolution," he said. "Resolved: That James Lee, having found in an old temple in China the girl of all the world, shall now walk out and leave her. All those in favor say aye. Contrary, no. No! The noes have it." He pointed to the broad lower step of the altar. "Won't you sit down?"

She did not return the smile. She did not, although she was almost exhausted, resort to the inviting altar step. Her voice, however, was no longer scornful as she addressed him:

"You persist in taking me for a silly, flirtatious girl. Well, I'm not that. But if I were, do you think I could be interested in a flirtation just now? In the last hour I've run for my life and nearly lost it. I've seen human beings die horribly by the bayonet. I've seen them shot—one fell almost at my feet." She glanced involuntarily at the dark pool by the entrance, shuddered with sudden horror and began to weep. "Oh, I'm frightened. They haven't sent for me. I must get back to the legation. I must."

Jimmy with an effort kept his arms stiffly at his sides and mentally cursed himself.

"You poor little thing," he said huskily. "I was a fool. I thought—well, never mind what I thought—I'll tell you about it later. I'll take you straight to the legation. Now don't cry any more. It's all right. Please don't cry any more."

"Thank you. I'll try not to." And now she did smile. "I—I haven't a handkerchief."

"Here's one." Jimmy's hand started for a pocket, then returned to his side. "I'm sorry," he said shortly; "I haven't either."

"It doesn't matter; they can just drip. Shall we start?"

"If it's safe," said Jimmy. "Wait till I look." He turned and went to the western entrance. "Just how do you get to the legation?" he called.

She followed him to the entrance.

"Let me think," she said, looking over his shoulder. "Five blocks down the street you are looking—four to the right."

Jimmy took his binoculars from his case and leveled them.

"Clear all the way," he told her. "There's an English company in the square by that pagoda thing, Scotch, rather—they've got on kilts." He swung the glasses south. "Japs down this way." The glasses moved a full half circle. "French over there. It looks all right. Hold on." The glasses steadied on a line straight ahead. "Not a chance. They're sniping from the roofs—one—two—three—four—five blocks down. There go some of our crowd into a building below. They'll enfilade them from the roof. That'll make 'em sick." He lowered the glasses and turned to her. "You can't go yet."

"But I must get back," she insisted. "The colonel will be frantic."

"What colonel?"

"Colonel Bradley."

"Oh, yes. I've heard about him. They call him the chicken hawk in the Army. Don't worry about that bird. One woman more or less won't bother the colonel."

She had been looking anxiously down the street toward the sniping he had discovered. She turned quickly and faced him.

"What do you mean?"

"Oh, I don't know," Jimmy evaded. "He's a bachelor, isn't he? Old bachelors haven't much use for women as a rule. Now suppose you come on back in here and sit down. You're all played out. They'll fix those snipers in ten minutes and then we'll start."

"I am tired," she admitted. "I'm just beginning to feel it. I think I will go and sit down." As they retraced their steps into the temple she suddenly staggered. "Oh, I am tired. My knees are giving way."

Jimmy threw an arm about her shoulders and got a supporting hand under her elbow.

"Come on," he said. "We'll make it all right. It isn't because you're tired," he explained as they returned slowly to the altar steps. "It's just the reaction after excitement. I've seen fellows get it when they come out of action. There you are!" he exclaimed when she was seated at last. "You'll be all right in a minute."

She rested quietly on the altar steps, wondering about him. She liked him now—tremendously. Why had he said such impossible things at first? He was gazing curiously at the big idol towering above them. His chin was lifted and the straight line of his jaw was clear-cut against a background of purple shadows. She suddenly stiffened where she sat. Somewhere she had known someone who lifted his head just that way. She made an effort to remember who this someone might have been. It was useless. He looked down as he became conscious of her intent gaze, and smiled.

"Feeling better?"

She nodded. What fine eyes he had, and what a kind smile! How comforting and friendly and nice he seemed. An explanation of his earlier wildness came to her. Her legs had given way unexpectedly a moment ago. Perhaps his mind had been affected in the same way in the excitement of fighting. If so, she had misjudged him frightfully. She decided to wipe out the memory of her haughty dismissal.

"You are a rapid young man," she smiled. "You burst upon a girl you've never seen before and say: 'How do you do? I love you.' And five minutes later you—lead her to the altar."

He did not return her smile.

"No," he contradicted gravely, "I didn't say it to a girl I'd never seen before. A wonderful thing has happened. I stopped telling you because you misunderstood. But I can't joke about it. When you understand you won't joke about it either."

Good heavens! There he went again. He had seemed so normal a moment before.

"Yes, I know," she said quickly. "I don't remember seeing you before, but we'll talk it over—sometime. Perhaps they've stopped firing. Won't you look, please?"

"But you have seen me." He said it with such quiet assurance that she wavered.

"Well, I've certainly forgotten if I have. When do you think I've seen you?"

He seated himself on the step beside her.

"You said a while ago that even if you were the flirty kind—God knows I never thought you were—you couldn't do that sort of thing after seeing men die."

She nodded.

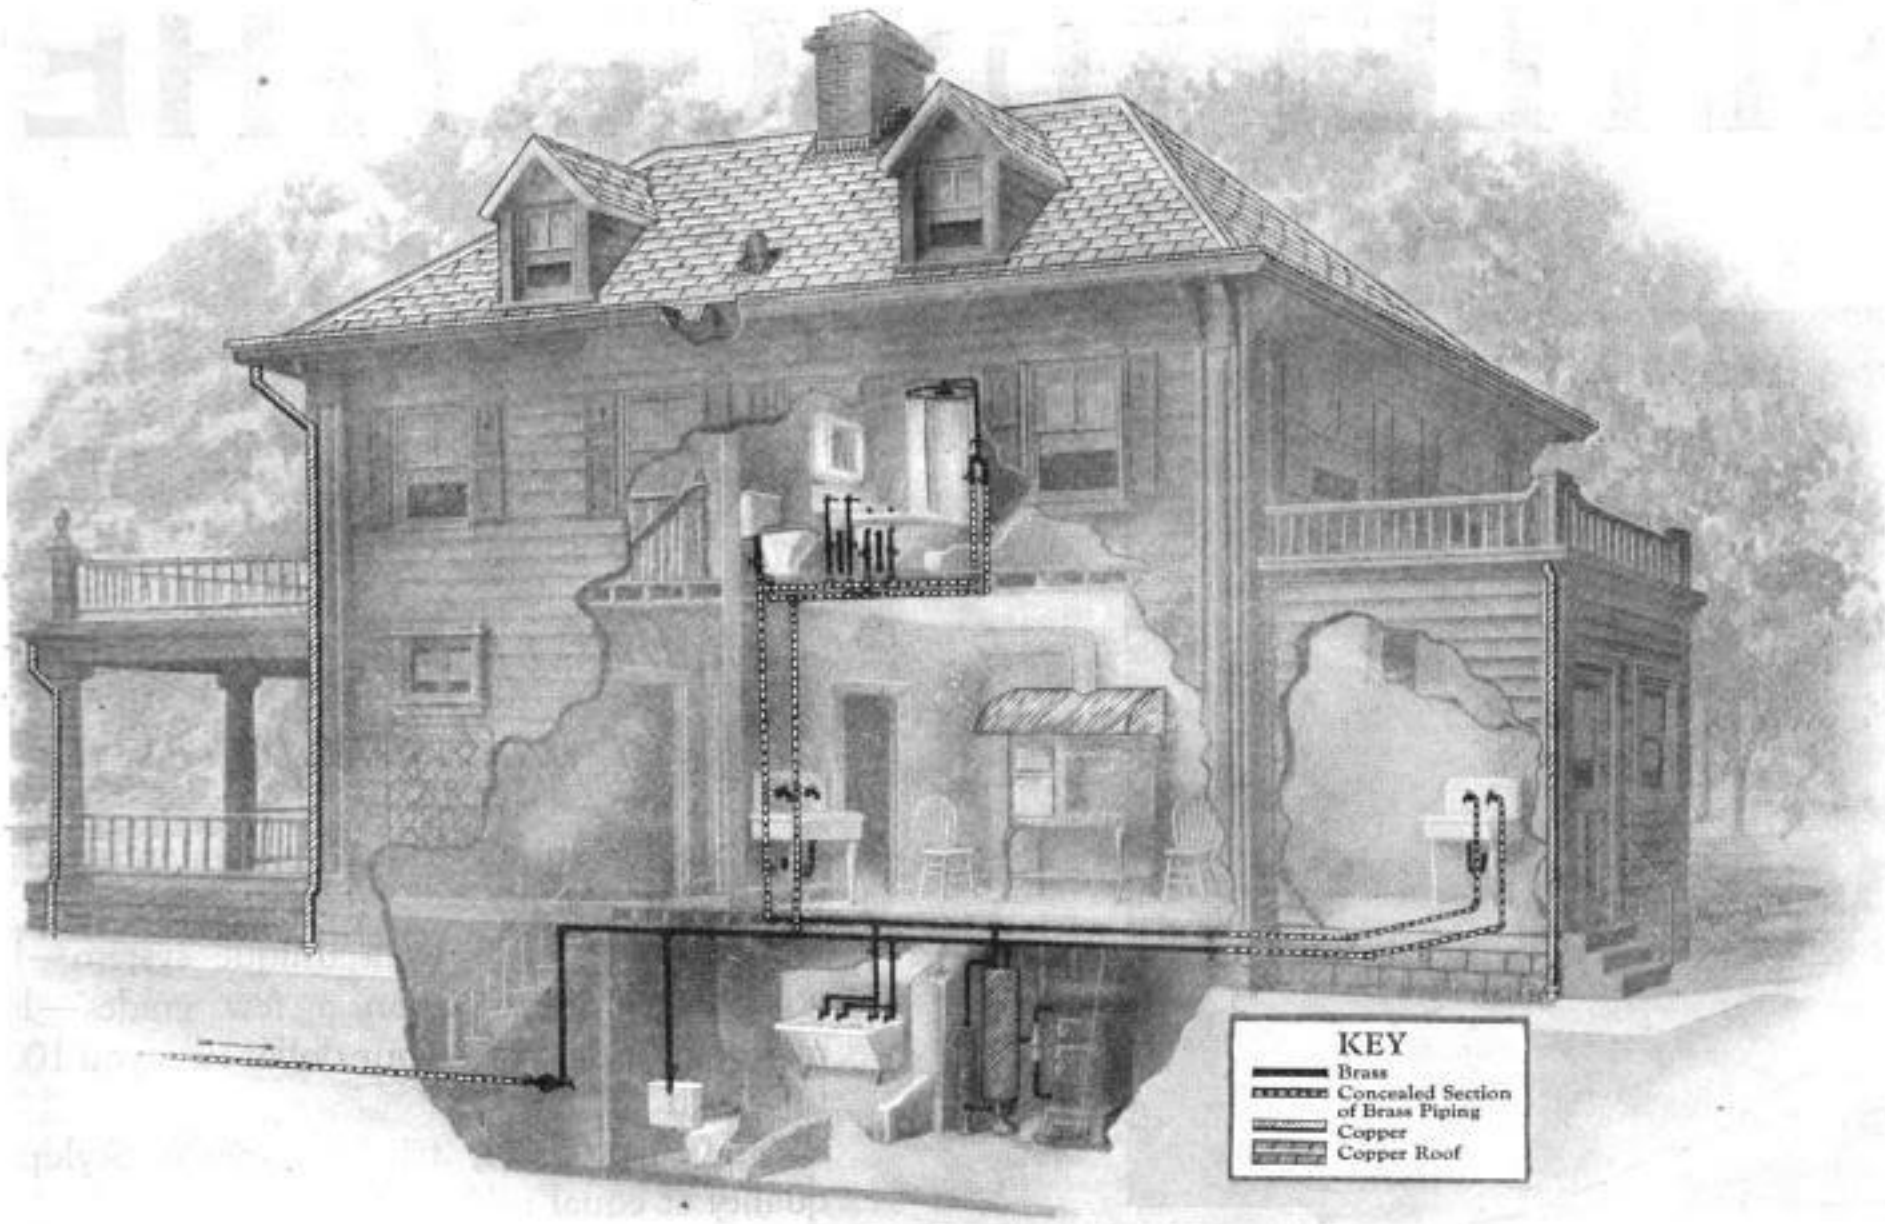
"Then you wanted a handkerchief. I told you I didn't have one. I did have one. Here it is." He produced something from the breast pocket of his tunic and spread it out before her.

"Why!" she gasped. "It's soaked with blood. Are you hurt?"

"No," he said. "That's the blood of Bobby Prescott—my pal. We were roommates at the Point. He was shot through the lungs at the wall this morning. He died in my arms."

"Oh, oh!" She touched his sleeve in a sudden gesture of pity. "I'm so sorry."

He stared at the handkerchief spread across his hands.



"He went the best way a fellow can go, I guess; but do you think I want to flirt?"

"No," she said; "I think I made a mistake, but—well, of course, I don't understand."

He folded the handkerchief and replaced it in his pocket. "I don't understand, myself," he confessed. "But I'm going to tell you about it. Bobby's dead—good old Bobby. I'm going to send this handkerchief to his dad. I didn't give a damn this morning whether they got me or not, but now I'm glad I'm alive. I never was so glad to be alive in my life. I'll tell you why."

Why Pay So Many Plumbing Repair Bills?

A plumbing life-extension service—that's what Brass pipe is.

A man is only as strong as his arteries—plumbing is only as good as its pipe.

Iron or steel plumbing pipe is much the shorter lived—because it quickly succumbs to rust. That's why the average home-owner pays so many plumbing repair bills, and has to put up with the "red" water, clogged-pipe nuisance.

LENGTHEN THE USEFUL LIFE OF THE WHOLE HOUSE BY USING BRASS PIPE WHERE INDICATED IN THE PICTURE.

Brass pipe will successfully, permanently resist rust, and thus prevent incessant plumbing repair bills, save you the annoyance of a rusty, reduced flow of water, leaky pipes, and water-damaged decorations.

Brass pipe takes the worry out of plumbing.

Brass is cheaper because you pay for it only ONCE

COPPER AND BRASS
RESEARCH ASSOCIATION
25 Broadway, New York

The Low Cost of Brass

PIPE is the smallest expense in plumbing—less than 10% in the total cost of the installation. Yet the pipe absolutely fixes the useful life of the system.

BRASS for hot and cold water pipes in your house adds only about ⅔ of 1 per cent to the cost of the house. Through this small additional investment you add years to the life of the plumbing—and to the useful life of the house.

(Continued from Page 76)

She became aware that he was as sane as she, and that he was in deadly earnest. But her tremendous curiosity as to what he was about to say was conquered by the knowledge that she had no right to let him say it.

"No, no; you mustn't!" She made an effort to rise from the step.

A firm hand fell on her arm and kept her where she was.

"But I must. It's the strangest thing that ever happened. It will be hard to make you believe. It begins with a dream."

"A dream!" She repeated the fascinating word, hesitated, and was lost. "If it's just a dream I'll listen."

"I had this dream when I was a little shaver," he began abruptly. "Seven years old, I think I was. My grandfather had died suddenly and I was taken to his house on the day of the funeral. His death meant nothing to me. I was too young. But my mother took me in to see him lying in his coffin, and that impressed me and frightened me tremendously. I didn't want to stay alone in my room that night, and my old black nurse sat beside me until I went to sleep. The next thing I knew someone was calling my name. I opened my eyes and saw—well, I saw my grandfather standing at the foot of the bed." He paused for an instant.

"Poor little tad!" she exclaimed. "They shouldn't let children see dead people. Were you terribly frightened?"

"Not in the least. I sat up and looked at him. He didn't look as he had in his coffin. He didn't look as he had when he was alive, for that matter. He looked younger, less careworn, and there was a sort of vapor, a sort of pale green light around him seemed coming from him, I couldn't tell which. 'Why, grandpa,' I said, 'I thought you were dead.' 'No, James,' he said, 'I've just begun to live.'"

She had been listening to him intently, eyes wide, lips parted. Now she broke in softly: "What a wonderful dream!"

"Yes," he said, "it was a wonderful—dream."

She caught up the implication of his pause before the last word.

"You think it was more than a dream?"

He postponed discussion with "Wait!" and went on: "Suddenly my grandfather stepped from behind the foot of the bed and I saw a little girl with her hand in his. 'I've found her, James,' he said. 'You must find her too. Look at her well.' I stared at the little girl. She stared at me."

"What did she look like?"

He took his eyes from her face and rested a marble square of the temple floor meditatively.

"Well, she seemed very pretty to me. In fact the nicest little girl I had ever seen. She had a droop at the corners of her mouth and big, gray, wistful eyes. Her hair was dark and brushed straight back. On the left side of her neck was a long white scar."

Her lips were still half parted. They moved suddenly. The pupils of her eyes contracted until they seemed like the heads of two black pins sunk in gray-green agate.

"What did you say?"

"I said a long white scar," he repeated dully.

Her hand went to the high white linen neck which concealed her throat.

"But it doesn't show," she said automatically.

"No," he agreed. "That collar hides it. You wear high things to hide it now, don't you?"

"Someone told you."

"No one told me; how could they?"

"I don't know, but ——" She again attempted to get to her feet.

"Please." Once more his hand fell on her arm.

"But it's all so—so absurd."

"Is it?"

"Of course; and you know I must get back."

"I know. I'll take you when it's safe. I might as well hear it all now. There isn't much more."

"Well, if there isn't much more." She mused where she was, but her attitude had changed. All restfulness had left her. She suggested a bird about to take wing.

Jimmy hurried on:

"My grandfather and the little girl grew fainter then and disappeared. I found myself sitting up in bed staring into the dark with my heart pounding like mad. I remembered the dream for several years. I kept looking for the little girl. But I never found her, and when I went away to school the dream faded out of my mind. I didn't forget it altogether, but I was busy with studies and games and things. I had no use for girls, I remember. They dawned on me when I was seventeen. It was at a party. They played post office. Have you ever played post office?"

"No."

"Do you know how it's played?"

"Yes, I think so."

"Well, I was called out by a girl to get a letter."

Her interruption was entirely feminine: "Was she pretty?"

"A peach. She was a blonde, pink and white, with sort of purple eyes."

"Oh," said the ivory-tinted brunette who listened.

"I nearly died of fright when they closed the door and left me alone with her. I was wishing I'd never come to the party. Then she put her arms around me to give me the—letter, and ——"

"A letter is a kiss?"

"One letter—one kiss. I guess she thought she was the postman. All of a sudden I wasn't embarrassed any more. I started in to deliver a little mail myself. I went crazy—sort of. I walked home that night on air. I could still feel her arms about me and her lips against mine. I was terribly in love."

He heard something like a sniff.

"In love—you were nothing but a boy!"

"No," he contradicted. "I became a man with my first kiss. But here's something I've never told anyone else—I've never kissed a woman since—except my mother. Do you believe that?"

She evaded the question with another:

"Why haven't you?"

"Because that very night I went to sleep thinking wild thoughts about Mabel—that was the girl's name—and then I dreamed about her. I seemed to be ——"

"You dream a great deal, don't you?"

"Why—yes," he admitted, puzzled by her interruption. "Well, in this dream I seemed to be in a woods looking for her among trees. Suddenly I saw a garden filled with wonderful flowers, peculiar flowers that were warm, like people. Among the flowers were hundreds and hundreds of little naked babies that laughed and held out their arms to me. In the center of the garden was a fountain. In the fountain was Mabel. She was"—he shifted his glance to a point straight before him—"bathing. She—well, she held out her arms to me too. I started toward her, running. As I came to the gates of the garden someone barred my way. It was another girl and I tried to get past her, and then I recognized her. It was the little girl with the scar my grandfather brought to me. She was older, but I knew her at once."

His eyes returned to her face. He found her lips again slightly parted. Her breast rose and fell at her more hurried breathing. Once more the rose tint was warming the ivory of her face.

"What—what did she look like?"

"Well, she wasn't as pretty as she had been before," he confessed, "but the minute I saw her I forgot about Mabel and my heart began to beat like fury. I tried to put my arms around her but she avoided me. I said, 'Yes, yes, I must.' She said, 'Not now—you must find me.' Then she faded away, and so did the garden and Mabel. I was wide awake sitting up in bed just as before. But I'll swear I heard a voice say, 'Find me.'"

His last sentence had been spoken with slow impressiveness, but she for some reason flew back to his first words and darted upon them. "You say she wasn't as pretty as before?"

"Not that time," he said. "You see she was pale and thin. She looked as if she'd been crying a lot. Her hair was all frowzy and she was dressed queerly."

She had relaxed somewhat as he had talked. Now she became rigid again. Once more the pupils of her eyes swiftly contracted.

"Queerly? What do you mean?"

"She had on a dark blue dress—sort of like a uniform," he explained. "Her legs were bare and she wore sandals."

"Sandals!" It was a whisper. "Sandals!" It was a scream. And now she was on her feet.

"Yes," said Jimmy, "sandals." He got up unhurriedly from the step and faced her. "You seemed about fifteen then. How old were you?"

Her dry lips moved. "Fourteen—in Hawaii. What does it mean?"

"This," said Jimmy, advancing a step.

She shrank away.

"No, no, you mustn't!"

His hands dropped to his sides and clenched.

"Don't say that," he said harshly. "You haven't heard it all yet. Do you know that all my life you have kept me from every other girl? If I looked at one admiringly when I was awake, if I so much as touched her hand, that night you came to me and reproached me."

"I didn't. I didn't," she cried, wringing her hands. "It must have been someone else."

"Someone else?" Overmastering scorn was in the repetition of her words. "I've looked for you for fifteen years. First, in my grandfather's garden and house and attic; then, later, at dances, on the streets, in theaters, street cars, everywhere I went. When you waved from the window I was thinking about Bobby. Something made me look your way. Something made me forget Bobby and everything, and run in here. I'll have a fine time explaining that I didn't dog it in the face of the enemy to look for a girl. That's what I did, as a matter of fact, but I couldn't have helped it to save my life. All the time I was telling the Heinies where to head in I was wondering about you. Then I saw you standing on the bench and you walked over to me and—oh, no one can ever know what it was like. I knew you instantly. I knew every line of your face. I could describe the dress you wore each time you came to me except the nightgowns—they were just—well, nightgowns."

"N-nightgowns?" she stammered.

"Yes," he told her grimly. "You've often come in a nightgown. They've been cut low lately," he added. "You have a mole on your back between your shoulder blades shaped like a three-leaf clover."

He had grown white with emotion. The lines in his face had deepened. He suggested for a moment what he would look like many years later. And she, staring at him, gasped as though struck by a bullet.

"Oh, oh!" she cried. "Am I awake? I can't be! I can't be!"

"I wondered, too, when I recognized you, but you're awake. Oh, you're awake, my dear."

She pressed her fingers to her temples, still staring at him.

"Then I'm insane."

"Why?" he asked.

"Because—because"—a sort of terror was in her voice—"I'm sure I've known you before."

"Of course," he said impatiently; "I've told you."

"I don't mean that," she whispered. "I mean long, long ago—ages ago."

He sprang toward her with a half cry and seized both her hands.

"Girl, girl, I didn't tell you that; but I knew it from the very first. I knew it when my grandfather brought you to me in my dream."

"It came to me just now," she told him, still in a whisper. "It was when you turned so white and looked so much older."

"When was it we knew each other?" he demanded with an imploring tug at her hands. "I can't remember; perhaps you can. Think!"

Her brows contracted in a mental effort while he waited, scarcely breathing. She shook her head at last.

"I don't know. It won't come back. It was—so—long—ago."

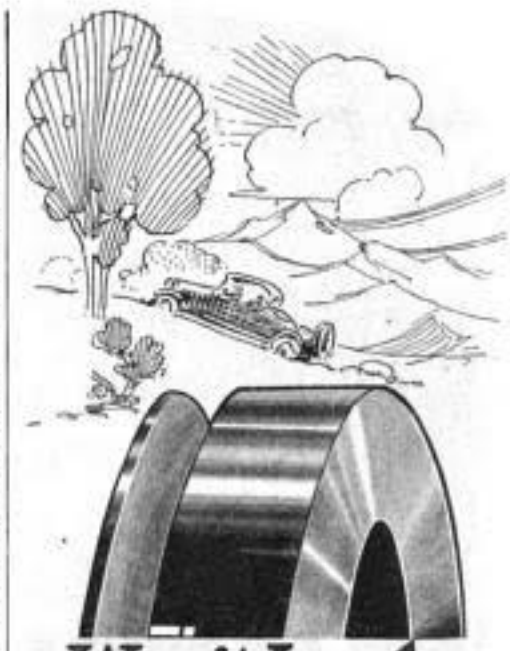
"Never mind," he said. "It doesn't matter. Nothing matters now but—this."

He drew her to him unresisting, disembodied. It seemed to her that her naked soul was joining his somewhere in infinite space. His lips on hers reclothed her spirit in singing flesh. The Room of Celestial Bliss for a timeless moment was adequately named.

And then the world—a hideous world—beat at the doors of her mind. She struggled to free herself.

"Let me go! Let me go!"

"Darling girl, what's the matter?"



Clear of his arms she was altogether panic-stricken. "Oh, what have I done? I should have told you."

"Told me what, sweetheart?"

There was a sudden clatter in the western entrance as it filled with a squad of marines. At their head was an officer—an old officer.

"Betty!" he cried; and rushed upon them, repeating, "Betty! Betty!"

(TO BE CONTINUED)

Won't Leak

Because They're Sealed With Oil

HERE'S a fact—No-Leak-O Piston Rings won't leak. Their "oilSEALing" groove—a specially cut groove, found only in No-Leak-O Piston Rings, "packs" an impassable film of oil between piston and cylinder walls and seals the combustion chamber tight.

Results: More miles per gallon and no power-killing carbon choking your motor.

For your pocket-book's sake, get NO-LEAK-O PISTON RINGS.

It's here

A Revolutionizing invention—the SUPERFEX Burner that cooks as fast as gas and is absolutely reliable.

Pictured above is the new double-walled, double-draft, rapid cooking Giant SUPERFEX Burner found only on the latest model New Perfection Oil Cook Stove.

At the right is shown the 4-burner model (No. 304 with New Perfection Oven) of this new speedy oil stove equipped with ONE Giant SUPERFEX Burner and three Standard SUPERFEX Burners having the same double-walled, double-draft construction as the Giant.

Other models are—the 3-burner, No. 303; and the 2-burner, No. 302. Each model of the new 300 Series has one Giant SUPERFEX Burner.

The Kind of Range You've Always Wanted

THE world's largest makers of oil stoves and ranges have crowned their achievements with the production of an oil stove that cooks as fast as gas and is absolutely reliable.

Its speed and success are all in the New SUPERFEX Burner which grills a minute steak, roasts a leg of mutton, bakes a chicken pie or preserves a kettle of fruit in proper time—fast or slow—for each operation, be it an intense searing flame or a gentle simmering heat.

Over four million housewives already appreciate the reliability, safety, economy and comfort of the New Perfection Oil Cook Stove. This new burner adds quickness and absolute heat control to the sturdy virtues of these New Perfection Models.

To accommodate the SUPERFEX Burners and the Giant SUPERFEX, we have constructed a stove that for beauty, strength, smartness, convenience, completeness and all-around satisfaction sets a new standard. Now on exhibition for the first time—America over. Visit your dealer.

These new (Series 300) models of the New Perfection Line, equipped with the revolutionizing SUPERFEX Burners, are additional to the long established, regular New Perfection Line. The Series 30 New Perfection Models, famous and favored the world over, continue to be the most popular oil stoves made at their price.

THE CLEVELAND METAL PRODUCTS COMPANY

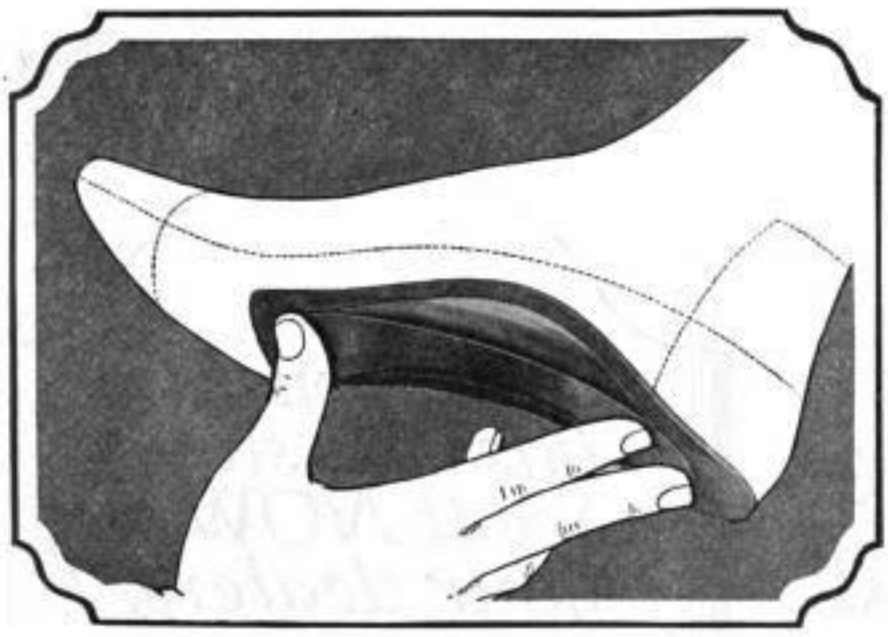
7635 PLATT AVENUE CLEVELAND, OHIO

What you get in this new stove-See it NOW at your dealers.

1. Cooking speed of the giant gas burner—in the Giant SUPERFEX Burner.
   Cooking speed of the standard gas burner—in the standard size SUPERFEX Burner.
2. Abundant heat that is absolutely clean and odorless.
3. Greater economy and reliability of cooking with kerosene oil.
4. Operating convenience and new time-saving features.
5. Handsome, sturdy, long-lived stove with higher and bigger Aladdin Quality Porcelain Enameled Cooking Top, and new base shelf for utensils.
6. The New Perfection quality—standard the world over.
7. Two sizes of SUPERFEX Burners—one Giant and three Standard SUPERFEX Burners.
8. A new (more beautiful) Gray Enamel finish on all chimneys.



The Giant SUPERFEX Burner is 7 inches in diameter, the largest oil cook stove burner and the most powerful ever marketed.

Look for the name SUPERFEX on the Gray Burners.

Relief for aching feet tired bodies— *this way*

Dr. Scholl's Anterior Metatarsal Arch Supports correct callouses, tenderness or cramps caused by weakening of the arch ***across the ball of the foot***

Distorted toes (cause of bunions) are restored to normal action by the use of Dr. Scholl's Toe-Flex. Price, 75c each

Dr. Scholl's Bunion Reducer removes pressure from bunions, preserves the shape of the shoe and gradually reduces the growth. Price, 75c each

Dr. Scholl's Walk-Strate Heel Pads prevent crooked and overrun heels by equalizing the body's weight. Price, 40c pair

Dr. Scholl's Zino-pads protect and relieve corns, callouses, bunions and blisters. Price, 35c a box. Sample free

Why, two or three hours after you arrive at office or store, do you feel yourself "slowing up"? Why does an afternoon's shopping completely exhaust your strength? Are you "losing your grip"—slipping into the old age class prematurely?

The probability is that you are suffering from a condition known as "weak foot." The muscles and ligaments which support the bones have begun to weaken—this condition causes tired, aching feet, bodily fatigue, rheumatic-like pains, weak ankles, and results in run-over heels, corns, callouses, tender soles, cramped toes, excessive perspiration and other discomforts.

How to obtain relief

Foot suffering of this kind is wholly needless. *There is a way*—Dr. Scholl's Foot-Eazer way—to obtain quick and lasting relief.

Dr. Scholl's Foot-Eazer is a scientific foot arch cushion, which supports the arch gently and firmly and relieves the strain and pressure on the muscles and ligaments of the feet caused by standing or walking or inherent weakness.

It assures positive and permanent relief. It is comfortably adjusted and worn inside the shoe.

Where to obtain relief

In thousands of shoe and department stores the country over are men—trained Practipedists—who have been carefully trained in Dr. Scholl's methods and who will assist you in selecting the Dr. Scholl appliance which you require.

Go to the store in your town which carries Dr. Scholl's Foot-Eazer for an examination of your stockinged feet. Seek out this service today—and have immediate relief and comfort and freedom from foot suffering.

NOTE: If you cannot locate the Dr. Scholl store in your city, write us. We will send you the name of the nearest store and an interesting new booklet, "The Feet and Their Care." Address the Scholl Mfg. Co., 213 W. Schiller St., Chicago, Ill. Branch Office: 62 W. 14th St., New York City. For Canada, address the Scholl Mfg. Co., Ltd., 112 Adelaide St., E., Toronto.

Lessons

IT IS seldom that a boy has good fortune to learn three excellent lessons in one day, and when the three lessons are taught by a person of questionable standing before the law the circumstance is truly remarkable.

While yet in my teens I walked one day along a country road, light of heart and foot, having quit one job that had become a bore to search for another that would afford variety. As the morning wore on I was overtaken by a cheerful, talkative adventurer who drove a sweet bay mare to a buggy. He asked my destination, and having learned that I was merely on my way, offered the hospitality of his buggy and the instructive chatter of his whimsical self.

As we drove on I learned that he was for the time being contriving to get his bread by peddling maps.

"This," said he, "I confess to you in strictest confidence. When you see me go into action you will observe that I am a person of considerable consequence, and not the lowly peddler I now pretend."

We topped a hill and saw in the valley below a nondescript farmhouse flanked by great barns and entirely surrounded by fields of ripening wheat.

"A land of milk and honey," said my companion. "It is my task to milk it. In order that you may fully appreciate the skill required in the process, I shall now give you your first lesson in the art of salesmanship. Always know your customer's name. At the last farmhouse I visited I inquired the name of the fortunate individual who owns this one. I learned that he is Alexander Williams, has money in the bank and is proud of his pure-bred Berkshires. When I call him by name he will feel flattered. When I lead the conversation to the subject of hogs and express regret that so few farmers seem to appreciate the good qualities of the Berkshire he will be my friend. And then I shall take the profit justified by my superior acumen. Meanwhile you will have opportunity to learn another lesson that may serve you well in future."

When Williams had been duly complimented by mention of his name and flattered by reference to his Berkshires the map peddler became grave.

"Mr. Williams," said he, "I have been appointed to show a new government survey of this territory."

Here was no reference to commonplace maps, no hint of peddling, but only words of dignity, suggesting great matters—government, survey, appointment. The engagement launched with so brave a show was developed adroitly until the business was accomplished. The peddler sold a map, inquired the name of the man living in the next house on the road, and swung back into the highway.

"Tell me," I demanded, "what lesson I learned there save the value of a smooth tongue."

"You learned," he replied, "that all men respect the authority of government, and respect does not endure without a reason. I did not claim to be an appointee of the President or of any other official. I told Williams that I had been appointed to show a new government survey. Just between us, I appointed myself, and the appointment was confirmed by me without opposition. This map is in fact the product of surveys made by Federal authority. So much for a New England conscience. The point is that mention of government gains me a hearing.

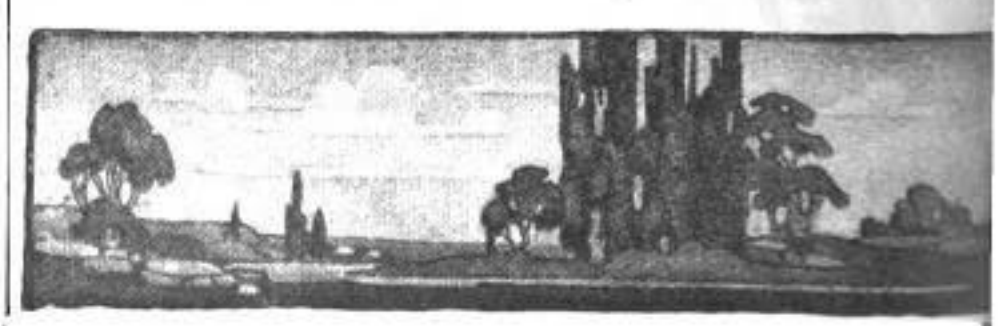
"As you grow older and travel about you will observe that freedom of speech means license to scold officeholders and all their works. Men curse an administration and ridicule an official, but they have an abiding and wholesome respect for the vague something that is Government with a capital G. They fear it and honor it, and when occasion requires they will fight for it. 'On the King's business' gains the right of way now as it did when the cry was first heard. You may, in future years, see promise of a profit in foolish undertakings, but I adjure you most solemnly, don't you ever monkey with your Uncle Samuel."

The third lesson had to do with ham and eggs. Noon approached. The peddler turned to me with his whimsical smile and asked concerning the state of my finances. I showed him a few coins.

"Keep them," said he. "Useless spending is always foolish spending. This next house is owned by a widow, and we shall be her guests. With her we shall fare sumptuously, and though she doesn't realize it, yet she has a hearty welcome for us. There will be another lesson in this for you."

He drove up to the house, introduced himself and me, and asked if it would be possible to get a bite to eat. I thought the widow's face rather grim, and half expected to be turned away, but the peddler chatted merrily and began to pull the harness off the mare as though entirely at his ease.

"Don't go to any trouble for us," said he; "just ham and eggs and coffee, or any little thing. I'll water the mare and rustle some oats, and then we'll wash up."



The dinner was not a social success. I felt ill at ease, and the widow refused to unbend. The peddler was undismayed, however. He talked of crops and of business conditions in the county seat. He spoke of his home on North Street, and of the boy he had in school. And when we had cleaned our plates and pushed back our chairs he offered his hand to the widow and said: "That was a delightful lunch, and we enjoyed it hugely. I hope you will repay me by giving me the privilege of being your host when again you visit the county seat. My wife will be delighted to see you. We are old-fashioned folk, and cling to the belief that God sends the guest."

The widow was dazed, but game. She accepted his hand and ventured her first smile. We were no longer nuisances, but guests, and she insisted that we should sit on her front porch and smoke while digesting our dinners.

Soon after we got on our way the peddler gave me directions to reach the next town and pulled up to take a crossroad. We shook hands and expressed a mutual liking.

"Son," said he as he took up the reins, "don't ever forget this last lesson. It is most important of all. There are many many people in the world, some good and some bad, and all with axes to grind. They will be interested in you only when they see promise of a profit for their purse or their vanity. But mark this: Each of them has great respect for good manners, each wishes to feel that his own manners are good; and few of them will permit you to outdo them in the matter of courtesy. Never dare a man to do a thing. Before he announces his intention of doing it, remark casually that you know he will not because he is a gentleman and no well-bred person would stoop to a thing so unworthy. When you get them on edge to show their good manners you have them on the hip."

He was full of guile and blarney, and, I have no doubt, came to some bad end; but I owe him for three well-taught lessons, and a fourth he was not conscious of teaching. The fourth is that the good have no monopoly of wisdom, and there is profit in the serious speech of the humblest wayfarer.

THE INSIDE STORY OF THE A.E.F.

(Continued from Page 11)

our forces wholly and unreservedly under French tutelage.

"7. I request that a copy of this letter be furnished the French Military Advisory Mission in the United States."

Not the least remarkable feature of the American effort was the suddenness with which it became effective after weary months of delays. In April, 1918, the A. E. F. was still an insignificant factor in the fighting, its value potential. At the end of July the A. E. F. was furnishing the punch for the Allied blows. And from then on the mighty military machine we had built up in France gathered impetus; it drove ahead with resistless power. Once the American forces were concentrated as an American Army, employing American methods, the results surpassed all expectations. Pershing's faith was justified; his tenacity of purpose, his stern patience under every form of pressure and aggravation and political maneuver, were rewarded. In my opinion there was no military leader in the war who upheld the dignity and interests of his country with braver devotion.

He surely needed patience. Watching the slow growth of the A. E. F., our Allies and not a few American observers began to despair of American aid becoming effective in time. There were such endless and saddening delays. The available shipping all pitiably short of needs; we could not bring men fast enough, let alone supplies for them and equipment for divisions and ports and camps and railroads and lines of communication. The first ten months in France would have brought despair to ninety-nine men out of a hundred.

Here is an instance of our shortages: The first time our troops went into the line I saw a trail of dead horses for miles and miles. These animals had not been killed by shells; they had simply dropped by the road from exhaustion and died there because they were worn out when we got them. Originally these horses had been bought by the French at exorbitant prices from American dealers; they had been used in the war until condemned; then had come our pressing need of animals, and we had been compelled to buy them back at tariff prices because lack of shipping prevented enough being obtainable from home. And we were clothing our soldiers partly in British uniforms. The doughboys did one of their most punishing hikes in English-made shoes, which may be all right for that kind of feet, but never seemed to fit.

In fact, our purchasing department had its men combing every corner of Allied Europe for supplies of all kinds, and animals. Back in the United States was plenty of everything we needed overseas, except we hadn't the ships to send it. Whoever commands the ocean highways dominates the world.

The Handicap of Humility

Yet another factor hampered speedy development of our overseas forces as a fighting machine: it is undeniable that French and British tutelage slowed American endeavors. Each of these armies had worked out through hard experience methods of warfare adapted to their needs and to the habits and temperament of their soldiers. They got admirable results with them, and it was very natural they should recommend their use and seek to impose them on us. But methods foreign to men's temperament and ways of doing things—methods repugnant to their mental attitude—cannot be successfully imposed on officers in any line of effort. When a horse wants to run he will not do his best when you try to make him trot.

Many of us approached the war altogether too humble in heart. That statement about Americans may stir the risibilities of our friends, who are loath to credit us with humility in any direction; nevertheless it is true. Both the people at home and the younger officers and men composing the first expeditionary units had acquired an almost reverential attitude toward our Allies. During three years of war we had read every morning and evening in our newspapers of the achievements of the French and British; they were heroes to the average American, every one of them. They had passed through the war and we had not; we felt toward them a great humility of spirit; so when it came his turn to join those paladins in the fight the average citizen of the United States entertained misgivings, doubtful of his capacity to measure up to all he had heard of these soldiers; he went to France meekly deferential to the others' knowledge and experience.

It was in that spirit the first few hundred thousands of our expeditionary forces went at the work of training. I was there and saw it operating—saw, too, what the effect would be. For though humility may be an admirable quality from an ethical standpoint, and the Bible teaches it persistently, it's a sad handicap when the rough stuff starts. Confidence is nearly half the game in war. One has only to reflect where an attitude of humility or deference would land him in a rough-and-tumble fist fight—provided it permitted him to stay in it—to realize the drag this virtue can become in war.

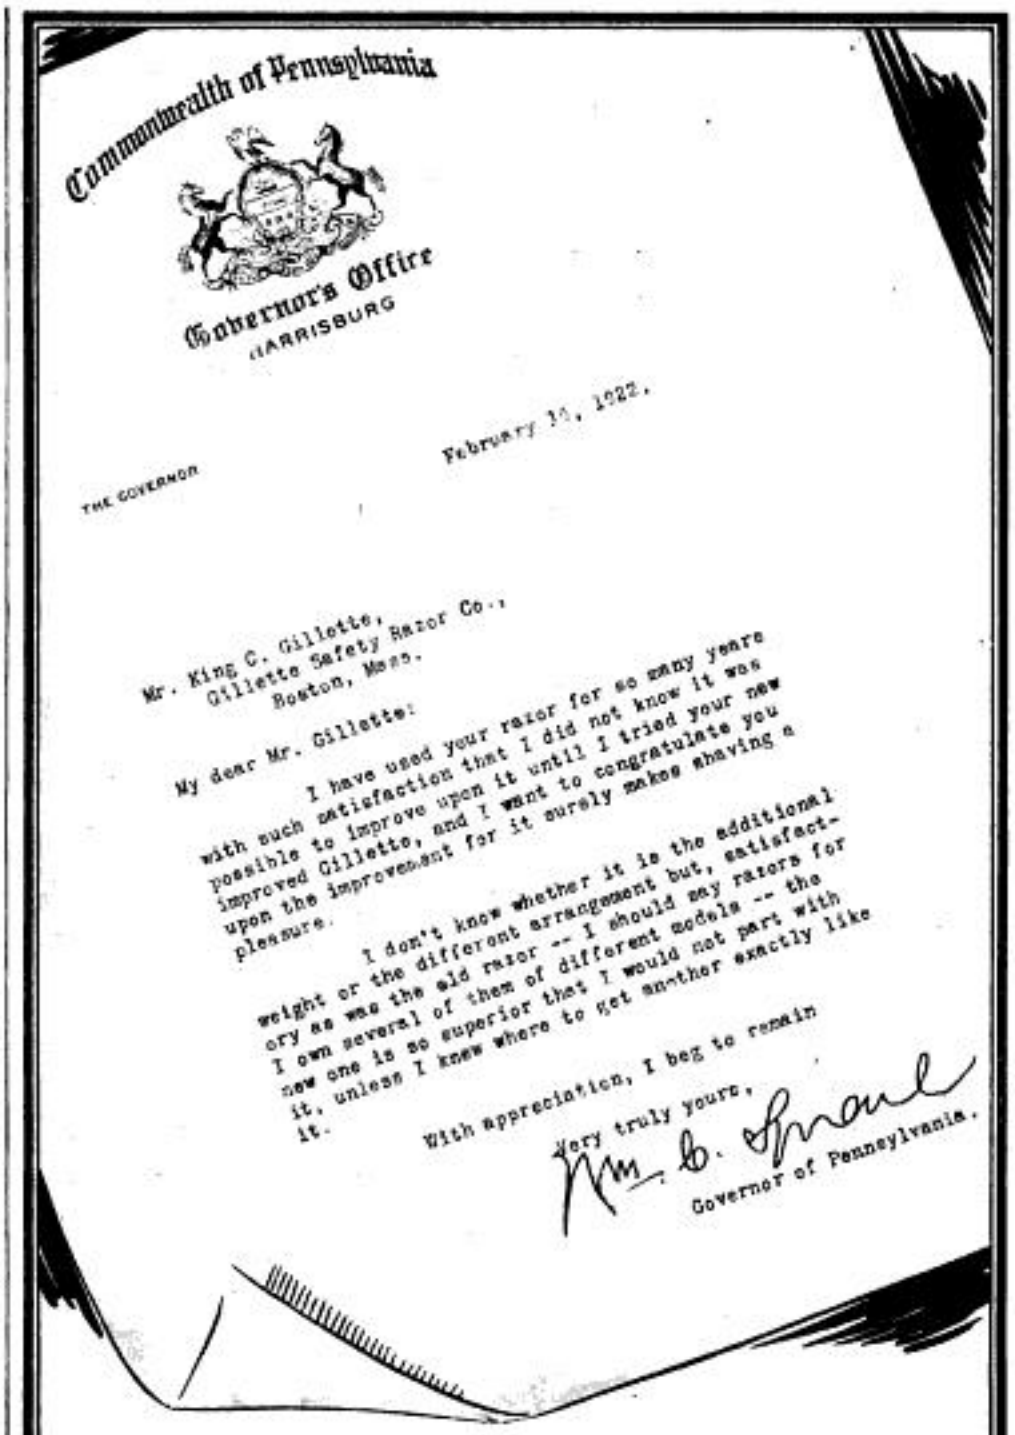
Fortunately a short contact restored the Americans to a sense of proportion. They soon realized that here were men like themselves, except only for their experience. And they speedily decided that experience had taught their associates lessons which hurt their effectiveness. Our troops got fed up with defensive tactics; but meanwhile precious months were consumed in overzealous training in forms of warfare calculated to prolong the struggle as a defensive war until A. D. 9000. And this too careful preparation in stuff he had grown to despise began to take the fine edge off the doughboy's natural spirit of aggressiveness. "Let's go!" was his constant plea. And when at last the leash was taken off him and he could fight in American fashion he showed a superb dash and disregard of punishment. He got results.

Our Numerical Strength

On January 1, 1918, there were 176,665 American troops in France, and none in the line. One division had appeared on the front, but only for a short period of training. A month later we held ten kilometers of front in a very quiet sector—and the Allied front extended from the Channel to the Swiss frontier! A puny, puny effort for a great nation which had been in the war since April 6, 1917, and had had three years' menace of embroilment staring it in the face!

However, I mention these early discouragements simply to show the amazing speed with which our military machine moved once it was organized. Perhaps it was inevitable that progress should be hardly perceptible in the early stages of building.

At the end of January the French held 520 kilometers of front, the British armies held 187, the Americans only ten. By June twentieth the Americans held 105 kilometers, against 579 for the French on that date, and 133 for the British—the front had become extended through the German offensives. We had then 800,000 men in France.



The fighting grew very severe in September and October; the decisive blows of the war were being struck. On October tenth the Americans held 162 kilometers of front, the French held 392, and the British 133. When the armistice came the Americans held 134 kilometers of front and had more than 2,000,000 men in France, being second to the French armies in numbers; the French held 343 kilometers of front, and the British 113.

These immense American forces, with equipment and supplies to sustain them, had been transported across three thousand miles of submarine-infested seas; ports and towns and camps and railroads had been built in France for their handling and upkeep; and all in about fourteen months' time. It is one of the colossal achievements of history.

To get back to the fighting: For difficulties to be overcome, numbers of men engaged and importance of results, the Meuse-Argonne offensive easily takes rank as the greatest battle in American history.

The front on which this series of operations took place had remained practically unchanged since it became stabilized in September, 1914. There had been a few minor fluctuations during the enemy attacks on Verdun in '16 and the French counter-offensives the following year, but the only real result of these activities was

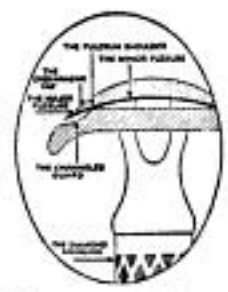
THE GOVERNOR

February 14, 1922.

Mr. King C. Gillette,
Gillette Safety Razor Co.,
Boston, Mass.

My dear Mr. Gillette:

I have used your razor for so many years with such satisfaction that I did not know it was possible to improve upon it until I tried your new improved Gillette, and I want to congratulate you upon the improvement for it surely makes shaving a pleasure.



I don't know whether it is the additional weight or the different arrangement but, satisfactory as was the old razor -- I should say razors for I own several of them of different models -- the new one is so superior that I would not part with it, unless I knew where to get another exactly like it.

With appreciation, I beg to remain

Very truly yours,

Governor of Pennsylvania.

What Governor Sproul of Pennsylvania says is endorsed by busy executives and active responsible men everywhere—They have found in the New Improved Gillette *the* solution of their shaving problem.

Here's Bill!

Digitized by Google

"Where's Bill?"

Man at 'Phone—Has Bill left yet? We're all here and there's a big crowd at the first tee. Lord knows when we can get off now!

—What's that?—left an hour ago! (jamming receiver on hook). Well, I'll be—!

* * * *

Bill's in for it when he arrives—that's certain. But right now he's wondering whether he ever *will* arrive. Just took the car out of the repair shop and here he's stuck again, on the finest Saturday afternoon of the season.

There's a way to avoid many such predicaments as the one Bill is in—ask all the questions before you buy, instead of afterwards.

One of the most important is "Who made the axles?" It may save you from a "dubbed drive" sometime, when you're specially anxious to get a good long one that doesn't land you in the rough.

Axles are not only more important, but more costly than other parts. When a car builder uses Timken you can be pretty sure he doesn't spoil quality by sparing expense in other parts either.

So remember to ask that question: "Who made the axles?"

Down on the Farm you need a Stillson

A STILLSON on a farm has nothing to do till tomorrow. Like the hired man's, its job is never done—he has to do anything, anywhere, any time. When it hasn't something to fix on the tractor or the windmill, and all its jobs around the house are done, then somebody'll be wanting it out in the barn right away to handle a greasy wheel with.

You'd laugh if we told you some of the emergency uses for a WALWORTH Stillson that common-sense, hard-headed farmers have reported to us. Dan Stillson invented this wrench to start or stop anything that's round, square or hexagonal, but he didn't figure on its being used to open sardine cans and shake down the kitchen stove.

Still, what a tool has been used for once it can always be used for again, and so long as nobody succeeds in making a better wrench than the genuine WALWORTH Stillson, we don't much care how its reputation increases as a tool of all work.

If you have one of these handy tools already, you'd better get an extra one for that hard-working hired man of yours. It doesn't pay to lend a real Stillson.

Be sure that the wrench you buy has the diamond on it.

Ask your hardware dealer for a genuine *Walworth* Stillson Wrench (look for the trademark). Also write our nearest office for descriptive booklet.

(Continued from Page 83)

the development of a remarkable defense system by the Germans. For a depth of twenty kilometers they had continuous defenses, and to help out this elaborate system there was a zone of devastation an attacking army would have to cross in any move against them.

The job intrusted to the Americans was to break through the successive fortified zones, the Kriemhilde-Stellung, or Hindenburg Line, on the front Brieulles-Romagne sous Montfaucon-Grandpre; having done that they were to press toward Mézières and bring about the fall of the Hindenburg Line along the Aisne River in front of the French Fourth Army. This French army was to attack to the west of the Argonne Forest.

It was a tremendous undertaking, the most difficult on the Western Front, but success would precipitate the crumpling of all the German armies in France and Belgium. This region was vital to the enemy; hence the convergence of successive defensive positions which rendered all that country he held a dense mass of fortified points; hence the steady flow of his divisions to this front from other sectors.

The reasons for this desperate defense are plain enough. The German armies in Northern France depended upon two great railway systems, one passing through Liège and the other having as its vital section the line Carignan-Sedan-Mézières, with lines coming from Luxemburg, Thionville and Metz. No other important railroads were available, and the Germans had to rely on the Carignan-Sedan-Mézières line for the strategical movement of troops. If the enemy could not withdraw his forces through the narrow neck between Mézières and the frontier of Holland before this line was cut his ruin would be absolute.

A moderate penetration on this front meant much more than a deep one on any other. If the American Army could smash through for a gain of eighteen kilometers it would be equivalent to a penetration of sixty-five kilometers farther west; and as for the effect on the Germans, such an advance would be infinitely more menacing. That the enemy realized his vulnerability here had been evidenced by his herculean efforts in 1916 to improve his position through the reduction of Verdun, and by the tremendous labors he had put forth since then in building up defensive positions. If he were driven back here the jig was up, and he knew it.

The terrain also aided the Germans, as there were great natural barriers to an army's advance. The heights east of the Meuse afforded the enemy excellent artillery positions for oblique fire on the western bank, and his right flank was covered by batteries located in the almost impassable Argonne Forest. Midway between this forest and the Meuse were the frowning heights of Montfaucon, which had been strongly fortified. Densely wooded fastnesses and other naturally difficult places offered ideal positions for machine-gun nests. And the Germans certainly utilized them.

So complete had been the success of the St.-Mihiel operation that on the second day of that attack reserve divisions and army artillery units were withdrawn and directed toward the Argonne Front. Things were speeding up everywhere.

An Immense Traffic Problem

"The movement of the immense number of troops and the amount of supplies involved in the Meuse-Argonne battle," says General Pershing in his report, "over the few roads available, and confined entirely to the hours of darkness, was one of the most delicate and difficult problems of the war."

The congestion was terrific. How they ever evolved order out of the maelstrom of marching troops and trucks and wagons and artillery that choked those roads, all moving in the blackness of night, in rain and mud, is a marvel. But they got the tangles straightened out somehow; the artillery reached their positions, the infantry arrived at their jumping-off places and supplies came along for them.

To meet the American attack the Germans had ten divisions in line and the same number in reserve. All signs pointed to an expectation on their part that we would enlarge the St.-Mihiel operation into an advance on Metz, and successful ruses were carried out to encourage the enemy in this belief.

A violent artillery fire of preparation opened at 2:30 on the morning of September twenty-sixth, and three hours later the infantry jumped off, accompanied by tanks. The nine divisions which led the attack were the Thirty-third, Eightieth, Fourth, Seventy-ninth, Thirty-seventh, Ninety-first, Thirty-fifth, Twenty-eighth and Seventy-seventh. There were six divisions in reserve, and the First Army had 2700 guns, 189 small tanks and 821 airplanes. Americans manned 142 of these tanks and 604 of the airplanes—in our previous actions these arms had been largely manned by the French and British.

The Americans encountered a critical problem at the very outset of this battle—the restoration of communications across No Man's Land. Only four roads were available and during the bitter fighting earlier in the war the artillery fire had virtually destroyed them. The soil was spongy; we lacked materials. But engineers are a hard breed to stump; they fixed up communications somehow and made possible the movement of troops, artillery and supplies.

The fighting was fierce and dogged. On each side it seemed to be felt that the end was near, and each army put all it had into the effort, straining for a knock-out. So bitterly was every foot of ground contested that in many cases no quarter was asked or given. Men fought until they dropped, without thought of surrender.

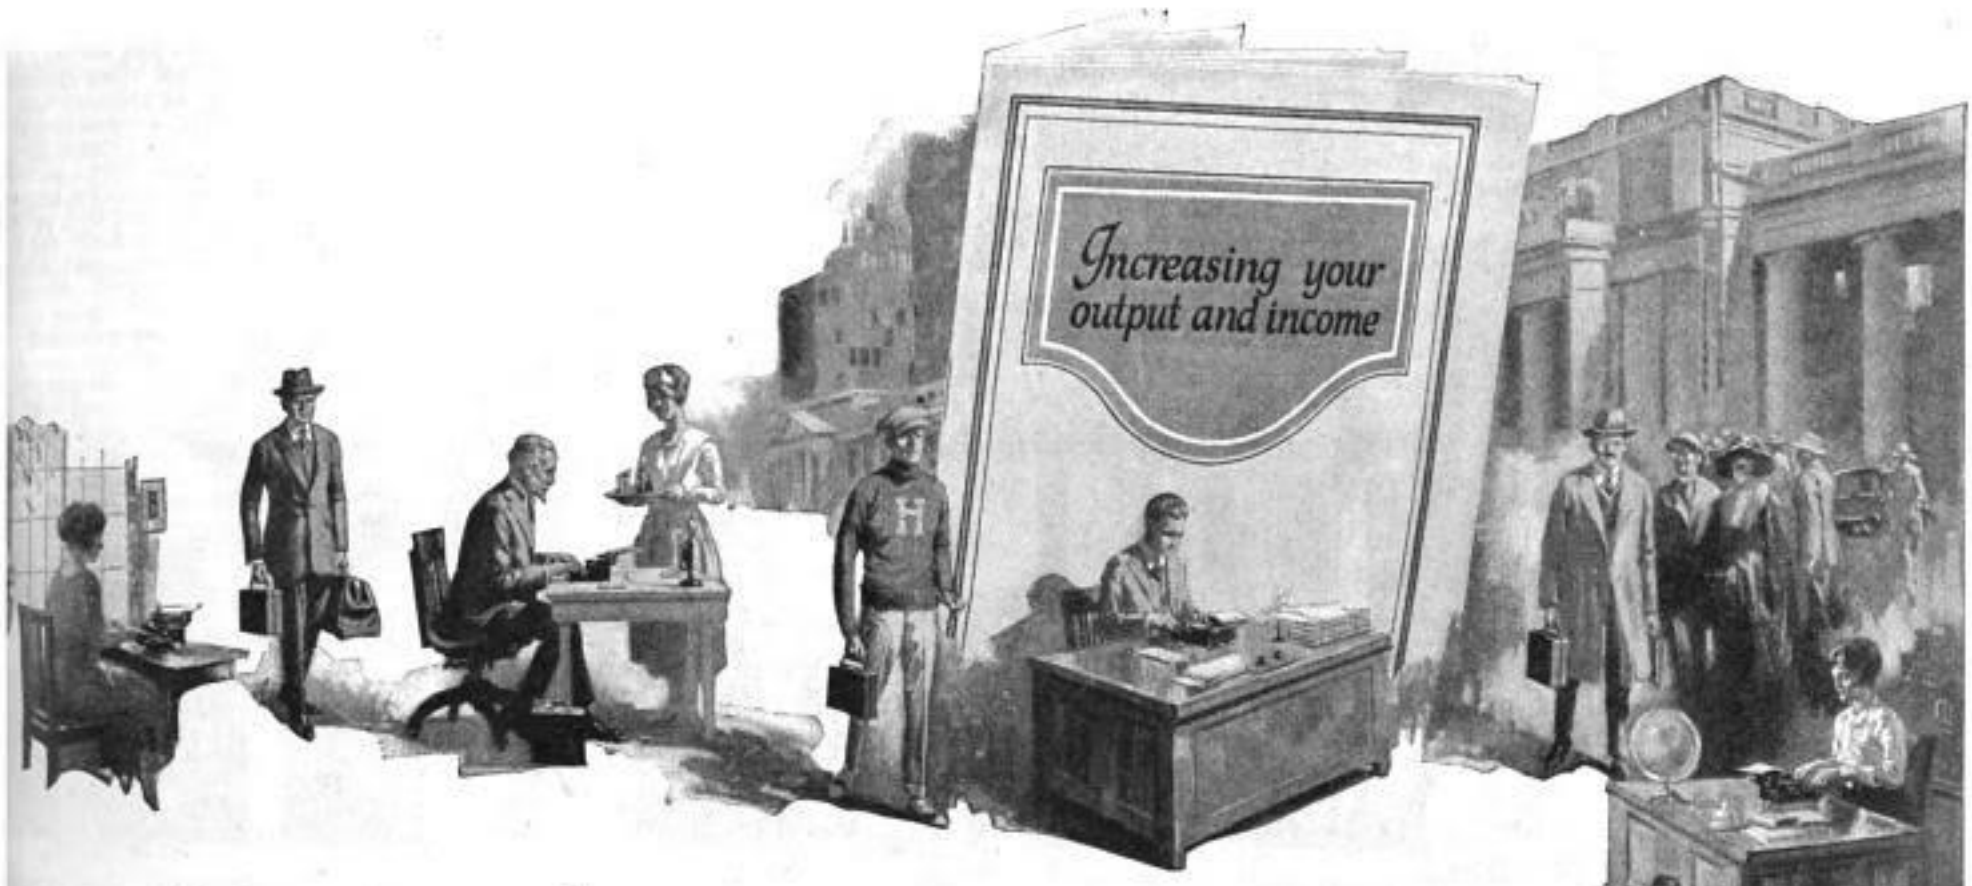
With No Thought of Quitting

The ground over which the Americans advanced was exceptionally rugged and difficult—steep heights, dense woods, farmlands intersected by ravines and streams, with fortified villages commanding all the approaches. It rained, and there were heavy fogs; they struggled through the thick mud and the blackness of night against terrific machine-gun fire and a crashing inferno of shells. They moved in waves up the slopes of plateaus whose ridges were a living flame of enemy fire and stormed the positions. They charged machine-gun nests and bayoneted the gunners. With rifle fire and hand grenades and the cold steel they cleared the Germans out of farm buildings and villages. And all the while the world rocked and quivered under the thunderous clamor of thousands of guns, red-hot from the furious speed.

Sleep was something to be snatched when a man could get it. Men grew sick, utterly weary and sick at heart, from cold and hunger and lack of rest, that death held no terrors for them. They would ignore bursting shells to take a nap. Yet aching, worn out, hungry, and desperate as they were, they fought their way forward and never dreamed of quitting. Human fortitude can rise to wondrous heights.

"Continuous fighting was maintained along our entire battle front, with especial success on the extreme left, where the capture of the greater part of the Argonne Forest was completed."—Pershing's report. "The enemy contested every foot of ground on our front in order to make more rapid retirements farther west and withdraw his forces from northern France before the interruption of his railway communications through Sedan."

At this critical time the First Army was confronted by an insufficiency of replacements to build up the worn divisions. The combat units required about 90,000 replacements early in October, but not more than 45,000 would be available by November first. Pershing had kept the cable humming with appeals to Washington, but results were meager.



With the British were two American divisions, and there were two more with the French. In this predicament Pershing decided that the American troops with the French armies must be recalled.

He held a conference with Marshal Foch and General Petain about this matter on October tenth. Both were of opinion that the American divisions were essential to the French effort, and that this was so became speedily evident, for before Pershing could effect the release of the two divisions in question he had to send the Thirty-seventh and Ninety-first divisions from his own hard-pressed army to the assistance of the Sixth French Army, which was in Flanders.

The American First Army was now fighting along a front of 120 kilometers and its strength exceeded 1,000,000 men.

How I increased my output and income with Corona

Mail the coupon for your copy of this fascinating booklet. Learn how this wonderful little Personal Writing Machine is helping men and women to success.

"MY CORONA paid for itself four times in a single month."—"Two hours of work each night netted me more than eight hours of hard work during the day."—"I find Corona invaluable as a private secretary."—"Six evenings' work more than paid for the machine."

These are just a few extracts from experiences of Corona owners. Many more are told in a new illustrated booklet which is yours for the asking.

Salesmen, business men, students, teachers, doctors, lawyers, —tell how Corona is helping them to do more work and better work. Famous authors and newspaper men tell how they simply could not get along without this tireless, willing little "secretary."

For $55 in easy payments or $50 cash, you, too, can own a Corona. Mail the coupon for your copy of the new booklet, and details of our Own-a-Corona Plan by which you can use a Corona while you are paying for it.

The sturdiest of all typewriters

NEARLY half a million Corona owners have learned that Corona is the ideal personal typewriter, because it is so simple and so sturdy that it practically never gets out of order.

The fact is that no typewriter in the world has proved itself able to stand the punishment Corona has taken during its 16 years of service, including a remarkable 4-year war record.

Weighing only 6½ pounds, Corona folds and fits into a neat, compact carrying case, and travels with you as easily as a small hand bag.

Residence from Plans by
Boyd, Abel & Gugert, Architects

Pipe replacement means ripped up floors and walls. Then new pipe and repairing of all the damage done. Reading Genuine Wrought Iron Pipe will outlast the building.

THINK OF TOMORROW WHEN YOU BUILD TODAY

THE home you build today—what will it be tomorrow? Will you be put to the expense of many repairs which could have easily been avoided by a careful selection of materials used in building? One important item in every home is the piping system.

You should give it serious consideration.

If a pipe rusts, it must be replaced, and the cost of tearing out alone is excessive. Walls and floors must be opened up at a cost that may run into thousands of dollars.

There is one certain way to avoid corrosion and its disastrous results: Use Reading Genuine Wrought Iron Pipe in both your plumbing and heating systems.

Reading Pipe lasts two to three times longer than cheaper pipe—it often outlasts the building itself.

Architects prefer to specify Reading because its long life reflects favorably on their good judgment. Plumbers prefer to use Reading because it expedites the work and assures them a clean-cut job.

You will prefer Reading because it will prove to you in years to come that it is ultimately the cheapest and best pipe to use.

"'Reading' on every length"

SEND FOR THIS BOOKLET—It contains instructive information on pipe costs and the best installation methods. Also literature on Reading Cut Nails, which hold and prevent squeaking floors.

READING IRON COMPANY

READING, PENNSYLVANIA

World's largest manufacturer of Genuine Wrought Iron Pipe—100% Pure

(Continued from Page 86)

and away the greatest combat force ever assembled under the American flag. It became necessary to relieve some of the exhausted divisions preliminary to another general assault.

In an attack along the whole front, launched on October fourteenth, the stronghold on Cote Dame Marie was captured and the Hindenburg Line was broken. Cunel and Romagne-sous-Montfaucon were taken; an advance was made north of Dommerance. The maximum gain since the offensive opened on September twenty-fifth was seventeen kilometers, and the enemy had been compelled to throw into the fight fifteen of his reserve divisions. Thus ended one phase of the battle.

In local operations during the remainder of the month the First Corps, under Dickman, advanced through Grandpre; the Fifth Corps, under Summerall, captured the bois de Bantheville; the Third Corps, under John L. Hines, completed the extremely difficult occupation of Cunel Heights; and the Seventeenth French Corps drove the Germans from the main ridge south of La Grande Montagne. By the end of October the enemy's elaborately prepared positions, including the Hindenburg Line, had been broken; the Argonne Forest was in American hands; an advance of twenty-five kilometers had been made; 18,600 prisoners, 370 cannon, 1000 machine guns and a great mass of material had been captured; and the Germans had increased the number of their divisions on this front from twenty to thirty-one. The vital railway artery through Carignan to Sedan was now imperiled.

"The demands of incessant battle which had been maintained day by day for more than a month had compelled our divisions to fight to the limit of their capacity. Commanding troops were held in line and pushed to the attack until deemed incapable of further effort because of casualties or exhaustion; artillery once engaged was seldom withdrawn and many batteries fought until practically all the animals were casualties and the guns were towed out of line by hand or trucks," reports Pershing. "The American soldier had shown unrivaled fortitude in this continuous fighting during inclement weather and under many disadvantages of position. Through experience, the Army had developed into a powerful and smooth-running machine, and there was a supreme confidence in our ability to carry through the task successfully.

"While the high pressure of these dogged attacks was a great strain on our troops, it was calamitous to the enemy. His divisions had been thrown into confusion by our vigorous assaults, and his morale had been shaken until his will to resist had well-nigh reached the breaking point. Once a German division was engaged in the fight, it became practically impossible to effect relief."

While the First Army was battling in the Meuse-Argonne, American troops were participating in attacks on other portions of the front. The Twenty-seventh and Thirty-first divisions under Major General Read fought with the British, and cooperated with the Australian Corps in breaking the Hindenburg Line at Le Cateau, the two American divisions capturing 6000 prisoners and advancing twenty-four kilometers.

A Purely American Effort

The Second and Thirty-sixth American divisions aided the French in their advance between Rheims and the Argonne. The famous Second Division took by assault the wooded heights of Mont Blanc, the key to the German position, and then by forging ahead into the village of St. Etienne, forced the enemy to fall back before its guns and yield positions he had held since September, 1914.

In response to Marshal Foch's urgent request General Pershing sent the Thirty-second and Ninety-first divisions in the middle of October to help the Sixth French Army in Belgium, although at that time he could not know which way to turn for reinforcements for his own battered divisions. The Fifth French Army was having a hard time of it, being unable to advance as de-

By November third the American division had driven the enemy across the Estinnes river and had firmly established themselves on the east bank; they also had taken Spitaals Bosschen, reached the Sambre and entered Audenarde.

Marshal Foch made many changes in the detailed plans for the operations of the Allied Armies as new conditions arose, but the mission of the American First Army remained unaltered. Accordingly General Pershing issued orders for a general attack on October twenty-eighth which would be decisive.

This attack was to be made simultaneously with one by the French Fourth Army, and its execution was delayed until November first. Buzancy and the heights of Barricourt were the immediate objectives; then the gain was to be exploited into a drive for Sedan.

"By strenuous efforts all available artillery had been moved well forward to the heights previously occupied by the enemy, from which it could fully cover and support the initial advance of the Infantry."—Pershing's report. "On this occasion and for the first time the Army prepared for its attack under normal conditions. We held the front of attack and were not under the necessity of taking over a new front, with its manifold installations and services. Our own personnel handled the communications, dumps, telegraph lines, and water service; our divisions were either on the line or close in rear; the French artillery, aviation, and technical troops which had previously made up our deficiencies had been largely replaced by our own organizations; and our army, corps and divisional staffs were by actual experience second to none."

In other words, our forces had really found themselves.

The battle opened on the morning of November first with two hours of violent artillery fire. "The Artillery acquitted itself magnificently, the barrages being so well coördinated and so dense that the enemy was overwhelmed and quickly submerged by the rapid onslaught of the Infantry"—Pershing. Maj. Gen. E. F. McGlachlin, Jr., commanded the American artillery in this offensive. "Our heavy artillery"—this was later—"was skillfully brought into position to fire upon the Carignan-Sedan Railroad and the junctions at Longuyon and Conflans."

The Race for Sedan

The Americans had taken the heights of Barricourt by nightfall of November first, had advanced to the Bois de la Folie, had captured Aincreville and Andevanne. They had broken through the Germans' last defense, overwhelmed their artillery positions and precipitated a retreat of the enemy forces about to be isolated in the forest north of Grandpre.

By the evening of the fourth the American forces held La Neuville, opposite Stenay, and had swept through the Foret de Dieulet to the outskirts of Beaumont; to the left they were eight kilometers north of Boult-aux-Bois; and on the following morning the advance toward Sedan continued at top speed.

Pershing wanted Sedan. At a conference with General Maistre, who commanded the French group of armies on the American left, the French general conceded that the military importance of the capture of Sedan was so great the Americans ought to occupy it if they could, regardless of the political and patriotic considerations which made a French occupation so desirable. Accordingly, memorandum for commanding generals First and Fifth Corps reads as follows: "General Pershing desires that the honor of entering Sedan should fall to the First American Army. He has every confidence that the troops of the First Corps, assisted on their right by the Fifth Corps, will enable him to realize this desire."

In transmitting this message Gen. Hunter Liggett drew attention to the favorable opportunity for pressing the advance. Mr. Junius B. Wood, of the Chicago News, wrote of this memorable event: "All roads leading into Sedan were registered by the German artillery. That means that from the new positions which their batteries took in the successive stages of the retreat they knew the exact range for every turn in the few roads possible to use in the American advance.

"The enemy had lived in that country for four years. It was all mapped, with the distance figured down to inches. In addition to this, though the German artillery had retired across the Meuse to the heights east of Sedan, German machine gunners remained on all points of vantage, contesting every foot of the advance. The race for Sedan was not only a race, but a running battle as well.

"Against this opposition men fought their way forward with endurance which was almost superhuman. The march, alone, which some of the regiments made was such as men are rarely called on to endure, even without constant death stalking every footstep. It was raining. Packs were soaked until they weighed nearer 100 pounds than the regulation 72.

"Shoes went to pieces on the rough road. Bloody tracks from bleeding feet marked each passing company. All the food they had was what they carried on their backs, and that was soon gone. The roads, jammed with troops, could not handle even the artillery and ammunition, which was given first place, while supply trains never reached them. At the hourly halts, oblivious to the shelling, men fell asleep in their tracks, only to be awakened to start plodding onward."

The French were also straining every muscle to reach the goal. "At the same time," says Mr. Wood, "the Twenty-sixth regiment, commanded by Lieut. Colonel Theodore Roosevelt, Jr., which had been eating up the kilometers throughout the night, had left the main road at Chehery, moved to the left across the Ardennes canal, and advanced up the west side of the canal and La Bar River, attacking the machine-gun nests and batteries. Eventually the Twenty-sixth captured those on the heights beyond St.-Aignan sur Bar.

"The Twenty-sixth, after it crossed the canal, was in the sector of the French Fortieth Division under General Laignelot. The sudden appearance of the columns of dripping Americans in the darkness caused a hurrying of French officers from dugouts, and much questioning and many exclamations.

"In a few minutes came an order to halt. It was not much longer before a French commanding officer and Lieut. Colonel Roosevelt were together. . . . The French officer explained that the Americans were in his sector. The American officer explained that he was on the route given him to reach Sedan.

"'But my orders come from the Marshal of France.'

"'And mine come from my commanding officer, sir,' said the American lieutenant colonel.

"'If you try to pass my men they have orders to fire on you,' was the ultimatum of the officer.

"'My orders are to advance, sir, and the only way your men can keep ahead is to march faster than mine,' was the reply, and the advance continued."

No shots were fired. Probably the French officer's reference to his orders was inspired by the following from General Laignelot to Lieutenant Maudet for transmission to the American infantry and artillery brigades: "The limit given by the high command between the Fortieth infantry division and the American brigade is not the national highway, but the road Chehery-Bulson-Thelonue, after leaving Chehery. I am compelled to make my artillery intervene there. I pray you, my brave neighbors, to call this to the attention of your artillery commander, who is making a mistake."

The Appeal for an Armistice

No Americans entered Sedan. They could easily have done so, but orders from the Allied High Command prevented. Nobody captured the famous stronghold. Under French and American artillery fire, the Germans evacuated it, and after the armistice French forces made a peaceful entry, with fine effect. But the First and the Forty-second will argue together until kingdom come as to which won nearest to the goal.

Colonel Reilly, commanding Eighty-third Brigade: "I went over the hill, and the dead of the Forty-second were three hundred yards beyond any dead of the First."

Private James L. Strow, Twenty-eighth Infantry, First Division: "I went up that hill more than once that day, and could not find any other soldiers than those of our own battalion on it. None could be found ahead of our men."

So there you are.

By November fifth the Americans forced a general withdrawal of the Germans from the strong positions they had held so long on the hills north of Verdun. Two days later the enemy was being driven out into the swampy plain of the Woevre; our troops held the heights dominating Sedan; we had advanced forty-one kilometers in five days and had cut the Germans' main line of communications. In this desperate extremity the German High Command appealed on November sixth for an immediate armistice.

Foch's orders were explicit: "The enemy, disorganized by our repeated attacks, retreats along the entire front. It is important to coördinate and expedite our movements. I appeal to the energy and initiative of the Commanders-in-Chief and of their armies to make decisive the results obtained."

Accordingly the Second American Army pressed the enemy along its entire front. Foch had requested the use of six American divisions for an attack which the French were preparing in the direction of Château-Salins. Pershing agreed to furnish them, but stipulated that they should operate as an American army with General Bullard as commanding officer.

"In the face of the stiff resistance offered by the enemy," reports Pershing, "and with the limited number of troops at the disposal of the Second Army, the gains realized reflected great credit on the divisions concerned."

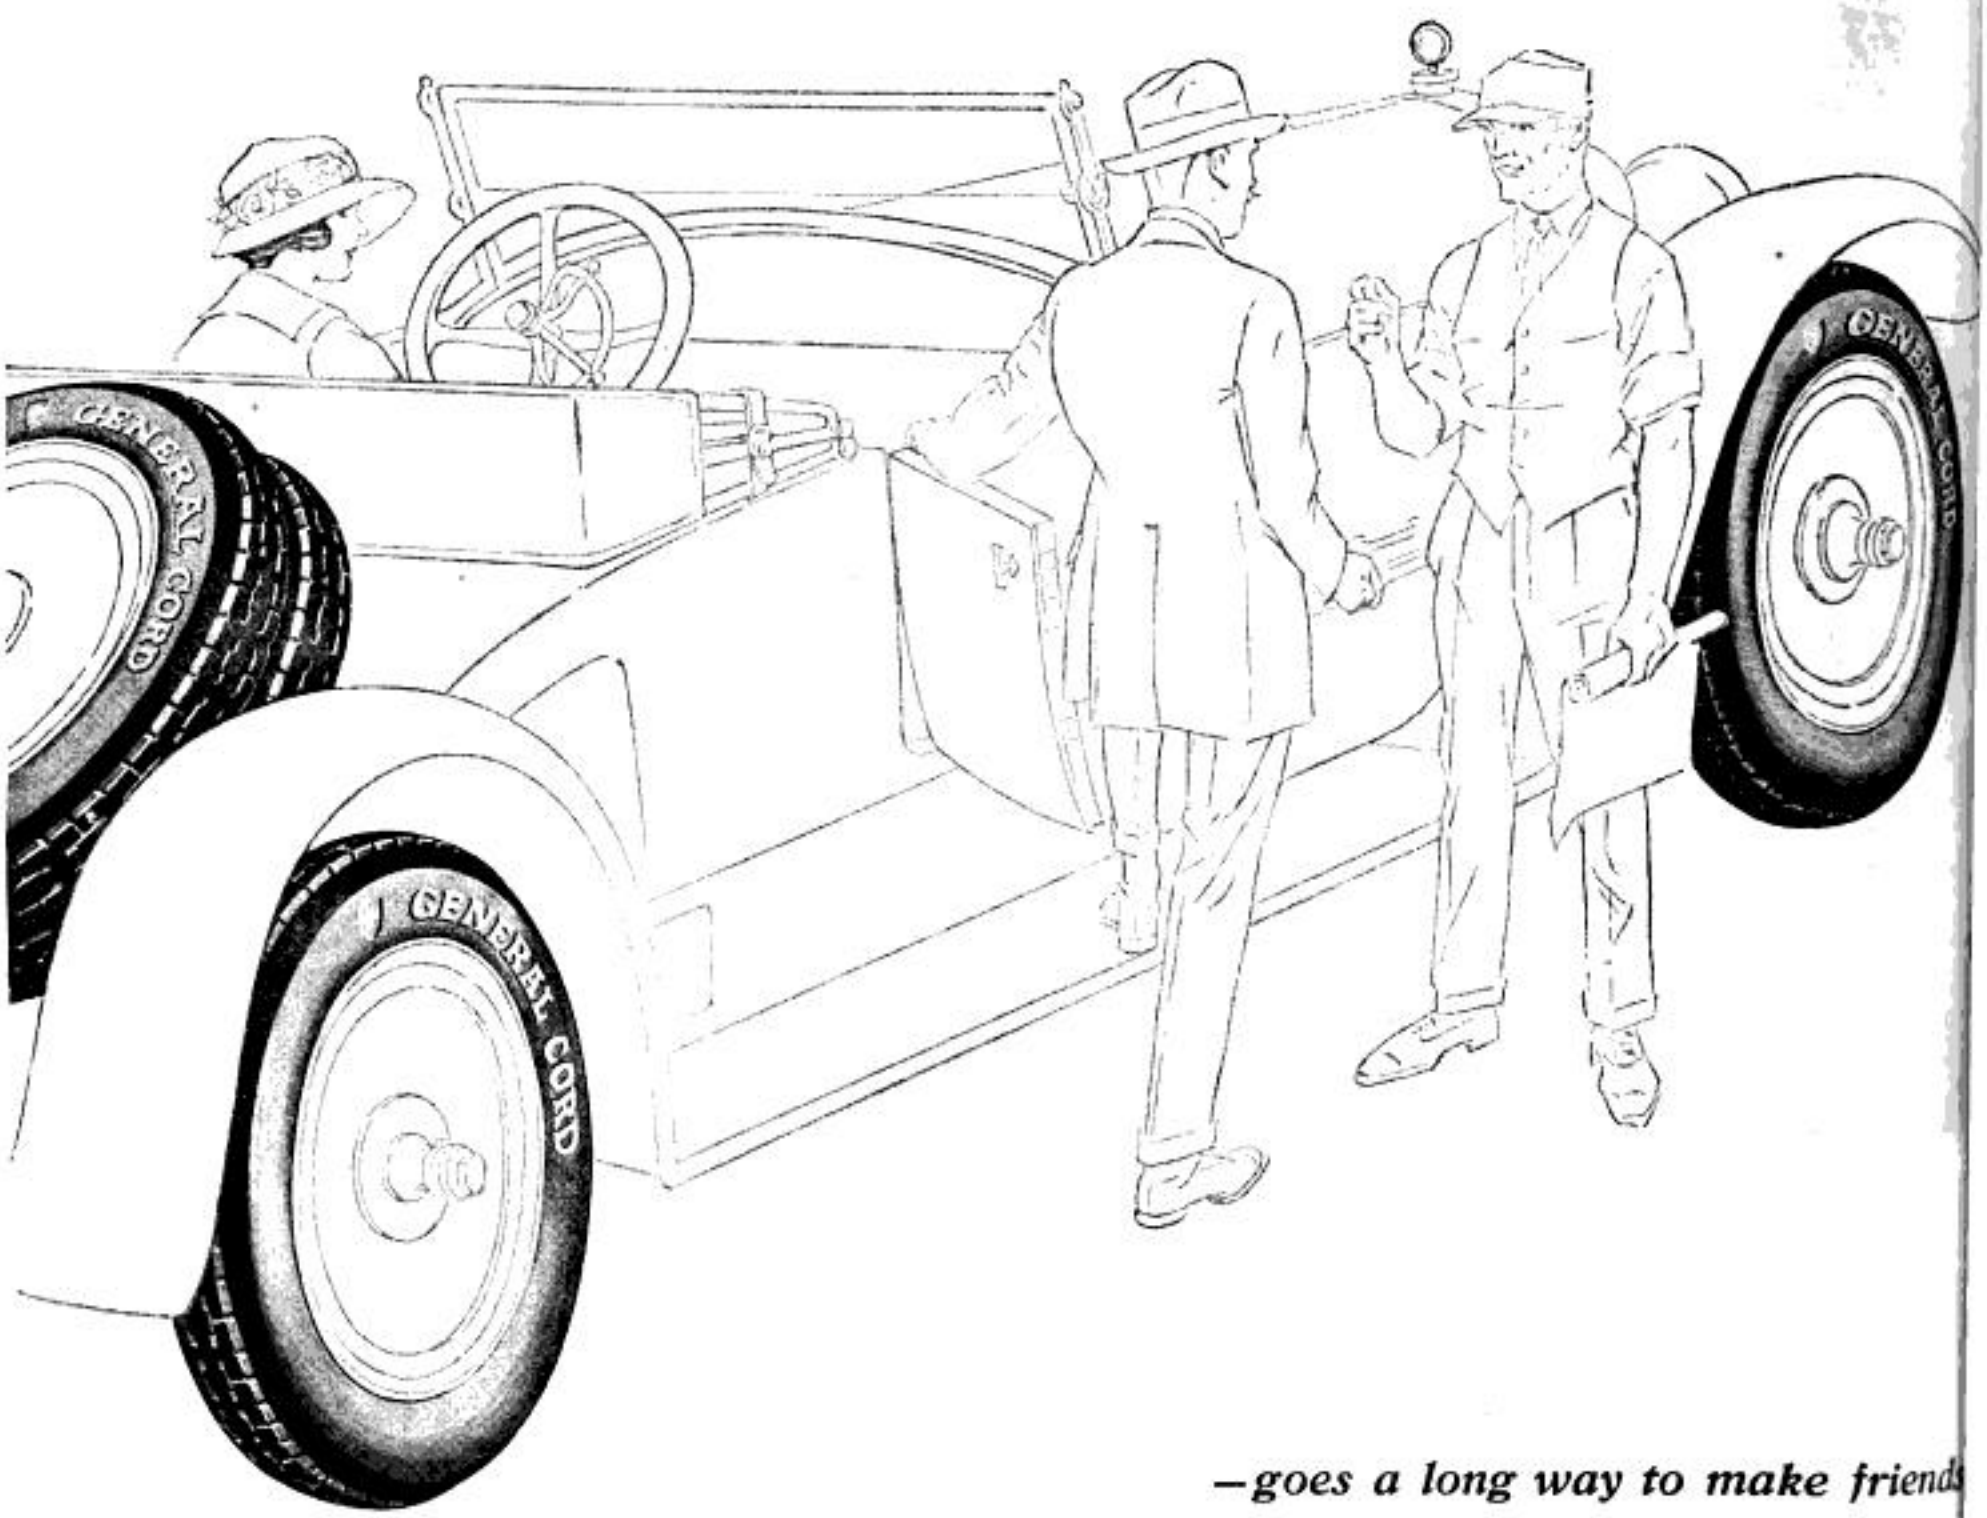
Weakened French Morale

The armistice went into effect at eleven o'clock on the morning of November eleventh. The guns hushed. A sudden eerie quiet fell over that far-flung front. The stillness was so intense after the quivering thunder of months that veterans gazed at one another uneasily, tingling with apprehension.

East of Beaumont some desultory fighting occurred after that hour, owing to the fact that the Americans had advanced so rapidly at that point they got out of touch. The Germans complained bitterly about this.

"Between September twenty-sixth and November eleventh," says Pershing in his report, "twenty-two American and four French divisions, on the front extending from southeast of Verdun to the Argonne forest, had engaged and decisively beaten forty-seven different German divisions, representing 25 per cent of the enemy's entire divisional strength on the western front. Of these enemy divisions twenty had been drawn from the French front and one from the British front. Of the twenty-two American divisions twelve had, at different times during this period, been engaged on fronts other than our own. The First Army suffered a loss of about 117,000 in killed and wounded. It captured 26,000 prisoners, 847 cannon, 3000 machine guns, and large quantities of material."

That the French armies would have found difficult any real offensive without the support of our troops was proved throughout all the operations of the summer and fall of 1918. Even with victory crowning the Allied arms, French troops did not seem equal to a great attack without American help. On November fifth, with the Germans eager for an armistice, Foch wrote to Pershing: "In order to avoid any let-up in the constant pressure upon the enemy and to surprise him by a new attack on an unguarded portion of his front, I have had General Petain prepare a surprise offensive in Lorraine to be made with fifteen or twenty divisions, which is all that French resources now make available. This is not going to be enough to give sufficient amplitude to the enterprise. Under these conditions, I request you to place six American divisions"—about 180,000 men—"in readiness to be added. You would take these from your reserves. They would have to make their movement by marching."



And that the French had not even now abandoned their plan to break up the American forces and thereby get the benefit of their incorporation in the French armies is proved by Marshal Foch's reply to General Pershing's request that the six American divisions he asked for the Lorraine operation should be employed as an American army under General Bullard, who would act, however, under orders of the French.

"It is at the present time impossible to consider the grouping of these six divisions in an American army," Foch replied on November eighth. "In the first instance, such a disposition would delay the operation as a consequence of the obligation of

THE GENERAL CORD TIRE

—goes a long way to make friends

Digitized by Google

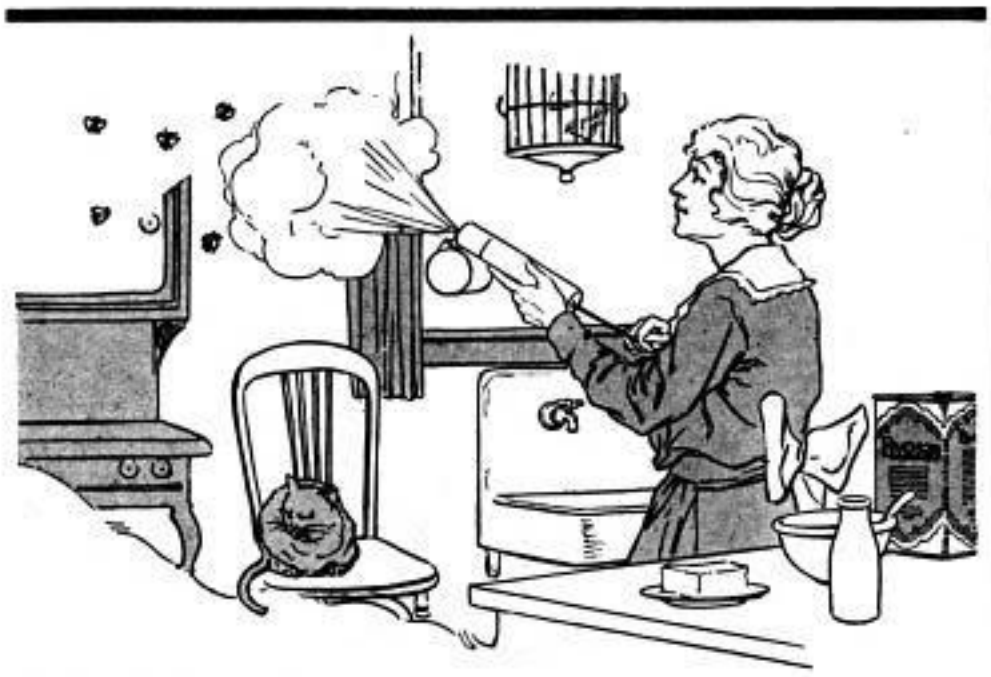
General achieves new leadership in sales of cord tires

Is not the success of a tire maker—the manner in which the sale of his tire increases—a good indication of the character of the tire? May it not be a reliable guide for shrewd tire buyers—those who seek the utmost in service and tire mileage?

In 1921 General's dealers sold one-third as many Cord Tires as the dealers of each of the two largest tire-making concerns and one-half as many as the dealers of the next largest; thus gaining new place among the leaders.

In forty-three of the hundred largest cities, the most successful tire dealer—the one with the largest and most successful business—is the General dealer.

In fifteen more of the hundred largest cities, the General dealer shares leadership or stands second.



While in the seventy cities next in size (from 25,000 to 65,000 population) the General dealer leads in twenty-six.

The most astonishing fact, to some, is that all General Tires are bought for cars in use. Generals are not sold to automobile manufacturers for "original equipment." Generals are sold only through dealers. Thus, each purchase of a General represents the mature judgment of an experienced tire user. And the General factory is today operating 100% capacity.

To profit by the experience of seasoned tire users, put a General on your car—*and watch it*. The General dealer nearest you has a tire exactly suited to your needs.

Kills flies by the roomful

SUPPOSE there were 106 flies around your kitchen—lighting on the meat platter, buzzing near the milk pitcher and getting mired on a freshly frosted cake.

Suppose, inside of five minutes every one of the 106 flies were dead and you merely had to sweep them up in a dust pan.

Wouldn't you say "Well, this *is* a miracle!"

Yet this is exactly what happens when you use harmless Flyosan.

Flyosan is a non-poisonous liquid which you apply with an ordinary garden sprayer.

A can of Flyosan and an ordinary inexpensive sprayer are all you need. Getting rid of flies is as easy as using a feather duster.

Most remarkable of all, Flyosan is harmless to everything except insects.

Flyosan is equally effective against flies, mosquitoes, cockroaches, bed bugs, ants, lice, moths, fleas and all other insect pests.

If your drug, grocery or hardware store does not have Flyosan send us a dollar and we will mail you an introductory package containing a pint of Flyosan and a sprayer.

requesting plans and orders from a new commander, but the Commanding General, Tenth French Army, who would have those divisions under his command, will make his disposition to have those divisions operate as far as possible on his left, and I will for my part issue orders for those divisions to be speedily replaced under the American High Command. The accomplishments of American divisions under your orders are too fine for me not to look forward for every means of leaving them under your command. The question to-day is above all to act very speedily in the organization of the Lorraine operation."

Others than the military leaders continued anxious for the employment of the American forces in the French armies. The French political chiefs also bestirred themselves to that end. As late as November fourth they still clung to the hope that their plan might be adopted, for on that date M. Albert Thomas, member of the War Committee and ex-Minister of Munitions and Armaments, submitted to a member of the American General Staff a letter which he, M. Thomas, had written to Premier Clemenceau as far back as August 22, 1918. M. Thomas wished the information contained in it to find its way to the proper quarters.

"If we wish to maintain these 100 divisions," said the letter to Clemenceau, "which I beg leave to say are incomparable among the Allied troops, we naturally fall back on the expedient of completing their effectives by American troops. One American regiment of 3000 men per division would make 300,000 men—that is the number that arrives from America in one month.

"And then, I wonder if the idea of amalgamation, on which we have insisted so strongly, is definitely abandoned. I wonder whether it is possible that President Wilson and the American authorities will persist in not understanding the advantage there is in maintaining the 100 French divisions, whether they will not finally understand the advantage there would be for the American troops to receive their training in such divisions as ours. As soon as it is understood that the American Army is constituted as the United States desires to have it, the utilization of the 300,000 men of this army in French divisions might easily be accepted by them."

On the margin of the letter is this notation: "The idea dies very hard."

French expectations of what the United States ought to do for France did not abate; victory seemed only to fan them. Early in November, M. André Tardieu, French High Commissioner to the United States, made certain statements publicly which virtually assumed that the restoration of France, both by American money and by the labor of American troops, was incumbent upon the United States. The French press eagerly seized upon these statements and played them up to stimulate hope and keep the French people from realizing their true situation.

A fortnight after the armistice a report was made to the American General Headquarters that the French had served notice they would move no more large American troop units by rail until further notice. This report stated that several efforts had been made to obligate the Americans to the restoration and maintenance of certain roads. "I have been struck by the fact," reported Colonel Connor, "that the French appear to be acquiring the conviction that, in expecting American labor and money to bear a large part of the burden of restoring France, they are but demanding their just dues."

On November 23, 1918, Marshal Foch wrote to General Pershing:

My dear General: The reconstitution of the soil and the means of habitation of the devastated regions will necessitate considerable labor and effort. It will be impossible for France to furnish, within the time limit set for restoring the country to the economic condition which is indispensable to it, this labor and effort after she has been reduced to her own resources.

The French Army in the zone which it occupies will, from the present moment, cooperate in the work of reconstitution by furnishing to the civil authorities who are charged with it, the assistance of units at rest, and the available material resources.

The American Army has, like the French Army, a great part of its units at rest. Those units which are stationed near the devastated regions, or near those which are encumbered by trench systems, and so forth, could render precious service to our population.

I do not doubt that your sentiments will lead you to continue to give France, during the period of the Armistice, the aid which you have so generously given her during the war. I am equally convinced that your troops will put all their soul into repairing, so far as they are able to do before leaving France, what has necessarily been destroyed during the course of operations.

The work which would be asked of these troops would be of the same nature as that to which they have become accustomed during the campaign. The nature of the various classes of work and the methods of execution are set forth in the note herewith.

I would be very much obliged if you will be kind enough to inform me as to what extent and in what manner it appears to you possible to assist in this work by the coöperation of the troops and of the services under your orders.

Very sincerely yours, F. Foch.

The note on method which he inclosed provided for the work of reconstitution under direction of the French civil authorities. This work would consist of filling in trenches, removing barbed wire, cleaning up cities and villages, sorting and storing material of all kinds, placing roads and other means of transportation in proper condition, removal of a lot of barracks, the construction of some they needed; working of quarries, sawmills, and so on, and repair of buildings.

I have not been able to find that Pershing ever replied directly to this letter, but he said in a cable to the War Department in Washington: "It would be unjust to them to use our soldiers as laborers." He also stated at the same time that the temper of the American soldiers precluded the possibility of such employment, not to mention sentiment at home. Pershing recommended that the Government should announce a clear, definite policy in respect to the return of our troops which would admit of no misunderstanding by the French.

Editor's Note—This is the fourth of a series of articles by Mr. Pattullo. The next will appear in an early issue.

PROTECTING THE SMALL INVESTOR

(Continued from Page 7)

promotions fostered by others and men who, like oil operators, use their own capital in enterprises which they themselves conduct and which nevertheless are often conceived in ignorance and foolishness.

The losses are large and serious enough without exaggerating them, and nothing is to be gained by falsely minimizing the extent to which the American people save and invest their savings securely. Certainly the millionaires are not the only men and women who own the $20,000,000,000 of Liberty Bonds, the billions of dollars of state and municipal bonds, the $56,000,000,000 of life-insurance policies, and the billions of dollars of savings-banks deposits, sound mortgages, bonds and stocks.

The statement that we are not a nation of savers and investors should be made with care and discrimination. If it is made for the purpose of inducing people to save more it may be laudable enough. But the fact is quite commonly overlooked that Americans provide for their families and to no little extent for themselves by means of life insurance. Many a man feels that if only he buys enough life insurance and provides for his family in this way it is all right for him to gamble with the rest of his money or with a part of it. What may be called the thrift and investment side of his nature goes into life insurance.

But this is not the whole story. Having bought life insurance the man has made a secure investment. But something fatal seems to happen when he dies and a lump sum of $5000 or $10,000 is paid over to his wife or children or nephews and nieces, or in case he has purchased an endowment policy, when it is paid, to himself. There is no doubt that a large part of all the unwise investments follow upon the receipt of life-insurance money. Americans do not distinguish between principal and interest after the fashion of Europeans. A young American who receives $50,000 life insurance money from an uncle or as any part of the latter's estate would say that he was worth $50,000, whereas the young European would consider himself worth only the annual income or annuity upon the same.

Insurance companies attempt to sell as far as possible policies the proceeds of which shall not be paid in a lump sum but in the form of an income. But though such insurance has no doubt increased in popularity it has not been adopted widely enough to make more than a dent in the unwise investments which follow upon the receipt of the proceeds from the ordinary form of insurance. Most people want the money all at once, and if the insurance company attempts to advise them to the contrary there is likely to be resentment and suspicion. The recipient knows that the money is left with the company it will be safe enough, but will not pay more than 5 per cent at the outside. The beneficiary is confident of placing it to better advantage than that, and the general reaction is something like this: "What are you trying to hold my money back for, anyway? What ax have you to grind in trying to keep my money?"

Treasury Savings Certificates

Most of the recipients are women, the majority of whom have relatively little business experience, and who are often vicious of advice from legitimate sources although ready enough to listen to the lure of the stock salesman who promises an income large enough to maintain them in comfort.

Possibly in time a system will be worked out by which insurance will be bought only in connection with a trust deed in a bank or trust company. In other words, the money will not be turned over unconditionally to the beneficiary but will be administered in her or his behalf by a sound banking institution. But anything as sensible as this exists at present only in a tentative and fragmentary form. Meanwhile, one life-insurance company alone out of many hundreds pays out during each minute of each business day of eight hours more than $630.16 in cash to people, more than half of whom are almost totally ignorant of all financial and investment matters.

It cannot be stated with too much emphasis that anyone who really wants a safe investment with a good interest return can secure the same without the slightest difficulty. On December fifteenth last the wife of the President of the United States purchased from Mr. Mellon, Secretary of the Treasury, the first Treasury Savings Certificate sold by the United States Government. These are now on sale at all post offices and many banks and can be had by mail direct from the Treasury Department. They pay 25 per cent on the money invested for a five-year period. They are guaranteed by the Government to pay this figure, and guaranteed against any decline in price. They are beyond question the safest and surest investment available to any American citizen, and if they are not good, then nothing in the world is.

There has been a lot of talk and cheap platitudes about the necessity and advantages of thrift and savings, but a man cannot dig a garden without tools and he cannot save without a secure place to put his money. A splendid work is done by the savings banks, but they do not cover the entire country by any means. There are millions of people whom they do not reach. Life insurance covers an even wider field, but it is only partially a savings and investment proposition. The Government is the one agency that can appeal to everybody, and at last, after much experimenting during and following the war, it has devised a permanent form of small investment which is simple, convenient and which meets the needs of all except the wealthiest classes.

An Ideal Investment

These certificates are always sold at the same price, $20, $80 and $800. In five years they are paid off at $25, $100 and $1000 respectively. This is 4½ per cent interest compounded or 5 per cent simple interest. It is 25 per cent in five years. There is no state or local tax on these certificates and no normal Federal income tax. Any individual can buy as much as $5000 each year, and the same amount is available to any member of his family. They can be redeemed at any time before the five years are up, at the full amount paid, plus 3½ per cent interest, by sending them to the Treasury Department. Since the name of the owner is registered at Washington the loss of the certificate does not mean the loss of the investment. There is no risk, depreciation in value or promoter's or broker's commission to pay, there is liberal interest and an immediate cash withdrawal value.

People were asked to buy Liberty Bonds during the war on patriotic grounds. Although the bonds have now recovered in value they declined severely for a time and many people lost heavily. Though the Government is selling Treasury Savings Certificates partly because it still needs money, another reason is to give people something in the way of an investment that cannot decline in price to make up for the losses sustained during the war.

If the attention of the public can be drawn widely enough to these certificates the stock swindler should fall upon lean times. He fattens of course from the recipients of the various state soldier bonuses and will take advantage of any Federal bonus which may be paid. Even without considering the proposed Federal bonus something like $42,000,000 is now being paid out each month in the form of 600,000 checks to veterans. All veterans who have any form of government allowance are sought out, not only by stock swindlers but by every salesman who has goods to sell on the installment plan. To the extent that they can be reached first by the Treasury Savings Certificates a lot of money will be saved in this country.

Many people are not in a position to study or analyze investments. Many have no time for such study. There is the country doctor who works day and night and does not have time even to keep up with the most important developments in his own science. Most town and city doctors are little if any better off. Quite often their incomes are relatively large, and too often they fall victims to the get-rich-quick lure. But the doctor can put his money into this form of government security without any worry for the future.

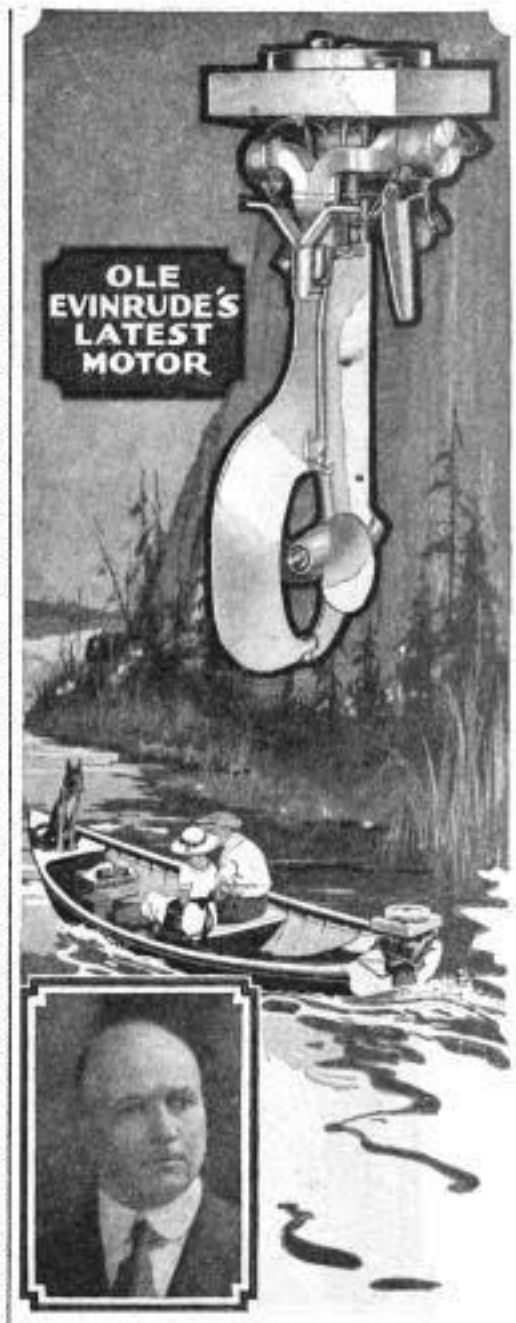
When it comes to the direct purchase of the general run of securities offered to the investment public it must be recognized that one almost insuperable obstacle to the public's greater success is the high cost of bringing to their attention the legitimate offerings. The American people have bought life insurance on a vast scale because the insurance companies found a way of selling through solicitors to even the smallest buyers, and yet making it pay.

With sound securities unable to pay the cost of small-lot distribution the attention of the small investor is rarely called to the legitimate agencies for their distribution, and he hesitates to approach them on his own initiative. It is right here that the get-rich-quick dealer comes in, the chap who talks all profit. Not only is the field wide open to him but he has a great natural advantage in that his commission or margin of profit is from the very nature of the case far larger than is earned by those who handle high-grade securities.

For there is no more generally recognized rule in all the financial markets of the world than that the more solid, conservative and staple the character of the security, the smaller the commission. On government and municipal bonds it is reduced to the smallest fraction of 1 per cent, whereas on a semifraudulent oil-stock promotion it may run up to 60 or 70 per cent.

No wonder the reputable investment banker cannot send salesmen out to sell ten-dollar New York City bonds. A large firm that makes a specialty of dealing in municipal bonds once figured that it cost $7.50 every time it handled one of these ten-dollar pieces, and decided that it could not charge less than two dollars for the service, but customers complained after this charge was put on that they were being stung.

Competition between the reputable investment banker and the fake stock promoter is so impossible that the former is obliged to leave the field almost entirely to the latter, except where the sale is large enough to make it worth his while. This is the literal fact, but what the fake stock promoter usually says is that the big financial interests have made all their money from stocks, and consequently he has now organized this particular company for the benefit of the man of small or medium means, so that he, too, may clip coupons or draw dividend checks and make more money in a day than he has been accustomed to make in a week.



Small Business Accepted

But though the reputable dealer in legitimate securities cannot search out the man with $100 or $500 it is indeed rare that such business is refused when it comes of its own accord. It will be recalled that in a previous article President Cromwell, of the New York Stock Exchange, said in his opinion an investor should keep his money in the bank until he had $500. President Howard F. Beebe, of the Investment Bankers Association, said that he would place the minimum at $1000, and had advised hundreds if not thousands of persons who had less than this amount to put their money in a savings bank instead of trying to buy securities, although he is in the business of selling securities himself.

Although many of the most experienced authorities agree with this view, there is plenty of difference of opinion on the subject. But whatever the views of experts may be there will always remain great numbers of individuals who wish to invest less than $1000 directly in bonds or stocks. And here another difficulty appears. It is almost impossible for the inexperienced small investor to choose among the tens of thousands of available securities offered for sale or among the complicated agencies which offer them.

There are ordinary commercial banks and trust companies with investment, bond or security departments; there are dealers in investment securities technically and as a rule incorrectly known as investment bankers; and there are brokers who belong to recognized stock exchanges. All three classes overlap and duplicate to a considerable extent, and from all three bonds and stocks of every variety of excellence, or the lack of it, may be had. Then, too, there are concerns which are entirely reputable that combine the work of security distribution with promotion and even

(Continued on Page 98)

The Big Surprise of the Industry

EVERYWHERE, outdoor folks predicted this surprise would come. They knew Ole Evinrude's determination to reach the ultimate in outboard motor development. They knew his hopes had been centered on that achievement from the infancy of the industry. They were confident the Elto Light Twin would be the fulfillment of his ideals.

But they didn't look for such a marked advance in outboard motor engineering. Even those within the industry were taken by surprise when the many distinctly original features of Ole Evinrude's latest motor were announced a year ago.

The Elto weighs but 48 lbs. It develops full 3 H. P. Has improved ignition—instant and easy starting. Twin cylinder construction—smooth, quiet running. Tilts automatically—a big safety factor. Steers comfortably from any part of the boat. Operates at perfect trolling speed. Rudder folds for carrying. A rugged light-weight. A beautiful motor.

Write to Ole Evinrude's *new organization* for descriptive literature and name of the Elto dealer nearest you.

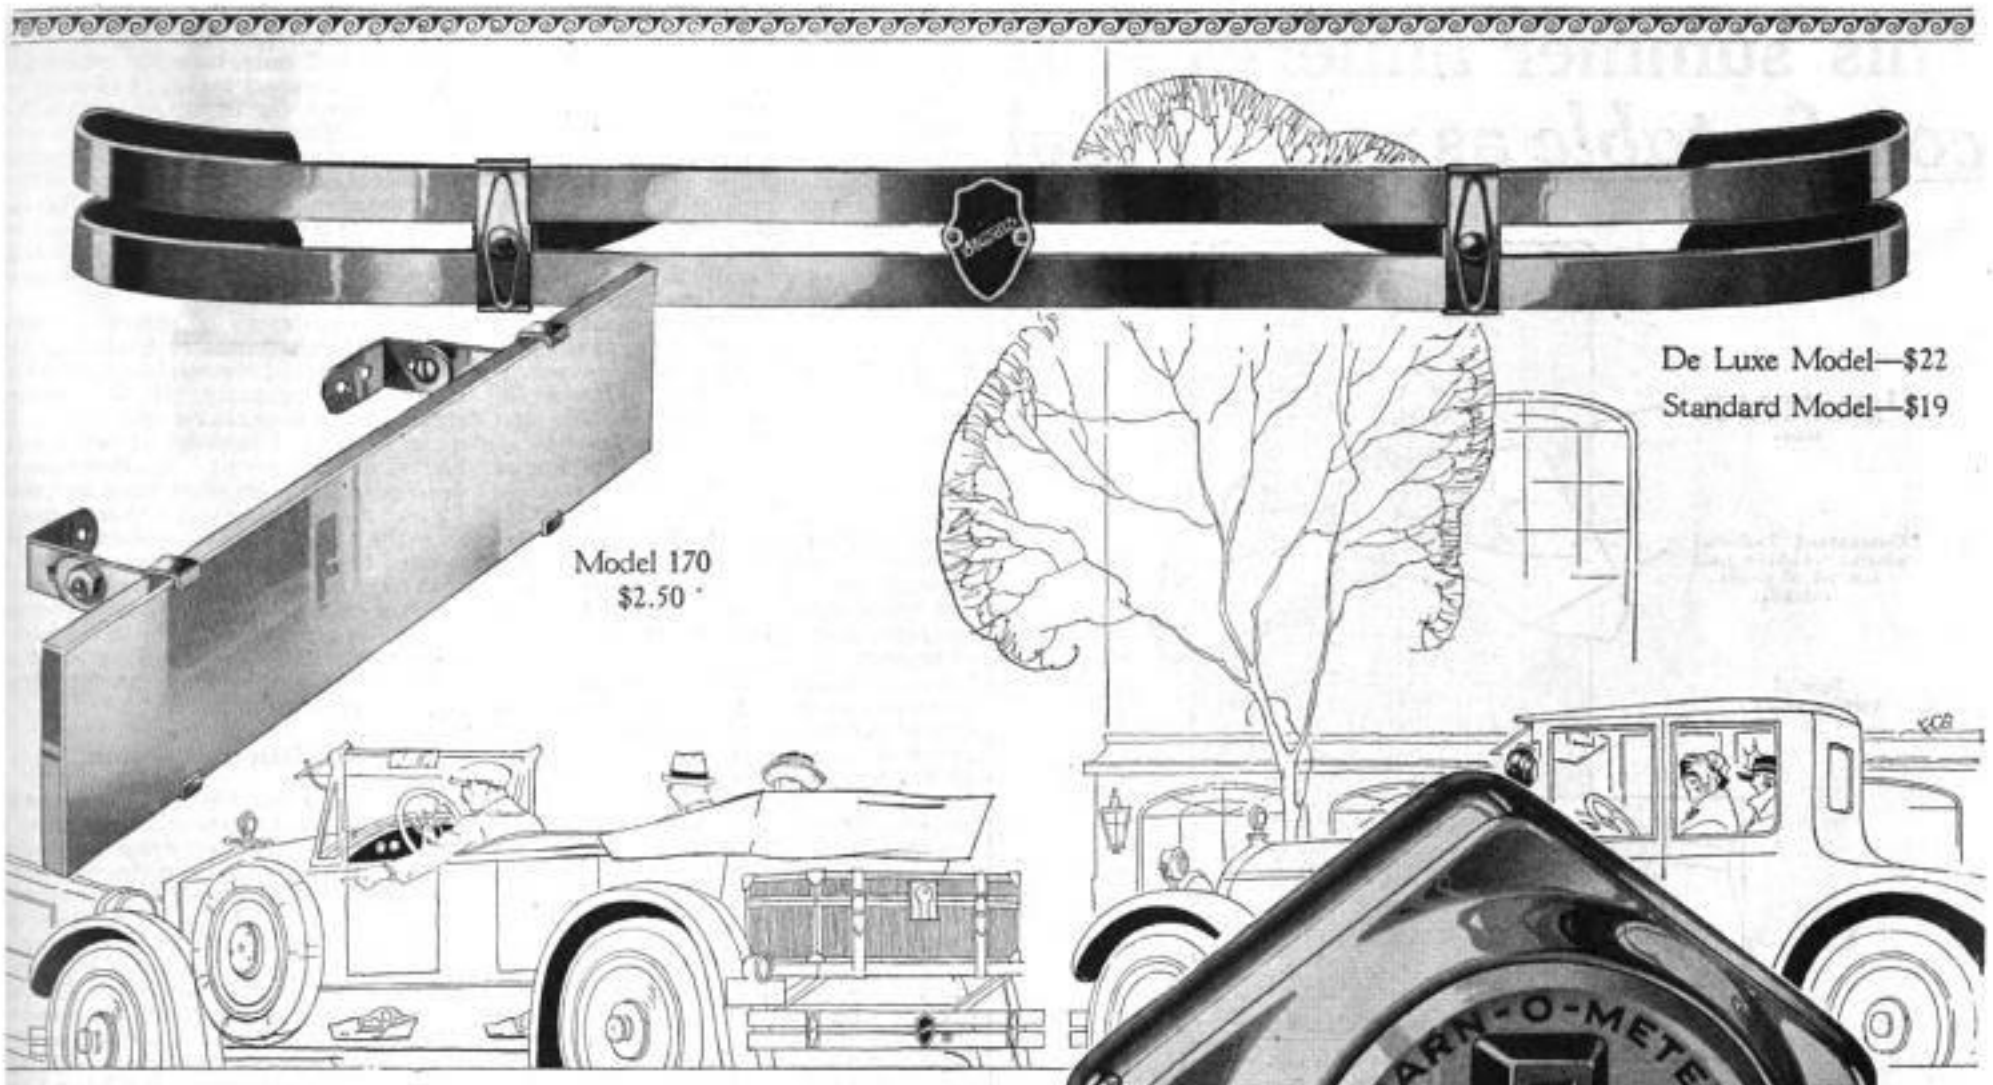
The Stewart Vacuum System and the Stewart Speedometer. Giants of the Automobile Industry.

THE car buyer of today is equipment wise. That is why manufacturers of motor cars are giving great thought to the selection of their equipment, and why practically 90 per cent of them have selected Stewart equipment.

When a manufacturer uses Stewart Products, his equipment is a selling point—not a ground for apology. Stewart Speedometers and Vacuum Tanks have been selling points for motor cars for years. They represent the peak of perfection in automotive equipment.

Furthermore, with Stewart equipment, you get Stewart Service. There are 86 authorized Stewart Service Stations in principal cities all over the world—53 in the United States alone. Each station is manned by a corps of factory-trained, skilled mechanics, who thoroughly understand Stewart Products. Only Genuine Stewart Parts used in replacement.



Car manufacturers are proud to advertise their cars as Stewart equipped. It means a great deal to an equipment wise motoring public.

This summer underwear is *comfortable* as well as cool

THAT'S why men ask for Hanes Athletic Union Suits by name. They've a carefree, out-in-the-open, ease-and-freedom feeling you never forget once you've worn them. That's because "Hanes Extra-Features" have done away with tightness that masquerades as "fit"; bagginess that trades as "fullness"; and the wrinkles and puckers that nag at moist, perspiring skin. Hanes Athletic Union Suits are studied garments—snug where snugness is essential to comfort; *over-size-full* where arm-play and body-play should go the limit. **They are only $1.00, so why pay more?**

Get these "Hanes Extra-Features"!

ARMHOLES taped instead of turned under. Never a chance for curl or rip—but a friction-free surface that wears as long as the garment.

NECK "V" or circular style, strongly reinforced with nainsook. Stays up on the shoulders without a hint of chokiness.

CLOSED CROTCH stays closed. (See illustration above.) Crotch lap buttons sewed on the seam—**4** thicknesses of material instead of **2.** No patch used.

WEBBING BELT guaranteed two-thread elastic webbing instead of single thread, gives more elasticity and greater strength. Specially sewed to prevent tearing or ripping.

PEARL BUTTONS specially selected, sewed on to stay put.

REINFORCEMENTS at every point of strain safeguard against all chance of seam-rips.

Register a summer comfort pledge today—your dealer is authorized to accept your initiation fee of $1.00 and enroll you for a season membership.

The youngsters can also have Hanes comfort and wear. Hanes Athletic Union Suits for Boys—sizes 20 to 34; ages 2 to 16

P. H. HANES KNITTING CO., Winston-Salem, N. C.

$1.00 A SUIT

$1.15 west of the Rockies

Hanes Guarantee

We guarantee Hanes Underwear absolutely—every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks.

management; and there are great corporations, especially the public utilities engaged in the electrical and telephone business, which sell their own stock direct to employes and customers.

The movement toward customer ownership of public-utility corporations has progressed very rapidly in the last few years. For the most part, the sales are of preferred stock, rarely paying less than 6 per cent and generally 7 per cent. The great advantage to the investor is not only that he gets a fairly high rate of return in a company whose operations are familiar to him and in regard to which he can secure ample information, but that the whole proposition is simple and direct. The man who uses a telephone a dozen times a day or turns his electric light on and off knows that the company supplying these services is something real and fairly substantial, never a mere paper, get-rich-quick or fly-by-night enterprise, even though in some cases, of course, it may be mismanaged.

As such stock is usually sold by local employes already on the pay roll the item of expense, although by no means negligible, is not at least wholly prohibitive when it comes to reaching the small purchaser. One of the subsidiaries of the Bell Telephone system in the Northwest sold $5,000,000 of 7 per cent preferred stock in ten days' time to 11,000 persons. A gas-and-electric company on the Pacific Coast has more than 15,000 owners of its preferred stock, many of them made investors through the efforts of the employes.

Of course a company of this kind cannot induce its subscribers to buy stock unless it is reasonably popular with them and has a fairly clean record. It is said that at least one powerful but very unpopular gas-and-electric company utterly failed to sell any large amount of its stock to customers even though the greatest pressure was brought to bear upon the local employes to act as canvassers. However, people who have money to invest and no great knowledge of the subject would generally make no mistake in asking the local manager of their gas and electric or telephone company if the company's bonds or stocks are on sale and at what terms.

The great obstacle in the way of small investors getting into touch with reliable investment dealers is that few of them, relatively speaking, will take the initiative. Anyone who writes to the New York Stock Exchange or to the Investment Bankers Association, in Chicago, can get a list of members. Membership in such an organization does not guarantee the wisdom of the advice offered by the members or the unfailing excellence of their securities. Indeed, it does not always guarantee their honesty. But there is constant vigilance to weed out dishonest and unreliable members. The proportion of outright fakers and swindlers is exceedingly small, and as the years go by should become even smaller.

Advice of Local Bankers

But the investor in far too many cases buys from the salesman who gets to him; he does not himself hunt out a reputable dealer. A large bank which sells immense numbers of bonds advertises extensively in all parts of the country on a similar scale. A country merchant in California wrote to the financial editor of a newspaper in New York City for the name of a reliable bond dealer in California. The editor replied that the investment department of this particular bank had a branch there and advised the merchant to call upon them. As a result he purchased $25,000 of bonds, although he had never seen any of the advertisements.

This concern, with scores of branches, reaches thousands of investors every day, and it is only one of many engaged in similar work. But such efforts are only a drop in the bucket, which fact often leads to the opinion that our whole scheme of distributing investment securities in this country is entirely inadequate to meet the needs of the people. Probably it is done much better in such countries as England, Holland and France, where banks, investment trusts and similar institutions play a great part. As a banker who has studied the subject closely said to the writer:

"When we are able to reach more people with sound investments it may reasonably be expected that there will be less tendency to purchase the unsound, and I have no doubt that that will be one of the developments of the future, although it presents many problems in the way of expense, organization, and so on."

But it will only bore the reader and afford him no practical help to discuss the many schemes for improved security distribution. This is a large country, with a great variety of people and forty-eight different states. Taking conditions as they exist the most practical statement that can be made to the great majority of small investors is to consult their own local bank before believing what the stock salesman or stock circular has to say.

There are dozens of objections which may be raised against such advice. The local banker is not always the most popular man in his community. He is sometimes regarded as a note shaver or skinflint. In many cases his knowledge of securities is limited in the extreme. In other cases he dislikes to tell even what little he knows for fear the depositor will withdraw money from the bank and invest it elsewhere. He is often too narrow and ignorant to realize that any investment in sound securities which a customer makes tends to increase business in general and reacts to the bank's advantage. Even if he is willing to advise and assist, it is often in the most perfunctory and guarded manner.

Mr. Sisson's Opinion

There are a few cases where the stock swindler has paid a banker a commission to stimulate sales. A fairly common practice in Middle Western rural districts is for a stock salesman to approach a director in a local bank, who holds his position not because of any knowledge of banking or finance but simply on account of his having a little money, with a proposition like this:

"Mr. Smith, we want to do the people of this state a good turn. We want to keep Iowa money in Iowa and we are forming a new insurance company. We have heard that you are a leading citizen and capitalist of this town and we want you to become one of our stockholders and possibly a director, if you think this proposition is all right. All we ask of you is that you give us letters of introduction to some of the people around here, and you will get a commission on every sale of stock. But you of course get in on the ground floor."

With letters from the local bank director the stock salesman goes to other people in the neighborhood and says that Mr. Smith has invested in the proposition and knows all about it. "If you want to know anything about it go and ask him." Most of them never even take that much trouble. The mere fact that the bank director has looked into the matter is enough for them. They do not investigate any further.

But after the local banker has been damned in every way that can be thought of, the fact remains that most careful students of investment subjects concur in the opinion that more loss would be avoided if investors universally consulted their local banks than in any other way. The case is well put by **Francis H. Sisson**, vice president of the **Guaranty Trust** Company of New York:

"While no advice to this effect will be 100 per cent good, nor will the experience of those who follow it be 100 per cent satisfactory, it is the best advice that can be given, and the local banks are the best agencies to suggest for the guidance of prospective investors. The situation, in my mind, is analogous to that of advising a man when he is ill to consult a doctor. In following that advice many men would suffer from an inaccurate diagnosis, unscientific treatment and, perhaps, even malpractice; but on the whole it is the proper advice for us to give for our physical demands, and the average of service returns will much more than justify it.

"So I think we can honestly claim that, on the average, prospective investors who seek the advice of their bankers will profit, and, inadequate as the system may be, it is the only one broadly available and must be relied upon for such service as it can render. While bankers at large are not 100 per cent competent or even 100 per cent honest, there is enough competency and honesty among them as a class to justify the general reference of investors to them.

"Bankers are in the nature of things, as a rule, cautious on credit matters and skeptical about new ventures. These are exactly the elements which are needed in advising investors. If the banker does no more than to make them stop and question, he may have rendered a great service.

$1000.00 in prizes

What is she saying

YOU can win a prize! Use your imagination! What do you think this woman is saying to the clerk? She is evidently buying underwear—probably for her husband—and she is evidently saying something about Sealpax Athletic Underwear.

What is she saying?

Figure it out. There is no set answer to guess. Yours may be the winner! Study the facts about Sealpax given below—then decide, in not more than twenty words, what this woman is saying.

Send your answer to the Prize Department, The Sealpax Company, Baltimore, Md. Competent, neutral judges will award prizes. The contest closes July 29th, and the winners will be announced in The Saturday Evening Post, October 28th, 1922. Think about it—and win a prize!

Best answer .	**$500**
Second Prize . . .	$200
Third Prize	$100
Fourth Prize . . .	$50
Next Best Five . .	$15
Next Best Five . .	$10
Next Best Five . .	$5
Next Fifty (each) — one suit of Sealpax	

(In the event of a tie for any prize offered, the full amount of such prize will be awarded to each tying contestant.)

Sealpax
Athletic Underwear

Men's Sealpax $1.25 (Union Suit)

"Lady Sealpax" $1.00 up

Children's Sealpax $1.00

IT ought to be easy to frame a prize-winning answer to the Sealpax "What Is She Saying?" Contest. Suppose *you* were buying underwear. What would *you* say to the salesman—

—if you knew there is no other underwear quite so cool for hot sultry days, quite so comfortable for active people, as Sealpax.

—if you knew that the athletic cut, the light-and-breezy fabric, the double crotch, the wide, roomy armholes and other comfort features make Sealpax the finest underwear a person can slip into.

—if you knew that Sealpax comes to you packed in individual sanitary envelopes, fresh and crisp and clean!

Think it over—write it down—and win a prize!

Women and children may also enjoy the cool comfort of Sealpax. Lady Sealpax is "Just as Comfortable as Brother's" athletic underwear, daintily made in a wide variety of feminine fabrics. "Little Brother" and "Little Sister" Sealpax bring "Dad's Comfort to Dad's Kids"—an athletic underwear for children as long-wearing as it is cool and comfortable.

Sealpax for all the family! Sold everywhere!

Send your contest answer to
PRIZE DEPARTMENT
THE SEALPAX COMPANY, BALTIMORE, MD.

(Continued from Page 98)

"I appreciate the limitations of this suggestion fully, but to my mind it is a good deal like discussing democracy as a scheme of government; in spite of its shortcomings and miscarriages, it is the best scheme so far devised, and we have to fall back upon it to meet our political needs, and always live in the hope that the processes of education will constantly raise its standards and produce better results."

If the farmer or school-teacher does not trust the local banker there is always the near-by town or city of greater size whose banks are perhaps better informed. Then there are the chambers of commerce which can be appealed to, and the newspapers in the large cities. Workmen who have no time to visit bankers in their office hours can usually find someone connected with the management of their own company who will help them get information and advice.

There is always some reliable, experienced and disinterested business man who may be consulted if the investor really wants to take the trouble. Besides, there are about forty states which have blue-sky or security commissions which at least will warn the investor if the offering is actually a fraudulent one.

The fact is that the majority of investors who lose do not even attempt to secure information in advance. Actual surveys covering thousands of individuals in selected areas of the country show that close to one-half of the people who invest consult no one. What they really do is to buy blindfolded, with a laxity and carelessness they would not dream of showing in the purchase of a house, an automobile or even a suit of clothes or a pair of shoes. Until the psychology of hurrying up, buying from strangers and failing to investigate beforehand can be broken down, losses will continue at about their present rate.

A practical suggestion made to the writer by the vice president of a large securities concern was that investors should get three different people to suggest a list of securities and three others to criticize the list and scratch them. "People often take brokers' suggestions as final," said this man. "That is foolish. What the investor should do is to submit suggestions to brokers and get them to make their criticisms, which are often useful."

Edward A. Woods, of Pittsburgh, who, as the head of what is said to be the largest life-insurance agency in the country, has dealt in a practical way with many thousands of beneficiaries of life-insurance policies, makes this statement: "I have often advised widows who have asked me about investments to take this up with three competent, careful advisers and make no investment that all three did not concur in advising her to buy."

Blue-Sky Laws

Finally we come to what, in the opinion of the writer, is the least important and effective method of preventing investment losses, namely, the operation of laws specifically designed for that purpose. It is physically impossible for any government department or bureau, Federal or state, to pass upon the soundness or merit of all securities offered to the investing public. Obviously the Government should prevent, as far as possible, actual fraud and misrepresentation, and the best type of law and administrative machinery for this work should be under continual discussion and experimentation. But the Government cannot be held responsible for errors of judgment or for unforeseen developments which result in loss. The idea that it should guarantee securities is at once an absurd and a pernicious fallacy.

Yet it is remarkable how widespread a dependence the investing public places upon the approval of a security issue by a Federal or state commission. The same thing is true of a listing on the stock exchange. All these forms of recognition have their value, but they do not and cannot guarantee perpetual success, and the most foolish thing an investor can do is to be lulled into a false sense of security by these stamps of approval. In the end, no one but the investor himself can determine what is a good and what is a bad security.

About forty states have blue-sky laws in one form or other. These laws differ widely; they are of every degree of severity; and relatively speaking none of them have been in operation very long. That the blue-sky commissions have driven out many frauds and saved great sums of money to ignorant or credulous investors is generally agreed. But on the other hand frauds have flourished as never before. For one thing, the fakers have learned to operate in or from states where there is no such commission or where it is not especially efficient. By being very quick in their clean-up and get-away the swindlers have pretty largely escaped through the meshes of fifty different jurisdictions. Even more important is the fact that the state authorities cannot reach interstate commerce and the use of the mails.

In course of time the post office usually gets the swindler who for a long period misuses the mails. But this department of the Government is overloaded with such work and cannot keep up with the thousands of petty stock swindlers who operate for only a brief period. As H. N. Duff, president of the National Association of Securities Commissioners, has said:

"In my own state of Michigan our commission has frequently turned down securities as fraudulent, only to find within a very short time that the state was being flooded with them. It was an easy matter for the promoter to rent an office in Toledo, Ohio, or Chicago, Illinois, and, armed with a few city directories and general mailing lists, unload upon the people of the state securities which the state officials had barred."

Boycotted States

Much of the swindling or loss is due in the first instance to the laxity of state incorporation laws. There are a few states that will allow anyone to form a corporation for almost any purpose and at a cost so nominal that absolutely no check is placed upon the promotional tendencies of crooks or crazy visionaries. Corporations are formed almost as easily as bacteria, and it is easy money for the states that permit it. It is believed that a strict Federal incorporation law to take the place of the state laws would prevent thousands of worthless promotions. But under our dual form of government it would seem practically impossible from a political standpoint to bring about this reform.

Then there are students of the subject who urge the adoption by the Federal Government or all the states of a law like the British Companies Act, which requires all promoters or distributors of new securities to file with the Government complete information regarding commissions paid to promoters, and other pertinent facts. It is argued that "Just as the Pure Food Act does not attempt to tell people what is good for them to eat, just so must we avoid in security regulation trying to guide the public as to what they should buy and what they should leave alone." The idea is to give complete publicity and let the investor judge for himself.

This sounds very well in theory, but it probably would not work out in practice in a country as big as this. "It would be little more than a joke," says G. S. Canright, of the Wisconsin Railroad Commission. "Imagine what protection it would be to persons in California to have filed in Washington information in reference to all these enterprises." The slick salesman would sell the farmer on a ranch in California before the farmer could write to Washington and get an answer back.

There is the further difficulty with all legislation for the protection of investors that if it is made strong enough really to work there is always danger of injuring legitimate business. It is a well-known fact in financial circles that many of the most reputable investment houses will not offer their securities in numbers of the states which have severe blue-sky laws.

"We not only won't comply with all the diversified, complicated, contradictory and often confusing requirements of many of these states," said the manager of a house of international standing, "but we won't ask the corporations of high standing whose bonds we sell to subject themselves to such indignities. Whenever we put out an offering we simply ask our lawyers which states we can advertise in and which we had better stay out of."

Now there may be parts of the country where a certain satisfaction is felt in keeping out the great banking houses and corporations whose headquarters are in Wall Street. But many a financial swindle has been floated in the last few years on the basis of appealing to local pride, and many an investor in states far removed from Wall Street would have his money now with

Digitized by Google

accumulated interest in the place of vain regrets if he had bought stocks and bonds in corporations of national standing instead of listening to the wily promoter who pretended to hate Wall Street.

A couple of years ago the Standard Oil Company of New Jersey sold through a banking syndicate $200,000,000 of 7 per cent preferred stock—stock which has proved profitable to its purchasers because of an increase in price. But there were a number of states where the banking syndicate refused even to advertise the stock because of the blue-sky requirements. These great offerings of standard securities must be sold quickly to meet market conditions, or the losses which fall upon the bankers are often very heavy.

Advertisements must be telegraphed to newspapers at distant points and the whole affair carried through in a few days or hours. This does not mean that the investor must buy immediately; the change of price in a few weeks' time is rarely enough to make much difference to him on his small holdings. But it means much to a banking firm which is responsible for perhaps $100,000,000. State commissions, however, may want weeks to investigate the proposition.

One of the best-known banking firms in the world refused to offer in a certain state whose laws are most stringent. Probably the newspapers, which of course lost the advertising, brought pressure to bear upon the politicians. In any case, the attorney-general telegraphed the banking firm that he was willing to overrule the law in this particular instance. The bankers replied after consulting their lawyers that they were taking no chances. It might be all right with this particular official, but if a new administration came in, a new attorney-general might subpœna every member of the firm and require them to go thousands of miles and spend weeks at some hearing.

A minor but curious complication is that though advertisements of securities cannot be offered in many states without first getting permission from the authorities the newspapers, of course, are at liberty to run news articles concerning them. Thus a clever publicity man may in this disguised form announce the offerings and often secure many purchasers in states where his firm is not legally entitled to offer the securities for sale.

It is not to be supposed that blue-sky commissioners are unaware of these defects, complications and inconsistencies. To an increasing extent the state laws are exempting many recognized and legitimate groups of securities. But as these exemptions become broader and broader there will always be a number that turn out badly, and the citizens of the state will blame the blue-sky commission as bitterly as if they had lost their money in concerns which were frauds from the beginning.

Mr. Callbreath's Testimony

Blue-sky commissioners have admitted freely enough that if legitimate business is entirely free, then the door is open too wide to fraudulent securities; and if the law is stringent enough to prevent these, then it is sure to interfere with legitimate business.

James F. Callbreath, secretary of the American Mining Congress, recently told a committee of the House of Representatives that D. C. Jackling, the mining engineer, could not have gotten a permit under any blue-sky law in the country to raise the money necessary for the development of the porphyry copper mines without which the prosecution of the war would have been impossible. "I say to you, gentlemen, that two-thirds, I think all, of the developments of the wonderful Cripple Creek district also would have been pronounced frauds by any blue-sky commissioner in this country."

On the other hand, it may be that blue-sky laws have saved capital which otherwise might have been entirely wasted, and that it has been released for legitimate new promotions. No one really knows where to draw the line, or to what extent restrictive laws do more good on the one hand by preventing losses or harm on the other by preventing legitimate promotions.

There is no doubt that blue-sky laws have been passed partly because frauds were not prevented by the laws already in existence. But it is a question whether the good could not be accomplished by the arousing of public opinion to the enforcement of existing laws than by the constant piling up of complications involved in the creation of new statutes. A lawyer who has successfully prosecuted and put out of business several of the worst stock swindles, made this statement to the writer:

"In my work I have found in every state I have ever visited sufficient laws to convict anybody of anything that any well-wishing legislator might possibly label as a crime. The trouble is they are not enforced. To speak plainly, prosecutors generally pick out for enforcement those laws which reflect the greatest political advantage, and you will find it difficult to interest them in the others unless you first interest some publication in publicity which will assure the prosecutor that the public will know he has done something when he acts.

"Every state in the Union has laws covering embezzlement, grand larceny, petty larceny, and the act of obtaining money by false pretenses, and it is difficult for me to think of a case which these statutes do not cover at this time.

"What the country needs is an awakening to the possibilities of enforcing laws already on the statute books. A few years ago we looked upon automobile thieves as joy riders, and at the same time the man who stole a horse was apt to be hung if he was not lynched before the court got to him. That was entirely due to the viewpoint of the prosecutors, who were convinced that horse stealing was a crime. We are going through the same thing with the prohibition act, and until its enforcement becomes more popular we shall continue to be troubled along that line."

Slow-Footed Justice

"Right at this time the United States courts throughout the country are jammed with untried cases brought under Section 215. The reason for this is that there are not enough judges nor enough prosecutors to try them. Of course that is not saying that the judges we have, and the prosecutors available, could not have done more. But we found grand juries to indict, post-office inspectors to prepare cases, and I think it is the duty of the Department of Justice to find judges and district attorneys to clear the dockets. Incidentally I believe that such a move would do more to put a stop to the wave of crime going over the country, and to instill respect for the law, than anything else they could do. And I am equally certain that the delays encountered in the trial of cases do more to encourage criminals in the belief that they can commit the crime and take a chance on ever being convicted. It gives politicians an opportunity to pretend, at least, that they have influence with the court.

"Personally, I would advocate that the American Bar Association make a strong showing to the Attorney-General for action along this line, and that they encourage local bar associations to do the same thing in local communities, and that there be an insistence that criminal dockets everywhere be cleared, and that thereafter punishment of crime be made swift and certain. That is what we need, and that will do the job.

"I am perfectly willing to take the credit which you pass on to me for my work, but, frankly, my work was never permanent in any particular; it was aimed to educate the public to an insistence for the things I advocate above, and to convince public authorities that their handling of matters on this basis would be wise, politically and otherwise."

It is only fair to say that the present tendency appears to be toward a standardization of the blue-sky laws, and the investment bankers and blue-sky commissioners show an increasing tendency to work together instead of pulling apart as in the past. Many bills providing for one or another form of Federal control are now before Congress. One bill, which has rather wide support, contemplates a Federal law which would tie together the state blue-sky laws to the extent, at least, that securities illegal in one state could not be sent in from outside. Many minds are working on the problem of closing up the meshes.

But the question remains whether each new proposal if enacted would not merely add more laws and machinery to remain idle; or if enforced strictly, whether it would not still further disturb the delicate mechanism of credit and capital accumulation. The problem if not insoluble is extraordinarily difficult and delicate. Progress must necessarily be made slowly.

"*This* will protect you against ignition trouble!"

YOU would not think of starting off on a motor trip without a spare tire or a full gasoline tank. Neither would you drive in the rain without chains or with the top down.

Then why start off without protection against trouble in the most vital part of the power plant—its very nerve center, the ignition system?

At any time a plug may become fouled, a porcelain cracked, an oil-soaked wire shorted—or some one of the many elusive minor defects may crop up—all meaning trouble and delay.

In the mountains, or on a lonely road, far from a garage—no matter where you drive—you will be protected against ignition trouble if you have an

Airco IGNITION GAUGE

The Watchdog of the Ignition System

For All Internal Combustion Engines

Instantly spots the plug that's missing

—Enables anyone to locate the slightest defect anywhere in the ignition system.

—Unerringly detects short-circuits, breaks and leaks in the high-tension wires.

—Handy size—not cumbersome—fits the vest pocket. Small enough to reach the most inaccessible part of the ignition system.

—Blunt contact cap cannot slip off plug or wire while testing.

—Cannot get out of order—no wires to connect—no shocks—no danger.

—Directions printed indelibly on the shell.

The Airco Ignition Gauge has a hard rubber shell enclosing a tube of Neon—a gas which flashes orange-red when electrified. These flashes are visible through a window in the shell. The nature of the flashes tells what and where the trouble is.

Be sure you get the Airco—the original ignition gauge—you can buy it at your dealer's, or fill in and mail the coupon.

AIR REDUCTION SALES CO.

The name Airco on this ignition gauge signifies that it embodies all the high standards characteristic of the twenty-one other products of the Air Reduction Sales Company, pioneers in commercializing the elements of the air and large manufacturers of oxygen, acetylene, apparatus, etc., for the oxyacetylene welding and cutting industry. It is most logical that an instrument relying solely for its functioning on Neon—a rare gas of the air—should be built by an organization of such specialized experience.

This is the World's *Safest* Motor Car

WE ARE prepared to show that this new Cole *Eight Ninety* is the safest car on slippery paving—the safest car on sharp turns at high speed—the safest car on the precipitous climb or on the even more dangerous descent—the safest car in traffic where life is a matter of inches and where you graze fenders with fools—safest wherever brakes, acceleration and perfect balance count.

Eight million automobiles fighting for position on the streets and roads of America to-day—mill-racing to eight million urgent destinations—twenty-four hours out of every day, missing each other by the thickness of the paint on their fenders—

To keep this tidal wave of humanity and steel from grinding itself to pieces is the problem of the automobile engineer.

That it does not grind itself to pieces is the greatest of all modern miracles, and at the same time the greatest possible tribute to the manufacturer of motor cars and to the skill of the people who drive them.

In view of this situation it is only natural that some forward looking automobile manufacturer should have set about deliberately to engineer a motor car, from stem to stern, on *the one basic principle of SAFETY.*

That is exactly what has been done in this new Cole *Eight Ninety.*

Most Accidents from Skidding are Caused by Brakes that Grab —Cole Eight Ninety's Brakes do Not Grab

Anti-skid chains were created primarily to provide safety against brakes that grab—non-skid tires were developed for the same purpose. We have striven to produce a car that does not require chains and one that is safe even after non-skid tires are worn smooth.

In official brake tests Cole *Eight Ninety* has established new, unequalled short-stop records; and on slippery paving its non-skid quality is nothing short of marvelous.

The owner of a Cole *Eight Ninety* does not get nervous when his wife and children are out in the car.

Digitized by Google

Five minutes in this Cole *Eight Ninety* through any traffic or on any road will convince you that the Cole Motor Car Company's effort to engineer a car on the one basic principle of safety has completely succeeded.

This Car Eats Nobody's Dust

Make no mistake about this car's performing ability. No car on wheels is more capable of giving a real account of itself. It has the POWER, the SPEED, the ACCELERATION and the BRAKES to get more miles in less time over give and take roads. If this does not check up with your impression of Cole—you simply do not know the car, and you should permit the nearest Cole dealer to complete your education. Don't be prejudiced—be FAIR—get at the FACTS. If this car, after a complete demonstration, out-performs any car you ever drove, be a good sport and admit it.

Twenty Thousand Miles on a Set of Tires

the Cole average. If you don't want this statement proved to you, don't challenge it—we are loaded for you. We have so many letters from owners who have actually got that much mileage out of Cole tires that there can no longer be any doubt whatever about this great Cole economy factor. It's hard for a man who is learned to congratulate himself on 10,000 miles out of a set of tires to grasp such unusual tire mileage.

Twelve to Fifteen Miles on a Gallon of Gas

Considering that this is a powerful, eight-cylinder engine, such economy can not be brushed aside without comment. Many Cole owners *claim* far more mileage, but 12 to 15 miles is what average drivers get out of this car under average conditions. We know of no other car in the quality class that can equal Cole's economy.

You Never Bounce Out of Your Seat in a Cole Eight Ninety

The only way to learn what we mean by Cole "road action" is to give the car the third degree over a rough stretch of road, and compare what *doesn't* happen to its passengers with your past experience under similar conditions. Don't be afraid to go into the bumps head on—you don't have to be cautious—nobody ever yet cracked his head or broke his nose against the top bows of a Cole *Eight Ninety*.

This car is the first to equip regularly, and at no extra charge, with that superb motoring luxury—Lovejoy Hydraulic Shock Absorbers.

Notice How Their Eyes Follow the Cole

These "different looking" Cole *Eight Nineties* are putting a new aristocratic atmosphere into American boulevard traffic. Wherever they appear, people crane their necks after them. Notice, too, the class of people who are riding in Coles—and if you get an opportunity, ask a few of them how they like their Coles. You will find one thing—that these people, many of whom can afford any kind of car regardless of price, are delighted with their Coles and are proud of the fact that they have "cut down" on their automobile operating expense "without sacrificing anything."

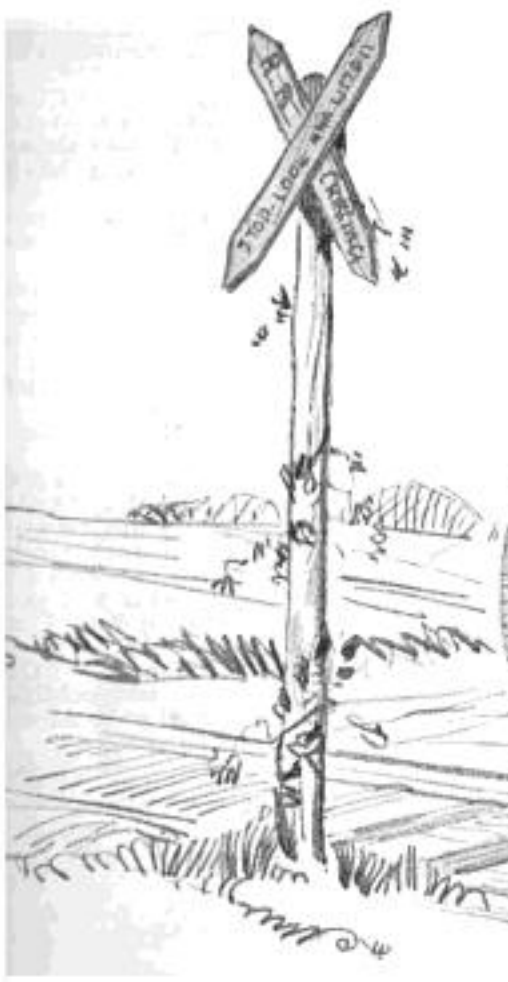
Bear in mind that this strictly high-grade EIGHT cylinder car is only $2485.

Your Cole Can Never be an Orphan

Behind your Cole to the last mile there will remain one of the strongest factories in the entire automobile industry—your Cole can never be an orphan. You know where to go for service, if you own a Cole. There is somebody always responsible for every Cole car in existence, and the Cole Motor Car Company's interest in its cars on the road never slackens or abates. This dependable Cole service can not be ignored by any man. No factory serves its owners more faithfully or cheerfully.

NOTICE TO DEALERS

This company and its product are entitled to cream representation everywhere. Our new contract is liberal and fair.



RIGHT NOW is the time to get "all set" on the right basis with the right people.

It is easier to sell this car than to compete with it. *Wire today.*

There's Personality in a Gilbert Clock

THIS beautiful Gilbert Normandy Chime Clock is *more* than a timepiece. Its soft, melodious, two-tone chime, joyfully proclaiming each passing hour and half-hour, adds the finishing touch of harmony to the happy home circle.

The rich mahogany case, exquisitely made and hand-rubbed to a softly glowing, satin polish, reveals the handiwork of a master designer and conceals the fine Gilbert movement, which tells the tale of fleeting time with unfailing accuracy.

Every Gilbert Clock is a triumph of beauty and precision. Generations of faithful, honest workers have built into these masterpieces of refinement and dependability their own sterling qualities of character and service.

Gilbert Normandy Chime models now cost little more than an ordinary gong clock. The prices range from $18.00 upward.

If not sold by your dealer, write us

William L. Gilbert Clock Co.
Winsted, Conn.

"Makers of good clocks since 1807"

No. 2046—illustrated—Solid Mahogany case; 20 in. wide; 10 in. high; 3½ in. dial with convex glass; Normandy Chimes. Choice of silver or porcelain dial. Price, U.S.A. $30.00 (War tax extra).

No. 1166—Same design, with Cathedral Gong. Choice of silver or porcelain dial. Price, U.S.A. $25.00 (War tax extra).

WHEN AMERICA GOES EAST

(Continued from Page 15)

"Well," said the other, "it's time we had a talk, and this will save me going out to your house to see you. Have you got any offer to make me?"

His very voice had an inflection that chilled. It was no more than the accent of New York, but Ferid Bey was hearing it for the first time.

"Listen!" he said. "You are not in America now. Be careful, then! I tell you, I must have more money—ten thousand piasters at least. Do you understand?"

The young man smiled, and it was apparent that many of his teeth were stopped with gold. He made a movement with his hand as though he brushed something away from before him.

"Too well," he answered. "Tell me now—what is that house and garden of yours worth? I reckon it would go a long way towards clearing you."

"Eh?"

The stallion bounded at Ferid Bey's unconscious touch of the spur and nearly unseated his rider. The brutal Turkish curb fetched him up, trembling and sweating. When he was still again there was also a slime of sweat on the face which Ferid Bey turned on his tormentor.

"My house!" he gasped. "You mean ——"

The young man nodded. "Seems to be all you've got," he answered calmly. "I'm going to write it off at a hundred and fifty thousand piasters. You'll still owe me about a hundred thousand."

"My house!" repeated Ferid Bey.

His face was white. The words had evoked in him a vivid picture of all that he had looked upon that morning—the city in the sunlight, the waters at his feet, the whole frame that encompassed and contained his languorous and lovely wife. They would be homeless; it meant parting. The blood surged back into his face and drummed in his temples.

"My house!" he roared.

The stallion wheeled at the urge of knee and rein. Old Izak ben Ibrahim cried aloud; he had seen the Turk in his mood of massacre before; but the young man on the shop board moved only when the long cutting whip thrashed down across his face, rose and fell again in a devilish slash across his neck and shoulders. He was cut twice again ere, with his one arm and his crippled leg, he was able to drag himself into the shelter of the shop. Along the alley from both directions the crowd came running.

Ferid Bey wheeled his horse again and hesitated. He had thoughts of dismounting and following the young Jew into the shop, but abandoned them.

Instead, he put the stallion to a canter and went smashing through the shouting, screaming crowd till he was clear of the Kalé Quarter.

He returned to his home late that afternoon on foot. He came limping through the gateway with that in his face which made the scared servants dodge before him. His wife was, as usual, in her long chair in the courtyard, her face lustrous in its unchanging pallor under the jet of her hair. He walked across and stood looking down at her. She smiled half sleepily.

"Well?" she asked, and stretched forth her hand for him to take. "Is it victory, my knight? And why do you return on foot?"

He took her hand and pressed it. "No," he answered, "it is not victory—yet! And I found a buyer for the stallion. That is all! Let us go in; I am thirsty and I should like some brandy."

But that night, of course, he told her all, and they debated the situation till daylight. Only one ray of hope was discernible to either of them: The pasha, Fathma's father, must come to the rescue; if not with money down, then with power. Few things could be easier to the pasha than to silence a Jew; in his time he had profitably silenced a good many forever. To organize a little local riot, with a harvest of just two corpses; it was a small thing to ask of one's father-in-law.

They decided in the end to wait for a week before acting—it comes as naturally to a Turk as to a Spaniard to postpone action. They have not grasped the fact that a thing left undone will sometimes do itself. Upon the sixth day of the week they had granted themselves before going to the pasha, the pasha came to them.

He came without ceremony too. They were together in the courtyard when his carriage clattered to a standstill outside the arch and he himself came foaming through upon them. Ilderim Pasha was an old man; he was great in girth and plethoric in the face; at his mildest he gave an impression that he might at any moment explode. Now he seemed positively to emit fumes.

"Ah, you!" he roared at the moment when he laid eyes on Ferid Bey and his daughter. "Is it not enough that I should father a daughter who bares her face like a harlot? Must she also be married to a piece of defilement like you? May Allah ——" But here the pasha lapsed into a perfect hysteria of Oriental imagery that is barely translatable and not at all printable. Ferid and Fathma had come to their feet in disorder.

"But what—what is it?"

"What is it, nameless thing!" howled the pasha. "Who was it that flogged a crippled American soldier with a whip in the presence of his family? Was it not you, shame of Islam? And this when there is an American commission at Stamboul, to whose whip cracking and money jingling the Sultan himself dances like a performing ape! It was not you who have brought upon me alarming letters from the government, and an American officer to see strict justice done? No, it was not you; it was a devil in your shape. Abomination! Stain upon the face of creation! Infidel! Now, to-morrow at the opening of the divan, you come before me. And these Americans and these Jews and the rest—they shall see how swift goes justice in a Turkish court!"

Ferid Bey preserves to this day only a vague general recollection of the proceedings that made him homeless. The evidence, the formality, the production of his notes of hand, the crisp voice of the young Jew as he made his claims good—these are only mistily in his memory. The words "American citizen" occurred more than once; he recalls that. But what endures pungently is the picture which his mind guards of the American officer, trim as a new doll in his uniform, and his face, pleasant enough to look upon, which was granite to all appeals, to all considerations other than his clear duty, his eye, lively as a bird's, and something contemptuous in it as it ran over the fine figure and stature of Ferid Bey.

And at last it was over. All that he possessed was stripped from him, and the others left the room. He was alone with the pasha, who sat, regarding him balefully.

"But," broke out Ferid Bey, seeming to awake from a dream, "this is impossible! The fellow is a Jew!"

"Oh, fool!" cried the pasha. "Have you not yet understood? He is an American. They are all heathen together over there. There is neither sultan nor slave; they walk together on the one level—may Shaitan claim them for his own!"

Ferid Bey shook his head. "But that officer ——" he began.

The pasha interrupted. "He is just one of them," he said impatiently. "And now. My daughter, of course, will return here and we will endeavor to teach her better and seemlier ways of living—with a stick if need be. But you—what will you do? You have nowhere to go; and I cannot have you here. You had better ——"

Ferid Bey cut him short. "Do not trouble about me," he said coldly. "I know what to do. I shall go to America!"

And in due course he went!

SUN OILS

For those *queer* engine troubles

—*try buying lubrication—not just "oil"*

Perhaps it's a knock—or oil pumping, overheating, fouling of the spark plugs, poor compression, sticking of the pistons, loss of power. Whatever the trouble—it's costing you money, spoiling your temper and stealing the pleasure from driving.

And you've done about everything—had your engine overhauled, cylinders rebored, new pistons installed, valves reground, bearings tightened and oil leads cleaned.

But you have overlooked FAULTY LUBRICATION. And it's responsible for more than 75 per cent of all motor ills.

You can't keep a good engine in good shape with a poor oil—or even a good oil of the wrong type.

Poor oils break down under heat. And their sticky, gummy residues—plastered over the vital parts of your engine—carbonize and cause trouble. Wrong types of good oil are just as bad. Cylinders are not sealed—compression escapes—power is lost—too much oil gets into the firing chambers and too much gas into the crankcase.

Why not buy SUNOCO Lubrication—not just "oil"—use it exclusively and eliminate these troubles? Here's the way to do it:

Drive your car to the nearest SUNOCO dealer. He's a lubrication specialist—not a "peddler" of oil. He will clean the dirty, contaminated oil from your crankcase and refill with the type of SUNOCO scientifically refined for summer use in your car.

Then watch results. You'll be astonished how much better your car runs—at your freedom from trouble—at the greater power and mileage you get from gasoline.

Every motorist should read our new booklet, "Lubrication or Just Oil." Ask your dealer for a copy or write to us.

SUN COMPANY

Producer and Refiner of Lubricating Oils, Fuel Oil, Gas Oil, Gasoline and other Petroleum Products.

More than 1,500,000 gallons of lubricating oils per week **Philadelphia** *Branch offices and warehouses in 32 principal cities*

Glistening Cleanliness

THE inside of baby's bottle, of preserve jars, cruets, pitchers, etc., quickly becomes sweet and fresh under the deft touch of the Fuller Bottle Brushes. Into the farthest corners, down under the neck they go, leaving perfect cleanliness in their wake. The Small Bottle Brush and the Test Tube Brush assist their big sister, the Fuller Bottle Brush, in making this important task easy and satisfactory.

These brushes are typical "Fuller Necessities"—members of a great family of forty-five brushes for personal and household use.

We are the largest buyers of brush material in the world, therefore get better quality at lower prices. So do the users of Fuller Brushes.

Fuller Brushes are never sold in stores. They are brought to the home, demonstrated and explained by experts in the science of modern housekeeping. The Fuller Man is courteous and accommodating, and lives right in your vicinity. We picked him out in the first place because he was a gentleman. Identify him by the Fuller Trade-Mark Button he wears, and by the Fuller Red Tip Tag on every brush he shows.

There are hundreds of little short-cuts that reduce the labor of housekeeping. The Fuller Man knows them all and will explain them to you.

May we send a Fuller Man to see you—and also send you a copy of "The Handy Brush Book"? Write us.

RITA COVENTRY

(Continued from Page 19)

him—J. N. Burlingham, president of the Cuyahoga Car and Foundry Company?"

"I know that company," said Parrish.

"Well," George went on, chuckling, "Burlingham has taken a great fancy to me just lately, since Alice came. He doesn't come around my office very much, but he can't keep away from me evenings. For about a week Alice thought he really did come here to see me. Almost any other girl would have caught on sooner, but that's one of the dandy things about her—she doesn't seem to realize that anybody could be interested in her. When she did get wise to it I had a deuce of a time getting her downstairs at all. And, Lord, how she did hang icicles on the poor cuss! She doesn't want to be mean to him—in fact she likes him—but he's not going to get a chance to propose to her if she can help it."

And he went on: "I don't think it pays a woman to be too honest and straightforward. She does herself out of a lot of fun. That kind of woman treats men too well because she thinks they're as sensitive as she is. But you and I know that's not so. If a woman won't have us it may be a hard bump, but we get over it. We have our business to keep our minds occupied. But if a man should trifle with a woman like her I don't believe she'd ever get over it, do you?"

As he talked he had been watching the smoke of his cigar, but now, with the question, he turned.

Parrish reached slowly out and knocked the ashes from his own cigar into a bowl.

"Perhaps not," he said.

There was silence between them for a time.

"Of course it has often struck you, as it has me," George said presently, "that in any relation between two people one of them always has the upper hand." And as Parrish nodded he continued: "Even in so-called equal partnerships one of the partners is always the stronger. In business one partner will dominate because he is more of a person than the other, but in domestic partnerships the man will generally dominate even when the woman is more of a person. It isn't only that he controls the purse strings but that his position is stronger because he is freer, has more outside interests and is less sensitive. That has always seemed to me a rank injustice. What I mean is that men, instead of getting the upper hand of women because they deserve it, seem lots of times to get it for exactly the opposite reason—because they're so much more selfish than their wives. Or if the wife happens to be the more selfish one—of course that sometimes happens too—then she gets the upper hand. It puts a premium on selfishness.

"I suppose," he pursued reflectively, "there is no better gauge of a man's quality than whether or not he imposes on a woman because of his advantage over her. It's pretty hard not to do it sometimes. Take the case of a man with a wife like mine. I try to be on my guard against imposing on Margaret, but I guess I do impose on her most all the time. There's our parlor out here, for instance." He gave his little laugh. "When we moved in here she bought that furniture because she knew it was the kind of stuff I liked. Alice says it's not in good taste, but Margaret sticks up for it because it's my style. It isn't what she'd have for herself at all though. I didn't realize that in the beginning, but I've got wise to it since, and I'm going to remedy the matter when business picks up a little more. That's one of the things I've thought about while she's been away." And after a little pause: "Their going away does give us men a chance to think things, doesn't it?"

"I imagine so," Parrish answered, feeling, as he spoke, the inadequacy of the reply. He liked George. George was being extraordinarily friendly. He had a feeling that George was trying to make him understand that he wished to help him, and he knew that he needed help, yet here he had been as uncommunicative as a Buddha.

"Look here, Brooks," he said, leaning forward, "you've been bully to me and I appreciate it. The fact is, I'm afraid Alice is thinking of refusing to see me at all."

"I gathered that there had been a misunderstanding of some kind," returned George, "though she hasn't said a word. She's been awfully downhearted—she didn't want me to know, but I could tell—and last night, when you telephoned, I got out of the room in a hurry, but of course I couldn't help knowing she was crying. I don't mind telling you I was pretty sore on you last night."

"And I don't mind telling you," Parrish answered, "that I'm pretty sore on myself. Do you think perhaps you could get her to come down and see me just for a minute?"

"Well, I got her down to see Burlingham," said George quizzically.

"I'm afraid that was easy compared with what this is going to be. The plain truth is, I don't deserve to see her."

George dropped the end of his cigar in the ash bowl and rose.

"I suppose not," he said.

"Of course," said Parrish, "if she's really sick I don't want to bother her. I'll come back."

"Oh, she can see you all right—if she wants to." He moved toward the door. "I'll go up and ——"

"Wait!" cried Parrish; and as George turned: "Tell her I've *got* to see her!"

"I'll do the best I can, old man." He moved on again.

But as he was starting up the stairs Parrish, following, caught him by the arm.

"Tell her," he said in an eager voice, "that it isn't going to do her a bit of good to say she won't see me—because I'm going to stick around here until she does!"

XXXI

THE den was not a room suited to the needs of one nervously waiting. Small, with bulky furniture, it afforded but scant space for promenading; the only straightaway was the passage between fireplace and desk, and even that was abridged at one end by an armchair, so that four long steps covered the entire distance.

For a time Parrish paced back and forth over the cramped course, smoking a cigarette which he had lighted after discarding his cigar; then, annoyed by the restrictive walls and furniture, he dropped again into a chair, and finding his cigarette burning to a stub lighted a fresh one.

When his second cigarette was consumed he flung it in the bowl, and opening his case to get another found it empty.

He looked about the room for cigarettes or cigars, but could discover only pipes and pipe tobacco.

Strange she did not come. He had hoped that George would be able to persuade her to come down at once. He wished he had noticed what time it was when George left him, and that the latter would return, if only for a minute, and give him some idea how things were going on up there.

For lack of other occupation he wandered about inspecting the contents of the room. In three group photographs of football teams of the Ohio State University he had no difficulty in recognizing George, and he gathered from inscriptions on several silver cups standing on top of the bookcase that his host had also shone at shot putting and trap shooting. The books upon the shelves below dealt with hunting, fishing and natural history, and the magazines upon the desk were sporting periodicals.

What could be the matter up there? He went to the door and listened, but the house was as silent as if it had been uninhabited. Perhaps Alice had been lying down; perhaps she was dressing. In that case, though, George could easily have come and told him what was causing the delay. Surely he would have done that. A nice fellow like George would not leave him down here in this horrible suspense if he could help it. He must be staying because he had to stay. He must be having a hard time with her. Suppose she wouldn't come? Or if she did, what chance had he of obtaining her forgiveness when so persuasive a person as her brother-in-law had such difficulty in inducing her merely to come and listen to his plea? He took out his handkerchief and wiped the palms of his hands.

Oh, for a cigarette! George must have cigarettes. Again he looked for them, this time going so far as to search desk drawers, but to no purpose.

He had resumed his animal-like pacing and was trying to concentrate his thoughts upon the formulation of an effective appeal to Alice, when through the slightly opened door he heard from above the squeak of a hinge and the faint sound of steps. The tread was not George's. It was a woman's. She was coming down the stairs. Coming slowly. He could hear each muffled footfall on the carpet.

Now that the moment when he would see her, the moment he had waited for so anxiously, was imminent, a wave of fear swept over him. Had it been George coming to tell him that Alice would not see him his suffering would have been acute, but hardly more acute than was this panic at the thought of facing her. He dreaded to look into her eyes.

By the difference in sound he knew when she stepped from the last stair to the floor. Now she was in the hall, coming directly toward him. He stood a little back from the door, waiting, gazing at the place where she would appear.

The door swung slowly. As their eyes met he saw in hers the look that he had feared. It was a look that he had never seen before—how, then, had he known what it would be? There was no question now of what she knew. She knew! He understood it instantly and as definitely as if she had spoken out and told him.

With her hand on the knob she paused. He was struck by the fact that she looked taller, and for an instant that thought stood forward in his harassed mind. How curious that she should look so much taller!

He waited for a moment, hoping she would say something that would help him to begin. Perhaps if he could once get started it would not be so hard. The things he wanted to say to her seemed to be revolving in his mind at terrible speed, like a huge flywheel in a power house. He must seize hold of that dizzying wheel. When he spoke it was as if he had leaped blindly at it.

"Why, you look taller!" he said, and wondered why he had begun with such a fatuity.

She stood motionless, silent, her hand upon the door knob as if at any moment she might turn and go. Was it perhaps the lines of her soft dark dress that made her look so tall?

"Please come in and sit down," he pleaded; and as still she did not move he repeated, "Please—come in and sit down."

She closed the door and, advancing, seated herself in the nearest chair; and there was something in the way she sat that gave him a feeling of her impermanence there.

"Alice, won't you forgive me?"

"You broke your word," she answered without inflection.

"My word?" He was not sure to what she was referring.

"You promised you'd tell me if you ever—Clara said you wouldn't, but I believed you."

Now he caught her meaning. The promise had meant so little to him that it had slipped his mind. Another black mark against him.

"If that were only all I had to ask you to forgive!" he brought out in a low voice. "How am I ever going to explain? I can't explain it to myself. I feel as if I had been out of my mind. That's the only shred of defense I have to offer—and it isn't a defense. There's no justification for any of it, from beginning to end. You couldn't hate me more than I hate myself. I loathe myself! I'm wretched. I'm sick. I never deserved you, and now I deserve you less—but I never wanted you so much. I used to imagine I appreciated you, but—why, I didn't at all! Not at all. If I had you and I would have been married long ago. But I had selfish delusions about the advantages of being free—just as now I have a selfish desire not to be free. Oh, Alice, if ——"

"I used to wish you wanted to marry me," she said, still in that uninflected tone. "Now I thank God you didn't want to. If we had been married this would have happened just the same."

"Oh—no!" he cried.

"Yes, it would. If I had been your wife you would have been sly about it—you wouldn't have told me—you'd have got me out of the way just exactly as you did. But I didn't come down to discuss this with you. I came because George said you wouldn't go away until you saw me. Well, you've seen me—so now you can go."

"Go?" he repeated. "With you hating me like this? I can't! I've got to try to make you understand something. I've had

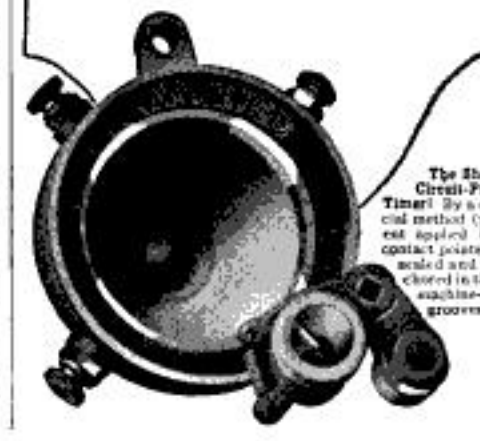
How $2 Re-Powers Your Ford

A new lease on life for tired Fords! More power to buck Spring's muddy roads. Snappier starts, smoother pulling, faster pick-up. That's what a Milwaukee Timer will give. Just put one on and see how your car responds!

Cost? No more than a tankful of gasoline! Hard job? 15 minutes with pliers does the trick. In fact, the Spring overhaul of thousands of Fords means only cleaned spark plugs and a new

MILWAUKEE TIMER for FORDS



No other replacement makes a Ford car, truck or Fordson tractor so much more efficient. The Milwaukee's hotter spark puts more drive into each explosion.

The Milwaukee Timer's smooth-running design, highest quality materials and workmanship, and faultless performance have made it the standard replacement timer of the world. Over a million users.

Each Milwaukee Timer is rigidly tested, mechanically and electrically, before packing. It fits perfectly, runs freely and quietly—and its durability is famous. *Ask any garage mechanic about the Milwaukee Timer.*

Sold by garages, auto supply and hardware stores everywhere — $2.00

Milwaukee Motor Products, Inc.
Milwaukee, Wisconsin

The Short-Circuit-Proof Timer! By a special method (patent applied for) contact points are sealed and anchored in their engine-cut grooves.

F.O.B. Trenton

TEPECO Water Closets

FOR EVERY PLACE AND PURSE

THERE are times when you cannot even pretend not to notice the sound a noisy closet makes. Why let such a water closet stay in your house, disturbing you, embarrassing your guests? Install a Si-wel-clo, the quiet-operating closet that flushes thoroughly with a minimum of sound.

The Si-wel-clo is the leader of a group of water closets which The Trenton Potteries Company has developed to meet the needs of every building, from the big hotel to the modest bungalow.

While water closets may look alike to the layman's eyes, there are, as a matter of fact, several different types, from the simply constructed washdown to the superior syphon jet closet with its instantaneous flushing, large water surface, protection against sewer gas and passageway that minimizes chance of clogging. Naturally the better types, being of complicated construction, are more expensive to manufacture and not within the means of everyone.

We, of course, consider the Quiet Si-wel-clo the most desirable. For those who cannot afford it, we make other good closets. Into our "Welling," "Merit" and "Saxon" we have merged as many of the excellencies of the Silent Closet as possible. Each in its class and at its price is the best the market affords. Each is equipped with a tank of glistening white china, with surface unaffected by stain, acid or soil, and *trouble-proof* working parts.

WELLING
Price . . . $65.65
F.O.B. Trenton

MERIT
Price . . . $57.50
F.O.B. Trenton

SAXON
Price . . . $53.15
F.O.B. Trenton

We have priced these four closet outfits fairly, f. o. b. Trenton, and are shipping them completely crated to the plumbing contractor. We *know* it will pay you to insist upon your plumber's furnishing them.

BOOKLETS—So that you may learn why some closets cost more than others and are worth it, we have prepared booklets showing the difference between the types. We want you to send for them, also for our bathroom plan book—"Bathrooms of Character," Edition D.

an aberration—but it's over with. The thought of it is sickening to me. Even if I never win you back I'm going to try to live it down because I must win back my own self-respect."

"Yes," she said.

He clutched at the small encouragement afforded by that single word.

"When I've won back my self-respect," he went on, "is there no chance of my winning back your respect too?" And before she could speak he continued: "Don't answer now. Don't take that hope away from me—I couldn't stand it! I'm not asking you to promise anything; I'm only begging you not to efface me. I'm not asking you to marry me—because I don't dare. But won't you put me on probation? Won't you let me try all the rest of my life to make myself worthy of you? Don't answer that either. I know how you feel now. Right now it doesn't seem possible that either of us can ever get over this; but if we can be patient, some day the wound will heal, leaving perhaps only a slight scar. That's the way the world is; if it weren't so life would be unendurable.

"Probably you will resent the idea—but I must tell you: I am actually a better man to-day because this thing has happened to me. It has humbled me, and I needed that. And it's given me a new sense of values. It has marked me away down and you away up. It has shown me the absolute falseness of the standards I used to believe in. Sophistication! Lord, what rot most sophistication is! It took something like this to make me see straight. But I do see straight now. I'm really changed. Changed inside. Oh, I wish you could see how it has changed me!" He beat upon his breast with one clenched hand.

"Don't I seem different to you? Don't you sense it? Don't you get something—I mean something like—well, like a man who used to come into our office—he was a hard drinker, and every now and then he would say 'I've gone on the water wagon,' and Bement and I would laugh because we knew it didn't signify anything at all—just temporary. Then one day we heard that his wife had left him. The next time we saw him he didn't say he was on the wagon—didn't even speak about drink until somebody offered him one; then he said 'I don't drink any more,' and there was something about the way he said it that made us know that this time it was final."

He had been talking rapidly, but now he paused. Since entering the room Alice had looked at him steadily. Though she gave no sign of relenting, it seemed to him that the expression of her eyes was less forbidding. It heartened him.

"And don't overlook this," he went on: When his wife left him she thought she was through with him forever. But after a while she saw that he was really different and came back. They're happy now."

For the first time Alice lowered her eyes. Her hands had been clasped in her lap; now he saw that they were clenched, the knuckles showing white in the lamplight.

"I wish you'd go," she said, but her tone lacked the cold resolution it had held.

He longed to touch her but was afraid. He felt that if he could take her hand the something he was powerless to express in words must flow into her, charging her with an understanding of this profound revolution in his soul. And because he feared to touch her physically he was impelled by instinct to recall to her the days when they were happy.

"I've been having a ghastly time lately, alone," he said. "Night after night I've been sitting in my apartment longing for you, wishing I could go to you for comfort as I used to. Last evening when I was in the depths of despair, just before I telephoned, I got to thinking of the time when I had the grippe and how you came in every afternoon. You used to fix my pillows for me so much better than the nurse did. All day long I had you to look forward to, and I used to ——"

"I wish you'd go!" she broke in, wringing her hands.

"But I don't want to leave you, dear! There is there for me to go?"

She stiffened in her chair and raising her head looked at him savagely. It was as if the memory all but dismissed had returned stealthily and stabbed her.

"Don't ask me where to go!" she cried with cold fury. "So far as I'm concerned you can go anywhere!" And as he stood astounded at such an outburst from her, she continued: "Why don't you go back to Atlantic City! Back to Rita Coventry! Back to—to where ——"

She stopped, gasping as if suffocated, and there was a moment in which he felt himself quailing before her. Then quickly she turned away from him, sank her face in her arm on the back of the chair and wept.

Her weeping frightened him. He had never heard such tearing sobs. He dropped to his knees beside her, flung an arm about her, and drawing her to him, pressed his cheek against hers.

"Oh, don't! Alice! Don't cry like that! I can't bear it! Oh, please don't!" He was pleading passionately without knowing what he was saying.

But the awful tearing sobs continued. With his arm about her he felt the impact of each shock. Never had he so desired to comfort anyone, and never had he been so powerless. He snatched out his handkerchief and with a trembling hand tried to dry her cheek, as if the stopping of her tears could stop her sorrow. He felt desperate about it, like one endeavoring to stanch a wound. Her sleeve was wet. He pressed the handkerchief into her hand.

"Oh, Alice! Dearest! Dearest! I feel like a murderer! Don't cry like that! Oh, please don't! There's nobody else that matters to me at all! Alice! I'll go—I'll do anything—if you'll only stop! Please, sweetheart! Oh, please!"

Again he put his cheek to hers, tightening his arm around her to fortify her body against the successive, racking impulses; and when at last she became quieter he knelt there, thankful, almost happy, holding her, pressing her face to his, stroking her hair, her shoulder, her arm, as if to smooth away the pain.

She relaxed against him with a sigh.

"Dearest!" he whispered.

She gave up.

"It's no use," she breathed despairingly. "I love you. I can't help myself."

"Thank God!" he murmured. "You love me. That means I've only got to make you glad you love me."

As he knelt there with his arm around her and his face pressed to hers there came to him a memory at first seemingly unrelated—the memory of the time when he had almost drowned.

It was in Maine in the early fall. He had arrived from New York just before twilight and had hastened to the deserted bathing beach. Off shore a sloop was anchored and he made it his objective, swimming rapidly through icy water. While he had some distance yet to go he became conscious of fatigue, but the space between him and the boat was now shorter than between him and the beach, so he kept on. The last few strokes brought him to the verge of exhaustion. He clutched at the boat's side, missed it, went down. Coming up he had to swim a stroke or two to reach it again. He put all his remaining strength into the effort, feeling that should his grasp fail this time he was lost. But now he managed to get his finger tips over the low wooden rail at the edge of the flush deck. For a long time he hung there in the frigid water without strength to lift himself aboard, facing the fear that he could never do so. But at last, a little rested, he mustered the remnants of his energy and managed to clamber up the side to safety. Never would he forget the feeling of relief that came to him at the moment when he lifted himself gasping to the deck. Until now he had known no emotion like it.

In the moments following that jeopardy, when he lay in the lee of the little deckhouse recovering his strength, life had seemed sweeter to him than ever before; he experienced a sort of vision of the coming years spread out like a lovely landscape for him to wander in. And now, confident that Alice was to be restored to him, love seemed sweeter than ever before, and his landscape vision of the coming years was made beautiful by the thought of Alice with him.

In the past he had experienced many pleasures, vivid but short-lived—selfish pleasures, glittering little pleasures, ornaments pinned onto life; but about this new-found happiness there was a reaching out, a sweep which seemed to make it integral with life; and the thought struck him that this quality of largeness was in some way connected with the fact that now he was not thinking of himself but of Alice—of making Alice happy.

The three harmonizing notes of a Chinese gong echoed through the house. Alice stirred.

A BETTER IRON

TONCAN

The Triumph of Alloys

Yesterday's dream is today's reality. Rustless, stainless iron is at last a fact! Alloys have made it possible.

How closely an iron approaches this absolute resistance to rust depends chiefly upon the amount of the costly alloys used in it.

Toncan—the better iron, while not entirely rustless, is rust-resisting to an exceptional degree. It gives the greatest durability that can be obtained at reasonable cost.

Toncan is abreast of a new era dawning in this industry. Inquiry invited.

Ethics of Credit

By means of hard work, courageous enterprise and economy, society accumulates capital, a considerable portion of which is entrusted to banks.

This surplus capital, as a basis of credit, becomes a great public utility. It should be employed in such ways as will be of the greatest benefit to the community. That is the moral responsibility of those who deal in credit.

It serves most fully the common good in stimulating productive enterprise—in balancing production with consumption—in moving goods from the producer to the consumer with the least cost and waste of effort.

The National Bank of Commerce in New York believes that the beginning of a new business cycle is near at hand. It is impressed with the necessity of economic business practices if the foundation of enduring prosperity is to be created. It believes that the soundest individual credit is that into which enters the recognition of these broad general principles.

National Bank of Commerce

Capital and Surplus Fifty Million Dollars

"Dinner," said she. "I ought to have put the children to bed long ago." She sat up, turning her face from him.

"It won't hurt them to stay up a little bit later this once, will it?" he asked as he rose.

"Anyway, I must go see. You'll keep George company at supper? It won't be much—the maid goes out to-night—but he'll be glad to have you."

"And you?"

"I can't come down—the way I look."

"But you must eat. I'll carry a tray to you."

He followed her to the foot of the stairs. He wished to stand there looking after her as she ascended, but knowing that she preferred not to be looked at, turned to the parlor, where presently George joined him.

He tried to express his gratitude.

"Oh, that's all right," said George, checking his stumbling speech of thanks. "Come on in and have something to eat." He led the way to the dining room. "I guess by the looks of you a drink wouldn't hurt you either."

"Thanks," said Parrish; "but first I want to carry some supper up to Alice."

"Oh, I'll do that," the other said.

"Not if I can help it, you won't!" Parrish answered, mustering a smile. "It's the only thing I can think of to do for her right now."

Together they prepared the tray.

"No, we've got this wrong," said Parrish when the tray was set. "We ought to have put a napkin on first. We must make it look dainty."

"All right," said George tolerantly. "Here's a napkin. You go ahead and make it look dainty while I get you that drink."

The tray having been made ready before George returned, Parrish carried it upstairs, but at the top of the flight, not knowing which was Alice's room, he hesitated. He called her and was guided by her answering voice to the door.

"Come in," she said, and as he entered the dimly lighted chamber she warned, "Look out for that chair."

He looked for a place to set the tray, and finding a small table appropriated it for his purpose, carrying it over to the couch where she was lying.

As she sat up to inspect her supper he suggested: "Wouldn't you like a little more light?"

"I suppose I'll need it. That one over by the dresser, please."

Turning on the light he saw his photograph, and hoped that it had remained there ever since she came to Cleveland.

"Pictures like this are too big to lug about," he commented. "I must have a miniature of you to carry with me when I travel."

Then returning to her side, eager for approbation of his handiwork, he asked: "Well, how do you think the tray looks?"

"Very nice."

"You might just make sure you've got everything you want," he suggested. "George and I tried to think of everything, but—oh, I forgot the salt, didn't I!"

"I won't need it," she protested.

But already he was leaving the room.

Returning with the salt he placed it on the tray, and maneuvering to the foot of the couch sat down.

"I hope you feel a little better?" he asked anxiously.

She nodded.

"That's good!"

After a little silence, during which she drank some tea, she said, "Now you'd better go down to George—and have your own supper."

Reluctantly he rose.

"You're sure there isn't anything more I can bring you?"

"No, thanks; I have everything I want."

He longed to embrace her.

"Oh, my dear," he began, "how I wish ——"

But he was interrupted by George's voice booming from below: "Hey, you, Dick! How long does it take you to carry a saltcellar up stairs? Come on to supper!"

"Right down!" he called back, but he did not move from her side.

"May I come up and see you afterwards?"

"I'm sorry—I'm afraid I'm too tired."

"Yes, of course," he said quickly, his voice full of solicitude. "May I see you to-morrow?"

She nodded, asking:

"But when are you going back to New York?"

"Oh, I haven't thought about that. I'l have to go pretty soon—in a day or so but I must wait until you're better. You'l be a lot better to-morrow, won't you?"

"No doubt," she answered. "Now yo really must run along."

"Yes." He looked at her hungrily.

Passing by the back of the couch on hi way to the door, he ventured to bend an kiss her hair.

As he reached the hall she stopped him "Dick."

"Yes, dear?"

"This lake climate is so changeable—di you bring plenty of warm clothing?"

XXXII

BEFORE Parrish left for New York h had a long talk with Alice. He begge her to marry him as soon as possible, an although she would give him no assuranc he took with him on his journey thre thoughts to comfort him: She had assente to his coming back to Cleveland a wee hence. George, a matrimonial enthusia because of his own happy experience, wa his supporter, and this, he felt, meant tha he would have the support of Margare also. And most encouraging of all, Alic was worrying about his health again, Go bless her!

That she would finally marry him h could not doubt. His fear now was tha she would make him wait. What if sh kept him waiting six months—or a yea The mere thought of such delay appalle him. A terrible waste of precious time And he wasn't growing any younger—tha ought to be considered too.

Among other arguments presented t Alice in his letter to her from the train, h made a point of his increasing years.

"In a couple of years," he wrote, "I'll h forty—practically middle-aged. Youth going. I can feel myself aging. I can stand this waiting. It's going to make a old man of me if you don't look out."

However, he overlooked the fact that i this argument he was exhibiting a qualit anything but old: His impatience was tha of a young lover.

In the evening after his return to Ne York he telephoned to Alice, and findin conversation with her highly satisfactor called her up again next night, and th night after. Telephoning to her became daily habit with him; the contact thus es tablished made him less lonely; he knew what was going on out there day by day For example, when little Georgie, lookin out of the window at a storm, remarke that the rain was combing its hair, the re reached Parrish on the evening of it utterance. Again, on the night of Marga ret's return, he was introduced to her ove the wire; her voice was sweet, like Alice's And again on one occasion when, Alic being out, he talked with George, he was i position to gather such satisfaction as lover might from an exact knowledge o her whereabouts: She had gone with th president of the Cuyahoga Car and Foun dry Company to see John Barrymore.

Parrish went to Cleveland the next week end. Upon the occasion of this visit he di not neglect to point out to Alice that, how ever she might have passed her evening during the preceding week, he had in variably remained alone at home for th purpose of telephoning to her. And he ha almost finished reading Carlyle's Frenc Revolution. Later in the same evening h managed to give her his estimate of John Barrymore as an actor. In his opinion Barrymore was overrated.

To Margaret he was drawn at once. Sh was like Alice, though not so beautiful Her face, however, held that same sweet ness, and there was a poignant loveliness i her eyes when she looked at George and th children.

Among Margaret, George and Parrish there was no concealment as to his aspira tions; when Alice was absent they would discuss the topic frankly.

"She ought to marry," Margaret said "She is a born wife and mother. I suppose being a bachelor you haven't noticed her tact and judgment with the children. Marriage will do a lot for her. It will give her more poise."

George, sitting on the arm of her chair, looked down at her affectionately.

"Yes, dear," he said.

And she glanced up at him and smiled and nodded.

This aspect of the matter had not hitherto struck Parrish, but he realized instantly

Sweeping Slavery Ended by the Wonderful Vacuette

No Electricity

Science and mechanical ingenuity have scored another triumph.

No longer need the housewife wear out her strength and waste time with old fashioned methods.

The invention of the wonderful Vacuette has made sweeping merely an incidental part of housework, to be done so quickly and so easily that it ceases to be work.

Already nearly 200,000 women have found in the Vacuette freedom from sweeping slavery. And every woman who has not yet found this easiest of all ways to keep rugs and carpets bright and clean and new looking should ask our local representative for a free demonstration of the Vacuette in her own home or write direct to us.

No Cost of Operation—No Attachments—No Electricity

No wires, no cords, no plugs, no attachments at all with the Vacuette—and *no cost of operation*.

The Vacuette is a purely mechanical sweeper in which you have the combined advantage of a swiftly revolving gear driven bristle brush and a powerful air suction. These are put in action simply by your push on the handle—and the effort is no more than you give to an ordinary carpet sweeper.

In the Vacuette you have no complicated mechanism—it is the last word in simplicity. Its body is polished cast aluminum. It has "Parkerized" rust proof parts. It runs on noiseless rubber wheels. It is rubber cushioned—it will not scratch the furniture. The mechanism requires practically no oiling. It weighs only 7½ pounds. It is so light that a child can use it—so strong that it will last for years—practically for a lifetime.

Priced at Half what You would Expect to Pay

From what you have been told about the Vacuette and the amazing work it does you may imagine—very naturally—that its price is high.

But—the simplicity of its mechanism means low manufacturing cost and the buyer gets the benefit of this saving.

That is why you pay only about half what you would logically expect to pay for a really efficient and practical vacuum sweeper. Not only does it give you clean rugs with practically no effort and no cost to operate, but it saves you money in the first cost.

And if you wish, you can arrange to pay on easy terms—a little every month.

Backed by the Makers' Guarantee

You do not have to be a mechanical expert to know that the Vacuette is the final triumph in devices of this kind. And you are guaranteed that the one you get will be perfect in every detail when it goes to you.

The makers guarantee that every Vacuette has been thoroughly inspected by experts at the factory and that if any part shows a defect due to fault of material or manufacture they will replace it free of cost to the user.

Proved Free—In Your Own Home

We have local representatives everywhere.

These representatives are employed for the purpose of giving every housewife a free demonstration right in the home without cost or any obligation whatever.

Simply write to us asking for the demonstration and we will arrange for you. We want you to see the Vacuette at work—we want you to try it yourself—whether you buy or not.

You can't realize how wonderfully it takes up the dust and dirt and how it saves you from an aching back and tired muscles until you actually see it in operation. You will be amazed at the amount of wonderful work the Vacuette does in just a few minutes—with practically no effort on your part—and without cent to pay for power.

The Demonstration is free. Just Ask For It.

Vacuette
Non-Electric Suction Sweeper

As Efficient as an Electric—as Easy to Operate as a Carpet Sweeper

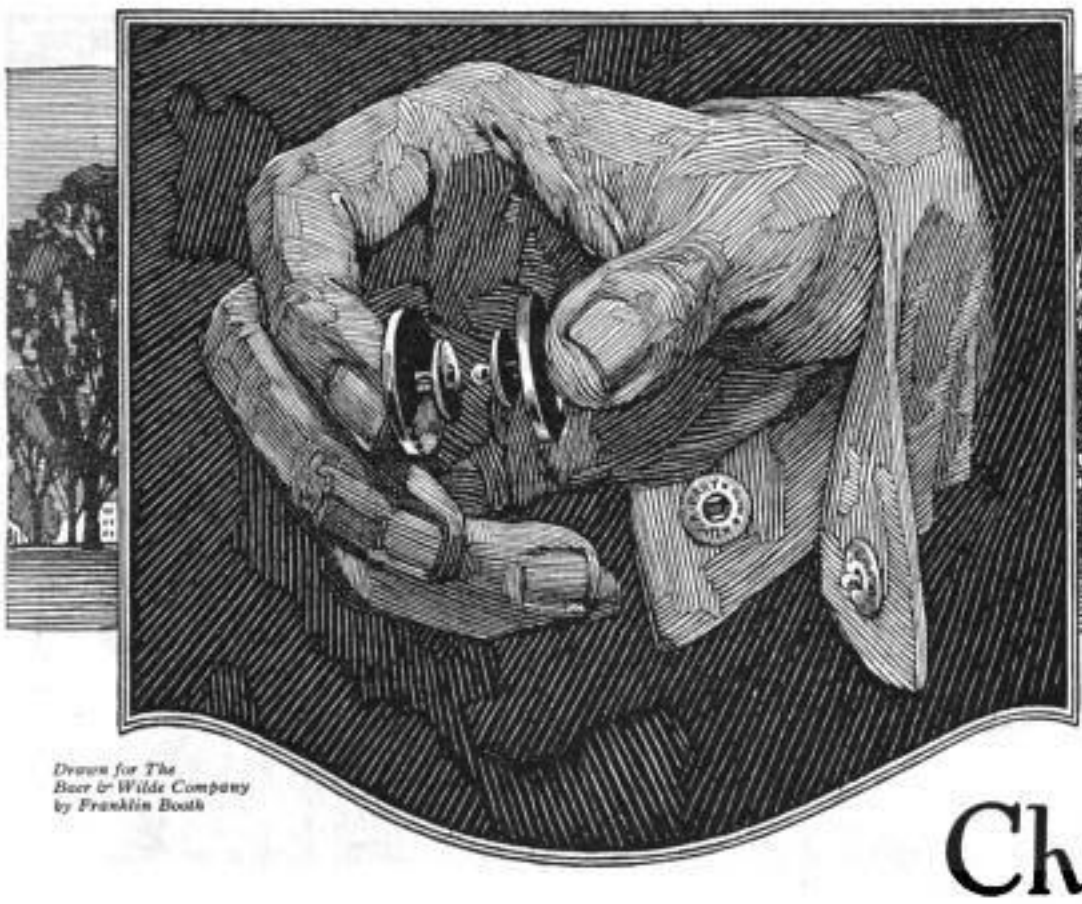
IMPROVED Vacuette MODEL "C"

The Vacuette is Putting Men into a Paying Business

So widespread is the demand for the Vacuette that we have openings for a few more men in various sections of the country to work with our district managers, demonstrating the Vacuette in homes and taking orders for it. If you have ambition and "go-getter" qualities, this is your chance to place yourself where you can obtain every dollar to which your ability entitles you—for you can set your own pace in money making.

You are offered the opportunity to join the sales organization of one of America's soundest, most progressive manufacturers. As our representative, you offer a device which is needed in every home—not only where there is no electricity, but where there is.

You need not be an experienced salesman to succeed with the Vacuette. We will give you the necessary training which will enable you to show the housewife that with this device she actually takes the work out of sweeping and always has her rugs and carpets wonderfully clean—and this without any cost for operation.



You don't need to be a salesman. The Vacuette actually sells itself. Every housewife will tell you that it is just what she has been looking for. You also have back of you all the power of our great national and local advertising campaigns and constant co-operation from the company. This is the opportunity which offers all that the active, ambitious man can ask for—not only in splendid earnings as a salesman—but with the opportunity to become a district manager.

Write Today Action is the word. No matter what you are doing, find out what this proposition offers. Men now in the field are making big money—and the same chance is open to you. To delay may mean losing out on the territory in which you would like to work. Tell us what you have been doing the past three years, state the locality in which you are best acquainted, and we will give you complete detailed information about our proposition.

(Continued from Page 110)

that what they said was true. The essential difference between Alice and her sister, aside from Alice's greater beauty, was that she had less poise. Margaret had the serenity which comes only to those who are conscious of fulfilling their destiny. One knew that she felt secure, established. Her husband, her children, her house, even the furniture in the house, seemed to collaborate to that end. It was as if the very chairs contributed their quota toward making her feel sure. Thinking of this, Parrish was struck by the fancy that the furniture in this house, although it had been selected to suit George, and although it was presumably his legal property, seemed to belong more to Margaret than Alice's own furniture to her. Why was it that an unmarried woman, however independent, never seemed so completely the proprietor of her home and possessions as a married woman?

Now he perceived clearly what hitherto he had but dimly sensed—that as a wife, secure in home and husband, Alice would have her proper background. In marriage she would bloom.

Suddenly it came to him what her background should be.

Blenkinswood! For her wedding present! Blenkinswood restored, with the old portraits, mahogany and silver back in their places. And a surprise! He would keep it secret from her until he should take her there.

The project put him in high spirits. He felt enterprising, confident. And when that evening after supper George and Margaret considerately went out to a movie, leaving him alone with Alice, he had a new sureness with her. To-night she must definitely promise to become his wife.

She did. She was quite reasonable about it. He was able to make her see that the week of his probationary period, being in reality an æon, was long enough.

And ah, the beauty of her yielding!

It was the essence of her nature to yield to those she loved. He must be on his guard always against that. He must spoil her—because to spoil her was impossible. He must teach her to be selfish—because it was a lesson she could never learn. With all the spoiling he could give and all the selfishness he could instill, she would ever be contriving to give him his own way.

When at some future time it would seem to him that he had done his utmost he must keep on searching out new contributions to her happiness, heaping them up before her in atonement for the past. Owing her a debt that he could never liquidate, he must pay and pay against it, so long as his life should last.

A trinity existed in her. She was mother—sweetheart—daughter to him. How he wished that he had known her when she was the age of little Alice!

With her cheek resting peacefully upon his shoulder he was for a long time motionless and silent. The lamplight, sifting through the outer softness of her hair, crowned her with a golden aureole, and this wonder and pure luminousness about her head added to his awe.

Yet he was aware, in his feeling for her, of a duality. Bound up with his almost religious adoration for her as a beautiful spirit was a passion for her as a beautiful woman. The two emotions were interwined like two vines of equal strength, so twisted around each other, so inextricably entangled from trunk to tendril, as to form a leafy cable, on which white blooms and green grew one against the other. Instead of strangling, these vines upheld and made each other doubly strong. And Parrish knew that this duality, this blending of adoration and passion, was essential to a great and lasting love.

He craved to tell her of these things, but could only whisper over and over, "I love you! Oh, I love you so!"

And as he murmured to her he felt a terrible, sweet suffering because instead of offering for her a palace of his thoughts he was able to build her only a structure of old worn words.

How they were lovers again! Yet not again, for this was a balanced relationship such as had not before existed. This love was new. There was a fullness, a translucence, an unthinkable glory in it which carried to his spirit a rapturous sense of sun and color, arborescent, radiant. He was exalted. A pilgrim, footsore and weary, he had stumbled through the world and reached at last the holy place. With mind and body bathed he had entered the temple and knelt before the sacred shrine. In her love he was reborn.

It seemed to him that George and Margaret had hardly gone when they were back again, speaking of having seen the entire evening's show. The speed of it all dazed him. He found it hard to speak with them coherently as they paused on their way upstairs.

"And when we are married," he said as he sat down again by Alice, "there's one thing I want you to let me do. I want you to let me plan the wedding trip. I want you to start out with me without knowing where you're going. Will you trust me to plan something that will please you?"

Though she assented readily enough he was particular to make the understanding very definite.

"Then it's agreed? You will abide by my plans?"

"Of course."

"All right," he said triumphantly. "I'll tell you the first part of the plan now. We are to be married about the middle of May. That gives us nearly two months to get ready."

She smiled, saying, "Oh, I didn't agree that you should settle the time."

"But I've got to settle the time if I'm to settle the trip," he insisted. "I've got to make it seasonable, haven't I?"

Before he went back to New York that night he made her see the soundness of his argument. Again she was reasonable—so reasonable that he almost wished he had said April. But two months would give him none too much time in which to get Blenkinswood in order.

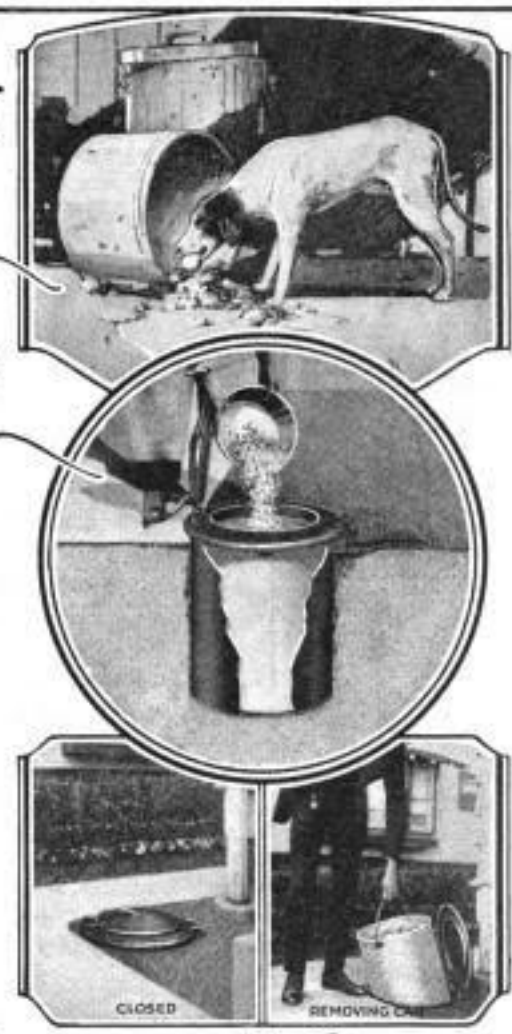
One evening a few weeks later, when Alice was in New York buying a trousseau and arranging to give up her apartment, she spoke to him of Blenkinswood.

"I've never been able to understand," she said, "why you don't take better care of it. That is one thing I am going to try to make you do."

It gave him great amusement to assume, in answering, the tone he had so often taken in the old days when he used to put her off.

"Oh, let's not bother about Blenkinswood now," he said as if the topic bored him.

And it was difficult for him not to laugh as he spoke, for they were in her apartment, and her words had interrupted his surreptitious scrutiny of her chintz curtains, which he intended to have duplicated for her room in the old house. Moreover, he knew that the transformation of Blenkinswood was now well under way. Not only had the shiftless farmer been dismissed, and a young couple, the husband a graduate of an agricultural school, been established in a cottage on the place, but a large force of carpenters, plumbers and painters were at work in the house, installing a heating plant and bathrooms, laying hardwood floors and restoring the ancient paneling. Outside, a landscape gardener with a gang of men was engaged in renewing the lawns, gardens and slave-built terraces sloping down to the river front; that very day Parrish had received from the gardener a report informing him that, despite neglect, the hedges and arbor of box, planted on the terraces by the Signer, could be reclaimed.



The boat landing at the foot of the garden was being rebuilt, for a hurried trip to Blenkinswood had reminded Parrish that Virginia was still backward as to roads, and he not only wished to avoid the rough eleven-mile drive from the railway but desired that Alice's first vision of her home should be from the river. He could imagine the expression of her face when, as their launch would come around the bend, she should first see the venerable mansion crowning the bluff, the sunlight glowing on its rosy bricks. Landing, they would mount the terrace steps, passing the giant azaleas, the wistaria, strolling under the arch of box, and so up and up until, ascending the last terrace, they reached the crest of the hill, where the house, with its two long wings extending like outstretched arms, would seem to welcome them.

There came a Sunday, the first day of May, two weeks before the date set for the wedding, when Parrish planned to pack the last of the smaller treasures to be shipped to Blenkinswood. Coming out to breakfast in his dressing gown he found the Sunday papers piled on the table in the dining room. After pouring his coffee he slipped a news section from the sheaf, and leaning it against the coffeepot before him

THE FLORSHEIM SHOE CO.

Manufacturers Chicago

for the man who cares

The Florsheim Shoe

found himself facing a picture of Rita and Delaney, beneath which, in large headlines, he read:

DIVA WEDS COMPOSER SHE MADE FAMOUS

RITA COVENTRY MARRIES PATRICK DELANEY, SEVERAL YEARS HER JUNIOR

SINGER'S ASSERTION SHE WOULD NEVER WED RECALLED

Stated at Time of Reported Engagement to Italian Noble, Domesticity Impossible for Artists and Marriage Certain to be Failure, "A Woman's Right to Change Her Mind," She Says

With an interest keen but quite impersonal he read the florid story. For him it had no more significance than if it had been the tale of some happening in a city he had visited long ago. Rita seemed strangely remote. A reporter had interviewed her and she had spoken with a brazenness which Parrish found repellent.

"Yes," she was quoted as saying, "it is true that when, several years ago, I refused the Duca del Valentino, I did so on the ground that an opera singer should not marry. But though a singer, I am also a woman, and a woman has a right to change her mind.

"Paddy"—here the reporter described her arch look at her young husband—"is enormously gifted and I intend to see that he gets the fullest opportunity for self-expression. He has never been abroad, and you may imagine with what pleasure I anticipate acting as his guide in my beloved France, for which we sail May twentieth.

"Some of my friends tell me I am a fool to marry, and especially to marry a man so much younger. That may be true. I can only say that now we are blissfully happy. What if later we tire of each other? Shall we not have had our hour of joy? After a motor trip through France we shall settle quietly for the summer at Deauville, where I have taken a villa. I intend to show him how domestic I can be. I shall cook for him, sew on his buttons and mend his socks, like any good wife."

Sitting there alone Parrish burst out laughing. He could fancy Rita cooking for Delaney—once—carefully costumed for the part. And the simple life at Deauville, that Mecca of jaded Parisians, with its casino and its one-piece bathing suits! Poor Delaney, how out of the picture he would be!

He was so boyish, so ingenuous. There was something really fine about him too. Would that fineness be burned out? He felt genuinely sorry for Delaney.

Breakfast over he took the Sunday papers to the living room. The floor and walls were bare and packing boxes stood where the furniture had been. Some of the things were going to Blenkinswood, some to the larger apartment he had taken.

He would not have time to read the papers. He used them to wrap up the silver, Ito helping him.

Then he turned to the bookcase, where were the portfolios containing the old documents and the engravings of the house. The papers must be neatly arranged for shipment. Opening the first portfolio he made himself look at the engraving showing Blenkinswood with its new wing—added in 1791. In the center of the picture was the ruinous imprint of a sharp little French heel. Once he had thought the damage irreparable, but now he remembered a man down on Fourth Avenue, very skillful, who could repair such things. He would send him the engraving and the torn letter of the Signer. When they had been mended the damage would be almost imperceptible.

XXXIII

"AND you honestly have no idea where this boat is going to take us?" he asked Alice.

"Not the least in the world," said she. "I don't even know the boat's name."

"Would you like to know it?" he asked, delighted at her ignorance.

"No, I don't care."

"Do you think you're going to Florida—or Panama—or South America—or Bermuda—or Europe? Where do you think you're going?"

"I don't know at all." She laughed. "Wouldn't it be absurd if someone came and asked me where I was going—and I couldn't tell them!"

"Tell them," he said, pouring over her an adoring look, "to ask your husband!"

"I know who he is, anyway!" she said, and after a quick look about reached out and pressed his hand.

"And," he said proudly, "you know what your name is, don't you, Mrs. Parrish?"

She nodded.

"Perhaps that's why I'm not interested in the name of the boat."

A steward carrying a long cardboard box knocked at their cabin door near by. Parrish crossed the deck, took the box, and entering the cabin, opened it. It contained Ophelia roses—her favorites—with petals shading from cream to a delicate pink. He took them out, assembled them and placed them in her arms.

She buried her face in the blooms, and as she raised it there came a little flush of pleasure in her cheeks; it was as if the color of the roses had been transferred to them.

Little things always pleased her so!

She rang for a stewardess, who brought a vase; but the stewardess was not allowed to arrange the flowers; Alice must do that herself, although the vessel was now backing out into the stream, and Parrish, in the doorway, was urging her to join him on deck.

But before the steamer was fairly headed down the river she was out there with him, watching the cross currents of shipping and gazing at the massed, competing towers of lower Manhattan, etherealized in a haze of smoke, and bathed in the soft light of a late afternoon sun, which shone upon them like a rose-colored calcium in the theater.

As they gathered way, passing down the harbor, the fresh salt smell became more vigorous and the breeze more boisterous. But though the breeze was lively, snapping the sheltering canvas at the fore part of the deck, there was a mildness in it. It was a breeze of spring—not the false spring of a few months since, but the season of resurrection and rebirth.

When the vessel entered the Narrows they ascended to the deserted boat deck, and standing by the towering stacks watched the black smoke whirl back across the water. It was twilight. In the sky behind them orange streaks still showed, while with the gray of the distant shores was blended a subtle note of mauve. To the north and to the south the evening sky was clear, but the horizon to the east was black and menacing.

A great liner which must have started some time after they did had followed down the bay and all but overtaken them. As they emerged from the Narrows she was entering behind them; through the Lower Bay and the Swash Channel she pursued them closely; and no sooner had their bows made contact with the open ocean beyond Sandy Hook, giving the other sea room, than she came up and passed them arrogantly, close inboard, her sleek black body dotted with long rows of portholes lights. The stream of sable smoke hurled by her four red stacks, soot banded at the top, was like a stream of curses poured at the humble coastwise vessel which had retarded her, and the picture of impatience was heightened by the nervous, syncopated flashing of a signal light above the bridge. She was telegraphing with it, talking furiously. Furiously, too, her four propellers lashed the waves behind.

Parrish recognized that proud sea challenger. He had crossed on her. Moreover he knew from his morning paper that she was sailing to-day. And he knew more than that, for the list of prominent passengers that he had read was headed by the name of Rita Coventry.

"What a beauty!" exclaimed Alice, gazing across the water at the other vessel.

He assented, mentioning the liner's name.

"But we aren't going the same way they are," she commented, observing that their own course had been swinging toward the south. And she added, "I'm glad. I don't think that sky out there looks any too pleasant."

He glanced at the dark line of horizon to the eastward. Then with a feeling of complete finality he turned his back upon the other ship, and facing the bows of their own vessel, now straightened on a southern course, envisaged the calm sea and the peaceful heavens.

"Well, dear," he said, "we needn't worry about what's out there, where they are going." And he added, "We couldn't ask a sweeter sky than is ahead of us."

Then, as the wash from the fleeing liner reached them, causing the deck to lurch a little, he encircled Alice with his arm, steadying her.

(THE END)

SONNEBORN PRODUCTS

The Demon of Destruction is at work on Your Roofs NOW

Protect your roofs or they will surely leak. Stop the leaks before they start. Brush on Stormtight and make your roofs leakproof for many years.

Without protection, Rain and Snow, Heat and Cold will rot and crack and corrode your roofs.

Stormtight

FOR USE ON ANY ROOF IN ANY WEATHER

gives a thick covering, elastic under Heat and Cold—impervious, permanent. Paint, however, offers only a thin film which soon cracks and leaks. Expensive, because temporary.

No need to re-roof, at the present high prices. Your old roofs form a suitable base for Stormtight which will make them as good as new. Never too late for Stormtight on tin, composition, paper, canvas roofs on factories, homes, barns, garages, outbuildings, etc.

Stormtight is saving millions of dollars formerly wasted. Investigate—buy of your dealer in small or large lots.

Write for free booklet, "Leakproof Roofs," and testimonials covering years of use.

McAllister's house;
oped for, a light in
ed the car.

With a masterly imitation of sudden impulse I said, "Want to drop in here a minute?"

"Huh?" said Gus Hardy, staring; and after a moment, "Here?"

The McAllister house did me credit. It was not so large as to be formidable, but it was wide and comfortable looking, with a veranda that seemed to invite and welcome you. Gus Hardy made no objection; he said nothing at all.

Wherefore I shouted cheerily, "Hello! Anybody home?"

Martha's bright head bobbed up at the open window and her bright voice answered me. I think I forgot to notice whether Gus Hardy followed. She met me at the door, laughing, scolding me.

"This is a nice time of day! I thought you weren't coming. I didn't care if you never came," she said, and wrinkled her small nose in the most entrancing impudence. "Sitting here in my very newest, nicest dress. Like it?"

That was Martha—quick, dancing you lightly out of your own mood into hers. I wondered why I had thought it was a rather solemn moment—following her into laughter, feeling a little slow and heavy and masculine. I did indeed like her dress; it looked like the stuff of misty moonbeams, caressing her. What should I say about it?

I became aware of Gus Hardy's brown impassive face. I said, "Martha, let me present ——"

Her clear eyes widened and her dainty brows went up. She had thought, of course, that I came alone; instantly I knew that I ought to have come alone. All at once I knew how a married man feels who cheerily produces an unexpected guest at dinner. It came to me that the business of being a lover was not so simple as selling real estate; I should have to put my mind to it.

Have I said that Martha was lovely? Dainty, the fine and fragrant product of tender care. And Gus Hardy, hobo! Instantly I knew that she could never understand the caliph feeling; that for her he must be not less than he seemed, with his grave brown face and the dignity of his borrowed clothes. Presto! Vanished the vagabond; appeared the distinguished naturalist and explorer.

"—— my old friend Hardy—Hardy Logan, you know, the great Hardy Logan you've heard me talk so much about. Just back from his expedition up the Amazon, bug hunting, you know. I didn't tell you, did I, old man, that Miss McAllister came in on the same train with you? Or maybe you saw each other," I said hysterically, thinking of Martha in her Pullman and Gus Hardy crouching in a swirl of cinders on the blind-baggage platform. "That's how I happened to be at the station. Lucky, eh?"

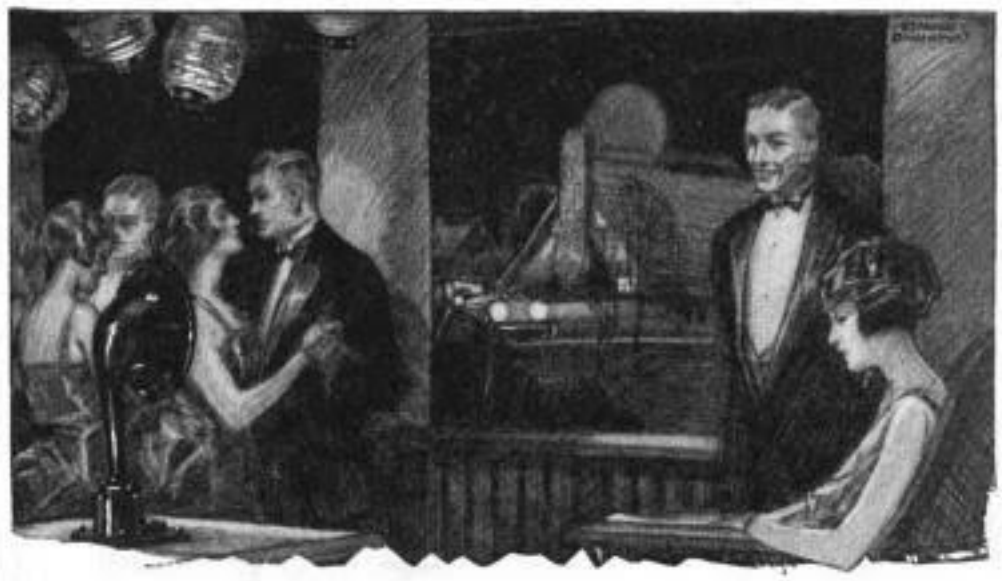
Then I had to stop for breath—ready to break out again if Gus Hardy should fail me. Without a flicker his grave eyes accepted the nomination; he bowed, a stiff, foreign sort of bow; he looked at me and grinned, a slow easy grin.

"Lucky," he said, "is the very word I was trying to think of!"

"The Hardy Logan? How nice! I'm dreadfully thrilled!" Not even Vassar could ever give Martha a vocabulary.

I remember I laughed a good deal. I made mental note to try grinning slow that way myself, after the golf season was advanced and I was properly sunburned.

Following Martha into the room I whispered in his ear, "Great! Keep it up. I'll explain later."



He murmured, "You don't hunt bugs up the Amazon, old-timer. They hunt you."

And I laughed again: "You've been there? Fine!"

I mean, I felt as if I had deftly mastered a delicate situation. Before Mrs. McAllister my vagabond clicked his heels and bowed again; even Andy, the demon brother, was so impressed that he forgot to be funny about the unusual splendor of our attire. In Milo, you understand, evening clothes are distinctly the mark of an occasion.

Well, I can see it now; distinctly that was one!

Mrs. McAllister was placidly sewing or embroidering or something; I said, "Andy, Mr. Logan knows all about Indians. Indians that cut men's hearts out!" and let nature take its course, which left me free to enjoy a little attention from Martha.

To get the most from RADIO

WESTINGHOUSE AUTOMOBILE BATTERIES

A size and type for every car. "Oversize" and reasonably priced.

WHEN you buy a vacuum tube radio set you invest from $100 up in scientific apparatus. Then you have to buy special "A" and "B" batteries to make it work.

Right here the name Westinghouse becomes specially significant. In radio batteries, as in automobile batteries, the air brake and automatic railway signals, it means—the best Westinghouse can build.

Westinghouse "A" batteries are especially built for the peculiarities of radio work. The Westinghouse radio "B" battery is a radio innovation. It is a baby storage battery, rechargeable, that will last indefinitely, that gives quiet, steady, economical service.

If you are buying a radio set insist on Westinghouse Batteries. If you are replacing worn out or noisy batteries buy Westinghouse batteries and eliminate all battery trouble.

Unloading a cargo of Pacific Coast Douglas Fir at the Weyerhaeuser plant at Baltimore.

One of the storage sheds for Douglas Fir at the Weyerhaeuser plant at Baltimore.

A few of the large timbers in the timber yard at the Weyerhaeuser plant at Baltimore.

Douglas Fir for Industrial Buildings —via Panama Canal

THE huge Weyerhaeuser redistributing plant at Baltimore, Maryland, makes immediately available to the Eastern markets the great Douglas Fir forests of the Pacific Coast.

No other wood produces structural timbers their equal — great timbers up to 80 feet long and of almost any size. All heart-wood and enduring — no sap-wood to decay, as with ordinary timber. This wonderful wood grows over a wide country at varying altitudes, producing variations adapted for many purposes.

The highest type for structural timbers requires *scientific selection* of standing timber, careful sorting in the log-pond, sawing into structural timbers only that portion that contains the greatest strength—followed by rigid inspection and grading.

All a Weyerhaeuser detail—to produce a more efficient, uniform type of timbers adapted to the heaviest needs of industrial construction.

More about the Weyerhaeuser method of timber selection and why it is important to industrial builders is contained in two booklets, mailed free on request.

WEYERHAEUSER FOREST PRODUCTS

A Special Lumber Service for American Industry

FOR YEARS industrial men—purchasing agents, engineers, executives—men responsible for the day in and day out activity of American Industry—have been searching for a dependable source of lumber supply.

There is a real need, with so many kinds of lumber on the market, for a lumber organization with the industrial point of view.

SUCH a service the Weyerhaeuser organization is now equipped to render to the industries of the country.

A corps of men, specially trained, with a broad vision of industrial needs and conditions; men who think *industrially;* and backed by shipping facilities *planned for industry;* lumber and even standing timber *selected for industrial requirements;* all coupled with timber and manufacturing resources strong enough and varied enough to meet the wide scope of industrial demand.

Here you have sixteen sawmills with complete stocks of fifteen kinds of lumber all available through one organization.

Every standard grade of "Finish," "Factory," "Structural" and "Common" lumber suitable for the manifold factory and industrial uses.

THE Panama Canal now makes possible an additional service to the Eastern markets.

A great Distributing and Remanufacturing Plant is now in operation at Baltimore, Maryland, serving the needs of that section from well-balanced stocks of Pacific Coast woods 3000 miles closer at hand, and all designed to save for industry the large losses so often incident to delayed shipments and unforeseen contingencies.

The resources of this great lumber service organization are being recognized as indispensable to more and more industrial lumber buyers.

Their knowledge of industrial lumber needs is available to you.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 S. La Salle St., Chicago; 1015 Lexington Bldg., Baltimore; and 4th and Roberts Sts., St. Paul; and with representatives throughout the country.

my money gave out, because it was cheap. No, that ain't the truth. I was hungry for Spanish—everybody talking English all the time, and always in a hurry. Hungry for something that reminded me of the hot country."

"You said you hated it," said Martha.

"No, ma'am. I said I knew I hated it. But you can't always remember what you know," he said, and was silent, his eyes appealing to her for understanding. You'd have thought I was hardly among those present.

"You were telling us about the song of the cook," I said.

"Well, I had a big time for a while. Lots of friends while I was spending, but after that I—got lonesome. Walking around trying to find a place that felt like outdoors, and I saw this Mexican joint. Got to hanging around there, spinning yarns with the owner—from Durango he was, and homesick too. A fat guy named Murgia. And this woman used to sing.

"One song she liked—I've heard it many a time out in the hills. At night, the stars burning four times as close as they do here, and the mountains big and dark, and off yonder the native women singing. Like this."

He hummed, his brown fingers touching that staccato measure with the blurred bass. He hummed; and you felt the loneliness, and heard, far off, the native women singing.

"Made me remember," he said, looking at Martha. "The old gang's out there now, plugging away, taming the country God forgot to finish. Mountains as far as you can see, the sun hot and the air thin and cold." He stopped, groping for words; with irony he grinned and gave over the effort and set down the guitar. "So I hit out," he said. "Reasonable, ain't it?"

"Sing it!" said Martha.

Still I didn't see what the fellow was doing. I only had an uncertain, childish wish to be disagreeable.

"Yes," I said, "sing it! It must be wonderful."

Simply, without reluctance or apology, he took up the guitar again. He sang almost under his breath—looking at Martha.

Odd, how that melody took hold of you. It was pitched in a plaintive unfinished key—a minor I believe they call it—and it sounded wistful and hopeless. Somehow it told us things Gus Hardy had no words to say. Age-old, ineffable sadness; mountains heaped under a great star-sprinkled sky, and a strange, wild, simple people that lived on, bewildered, after their ancient world was dead. I wanted to be near to Martha, to take her hand; but she was looking at Gus Hardy. Her lips were parted and her eyes absorbed, listening.

Then, then I knew what he had done. I had brought him here that he might show them visions; and he had shown them instead, shamelessly and without reserve, himself—brown and hard and wistful and appealing, a vagabond with the glamour of far countries on him. I knew how sleek and dull I looked beside him. I, Howard Pressley, dealt in my little city lots; his were the jungles and the mountains and wide plateaus in the sky. His voice deepened and softened and died away on that strange unfinished note.

"Very nice!" I said, and myself was shocked at the harshness of the sound.

"Sh!" said Martha, for his fingers were still plucking at the strings, running up a little golden interlude.

Yes, now I knew that sharp hot thing that twisted in me. It was rage. What right had she to look at him like that? And he sang to her. As if I were a stuffed figure, sitting there—as if he were alone with her in some star-shining stillness, he looked into her eyes and sang. It wasn't decent. Americans don't make love that way.

You saw a high-walled garden and a lover at his lady's window. A garden very far from Milo, Indiana; a lover who sang though he knew the night might well have eyes of death; sang as a bird sings, softly, but with a throb that was like tears in your throat. The red coal of rage melted within me. I wanted something, something great and sweet and wild and forever unattainable; and I had a crazy impulse to laugh—feeling the absurdity of great longings in that comfortable, well-furnished room.

I tell you, a fellow that can sing like that ought to be restrained by law. I was glad when he stopped. "Bravo!" I said.

You know the startled feeling you have when you speak aloud in an empty room?

BRIGHTON CARLSBAD
SLEEPINGWEAR

Friends for Life!

Slip into a Brighton-Carlsbad nightshirt or pajama and you are *friends for life*. There are soft, caressing fabrics ranging from hand-loomed oriental silks to the softest, most closely woven native cloths.

The trousered garment at the left is the Pajunion, or *pajama in one piece*.

Sensible idea, you'll say, as nearly everyone does. You are not likely to want two-piece pajamas again if you try these.

For bedroom and lounge, Brighton-Carlsbad answers your every requirement.

Other Styles and Fabrics
Whether you want nightshirts, pajamas or pajunions, ask your dealer for them by name—"*Brighton-Carlsbad*"—and learn real sleeping satisfaction.

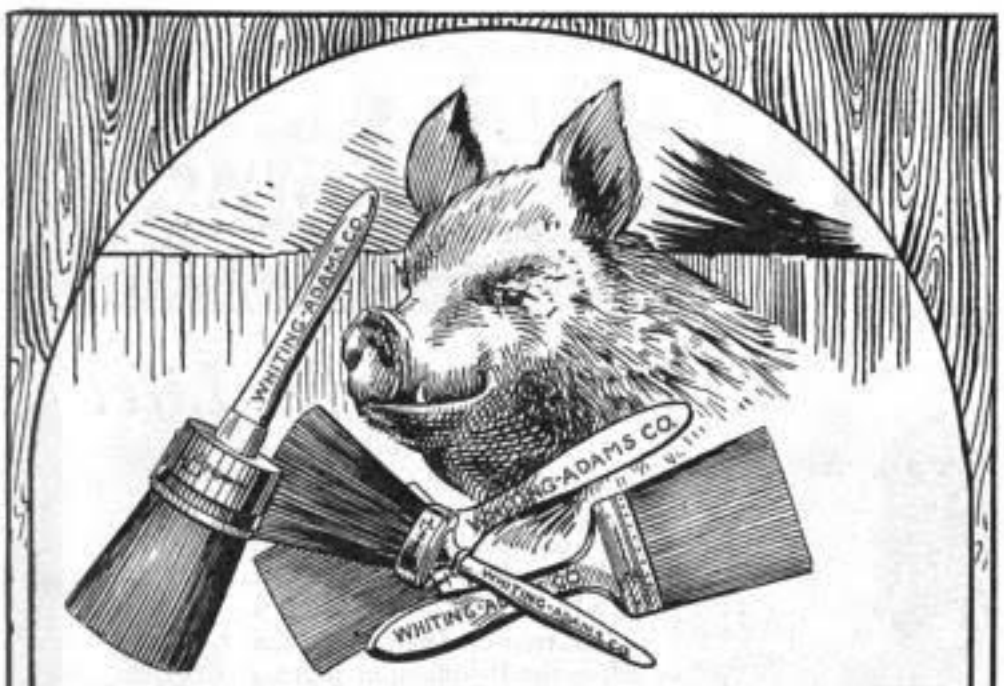
You spend hundreds of dollars a year in careful buying—items for home and personal use. Do you realize how much of this you lose because of ignorance, because your judgment alone cannot always tell true value?

IF there is one article you cannot judge for yourself, it is a gas mantle. Yet 100 millions are bought in a year. The only possible way to safeguard your purchase is to look for the manufacturer's name, and to know what that name stands for.

Welsbach
GAS MANTLES

The name Welsbach identified the first gas mantle. Since then, three decades of experience and an unswerving policy to produce Quality at any cost have established Welsbach Gas Mantle value as the highest standard.



To protect yourself, look for the Welsbach name and Shield of Quality on every box. They are your guarantee of satisfaction.

At your dealer's and the Gas Company.

We Pay Cash *for* Their Spare Hours

HERE are three of many hundreds of part-time workers to whom we pay cash every month. Most of them devote only a few hours a week to our interests; some of them simply forward orders that are handed to them; but *all of them make money*.

You know the reason. Wherever you go you will find people reading *The Saturday Evening Post*, *The Ladies' Home Journal* and *The Country Gentleman*. Many of these readers are yearly subscribers—they are glad to have some friend or neighbor save them the trouble of forwarding their orders year after year.

Then there are people in every neighborhood who do not yet subscribe, partly because they have never been asked. An interested worker can, however little spare time he may have, obtain a number of such new subscriptions.

For every subscription, new or renewal, we pay a generous cash commission. In addition we pay a liberal cash bonus for even ten subscriptions a month. Let us make *you* an offer—no obligation.

ASK FOR OUR CASH OFFER TO YOU

The Curtis Publishing Company
661 Independence Square, Philadelphia, Pennsylvania

Gentlemen: Tell me, please, about your cash offer. I assume no obligation, of course.

It was like that. Martha looked at me, a queer, vague, misty look; Gus Hardy sat with his brown hands listless on the guitar; Mrs. McAllister sighed and took up her sewing or knitting or embroidery or whatever it was, and nobody said a word.

Briskly, trying to break that inertia, I looked at my watch and rose, saying, "By Jove! I'd no idea it was so late," though I knew perfectly well.

Gus Hardy got up and stood looking about him, for his hat, I supposed, forgetting that we had come bareheaded. I reminded him; he only shook his head, smiling that faint one-sided smile.

"You'll come often while you're here," Martha commanded him.

Gus Hardy looked at me.

"He insists he has to hit the trail tomorrow," I said.

Gus Hardy bowed, murmured "Good night, ma'am. Good night, Miss Martha. Much pleasure," and marched out.

"Ha, ha," I said lightly, to cover the crude abruptness of his exit, "quaint fellow, old Gus. This sort of thing's a little out of his line."

But the atmosphere absorbed that effort like a sponge, leaving me futile and fat and dull, my actual presence less vivid than the knowledge that Gus Hardy had been there. Under the hall lamp I saw Martha's eyes still full of the mist of dreams.

"Martha ——"

"Yes?" she whispered, gazing into the darkness that had swallowed him.

"I think I'd better tell you."

Her eyes cleared and cooled and came to me.

"He's just a hobo. A vagabond. I picked him up when they kicked him off the train. Out of the gutter," I said, savagely glad to have it out and smash the glamour that incased him. "He seemed an amusing sort of fellow, so I dressed him up and fed him. I don't know why I brought him here. That's all."

I stood, you might say, with my head bared to the lightning, but nothing struck.

"I don't know the man from Adam," I said, sinking my teeth in the words. I had little practice being savage in those days and there was intoxication in it. "He's told us what he is. A waster. A gambler. A ne'er-do-well. But he's seen things and done things and the world's a big place to him. Big," I said, and borrowed a gesture from Gus Hardy, "do you understand? Big!"

"I don't care," said Martha; "I think he's nice. You can tell it by his eyes. He looks at you just like a sweet little boy, lost and homesick and so grateful."

"Eyes!" I raged. "My goodness, woman, didn't you hear a word I said?"

"Oh, yes. Ed Willis told me you—picked him up."

Imagine that! Knowing all the time, and pretending to remember all about a nonexistent Hardy Logan. I don't know which enraged me more, the officiousness of Ed Willis or the duplicity of the woman.

"Oh!" I said; which hardly covered the case.

"It seemed a funny thing for you to do," she said with gentle, unflattering emphasis. "I thought at first he really was an old friend of yours. I couldn't imagine your doing it for a perfect stranger—and it didn't help to boom Milo a bit, did it?"

And while I struggled with that she spoke again, gazing into the darkness.

"Howard, imagine," she murmured, "living like that! Always alone and lonely, nothing to look forward to, nobody that cares. Homesick for a home that isn't anywhere, just drifting on and on—I never thought how it would be. It meant so much to him, being here in a nice American home. Did you see him, just looking and looking, storing up every little thing to remember?"

"He was looking for his hat," I muttered.

"Howard," she said, "must he really go away to-morrow? Can't you find something for him to do?"

Well, I mean, imagine that if you can.

The soft air of June came through the open door, a breath from wide starry spaces and the good smell of growing things, and showed me the feeble uselessness of rage. It had always been like this. It would always be like this. She was a woman; she was like a lovely child, c tent to live between four walls. I brought her visions and she had seen a lean brown face and wistful eyes. Lon I laughed, not mirthfully. Even now odor of honeysuckle can make me s how sad.

"Lonely," I said, "lonely! The v loneliness of all is to bring you my thou and feelings and see them flatten out wither into nothing. Time after time never seem to learn."

"But you get excited about such t things," said Martha. "Howard, I've thinking ——"

Gus Hardy spoke only once on th back to the hotel, to ask if we had no laws in Milo; and I saw then that ripping along Madison Avenue at miles an hour—I, president of the Wire Club, that stood for law and if it stood for anything.

Again, while he was divesting him his borrowed splendor, he rose brie the depths of moody silence:

"Sorry I had to run out on you hunter yarn. Thought I'd better safe. Oh, I could have talked lik hunter for a little while, but sooner I'd be sure to slip."

"It doesn't matter," I told him li "It didn't get over anyway. I ha them who you were."

After a time I became aware tha sitting with his shirt half off, starin spot on the rug.

"Well," I inquired, "got any g man?"

"Buck," he demanded, "is t girl?"

Emptying my pockets, I droppe drawer a neat but expensive ring I said.

Silence, and yet more silence. a cigarette and yawned. Gus looked up, and then I saw how eyes were shining with the light o

"Buck," he said softly, "old like this town."

Yes, it's a good little town, M not Bagdad. No man is born a thrust his hand untouched into of another's destiny. But it's a town. It grows. Already its beyond the use of slogans. You the electric sign at the station to proclaim to the public that "M More"? It just says "Milo" a

I saw it the other day, and laugh, remembering. I laug when I saw Gus Hardy. He's as he was, and his sunburn is runs clear up to his hair; he bareheaded, he tells me. It see think that I myself used to chances with the sun.

I asked him if he remembered and he said "What song?"

I hummed a few notes of it, membered. While he was th piano and trying to sing it M into the room. She is still pr like that placid, young-matron she introduced me to a pug-no young Hardy who swarmed all buried me under an avalanche calling me Uncle Buck, while complacently over his shoul "h'm, h'm" for the words he k

Wadsworth Cases

MAKE WATCHES BEAUTIFUL

Choose with care the watch for bride or graduating youth

A dependable movement in a WADSWORTH *case will stand as the enduring mark of your regard*

COMES now the orange-blossom time, when man and maid go forth as bride and groom. Now, too, the classroom sends its youth into the world.

And in this group there's one most dear to you—whom you will want to gladden with a gift.

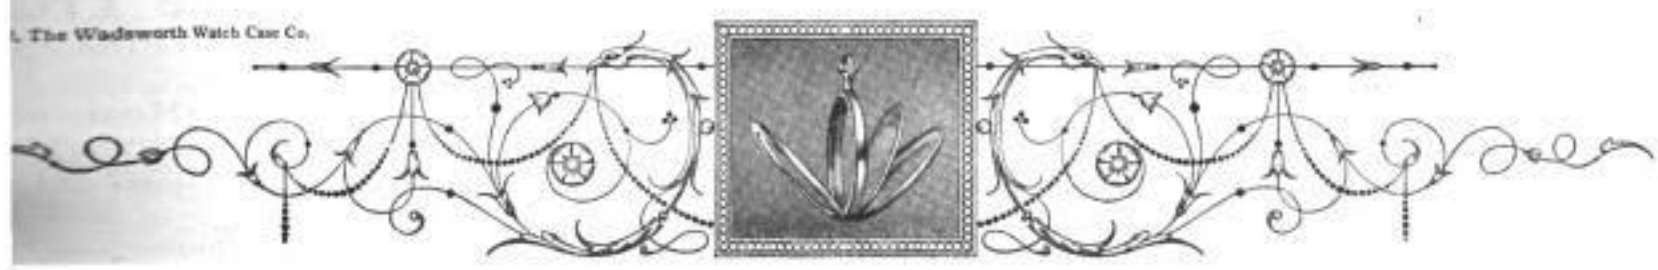
Consider, then, a watch—the gift that will stand through future years as a faithful reminder of your regard.

But choose with care, first, a movement of undoubted dependability—for therein is the test of usefulness.

Then, to protect this mechanism from the inroads of dirt particles, choose an exactly fitting case—a case which, too, will lend such beauty to the watch as will reflect the spirit of your giving.

Such are the Wadsworth cases pictured here. Products of the highest watch case artistry, they are built to add protection and a beauty unexcelled to the delicately adjusted watch movements. And there's a Wadsworth case well suited to your taste and means.

The watch—a product of two industries



With great skill the movement maker constructs the movement, an intricate mechanism for the measurement of time. But, for the completion of the watch he now turns to the case maker, who employs such artistry in the designing of the case as will make the completed watch a beautiful article of personal wear.

Thus it is that for thirty years Wadsworth cases have dressed and protected the watch movements of leading manufacturers and importers. Many of the most beautiful, most popular designs with which you are acquainted are Wadsworth creations.

When you buy a watch, select a movement that your jeweler will recommend, and insist that it be dressed in a Wadsworth case. The Wadsworth name is your assurance not only of correct design but of the finest material and workmanship.

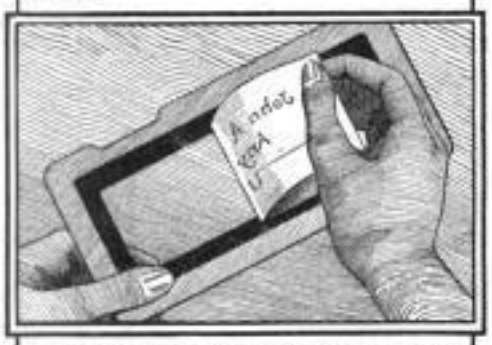
YOU ALREADY OWN
Part of this
Speedy, Simple, Economical
Business-getting System!



The Address-Press

Any standard typewriter is all you need to start an efficient mailing list with Elliott Index-Address Cards. We sell you the blank cards; your stenographer can stencil your addresses into them during her spare time, and then these cards will print their own typewritten addresses forever after.

Elliott Address Cards file card-index fashion. They come in eight different colors, are lightweight, require little space. The Elliott ADDRESS-PRESS itself costs much less than a typewriter. You can start using it with as few cards as you wish, and easily develop your list until it covers every prospective customer. Sears-Roebuck & Company of Chicago use the ADDRESS-PRESS to handle a list of 7,000,000 names.

Elliott Index-Address Cards contain no metal. You can write or print on their tough fibre frames. Changes of address can be made without throwing away these frames. Simply remove stencilled center, attach a new blank, and card is ready to be used again.

The Elliott ADDRESS-PRESS automatically transfers addresses from the indexed stencils to your circulars, etc., at a speed of sixty per minute. Uncle Sam's big army of postmen is then ready to deliver your sales talks, direct to the people you want to reach, for one cent per call. You do your selling without railroad fares, hotel bills or expensive selling crews.

BUMPED

(Continued from Page 30)

"Could you do something more too?" she says.

"What would that be?" he asks, staring, surprised and kind of uneasy.

"Would you be willing to have my father stop with us after we were married?"

"I would," he says after a short hesitation, for he loved her well. "I would," he says, repeating it to bolster up his courage. "But why? What makes you ask it?"

"Then I'll bump him!" she says in a quick, sharp, kind of grateful voice. "Right away!"

"Bump him?" he says, confused. "How?"

"In the stomach," she says, flushing with a sudden anger and vexation.

"In the stomach?" he says, loud. For she was a soft, well-spoken girl, who never used any rough or untidy talk at any time; and that was one thing why he liked her.

"I mean it," she says to him when he stood staring. "I mean just that. I'll strike, myself!" she says, rosier and more flushed up than ever.

"What—your father?" he says, stepping back. "In the stomach?"

"In the stomach!" she says. "The one place where he never could stand striking. I'll do to him what he's been doing himself. I'll bump him—I'll bump him out of house and home the way he's done to so many others," she says.

She started crying with vexation. And he let her cry it out, patting and comforting her.

"You've no idea," she says then after a while, explaining her idea, "how it is living with him—everything so particular and special. It's all the English cooking he must have, unlike American entirely. The bacon, fat and soft and English," she says. "And all kinds of crumpets and muffins," she says, "such as you never see in this country. And if he don't get them he'd get down sick—partly sick and partly mad," she says. "But it all comes to the same thing in the end."

"Ah," he says.

"Yes," she says. "And you have no idea what a baby he is—what a fuss he makes about himself around the house. If he cuts himself shaving you'd think there was murder. And if he bumps his finger with a hammer the world must be drowned and deluged with arnica. And as for his stomach," she says, "you can have no suspicion even how delicate he's made it, just talking about it all the time, and how an Englishman must have sound, healthy, nourishing food always to keep his health."

"Oh," says Tommy.

"And I'm the only one that can cook all those different things he wants, and that he thinks he's got to have to keep on living."

"I see," he says.

"Good-by," she says, breaking away. "I'm going home right now to start on him. I'm going to start my muffins."

And she run along home.

"What's this?" says her father, taking up one in the morning and throwing it down like a ton weight on the table.

"And what's this?" he says, taking up a piece of bacon, fried to a crisp, while she stood, white first and then flushed all over, breathing hard, but saying nothing.

"It's your warning," she says, speaking finally. "Your notice."

"My warning?" he says, dropping his knife and fork at once, from where he had them standing up in each hand, English fashion. "My warning? Of what?"

"Of what you'll get to eat from now on," she says, "when somebody else cooks for you. When I leave you!"

"Leave me!" he says, swearing dreadful.

"Yes," she says, her voice coming stronger now, and a color like the last rose of summer upon her cheeks. "The first of this coming week."

"Leave me!" he says. "How can you—if I say not to?"

"I'm of age," she says, her eye meeting his and holding it for the first time in her life. "And more. So I'm leaving."

"Leaving," he says, turning away from her eye and what he saw there, and taking a different direction. "Leaving, you say. Then who'll take care of me? Who'll fix your old pop's bacon for him, and get his muffins good for him?" he says, getting kind of sentimental, like he always did when he got talking about himself to her.

"I can't tell you that," she says, hard. "I suppose you'll have to eat like all of the Americans do—out of the bakeries," she says, calm and self-controlled outside, though fluttering wild inside. "After I'm leaving."

"Leaving!" He started roaring worse than ever now. "Leaving! I forbid it! Leaving! What got that idea into your head all at once?"

"Bumping!" she says, and turned loose on him. "I'm all sick and tired out with bumping. I'll be bumped no more for you. I've been bumped here and I've been bumped there and I've been bumped all over. And I've had the hand of man and the tongue of woman out against me for this for the last time! I've plead with you and begged with you and wept with you—to no avail! So now I'm done. From now on," she says, "when you bump you bump alone!"

"And what'll you do?" he says.

"That'll be all right. That's fixed already," she says. "I've got my job all ready for me."

He didn't answer her. His mind was too full. And she went out into the kitchen.

"I never thought it would come to this," he says, snatching his coat and hat. "My own daughter!" he says, and put them on and banged out of the house.

But he couldn't forget it. It set heavy on him all day long—the excitement and the wrong breakfast and the luncheon she had put up for him—all American cooking—baker's bread and all that. And by night, with his anger and that new food he always had been set against, his stomach got terrible. And then he came in and tried to eat the roast beef—and that was worse. He never tasted stuff like it in all his life—all cooked up solid—no blood gravy to it—just brown grease.

He went to bed without a word to her all that evening. But if he looked to have her come around he soon seen he was mistaken. And along toward three o'clock in the morning he awoke with a terrible pain and grinding in the center of the stomach.

"I hope you're satisfied," he says when he'd yelled for her to come in. "You've killed me. You've taken your poor father's life with your bloody cooking," he says. "I'm gone—done for!"

"Nonsense!" she says. "Father. Nonsense. Buck up," she says, more and more surprised every minute at the way she found herself talking to him. "I'm just taking the best way out—and showing you how you'll get on after I'm leaving you."

And then she left him there, lying still and careful on his back, with the hot water bottle on him—and went away. And the next morning he had the same thing over again on the breakfast table—only worse—all American cooking now—baker's bread and all that. And he just shoved it all on the floor, and walked out without speaking. It was as bad that night—worse. Ham out of a delicatessen store now, that would kill a dog—and just German mustard. And in the middle of the night he had another hard attack.

"I'm gone," he says, "this time. You've done what you were arfter!" And he cursed then something awful.

And a minute after, he saw her coming in with her hat and coat on.

"What's this?" he says, straightening up out of a cramp.

"I'm going now," she says, "a little earlier than I expected. I can't stand this!" she says, alluding to his swearing.

"Go, that's right!" he says. "Go—and leave me dying!" But he hollered her back before she got to the door.

"Do something," he says. "Do something—quick! I never felt so near death's door. I'm stiffening fast," he says.

"Oh, nonsense, father!" she says, going on now, browbeating him as if she'd always done so. "Why are you men always such big babies—the minute you get a pain on you? You've got to learn to eat like other folks sometime."

But he only groaned and coughed. And at breakfast he was so bad he could just hold himself together. And the bacon was burned, and there was only that thin baker's bread; and the tea was just boiled copper cents; there was no taste of the vegetable to it. It was all poison to his

stomach; he could feel it poisoning him as it went down and settled on the bottom—all waste, poison stuff with no nourishment to it.

He was so weak he couldn't but just hardly pull out the door; and by night, when he come back, he was gone; not in no pain any longer, but just listless—all gone!

"So you're leaving me," he says to her finally, speaking first that night. "You're leaving me—like this!"

And she said yes, she was—next week.

"Your old father!" he says. "Your poor old pop!"

And she said nothing.

"Did he ever deny you anything?" he says, leading on his talk to her. "Anything in your life? If you just asked him—asked him pretty for it?"

And she said nothing, waiting, though it was hard work—against all nature and the previous training of an English girl—for her to do so.

"Suppose," he says, "suppose I told you that I'd do just what you want me to? That I'd stop bumping them?"

"Forever?" she says, quick—and then held herself back.

"Yes, I will!" he come back, eager. "I will—if you say so—and you'll stay home with me!"

And she looked back at him with tears in her big blue eyes, hearing how pitiful he talked.

"I wish I could, pop," she says. "I only wish I could. But it's too late now."

"Too late! You wish you could!" he says, roaring, his strength all coming back to him again. "Why can't you?"

"I'm promised," she says. "That's the truth of it."

"Promised how?" he come back, roaring harder yet.

"To be married."

"To be married!" he yelled after her.

"This coming week."

"Married!" he says. "To who?"

And she told him, edging toward the door as she done so—to be on the safe side. And it was well she did, for he come after her. And she grabbed her hat and coat and come running out in the street, and him after her, stopping, standing, shouting deadly curses from the doorway.

Then she run out and stayed with a girl friend that night, and telephoned over to Tommy Nugent all the particulars when she got there. "I had him," she says, "kind of weakening. I thought I had him all our way once. But now I'm afraid I've lost him—when he found out it was you!"

And he went from the telephone and told it fast and anxious to his mother.

"Don't worry," she says, with the wisdom of woman beaming in her eyes. "Let him work on. He'll be getting his own breakfast in the morning. Let her telephone to-night and tell him where she is. That's all—so he can reach her."

And along that next night, when she had done so—not in the morning, but about the meal time in the evening—the girl went to the telephone—called up to talk to him.

"Come 'ome!" he says. "Come 'ome! For God's sake! All is forgiven. Come 'ome—and make me one more decent cup of English tea—or a muffin or a crumpet. I'm dying," he says, "right now to-night," he says, "for decent, strengthening English food—that won't all churn and turn to poison in my stomach."

"Will you promise?" she says, for she could tell by his voice how bad he was broken.

"Yes."

"Not to bump again—at all?"

"I promise," he says, like one repeating a lesson.

"And let me marry Tommy Nugent?" she says.

"I promise," he says. "You can marry who and all you please. But for God's sake come 'ome and make me one more decent cup of tea before I die. For I'm terrible ill," he says.

"I'm coming right over, pop," she says, and went over right away.

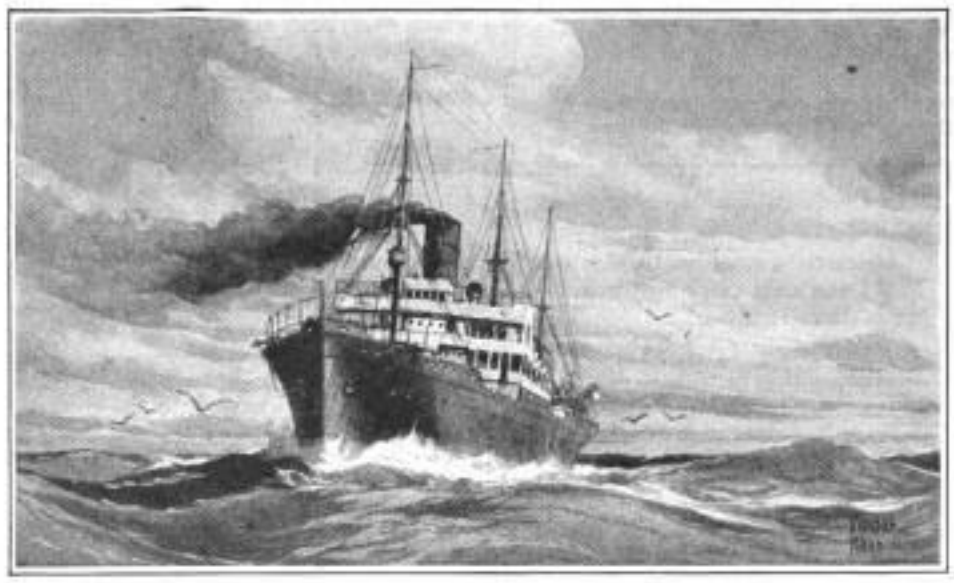
And when she had put on a square English meal for him and it was over, he sat down and began questioning her—and begging her.

"You ain't going now," he says, "and get married," he says, "and leave me out in the cold entirely? Your poor old British dad?" he says. "Out of 'ouse and 'ome and food! I'd pay my shot if I come with you," he says, talking piteous. "You can count on that."

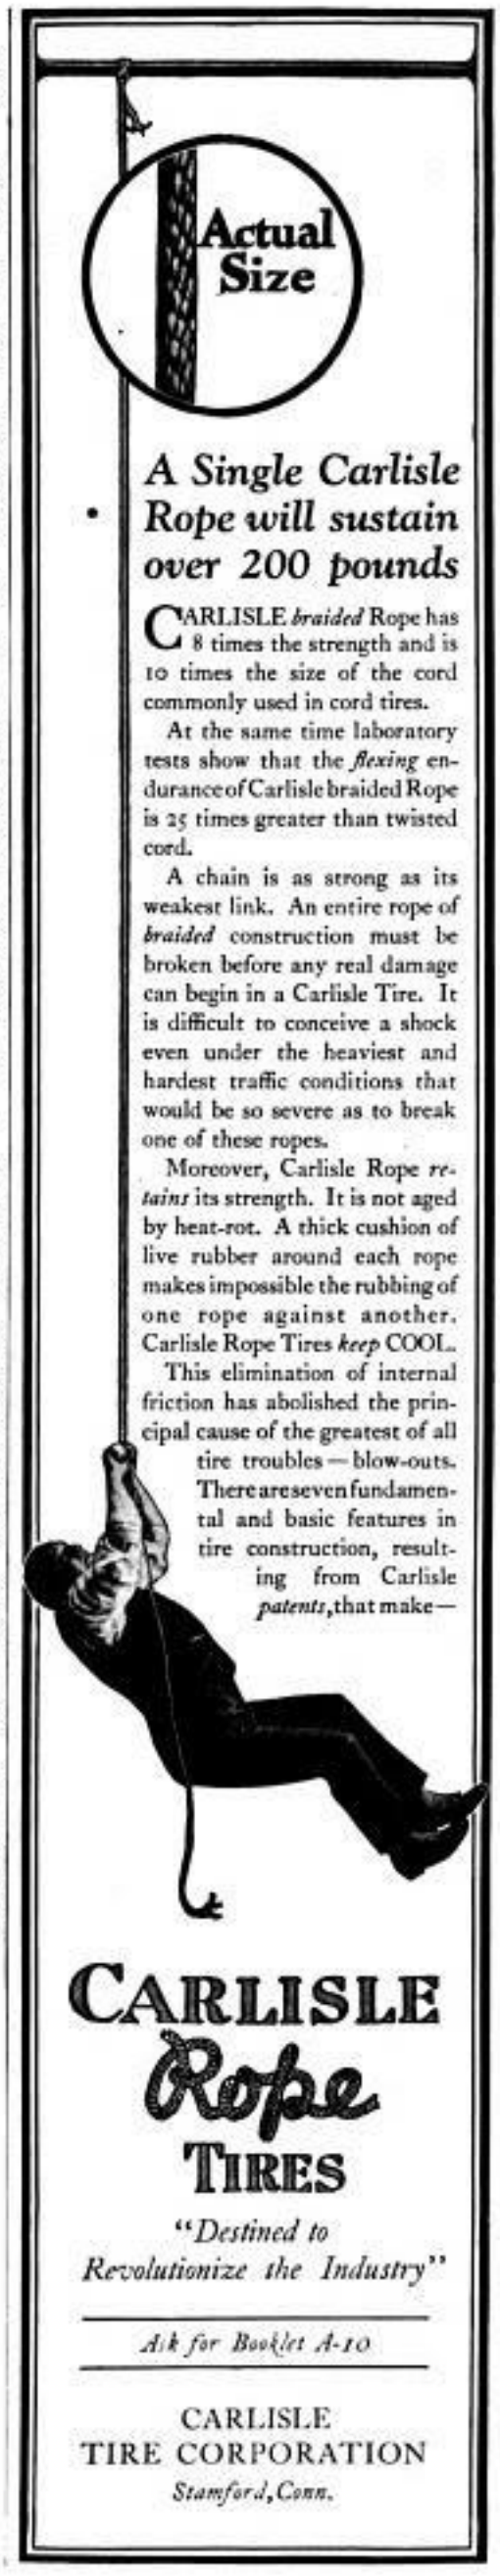
"I know you would, dad," she says, smoothing down his hair—and waited, holding back.

"I'd pay it good," he says, and named a figure.

"That's just fine," she says to him. "That's lovely," she says. For she thought it was almost enough for them to live on. "And I know Tommy will be tickled to death to have you come. He told me so," she says, going on far and wide, now she was started. "He always liked and admired you greatly. Only he said he was afraid you might not like him."



"He's wrong!" says the Englishman. "I always liked the lad," he says. "He looks like a young Englishman—in many ways. And I'll take him right up, and show him—how the English take hold of things. The bulldog breed," he says, feeling better already. "The bulldog breed. They'll be more of them no doubt—before so long," he says, squeezing her arm.



"Don't, father, please!" she says, blushing and drawing away from him.

And then she went and telephoned the news to Tommy Nugent, who was waiting; and he gave it to his mother. And they brought their old man—Nugent—around, working together with the local chairman of the union, who they brought in for the purpose.

"You started it," he says to Nugent, "with your cheap practical jokes. And now you've got to come in and help end it. As for you," he says to the boy, "go ahead and get your education done—and come right here and settle down—at once. For I can promise you now you'll be prospering from the start. I'll get you the local business of the railroad," he says. "The division superintendent will see to that. He told me to say so.

"And you know yourself what the folks around, up and down the line, will do when they find out what it was—and who it was—that stopped the bumping when all else had failed. They'll all come to you, when they know how it was finally done. For we tried reasoning," he says, "and we tried threatening, and we tried kindness," he says—"all, everything we could think of. And they were all no good. And in the end it was just what your mother said," says the local chairman, looking over at her now and winking. "'Twas love that done it—'twas love that stopped this war and bumping, when all else failed. As it always does and will," he says, "*in secula seculorum*—world without end, Amen!"

A Single Carlisle Rope will sustain over 200 pounds

CARLISLE *braided* Rope has 8 times the strength and is 10 times the size of the cord commonly used in cord tires.

At the same time laboratory tests show that the *flexing* endurance of Carlisle braided Rope is 25 times greater than twisted cord.

A chain is as strong as its weakest link. An entire rope of *braided* construction must be broken before any real damage can begin in a Carlisle Tire. It is difficult to conceive a shock even under the heaviest and hardest traffic conditions that would be so severe as to break one of these ropes.

Moreover, Carlisle Rope *retains* its strength. It is not aged by heat-rot. A thick cushion of live rubber around each rope makes impossible the rubbing of one rope against another. Carlisle Rope Tires *keep* COOL.

This elimination of internal friction has abolished the principal cause of the greatest of all tire troubles—blow-outs. There are seven fundamental and basic features in tire construction, resulting from Carlisle *patents*, that make—

$80.00 Profit *for* 8 Subscriptions

SEVERAL years ago it occurred to Miss May Avery of Pennsylvania that she might pay for her own subscription with the commissions she would receive for forwarding the orders of her friends. She found the subscriptions so easy to get that she has devoted her spare time to the work ever since.

Among her first year's subscribers were eight whose orders she still forwards to us each year. For these eight subscriptions her renewal profits in commission and bonus have amounted, during this period, to *more than $80.00!*

$75.00 Extra in One Month

Miss Avery finds her work pleasant, easy and profitable. "I have never had any trouble getting a hearing for the Curtis publications," she writes. And when you consider the universal popularity of THE SATURDAY EVENING POST, THE LADIES' HOME JOURNAL and THE COUNTRY GENTLEMAN it is not to be wondered at that their representatives are usually received as welcome friends. Orders are easy to obtain; the profits are liberal. The high percentage of renewals guarantees the permanence of these profits—they grow larger year after year.

Our Offer to You

Will you represent us in your neighborhood? Don't say "no" because you lack experience—you need none. Don't say "no" because you are busy most of the day—practically all of our workers have other occupations or other duties. Don't say "no" at all until you learn about our offer. The coupon below will bring full details, without obligation to you. When you realize how easy and well-paid Curtis work is, you will, we feel sure, be anxious to get started.

EFFICIENCY AND BILL

(Continued from Page 9)

This made three apartments to collect the rents from and oversee generally, and Bill did it, because George stuck to the advertising business and gave Bill all he could make to put into furnishing. He wrote some very clever advertisements about the apartments, too, and put them in rather odd papers and magazines, you might think; but people seemed to see them. Their next apartment they furnished to suit people who were fond of books and liked a larger library than small apartments usually have. There wasn't any formal drawing-room, but there were bookshelves everywhere, and Bill took a lot of extra books that Rissa had put in storage in the old carriage house, and brought in more than two hundred from our old library that was stored in the cellar of St. Mark's Church at home, and had them all catalogued and put on the shelves. He brought in two or three of our old-fashioned pictures too—steel-engravings of the Forum and things by Michelangelo, and hung them between the books, and he had father's old walnut secretary with the pigeonholes that he used to play post office in brought in by a motor truck. It seemed awfully wasteful, though I had to admit that the two rooms, treated like one large one, looked amazingly comfortable in an old-fashioned way.

"But everyone is having Italian things now," Rissa told him, "or crazy orange-colored interiors, with parrots in the window and purple glass jars. If you must run such a risk, why not run as little risk as possible? Study what the decorators are doing, why don't you?"

"Aha!" Bill answered triumphantly. "That's just the point, sis! All decorators' apartments look alike. This is for the people who don't like parrots."

And they rented it inside of a month to an elderly gentleman from Philadelphia who was writing his grandfather's life. He signed a lease for three years one afternoon when I was there helping Bill arrange some books he had bought at a rummage sale.

After that they moved away uptown on the West Side and rented three apartments in succession to Columbia professors, and Rissa had to admit that Bill really was in business. Certainly he had never been so busy. He went out of town Sundays with George Hawkesworth and looked up secondhand furniture and books and pictures and china, and they did get the most extraordinary bargains; comfortable sorts of things, half worn, that really looked homelike, you see, and not like those sample rooms that professional decorators make. Bill said that only women liked those, and that he and George were advertising apartments that men would like to live in.

Sarles was much interested, and got him two apartments at once for doctors who were friends of his and wanted to move.

It was while he was down South buying up a lot of old furniture he had heard of in a little town in Georgia that the news of Mr. Plympton's company's failure and his death came out in the papers. Of course we shouldn't have noticed it much, except that we had come so near to being relatives-in-law of the Plymptons, and Mr. Plympton had practically promised to make Bill general manager some day. Although we never spoke of them nowadays, we naturally read about the failure, and we were rather unpleasantly surprised to find it was clearly intimated that Mr. Plympton, whom everybody considered so responsible and clever, was the principal cause of it.

Sarles tried to explain it to me, but I am not very good at business, and all I could really understand was that Mr. Plympton's board of directors were what is called dummies, and he attended to everything. In doing this he made some very unwise investments and dismissed a good many old employes who might have been helpful to the business, taking on in their places a lot of new men who didn't understand very well about things, so that what he was doing wasn't made clear till the failure actually happened, and then it was too late. It was while he was making these changes that Bill went into the company.

"And do you know, Florrie, it almost looks to me as if Bill had got wind of all this, somehow, and got out," Sarles told me.

"You mean he wasn't willing," said I.

"Just so. He wasn't willing," said Sarles. "Not that I know this, of course, but it looks that way to me. Do remember how reserved he was ab all? I said to him once that Marjory be a thorough Blair, because she a bit like Mrs. Plympton, and re didn't seem to have much in comm her stepfather, and Bill stiffened said 'No, thank God!' I thought seemed rather unnecessarily bitt I'll bet you now he knew!"

"Why, Sarles," I said, "how co You know Bill is such a child abo ness! How could he guess what experienced men out there didn't

"I know," Sarles said. "That's so funny about it. For, of course know that Bill's all up in the air."

I was always very fond of Marjo was the only one of all the girls been in love with that I had real Of course she was impractical, a sponsible and flyaway, like Bill, a wouldn't have been much of a wi way for a boy of Bill's temperam how could you blame her for th child? She'd never had to lift a herself, and Mr. Plympton and he spoiled her to death. Mr. Bla literary man—a sort of poet, Mr ton told us—and Marjory had a great deal of his disposition, s charming; but you couldn't co on it, Mrs. Plympton said wit you wanted to get anything done This was what made Mr. Plym such a relief, she said.

Of course I wanted to see th if there was anything we could persuaded Rissa to help me find even with Sarles to advise us w seem to accomplish much. Mr. had died of pneumonia very sud Mrs. Plympton and Marjory away, leaving no address, or th left one, there seemed to be getting hold of it. We couldn't advertise or employ a detect reminded us, and so there didn't anything more to do.

We judged that Bill wouldn't anything about it, 'way off country town he'd gone to, and suaded me not to mention it to

"What good would it be?" "He's just crazy and romantic think that he ought to find M marry her now. As he didn't w when he might have, he presum want to now. He seems inter furnishing game just at pres keeps him busy and contente leave him alone while the fit

Of course Rissa can always anything her way. So I pret that she was right, though I mean about it somehow. But that Sarles surprised us. M odd; they are always telling interfere, and to let things alo work out, and numberless o of that sort. And yet they w interfere in the strangest way

When Rissa mentioned th we had decided not to tell M Plympton failure he was muc

"Do you think that's qui Riss?" he said at once.

"I can't see why not," sh all over now, their affair, an all up again? I do hope you the judge of this, Sarles. I'l all out very carefully, and best."

"I don't doubt it, my d "but I shall use my own jud

And as soon as Bill got ba Bill went straight out to found out in a few hours w been able to learn in seve hunted up an old bookkeeper for years and years with M and this old man told him urging, that Marjory and he living quietly by themselves at liberty to say where. E been sold, and the creditor cally satisfied, he said. She life insurance, which Mr. never allowed her to use. T of course, but perfectly co independent, and had dec a complete break with all th tions and begin again. Mrs been dreadfully shocked by the publicity and all, and

1 The bread placed in the toaster ready to start.

2 The toaster closed. One side of the bread is being toasted.

3 One side done, a touch on the knob turns the toast.

4 Both sides toasted crisp, delicious, done just right.

The Newest Turnover Toaster —a Hotpoint Servant

YOU probably know the woman who seems to pay more attention to her electric toaster than to the folks at the table.

Imagine her relief with the new *Hotpoint Turnover Toaster.*

The *heat,* as you would expect in a Hotpoint Servant, is just *right* —giving confidence of delicious toast without constant watching.

* * *

Now the Hotpoint Housekeeping Engineers have added a *practical* turnover feature to the *perfect toasting qualities* of the older Hotpoint Toaster.

Bread sliced thick or thin, as you prefer, is turned *every time* at a touch on the cool knobs. Making the Hotpoint Toaster even more practical than ever before.

Typical of Hotpoint Servants, the new Toaster is announced only after it has been perfected as a *real* improvement. Thoroughly satisfying those who think more of a tradition of service than of catching the market with "clever" electrical novelties.

FIELD & FLINT CO., BROCKTON, MASS.

(Continued from Page 126)

had just picked her up and carried her off. That was all.

"And there was nothing more for me to do," said Bill, "so I came back. I was much obliged to Sarles. And really, Flops, I was a little surprised at you. Not that you wouldn't have told me, of course, Rissa or no Rissa."

"I did feel rather queer about it, Bill," I admitted. "But Rissa was so afraid that you would get excited about it and insist on finding Marjory ——"

"Why should I insist on finding her?" he said. "She doesn't want to be found. I wish Rissa didn't think everything was a novel that she was writing."

Rissa laughed very good-naturedly when I told her about this.

"Thank goodness, he's growing up at last!" she said. "Perhaps he'll fall in love with one of his clients next—a sensible one—and actually settle down."

For that was what Bill insisted we must call them—clients.

He had bought more furniture in the South than he had expected to, and a good deal of it was bureaus and wardrobes and beds. It was this that gave him his next idea. He took an old-fashioned apartment next door to a good restaurant and made the library and dining room into bedrooms. Then he advertised it as a home for four men, who could get a housekeeper and either have their meals cooked at home and served in the drawing-room, as in lodgings, or have them sent in from the restaurant, or they could go and eat there, just as they pleased. Three men from George Hawkesworth's office rented it immediately, with an outside friend, and this friend got them an order for another apartment just like it for four friends of his. They had no housekeeper and didn't dare engage one, so Bill asked me to do it for him, and I got them old Katy, who cooked for us when we lived with Aunt Ella.

That gave him an idea, and with his next apartment, which he furnished for an elderly couple who would like carpets and a double bed and a sort of little conservatory arrangement in the dining-room window, and a parrot cage, he offered to provide the service if the clients would agree to his rules. He and I made up the rules, which Rissa said were idiotic, but the maids and the elderly couple—who appeared the second day after the advertisement—both agreed to them, and Bill dropped in once a month to see if there were any complaints. There never were, and the old lady, who took a great fancy to Bill, always kept him to supper and had soft molasses cake and stewed pears and fried ham in milk sauce, which Bill adores.

We saw very little of him by this time, because he was terribly busy, of course, all day, with renting and collecting and furnishing, and at night he and George had to do the advertising and the accounts and the planning generally. But he used to drop in on us Sunday afternoons, and Sarles always stopped reading and asked him all sorts of questions and laughed and laughed, the way he used to laugh at Rissa. He said Bill was very much like her, and I began to see what he meant. You see, neither Rissa nor Bill ever minds a bit what anybody else thinks of them or their ideas. Other people may laugh, but they go right on.

One Sunday afternoon Bill was telling us about his last apartment. A queer old spinster, whose house he had seen when he was in the South, had just decided to give it up and go abroad. She had offered the furniture, which was simply wonderful, to Bill, and he and George had borrowed some money and bought it. They had advertised it in two expensive magazines as a complete Southern interior, with a photograph of the dining room and the old darky butler who went with it, and rented it immediately to a famous moving-picture actress. The price was very large, and we were congratulating Bill most warmly, for she had taken a long lease; but we all noticed that he didn't seem very enthusiastic himself. In fact, he was very grumpy about the actress, and called her the movie maniac and the film freak whenever he spoke of her.

"I don't believe the lady liked you, Bill," Rissa said at last, but he only sniffed.

"I hope not. I certainly didn't like her," he answered.

"What was the matter, old man?" Sarles asked.

"Oh, she was all right," Bill explained. "There wasn't anything the matter with her, I suppose. But she looked so darn silly among all those lovely things! She's a vamp, you know, professionally, and she's about the size and shape of a lamp-post, with bright pink hair and all covered with green jade earrings and things. She's crazy about the place, and I must say she seems to appreciate the stuff. She raved about the lusters and the rosewood piano and the curtains especially. She's no fool. But to see her in front of poor old Miss Leffingwell's tea tray, slapping on that lip stick and feeding those sickening Pekingese pups, was simply ghastly. She ought to live in a poster, not that apartment."

Rissa began to laugh.

"Of course, Bill," she said, "you'll always be bothered very much in your business if this is the way you're going to take it. You can't always expect old gentlemen from Philadelphia who'll fit into the picture, you know. You ought to look them over very carefully when they answer your advertisements, and turn them down if they don't fit in with your plans. 'I'm sorry, madam, but you are too Early Victorian, really, for this Italian interior. I'm afraid you won't do!' That's what you'll come to!"

We all laughed, for Rissa imitates Bill almost as well as he imitates her. But Bill didn't laugh. He just stared dreamily at her and made little rings in the air with his finger, to follow her smoke rings.

"Not a bad idea, sis," he said, and soon after that he went home.

In less than a week he mailed me a new advertisement. It was a neat little pamphlet, with a picture of a stout, hook-nosed woman in a tiara and a short-skirted evening gown, cut very low, sitting in a prim colonial drawing-room, with a footman in knee breeches offering her a big bunch of orchids. Beneath the picture it said:

If you have a charming period home, why spoil the effect with your own appearance? Do you know what sort of background your type requires? Have you ever studied this? Your surroundings should express you—do yours? Messrs. Etheridge & Wisner have made a lifelong study of this and are prepared to consult with clients before taking the first important steps in home planning. Remember, it is not what you happen to like, but what actually suits you best that brings out your good points. Your dressmaker fits your clothes to you; who fits your apartment to you?

When I read this I thought that Bill was crazy, but Rissa felt differently about it.

"I shouldn't wonder if the lunatic pulled the thing off," she said, and nodded her head several times.

Well, he did pull it off!

A very rich woman from Texas—her heart was as big as her bank account, Bill told us—came to him about an Italian Renaissance duplex apartment she wanted on Park Avenue. She was very blond, with a great deal of color, and she weighed two hundred pounds, because she ate a great deal and never walked farther than across the room. She had two quite handsome daughters who had got themselves up to look like young French widows, Bill said.

He told us he was very high and mighty with her, and refused to do her unless she would be Early Victorian. So she agreed to this, and her portrait in a big flowered silk, on a rosewood sofa, with the girls leaning over it, in white, and some wax flowers, and a wool-worked hassock, was exhibited with wild success on Fifth Avenue. Bill persuaded the girls to embroider fire screens, and one married the artist who painted them, and the other has just announced her engagement to Sir Wilfred Crytchley, who is master of hounds somewhere in Surrey. Bill says it is all owing to him.

I was there myself when he persuaded the little pink lady with the pointy nose that she ought to have what she always called a "Louis" drawing-room, all pink and gold, with little statuettes of Venuses and things. She wanted Jacobean and a great deal of white plaster, but Bill persuaded her. And really she looked like a clever little marquise in it when it was done. The only trouble was, she wasn't clever at all; but Bill said that everybody had to expect to find some hopeless flaw in his method—and this was his!

They got so much remodeling to do that they decided to take in a young architect, who could help out in the office when he wasn't busy. But after a while he had less time, himself, and I used to go in to the office and help out afternoons. It was quite interesting to watch Bill handle the people. They would listen to him with the greatest respect—which always seemed funny to me—and even the ones who

argued with him and held out for what they wanted always gave way when he looked at them quietly and said:

"Of course, madam, you will do exactly as you choose. I, myself, couldn't see you in any but the interior I have sketched out for you, and I shouldn't feel justified in going on with it otherwise. But there are dozens of other men, no doubt, who will be delighted to oblige you."

Other men! Bill! It was too absurd.

But after they got that big apartment house on Madison Avenue it was quite clear that a secretary would be needed. George managed the books evenings, and had just about decided to give up his own job in a few months and take up the real-estate end of things, with the advertising. Mr. Fleete took on a great deal of buying and decorating, besides the remodeling, and Bill kept himself free for the clients, because he was the only one who could manage them. George Hawkesworth said frankly that he would sink into the floor with shame if he should even try it, and Mr. Fleete, though he agreed that he might be able to do it if necessary, warned Bill that he was more than likely to get giggling. Bill was quite severe with him.

"Giggling?" he asked him. "What do you mean, giggling? When a pug-nosed, bow-legged heavyweight with frizzy gray hair tells me she has always loved Ompeer things, because they're so sort of classic, don't you think I feel more like bursting into tears myself? Giggling!"

George wrote a careful advertisement for the secretary, which Rissa said would require a postgraduate angel with a past, if the requirements were to be met, and then they asked me to interview the applicants with them. It seemed to me they were very hard to suit.

Bill said that "pretty" was not the word exactly; she must be a distinct rest to the eye. George said that she must have studied modern filing systems thoroughly, but not be in the least hidebound about them, and stand ready to adapt herself to his, which was rather original. Mr. Fleete felt that in her odd moments she ought to be able to do a lot of shopping, and pretty darned intelligently too. Rissa said that all her moments in that office were quite likely to be odd, poor girl.

I began to think they'd never find one. At least, as Rissa said, not on this poor planet.

But one afternoon when I dropped in, Mr. Fleete was much elated.

"She's just gone, Miss Florrie, but she's to call in again to-morrow, and you must be here to see her. She's a peach. She saw my point about the filing directly; she loves shopping, and she's so good-looking that I've practically proposed to her and got it over. She's awfully interested in the idea, and by George, she's made for the business! I wish Bill could have been in here half an hour ago. His eyes would have popped out of his head. She landed a client for us."

"Why, how could she?" I asked.

"Just as I'd finished giving her the idea of the thing, and showed her our ads," he went on, "a tall, thin, cross-looking spinster marched in leading a Russian wolfhound as big as a small horse.

"'I've called about a letter from Mr. Wisner,' says she, 'and I've brought my dog, because I wish nothing in the apartment that is likely to annoy him or get in his way.'

"Well, I got the giggles, just as I told Bill I should. You see, all I could think of was to tell her that the furniture would have to be attached to the ceiling in that case, and of course I couldn't keep a straight face. And besides that, Miss Florrie, there isn't any style under heaven that would have suited that woman and that dog. She was the kind that wears tweeds and flat square shoes and awful oblong felt hats—you know—and thin! Thin as a chimney-pot extension!

"Well, I began to choke and cough and flap my hands in the air, and the beast of a dog began to growl at me and I was scared to death. And just as I thought the game was up, and she was beginning to gulp as if she'd swallowed a pint of vinegar, that angel of a girl steps out and smiles and says, 'Mr. Wisner isn't in, madam, but can't I get a rough idea of what you require, before he comes? What a magnificent dog! Of course anyone could see that you want a strong, simple effect, without any clutter—large pieces.'

"'That is just it,' says Old Vinegar, and before I'd finished blowing my nose the girl has her all settled in a kind of Gotnic outfit, and actually shows her pictures out of a Boutet de Monvel book of crusaders. She ate it up. Mullioned windows and carved chests and coats of arms—gosh, she ought to have worn armor herself, Miss Florrie!

"'But I should hardly do in this beautiful picture,' says she, with a gleam of human intelligence, looking at her terrible brown spats. 'Poor Falco would be ashamed of me!'

"'But you could have a sort of tea gown like this,' says the peach, dragging out a pad and sketching a kind of medieval, nightgowny thing, 'in smoke-colored velvet, for instance!'

"'So I could,' says Old Vinegar, very coy, 'but I'm afraid my tailor ——'

"'I know a woman who does that sort of thing beautifully,' says Peaches. 'Shall I give you her address?'

"It was all over. Just like that. You wait till you see Peaches!"

And when she came into the office the next day, it was Marjory Blair!

"Why, Miss Florrie!" she cried, and ran over and gave me a hug.

She'd taken a business course and done very well in two positions already. She loved business, she said, though Mrs. Plympton simply couldn't understand it.

"And how did you happen to come in, Miss Florrie?" she asked.

"Why—why—because of—of Bill!" I stammered out.

"Bill?" she said, very surprised. "Is Bill—— Oh, is he the Etheridge?"

"Why, of course," I said; "he and George."

"But who is Mr. Wisner, then?"

You see, George's name would have told her. But he had never used it, in case his firm mightn't like it, and put his middle name, Wisner, in the advertisements. And of course she never knew Mr. Fleete. I was a little embarrassed, but the young people to-day don't seem to feel this sort of thing at all.

"Why, isn't it funny!" she said. "What will Bill say?"

I took care to get hold of Bill and break it to him, but he was as calm about it as she had been.

"Well, well, well!" he said. "Good for her! So Marjory was Peaches! She's got her first commission from Etheridge & Wisner, Flops, that's one sure thing!"

I came in with him when he met her.

"Hello, Madge!" he said; and "Hello, Bill!" she answered, and they shook hands as friendly as possible.

We all went up to supper with her and her mother. They had a comfortable little flat uptown on the West Side, and Mrs. Plympton managed everything but the washing and enjoyed it immensely. We all thought she was much nicer than when she was rich. She had cooked a wonderful supper, and Bill insisted on being the butler, as he was when he first went to them, and kept us all screaming with laughter.

Marjory was just what they needed. She was born for the business, Bill said. She got her old dressmaker interested, and they worked out sketches together, and before long Madame Rose had "recommended by Etheridge & Wisner" on her cards. Bill gave Marjory the commission on every dress she got them, too.

She looked so nice in her little white collar and cuffs, with her smooth thick hair and her clear red cheeks. Even the clients liked her, because she made no pretense at any period herself, and really showed them off. She was supposed to work from nine till five, but she was quite as much interested as the boys, and often and often she'd sketch and plan and write till eight and nine o'clock.

Rissa wasn't so pleased at first, but after a while she told me that she'd decided that it was undoubtedly quite all right.

"The best cure for Bill, if he needs any more cure," she said, "will be to have her in the office like this. A romantic young idiot like Bill needs a little more illusion to keep him in love. When you pay a girl a salary to work a typewriter for you, you can hardly make a moon princess of her."

And I saw that, and felt a little sorry for it, I admit, for I had always liked Marjory, and I used to think them well suited, in the old days.

Mrs. Plympton would never come to call on us, which was silly in a way, but we got used to it and went to see her instead. We never spoke of Mr. Plympton, and Bill told me that she had gradually come to believe that his business troubles had preyed on his mind till he wasn't really responsible for

Why Aren't You Satisfied?

You realize, of course, that the General Manager can't put an untrained man in a trained man's job—can't pay a clerk what he would pay an efficient Auditor, Traffic Manager, Office Manager, or any other highly trained executive.

And yet, you are not satisfied. You want to make more money.

Are you in earnest?

Then, for the sake of your future, do the logical thing—*train!*

Right in your own home, by the LaSalle Problem Method, you can quickly acquire specialized business training that will put you on the road to real success.

For example, if you have average ability but have never specialized, you should be able to increase your salary 56 per cent. That was the *average* increase, mind you, of 1089 members, who during a period of only three months reported "raises" as a result of LaSalle training.

A booklet that we will gladly send you tells exactly how they did it. Certainly you should do as well as they or better. The coupon will bring you this information promptly—also your free copy of that inspiring book, "Ten Years' Promotion in One."

his mistakes. She talked more now of Mr. Blair, Marjory's father, and often said that Marjory was like him! She was quite busy and contented, and even when Marjory insisted on getting a maid her mother superintended everything and went to market every day.

By the end of a year the boys had to move to a larger place, for they needed more room for all the sketches and samples. We had grown used to Bill's success by this time; everybody knew of Etheridge, Fleete & Wisner, and once a woman asked Rissa if she was the sister of the famous decorator!

Many of the other firms tried to imitate him, of course, but Bill had got the name, you see, and George Hawkesworth thought up such clever advertising schemes that they kept their lead, as Sarles put it. And then, as they all admitted, no one could handle clients like Bill.

George Hawkesworth never got used to it. He would get fits of choking and run out when Bill, after a long argument, would pull a curtain dramatically away from a long mirror and say with a kind of disgusted sigh, "Look, Mrs. Jones! Look at what you see there, and tell me honestly, can you see that profile in an Italian frame?"

They always gave way then.

The day before they left the old office they asked me in to tea, and when I got there I was surprised to see Mrs. Plympton, looking rather grand in black satin, and some lovely spring flowers scattered about. They were going out, first, they said, and wanted me to come with them and meet an old Chicago school friend of Marjory's. I should have thought the friend would have come to tea in the office, but as Mrs. Plympton seemed very excited and anxious to go, I followed on, of course. Bill and Marjory were joking and laughing, but George Hawkesworth hardly said a word.

"Is your friend in here, Marjory?" I asked as she and Bill ran up the steps of a little brown church tucked away in the middle of the block.

"Y-yes, Miss Florrie," said Marjory, and I thought she looked rather pale, for her.

"Don't stare at us so, Flops. We're going to be married!" said Bill. "To wedding and you are the guests!"

"Why, Bill!" I said.

"You see, Flops," he told me, his arm around me and smiling as but Bill can smile, "it seemed to lucky before, with all the fish knives desk sets and all, and if you ask they have to send you things. And couldn't stand the clothes and ever She really can't be spared from the for fittings. But this part only takes twenty minutes. It's really much est way."

"But—but what will Rissa I gasped.

"Rissa ran it the last time; it's now," he said.

I never realized that you can be perfectly well in a blue jersey dr white collar and cuffs, but you c Marjory would have made a love

The friend from Chicago, far fr shocked, said that this was the she would ever be married; a people are changing.

It was over so quickly. Bill say bridesmaids and the ushers gett selves arranged that makes we long.

And then we came back to tea Plympton had a wonderful cake, and sandwiches. The salad wa thing that made it seem like George said.

"Now, Bill, I know you're m cause I've slopped mayonnaise clothes!" he said. And Bill laug cried.

They were going off to Virgin days, and George and Mr. Fle attend to the moving.

"I shall think of you pick blossoms," the Chicago friend Bill answered, "You'd better stalking old furniture, Betty."

"Bill, you certainly are cuss!" George Hawkesworth at him admiringly, and then the thought struck me for the

"Our farm business took a marked upturn last fall"

The upturn in the Western Electric Company's farm business began with this advertisement.

writes the Western Electric Company. "It was coincident with our making THE COUNTRY GENTLEMAN the backbone of our advertising campaign.

"Our farm power and light market is among a growing class of farmers who want modern comforts and labor-saving conveniences.

"We made an investigation to learn from farmers and dealers themselves the best medium for reaching these leading farmers.

"We found THE COUNTRY GENTLEMAN *read by the country's most progressive farmers and dealers. Results produced by it have been very satisfactory and it gets first consideration when national farm publications are chosen to carry our advertising."*

THE CHOICE OF A GREAT EXPLORE

Capt. Roald Amundsen — one of the world's greatest explorers — discoverer of the South Pole — now starting on a new journey into the frozen Arctic. No one knows better than he the exacting food requirements of men who invade the Polar regions. Read why he is taking DEL MONTE Products with him.

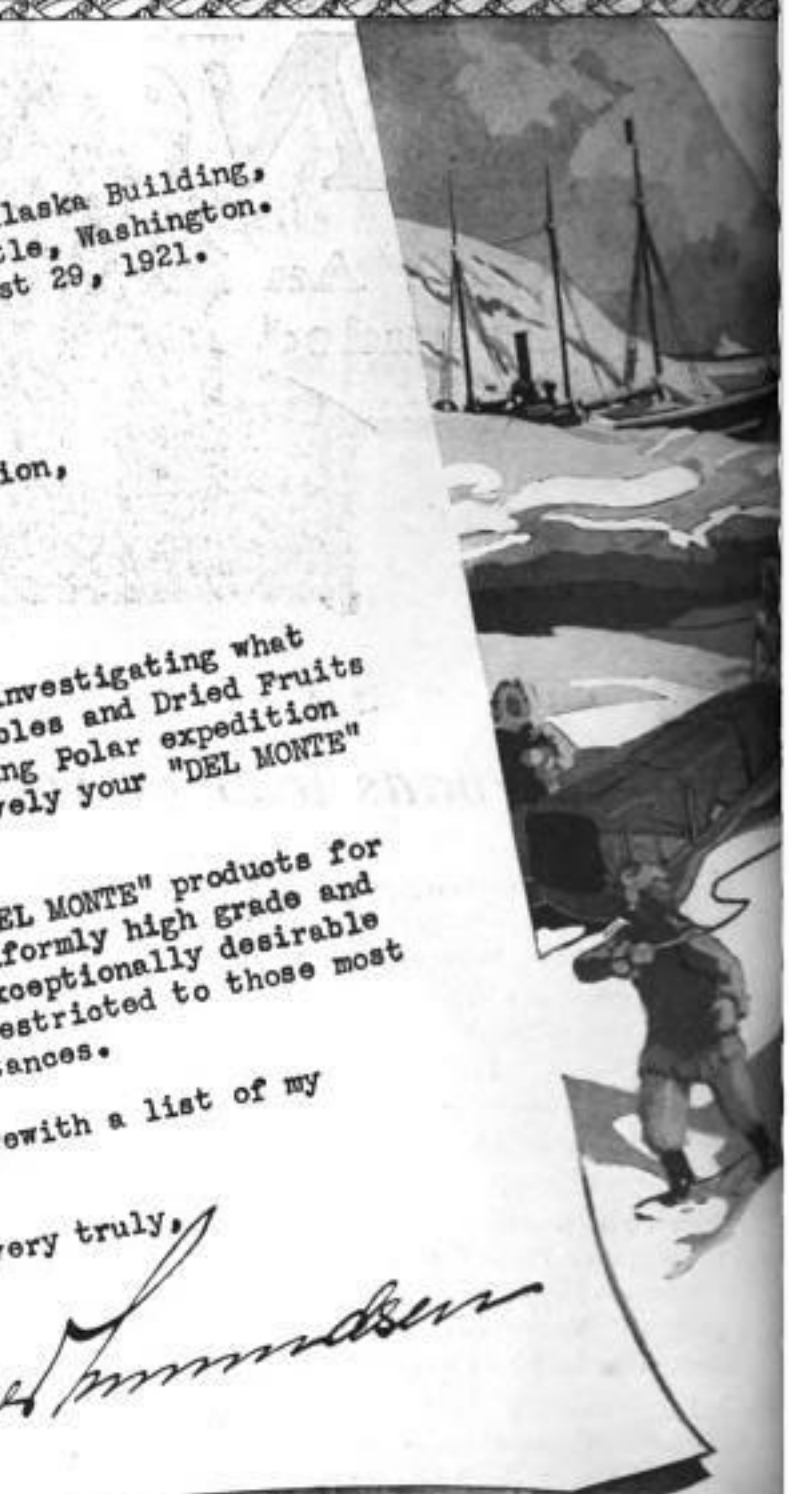
ROALD AMUNDSEN

520 Alaska Building,
Seattle, Washington.
August 29, 1921.

Messrs. California Packing Corporation,
101 California St.,
San Francisco, California.

Dear Sirs:

I have been carefully investigating what kind of Canned Fruits and Vegetables and Dried Fruits I should choose for my forthcoming Polar expedition and have decided to use exclusively your "DEL MONTE" brand.



I have chosen the "DEL MONTE" products for the reason that with their uniformly high grade and keeping qualities, they are exceptionally desirable where food supplies must be restricted to those most dependable under all circumstances.

I am enclosing herewith a list of my requirements.

Yours very truly,

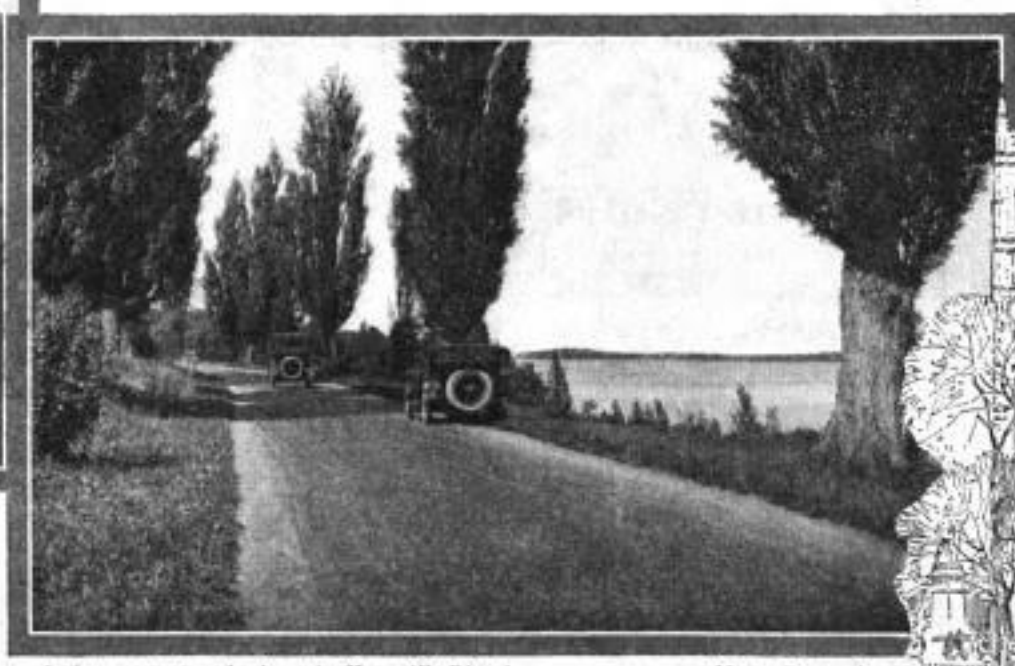
Roald Amundsen

RA:EN

"Where foods must be restricted to those most dependable under all circumstances"

—the reason assigned by Amundsen for taking DEL MONTE Products with him to the North Pole.

And doesn't it apply just as strongly to your own every-day menu? Isn't it just as important that you may always be *sure* of highest food quality, "dependable under all circumstances?"



That is the guarantee that DEL MONTE offers in more than a hundred varieties—choicest fruits and vegetables from the world's finest orchards and gardens—packed where they ripen the day they are picked—and brought to your table ready to serve, in season or out of season, with all their natural fresh flavor and delicacy.

Lake Placid—Wilmington Road, N. Y. A water-bound macadam highway kept traffic-proof with "Tarvia-B."

A picturesque stretch along the Keeseville-Plattsburg Road, N. Y.—treated with "Tarvia-B."

Notre Dame de Montreal—an impressive edifice facing on the Place d' Armes.

All roads lead to Montreal—

QUAINT, historic, yet modern—a picturesque city of romance where the atmosphere of the Old World blends with modern customs of the New—that is the Montreal of today.

Good roads have now opened up to the American tourist this unique and intensely interesting old city: Sherbrooke Street West, "The Fifth Avenue of Canada," has become the common meeting ground for cars from California to Florida and from Maine to Texas.

Yet only since 1913 has Montreal been readily accessible to American tourists. In that year the Quebec Government built the famous King Edward Highway, 45 miles long, from Montreal to Rouses Point, New York, linking up with the wonderful tarviated roads of New York State which lead through the incomparable Adirondacks and Lake Champlain country.

Last season the Quebec authorities tarviated the entire King Edward Highway and over its smooth surface thousands of autos sped to and from Montreal.

Throughout all Canada and the United States, road officials have discovered that Tarvia solves all road problems. It brings durable, dustless, mudless, all-year roads within reach of the most modest community.

If you have any road problems—construction, maintenance or repairs—our engineers will gladly help you solve them. Address our nearest branch.

A section of the beautiful King Edward Highway maintained with "Tarvia-B"

Château de Ramzay—one of the most interesting spots in a most interesting city. Built in 1705, this old Château was for some time the official residence of the early British governors.

Speed

You have always known naphtha soap as a quick cleanser—it separates dirt from fabrics without boiling or hard rubbing.

Safety

Whiteness in a fine soap is the outward sign of fine ingredients — it assures beautiful white results with white clothes; it is safe for colored as well as white clothes.

In this case—

Invention was the mother of a Necessity

FOR a number of years you have known both naphtha soaps and white soaps.

Naphtha soap, you know, cleans *quickly*. On the other hand, fine white soap has shown itself effective and *safe*.

The invention of White Naphtha Soap came very simply, in answer to the question: "Why not combine the virtues of both in one soap?"

P and G The White Naphtha Soap was the result. It was found so quick, effective and safe — so much better than either *naphtha* soap or *white* soap alone—that P and G The White Naphtha Soap is now considered a *necessity* in a very great many homes. Already it has the largest sale among all laundry soaps in America.

Do you find the cuffs of shirts difficult to clean? Let P and G The White Naphtha Soap show you how much less rubbing is required to remove the soil — without fading the colors.

You will find that P and G The White Naphtha suds quickly give a new whiteness to your table linens and towels — without injuring the fabric or your hands.

P and G The White Naphtha Soap is a *complete* soap for all household purposes.

for Speed *and* Safety

N AUDIENCE WITH THE IPANESE PRINCE REGENT

heart of Tokio stands a vast d, surrounded by moats which rn fringed by embankments i gray with age. Through the rees that top these hoary walls en-tiled roof of the Imperial roofs afford the only glimpse le of the capital ever get of nent. No other royal resi- e is so zealously guarded or m curious intruder, for it is y of holies—the abode of the er royal establishments are le to the public. This one ated shrine—a thing apart. nperial area itself lies in the life, so is the palace—or where the Emperor hap- he very fountainhead of al existence. In no other overeign venerated to the ains in Japan. Tradition- Heaven, symbol of many —the present Emperor is and twenty-second—god- of a religion of patriotism, red. He is the one ruler rong.

The Prince Regent in Uniform. Prince Tokugawa Precedes Him

By Isaac F. Marcosson

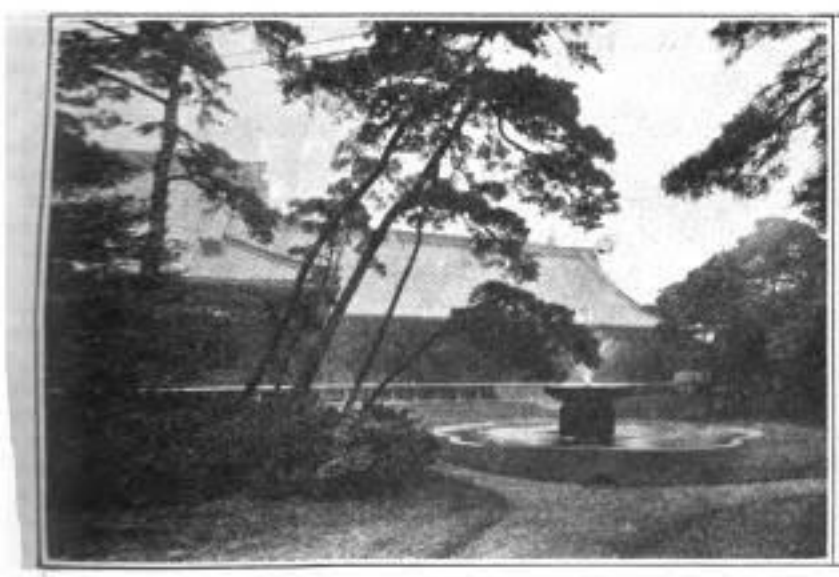
ent's Isolation

me miracle went Bolshe- crowd that might burn Japan or the homes of a ould assemble in the plaza e to the palace and yell imperial master. Here phase of Japan that is

at Tokio palace I talked h with the inheritor of e prestige, the young Prince Regent, Hirohito. I have had other alty, but none was so difficult of approach, none so hedged in by did any represent such strange blending of feudal suggestion and he more practical things that make for modernity.

got in the way, these daimio—as they were called—could lop off their heads and proceed calmly on their journey.

But there were other reasons why this meeting with the Prince Regent was invested with special interest. To begin with, it was the first time, either as Crown Prince or in his present capacity, that he had received a writer in private audience in Japan. On his European trip last year he was greeted by delegations of newspaper men. He even talked to some of them in London and Paris. That, however, resulted from his being on foreign soil and when he had cut himself loose from the rigid limitations that restrict him at home. Once he returned to Japan the lid was clamped down again. Though he has displayed a surprising sense of democracy he has been obliged to yield in the main to the immemorial traditions of his rank and heritage.



Divine Right Incarnate

YOU get some idea of the extraordinary aloofness of the Japanese family when I say that even after the Restoration of 1868, when the shogunate yielded to the actual rule of the royal line, court physicians could feel the pulse of the Emperor only through a piece of silk. Tailors had to guess at measurements for the European clothes of the monarch. In a word, no lay finger could be placed upon the body of the Mikado.

Some years ago the private car of the Emperor Meiji, grandfather of the Prince Regent, was delayed twenty minutes in the railroad yards at Kioto. The stationmaster immediately committed suicide, because he felt that he was responsible for this slight to his sovereign.

On the very day that I write this article in Tokio a young fanatic was killed by a bomb explosion at the entrance to the palace. From papers found on his person it was disclosed that he desired to present a petition to the throne protesting against the present Diet, but that he had also planned suicide because of his temerity in approaching the imperial preserve. The Minister for Home Affairs and the Tokio chief of police at once tendered their resignations, because, like the stationmaster at Kioto, they felt responsible for what was considered a desecration of the royal compound.

It is an unwritten law in Japan, strictly observed to-day, that no one can look down on the Emperor. If he passes in the street—and this

rule applies to the Prince Regent—mounted police ride ahead to warn all persons to descend from the upper stories of houses or draw the blinds. This applies to everyone, and there is usually a scampering of steel workers on the steel framework of new buildings to the ground. Passengers in tram cars must either get out or sit behind closed windows until the regal procession has gone by.

There is still the feeling in Japan outside of Tokio and Kioto that the Emperor is not a concrete personality but an incarnation of divine right. All success is attributed to him. When Admiral Togo, for example, cabled the news of his famous victory over the Russian fleet at Tsushima he gave all the credit to the virtue of the head of the nation. Every soldier and sailor feels the same way.

So, too, with the heroic General Count Nogi. His dramatic suicide was attributed to continued grief over the loss of thirty thousand Japanese soldiers at Port Arthur; in reality it was devotion to his Emperor and his expressed desire to follow him into the hereafter.

Now you can understand some of the significance and responsibility that attach to the heirship of all this legend and loyalty. As I watched the slight, spectacled, young Prince Regent and listened to his carefully enunciated words, I could not help realizing that he is destined to occupy a distinct and perhaps lonely place in world affairs. Possibly my recent years of contact with the wreckage of old orders in Europe fostered the thought. It is summed up in a single sentence. The imperial circle, as it might be called, is narrowing.

Russia, Germany, Austria, Turkey have all passed into the twilight. Ordinarily you do not associate the emperor business with King George, because he is the essence of the democratic spirit, and England is to all intents and purposes a crowned republic. Besides, it is not among the impossibilities that self-determination will some day pluck the jewel that Beaconsfield placed upon the diadem of Queen Victoria when he made her Empress of India. Japan may be the last of the empires.

Main Gate to the Imperial Palace, Tokio

The Fabric of Government

SO FAR as it is humanly possible to predict anything in these cataclysmic times, Japan will remain an empire. The zeal for the royal family—it is almost fanaticism—leaves no doubt as to this eventuality. Thus, unlike some of his European colleagues, Prince Hirohito is sure of his succession if he lives. He need never worry about radical intrigue. He is Emperor in everything but name now.

Yet amid this adoration for royalty, the guaranteed perpetuity of its rule and the traditional rights vested with the All-Highest, the Emperor of Japan has little more real authority than King George. Although Meiji, who has been called the Lincoln of his country, was a strong and forceful personality, he was swayed and his long and eventful reign was shaped by the Elder Statesmen. But the leaders among these Genro, as they were named, have all passed away. The last of the lions was Prince Yamagata, who died on February first of this year. Although there are still two surviving Genro—Marquis Matsukata and Prince Saionji—they were never dominant factors in the rule of the country as was Yamagata. Marquis Matsukata is now 88 years old and lives in retirement at Kamakura, a summer resort not far from Tokio. Prince Saionji is younger, but is no longer a strong figure in the councils of the nation.

With the regency of Prince Hirohito—it began last November—Japan began to face a crisis that is more momentous than the acute situation precipitated by the friction with the United States over the Californian alien law. This crisis is internal and affects the welfare of all the people. It is therefore impossible to comprehend the personality and the possibilities of the Prince Regent without knowing just how it began, what it means and where it may lead. Whatever happens, as head of the nation he must be a conspicuous figure in a drama that will affect the whole Orient.

It all goes back to the Constitution, which was largely the work of the late Prince Ito, the Bismarck of Japan, and fit mate of Yamagata in the councils of the Genro. This document, which was promulgated in 1889, strongly resembles the German Constitution of that period. German influence, I might add, has always been potent in shaping Japanese policy, especially on the military side.

Although the Constitution theoretically provided for the establishment of a constitutional monarchy, and was supposed to mark the change from an absolute to a limited monarchy, it did not bring about the equivalent of parliamentary government under a limited monarchy as we have come to know these institutions in Europe.

Though the traditions of divine right and absolutism have been maintained for centuries the Emperor, as I have intimated, has always been more or less a figurehead, his actual influence being a function of his own force and personality.

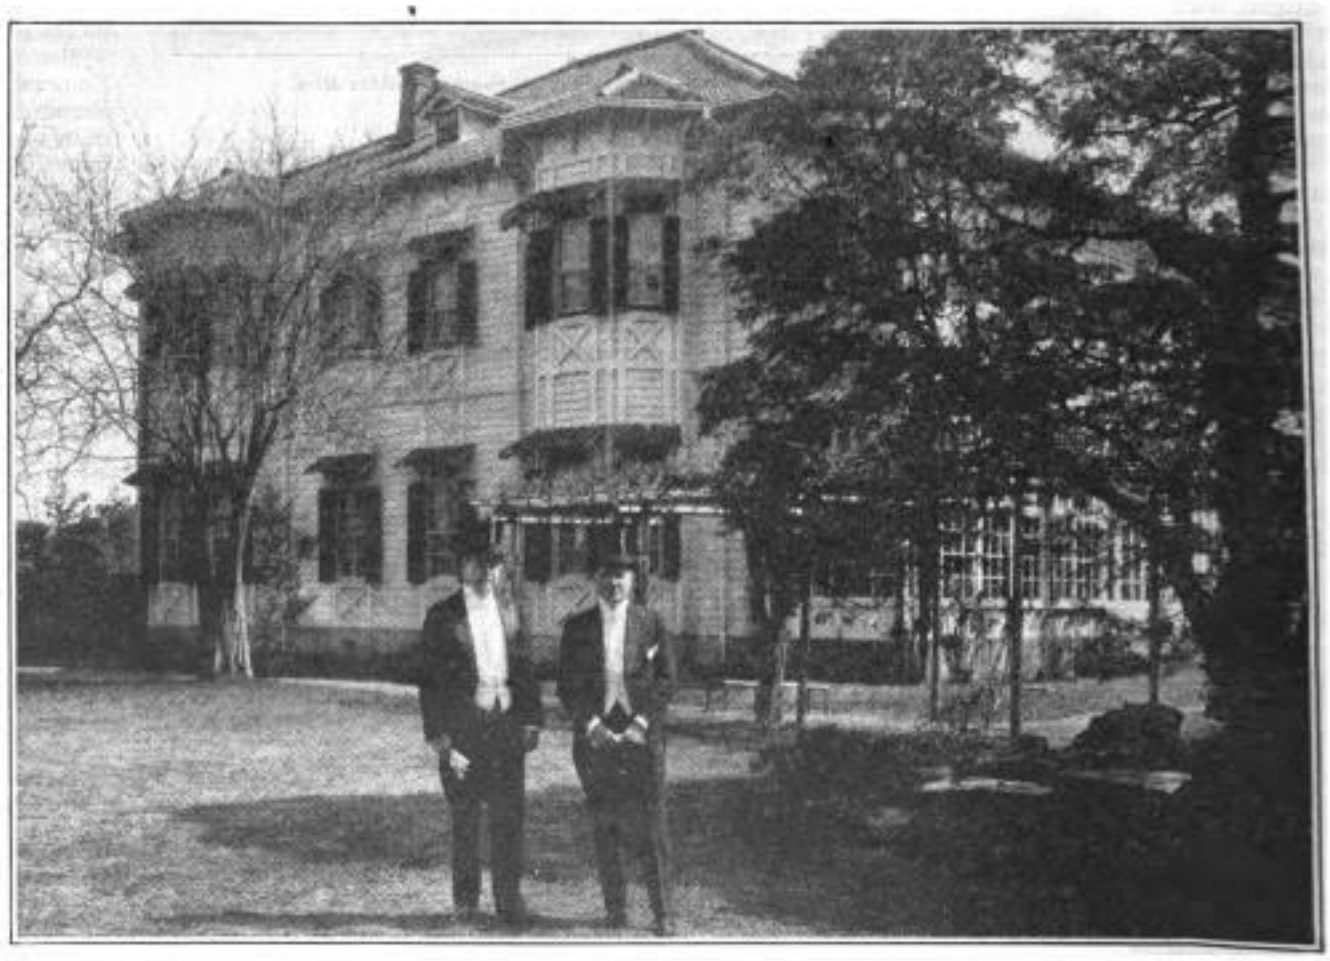
Up to the present time there has been no parliamentary government in which the power of public opinion eventually determines the policy of the state. The immemorial right of the British House of Commons or the American Congress to exercise control over ministers by refusing appropriations, for example, which has had such an important influence on political development in the United States and England, has no counterpart in Japan. If a budget introduced by the [illegible] ment fails to pass, the budget preceding year is continued [illegible] The Diet is something of [illegible] What it lacks in power it [illegible] in noise. Its principal [illegible] criticism, in which it [illegible] other similar body.

Another drawback to [illegible] mentary government—and [illegible] on the Japanese crisis of to-[illegible] in a provision of the Co[illegible] that the Ministers of War a[illegible] must be active or retired [illegible] the army and navy re[illegible] This has enabled the so-[illegible] tary party to bring pressure [illegible] government, for any cabi[illegible] fall if either the Minister [illegible] the Minister of Navy re[illegible] War Department and not th[illegible] Office has dictated the fo[illegible] and behind the War Offi[illegible] the Genro.

Now we come to the [illegible] present business. Up to t[illegible] the Hirohito Regency the Genro influence was all[illegible] The Elder Statesmen not only named Premi[illegible] Ministers of War and Navy but they formed [illegible] constitutional body responsible only to the Em[illegible] self. Originally they came into being because [illegible] Restoration, the Emperor needed wise co[illegible] there is no doubt that their authority grew [illegible] exceeded any other power in the land, not ex[illegible] Constitution. In a word, the Genro were the [illegible] Japan.

The Yamagata domination gave Japan her [illegible] sun because it built up an army and navy that [illegible] to be reckoned with as a great power. But [illegible] Yamagata died some of his influence began to [illegible] Wellington, his military genius outweighed [illegible] sagacity, and the old war horse—he was eight[illegible] he died—or rather the system for which he sto[illegible] lightning of popular wrath.

The Dawn of Liberalism



FOR months prior to the Washington confe[illegible] als like Yukio Ozaki had thundered again[illegible] armaments, an expanding army, forceful co[illegible] tration—all that militarism implies. There [illegible] particularly altruistic about this protest [illegible] called for relief from an excessive burden of [illegible] from a policy that farseeing men knew was [illegible] seeds of future international trouble.

Slowly liberalism waked in Japan. It beg[illegible] itself, for one thing, in the demand for univ[illegible] and free speech. I have seen nearly a hund[illegible] people packed around the Diet buildings [illegible] to influence a favorable vote on the suffra[illegible] birth control[illegible] on, to get [illegible] hearing. If [illegible] many babies [illegible] Japan, and [illegible] life has be[illegible] just one ch[illegible] army and na[illegible] realize wha[illegible] in the birth[illegible] Everywher[illegible] signs of ev[illegible]

In the ni[illegible] more or le[illegible] stirring Prin[illegible] came Regen[illegible] incident wh[illegible] tion of the [illegible] tragic blow[illegible] what might[illegible] popular wil[illegible] assassinatio[illegible] Hara. Esse[illegible] the people, [illegible] sheer chara[illegible] ciency. Al[illegible] anese call[illegible] Commoner[illegible]

Mr. Har[illegible] traditions [illegible] by taking[illegible] folio of the[illegible] Navy whe[illegible] Kato went[illegible] ton confer[illegible] first time [illegible] ever filled[illegible]

"Isn't it a shame some people have the clothes they do: and other people don't have the clothes they don't?"

"I don't require anything more, Parks," said Lady Hunter, looking at her rather piercingly.

"Thank you, My Lady," murmured Parks.

She withdrew, Steers, Sir William and Cyril each following her privily from the tail of his eye. Arthur remained his own sturdy self.

"Now," said Lady Hunter as she flicked all the ostrich feathers into their places and tried to achieve a sinuous effect with the rest of the garment—"now, Arthur, you will rilly try to enjoy yourself, won't you? The girls are in the garden, expecting you to go out and amuse them, and it's so warm and nice, and presently there will be a moon; altogether just the right sort of evening, I should have thought. Why you sat so long with your uncle and Cyril in the dining room I can't think. Your uncle has an engagement, and Cyril has work, poor boy; but why you waited for me to come and fetch you out! Tch! Tch!"

"Well ——" said Arthur protestingly.

"Pull yourself together, Netherby," said Cyril.

"It's all very well ——" said Arthur protestingly.

Lady Hunter waved her lorgnette. "No, my dear boy," she chirped, "it's not all very well, unless you go out and talk to them. This little week-end party has been given for you just to meet some nice girls."

"And you're not playing up, Netherby," murmured Cyril languidly.

"Well," said Arthur—"well, y' see ——"

"Are we going or are we not?" said Sir William, so courteously—in his anger—that Lady Hunter at once proceeded to the open doors, flung wide to a long, deep, dark starlit garden. Outside on the graveled drive the engine of their princely car purred softly like a sleepy cat.

"We are going," said she. "Don't come out, Cyril. Stay and persuade Arthur."

Cyril, who had followed Lady Hunter, returned laconically into the room, and seated himself on the arm of a settle warranted genuine antique. Arthur leaned up against the wall, hands in pockets. Steers tucked Lady Hunter into the car and vanished into the darkness towards the kitchen quarters.

Cyril opened a beautiful cigarette case very languorously.

"It's all very well," said Arthur at last, "but I funk it. I always funk it. It's very good of Aunt Jane to welcome the wanderer home 'n' all that, and give me shelter while my own little place is being set in order—but what does she do as soon as she's got me? Tries to marry me off! Asks twin girls and a widow to stay in this overpopulated cottage. I can't breathe! Give me air!"

"You're used to wide spaces," said Cyril languidly.

Arthur rejoined, "And no women!"

"A man like you must miss half the best things in life," said Cyril thoughtfully.

He made the effort, extracted a cigarette, and returned the beautiful case to his pocket.

Then a sound rose out of the long, deep, dark starlit garden. It was human, musical, appealing.

"Coo-ee!"

Arthur started away from the support of the wall, and listened.

"That's for you, old man," said Cyril with the deepest sympathy.

He lighted the cigarette.

"Why not for you?" Arthur replied fiercely.

"Well," said Cyril, attempting further efforts in the way of explanation, wearisome as it was, "they know I'm busy, you see. Being secretary to a distinguished knight with aspirations to Parliament involves a few duties, old dear; and I've got to prepare Sir William's speech for the Flower Show to-morrow. Come on! I'll see you to the door."

Arthur prowled about and kicked furniture. He kept a wary eye and ear turned upon the dark romantic garden.

"Coo-ee! Coo-ee!"

"Hark at 'em!" said Cyril persuasively. "I'll see you to the door."

"My holy aunt!" said Arthur, gritting his teeth. "I know I seem all kinds of a fool to everybody here, but, Wakefield, I tell you, of all the toughs a fellow meets, in the case of a rich man, the biggest tough is woman. And I've tried more or less to steer clear of her."

"You can't," cried Cyril, screwing on his monocle earnestly. "No man can. Only a darned fool wants to."

"In a way, I know that," said Arthur, administering a hearty kick to the settle, "and yet, in a way ——"

"I tell you what," said Cyril—"you're in a very marrying frame of mind."

Arthur looked around him. He looked at Cyril, and out into the dark garden, and back again.

He put out a large hard hand and touched Cyril impressively on the shoulder.

"You're right, in a way," he whispered; "I did come home hoping to—well, meet the real right girl, you know."

"That's you savages all over," moaned Cyril. "Tough as leather outside; soft as putty inside."

"Dare say," said Arthur, giving him a surly look of embarrassment.

"You seem to feel that woman's a bit of a humbug," said Cyril sympathetically.

"Ah," said Arthur, nodding.

"But no really nice woman ever tells the truth," said Cyril. "How can she?"

"Listen again," Arthur murmured.

"Oh, hark at 'em!" said Cyril; and "Coo-ee! Coo-ee! Coo-ee!" came the call outside.

Little Parks entered respectfully from a door on the right which led into the servants' quarters and addressed Arthur:

"The ladies keep calling for you, please, Mr. Arthur."

Arthur grunted and gave Parks a look of surly embarrassment, and having done her duty by him she proceeded to the open doors, wide-flung to the night outside.

Digitized by Google

"I'm going to collect the rugs and cushions from the hammocks, Mr. Wakefield," said she to Cyril. "There's a heavy dew."

She passed meekly out, with Cyril's gaze riveted on her black stockings; but Arthur remained his sturdy self.

"I'm not a Prince Charming exactly," said Arthur with very admirable modesty. "I'm a pretty plain-minded and plain-living man. And when women have made up to me—awf'ly fatuous, that sounds, I know—well, when they've made up to me I've had a fairly good suspicion that it was for my money."

"Women must live," replied Cyril reasonably.

"Why?" said Arthur, kicking the wretched settle.

"Coo-ee!" the voice was calling.

"Those girls out there," said Arthur, gritting his teeth, "Mrs. Drelincourt the widow, and the Harmony twins. Angela Harmony seems already engaged to be married, but says she's not going to announce yet who the man is; says it so happens that it might injure his immediate prospects; and it doesn't seem to trouble her anyway. Now I don't approve of that."

"Really," said Cyril a little coldly, "people have all sorts of private reasons for their public actions, don't you know."

"Coo-ee!" the voice was calling.

"Damnation!" said Arthur, gritting his teeth, and following the voice as far as the open door, where he paused, and hung awhile. "Where girls are concerned I—well, I'm no mixer," said he.

But at last he went doggedly out into the garden.

Cyril dropped into his chair before a busy-looking writing table and chose a pen with the greatest reluctance.

"Ladies and gentlemen," he murmured.

He began to write regretfully. But there he stopped, put his hands in his pockets and surveyed the otherwise blank page. He sighed. He lighted another cigarette and pressed the bell which he had caused to be installed for his convenience beside the desk. In fact, he had caused a bell to be installed close to any writing desk at which it was in any way likely that he would sit.

Steers entered sympathetically.

"Yes, sir?" he inquired.

"Life is a dull affair, Steers," said Cyril.

"Oh, no, sir!" said Steers after a pause for ripe consideration. "Never dull."

"But the things one has to do," argued Cyril.

"It is the way one does them, sir, that counts," said Steers confidentially. "In my experience—more than yours, sir, if I may say so—matters can always be arranged."

Cyril attempted to think this over.

"But what can I do for you at the moment, sir?" said Steers.

"Well, Steers," said Cyril, rising and leaning against the desk, glad to get even this far away from his work, "it's about this Flower Show to-morrow. You see, I'm preparing the rotten old speech. Now it would help me an awful lot if you could tell me here and now who will get the first vegetable prize; the first—er—er—flower prize; er—the—er—first wild-flower prize for school children; er—er—the first fruit prize; and the prize for ladies' table decorations."

"It don't seem quite fair to settle it before the goods has been exhibited to-morrow, sir," said Steers.

"What's justice?" said Cyril. "Who ever gets it?"

Steers spread his hands, toyed with his chins and shrugged. He was a very eloquent man.

"Well," said Cyril, "I could leave blanks for names to-night, if I must, though I do like to make a job of a thing when I undertake it. Tell us something definite. Is it going to be fine?"

"Yes, sir," said Steers.

Cyril dropped into his chair and took up his pen. "Good," he murmured. "Now listen. How does this go? Ladies and gentlemen: We have been favored with perfect weather for what I may justly call our splendid show, in which all exhibits in all classes are, I think we may rightly say, unsurpassable. The first prize in the vegetable class goes to—er—So-and-So So-and-So, for—er—her wonderful um-tums, than which no finer specimens have ever graced a show ring."

"Show tent, sir," breathed Steers.

"Show tent," said Cyril, writing. "Listen. Lady Hunter wishes me—that's Sir William—to say that she has been amazed at the research and industry shown by the school children in selecting and classifying so many brands —— Brands? Brands, Steers?"

"Species, sir, if you will excuse me," breathed Steers.

"How they do educate you fellers!" said Cyril, working away like a horse. "Thanks. Species of wild flowers; and their botanical lore is a fine tribute to the painstaking instruction received in our village schools. The first prize goes to little Thingummybob, for her beautiful arrangement of wibbly-wobs. You are a very nice clean little girl, my dear, and your good parents must be proud of you."

Steers coughed. "Pardon me, sir," said he, "but it is more likely that a lad will show the best wild flowers, sir. 'E has more strength to collect them, sir. Long distances are often covered ——"

"I have a certain amount of influence, Steers," said Cyril, bending to the task again. "And the prize will go to the best looker among the little girls."

"Very good, sir," Steers murmured. "Would you like a whisky and soda?"

"In a moment," said Cyril. "I will take the table decorations next; then the fruit; then the gardens; lastly I shall pass on to the ennobling influence of competitive enterprise, at the same time touching upon the sportsmanlike spirit in which a Britisher loses, and the modesty with which he wins. And I think that gets 'em all."

"Very tac'ful indeed," said Steers warmly. A little reserve fell upon him. "Miss Parks, sir," he added, coughing—"Miss Parks is thinking of entering for the table decorations, I believe."

"What!" said Cyril, laying down his pen with a smile. Then, still with a smile, he took it up again readily. "Little Parks," said he. "Is she really?" He wrote. "What a dear little thing that is, Steers."

"And a girl as will go far if she isn't stopped, sir," Steers replied.

"Well," said Cyril, writing faster than he had written yet, "she's won the first prize for table decorations anyway. The first prize—um—um—goes to Miss Emily Parks, for her lovely and tasteful arrangement ——"

"I will bring you a whisky and soda, sir," Steers murmured, creeping out.

"Oh, Lord!" sighed Cyril, writing.

For a short while after he had finished his eulogy—leaving blanks for the names of the flowers for which Parks would win her trophy, and then absent-mindedly writing in "lip," "ear," and "curls" as the words formed in his mind, and then scratching them out again and inking them over well—Cyril sat and pondered pleas little Parks and her ways.

Then Steers entered again. He helped Cyril to a and soda.

"Can I assist you further with the compositio said he when all was arranged to his somewhat f liking.

"No," said Cyril. He drank. "There's no e duties of a secretary," he added, sighing.

Steers toyed with his slightly spread his hands delicate and deprecating

"We're all obliged to days," said Cyril.

"More or less, sir," Ste sympathetically.

Steers was making slow the door, and Cyril was the writing desk, drinking soda, but still looking an apparition appeared doorway leading to the gar little Parks, flushed, thrill cited. She was smiling. few stripy cushions slung hand, and a light rug slung shoulders because she h means of transportation

She stood sharp-cut night, and she looked of mischief, like a fairy or a devil; or a naughty has tempted a good little haps she looked just like woman. Anyhow, the vi thus arrested Steers' p door.

Steers smiled before h pull himself together.

Little Parks looked at looked at Cyril, who ha wards them. She entered She was alight with bubbled with some whose source she alone cret. She caught Steers threw the cushions at the rug over it, and the door that he had open for himself.

The wind of her g and he turned, to standing calf-deep in stripy rug swirled a was a nice sight.

"Hello!" said Cyril. "Hello! Hello! What

Steers pulled the rug from his head, a He stared around him.

"I wonder if she meant anything?" said

"Eh, what?" said Cyril.

"Begging your pardon, sir," said Steers, dignity, and picking up the cushions slow for thought between each, "but I 'ave ja and cushions collected from the 'ammicks

"So I see," said Cyril, pressing h "But ——"

"It is Miss Parks, sir," Steers explai your pardon. Seeing it was only you here it, she—she"—here he tried to smother fatuous giggle—"she —— Do you think thing, sir?"

"Well, I know if it was me I'd jolly so Cyril languorously.

Steers moved with alacrity towards t sir," he agreed. "Yes, sir." He paused will excuse this having occurred in your Wakefield, but she has ab-so-lutely no te men are concerned. No fear at all. I knows her power."

"Oh, it's all right," said Cyril. "Eve were I."

"Thanking you, sir," said Steers, reach opening it at last.

Steers was destined, however, to pass pursuit, for just as his hand closed round second apparition broke in from the It, too, hesitated on the threshold of the It, too, blinked at the light, and looked up. It was Arthur.

Steers lingered, hand on doorknob. C desk, glass in hand, and made some a monocle, the better to see Arthur.

"Wakefield! Wakefield!" said Arthu "I've done it!" He walked in, dazed.

"Done what?" replied Cyril languidly

"I've asked a woman to marry me," sa

"Eh?" said Cyril after a pause to th suitable. "Nev-ar!"

"I Wonder," Said Lady Hunter Rather Coyly After a Pause, "How It Is That Secretaries Always Fall in Love With Their Employers' Wives?"

reat chestnut tree hanging over it."
dded Cyril dreamily.

"So at first I didn't see her," said Arthur. "And then I did, and something sort of—sort of—came over me."

"I know," said Cyril, sighing rather happily.

"She was as surprised as I was," said Arthur with simple faith, "when after a—a pause, y' know, I stepped in and sat down beside her."

Cyril made a sound of complete comprehension.

"I could feel her trembling," said Arthur, becoming solemn. "She was—was awf'ly startled. She said 'Oh!' and then, as I said before, something came over me that here was the—the—you know how I mean, old man—the one woman in the world. And I says 'What!' I says 'You!' She didn't say anything to that. It was, as I told you, damn dusky, and she was huddled up in one of those hammock rugs like a—a ——"

"Mantilla?" suggested Cyril.

Arthur accepted this. "I expect so. Like a mantilla."

After a pause, during which Arthur prowled about, Cyril made further inquiring sounds, and Arthur went on: "I said, 'I've been thinking about you.' She said in a whisper, 'Have you?' I think she was frightened." Arthur laughed tenderly. "I wasn't," said he, looking sturdier than before. "I just said, 'And now here you are. Don't let's waste time,' I said; 'there's been enough time wasted already. Tell me here and now, will you marry me?' And she promised. She promised to marry me."

In spite of his sturdy character the recollection awed Arthur once more into silence.

"Of course," said Cyril musingly, "to every man his method, and to every man a damsel or two. There's some quotation like that, I think—unless it's my own. It might be. But you made quick work of it. You might have disappointed her. Most women don't mind wasting time that way. They like it. They'll waste days and weeks and months and years that way. However ——"

Arthur walked about, smiling, not listening to Cyril.

"It's fearfully strong-minded of you, too, to leave her so soon," Cyril added.

Arthur looked up.

"Oh," said he, "she left me. The little devil! Suddenly she jumped up and ran."

"What," said Cyril, "directly ——"

"Well," said Arthur evasively, "not—not quite directly of course." He gazed reminiscently past Cyril into the starlit garden.

"Aren't you going to look for her?" Cyril asked.

"Eh?" said Arthur, dreaming.

"Look for her!" bawled Cyril, roused to energy from sheer wonder. "Aren't you going after her? In your shoes I should. I don't want to get rid of you—I've finished the worst of that confounded speech—but aren't you going after her?"

Arthur roused himself.

"Why," said he, struck by the idea and staring at Cyril, "of course I am!"

"Don't let me keep you a single moment," said Cyril.

"I wonder where she went?" mused Arthur.

"Well, if I know anything of women," said Cyril, "wherever she went she'll be pretty well fed up by now."

"Fed up?" repeated Arthur, staring.

"With you, you poor nut!" said Cyril. "Get out with you!"

Arthur realized this. "By Jove," said he, "what a fool I am! But I was so darned happy. I'd sort of lost myself."

Then Cyril shot the barbed bolt. "But you'd no business to lose Miss Gwennie," said he humorously.

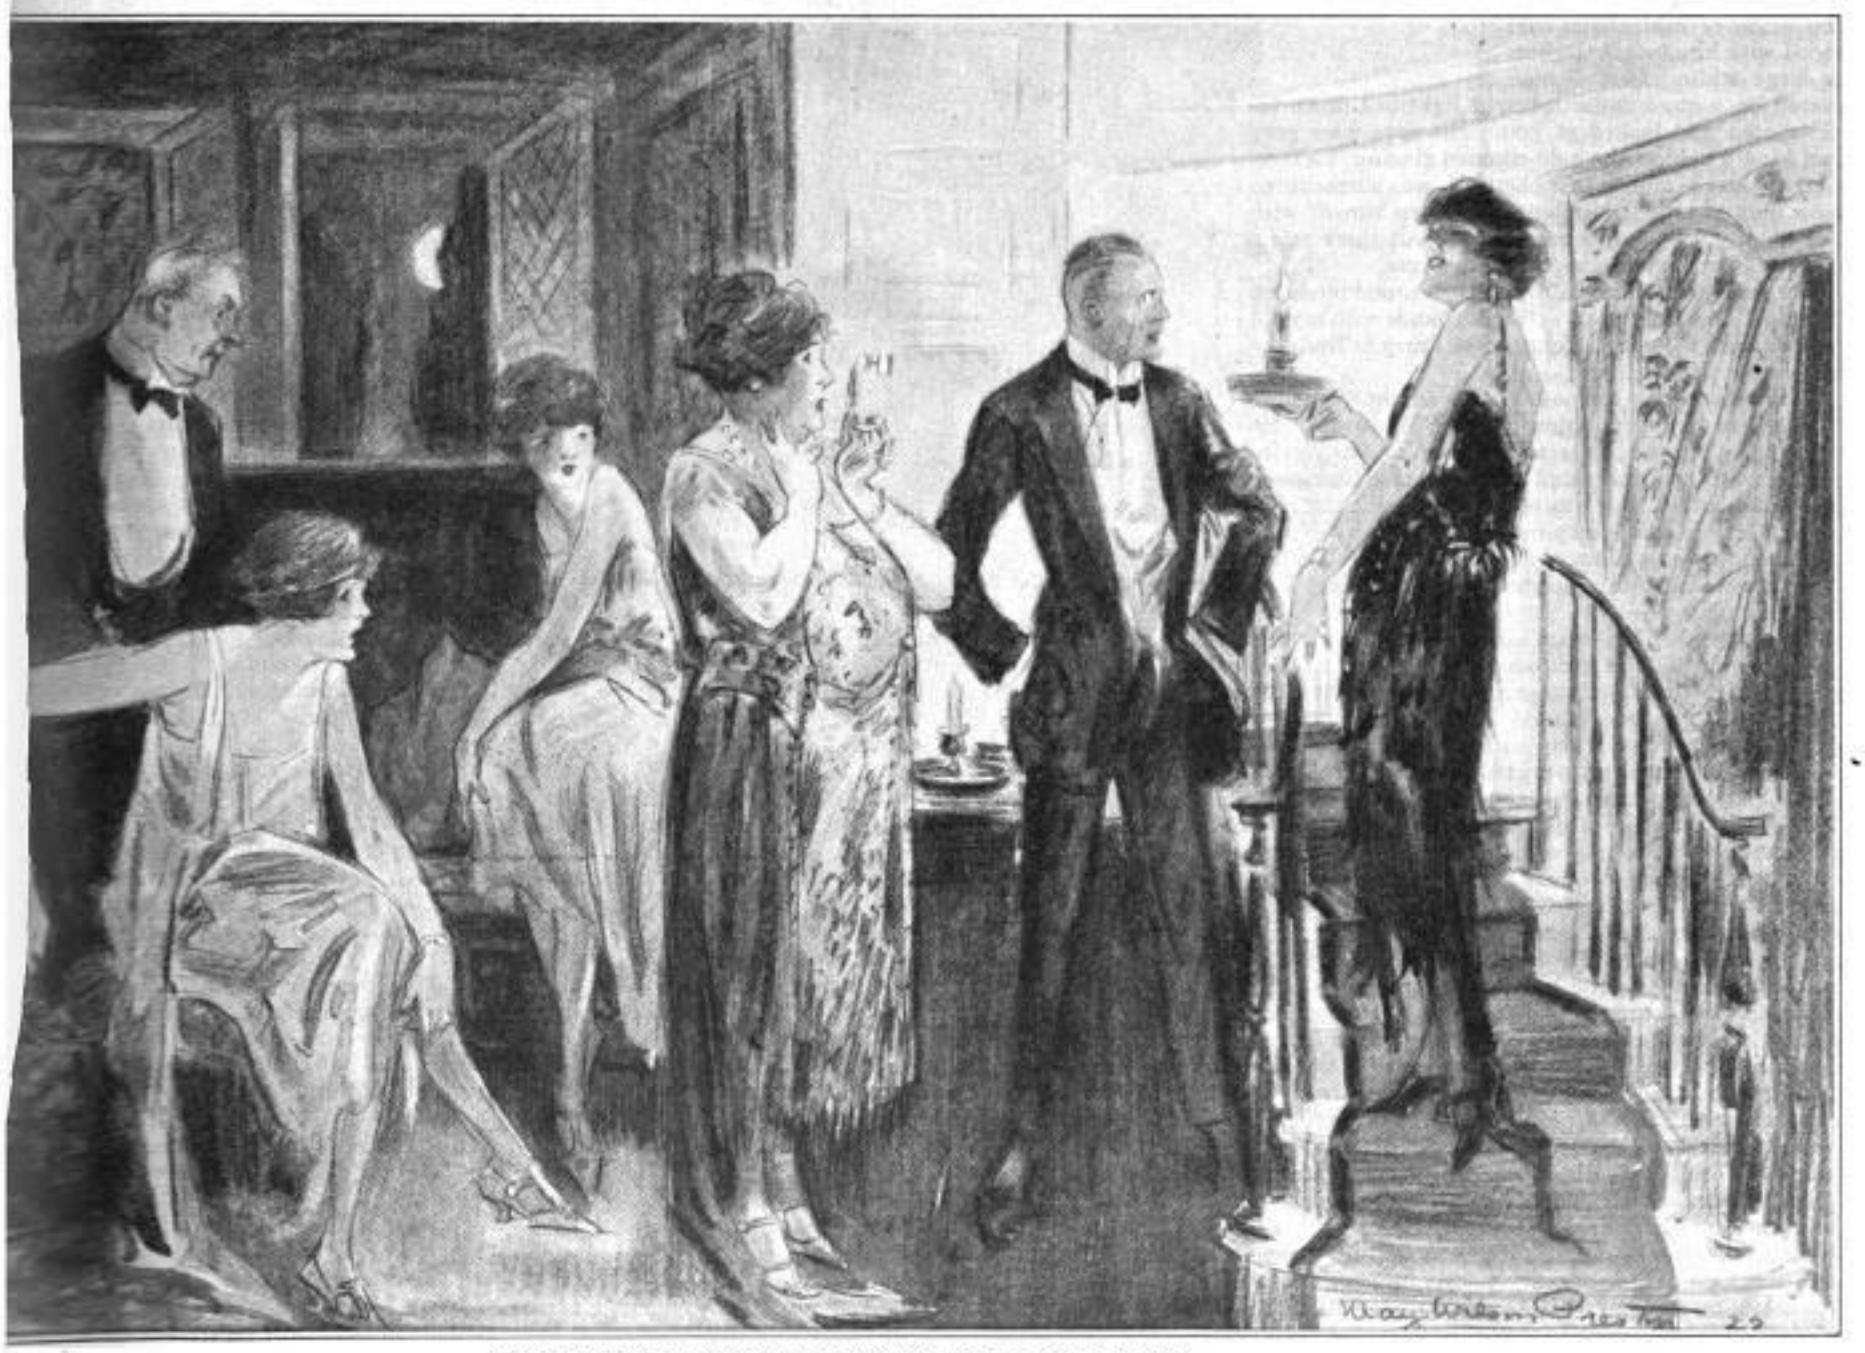
These words of Cyril's arrested Arthur on the very threshold, which he was even then recrossing. He came back promptly into the room.

"Gwennie?" said he. "Gwennie Harmony?"

Cyril protested. "Well, my dear old man, you haven't yet told me who is the lady, you know. I surmised Miss Gwennie, somehow, but"—his eyebrow delicately lifted in inquiry was the most tactful thing in the world—"but Mrs. Drelincourt's most awfully charming. In fact, one of the most charming women I've ever met; and you're lucky. A woman of the world, of tact, and discretion and perfect *savoir faire*, is what a man like you wants."

Arthur interrupted him.

"Eh?" said he, with a scared face. "Mrs. Drelincourt?"



Cyril became a little cold. Hostile suspicion crept for the first time into his naïve face. He coughed.

"Well," said he, "there's only Angela Harmony left; and she's engaged. You are perfectly aware, Netherby, that Angela Harmony is already engaged to someone else."

Arthur put his hand to his head.

"Why, yes," he stuttered. "You don't think I'm trying to play a dirty trick on any man, do you?"

MEET THE WIF

By EARL DERR BIGGERS

ILLUSTRATED BY CHARLES D. MITCHELL

"Larry, I Got That for Staying Married Ten Years. Do You Like It?"

IT MAY be that you were one of those who visited the city of Reuton in the old days before prohibition. Your first act was to sign the register at the Wilsey House, for more than a quarter of a century Reuton's leading hotel. Perhaps as you turned away from the desk a business acquaintance hurried toward you, in his eye a convivial light. He grasped you by the hand.

"Well, well—you old rascal. Glad to see you! What say to a little drink?"

Having signed no pledge you followed where he led. He pushed open a swinging door at the right of the lobby, and you stood in the Wilsey's famous grill. Screened windows and two more swinging doors hid it from the glare of the street. In the dim religious light within stood many small tables, deserted now, but every noon surrounded by leading citizens enjoying the Wilsey's excellent business man's lunch —sixty cents. Along one side of the room ran a mahogany bar. Behind it was a huge mirror, spotlessly clean, reflecting the gorgeous colors of a hundred interesting bottles, and before it, nine inches from the floor, a brass rail, dented a bit by frequent contact with many a homing instep.

Your guide led on through the maze of tables, and you stood with him before the bar. A large white-jacketed man seated on a stool under a bright light put down his newspaper and looked at you. His eyes were gray and kindly behind the gold-rimmed glasses; his face, chubby and beaming as a cherub's, was surmounted by a mop of snow-white hair. He bore himself with the dignity of a judge or a bishop, but there was a contradictory twinkle in those keen eyes.

For your guide this was evidently a proud moment. "Hello, Larry," he cried. "Shake hands with my old friend, John Whoozis. John, meet Larry O'Neil, the best on earth."

"Go on with yer blarney," Larry admonished him. "Sure, I'm happy to know ye, Mr. Whoozis." He offered you a great paw across the bar, and as you intrusted your own frail hand to that tremendous grasp you realized that here was no stranger, but a man you had always known. Inside twenty minutes you felt sure you would be reminding him of the story of your life, how you had always been misunderstood, how, if things had only been different ——

"Well, gentlemen—what's it goin' to be?" asked Larry.

When you left the grillroom and returned to the lobby you heard a few details regarding Larry O'Neil. Thirty years before, he had landed from Kilkenny, green but smiling, and made his way to Reuton. Old Sam Wilsey, who knew a charming personality when he met it, had taken him on at once and installed him back of the bar. This was in the days of the original Wilsey House, a ramshackle wooden fire trap standing on the same site.

Twenty years passed, and Reuton grew to be one of the liveliest manufacturing cities in the Middle West, with more than a hundred thousand people. Larry's popularity grew with the town. He remained enthroned behind his bar and before him the best minds of Reuton—the best male minds of course—lined up. With him they discussed politics, finance, religion, weather and the wars. Not a man among them but was proud to call Larry his friend. The little women at home listened scornfully to tales of this paragon they had never even seen, this fount of all wisdom, this dearly beloved pal.

Just before the death of old Sam Wilsey the tottering Wilsey House was condemned, and it was young Sam who built the handsome modern building that is still the pride of Reuton. On the day of the grand opening young Sam escorted Larry O'Neil ceremoniously into the presence of the gleaming new bar. "Get behind there with that smile of yours," he said, "and let me see how you look. Fine, Larry—fine!"

From that moment Larry's circle widened. Men who never touched the stuff dropped into the grill for lunch, and shortly fell into the habit of pausing at the bar to elicit a word of cheer from its presiding elder. Young and old, rich and struggling, drinkers and men on the wagon, they sought his opinions and advice. He talked to them of love and marriage, the care of the young, the handling of investments, how to get along harmoniously with the wife or the boss. When they were depressed he cheered them, and when they walked the heights he traveled at their side.

And always, it seemed, there hovered about Larry and his bar an air of respectability. No rough stuff—so your informant assured you—was ever pulled there. No man left Larry's presence with more than he could carry.

You listened to all this with the deepest interest. You had met a personage, a leading citizen. The best bartender in the diocese, as O. Henry said of another. You had clasped his hand. A new and uplifting influence had come into your life.

But this adventure, if it happened to you at all, happened some years ago. To-day that mahogany bar reposes in sections in the basement of the Wilsey House. The brass rail slumbers by its side. We have essayed the great experiment.

Bill Terriss, returning to Reuton after an interval of five years, was made acutely conscious of the changing times. His train brought him in about six o'clock one warm July evening, and a few minutes later he was signing the Wilsey House register. As he [illegible] away from the desk [illegible] carried him of their own [illegible] toward the rear right [illegible] the lobby. His mind [illegible] picture of a green-[illegible] ing door. He took a [illegible] then paused. The [illegible] no longer there.

In its place was a [illegible] most entirely of glass [illegible] through this Bill Terriss [illegible] cerned no dim religious [illegible] phere, but a room [illegible] the late afternoon [illegible] Half a hundred [illegible] stood about on the [illegible] floor, on each a [illegible] clasped in a metal [illegible] white-marble [illegible] stretched along one [illegible] room, and back of [illegible] enough—was a [illegible] Bill Terriss was [illegible] the first time the [illegible] Room and Soda [illegible]

He stepped [illegible] door. About the [illegible] ered a group of [illegible] plumaged birds [illegible] unaware that [illegible] over sacred ground [illegible] man with patent [illegible] was busily engaged [illegible] drinks. On the [illegible] saw, were a dozen [illegible] offering suggestions [illegible] patrons. Evidently [illegible] drinkers lacked [illegible] of the old. Bill Terriss [illegible] sadly away.

At nine o'clock [illegible] returning from [illegible] at the movies, [illegible] self approaching [illegible] Tea Room from [illegible] The side of the [illegible] fronted on the [illegible] made over; [illegible] two big display [illegible] liantly illuminated [illegible] high with bottles [illegible] soft drinks and [illegible] pastry or candy. "Sweet," [illegible] he murmured. The evening [illegible] he was thirsty, so he pushed [illegible] and went inside.

The place was at the [illegible] of custom. As he approached [illegible] fountain he was struck by [illegible] in the huge white-coated figure [illegible] paper back of the silver spigots. [illegible] footsteps on the tile floor the [illegible] its newspaper and gazed at him [illegible] rimmed eyeglasses. "Larry O'Neil!" [illegible] "Well, I'm a Chinaman!"

Larry's grin widened. He extended a hand [illegible] spotless counter. "Mr. Terriss, sir! Ye [illegible] eyes, an' that's no lie."

"And you, Larry. Back of a soda fountain [illegible] the mighty fallen!"

"Yes," Larry nodded, "they's been [illegible] Prohibition, some call it. Maybe ye've heard [illegible]

"Well, there's been a rumor of course [illegible] down on a stool. "Larry, I can't quite [illegible] last time we met in this room ——"

"Ye've not been here f'r some time?"

"Five years and more." Larry took [illegible] cloth and with a familiar sweep of his arm [illegible] inary spots from the counter. The gesture [illegible] tomer back. "Don't do that, Larry," [illegible] breaking my heart!"

"Excuse me, Mr. Terriss." Larry stood [illegible] sir—an' what's it goin' to be?"

"Darned if I know." Terriss sat [illegible] ards.

"Will ye try wan of Larry's specials [illegible] banana royal, sweetened up a bit. I [illegible] an' a trace of whipped cream, an' a [illegible] apple ——"

"Good Lord, no!" Terriss cried. "[illegible] late malted milk, Larry—not very sweet

Digitized by Google

t you," smiled Larry. "Well, th' old order changes, ellow said." He took up a gleaming glass and a little chocolate sirup into it. "An' where have all these years, Mr. Terriss?"

Mr. Terriss, sir, it's th' facts I'm givin' ye—I'm th' friend of every woman in town!"

Terriss threw back his head and laughed loudly. "So that's what you've come to, Larry?"

"It is, indeed. Is there anny little household hint I cud give ye now? D'ye know that oxalic acid will remove an ink spot from a stenographer's blouse? D'ye want th' name of th' Reuton doctor that has th' kindest bedside manner with children?

"Have ye heard that thim French dresses th' Bon Ton store put over last spring was fakes? Th' servant problem is not so bad as it was, they tell me. F'r fresh vegetables ye can't beat th' Reliance Market. That young fellow that come on to teach Latin at th' high school has th' loveliest brown eyes. Bobbed hair's goin' out—'tis too common ——"

"Oh, Larry, Larry!" cried Bill Terriss, setting down his empty glass.

"'Tis true, I don't see so much of th' men anny more," admitted Larry. "An' I miss thim. But I have th' ladies an'—I dinnaw. Things ain't so bad. Sure, I'm younger to-day thin I ever was."

The street door opened, admitting two customers, and Larry moved forward to greet them. Bill Terriss retired to the far end of the counter. He noted that the man who had come in was not much over thirty, good-looking and well-dressed, with a rather nervous and aggressive manner. The woman was young and handsome and intelligent seeming, with a particularly appealing face under a smart little turban.

"Good evening to ye, Mrs. Frear," Larry was saying. "An' have ye brought C. H. in f'r a drink?"

"Against his will," said the woman with a somewhat worried look at her husband. "I'll have one of your specials, Larry."

"Fine! An' you, C. H. ——"

"Nothing for me," growled the man. Larry O'Neil's smile was contagious, but this patron was evidently immune.

Larry busied himself with the special and placed it before the woman. The man gave it one glance. It was, indeed, rather an appalling sight.

"Good Lord, Anne!" he said.

"You're not going to eat that?"

"Of course. Why not?"

"It makes me ill just to look at it. Larry, I'll have a glass of water, please." Larry placed it before him. The man's eyes traveled about the room. "Great Scott, what a change!" he said. "We used to have some good times here, eh, Larry? Before this prohibition farce was put over on us. By Gad, I never thought they'd do it."

"So you always said, C. H.," Larry reminded him.

"But they did. After a fashion. Not that there isn't more of the stuff in circulation to-day than there ever was. Prohibition!" He set down his glass and appeared about to deliver an oration. "No little group can dictate to me what I shall or shall not do. I ask you, Larry, is this a free country or ——"

"There's a good film over at the Strand," cut in his wife hastily. "You really ought to see it, Larry. Such a cunning baby in it!"

"Ah, yes, Mrs. Frear. An' how are th' two little darlin's up at yer house, ma'am?"

"They're fine, thanks. Betty has a new bonnet—the cutest thing. I'm going to bring her in some of these days and show you—she was talking about you only to-night, Larry. You and ice cream are all tangled up in her little mind—and she loves you both."

"Is that so? Sure, I'm flattered."

The woman took a ring from her finger and handed it over the counter—a guard ring of emeralds and diamonds, costly and beautiful. "See, Larry. I got that for staying married ten years. Do you like it?"

"It's a beauty, an' no mistake." He handed it back and indicated another ring on one of the fingers of her left hand, a diamond solitaire, a bit old fashioned. "Sure, it seems only yesterday C. H. bought that wan f'r ye," he smiled. "He stopped in here an' showed it to me in its little velvet case.

"In thim days I see all th' engagement rings in town before th' girls they was meant for. 'Will she like it?' says Charlie—I mean C. H.—to me. He was worried, ma'am, he was that. 'Go on with ye,' I says; 'from you she'd take brass, an' be happy.' Was I right?"

"It seems so long ago," the woman said softly. "Do you remember, Charlie?"

"I remember it near broke me," replied the man, standing. "Have you finished that awful thing? How much?" He threw a few coins on the counter. "Good night."

"Good night, Larry," said the woman, and flashed him a tired little smile over her shoulder as she followed her husband to the door.

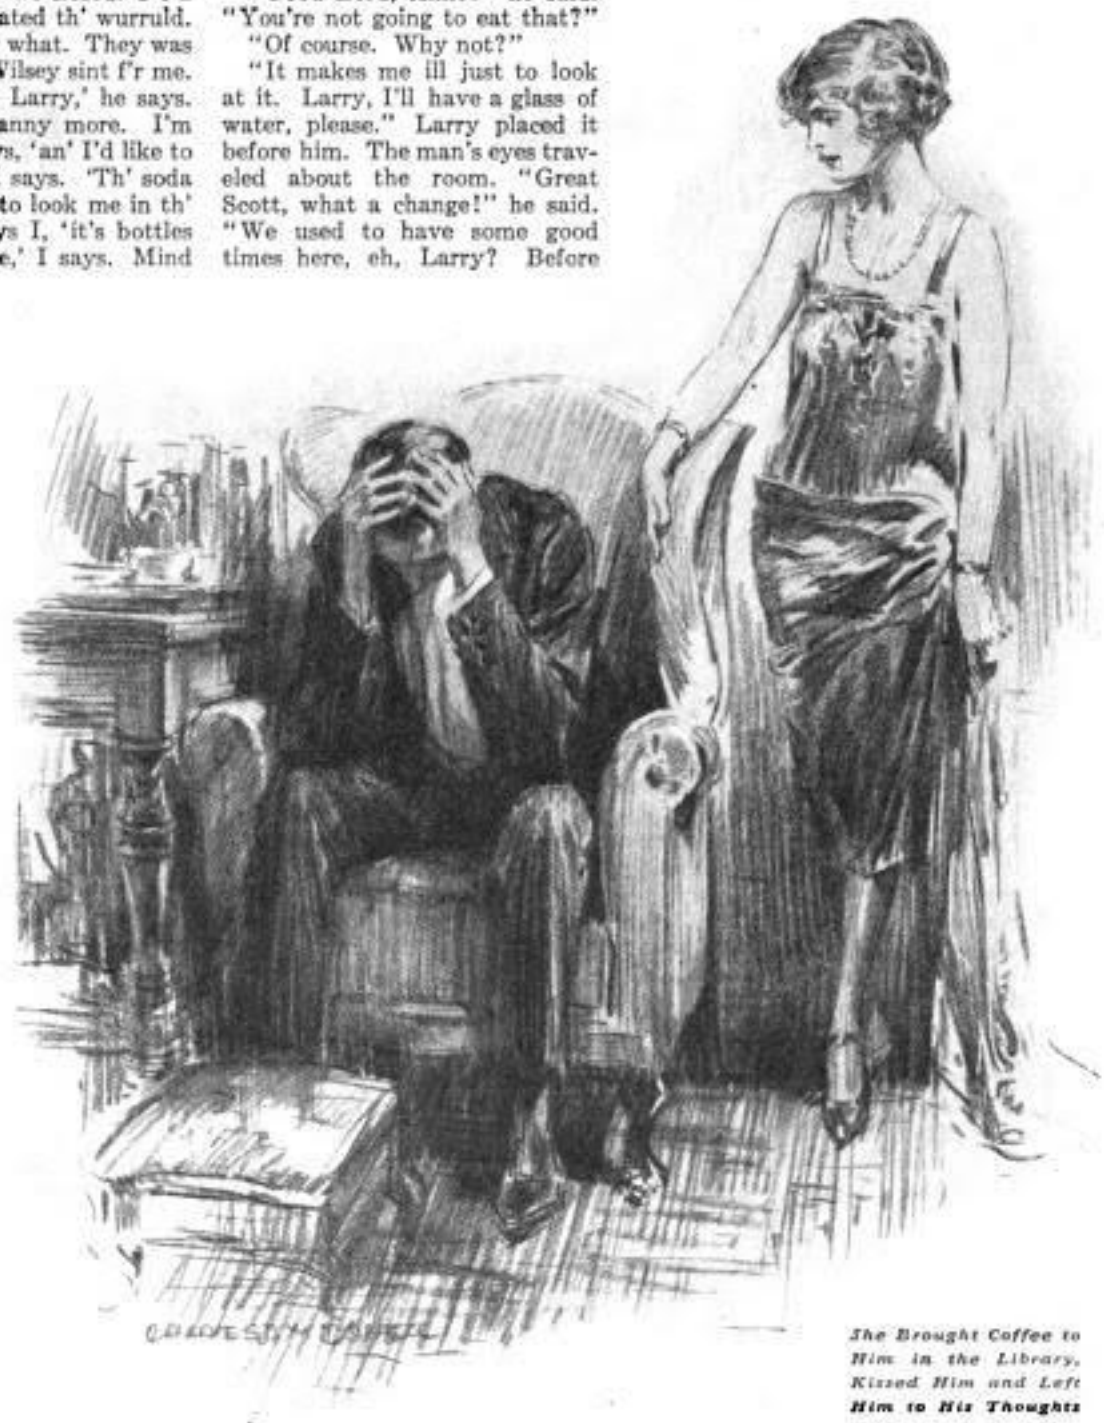
Bill Terriss came forward from his semiretirement. "Say, I used to know that fellow. That was Charlie Frear, wasn't it?"

Larry plunged two soiled glasses into a steaming bath, and smiled rather sourly. "Well," he said, "that was C. H.—yes. That was the chief."

"The chief? Chief of what?"

"That's what he likes to have thim call him. Let me see—five years ago—Charlie must have been manager out at th' Burkhardt plant whin ye was here last."

"Yes, he was."



"Thin ye don't know. Old Jim Burkhardt passed out an' th' company incorporated. They was lookin' round f'r a president an' their eye lit on Charlie Frear. A fine, modest boy in thim days, an' a hustler. I was fond of Charlie—like me own son. Well, they made him president. He wasn't quite thirty. Th' youngest corporation president in th' state, I heard some say."

"What happened to him?"

Larry smiled sadly. "Delusions of grandeur, as the fellow said. We was talkin' a minute ago about thim that was big business men as long as th' business was big. That was Charlie. Th' boy wonder—while th' boom lasted. Orders come in faster thin they could be filled, an' Charlie give himself all th' credit. He persuaded th' company to insure his life f'r a hundred thousand dollars, f'r fear he'd be removed untimely an' th' business would smash. He took a suite be th' year in a big New York hotel, an' another wan in Chicago, so rooms would always be ready f'r th' president. Every few minutes he dashed off on a long trip to talk things up—an' he always took his golf sticks along."

"And the directors fell for all that?" smiled Terriss.

"Directors will fall f'r annything so long as th' dividends keep comin'—ye know that, Mr. Terriss. Here in town Charlie set up f'r th' society kid. He put through th' new golf club. Whin prohibition come along he took

She Brought Coffee to Him in the Library, Kissed Him and Left Him to His Thoughts

Digitized by Google

it as a personal insult. His vanity was touched. No wan cud tell th' chief what he should do. They's manny like that. He never used to be much of a drinker—mind th' time a small beer was his limit. But now he set out to drink in earnest. They say he has a cupboard in his office that puts me old bar to shame. Out to th' club his locker is th' headquarters f'r all th' rum hounds. His cellar's overflowin' with th' stuff."

"I wonder if he remembers me," mused Terriss.

Larry laughed. "Well, as ye know yerself, th' slump come. Thim that had sense took off their coats an' wint to work. Not C. H. He ordered a new imported car, an' his trips was more frequent. So was his drinks. Talk of retrenchment come up, an' Charlie cut everybody's salary—but his own. To-day, as a business man he's th' joke of th' town. An' everybody knows it but him."

"He's still got his job," Terriss suggested.

"He has—yes. But old Henry Frost, of th' Reuton Trust, has lent Burkhardt's a barrel of money, an' Henry ain't careless with cash. I look f'r a change, an' I'm sorry. Not so sorry f'r Charlie, fond as I was of him once. But th' little woman—th' wife—there's a thoroughbred, Mr. Terriss, sir; an' the blow will fall hard on her. Charlie Frear is a fool. They's times I cud wring his neck."

"Too bad," commented Terriss. "I always liked Charlie in the old days."

"Ah, yes," Larry sighed. "Well, he's like manny another. He was a good fellow—whin he didn't have it." The front door opened, admitting a gay crowd. "Th' trade from th' movies," Larry explained. "Drop in often while ye're here, Mr. Terriss."

And as Terriss passed through the door leading to the lobby he heard Larry's booming inquiry: "Well, young ladies, an' what will it be to-night?"

II

CHARLIE FREAR was driving his high-powered car up Central Avenue, the main residential street of Reuton. He had not spoken since his good night to Larry at the soda fountain. At his side Anne sat, nervously twisting a ring on one of the fingers of her left hand. It was not the new guard ring, but the old-fashioned solitaire that, ten years ago, had won Larry O'Neil's admiration from its bed in the velvet case.

Ten years ago! She glanced at her husband across the gulf that had come unaccountably between them. His hat was pulled low over his eyes, his profile was sullen. She thought of the Charlie Frear who first put that ring on her finger, of his clear eyes, his gentle ways, his laugh that had altered so sadly these last few years. She sighed, and the lights of the avenue began to blur as they flashed by.

Charlie turned into the drive of a big handsome house on the edge of town and halted the car at a side entrance. She waited a moment, but he made no move to help her; so she unfastened the car door herself and stepped out.

One of the maids admitted her to the house. She hurried upstairs, her first thought for her children. She found them sleeping peacefully on top of the covers, in protest against the July night. She drew a sheet over each, while the nurse whose duty this should have been calmly went on with her novel in an adjoining room. For a few minutes longer Anne hovered over the two cribs, then she went to the big room at the front of the house. She threw off her hat, sat down and stared into the mirror. Had she altered so greatly in ten years, she wondered. Was Charlie as uninterested in her as he seemed?

She heard him now downstairs, busy in the dining room, then in the pantry. Presently he came to the foot of the stairs and called loudly, "Anne! Have a little drink?"

She hurried into the hall. "Hush, Charlie—hush! You'll wake the children. Nothing for me, thanks."

He mumbled something and returned to his precious sideboard. A few minutes later he passed through the bedroom to his dressing room. Anne saw that he carried a well-filled bottle in his hand.

Sadly she busied herself with her preparations for bed. Her heart was heavy; she was hungry for a word of sentiment, of affection, for a glimpse of the old Charlie she had married ten years before. In the dressing room Charlie was banging about, making a great fuss. She slipped on a negligee and crossed the threshold that divided the two rooms.

"Charlie, dear ——" she began, and stopped. He had his big battered leather bag open on a chair, and was surrounded by piles of clothing. At the moment he was wrapping the big bottle tenderly in underwear. "Another trip?" asked Anne.

"It looks like it, doesn't it?" he growled. He placed his beloved bundle carefully in the bag. "I forgot to tell you—I'm running up to Chicago in the morning."

"Shall you be gone long?"

"How should I know? I'll send you a wire."

"You're away most of the time," she ventured.

"Well, you're married to a successful man. That's the penalty you pay. Rather have a clerk chained to a stool?"

"No, of course not," she answered—but she wondered. She picked up a coat and began to fold it for him. "If I'd known you were going I'd have had your bag packed."

"Here, give me that. I didn't know it myself until this afternoon."

She dropped back and made no further effort to help. How long had it been, she asked herself, since she had had a gentle, kindly word from him? Had Larry's talk about the ring roused no memories in Charlie?

"Is it true, dear?" she began. "What you said—that my engagement ring nearly broke you?"

"You're Away Most of the Time," She Ventured. "Well, You're Married to a Successful Man. That's the Penalty You Pay"

He laughed. "It seemed like a lot of money Now of course it wouldn't be chicken feed."

"But you didn't mind, did you?" Her tone was

"I guess not. Here—let me look at it." He to hand. "It's a cheap-looking thing, isn't it? I afford to have my wife wear that sort of trash. Why you put it away, Anne?"

"I've put away—so many things," she answered and left him.

When she was in her bed he appeared in the "Say, Anne—are my golf clubs downstairs?"

"No—I don't believe they are."

"They're out at the club. I'll have to drive before I go to the office in the morning."

He went back and completed the preparations business trip. After a time he turned out the sought his bed. In a few minutes he was snoring For more than an hour Anne lay awake, thinking things. Among them, Larry O'Neil.

Three days later Larry had occasion to think was two o'clock, the noon rush at his counter and only two patrons lingered there. One long, lean, cold proposition with prominent citizens all over him, was Henry Frost, president Reuton Trust Company. Mr. Frost ing with his usual frugal repast, a lettuce wich and a glass of milk. "ILD have been so simple, so easy for her to leave Alicia, or to Jean." Mrs. Perrimain's thought like the inevitable white tulle in the neck of the—delicate, frail and distinct.

Billy had talked of nothing all during dinner but the Third Cousin Lucretia Perrimain had by her will to be sold, the proceeds to be applied to her charities. "I rather imagine," went on Mrs. Perrimain, "that she was not quite herself during those last months. She was so enthusiastic about things to be done for Jean. It was out of proportion somehow."

Billy Dancy, Jean's husband, kept very still and ate his dinner. These family dinners were to him part of the price he paid for marrying his adored wife.

"I wish she had left them to me!" he said, regretfully: "I wish she had left them to me! Jean, she'll—she!"

"You can have some in a year or so, honey," said Billy Dancy's raw voice. Alicia, his sister-in-law, glanced at him with the expression he loathed.

Alicia was thirty, dark, thin, high strung, rapidly turning acid. She looked at Billy, plainly, "Oh, you poor, crude Dancy person! Any man would marry and adore sacred, sacrosanct Jean. But he doesn't belong. He doesn't belong, poor worm!"

Alicia only said, "Pearls become you, dear. You really should have some. These of Lucretia's are marvelous."

"They are!" corroborated Jean, almost animated. "Billy Dancy decided. I know his mother-in-law if she ever did let him get at it, Lord, he should think was such a bundle of rags and looked at her fondly.

"What Right Have You to Keep Me in the Dark About Things—or Try To?"

"Well, I don't know who in the family can afford to buy them," offered Mrs. Perrimain thoughtfully. "Of course there's Uncle Rupert. But he wouldn't."

"He's got no one to buy them for," said Jean. "Besides," she laughed, "he hasn't any money when he's paid his income tax."

"There's no one else. Martin Halstead isn't interested in anything but unique single gems for his collection. It isn't as if the pearls were a cheap little ornament—they'll cost frightfully."

"It's a pity," said Alicia softly, "that Billy can't buy them for you, Jean. You ought to have at least one piece of jewelry with real distinction."

Billy had given Jean a diamond-and-sapphire wrist watch, a diamond bracelet, a sapphire bracelet, a diamond-and-sapphire engagement ring, a diamond half hoop, a pearl-and-diamond tassel, besides various trinkets of jade and coral and amber and lapis. To hear these items negligently dismissed as lacking distinction was not pleasant. But now he perceived Alicia's purpose. It was she who had brought up the subject of Lucretia's pearls in the first place, and she had artfully worked it around so that she could stick a little snickersnee of spite into Billy. It made him hot and mad and helpless.

"Oh, Alicia!" cried Jean. "After all the wonderful things Billy's given me!"

"They're charming of course," conceded Alicia, her tone driving in her dart and envenoming it. "Quite charming, but a little too much like everyone's else; just a little banal, perhaps. But a string of pearls like this"—she seemed to muse—"oh, one would need nothing else, ever!"

Billy Dancy's temperature increased.

"How much do they want for these pearls?" he asked defiantly.

The thin smile came back to Alicia's lips. "I really haven't an idea," she told him, as if the very thought of price and cost and such sordid things were distasteful to her. "I felt sure that none of us would be interested, and so I made no inquiry."

Her precise and even intonation, like her mother's, save that it carried with it a subtle edge of mockery, always roused his wrath. Of all the Perrimains, Alicia had fought the hardest and given in with least grace when this outer barbarian from north of Market Street had stormed the fastnesses of Rittenhouse Square and demanded the hand and heart of Jean Perrimain. She never lost a chance to belittle and to hurt him. Why couldn't she mind her own business? Why did she have to insinuate, first that he couldn't afford to buy Jean this rotten old string of pearls, and second that Jean didn't have any jewelry fit to wear? Billy longed to tell Alicia that Jean hadn't got any jewelry from the Perrimains—a measly cameo or two and some other old stuff that looked as though it had come out of a junk shop. He wanted to thump on the table and make the ancestral silver dance with his rage.

"Yes, Alicia," he wanted to fling at her, "I know why Jean hadn't anything. You spend too much trying to keep up this run-down old house here in Rittenhouse Square. And then your father eats up another big slice of your diminishing income. He's a walking stomach, that's what he is. As for your mother, she's a shadow, a poor apologetic ghost who lives on such words as 'tradition,' 'aristocracy,' 'good blood,' and spends her time catering to your father and being awfully genteel. As for you, Alicia, you're a sour old maid. You were a sharp-tongued, spiteful girl, and you scared away the few men who might have liked you, and now you've got no beaux and no prospects of marrying, and your whole life's dry rot. You hate to see Jean and me happy, and so you try to spoil it. You're a smart subterranean trouble maker. Lord, what wouldn't I give to get you married off to some strong husky brute who'd beat you up now and then! I know your people made earnest efforts when you were younger. That's another reason why you're all so poor now—they invested a good bit of capital in hunting

Digitized by Google

a chance at marriage for you—which was entirely useless. By golly, I wish you'd leave me alone! I hate to feel this way toward a woman, and toward Jean's sister in particular. There hasn't been one minute of the time since you first saw me that you haven't made it apparent to me that I'm a rough, low person, a disgraceful shadow on the Perrimain escutcheon, that Jean is everlastingly to be pitied, that everything I do is wrong, that I've no taste nor manners nor anything but a little incomprehensible success in making money. That's you, Alicia."

He had thought so vehemently, so coherently that, as he rounded out his invective, he was surprised that they didn't all hear him. But no. Even Alicia was still intent on the pearls.

"If you're really interested I could arrange for you to see them," she was saying. "Of course I don't imagine they'd like to be bothered to show them just to gratify our curiosity."

There she was again, insinuating that he couldn't buy them, and that he'd have the crust to go and bother folks to show things when he had no idea of really getting them. He thought with satisfaction of the books of the factory and the tidy little surplus they showed, a surplus that he didn't actually need for anything in the world. To be sure, old Beazley, his manager, had urged him to be in readiness if a slump in the silk market came along, but that was a fixed idea of Beazley's, and the silk market showed no more signs of a slump than Alicia showed signs of amiability. No, that surplus was velvet, and if he wanted to buy pearls or peanuts or anything else absolutely valueless to the business he had a right to. And wouldn't he like to show Alicia—just once! And then Jean ——

"Oh, Billy," she cried, "do let's go and look at them! I'm crazy to see them. I wouldn't let you buy them for me, dear, unless they were an enormous bargain, really—but do let's go look at them. I don't care if it does make the people peevish to show them; they'll have to be peevish! How can they expect to sell them unless they show them, I'd like to know?"

"Of course they must show them," conceded Alicia. "I only meant—it seems—you know—such a—well—rather common thing to do—like those dreadful people in the cheap department stores who are always 'just looking,' and spend the day pawing over merchandise and trying on things."

"I didn't know you ever shopped in cheap department stores, Alicia," said Billy dryly. He could not help it.

"My dear Billy, you must remember that we're not awfully wealthy—with factories and things to keep us going." This as they drifted into the library.

Oh, it sounded so harmless, so gentle, Alicia's protest, but it had an undercurrent of clear intimation that factories were terribly vulgar commercial affairs, and that making money was a filthy occupation.

Billy Dancy winced, looked surreptitiously at his watch and began to wonder whether they couldn't get the 9:40. He and Jean lived in a charming little house of gray stone with blue shutters, out on the Main Line, as far removed from Rittenhouse Square as Billy could find and still commute comfortably to business. When they were married the elder Perrimains had suggested that they take the upper floor of the ancestral mansion, but Billy had refused, in a panic at the prospect of such an uncomfortable existence.

Out on the Main Line he could be human and comfortable with chintz and oak and wicker, big fireplaces, a sun room, a garden, an appealing West Highland terrier to stick an affectionate nose under his hand—all new and bright and cheerful, and no ancestral reek on anything. Ancestors—he hated the word!

"Well, when can we see the pearls?" he asked wearily.

"Why not to-morrow?" said Alicia. "I'll telephone to the man who has them—Mr. Godfrey; he's quite the best for disposing of jewels privately, from estates and things like that, Mr. McLean said—and we could meet at his office about teatime, don't you think?"

"That'll be lovely!" cried Jean. "I was coming in town to-morrow anyway. And we'll go out together then, Billy, after we've seen the pearls."

Billy wanted to snatch her up and cuddle her, she looked so dear and adorable, a sprite of a thing in her blue frock, tucked down into the deeps of a big leather—ancestral—chair. But he observed that Alicia fully intended to be one of the party of inspection.

"If you'll give me this fellow Godfrey's address," he suggested, "I'll telephone and save you the bother."

"It's no bother," said Alicia. "If he can't see us I'll telephone you in the morning." She saw Billy's feeble ruse and checkmated him easily. Then, turning to Mr. Perrimain, who was indulging in his usual post-prandial quarter of an hour of satisfied silent repletion, she added brightly, "It will be wonderful, won't it, father, for Jean to have Cousin Lucretia's pearls?" She spoke, Billy reflected, as though the pearls were round Jean's neck and he was signing the check.

"Oh, look here," said Jean, "don't think it's settled. I'm quite sure we oughtn't to afford anything so luxurious as pearls, yet."

Billy regarded her with doting indulgence.

"Honey, if I can possibly buy them for you, any old how, I'm going to. You know it."

After all, there was that surplus. What is the use of having money unless you spend it for something you want? He wanted Jean to have everything she wanted. Jean wanted pearls. And there you are.

With Jean Opposite Him in a Golden Slip of a Dress—the Bomb Was Thrown. "Did You Leave My Pearls at Baltwell's To-Day?" Asked Jean

Alicia looked disappointed. She hadn't got him in a corner this time. Not quite. It made him feel triumphant and virile. It nerved him to look openly at his watch.

"Don't you think we might make the 9:40, dear?" he asked.

Mrs. Perrimain had been as silent as her husband ever since dinner, because he preferred that she should be. It helped his digestion if she didn't say anything. The younger generation's chatter he could disregard, but when his wife spoke, as a gentleman he must attend and answer. He was always too full, to put it bluntly, to do this for a short space after meals. So Mrs. Perrimain kept his silence with him. But now she spoke, with real feeling but incomplete understanding.

"I'm so glad it's been settled this way," she said. "I so disliked to see Cousin Lucretia's pearls go out of the family, and yet I'd hardly hoped —— I shall go over to Uncle Rupert's to-morrow and tell him. And the Spruce Street Perrimains. And Lucy Carmichael. And I'll write to Cousin Martin Halstead."

"Do wait until Billy actually buys them, mother dear," said Alicia. It was her final stab at him.

"Don't worry about that," he said rashly, determinedly. "I guess the old bank roll can stand the jolt."

"What an odd idiom!" murmured Alicia. "Where do you get such quaint expressions?"

"I pick them up among the shoppers in cheap department stores," replied Billy agreeably.

This retort buoyed him up through the leave-takings, and the inevitable acceptance of the inevitable invitation to dine with the family on the coming Thursday week. On two Thursdays a month the Perrimains dedicated themselves to these intimate hospitalities, and to Billy they were the utterly black days of his happy existence.

To-night as they came out he squeezed Jean's a[rm] said no word of the mighty cheers he would have [l]et utter at getting away so early. And once in the cab [h]er an unrestrained hug.

"I wish you could see how pretty you look [t]o[n]ight," he said. "I don't know how you do it. You get [l]ovelier and prettier all the time. About time you stopped [g]rowing, settled down into being a plain old married woman [a]nd—we've been married over a year and—look at [t]he time—not fair."

"Oh, Billy—you're such a darling!" said Jean, [s]tarting to kiss him. "You're the nicest man in the [w]orld."

"I fully agree with you, and that makes it [u]nanimous. But, Mrs. Dancy, you forget that there is another [t]hing before the house—viz., to wit, namely—that [y]ou're getting prettier before I get pinched or go crazy [o]r something. How about it?"

"If I am getting prettier," said Jean solemnly, "since there is no corroborative evidence of this [s]tatement yours, it must be because I am so happy. And [y]ou're so good to me. But, Billy—listen. About [t]he pearls. According to all accounts they're awfully [e]xpensive and—and—well—I would like a string of [p]earls as any woman would. But I'd be perfectly satisfied with [s]omething that cost a fourth or a fifth of what Cousin Lucretia's [c]ost."

"For Pete's sake, how much are Cousin [L]ucretia's crown jewels supposed to be worth, honey? [Y]ou're giving me scared in a minute."

"Oh—at least sixty or seventy thousand."

Billy Dancy's hair stood on end. "Dollars?" [h]e said, making a pretense of a joke.

"Yes, of course, funny. And that's why I [s]ay it's silly for us to think of them. If you were going [t]o get pearls—why, a little string—about eight or ten [t]housand would be quite good enough. And then you [c]ould add it from time to time, taking out the [s]mall ones and putting in bigger ones, you [k]now, at Christmas and birthdays and anniversaries."

"That's the way they do it, is it?"

He was talking against time. [T]hink of it—seventy thousand dollars had taken his breath; a devastating depression [s]et in. No wonder Alicia had been sniffy [a]bout him—she had let him in for this! She [h]ad seen him tumble from a dizzy height [o]n purpose. Drawn him on—[h]ad trapped him tight. He could see her [n]ow gloating over him. And she'd [n]ever get over of it to taunt him with in her [s]ubtle way for months and months and [m]onths.

"Yes—that's the way most [w]omen do about pearls. Billy, did you tell Gratton to [h]ave the car meet this train?"

"I told him to meet every [t]rain from 9:18, until we came."

"Why, we never get out as [e]arly as that."

"No, but I'm always hoping [t]o."

The very station looked good to him. [T]he respectful Gratton appeared, correct in [h]is manner as only a perfectly correct chauffeur can [b]e, and rose boyishly, as they always did at the [s]ight of solid prosperity, his coming up in the world [a]t what was only thirty-one. And he had a solid, [s]ubstantial a smart house on the Main Line, [t]hree cars, Gratton the magnificent, a car which [e]nhanced Gratton's perfection; and added to all this he had [t]he sweetest, the dearest wife in the world. [H]e'd done it all himself, with his own brains and [s]ome hard work. Pretty nice—all this! He'd [s]cored mockery and Cousin Lucretia's pearls [t]o their proper insignificance against such well-[b]eing.

The next morning, however, they returned [t]o him that they must be dealt with. Jean, [a]n angel in silky blue and lace with rosebuds [i]n it.

"Don't you think I'd better telephone [t]hat I won't bother to see those pearls, Billy? I [d]on't care so much about seeing them."

It brought it all back. How Alicia would [l]ove that ate the canary. By the jumping Jupiter, a [y]ellow-feathered bird to be devoured!

"Now see here, babe, there's no harm [i]n it, even if we don't buy. Let it ride. I'll [m]eet you as Alicia says and we'll go to tea afterward. [R]ight?"

Jean looked at him with an appraising [g]lance. She knew perfectly well that though [h]e knew he hadn't the least idea of what stuff she was [m]ade.

"Billy," she said at last, "you won't [u]nderstand. I don't want things we can't afford—I [m]ean 'afford' in the fullest sense of the word."

He did not have time to do more than [s]mile. "A little thing, I know you don't. There's [n]o time, dear. Listen! You get into town a little [e]arly, run down to the factory in a taxi for me, and [t]hen wherever Alicia says. That'll give me a [c]hance with you. 'By."

He kissed her and was gone. Jean stood [i]n the hall where he had left her. She knew [w]ell

fair price to some unknown Gertners, of
l man's never-quite-forgotten kin of his

ized his big chance. He had taken on the
rtgage, and heaped further debts on him-
inery and more of it, another story on the factory, better and more modern arrangements throughout. He had doubled the number of machines and more than doubled the employes. His pay roll was over a thousand a day. He employed salesmen, stopped selling to jobbers, and sought the big retailers. He had paid the bill for his improvements, and begun to amortize his mortgage.

He was not oppressed by his debts. Business was good—he was making nothing but silk hose now, of course—he could meet the interest on his mortgage and his notes in bank easily. And there was that lovely little surplus. He experienced the pleasure we all feel when we have a good little hunk of money that won't be needed the first of next month. This wasn't so much, perhaps, viewed against the bulk of what he owed, but it was forty thousand good round iron men, and as such was not without glamour. If that poor old dodo of a Perrimain had that much ready money, reflected Billy cynically, he'd probably eat himself to death within a fortnight.

He went into the factory at his usual quickstep. It was early, a quarter of nine. He used to get there at quarter of eight, but Jean had changed that. At any rate he was in plenty of time to catch Miss Koons, his stenographer, hustling off the cover of her machine.

He ran through the mail and then made his regular trip through the factory. That had been old man Gertner's practice, and Billy found it a good one; and just as Gertner had known all his employes by name, so also did Billy. He liked the people on his pay roll. It pleased him to feel that he had done far more for their comfort than the law required, and that they held no secret grudges against him for small, petty dealing or for gouging. He was fair with them, and conscientious, and he was rewarded by the work they turned out. There was precious little wastage in the Gertner-Dancy concern.

At the semi-inclosed space where Beazley had his desk Billy paused.

"Any signs of that slump in silk yet?" he asked.

Beazley was a thick, astute old man, active and powerful despite his sixty-five years. He grinned at the question.

"There's nothing that you might call anything to hang a real opinion on, I'll admit," he said. "But yet—I kind of feel she's coming, and coming before so very long."

It was his usual answer, and usually Billy dismissed it with a joke. But to-day he lingered and answered seriously:

"You've been saying that a good while, Beazley."

"I suppose I have," the old man admitted, and looked a little confused. "Maybe I'm wrong. I—I've got nothing but my suspicions. You can't get a word out of anybody who's in a position to know, though I've nosed around quite considerable. But—it's in the air somehow."

Returning to his office Billy sat down at his desk and thought the thing out. Heretofore old Beazley had spoken with assurance. Possibly there had been something, some vague hint, some underlying uneasiness that had justified that conviction. If such a slump should come the manufacturer who had a bunch of ready money to buy largely of thread cones would be well heeled for the coming season, would turn a profit sufficiently handsome to tempt the most cautious. But the silk people might have secretly strengthened themselves, got hold of money to tide them over and keep them going. And now Beazley was uncertain—and there wasn't anybody in the business smarter than Beazley. That was strong evidence that there would be no slump. We believe what we want to believe, and so Billy interpreted what Beazley had said. Ergo, following this through, that nice little hunk of surplus was waiting to be spent on something. He was no miser, to let money accumulate unused. Better translate it into some of the many things which his growing imagination told him were desirable. And, if in addition to this, he could put something over on Alicia and the whole Perrimain connection—zip—the money was as good as gone!

He had just reached this point when Alicia's cool clipped voice tinkled toward him from the telephone. Mr. Godfrey was at 1162 Walnut, ninth floor. Very well, he and Jean would be there at quarter of five. Oh, but Alicia had asked Jean particularly to drop in and see her mother before they started. Mother wasn't feeling very well to-day. So Alicia and Jean would meet Billy at Mr. Godfrey's office. Yes, at quarter of five. Very well. Good-by.

Billy gritted his teeth in a gust of youthful anger as he hung up the receiver. Just exactly like Alicia to butt in and break up his plans, his and Jean's! Nobody but a brute—as Alicia well knew—would have insisted that Jean shouldn't go and see her sick mother. He'd be willing to bet a million against a plugged nickel that Mrs. Perrimain wasn't sick at all; just one of Alicia's hateful little schemes to thwart and annoy him.

But presently Jean herself telephoned. "I'm sorry not to come for you, dear," she said, "but Alicia thinks mother's rather miserable, and I don't believe I'll have time to go from there all the way down for you. But I am sorry. You know, Billy"—the words became hesitant—"you know, I like to be with you as much as you like to be with me."

His good little fellow! She restored his morale.

He could work quite happily now. When the afternoon began to wane he became a clock watcher without shame. At half past four he signed his last letter, swept a handful of memoranda into Miss Koons' basket and disappeared.

But it was disconcerting to find that the pearl-inspection party had been increased by Mr. and Mrs. Perrimain.

"Father thought he'd like to look at the pearls," explained Jean. "And mother felt so much better that she wanted to come too."

Alicia had arranged it, Billy felt sure. She wanted the whole family there to see him made a fool of. Sixty or seventy thousand! He wondered fleetingly if Godfrey would take the forty thousand cash and his personal note for the rest. Godfrey was a good egg; one glance told that. No cold clammy fish he, but a real fellow. Billy warmed to him, and he, after a comprehensive twinkle at the Perrimains, warmed to Billy, possibly through sympathy.

WILD GAME—By Forrest Crisse

THAT the men of America still retain a keen and primitive interest in hunting wild game needs no better proof than the facts that more than three and a half million hunters' licenses were issued in 1919 and that the sale of these hunting privileges brought in a total of about four and a half million dollars.

If the figures for last year were available they would undoubtedly show that very nearly five million licenses had been issued in the United States.

A visit to the world's largest wild-game farm is certain to leave with every visitor two outstanding impressions: The enormous demand for wild game birds, particularly pheasants, which has developed in this country, and the immense expenditures of money and effort to protect the game birds from the wild creatures that prey upon them.

A Swan Over Her Nest Guarded by a Gander. Above—Fancy Water Fowl Inclosed by the Woven-Wire Fencing

This year fully fifteen thousand ringneck pheasants have been raised on this farm, and nearly two thousand of the fancy variety of pheasants. More than a hundred and twenty thousand ringneck pheasant eggs were shipped in the past season from this farm to the various states and to sportsmen's clubs and associations as well as to private estates and small breeders. This season more than five thousand ducks—most of them mallards and pure-blood English calls for decoys—have been raised on this farm.

When it is remembered that for several seasons ringneck pheasant eggs from dependable sources have sold for more than thirty cents each and that ringneck pheasants readily bring four dollars each in lots of several thousand, while call ducks bring five to eight dollars a pair; mallards, five dollars; American wood ducks, twenty dollars; Canadian geese, twenty dollars; mandarin ducks, twenty dollars; Australian ruddy sheldrakes, fifty dollars; and swans, one hundred dollars, it is not surprising that hundreds of callers come to this farm fully determined to go into the business and as fully convinced that there is a fortune in it. But as a rule they depart with the conviction that there is another side to the story. This change of attitude invariably takes place after a survey of the expense side of the ledger has been made.

Elaborate Protective Devices

FOR example, this farm, which contains about five hundred acres, has more than twelve miles of woven-wire fencing seven feet high. This fence requires cedar posts ten feet high, creosoted four feet from the bottom. Attached to a creosoted board or stringer, which is buried about six inches in the ground, is a two-foot width of woven wire of a mesh so small that a weasel cannot go through it. This is sewed with copper wire to the bottom edge of the main expanse of coarser woven wire, which is five feet in width. At the top of the fence is a strand of barbed wire to keep out two-footed climbers. At frequent intervals along the outside of the fences are drop traps very strongly made of heavy woven wire of small square mesh. These will hold any kind of animal, from a weasel to a badger. The cost of manufacturing these traps in wholesale quantities is about ten dollars each, and fully two hundred of them are required to protect the birds on this farm. But this is only a beginning in the expensive equipment required to keep up the incessant warfare against vermin.

The most interesting and expensive traps used on the game farm are known as tunnel traps. As they are sunk below the surface of the ground they are made entirely of structural and sheet iron carefully treated to prevent corrosion. Tunnel traps are mainly used for protection at openings of the walls or dams where a stream enters or leaves the farm. The cost of one of these traps is about seventy-five dollars.

Because this peculiar trap is automatic in its action and of large capacity, big enough to hold quite a menagerie, it often makes some startling revelations.

"After a stormy night," declares the gamekeeper, who devotes most of his time to trapping and shooting vermin, "I have found a mink, a rabbit and a pheasant huddled together. Why didn't the mink follow his natural instinct and kill the rabbit and the pheasant? Because he knew that he was trapped. He was only interested in getting out. Again I've found a cat and rats together, a weasel and pheasants, and a coon and pheasants. In the animal world a common peril will—for the moment, at least—subdue the savage instincts of predatory animals."

A large number of steel traps, about three hundred altogether, are set along fences and on hawk posts, with which the fields of this farm are liberally supplied. Each hawk post must be set with railroad spikes in order to permit the gamekeepers to climb them.

The central prison in which all captive prowlers are confined against the day of their final disposal is a commodious, expensive and highly secure structure of iron and concrete. The woven wire with which this house is walled is so heavy and at the same time of so fine a mesh that a weasel cannot escape through it or a powerful badger break it. All fur animals trapped in the open season are comparatively worthless; held until the coming of cold weather they bring very attractive prices. In this prison are to be seen mink, coons, skunks, muskrats, weasels and occasionally badgers, foxes and 'possums. Though the sale of furs from these captives amounts to several hundred dollars a year, it is only a drop in the bucket compared with the cost of protecting the birds against them.

one breeder has lost his entire flock and scored a complete failure for no other reason than this.

The period of incubation for true pheasant eggs is twenty-one to twenty-three days. The eggs must receive the moisture of the earth. For this reason the hatching coops in all pheasantries which are conducted upon sound scientific principles have no floors and the eggs are placed in a slight hollow or basin of earth, padded with a scant layer of chaff or chopped hay. The earthwork is built up high enough so that it cannot be flooded by an ordinary rain. If the setting season is extremely dry the little hatching house is flooded with water before the earth nest is built up. This gives the proper amount of moisture.

Before the pheasant chicks are dry from the shell their impulse is to escape. This is because they are hatched under a domestic hen instead of a pheasant, and because their introduction to the light of day is under artificial or captive conditions. The precocity of these tiny striped fledglings is suggested by the fact that it seldom takes them more than twenty-four hours to master a strange language. When they break their shells they are all set to hear and understand the peculiar calls and warnings of the pheasant mother. At the outset of their careers the cluck of a domestic hen means nothing in their young lives. They are being called in a foreign tongue, and their first impulse is to flee from the fussy old stranger who is apparently trying to boss them about. But in less than a day's time they have learned the new tongue and obey their foster parent as if she were their natural mother. There are few if any wild creatures more precocious than a baby pheasant.

No pheasant should be fed until it is at least twelve hours old and it is better to allow them to wait a full day before giving them their first meal—a simple custard made of eggs and milk. On the third day their diet may be altered by introducing pheasant meal, a prepared food somewhat similar to puppy biscuit, into the custard. It is technically known as a drying-out meal. More and more of it should be introduced into the custard each day; the custard should not disappear as an element of the ration until the birds are at least ten days old. At that age they can do nicely without eggs in their feed, but the pheasant meal should still be moistened with scalded milk.

Fawns Lack Any Sense of Honor When Pheasants' Food is Lying Around. Above—Taking Down a Hawk From a Pole Trap

Causes of Failure

IN COMMENTING on the feeding of young pheasants the foremost expert in this peculiar calling in this country and probably in the world said:

"A fertile cause of failure in raising pheasants is feeding mixtures which are too moist. There is just one safe rule to follow: Add enough drying-out meal to make the combination of a consistency described by the term crumbly moist. This means that a handful of this feed leaving the keeper's hand as a ball will break and scatter before it hits the ground. But to go back to the baby chick's ration of custard.

"All chicken eggs used for feeding young pheasants may look alike to you excepting as to size. Anyhow, they do to most persons. But the fact is they're not. You cannot go far in raising pheasants—provided you are reasonably observant—without making the discovery that there is a vast difference between eggs in the matter of their feed value. That difference lies in an element of which few would think. Eggs which are laid by hens having a free and open range have far higher nutritive powers than eggs from hens confined in pens. Why? Because the range hens get more phosphorus-producing feed and consequently put more of that element into their eggs. And phosphorus-bearing feed is what the young pheasants must have to make a quick and healthy growth. Good milk comes next to eggs in supplying phosphorus—or I should say next to eggs from hens having a free range.

"The successful raiser of pheasants must be many kinds of a specialist, but if he is not a practical nutrition expert he is bound to run a great risk of failure. For more than thirty years I have

FROM McKINLEY TO HARDING

Personal Recollections of Our Presidents

By H. H. KOHLSAAT

VI

EARLY in 1895 Governor and Mrs. McKinley visited Mr. and Mrs. Hanna in Thomasville, Georgia. Mrs. McKinley was always delicate and the cold weather aggravated her illness, so the governor gladly accepted the Hanna invitation, and Mr. and Mrs. Myron T. Herrick, my family and myself, joined them in the hospitable Hanna home. Mr. Hanna sent for a number of the Republican leaders in the Southern States and had them meet McKinley, one or two at a time, in the beautiful sun parlor of the house.

I think, without exception, they were delighted with the governor, and pledged him their support in 1896, and most of them kept their pledge.

The Atlanta Constitution, edited by my good friend Clark Howell, got wind of the visits of the politicians, and Howell had his correspondents sending daily accounts of the meetings. Some of the comments were unfavorable, which was natural in an opposition paper. I wrote Mr. Howell and invited him to come to Thomasville and meet McKinley and Hanna. He did so, and from that day his paper and he personally were extremely kind to the governor without in any way changing the political policy of the paper. The friendship lasted until McKinley's death.

I will depart from the thread of my story to tell of President McKinley's visit to Atlanta in 1898, but let Mr. Howell tell his own story as he wrote it:

ATLANTA, GEORGIA, December 22, 1921.

My dear Kohlsaat: The McKinley incident, as I recall it, is as follows:

President McKinley came to Atlanta as the chief guest of honor at a Peace Jubilee banquet given under the auspices of Atlanta business men in the fall following the close of the Spanish-American War in 1898, at which banquet I presided. During the morning of his arrival here his secretary, Mr. Cortelyou, made a call on me at my office, stating that the President wished to see me at the Kimball House.

I went there and was ushered into the private parlor with the statement that "the President is shaving, but he will be glad to see you."

Only President and Mrs. McKinley were in the room when I went in. She was sitting before an open fire with a shawl thrown lightly around her shoulders. The President sat before a glass at a table in the center of the room. A towel was around his neck, his face was lathered, and he was shaving himself.

He welcomed me, stating that he had sent for me to read the address he had prepared to deliver to the General Assembly then in session in Atlanta, before which he had been invited to speak that day at noon.

He handed me the address, which I proceeded to read.

Every once in a while he left his table and walked to the side of his frail wife, solicitously fastening the shawl around her shoulders, patting her on the cheek and returning to his conversation with me.

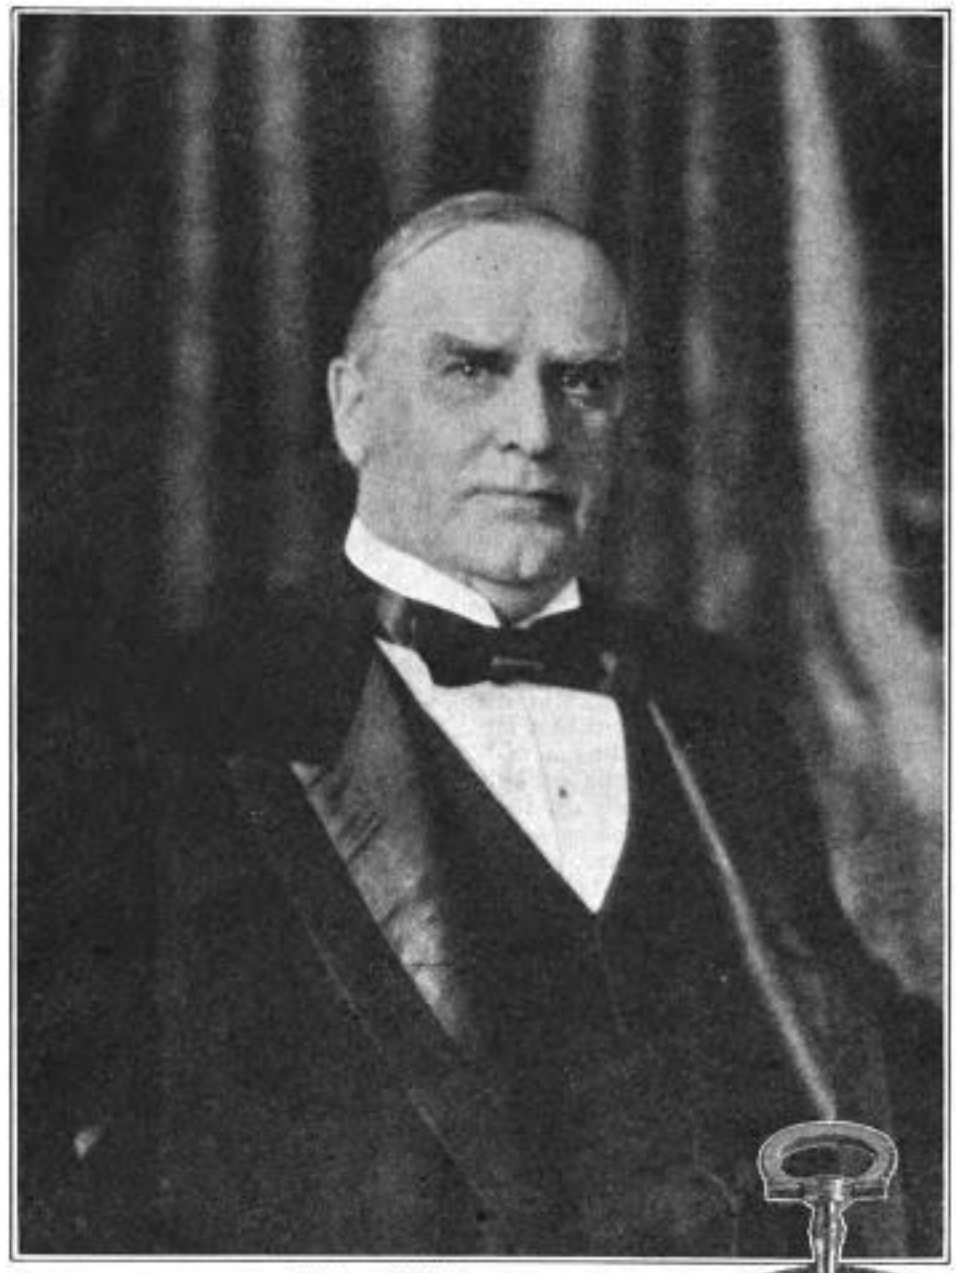
"The feature of the address that I want you to see," said he, "is the reference to the government care of the Confederate graves," in which he stated, in referring to the complete reconciliation between the sections, that the time had come when the Federal Government should take over the care of the graves of Confederate veterans.

My father, a Confederate veteran, was then a member of the committee that had been appointed by the President to investigate charges growing out of government purchases during the Spanish-American War.

About a month before this, in a letter to my father I had suggested that if President McKinley, who had just accepted the invitation to speak in Atlanta, would make an expression in favor of the Government's caring for Confederate graves, he would strike a very responsive keynote. My father had written me that he had shown my letter to the President, who seemed pleased with the suggestion.

I thought no more of it until the President submitted his address to me.

I went with the President to the joint session of the General Assembly that day. The galleries were crowded and every member of both houses arose as the President was escorted to the speaker's stand. He was given a very cordial ovation, for while differing with him politically the South held McKinley in high personal esteem.



There was nothing unusual about the first few minutes of his address. He was mildly applauded from time to time as he said something that caught his audience.

After a while he reached that part of his address referring to the care of Confederate graves by the Government. He had purposely held it as a climax.

In a minute the audience was in a storm of applause.

I never before witnessed such a scene in our General Assembly. Both the galleries and the floor joined in an uproar of enthusiasm.

Every person in the hall stood and every handkerchief went up into the air.

William McKinley

Tears flowed down the cheeks of Confederate veterans, and when the President concluded they particularly made a rush to shake his hand.

He saw instantly that he had caught the heart of his audience and he seemed to be immensely pleased at the result.

As we left he said, "They liked it, didn't they?"

The speech caught the whole South and the next day was the talk of the town.

This covers the incident as I recall it. It was a long time ago, but it is still fresh in my memory.

And the one thing about that day that I will never forget and that has always endeared McKinley's memory to me was the beautiful, sweet solicitude of this strong, manly man to his sweet, frail wife as she sat by the fireside that day.

With cordial personal regards and best wishes, I am Sincerely yours,
(Signed) CLARK HOWELL.

Mrs. William McKinley

Joseph Medill, of the Chicago Tribune, was also in Thomasville in 1895, and joined in some of the conferences. His grandson, Medill McCormick, spent a few weeks with him and sent in some of his first efforts as a cub reporter to the Tribune. I think he met his future wife, Miss Ruth Hanna, the idol of Mark Hanna's eye, during this visit. I met them riding in the pine woods many times—the slim dark-eyed Ruth in a trim riding habit, riding astride a high-mettled horse. It was said she could control any of the spirited horses of Thomasville, for which the city was famous.

When McKinley left for Columbus I rode as far as Atlanta with him and visited my friends, Clark Howell, Joel Chandler Harris and Frank L. Stan for a few days.

"Uncle Remus" invited me to a meal at his house in Peachtree S When we arrived at the front gate h in that wonderful musical voice of his, Kohlsaat, would you mind our going w to the kitchen gate? A little wren ha her nest in this gatepost, so we beg up until the little birds are hatched.

VII

AFTER selling the Inter Ocean, in 1894, with my family I spent months in Europe. On our return w in Washington for a few weeks in th 1894, going to Thomasville in the w 1895.

While in Washington, in March, secured a provisional option on a of shares of the New York Times fr Charles R. Flint. A block of stoc sary to obtain complete control obtainable for some weeks—so the was never completed. During the tions for the purchase of the N Times my boyhood friend, James purchased the Chicago Herald from Walsh, and the Chicago Times fr parties, and merged them into the Times-Herald. He also bought the Post from Mr. Walsh.

On April 22, 1895, sixty days aft acquired the papers, Mr. Scott denly in the Holland House, N Thirty days later I purchased his in both papers and changed th Herald from a Democratic to a R newspaper. The Evening Post pendent, and remained so.

During the year 1895 there quent meetings, held generally land, of McKinley, Hanna, H myself. At one of the gather was asked to go to New York interest Thomas C. Platt, and of Pennsylvania, in McKinley's One Sunday some weeks later, a home, we were sitting in what called his den. After dinner whe asked Hanna what report he h of his visit to Platt and Q said, "You can get both and Pennsylvania, g there are certain con McKinley asked. they?"

Hanna replied, a promise that point Tom Pla of the Treasu want it in w says he has b ence with one Harrison—"be and he wants a promises."

McKinley wa cigar. He threw and let the smo a moment or so and paced the lit few minutes.

Finally facing Hanna me, he said:

"There are some thing that come too high. If President without promising Platt Secretary of the Treasu be President."

Hanna remarked, "New York and Pen clinch the nomination—with the votes alr

McKinley said, "I can't do it, Mark."

"Well," sighed Hanna, "we have got to make up that big block of votes, but we w

between "existing" and "standard" and then crossed out again, making it read, "the existing standard must be maintained."

Mr. Hanna explained the plank had been changed because there was strong protest against the word "gold" from Indiana, Michigan, Iowa, Nebraska and other states west of the Mississippi, where the majority of the McKinley delegates were to come from.

I argued it was cowardice not to say "gold" and make the declaration definite; that the plank they had adopted meant gold to the gold man and silver to the silver man. Mr. Hanna insisted it might defeat McKinley's nomination if the word "gold" was put in. We made little headway for an hour or so. Finally Hanna said, "Damn you, Herman, haven't you any compromise in your make-up?"

I replied, "Not on this issue, Mark."

"Well," he said, "I have no more time to waste on a crank," and then he left the room.

About three o'clock, after five hours of argument, the hated word was put between "existing" and "standard." Hanna was sent for and told what had been agreed upon.

Mark Hanna

He turned to me and said, "Are you satisfied now, you damned crank?"

I said, "Yes; I don't like the promise to send a commission to Europe to work for bimetallism, but will stand for it."

We then pledged ourselves not to give publicity to the plank, as it would upset the McKinley delegates who were for silver.

After the meeting Mr. Hanna asked me to come to his room, and holding both my hands he said: "You probably have noticed I have dropped you entirely for a couple of months. Well, I want to tell you I am just as strong a gold man as you are, but if I had been as outspoken as you we would not have gotten the votes for McKinley, but I want you to know I love you just as much as ever."

He then told me they had over 530 votes pledged for McKinley, and it took only 463 to nominate him. McKinley actually received 564 in a total of 924 in the convention. The gold plank received 812½ votes, and the silver 110½.

There has been much discussion as to who wrote the gold plank. It was sent out after its adoption by the convention by the Associated Press and others as "the Kohlsaat plank," but I had nothing whatever to do with writing the plank, except to put the word "gold" between the words "existing" and "standard." Every one of the seven men present was a strong gold advocate, but some feared it would defeat McKinley if the offensive word was put into the platform. With the exception of Senator Proctor, they were all from the Middle West. They had complete control of the convention and could have passed any plank agreed upon. With a few changes in wording and the addition of the word "gold" it was the plank agreed upon by Governor McKinley in Canton ten days before the convention, and was taken to St. Louis by Mark Hanna.

Saturday, the thirteenth, I mailed a copy of the plank to Horace White, editor of the New York Evening Post, and asked him not to publish it, but to wire me if he approved it. Tuesday morning his reply came: "The financial plank is satisfactory to me."

Monday, June fifteenth, I was in Mr. Hanna's room in the Southern Hotel when Senator Lodge, who had arrived in St. Louis Sunday afternoon, came in and walked to the table where Mr. Hanna was reading the speech of the temporary chairman of the convention, Charles W. Fairbanks.

Without any preliminary greeting Mr. Lodge said, "Mr. Hanna, I insist on a positive declaration for a gold-standard plank in the platform."

Hanna looked up and said, "Who in hell are you?"

Lodge answered, "Senator Henry Cabot Lodge, of Massachusetts."

"Well, Senator Henry Cabot Lodge, of Massachusetts, you can go plumb to hell. You have nothing to say about it," replied Mr. Hanna.

Lodge said, "All right, sir; I will make my fight on the floor of the convention."

"I don't care a damn where you make your fight," replied Hanna.

After Lodge left the room I said, "Mark, you made a mistake. We don't want a fight

OFFICE OF THE GOVERNOR.

Columbus Feb 26/93

Dear Mr Kohlsaat:

The pen will not - can not speak what is in my heart this morning. You letter is so full of personal sweetness - the expressions of Chicago friends, when you wrote, are so tender and generous, that my heart overflows with thanksgiving. Did ever man and wife have such friends and how can we ever repay them?

My mail is larger than ever before in my life and so brimming with kindness and sympathy and offers of material aid! I am standing up with courage. Yet the support of my friends & their confidence in my integrity moves me deeply. I wish I might see my letters and telegrams.

Your thoughtful suggestion about my immediate needs is gratefully noted, but with my salary which in a few days will be paid to me, I will be able to get along comfortably.

Give to my Chicago friends the warm and lasting gratitude of Mrs McKinley & myself. God bless you my unselfish friend and give to you home & household his tender care.

Your sincere friend

W. McKinley Jr

Mr H H Kohlsaat Chicago Ill

THE NUMBER ONE BO

By John Taintor Foote

ILLUSTRATED BY W. H. D. KOERNER

III

THE officer who had appeared in The Room of Celestial Bliss was a colonel, Jimmy noticed. He was tall, slender and very erect for his years. He had a hawklike face with deep-set piercing eyes sunk beneath overhanging, almost white eyebrows. He took no notice of Jimmy. His eyes were fastened on the girl of Jimmy's dreams. When he reached her side he seized her by the arm.

"How did you get here?"

Pale and dumb, she only stared at him.

He shook her arm anxiously.

"Betty, are you all right?"

She nodded, still speechless.

"How did you get here?"

She made a visible effort.

"I passed the guard by mistake. Boxers chased me here. I couldn't get back."

"Passed the guard! How could you? What for? Never mind—I'll ask you about it later. You're safe—that's the main thing." The hawklike face turned toward Jimmy. Steel-gray gimlets bored into him. "Who is this?"

"Lieutenant Lee—Colonel Bradley."

Jimmy heard the faltered introduction as though the words had been spoken from a great distance. He managed to salute, however.

The salute was returned.

"What are you doing here?" The words were snapped from between thin lips.

"I'm with the relief expedition, sir," Jimmy began to explain. "L Company, Seventeenth Infantry. I ——"

"I called for help from the window as the troops were passing," the girl broke in. "Lieutenant Lee saw me and ——"

"I'm addressing the lieutenant, my dear."

She flushed and subsided. Jimmy had been relieved of the boring eyes for an instant. Now they returned to him.

"Yes?"

"As Miss er—Darrow says, she called from the window. I saw her and came in. I found some German troops looting. I ordered them out. Miss Darrow was alone and unprotected. I remained with her."

"Why didn't you get her back to the legation, lieutenant?"

"There was sniping from the roofs. I was afraid to risk it."

"You left your regiment without orders to do so?"

"Yes, sir."

"But, colonel," she began, and was smitten to silence by a look.

"Who's in command of the American forces?"

"General Andrews, sir."

"Who's in command of the Seventeenth?"

"Colonel Blair, sir."

"Report to Colonel Blair. Say that you've seen me."

A sudden shade of warmth appeared in the grim face. The eyes ceased to bore; they suggested approval. "Tell him I think your conduct has been entirely justifiable."

"Thank you, sir." Jimmy saluted.

"Give Colonel Blair my compliments and tell him that you have been protecting Miss Elizabeth Darrow—my fiancée."

"Fiancée?" Jimmy's lips repeated the word soundlessly. His eyes groped for the face of his dreams—the ivory face with the dark swirl of hair above, for which he had peered all those years. Yes, there it was, pale, quite pale, but there it was. The lips with the little droop at the corners—the warm, moist lips which had clung to his five minutes ago—moved in speech:

"I came to China to marry Colonel Bradley. We expect to be married when ——"

"Not 'when,' my dear." The hawklike face became almost tender. "We'll be married to-morrow."

"To-morrow!" she repeated blankly in a whisper.

"Thank you, lieutenant," said the bridegroom-to-be. "Come, my dear." He put his arm about the girl of Jimmy's dreams and led her toward the squad of marines at the entrance. "Do you know my coming to this temple was remarkable? I had no idea where you were. I simply knew you were gone, and yet I came straight here and found you. I don't understand it. It's the most extraordinary ——"

The rest of the sentence was lost in the rattle of arms as the marines came to attention and swung briskly into guard formation about their commanding officer and his lady.

The Somber Eyes of This Unbelievable Servant Flashed Upon Him With the Force of a Blow

Jimmy found himself presently in the Room of Celestial Bliss in the [illegible] Gautama Buddha—alone.

Yes, that was it—alone! He had known what it was to be alone [illegible] one can be really alone, he now discovered, who [illegible] little hope. Jimmy was without the smallest hope.

He moved to the altar steps where they had sat [illegible] had told her everything. He had forced her [illegible] Now he knew why she had seemed like a bird [illegible] take wing. He sank down on the altar steps and [illegible] his face with his hands, pressing his fingers hard [illegible] his eyelids. It did not prevent him seeing words, written on an oval of black velvet: "The H[illegible] The Chicken Hawk!"—"Fiancée!"—"To-morrow" [illegible] shut his jaws on a groan that tried to burst from [illegible]

"You are in trouble?"

Jimmy looked up to see the old Chinaman's wonderful face and eyes and voice standing be[illegible]

"I have been sent to comfort you."

"Comfort me?" Jimmy's laugh was not [illegible] "Go away, old man. Let me alone."

The somber eyes looked at him musingly for [illegible]

"So speaks blind youth in its folly." The [illegible] became suddenly metallic. It had the quality [illegible] "Rise, young soldier. The brave meet sorrow [illegible]

Jimmy got to his feet automatically. He saw [illegible] of day glimmering in a far entrance across The Celestial Bliss. The light of day! He must re[illegible] He hunched his shoulders and set his jaws as tho[illegible] to face a withering gunfire as he moved toward th[illegible] of sunlight.

"Where are you going?"

Jimmy laughed his uncanny laugh.

"To hell—if you must know."

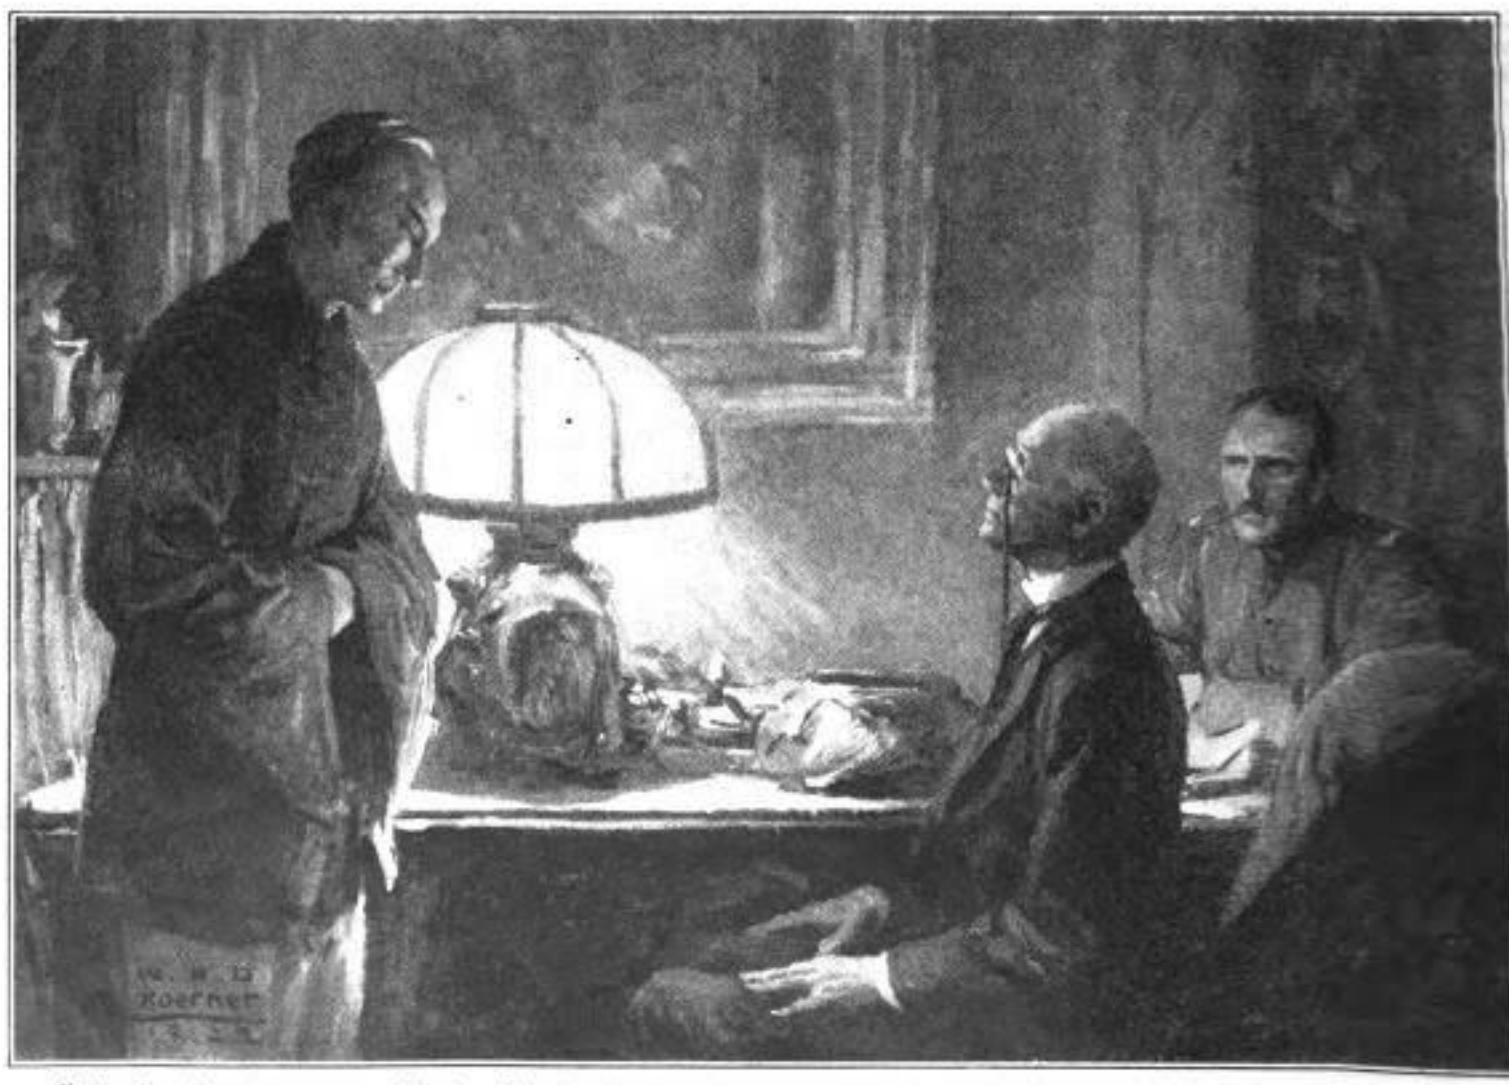
"You are already there."

Jimmy halted and wheeled.

"So you've been listening?"

"Remain a moment longer. Perhaps I can [illegible] hope."

"Hope!" said Jimmy. "That's just a word [illegible] only one word that has any meaning for me."



"And that word is?"

"To-morrow."

"There are many to-morrows," said Chang [illegible] softly. "They run through all eternity."

"Yes," admitted Jimmy, "but I'll not live [illegible]

"All!" The golden voice tolled the word [illegible] "That is why I have come to you now. To-[illegible] the [illegible] Lord [illegible] Now [illegible] Low, [illegible] high [illegible] spirit [illegible] you [illegible] watch [illegible] that [illegible] m[illegible] to-m[illegible] morr[illegible]

The couch was hidden, forgot…ming crimson silk cover on which a silk-threaded needle, held by patient Chinese fingers, had wrought a symphony in storks and flowers. As for the mantel, though it bore in the place of honor at the center a photograph in a gold frame, this was flanked on either side by a row of vases made decorative by the indifferent drawing and marvelous composition and color of the land that fashioned them.

And so it went. Grand Rapids chairs of cherry and imitation walnut; a carved teakwood seat in the bay window. A cold green carpet from the machine looms of Brussels, dotted with mellow, hand-woven prayer rugs from the province of Szechuen. A desk in the exact center of the room was boldly plain and serviceable. On its side, however, hung a small brass gong rimmed by inevitable dragons; and the lamp standing on the desk was an urn-like affair of bronze upheld by three solemn mandarins.

"Don't Come Near Me! Don't Come Near Me!"

If the living room showed the East and West engaged in silent combat, its immediate outlook suggested anything but strife. A wide doorway at the side of the room broken by the bay window led abruptly into a garden inclosed by a rambling, inconsequential wall which separated it from the grounds of the legation.

It was a small garden, which artfully contrived to suggest larger things. A garden in which one became delightfully aware that the tiny pool of water in the center was a huge calm lake; that the infinitesimal streamlet dribbling therefrom was a serenely flowing river; that the ridiculous bridge crossing the streamlet had the pompous arch of a mighty span. Having noted these things it became easy to see that the winding narrow paths, flanked on both sides by shrubbery, were broad fair roads which ran through frowning forests to far places of mystery and charm. It was, in a word, a Chinese garden, untroubled by a troubled world, as chaste, as lovely as the great round moon climbing the sky above the garden's wall.

Colonel William S. Bradley was not looking at the garden. His back was toward the open door leading into its soothing calm. He was writing at the desk in the center of the room. His face suggested the clashing of his immediate surroundings. Always that face had been hard; now it was also haggard. It had lost a little of its hawklike appearance. Hawks, aware of their ability to strike, are assured. This dazed and bewildered old hawk had lost some of his assurance.

He signed the last of a number of communications to various commanders of the allied forces, checked over a requisition on the American baggage trains for supplies, changed the item "as much condensed milk as can be spared" to "condensed milk, tins, 5000," addressed the requisition and struck the gong on the desk.

A Chinese servant appeared.

"Talkee orderly. Come this side," said Colonel Bradley, in the customary pidgin which serves as a slender bridge across which a little understanding may pass between those of English speech and the menials of China.

A moment later a sergeant of marines entered the room, crossed to the desk, halted and removed his hat. The sergeant's face was deeply seamed. He was grizzled at the temples and his close-cropped mustache was the color of an ancient badger. But his blue eyes held the twinkling youthfulness of his race—which was Celtic—and he stood, like his commanding officer, as straight as a sapling.

He had served that officer for twenty-five years, first as striker and later as respectful confidant and friend.

"Yis, sorr," he said.

"For Colonel Chabrillane, French Headquarters; for General Modida, Japanese Headquarters; for General Andrews—deliver this first."

"Yis, sorr." The sergeant looked meditatively at the letters in his hand. "And how's Miss Betty, sorr? You'll excuse me for callin' her that. I can't twist me tongue to the new name yit, sorr."

"She's still—indisposed, Tim."

"Bad luck to the yella bellies that give her such a fright. Will ye give her a bit of a message from me, sorr? Tell her the old orderly that's waited twinty years for a missus takes joy in paying his respects to her."

The eyes of the two men met and held for an instant.

The opinion of others had rarely interested the hawk. He had ignored them and the subtleties of life as well. He could ignore the latter no longer. His marriage four days before had plunged him into a growing cloud of doubts and fears.

He had married a child—the one member of her sex who had reason to be grateful to him. Until the day before their marriage she had seemed grateful. She had been dutiful, friendly, affectionate even. Since then —— Of course she had had a frightful experience with those Boxers; nervous shock might account for her desire to remain alone in her room for a time. But four days had passed. And why did she suggest a rat in a trap if he so much as opened her door? He had a sudden desire for an outside opinion of his marriage. The best, perhaps the only friend he had on earth was this Irish noncom standing before him.

"Then you approve of my marriage, eh, Tim? It doesn't—surprise you?"

THE MERRY WIVES

By Gordon Arthur Smith

ILLUSTRATED BY IRMA DÉRÈMEAUX

"He's a Genius, I Tell You," She Reiterated. "He Leads People; He Doesn't Follow Them"

MY YOUNG nephew, George Coventry, has caused me many an anxious moment. The fact that he himself, no matter how grave the outlook, never seems to share my anxiety serves in no way to minimize it. He is wont to sail gayly and serenely ahead up to the very edge of the rocks, and then, by some inspiration or luck, shift his helm and bring his ship about, quivering but safe.

I know of no youth who enjoys meddling in the affairs of others more than George. He is incessantly bringing people together or separating them, luring them into matrimony—not with himself, of course—or driving them away from it. He fancies himself immensely, I am forced to believe, in the rôle of *deus ex machina*.

A good-looking, clean-looking, innocent-looking boy, George is; cheerful, insouciant, casual, with a sense of the ludicrous which I, belonging to an older generation, am often at a loss to comprehend. He is rich and an orphan and a bachelor. I am his guardian. Hence, as Horace—or was it Terence?—says, these tears.

The episode which I am about to relate occurred during the summer—the summer that my stepsister, Mary McKnight, took a house for herself and her daughter, Annabel, at Fool Harbor. My stepsister is a voluminous woman with the intellect of a moron. I say this at once and shamelessly, but I shall have occasion later to refer again to the magnitude of her body and the parvitude of her brain. Annabel, however, is radiantly different. She is slim and blond and calm, and her mentality seems to be superior to that enjoyed by most women who have beauty. For Annabel is very beautiful in a decent, decorous way. Her beauty, I suppose, was in a great measure responsible for what came to pass that summer.

Primarily it was George's fault, for George had introduced the splendid Robert Gregory to Annabel, a thing that he might not have done had he been able to foresee the consequences. That George knew Gregory was in no way surprising, for George knew a great many people, and people, too, of all classes of society—pugilists, bookmakers, ex-bartenders, professors, actors, rich men, poor men, beggarmen and thieves.

"That actor fellow, Gregory," George had said to Annabel. "Like me to bring him around some day? He seems all right except that his nails are too pink. However, I don't suppose women object to that as much as men. How about it?"

"Robert Gregory!" Annabel exclaimed, with as much of a flutter in her voice as I have ever heard in it. "Robert Gregory!"

"Dear me, yes!" George assured her with a wink in my direction. "Gregory the Magnificent. Young girls cry for him."

"How do you happen to know him?"

"Oh," said George carelessly, "he's not so hard to know. In fact, he's quite eager to associate with what he calls smart people. He's even gone so far as to invent ancestors for himself, and I've heard him say that he wished more well-born people would take up the stage as a career."

"Well," observed Annabel, "you must admit that he's one of the few American actors that can play the part of a gentleman."

"That's just what I do admit," agreed George promptly. "He plays the part of a gentleman very well. He's always playing it."

"Bring him in to tea," said Annabel, "and let me know in advance."

So that was the beginning of it; and, as you see, it was really George's fault.

Gregory came to tea in a top hat and a cutaway, with a white slip edging the opening of his waistcoat and a gardenia in his lapel. He had an imposing chest which he expanded gorgeously; he was almost six feet tall; his hair was curly and shiny and gray at the temples; and he had a cleft in his chin. In short, he was well-nigh irresistible.

If he had come but once I don't think that any of us would have worried; but he came often during that winter and spring. Annabel liked him—she said so frankly; and Mary, my stepsister, fairly worshiped him. He had the women at his patent-leather feet.

It was not surprising then that he was invited to visit them at Fool Harbor that next summer. It was not surprising; but it was distressing to both George and myself, for I need not explain that we had soon found his charms rather cloying—a little too sugared for the male palate.

"Ointment on his hair and cologne all over him," George pointed out.

"He has his initials on everything that he owns," I added.

"You're correcter than you think, Uncle Foster. He has R. G. neatly embroidered even on his underwear. I know, for I was once in his dressing room."

"That is contemptible," I said severely. "He shouldn't be allowed in a respectable house."

But he was. He went to visit Mary and Annabel at Fool Harbor, and George and I went too.

Gregory Came Stamping Out to the Veranda, Looking Irritated But Majestic

II

FOOL HARBOR is on the coast of Maine not far from the New Hampshire line. It possesses all the necessary equipment of an American summer resort—a country club with tennis courts and golf links; a reading room with private lockers and plenty of fruit and cracked ice; a large, ugly hotel; a wayside inn that caters to tourists; a few soiled boarding houses; a quantity of cottages for rent—and usually all rented; a post office; a town hall; a store or two, ably managed by the descendants of the pirates and buccaneers of the Maine coast; a bathing beach and an adequate supply of indefatigable, industrious young girls.

My stepsister chose Fool Harbor to economize. She never chose it again for that reason. And yet it is a harmless, innocent-appearing village, with none of the deliberate magnificence of Newport. It is frequented mainly by nice, well-mannered people—many of them educated—who are neither ashamed if either mental or physical, revolved. The after the topic of conversation, the hour for lunch determined by him; and even Annabel, I wa note, seemed pliable and passive to his influ fluttered about him like an elderly excited dow

"I am indeed delighted, Mr. Langley," he in his resonant, unctuous voice. "And Georg fares it with our George?"

"I'm all right," answered my nephew brief I could see, the patronage conveyed in "our

"Annabel and I are whacking the elus about this afternoon," Gregory resumed. you two have a round? It's an admirable li admirable."

"Don't worry about us," I said. "We'll fi some sort."

"The devil finds work for idle hands to d Gregory with his rich, deep laugh. The ma quoting, I found, and generally inaccurately.

"I am motoring," announced Mary, w thought it was her turn to say something. welcome to come with me—or not, just as This is Liberty Hall, you know. There, that isn't it?"

"It is," said Annabel decisively.

"Dear lady," Gregory interposed, "what dom new. The great truths have all be remains, even for the most brilliant of us, on them as gracefully as we may—to add the here and the hint of silver there. But the p the same through the ages—the eternal i tern that is truth."

George, at this magniloquence, left the remarking that he would unpack.

"It is nearly time for the morning bath," consulting his magnificent initialed wat promptly at noon."

"Must we?" I ventured.

"Oh, positively!" said Gregory. "I bath. If I did I should have no appetite I I ate no lunch I should faint away on indeed, we all bathe promptly at noon."

"Yes, indeed," said Mary, and I thou nothing further. I inferred that if Gregor the whole household was expected to do

On the way to the beach I had an op braid George severely for having stood such as Robert Gregory.

"What do you know about him?" I de matinée idol—granted. But what else d were mad, I think, to have introduced h your Aunt Mary. You know what wo if you don't, it's time you began to le completely incapable of judging a ma probable that certain traits which we sh temptible in a man would be considered attractions. The affected *poseur*, for ex inate, chinless, spineless ballroom expe stood criminal. Who is it that sends th of murderers? Women, I tell you! Q mist's wife, and she'll say that her a against the bigamist but against his woman admires the man who dupes h the man who dupes other women."

"Heavens, Uncle Foster," exclaime have you been doing all your life to kno

no doubt that George racked his brain assidu-
an endeavor to hit upon a plan to thwart the
Robert Gregory; but for two days at least there
lower even from George's brain—a brain which
s found fertile enough—and Gregory made even
ess in his advance toward Annabel's favor.
, or on any occasion for that matter, he monop-
conversation with the ease and the perfect
hat mark those accustomed to public speaking—
ps, congressmen and others. He had a peculi-
ng way of annexing anybody else's remarks to
and of contradicting them; or, at the mildest,
g them into what became a monologue by
ory. And always he talked of himself. I have
heard a man employ the pronoun of the first
quently in my life. Himself and his art.
t evening of our visit he read aloud extracts
by William Shakspere, with critical com-
bert Gregory. He sat, I remember, in the
able chair in the house, and we formed what
een—and in the case of Mary and Annabel
d, adoring audience about him. His dinner
as George observed, elegant—a shirt so
ed that it gave the effect of ruffles; a broad
ith an edging of white above it; a single
ire stud about the diameter of a dime; and
ams of his trousers. I have often wondered
n't as a rule dress like gentlemen.

ot to be: that is the question:
's nobler in the mind to suffer
and arrows of outrageous fortune,
rms against a sea of troubles,
osing end them? To die: to sleep:
—"

Here he paused so long that I hoped that in truth there might be no more vouchsafed us. He fixed his lustrous large eyes on the chandelier and, his lips slightly apart, shook his head slowly as if in sorrow. Then almost in a whisper he repeated, "'To die: to sleep: no more.'" And presently he added: "It is too beautiful! Mark the simplicity of it, the simple grandeur, the working up to the terrific climax! 'No more!' It is everything, and yet it is nothing. Ah, dear lady"—here he turned to Mary—"the import of those two simple words is overpowering, transcendent.

"I recollect well the day I was presented to Irving. I was a mere lad, a youth just testing my wings for the great flight, and he was even then an old man; a wonderful old man, a glorious old man," he added generously. "But I had the confidence that goes with youth; the confidence which, alas, ebbs from me with every year of my career on the stage, and I recited to Sir Henry this soliloquy of Hamlet.

"I shall never forget his expression when I had finished. Never! It is one of my proudest memories. And the words of encouragement that he gave me—he, the gray-haired veteran who had run his race, and I, the stripling toeing the mark! He said, I remember—and you will pardon my seeming lack of modesty in quoting it, for I do so only to exemplify the amazing penetration of the magnificent old man—he said, with a fatherly hand on my shoulder, 'Young man, yours is the most astounding interpretation of Hamlet I have ever heard.' Then he smiled and turned away without another word; but it was apparent that he was greatly moved."

I confess that I myself was greatly moved at this ambiguous tribute, and George was restraining his facial muscles with difficulty. But, as George put it, Mary and Annabel ate it alive. That Mary should have evinced such *naïveté* did not surprise me, for my stepsister had never been endowed with a trace of humor; but Annabel—that was a different matter.

"When a woman's in love," George explained later from the depths of his infinite wisdom—"when a woman's in love she'll fall for anything; and Annabel's in love with that ham actor or I miss my guess."

That she was in love with Gregory, or in a fair way to so being, she proved to me even more conclusively when I first had an opportunity of talking to her privately. Annabel was—and heaven knows is—habitually a serene, cheerful and frank young woman, not given to hysteria or even to overmuch introspection. She was accustomed to accept life as it was dealt out to her, rejoicing in the good days and making the best of the bad ones. I have seldom seen her cry and less seldom seen her lose her temper. But she came near to doing both when I ventured to remonstrate with her in regard to this Robert Gregory person.

It was on the bathing beach, the second day after our arrival; a brilliantly clear day such as Fool Harbor can produce so often in August. Somehow or other I had managed to extricate Annabel from the company of Gregory and had led her up the white sand to a secluded spot where the beach narrows to nothing and the rocks drop abruptly into the sea. In the distance we could observe my stepsister bounding up and down in the mild little breakers that ambled up leisurely to the shore; and some distance out I fancied I discerned the black-rubber skullcap of Gregory as he plowed about with a great waving of arms and splashing of water. George was passing the time pleasantly and not unprofitably, perhaps, conversing with five—I counted them carefully—five young members of the less timid sex; but even as I looked he unchivalrously abandoned them for an informal game of baseball that was being held on the hard damp sand. George likes pretty girls, but he seems to have other interests as well, and this unfortunate lack of concentration leads me to believe he will never marry. At his age neither baseball nor wild horses would have dragged me away from those five silk-clad daughters of Nereus.

Satisfied that I was secure, then, from immediate interruption, I seated myself beside Annabel.

"Well?" she inquired, clasping her white arms about her black-silk knees. "I infer you are about to tell me that you disapprove of Bob Gregory."

Annabel is intuitive and abrupt. Taken by surprise, I fiddled about with my toes in the sand and sought for adequate words.

"What have you against him?" she inquired.

"Nothing definite," said I. "But what do you know about him? Is he a gentleman?"

"Isn't he?" She was assuming the offensive.

"I don't like his clothes," I said firmly.

She turned to survey me long and leisurely, and I was immediately conscious that I was wearing a rented bathing suit—a gray affair two sizes too large for my rather lean figure. She laughed, but did not press her advantage.

"Uncle Foster," she said, "you're ridiculous. He's a genius, and geniuses can dress any way they please."

"He's selfish; he's an egoist," I observed.

"He's a genius, I tell you," she reiterated. "He leads people; he doesn't follow them. All great men are egoists or they wouldn't be great. Napoleon was an egoist—and Robespierre, and Cromwell, and Byron ——"

"Yes," I interrupted, "but I shouldn't care to have you marry Napoleon or Robespierre or Cromwell or Byron. That's one thing about geniuses—the less intimately you know them the more you can admire them."

"The right woman," she replied sagely, "can do anything she wants with any man. It's simply a question of management. You know as well as I that if you put the right man at the head of a business he'll make a success of it, where the wrong man, with equal opportunity, would land it on the rocks. Well, if you put the right woman at the head of a man she'll make a success of the job, otherwise not. It's only a question of management, I tell you."

"And you're convinced that you're the right woman to manage Gregory?"

She hesitated a space, leaned over and picked up a stone and hurled it deftly into the sea.

Then she said, "When I'm convinced I'll marry him."

"I don't doubt it," I said, "and I warn you that if you do you'll spend most of your life listening to him talk about himself, and the rest of it embroidering monograms on his underwear."

Cutting the Canyon Forests

WE HAVE just received the following resolution, which we are glad to publish:

FLAGSTAFF CHAMBER OF COMMERCE
FLAGSTAFF, ARIZONA

The following resolution is respectfully submitted by the Flagstaff Chamber of Commerce:

Whereas, Agitation has been raised in an attempt to prevent the sale of a large tract of timber in the Tusayan National Forest, on the basis that the cutting of this timber will detract from the scenic beauty of the Grand Canyon; and

Whereas, No timber will be cut close to the highways leading to the Park, and, furthermore, since the timber along Desert View road is not included in the sale area and only mature timber will be removed, allowing the thrifty young trees to remain as a basis for a second crop of timber; and

Whereas, The sale of this timber will mean a direct return in receipts to Coconino County of some $80,000.00 in addition to other returns resulting from the manufacture of at least $4,000,000.00 worth of lumber;

Therefore, Be it resolved that the Chamber of Commerce of Flagstaff go on record as opposing all efforts made to prevent the sale of this tract of timber and heartily endorsing the sale thereof.

CHAMBER OF COMMERCE OF FLAGSTAFF, ARIZONA
By T. A. STAHL, *President*.

The forest referred to in this resolution is the first of those adjacent to the Grand Canyon to be marked for the ax. But the others will follow in the natural course of events, including the magnificent woodland on the north rim, which Emerson Hough has advocated setting aside in perpetuity as the President's Forest. So strong has been the pressure of local interests with eyes on this timber that the bill providing for setting aside the President's Forest covers only one-third of the desired area, and even this has small chance of passing.

Apparently eighty thousand dollars looks big at this time, but we believe the sum to be an insignificant fraction of what the timber lying adjacent to the Grand Canyon is worth, standing, to Coconino County. We sympathize with the desire of our Western States properly to develop their resources for the benefit of their residents, but anything affecting the Grand Canyon is bigger than Flagstaff, bigger than Coconino County and bigger than Arizona. It is a national, not a local matter.

One of the great charms of the Grand Canyon is its setting of beautiful green forests interspersed with lovely little open parks. To put the ax to these trees at this time, when the real possibilities of the Grand Canyon as a great national playground are just beginning to be realized, is, in our opinion and with due respect to the Flagstaff Chamber of Commerce, the height of shortsighted folly.

Open Season for Americans

EUROPE was never more eager than now for the American tourist trade, but her people are making a very foolish bid for our business. Hotel men, restaurant managers, government officials, taxicab drivers, retail shopkeepers and indeed almost every purveyor with whom the traveling American is likely to come into contact has grossly overestimated what the traffic will bear; and when knowledge of this becomes common it will keep thousands of vacation tourists on their own side of the Atlantic until present conditions undergo a decided change for the better.

Complaints of extortionate charges, minor graft and barefaced impudence are well-nigh universal among returning tourists. They are not confined to professional penny pinchers or to frugal students of art and music and school-teachers of modest means. Those who speak with most bitterness of the way in which Americans are treated in Europe are well-to-do men of affairs, travelers for business or pleasure, who spend their money freely when at work and lavishly when at play, but who nevertheless resent being trimmed and gouged and stung at every turn.

From one end of his journey to the other the tourist who goes to Continental Europe under present conditions is in the clutches of a money-extracting machine that works with merciless efficiency. He must disgorge passport or visa fees not only at home but in every country he visits. Often these charges are only ten dollars, but Germany has lately been talking of raising visa fees for Americans to one hundred dollars. The tourist's steamship tickets will cost him rather more than double what he would have paid before the war, though as a rule the service is not so good as it was in 1914 and the tips range higher. Railway travel on the Continent is everywhere costly, usually uncomfortable and often insanitary. There are a few trains de luxe that are clean, fast and comfortable; but such transportation is the exception and not the rule.

Outside of Italy hotel rates are likely to be found high and going higher. A self-respecting Parisian would sleep on a park bench rather than pay the prices that are charged at some of the big hotels on the boulevards that are frequented by Americans. Short-change workers, baggage thieves and sellers of fake antiques abound, and they have acquired a skill and technic that are marvelous. Art objects of every sort that our people are likely to buy are counterfeited and multiplied to meet the demands of American tourist trade.

At every frontier the American traveler is likely to be subjected to inconvenience, to personal indignity or to both. In many parts of Europe Americans are treated with open contempt and must put up with insolence that they are powerless to resent.

Europe has no scenery, no architecture, no examples of art or craft that can wholly counterbalance or atone for the unnecessary vexations by which the American tourist is beset.

Experienced travelers who speak the language of the countries they visit, who know the ropes and who patronize the smaller hotels and restaurants, will avoid many of these inconveniences; but even they will not travel under prewar conditions.

Nothing will improve conditions in Europe more quickly than cutting off for a time the summer stream of American gold that every year floods her capitals.

"Our Colonies in America"

THERE are occasional newspaper references to the widespread Teutonic societies—said to trace back to the gifted Herr Stinnes—one of whose functions is the systematic gathering of American trade information for transmission to Germany. Greek, Balkan, Japanese and Middle European propaganda have long since been recognized as permanent institutions. The more [illegible] cant fact that we have not yet come to realize is the [illegible] tude of some of the governments of Continental [illegible] toward their nationals in this country. We may [illegible] them as tolerated racial groups that we shall [illegible] assimilate if they do not, in the meantime, reverse process and assimilate us; but Old World nations [illegible] them in different terms.

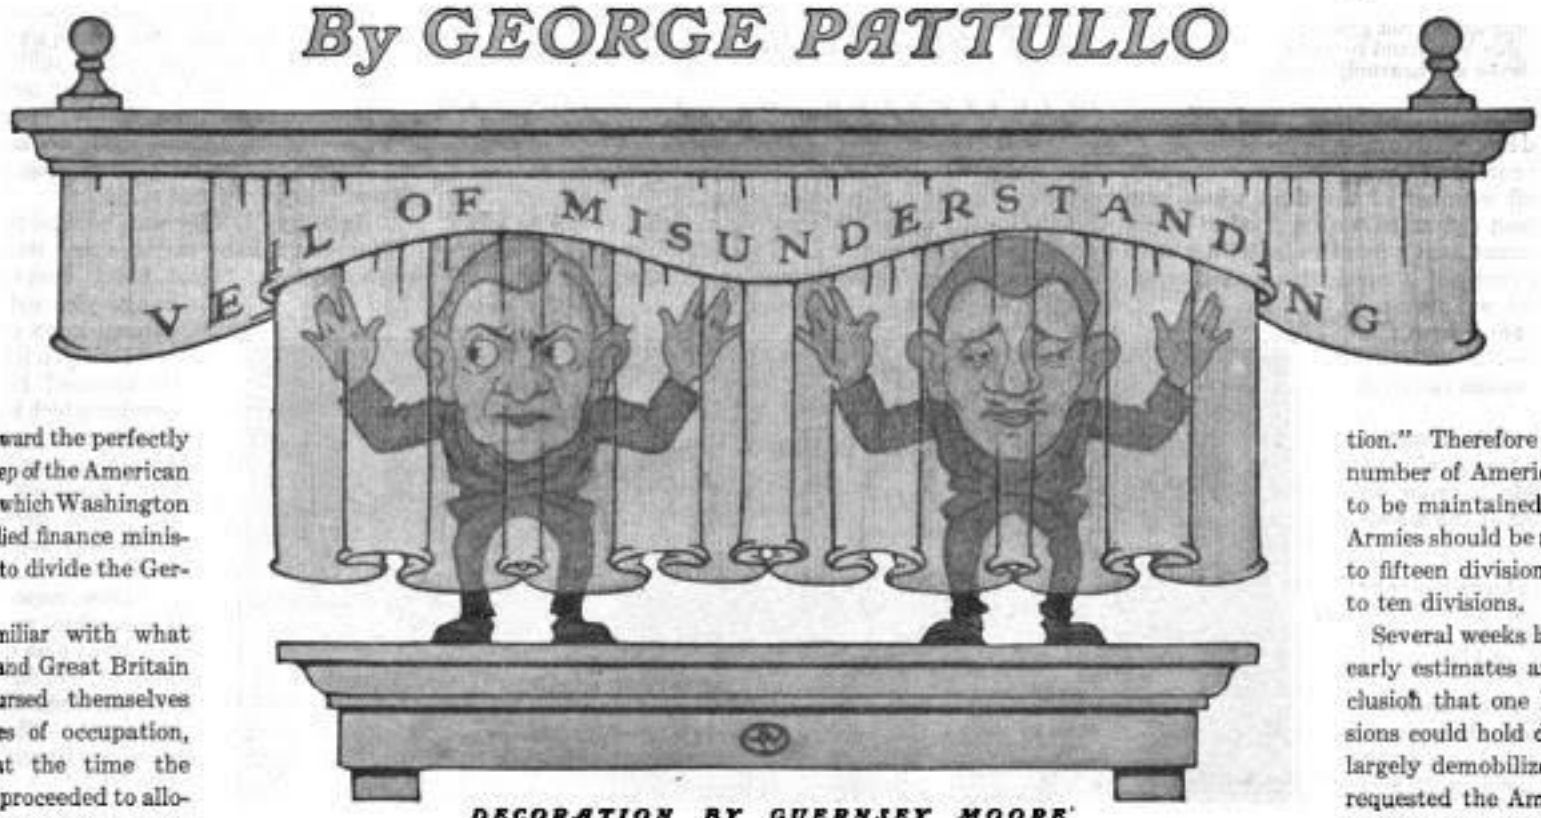
With rare skill and foresight Europe, as far as [illegible] stances will permit, ships overseas her least [illegible] citizens. Once on American soil they become the [illegible] of a systematic campaign to make them useful to the country. She profits by the savings they send [illegible] water. She encourages their frequent return in order they may be freshly imbued with a sense of [illegible] nationality and that they may be impressed with [illegible] of loyalty to the land of their birth.

Obviously we have nothing to fear from the [illegible] alien blocs in the immediate future; but if this is pursued for twenty or thirty years, a mere [illegible] lives of nations are reckoned, it will inevitably [illegible] that the American palate will find about as [illegible] an unripe persimmon.

Racial blocs acting in concert for the furtherance local interests can make trouble enough. They [illegible] stitute a far graver menace if they labor in the [illegible] overseas masters. We have tasted similar medicine now, and we have not found it to our liking.

Useless Inventions

THE annual output of all the gold, silver and [illegible] mines in the world does not equal in value [illegible] profits derived from American inventions. The reason why the subject of patents holds a decided fascination for the average person. Almost everyone [illegible] with the life stories of Edison, Bell, and other [illegible] ican inventors whose experimental work has [illegible] world-famous. A lot of folks know that the [illegible] rubber button for garter fasteners earned [illegible] million dollars. The originator of a new insulating [illegible] also received more than a million dollars for the right to handle this material in only one country. [illegible] man designed a new style of suspender and [illegible] million dollars in profits. The designer of a [illegible] shoe laces received more than two million [illegible] reward for his ingenuity, while a college profes[illegible] several hundred thousand dollars for his improved telephone apparatus. Large fortunes were obtained by inventors of a collar button that turns down, a steel pen for shading drawings, a new method of making sugar, and hundreds of other new ideas and devices.



But alongside this satisfactory picture is a [illegible] of the subject with which the public should [illegible] This less favorable side of the question is aptly [illegible] by the saying, "The patent office is the [illegible] buried hopes." Though millions of dollars [illegible] earned by inventors and by investors in patents [illegible] are lost each year by people who have pinned [illegible] to impractical dreams or false beliefs. The [illegible] the failure of so many patents is the lack of co[illegible] eration most inventors give to the commercial [illegible] which is the essential factor in the promotion [illegible] idea.

Everyone should remember that the patent [illegible] compelled to issue a patent to an inventor for [illegible] novel device that is not inoperative on its face. [illegible] the patent-office seal of approval of any [illegible] sense a criterion of commercial value. As a [illegible] the more fantastic the device the easier to get [illegible] a patent on it. The field for improvement [illegible] profitable lines of endeavor, where the ma[illegible] chines used are widely known and well tried, [illegible] restricted than in comparatively new and [illegible] theoretical fields of enterprise. Too much [illegible] usually attached to a set of patent papers. [illegible] other line of activity is it so easy to use [illegible] entation of the truth for purposes of fraud [illegible] ploitation of a perfectly valid but wholly

had been fighting for us all along,
an that the French should look to us

consumed by the ocean voyage and travel in the United States, even with the maximum employment of our then available transportation, at least a year must elapse before we could complete our demobilization." Therefore he proposed that the number of American combat divisions to be maintained in the Zone of the Armies should be reduced on April first to fifteen divisions, and on May first to ten divisions.

Several weeks later Foch revised his early estimates and came to the conclusion that one hundred Allied divisions could hold down the broken and largely demobilized Germans, and he requested the American Army to furnish fifteen divisions—more than 450,000 men. As the rate at which we could return our troops home necessarily left more than that number of divisions in France, any promise along this line was superfluous.

"We were, therefore, able to keep our available ships filled," says Pershing in his report, "and by May 19 all combat divisions, except 5 still in the Army of Occupation, were under orders to proceed to ports of embarkation."

It is clear why we kept troops in the Army of Occupation at French solicitation, and that their numbers would have been greatly reduced had the French not objected.

to share their burdens? It would be only right that we should, if we admitted the premise that in fighting the Germans in 1914–15–16, they were also fighting the battles of the United States. Few Americans will admit that, however.

Victory seemed to have the effect on the Allies which sudden, unexpected success so often produces in the individual. It completely turned the French head. And in the scramble for the spoils of war they forgot how there happened to be any. Ensued a diplomatic struggle with Great Britain, a struggle involving military operations under various guises, and the threat of more.

Immediately after the armistice Marshal Foch began to assume a high tone. All the problems confronting the Allies he attacked from a purely French standpoint, whilst commanding Allied resources to make his settlements effective.

The armistice went into effect on November eleventh and Pershing immediately tackled the job of returning the American troops home with all possible speed. It became necessary to take up with the Allied commander in chief the question of how many American divisions would have to be retained in Europe until peace was signed. Pershing could see no real need for anything but a small force, a sort of nominal representation by the United States.

Marshal Foch thought differently; under date of November twenty-ninth he declared it was impossible to diminish the strength of the American effectives in France below thirty divisions—about 900,000 men—and if General Pershing wished for the departure of the Ninety-second Division—a colored division which had been ordered home by the War Department—he was at liberty to plan for it, provided he could maintain the total number of divisions agreed upon by replacing the Ninety-second with a white division.

On December twenty-fourth the Allied commander in chief set forth the minimum forces each of the Allies should furnish for the Zone of the Armies—in other words, armies held to apply the peace terms—and the American Army's quota was fixed at from twenty-two to twenty-five divisions of infantry. After the signing of the preliminaries of peace a total of thirty-two Allied divisions would be sufficient, Foch stated in this note, and the Americans would furnish six of these.

In reply Pershing pointed out that "our problem of repatriation of troops and their demobilization was quite different from that of France or Great Britain. On account of our long line of communications in France and the time

The Restored Provinces

OWING to their propinquity to the lost provinces and the part they had played in their liberation, the American forces entertained the hope of making formal entry into some of the cities they had helped to free from the German armies—Sedan, Metz, and so on. For sentimental and political reasons the French desired to make these entries with their own armies. As it would strengthen their prestige in the restored territory, and these provinces had not long since been French, this desire was only natural and everybody was agreeable to the arrangement. The American command readily met French wishes in this respect, but when the Allied commander in chief displayed a purpose to impress the Germans in the same fashion by mixing American forces with the French armies of occupation, Pershing flatly objected.

On November twenty-eighth he wrote to Marshal Foch: "After very careful study I feel that it is most advisable that during the occupation of German territory there be no mixture of units.

"Many perplexing problems concerning our relations with the civil authorities and with the inhabitants of the occupied countries are certain to arise. In dealing with these problems, the troops of each nation must act in accordance with the laws and customs of their own country. It is as inadmissible that a French commander should act under the laws and customs of America as that an American commander should have to carry out instructions relative to German citizens, emanating from any source not directly responsible to his own Government.

"My Government holds me responsible for the relations of American troops with the German inhabitants, and it also holds me responsible for all such relations within the American Zone. I must therefore request you to modify so much of your instructions concerning the occupation of

SINGLE, DOUBLE, TROUBL

By HUGH WILEY

ILLUSTRATED BY J. J. GOULD

Dis world of sin I craves to leave;
De angels sing an' do not grieve;
I craves to jine 'em, hand to hand,
An' neveh leave dat heavenly band.

THE Wildcat, feeble with leg misery and ailing mightily, moaned his plaint to an indifferent world. Over in another corner of Captain Jack's woodshed, Demmy, the sawed-off member of the duet whose mutual friendship had been cemented with a flood of sticky molasses, pried the mascot goat's mouth ajar with a stick of kindling wood and propped it open with a clothespin.

"Reveal yo'self, fool, an' stay revealed. Go blattin' round here f'm eatin' pork'pine bushes! Stan' still. Mebbe dis learns you neveh to relish dese thistle bushes."

Demmy picked the stickers out of Lily's mouth to an accompaniment of song from the Wildcat, prone on his pallet in the corner of the woodshed.

Heah I is, Lawd, wid my breas'plate on;
Sweep me up on high.
Waitin', Lawd, wid my breas'plate on;
Honin' fo' my home on high.

"You gits on high afteh de front seats is filled. Wilecat, how come you is so soggy-minded? Lawd don't crave no sweepin's. Lawd sweep you up wid a club. Preacher say think befo' you jumps. 'Member dat nex' time when you starts flyin' an' finishes muscle-bound."

"Gwine to be no nex' time. Neveh gwine leap no mo'."

"Serve you right did yo' neck git busted 'stead of only strainin' yo' legs. Heah you 'dulges yo'self in a night prowl an' gits chased. Den whut happens? You climbs a fence—sudden. Thinks you knowed de lay of de lan'. Thinks you knows yo' own alley. All I sez, serves you right."

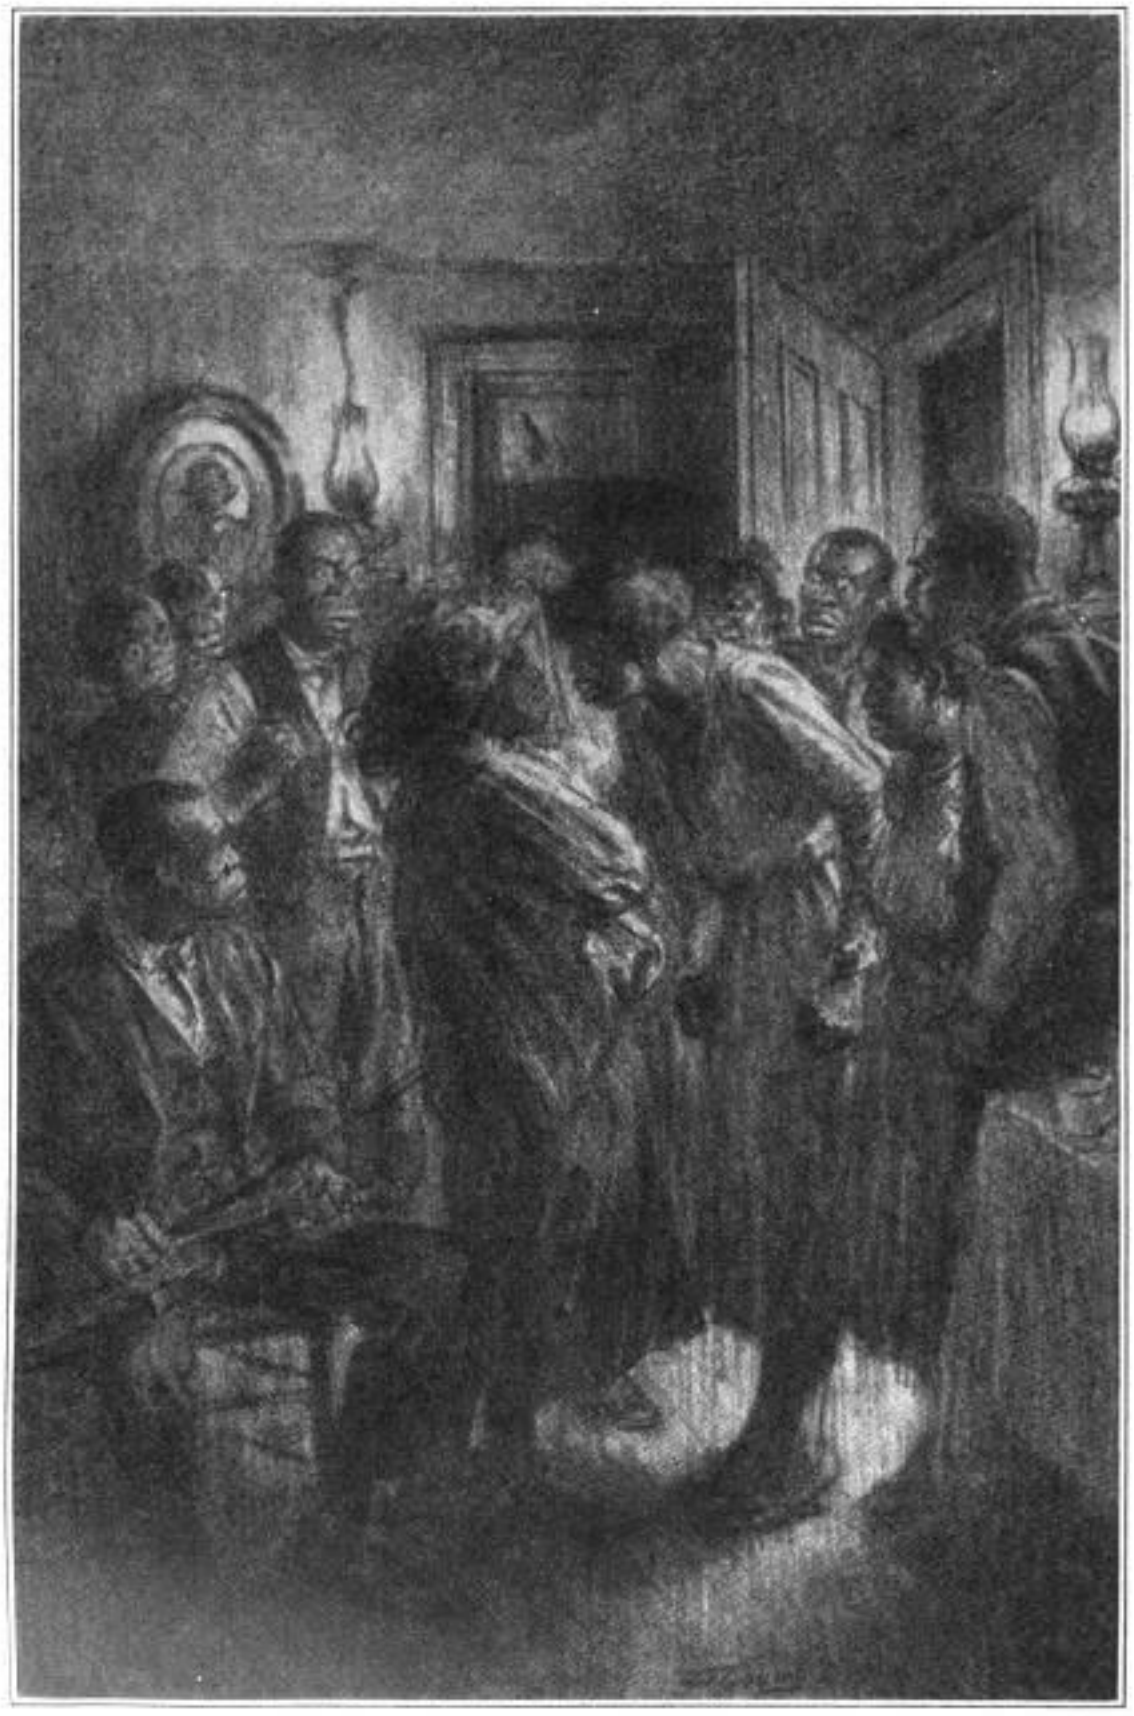
"Demmy, how I know dem neighbors was diggin' dat deep pit fo' dat 'cinerator thing? Las' hund'd yeahs dey hauls garbage. How come dis 'cinerator pit rage so sudden? How come dat pit right whah I aimed to land? Naw, suh! Ol' Lady Luck los' my name, else she wait wid a helpin' han' when I fell. Devil yell, 'Pick yo' podneh!' an' Ol' Man Trouble pick me."

"Serve you right. How come you night prowl anyhow? Some woman some place, seems like to me."

"Demmy, you wrongs me. Ain't no woman. Whut fo' I go prowlin' afteh some woman? Got me single troubles enough now widout hitchin' on any double extry."

"Dat's whut dey all say. I speck to see you hog-tied in madrimony any day now since de word went round you had money."

"Ain't got money. 'Vested it wid dat back-pay man whut is gittin' us army boys de boonus."



"You says. I strains to b'lieve you. Naw, suh, Wilecat. You is sho' backslid on de sin road. All I knows is, once you an' dis goat was upright. Den you gits de night prowls, loses yo' money, like to busts yo' legs gittin' loose f'm whut chased you, an' de goat takes to nibblin' thistles an' pork'pine vines. Yo' misery is richly deserved. Richly deserved an' not half plenty. Heah I stays by de house close, like de town marshal knowed my name, an' all I gits is a added burden to bend my back. You ain't done nothin' 'cept lay down. How dem legs? Ain't you able to wrassle dat jag of fancy washin' de cap'n's wife is sendin' to de French laundry?"

"Speck I kin, Demmy. See kin I."

Groaning plenty with every move, the Wildcat tried his legs and found them better than he wanted them to be. When work crowded down heavy a good pair of sprained legs were pretty handy to have. They had served as a shield between him and hard work for four days, and now it appeared that the time had come when Demmy would be relieved of some of the heavy running round.

"Whuf! Dat right leg feels kinda gentle. Lef' one is able to stan' up. Whah dem clo'es?"

"Time you was askin' whah de work is. You been askin' whah it ain't long enough. I gits de clo'es an' fetches 'em heah. You lugs 'em to de laun'ry. Rise up an' walk."

The Veiled Stranger Plowed Halfway Into the Mass of Perspiring Dancers to Meet the Enraged Magnezia

With this parting admonition the sawed-off Demmy left the woodshed and meandered up the path toward Captain Jack's house, where on the back veranda rested a bundle of feminine wearing apparel whose fabric had seemed too delicate to be intrusted to the rough-and-ready attentions of Captain Jack's Amazon laundress.

The Wildcat stepped gentle as if time had suddenly booned him with a premium of bone spavin. He hobbled to the corner of the woodshed where the mascot goat was trying her teeth on an old rubber boot.

"Lay off dat boot! How come you git yo' face full of thistle bristles? Ain't you learned whut is delicate an' whut ain't? Stan' roun' heah!"

With a length of clothesline in his hand, the Wildcat relayed the abusive and critical language which Demmy had showered down on him during the last four
"Goat—one mo' step on de sin road an' you
hot end of dis rope. Stan' still!"

Lily stood still. About her neck the Wildcat
the thin rope. He fixed it in position with a
loose knots, and presently the mascot was
a complicated net of harness from which trailed
line and a pair of free ends.

"Back up!" Lily was boosted to position
broken-down baby carriage that stood against
the woodshed. "Goat, halt! Quit eatin' dat rope
hangs you wid it!" A
clumsy knots and Lily was
"Dah you is! Dah you
de harness! Ponder on
ponder which is which. I'm

competition. She left the parade in possession of a reputation for being the best laundress on fine work for miles around. "Exclusive," that was her motto. Folks had to be somebody before they attracted her professional attention. Being somebody in her mind meant a commercial rating first of all, no matter what the social register might have to say.

"Folks thinks if things cost twice as much dey's twice as fine. I learn dat when I seed my fust man relish a nickel cigar whut de saloon man put in de ten-cent box. Ise learned lots since den, but it stays de truth. Folks pays big money to be fooled. I fools 'em. Cost mo' to have me wash an' iron a pair of silk stockin's dan whut de stockin's deyselves used to cost. S'clusive—dat's me."

Toward this exclusive establishment, riding herd on the hitched-up mascot goat and leaning lightly on the handle of the baby carriage, limped the Wildcat.

"G'long, Lily, gittin' late. Don't crave to miss no rations, an' dese legs ain't 'quipped wid much speed dis aftehnoon. Git 'long dah!"

"Bla-a-a!" Lily receipted for the message, and then, her mouth still sore from an overindulgence in nettles, she held her lower jaw at a cross between ah and parade rest.

The Wildcat asked his way. "Whah at de Bunny woman live? I means de washlady woman."

"Nex' do' de grocery at de co'neh. De yaller-do' house."

"Lily, git in dat collah! Step wide!"

In front of the yellow-door house the parade halted long enough for the Wildcat to restrain Lily with a few turns of rope around one of the pickets of the fence. This accomplished, he mounted the narrow porch and rapped loudly on the panels of the yellow door. On the instant the lifted edge of an upstairs lace curtain fell to place and the Wildcat heard a patter of slippers on a stairway. Then his ears were seduced with two gentle syllables cooed in the sundown tone of a turtle dove.

"Enter."

"Huh?"

Again the soft voice from within the house, "Please come in."

"Who—me?"

A boy never could be too careful, responding to these trap voices. Maybe nobody had said nothing. Sounded some like spirits. Best thing to do was to step down off the porch where Lily and the laundry were real and tangible. The Wildcat retreated one step to the rear, stumbled and got a red-hot reaction out of his sprained knee.

"Hot dam! Oh, Lawdy an' vinegar wid de shootin' blaze in mah laig! Oof!"

The door opened to emit a blast of guinea-hen language in which the dove accents were completely lost.

"Hush yo' mouth, nigger! Hush yo' yellin' befo' dis lef' wing unkinks a transfer and knocks you f'm heah to whah yo' face is a dimple. Shut up!"

This was something that could be understood.

"Yassum! 'Scuse de ruckus talk. I brung de washin' f'm Cap'n Jack's lady."

"Bring it down de side path. Front do' ain't no laun'ry entrance."

"Yassum!"

Lily was cast loose from her moorings and hazed through the narrow gate and around the house. At the far end of the pathway a wide expanse of clothes-lines, half of them draped with silk and fine linen, met the Wildcat's eye. Laces too delicate to be warped by clothespins lay around in the sunlight, supported on a series of white wood frames a foot from the ground.

"Tie up dat goat an' fetch dat laun'ry inside!"

"Yassum!" Here was a regular industry. No wash lady's establishment had ever been like this. Here was a superior organization, and the boss of it was giving orders. The Wildcat tied Lily to a clothes pole and groaned a little for effect when he stooped over to lift the ten-pound bundle of clothes out of the baby carriage. "Whuf! Dem wounds sho' is ragin'."

"Bring it in dis do'."

"Yassum. Lawdy, but mah wounds pain me!"

"Whut wounds? White man wound you close to a hen house?"

"Mis' Bunny, you flails de mo'tal flesh wid dem words. Dese is wah wounds I 'cumulates back in France."

"In de back, you say? Long time ago, seems like—dat wah."

"Dese is long-time wounds. Bay'nits, pistil shots, cannon balls, shaprel—one an' all I met an' konkered. Lef' me feeble."

The veteran modulated his voice to a tremolo to fit his recital. Inside the kitchen his eyes fell on half a boiled ham, resting at ease on a platter. He resumed his wild recital of his A. E. F. ordeal, winding up with a burst of criticism directed at the mess sergeant of his outfit.

"Boy neveh fed us a-tall. Sold de rations an' drunk hisself to de fo'gettin' point wid de money ev'ey month. Ain't got mo' dan half caught up wid mah rations in goin' on two yeahs steady eatin'. Seems like mah wounds an' dem wah 'flictions lef' me wid de perm'nent craves in mah stummick. Ise a Wilecat fo' ham."

He looked directly and fixedly at the ham.

"Set down 'till I gits you a ham san'wich."

The day was won.

"Woman, whet de blade! Omit out de san'wich part. Don't aim to let no bread clutter up mah neck whilst de ham lasts. Plain ham. Bread I tolerates when dey ain't nuthin' else."

"Ham yo'self whilst I gits de coffee hot."

Half an hour later the ham had sunk without a trace in a dozen cups of coffee.

"Whuff! Magnezia, spec' heaven is a ham island in a coffee lake, wid you wettin' a whetstone whilst I swings de ham knife. Nobles' rations I eveh et!"

"G'long wid yo' plag'in' talk. You sez dat!"

"Ise a bullet fo' ham, whinin' soft an' bitin' heavy. Ain't no mo', is dey? Dat's whut sez! You sho' is de ham-cookin'ist woman Ise eveh knowed!"

"Wilecat, go 'long! You cuts yo' words to de ja
an' us all wimmin gits de same dress."

"Ain't so. Means it. Always thought how grea
was, wid a woman whut really knowed ham cookin'

"Wilecat!"

"Magnezia!"

The Wildcat was slipping and he knew it. He rem
and buzzed loudly in the web.

"Got to be goin' now befo' Cap'n Jack lets go de
houn's."

"How much yo' white folks boon you in wages?

Model 32 Instruction Book

So many Model 32 Hupmobiles are in use today and we have had so many requests for Model 32 Instruction Books, that a new edition has been printed. Owners can secure the book from us at 50c per copy. Production of the Model 32 ceased in 1914—eight years ago.

Proof of Its Sounder Value
Found In the Years Behind It

is not strange that the Hupmobile this ır should be shattering all of its pre- us high sales records.

yers today are scrupulously seeking out ue, particularly among motor cars. ey are giving outspoken and positive ference to products whose worth is iliarly known to everyone.

nearly 14 years people everywhere e been saying good things about Hupmobile.

All Sales Records Are Being Shattered

ywhere it has long been spoken of unusually good car. It has made a ant name for economy and reliability long life.

le who have never owned it, regard host as highly as those who drive it day.

Our January sales this year far outstripped any previous January. February registered another smashing increase.

March not only surpassed February, but registered such vast strides that the record of our largest previous quarter went to pieces.

The quarter's increase over the same period in 1921 was 172 per cent; and April showed a still greater proportionate gain over the first three months of the year.

Hupmobile owners, as a rule, are not one-time buyers. They come back for another Hupmobile. A great proportion of our annual production is regularly taken by those who know how much it means—in savings, in continuous convenience, and in peace of mind—to drive a car like the Hupmobile.

So it was inevitable that in times like these, such a reputation and such a record should stand out sharp and clear, and attract new buyers by the hundreds and the thousands.

Hupmobile Owner-History Foretells Owner-Future

The years of owner-satisfaction back of the Hupmobile are founded on the good qualities which it is proving every day all over the world—real economy, in low upkeep and infrequent repairs; clock-like reliability; surpassing performance; length of life and high re-sale value that are decidedly unusual.

They foretell what the new owner can count upon when he buys a Hupmobile.

(Continued from Page 26)

wringer, twisting through its trajectory, reaped a harvest of lingerie three feet to the right of the goat. Lily, with a look of injured innocence shining virtuously from her eyes, asked one question in goat language before she was lifted high above her banquet table by her master's arms.

"Lily, fo' less dan money you gits sold to de slaughter-house. Dis time you is et yo'self to de edge of yo' grave. Lay dere, varmint, till I axes whah de road to de butcher's!"

The Wildcat slammed the goat down into the baby carriage to which the mascot had so lately been hitched.

"Lay still! Repent an' 'wait de minnit of sacrifice!" He turned to the war-dancing widow. "Magnezia, all I sez fo' de present is words, an' dem words is whut de judge says when de jury sez 'Guilty.' Dis de las' time Lily pesters you wid ——"

The double widow, looking at the cringing form in the baby carriage, was suddenly reminded of the fact that heaven disguises its blessings every so often.

"Wilecat, shower down mercy!" In her mind, superior to her rage, flashed a scheme whose success would substitute the word Marsden for the Bunny part of her name. "Dat goat has et de profits of a year's work, but she didn't know no better. Fo'give de transgressor an' judge not les' ye be penned up wid hoss'thieves. De Lawd gives an' hauls back. Ise only a lone an' downtrod widdah, a clingin' vine wid nobody laborin' in de vineyard; but Ise willin' to fo'get an' fo'give dat li'l' goat."

The nobility of Mis' Bunny's words was all gummed up with sobs and blind gestures. She groped feebly through her tears and encountered the Wildcat's arm.

"Magnezia, dry dem tears. Ain't nuthin' los' but laun'ry."

Sympathy! Quicksand!

Ten seconds later, far from feeble, Magnezia Bunny had embraced the Wildcat in a drowning clinch that felt like a session with a cinnamon bear. In his babble of comforting words the Wildcat had spoken no verbal options, but a moment after his last eloquent and soothing phrases had ceased the widow answered him, and her reply was an acceptance of various unoffered things, including one husband.

"Wilecat, honey, I does. I takes you, betteh or worser. I 'cepts yo' pleadin' fo' mah hand in wedlock. Sho' do, an' to-night at de party us 'nounces our impendin' weddin' festivilies."

Over the widow's shoulder, his hands hanging hopeless and heavy at his side while he breathed with difficulty in the bear-trap clasp of his impetuous fiancée, the Wildcat gulped convulsively at his sudden fate. He batted his eyes. The eye batting slowed down and the lids stayed put, a curtain between the fearful present and a future compared to which the present was a steam-heated paradise. Whichever way he looked he saw a barbed-wire trouble fence too high to be scaled.

"Honey, you is so cold. How come you so calm an' steady when Ise all flustered wid de beatin' of my heart? You deceives me. I bet you is a ol' hand wid de flame of love; bet you could build a June-love bonfire in de April rain. Why is you deceivin' so?"

"Ain't no deceiveh. Tol' you once. When is dese heah weddin' calamities happen you speaks about?"

"'Gagement is broadcasted to-night at Sis' Liza's party. De eleet folks gin'ally holds de weddin' f'm five to seven days afteh dey tells de worl' 'bout de 'gagement. Dis is Monday. 'Nounces to-night an' nex' Monday us gits de preacheh. High noon. Aftehnoon hack drive. Aw, Wilecat, honey! Lawd, how de time do drag!"

The Wildcat saw a temporary out.

"Ain't draggin' now. Release go dem twinin' arms an' I gits back an' 'dorns me wid de blue pants and dem yaller shoes so's folks sees me prancin' when dis 'gagement bizniss is told to-night."

The victim sought freedom that he might be alone in his misery. He squirmed loose, and a moment later, wheeling Lily along at a four-mile pace that indicated a sudden and complete cure of the leg feebles, he was on his way to Captain Jack's woodshed, where Demmy awaited him. He relied on Demmy. He bore down heavy on Demmy, trusting that diminutive genius in this hour of peril.

"Dat boy is little, but his head part is all whale meat, like I tol' him afteh dat prize fight wid dat Haiti boy. Huh! Demmy learn dis Magnezia woman whah to go wid dat hitchin'-bizness talk. Boy git me out of dis like in dat prize fight whah I starts wid one second an' winds up wid ten. Tells Demmy an' lays back whilst he 'ranges me loose f'm dis home-cravin' widdah. When dey is six gallopers in a crap game I gits double-hitched—mebbe. Only two dice now, an' dey is worked to death makin' a livin' fo' me, let alone some lazy manager you is doubled with. Dis heah Demmy 'ranges me free. Tell Demmy how come. Demmy fix it."

He tried to dismiss the subject from his mind and to dwell upon the happy single past instead of his doubtful double future.

The mascot goat, sogged down in the cramped interior of the baby carriage, knowing full well that her stock was under par for the moment, took advantage of a cobbled strip of street to change her bouncing position until her front feet lolled over the front rim of the vehicle. Thereafter, sitting pretty, Lily enjoyed the business of being transported without personal exertion. She voiced her satisfaction in a gentle bleat which served to start another cycle of brooding in the Wildcat's brain.

"Goat, shut yo' face! Heah I is, thinkin' of all dem good times us had in de wah, an' you blats in wid yo' say-so and brings me back to trompled laun'ry an' dat home-cravin' Magnezia. One mo' blaa f'm you an' us goes fust to whah dey sells goats fo' slaughterhouse purposes."

Lily was silent thereafter—silent with a fixed purpose that indicated her understanding of the Wildcat's words. Until she stretched her legs and trotted around in the freedom of the woodshed back of Captain Jack's house no sound cluttered up her face. That she spent the rest of the ride gnawing at a rattan spiral ornamenting the starboard quarter of the baby carriage may have inspired her silence, but this the Wildcat overlooked, attributing her obedience to the perfection of her training.

For once in his life the Wildcat encountered a supper hour filled with a subject more important than rations. It was six o'clock when the return journey ended, and sixty minutes of life and freedom intervened between the foot-loose present and the moment when, at Sis' Eliza's party, his entanglement with the tall and spindlin' Magnezia Bunny would be released to the listening local world.

"Don't crave no suppeh. Craves to tell Demmy—craves to share my woe. Got me a load of grief too heavy fo' one boy. Mebbe Demmy kin lift de heavy end like he always done. Demmy!" No voice answered him. "Demmy, whah at is you?"

Demmy, at the moment, was busy in the house. The Wildcat guessed the truth, and with a brief order to the mascot he walked out of the shed and up the narrow brick pathway to the back steps of Captain Jack's house. Light from the kitchen gleamed through the screened door. Half afraid that some malignant turn of Lady Luck's hand might whisk his helper from the scene at this critical eleventh hour, the Wildcat lifted his despairing gaze to the chair at the kitchen table where the sawed-off Demmy was wont to perform his prodigious feats with food.

Demmy was nowhere to be seen. The chair was empty. Except for the fat cook kneeling before the open oven of the long range there was no one in the kitchen.

"Whah Demmy?" The Wildcat's voice was husky with despair.

"Settin' de table. Whah you been? Git in heah an' git to work. Spec' you let Cap'n Jack eat alone without help. You gits mo' triflin' eve'y day! Git dem plates in de hot oven. Git yo' white coat befo' ——"

"Woman, git plassified! Lissen to whut I ——"

The Wildcat was interrupted by the entrance of Demmy. He broke off his oration to the cook and in three steps was at the side of the diminutive brunet.

"Demmy, Ise in trouble—bad. Ain't no worse kind." His whisper rose to a croak. "Ise got ketched—like you said. Come out heah wid me whilst I tells you."

Demmy sensed the emergency, and the pair retreated into the night, followed by the cook's loud statements of what she aimed to do to both of them.

"Stay calm, woman! Us comes back in no time."

"Less you does I scalds you red wid dis bilin' kittle an' ——"

"Demmy, don't lissen to dat woman. Don't neveh lissen to no woman. Just like you said, de you-an'-me talk begins at de washlady's, an' us gits 'gaged to git hitched. Party to-night, an' Magnezia tells de world. All come f'm dat goat. Lily et me into dis woe. Preacheh puffo'ms his duty nex' week—den Ise done!"

Demmy was silent for ten seconds, but his twisting face was an index of the intensity of his mental effort.

"Dis takes speed, Wilecat. Leave me think some mo'!"

Another forty seconds of brain work, with closed eyes. Consecutive steps of the tentative solution were ticked off on the fingers of Demmy's left hand. He opened his eyes.

"Might work. Ain't sayin'—sho' risky fo' me. Seems like eve'ything I does is risky. Git out of my way! You keep dat cook woman in de kitchen an' don't let her git neah her own room till after I gits back. Wait de table fo' Cap'n Jack. Meets you in de woodshed at eight o'clock wid de news. Keep dat cook in de kitchen—dat's all."

The Wildcat's imperfect service at Captain Jack's table that night and his various sudden attacks of dish trembles served to keep the cook in the kitchen. When the Wildcat dropped a platter on which was arranged a squad of candied sweet potatoes the cook's apprehensive mood gave way to one of undiluted abuse. From then on she was too busy showering down vitriolic language on the offender's bowed head to think about leaving the kitchen. On the part of the victim, he was too far away mentally to be affected by anything the cook might say, except that now and then at the apex of her eloquent flights he stored away a choice phrase for use on the mascot goat when the time for real language should be ripe. In his dazed mind the Wildcat sought to follow the course and actions of the absent Demmy, striving to picture each succeeding of the night's drama until the curtain might fall crown of victory resting on Demmy's brow. time, at the point where Demmy encountered Mi nezia Bunny, the picture faded and in its stead tableau of retreat. The retreater was the Wildcat closely pursued by a galloping and skinny whose upraised hand waved a meat ax labeled Marsden—Rush."

At the meat-ax stage he batted his eyes and head in a convulsive attempt to clear his brain vision of disaster. At one of these shaking points lided with the framing of the pantry door and candied sweet potatoes.

"Neveh mind, dey ain't lost. I eats dem sweeps up dem yams."

"You eats dem yams!" Hatred and scorn the accented you. "Sweeps dem yams up, Bam! The Wildcat dodged a hurled stove lid, encounter the mop end of a swinging mop. mud! Git dis hot bread to dat table befo' I per an' kills me a fumblin' fool!"

"Ise gwine! Yassum!"

Through the craven's mind flitted the unless the night marked Demmy's success would be one long business of dodging stove thought tamed him. Bitter replies were before they were uttered. For the time normally he might have exchanged lamblike and humble to a degree that stroy the masterful control and fireside had established in the home circle.

"Ise hustlin', honey. Gimme dat bread!"

"Don't honey me! Git goin' befo' I f'm yo' gizzard!"

"Yassum! I is!"

He was, and while the Wildcat was jumps ahead of the cook's slightest wish ning a personal race with Old Man Trouble.

Before he had left Captain Jack's cuted a quick piece of prowling and room which was normally occupied by under each arm a loose and obstinate raiment. In the sanctuary of the down his bundles. Then, startled by far corner of his retreat, he turned to phorescent green eyes.

"Whuf!" He controlled his feet. gits back I beats you to death fo' look come yo' eyes so green?"

Lily answered with an apology for ghost; but Demmy, busy with a deaf to the goat's explanations. business than listening to a goat dim light of the lantern he stooped yellow waist adorned with diagonal minous checked shirt, gaudy with orange, came next, followed by a hat from which exploded a pair of like of which no modest ostrich yellow veil netted in the open spaces sprawling purple spiders, and finally Demmy lashed the sash about his folds of the flowing skirt under the place with a square knot that as big as a dishpan.

"Sho' is awkward! Feels like a fish

Without fully realizing it at the under a suspicion which resembled a fish in a net as did not have fins and gills. draped a ponderous plush cloak. forward to the battlefield! the lantern, showered down was on his way.

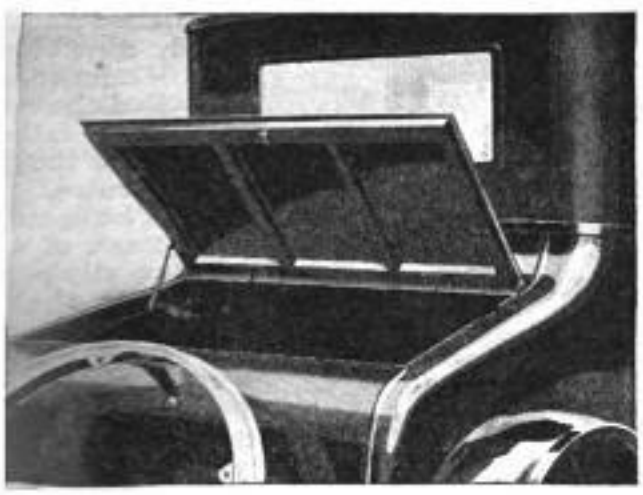
CHEVROLET



for Economical Transportation

Built for Better Salesmen

$720

f. o. b. Flint, Michigan

Price subject to change without advance notice

The Commodious Rear Compartment

Chevrolet Utility Coupé

Business houses are coming to realize that their salesmen should have automotive equipment on a par with the reputation of the house. The old idea of buying strictly on a price basis is being discarded and selling staff equipment is now bought with an eye to its own effect on sales.

CHEVROLET UTILITY COUPE is offered as the most efficient automobile for the purpose on the market.

It is also suitable for professional and business men.

It has a high-grade, single seat Fisher Body with black finish, gray whipcord upholstery, plate glass windows, ventilating windshields, and extra wide doors.

The chassis is the famous New Superior Model Chevrolet, strong, powerful, dependable, economical.

Full modern equipment, including cord tires and legal headlight lenses.

The rear compartment contains more than 14 cu. ft. It will hold a 36-inch steamer trunk and still have ample space for merchandise, advertising matter, etc.

We urge every salesman, purchasing agent, sales manager and professional man to call at any Chevrolet showroom and inspect this car, or phone dealer for a demonstration.

CHEVROLET MOTOR COMPANY

DIVISION OF GENERAL MOTORS CORPORATION, DETROIT, MICHIGAN

World's largest manufacturer of Standard, *Fully Equipped* Automobiles

5000 Dealers and Service Stations throughout the world

Applications will be considered from high-grade dealers in territory not adequately covered

A SENSATIONAL DISCLOSUR

By William Hamilton Osborne

ILLUSTRATED BY HUBERT MATHEWS

"I Want You to Think of Just One Thing, Cal," Said Lucy—"the Pockets of the People"

THE catastrophe was wholly unforeseen. Some three weeks before his scheduled departure for the national convention Maj. Mortimer G. Lane left River City, and with his daughter Lucy at his side, with his flashy red roadster clutched loosely in one hand, he corkscrewed up the side of Peveril Peak Mountain until he reached his summer home, Hawks Nest—claimed by the major's dearest enemies to be well named—an aerie clinging to the side of solid rock. Let into the wide wall of its living room was a plate-glass observation window commanding an unobstructed view of all the world that lay beneath. To Major Lane this observation window was as the telescopic eye of a bird that circles high in air.

The major badly needed rest. More, he had to have perspective. Seated in his observation window at Hawks Nest, he could think. There, toward the southeast, some fifty miles away, lay Wall Street. Toward the south, five times as far again, lay Washington, D. C. In his mind's eye Major Lane could see them; he could feel their subtle pull.

Seated there the major drew a deep, deep sigh of victorious relief. By gosh, one fight was over. His delegates were picked—hand picked by him—and every mother's son of 'em unpledged. Unpledged, that is, except to do what Major Lane would tell them, three weeks from now, to do.

The telephone bell rang. Lucy started violently; weeks after the tragedy she recalled its ominous tone. Its summons did not disturb the major in the least. There was but one wire at Hawks Nest—a private wire connecting this retreat with the major's private office at headquarters some forty miles away.

"It will be Cal Ingersoll," said the major, taking his time to light a mild cigar.

Lucy answered the telephone; she flung a young woman's badinage over the wire. At the other end was Cal. She told her father so.

"Cal's terribly worried," she whispered to the major; "I can tell it by his voice."

Her anxious note brought the major up all standing. He caught the receiver from her hand.

"Cal," he grunted into the transmitter, "I told you not—unless ——"

Cal's young voice, tremulous with the excitement of the moment, shouted the unwelcome message into the major's ear.

"Worse than unless!" cried Cal over the wire. "Your Mongol friend is going to run for President."

Major Lane stiffened with momentary shock. "Say that again—and say it slow," he yelled.

Cal said it again. "You see," said Cal, "he waited until your back was turned; that's the way he works."

Major Lane was silent. He was letting it soak in.

Cal's voice was insistent. "Instructions?" he demanded.

"None," roared the major. "Get this, Cal. I'll be in River City in an even hour from now."

He jerked the receiver violently into place. He turned to his daughter. She was standing quivering by his side.

"Lucy," he cried, gone tremulous with rage, "there's not an instant to be lost. That wall-eyed Chinaman is going to run for President of the United States."

Lucy indulged in no woman's protest. She stood ready, anxious, willing. She knew there was no time to lose. He was her father's archenemy, this wall-eyed Chinaman. He was something else. To her this wall-eyed Chinaman once had been an idol, an ideal. Once he had been to her as he now was to the people. But long ago she had discovered that her idol's feet were clay, that the rest of him was mud. Lucy didn't hate him as her father did—she detested him; all River County knew that she regarded him with undisguised contempt.

"Let's go," she echoed.

And they went. The red roadster took the narrow treacherous mountain path like a wildcat; she had a wildcat at her wheel. Maj. Mortimer G. Lane, in spite of a certain physical deficiency, was the speediest of speed maniacs. His red roadster and his wind-tossed shock of snow-white hair were infamous on three thousand miles of commonwealth highway. Nothing ever happened, it is true. The major was violating daily every traffic regulation known to God and man. This time he went the limit—there was no time to spare. The wall-eyed Chinaman was at the other end of a forty-mile run. The major threw discretion to the winds. His usual luck was with him. He reached the foot of the mountain safely. He swung very swiftly, on two wheels, into the Medway Turnpike. He was fairly on his way.

It was barely dusk when they rounded a sharp turn and caught sight of the khaki uniform of a state motor cop. The state motor cop, very much on the qui vive, saw them first. He leaped into [illegible] dle and started in pur[illegible]

il consumption—because the t oil does not "use up" as as incorrect or poor qual-

repair bills—because the correct oil protects the moving parts from wear. 50% of all engine troubles are due to faulty lubrication.

Add to these typical savings the satisfaction of driving a car that is delivering full power and for which the yearly maintenance costs are only nominal—and then you realize that correct oil is not an expense, but a real saving.

Not a gasoline by-product

Nine out of ten lubricating oils on the market are simply by-products in the manufacture of gasoline.

Gargoyle Mobiloil is *not* a by-product.

It is produced by lubrication specialists who are recognized the world over as leaders in lubricating practice. Gargoyle Mobiloil is manufactured from crude oil chosen for its *lubricating* quality—not for its gasoline content. Gargoyle Mobiloil is manufactured by processes designed to bring out the highest *lubricating* value—not the greatest gallonage of gasoline.

Warning:

Don't be misled by some similar sounding name. Look on the container for the correct name *Mobiloil* (not Mobile) and for the red Gargoyle.

Chart of Recommendations

(Abbreviated Edition)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger and commercial cars are specified in the Chart below.

How to Read the Chart:
A means Gargoyle Mobiloil "A"
B means Gargoyle Mobiloil "B"
BB means Gargoyle Mobiloil "BB"
E means Gargoyle Mobiloil "E"
Arc means Gargoyle Mobiloil Arctic

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures may be experienced.

This Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

Light cuts costs—

that means lower prices to you

THE PRICES you pay for merchandise include the merchant's costs of doing business, plus his legitimate profit. The lower he can keep his costs the better the values he can offer you.

"Progressive merchants today are cutting their costs with Light," says C. J. Potter, Store Service Manager of the *Dry Goods Economist.*

"1. A well lighted store window draws more customers inside. That means a quicker turnover of merchandise and permits a smaller margin of profit.

"2. Proper store lighting makes it easier for a customer to select satisfactory goods. That means a saving in returns and less sampling.

"3. Good light saves time in making a sale. Four salesmen can, with the aid of Light, do the work of five. That means a saving in salaries.

"4. Good light is the shoplifter's foe. That means smaller loss by theft.

"5. Good light increases good will and quality reputation."

* * * * *

"Here you will find good values, progressive methods, courteous service"—that's the message of a well lighted store; and in many of the best known stores of the country that message is carried by Edison MAZDA Lamps.

To Merchants:

Our Lighting Service Engineers have prepared three practical guides covering the lighting of the following:

Show Windows and Show Cases.

Large Dry Goods and Department Stores.

Small Stores.

Your request, mailed to the Edison Lamp Works, Harrison, N.J., will bring you the proper guide or guides.

Your Edison MAZDA Lamp Agent can supply you with the proper lamps.

The major lighted a cigar and took a puff or two.

"I'm here to make you governor," said Major Lane.

Jonathan Swift's poker face became momentarily distorted with genuine surprise.

"To make—me—governor!" he gasped.

The shock was swift, severe; but plainly pleasurable. But the editor made a neat and quick recover. Then he smiled that now historic, damnably disconcerting smile of his.

"Major Lane," returned the editor frigidly, "it is very clear to me that you're here to buy me off."

Major Lane snorted in derision. "Mr. Swift," he said firmly, "make no mistake. You overestimate the importance of your opposition to me. I've been the target for vituperation all my political life. You can keep on smashing me for twenty years."

The editor's eyes glowed as they always glowed when he took in hand his pen. "Twenty years," echoed Jonathan Swift loftily. "I'll keep on for forty years, without fear, without reward or hope thereof, if I can crush the thing you stand for."

The girl's face shone, the girl's eyes danced. She was happy now. These were the phrases she had come so far to hear.

Without fear, without reward or hope thereof—these were the stalwart editorial sentences that thrilled her.

"Go as far as you like," retorted the major with a grin.

Jonathan Swift came off his high horse; he saw he wasn't getting anywhere at all.

"At any rate," he went on slowly, for he, too, was puzzled, "I can sense your underlying motive."

"It's more than a motive," retorted Major Lane. "I've got a hunch. I got it from my daughter Lucy here. She picks winners for me, Mr. Swift. She knows something about men that I don't know. Instinct—somehow she's always got her finger on the public pulse. She knows, somehow, when the styles are going to change. She eats up everything you write. She's listened to your speeches. She's dinned you into my ears morning, noon and night. She says the public as a mass has become intelligent. She says it will listen to argument, to theory, to reason. She's hypnotized me into believing that the time is ripe."

"Ripe—for what?" interposed the editor eagerly.

"For you," returned the major with enthusiasm. "Dinged if I don't believe she's right! If you tell it to 'em straight, dinged if I don't think the people will believe that you're an honest man."

"I am an honest man!" cried Jonathan Swift, the white light of holiness upon his face.

Major Lane, of River County, slapped his thigh. "Gosh, Swift," he cried, "that's what I'm looking for! I want to see a man like you tear this state wide open—on a party platform—telling the proletariat that you're an honest man. Telling 'em that you're the only honest man."

Jonathan Swift thought it over for a moment. A cynical smile played round his mouth. "Major Lane," he nodded easily, "from what you say I gather that the Republican Party in this state is driven to put forth a man like me."

"Shucks!" cried the major. "The Republican Party in this state can pick any man for governor and win. You know that. We can shove through any man we pick. This is a personal matter with me. I take pride in filling offices with crackajacks. I give the people a run for their money; I hand 'em the kind of officeholders that they ought to have. If I didn't I couldn't keep my job. But it isn't that. I want to pick this man myself. I want to discover him—for practical political purposes—for a practical political career. I want to make you governor—and more: I, personally, want to make a man."

Jonathan Swift was forced to believe the major. Here was no bluff, no chicanery. The major had laid his cards upon the table. His great ambition as a political manager was at the bottom of it all. The editor of the Dalton Daily Times had had a chip on his shoulder. He brushed it off. But he still retained his mask. One thing was to him absolutely clear: Here was his only opportunity. He might write himself black in the face with scathing editorials; he could die of writer's cramp. But never in this life would he have this golden chance again.

He cast the die. Without the flicker of an eyelid he got down to the merits of the matter.

"Major Lane," he said, "let me understand your proposition. In the event of your electing me governor of this state, just what—would you expect?"

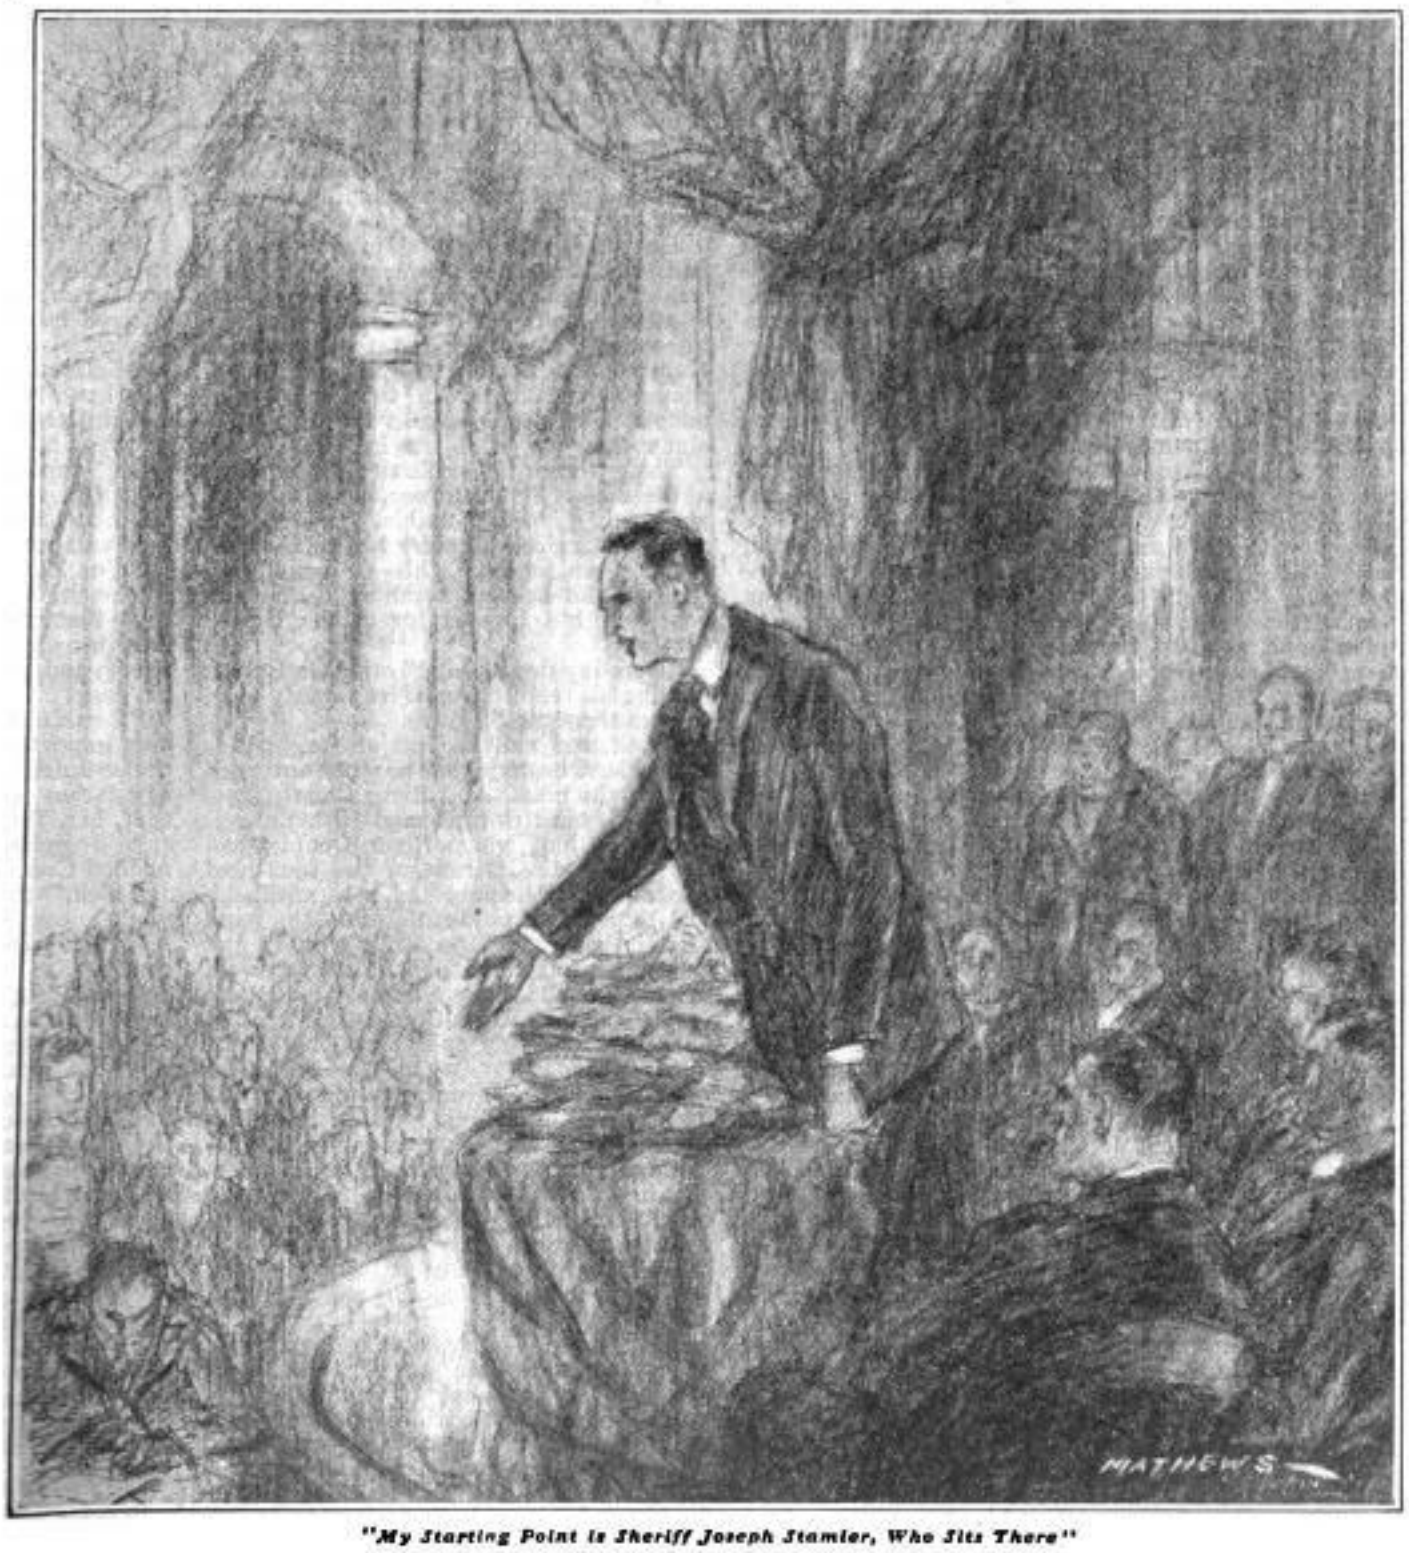
"That's commonsense," returned the major, "and I'll meet you fair and square. In the first place, when you run you'll be expected to subscribe to the party platform in this state. In the second place, let me remind you that as River County votes, so votes the state. River County will elect you governor. I must remind you, too, that I am River County. When you are governor I should expect to have a voice in the matter of your appointments in the state."

"A—controlling voice?" queried the editor.

"Well—yes," returned the major, blinking.

Jonathan Swift rose—rose to his full height. His was an artistic, striking figure; he was patrician in appearance.

For ten full minutes he paced up and down the floor, as a tiger cat might pace. As suddenly as he had risen he returned to his desk. He faced the major and looked him squarely in the eye.



"I accept your terms," he said.

In these plain, brief, simple words the deal was closed. There could be no doubt about conditions—on Jonathan Swift's part this thing meant absolute surrender.

On the way back to River City the major chuckled to himself.

"They're all alike," he said to Lucy. "By gosh, I knew he'd come to heel."

Lucy's face was white with shock. "Father," she gasped forlornly, as though this disgrace were

"My Starting Point Is Sheriff Joseph Stamler, Who Sits There"

Digitized by Google

all her own, "the man's a traitor! He's a renegade! A fraud!"

The major kept on chuckling. "He's a Chinaman," he responded cheerfully; "but you were right, Lucy. The man's a winner. He's a great man as he stands. But by gosh, I'll make him a greater man than he ever hoped to be."

The major knew his business. He started out to make Swift governor. The Old Guard protested, stormed. Here was a candidate with no following; a man who couldn't run for constable and get away with it. Major Lane, of River County, let them rave. Then he got down to cases; he got votes. Votes were Major Lane's ruling passion. The secret of his tremendous power lay in the fact that he knew how to get out the vote. He rounded up all his committeemen who particularly owed him favors—all who could be persuaded, bullied, hypnotized. And in the final showdown, in the face of all the bluster and the storm of protest, the Republican county committee of River County indorsed this candidate for governor—because the major had the votes.

This was only half the battle. There remained the tussle with the state committee. River County held the whip hand, it is true. Still, there was a horde of disappointed candidates to be considered. The major made no attempt to placate any of these men or any of their friends. He contented himself with buttonholing single members of committees, one at a time; letting them understand very clearly what would happen to them, one by one, if they failed to vote right. He broke up a powerful opposition into its component parts. One by one the major gobbled up the parts.

And then he put his man upon the stump. Jonathan Swift was an orator of parts. The major's candidate stormed up and down the state, appealing to the proletariat, flaunting his integrity, his own unblemished character in the face of the electorate in such a raw and flagrant manner that Lucy almost hid her head for very shame. With the steady, practiced hand of Major Lane, of River County, directing every move, with the tremendous power of the Republican organization behind him, this candidate for governor proclaimed the fact, day after day, that he was the people's champion, only the people's champion; that if elected he would be no party's man and no man's man. He kept Major Lane chuckling at his convincing chicanery. He was elected by an overwhelming majority; elected by an enthusiastic populace that regarded him as the great white hope.

As a matter of fact Jonathan Swift was elected governor because Major Lane, of River County, from the start to the finish of his fight, man by man, ballot by ballot, had gotten out the vote.

When Jonathan Swift went to bed at five-thirty on the morning succeeding the election with the big returns all in, he knew what ten thousand politicians knew—that he had been nominated and elected solely by a man and a machine. For years last past he had blackguarded that man and that machine for nefarious practices that smelled to heaven. During his campaign for governor Jonathan Swift had taken advantage of all the nefarious practices, of all the questionable operations of that man and that machine. They had done him yeoman's service. Without them Jonathan Swift would still have been merely the first-class editor of a second-class newspaper in a third-class city of the state. But for the grace of Major Lane, of River County, he would have been, forever and a day, politically a cipher.

What was the answer? Politically speaking, there was but one. It was for him now to carry out to the letter the terms of his agreement with that party and that man. He did it as no man had ever done the thing before. Once he had taken his oath of office, once he had installed himself in the gubernatorial chair, Governor Jonathan Swift paid them back in his own sweet way. He did it with three distinctive, comprehensive gestures. His first act was to sweep the Republican state platform into the discard. His next was to turn his back on River County. His third was to kick Major Lane, of River County—figuratively speaking—swiftly, squarely in the face.

In the light of subsequent events it became clear that there was but one reason for this action on the governor's part. He would have no further use for the ladder by means of which he had scaled the heights. He was the man of the hour. He had ordained himself to be the autocrat of the people's breakfast table. He had arrived.

Confronted with this outrage the major's white hair turned whiter yet; the major's heart stood still.

"The yellow—wall-eyed—Chinaman!" gasped the major in fine frenzy.

He was flabbergasted; he knew not what to do. In the history of state politics this thing had never happened; there was no precedent to go by. There was no formula to follow. Governor Jonathan Swift, with a turn of the wrist, with a flick of the forefinger, had committed the unspeakable, unpardonable crime; he was guilty of the basest of base political ingratitude.

Major Lane had been responsible for the catastrophe. By his own act in standing sponsor for this wall-eyed Chinaman he had robbed River County of the power and the glory that were hers. The Republican machine in River County was a wreck. For the first time in his career the major was a fizzle. His own committeemen, gnashing their teeth, at first denounced him. Then they derided him.

It was their derision that brought him to himself: that and his daughter Lucy Lane. Lucy's one-time idol was built of yellow mud. He had never been anything but yellow mud. She knew it now. Of the two, her father was by far the better man; of the two, this Jonathan Swift was by far the baser politician.

It was Lucy's ire that roused once more the major's fighting blood. Her anger and offense, the blazing wrath in Lucy's eyes, strengthened him, stiffened his backbone. With the laughter of his own people ringing in his ears he called his clans together. He hoped to face them down—to smother insubordination, to quell incipient mutiny. Mutiny was justified. The master of the ship had scuttled her; his crew felt it had the right to make him walk the plank.

The major called his special meeting of the county committee, called it while the fit was on him. From the start the meeting was a riot. The major's strident voice could not be heard.

Then something happened. The major's daughter Lucy entered the arena of events. She glided swiftly past the doorkeepers; she sped swiftly up a side aisle of the committee room, bent for one instant over the shoulder of Jack Dovell, the committee's secretary. She shouted something in his ear. Jack started up; with his expressive forefinger beckoned to one of the major's staunch supporters. That member sprang to Lucy's standard, led her to the rostrum and held up his hand.

His motion was unnecessary; the presence of the girl occasioned instant silence. The riot died. This irregularity interested the onlookers.

"I move," nodded the friendly member to the chairman, "that this young lady be accorded the privilege of the floor."

The motion was immediately seconded, wonderingly passed. Lucy seized the opportunity. And while Jack Dovell took down in stenographic notes her statement she told the story, word for word, of the base compact made between Major Lane and Jonathan Swift in Dalton some seven months before.

"I have never forgotten that conversation," exclaimed Lucy. "I shall take the witness stand and tell it at any time. I am telling you the truth."

She didn't have to assure them. Her face, her voice, her manner carried conviction. They had half doubted the major, but her corroboration clinched his account of the affair. When she had finished her story she stood, uncertain for a moment.

"Can I speak a moment more?" she asked.

"Go on," cried friendly voices.

Lucy went on falteringly, yet fearlessly. She had come there, not to help her father but to let them know what kind of man this man Jonathan Swift was. She had worshiped at his shrine; she had a schoolgirl's great ideals; she told them so. And his ideals had fitted in with hers. And now—this. And it was time to let the people know.

The people knew. This kind of thing was news—Jack Dovell scattered his flimsy carbon copies broadcast. The press ate it up. They did more than that—they clustered about the governor's desk in the governor's *sanctum sanctorum* in the state house, and exhibited to him Lucy Lane's statement. The governor declined to look. In fact he had taken a leaf out of Major Lane's book. He refused to read anything derogatory to himself; it crimped his form.

"Gentlemen," he told them, "my record as the people's governor of this state will speak for itself. Keep your eyes on me. For the people's sake I am about to drive Wall Street from our midst."

He did not deny the story that Lucy Lane had told the Republican county committee on that night. But every time it was brought to his attention a cynical smile played about the corners of his mouth. His face was as the face of a cat that had swallowed a canary. At any rate, he had done for the canary. Almost done for it, but not quite; for Lucy Lane's story had accomplished one glorious result on that committee-meeting night. The instant she had finished, a friendly member sprang to his feet and moved a vote of confidence in Major Lane. The motion was seconded by twenty friendly voices, was immediately put and carried. To clear the air and clarify the situation the vote of confidence was made unanimous. No man, however great his acumen, it was agreed, could have foreseen the treachery of the governor.

Major Lane, his feet hobbled, it is true, still retained his grip on River County. Almost he came once more into his own.

Three years of the governor's four-year term passed eventfully. During those three years Governor Jonathan Swift instituted popular reforms to his heart's content; he played to the galleries to the top of his bent. But the major wasn't worried, now that the end was in sight. He had seen reformers come; he had seen reformers go. And he made up his mind firmly that this man was to go. The major once more girded up his loins, once more prepared for a campaign for governor. Unfortunately for himself the major failed to give his enemy all the credit that was due. The governor had spent sleepless nights—not tossing in his bed. In his political laboratory he had spent his sleepless nights. With a scientific stickpin he had impaled the astral body of the major; had dissected him, had found him good. He had learned his tricks and manners, was making them his own. He did other things; he spent his time annihilating a machine, scrapping it. Then he built it up afresh. It was a new machine, but it was in no sense automatic. It needed a highly specialized engineer to run it. That engineer was Jonathan Swift; as a matter of fact, he was the machine itself.

During all this careful preparation he had learned one vital principle. This also was a leaf taken from the major's book. Jonathan Swift imbued himself with the importance of getting out the vote. He realized that a state majority of fifteen thousand meant fifteen thousand single ballots. The people must vote one by one and vote right; or all was lost.

The governor bided his time. Suddenly, at the close of his third year, he thrust forth his hand; lightning flashed from it. He raised his voice; thunder bellowed forth. A bolt from the blue, this—he announced that he had become a candidate, not for governor, but for senator of the United States.

"Over my dead body!" cried the major, gritting his teeth. "As River County goes, so goes the state."

Tooth and nail the major fought this renegade. The major left no stone unturned to beat the man. And River County, too, was with him; it was mad with hunger. For three long years River County had not been fed. Patronage, the food and drink of the machine, had been withheld, and by a single powerful hand—the hand of Jonathan Swift. So River County and the major fought; fought, alas, too well. When the battle smoke had cleared it was very plain that River County had smitten Jonathan Swift hip and thigh. No doubt about that. But when the vote was counted and all returns were in, it was discovered, unfortunately, that more Republican ballots had been cast in River County than there were men and women, cats and dogs in its confines. Major Lane and River County for once had overreached themselves.

And all to no purpose. The major's ready slogan was as a hissing and a byword now.

"As River County goes, so goes the state," had once been gospel. Now it was not even apochrypha. It was piffle. For in this instance the state went as River County didn't go. The state, by a small but very sure majority, wrapped the senatorial toga about the lean form of Jonathan Swift. Jonathan Swift thrust his right hand and his long, lean, gristly nose into Federal affairs. With both feet he [illegible] the arena of national events.

The River County vote was [illegible] a local scandal. It caused a [illegible] snigger, a nation-wide chuckle. [illegible] elect Swift shook his shoulders, [illegible] long teeth, indulged himself in a [illegible] laugh, silent, long drawn out. "[illegible] friend Major Lane is in a hole."

Major Lane was in a hole. He [illegible] hole of his own digging. The River [illegible] prosecutor was a Swift appointee. [illegible] prosecutor here was too flagrant a [illegible] of law to be ignored. A wiser man [illegible] tioning under a less venomous leader [illegible] have let the matter drop. Major [illegible] politically, was dying. It would be [illegible] well to let him die. Not so.

"Crush him," commanded the [illegible] elect.

With this ferocious end in [illegible] county prosecutor called into his [illegible] office his first assistant. Upon the [illegible] ders of this first assistant rested the [illegible] of the prosecutor's office. The [illegible] was a corporation lawyer, with [illegible] private practice of his own. He [illegible] ford to draw his salary, but he [illegible] afford to do the prosecutor's work. [illegible] tried the big, the flashy cases; [illegible] on the careful preparation of his [illegible] ant. This assistant was a young [illegible] County lawyer of some prominence [illegible] pute—with a record that was [illegible] name of this assistant was Calvin [illegible] soll. He was known to his intimates [illegible]

Cal was a thoroughgoing Jeffersonian [illegible] man. Imbued with the great [illegible] lished sentiments, Cal set his face [illegible] political organizations. He hated [illegible] publican machine in River County [illegible]

His chief, the county prosecutor, [illegible] the first step. He strode into the [illegible] chambers of a local judge, also [illegible] appointee. In his hand the prosecutor [illegible] a list of Jonathan Swift men. [illegible] scratch of the pen the court could [illegible] this list. The court called in his [illegible] handed him the list.

"Hand this to the sheriff," [illegible] manded. "Tell him those are [illegible] of the special grand jury to be [illegible]

On the first Monday of this [illegible] fairly chosen body met in solemn [illegible] and indicted Maj. Mortimer G. [illegible] Cal Ingersoll enthusiastically [illegible] case for trial.

When the scheduled date for [illegible] month away something happened. [illegible] prosecutor, winking the other [illegible] ushered into Cal's office a young [illegible] whom Cal had never seen.

"Cal," said the prosecutor, "[illegible] lady has a bone to pick with you."

Cal placed a chair for his [illegible]

"I'm Major Lane's daughter [illegible] Lane," explained the girl.

Cal, flustered, rose once more [illegible] His heart was in his throat. [illegible] didn't know which way to turn.

"You know, I'm sorry," she [illegible]

The girl held up her hand; [illegible] thus that no apology was [illegible] drew her chair closer, faced Cal [illegible] iously, and placed a well-rounded [illegible] his desk.

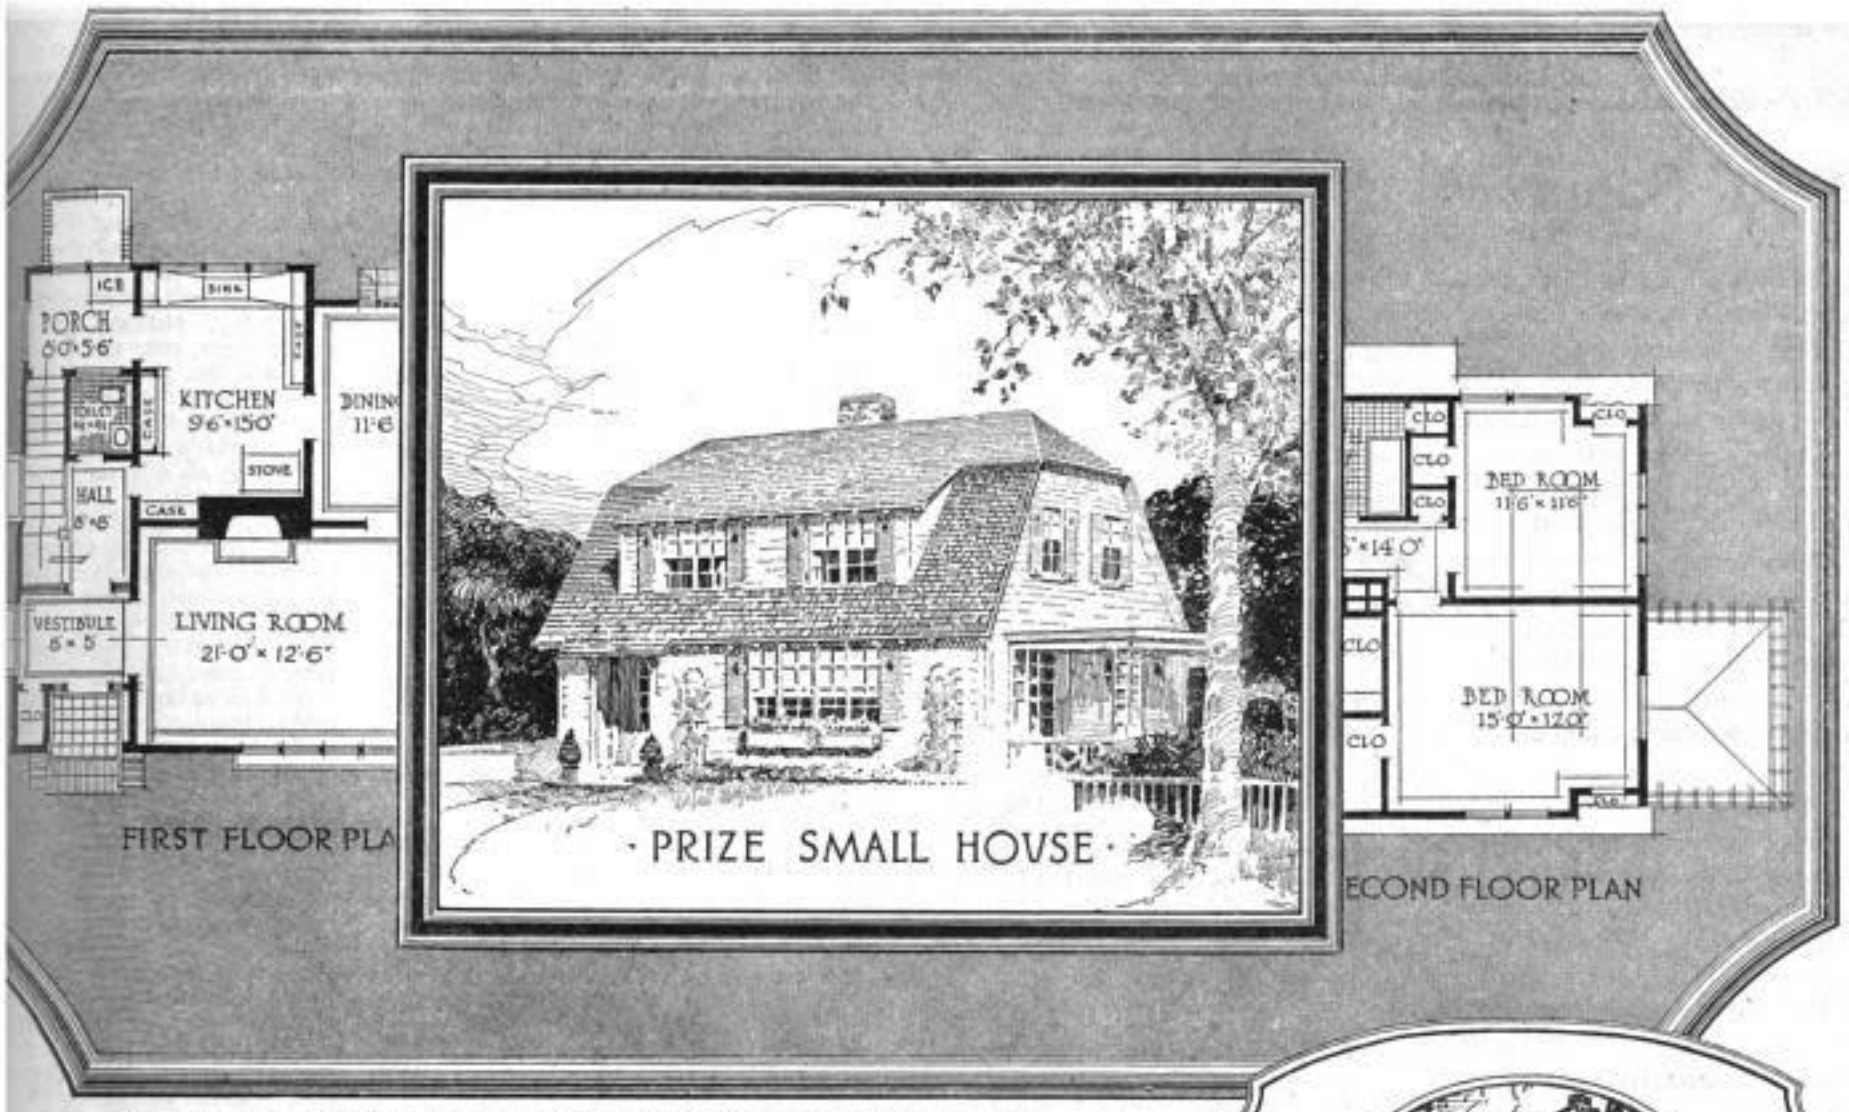
"I can't tell you," she [illegible] very important it is to me to [illegible] understand that I'm just [illegible] My father doesn't know. [illegible] that, Mr. Ingersoll."

"I'll believe anything you [illegible] nodded Cal. "Go on."

"Well," said Lucy Lane [illegible] don't know just how to go [illegible]

"Take your time, Miss Lane," [illegible] gently.

He swung about in his swivel [illegible] looked out of the window [illegible] composed herself. She felt instinctively [illegible] this man was one of her own [illegible] ing that, her fear slipped from [illegible] looking out of the window, [illegible] the hour that had made him [illegible] cutor; cursed all the circumstances [illegible] and small, that had compelled [illegible] a girl like this one instantly [illegible] was no help for it; he had [illegible] form—a duty toward society [illegible] chief, and, more than all, [illegible] leader, Jonathan Swift.



"I know," said the girl [illegible] speaking to herself; "I have [illegible] worshiper myself."

Cal started. She had read [illegible] thoughts. Somehow or other [illegible] lowed the train of his mental [illegible] step.

"Oh!" cried Cal, flustered [illegible]

Jim Henry's Column

99% Sales

One of the first great truths I learned in selling was that a 99% sale was not productive of commissions.

Selling is like a bull fight, the preliminaries of which are spectacular and exciting but don't mean anything. The whole show is really concentrated in one quick thrust with a short sword.

Now, I am a pretty fast worker when it comes to closing a sale with a man I can talk to, but I am frank to admit that this job of giving absent treatment to a couple of million men every week presents difficulties which I don't understand.

Take your own case as an example. Haven't you, once or twice, felt yourself weakening after reading one of my obviously sincere statements regarding the amazing virtue of Mennen Shaving Cream? Hasn't it come to you in a flash that I really must have a great product to believe in it so fully? Haven't you firmly resolved to give Mennen's a trial?

That was a 99% sale. But have you bought?

The secret about selling is that the buyer supplies the 1% which brings the sale up to par. All I can do is to raise a doubt in your mind—to make you wonder whether you are missing a lot of great shaves by failing to learn about Mennen's.

My sales are all closed in a bathroom. I count you a customer only when you have actually built up a Mennen lather and have slipped your razor through the softest, tamest beard you ever mowed.

So, please send 10 cents for my demonstrator tube of Mennen Shaving Cream. I may show a generous streak and throw in a sample of Mennen Talcum for Men—a strictly male powder for after shaving and bathing. It doesn't show.

Jim Henry

(Continued from Page 34)

The girl nodded. "I was thinking of him too," she said.

"Your father?" returned Cal.

She shook her head. "The other man," she said. "You told me you would believe anything I told you. I didn't come here to keep you from doing your plain duty; I'm not going to try to swerve you from it. But I did come here to let you understand something of my father's motives. Personally, Mr. Ingersoll, I believe him guilty."

"Your belief doesn't happen to be evidence," smiled Cal. "If it were I might have to use it against you. You are, perhaps, a bit too frank."

Despite the warning the girl kept right on. "Mr. Ingersoll," she went on, "my father has one rule of thumb: The end always justifies the means. It is not a safe rule, is it? But it sometimes is effective. It should have been effective in this case. Jonathan Swift should have been defeated, Mr. Ingersoll. By any means he should have been defeated. By any means his career should have been ended. But he wasn't defeated; and his career hasn't been ended. I'm afraid he's only just begun."

Cal was relieved. So long as he could keep her off the subject of her father he was satisfied. Besides that, he was young; so was the girl. She was opinionated; perhaps a bit conceited. He didn't mind. He was opinionated and conceited too. He smiled at her assurance.

"Why should Senator Swift have been defeated?" he demanded.

"Because," returned the girl evenly, "Senator Swift is a traitor."

"To his party, possibly," conceded Cal.

"To his people," said the girl.

Cal settled down into his chair. Here he was in his element. He read all the Jonathan Swift newspapers and he knew all about Jonathan Swift that there was to know. At least Cal thought he did. Unknown to himself a jolt was in store for this young man; immediately so. Before him, purposely facing him down, was a young woman who knew. No excuses are here made for Lucy Lane—except that she was young. She was too young; the world was on her shoulders. It is fair to say that her conversation would have bored ninety-nine women out of a hundred; it might have made old men very, very tired. As a matter of fact, Lucy was just a bit too insistent, a bit too raw.

But over against that were her youth and her youthful magnetism. A few years more and she would mellow into a bewildering young woman. Still, just as she was, she dazzled Cal.

"I think," said Cal, not unsympathetically, but still antagonistically, "that I'll hear you on the proposition that Jonathan Swift is a traitor to the people."

The girl squared herself. "I have always had an idea," she started in bravely, "that the nearest and the dearest thing to the people is the people's pocketbook."

"We'll start there," nodded Cal.

"We'll start," said Lucy, "with the pocketbook of the individual man—a man married and with a family, we'll say."

"Or without," interposed Cal. "Take me."

"You are a taxpayer?" she inquired.

"I am," said Cal.

"Equal taxation," smiled Lucy Lane, opening up her subject.

"A great reform," said Cal.

"A newspaper phrase," insisted the girl, "intending to indicate that the big corporations, who had paid low taxes, should have their taxes raised so that they bore their full share of the burden—and that the individual, whose burden had been, under a machine-made government, unusually heavy, should have it materially lightened, and his taxes materially lowered."

"Exactly," nodded Cal. "A great reform."

"You are a taxpayer," went on the girl, "an individual taxpayer. You are the man for whom this legislation was designed. How do you explain that the instant this radical law went into effect—how do you explain that your tax bills went sky-high?"

She stopped talking. She let that fact sink in. What she said was true. For three years now equal taxation had been in force; the fact was that it had increased the burden of the common people. Why? The people didn't know. They still clung to a fine phrase uttered by the lips of a fine man. A sure-fire vote getter, this fine phrase. Was the law a mere shell—had the executive ignored it after getting it put through? Was the law an abortive attempt to make good this fine phrase? Was it a blind, behind which the executive and the corporations were shaking hands? It made no difference. The thing hadn't worked out—that was all. And from the lips of this girl Cal Ingersoll got it first, and got it hard.

"How do you explain it?" asked the girl.

Cal gulped. "Go on," he commanded. "I like to hear you talk."

Lucy went on; she was there for that purpose. "Mr. Ingersoll," she persisted, "when Governor Jonathan Swift entered the campaign for the United States senatorship he went in with a slogan: 'I have driven Wall Street from your midst.' I'm going to ask you a question, Mr. Ingersoll: What did Governor Jonathan Swift mean?"

"What he said," returned Cal. "He did drive Wall Street from our midst."

The girl smiled. "Back in the 'nineties, Mr. Ingersoll," she said, "my father saw that there was an easy way for this state to make big money. Big money for the state, low tax bills for the people. He threw the state wide open to the big New York corporations, Mr. Ingersoll. He gave them easier terms than any other state offered. The big New York corporations organized in this state. They paid us millions in franchise taxes. We didn't pay them money, Mr. Ingersoll; they paid us money. Wall Street never got anything out of us; we got something out of Wall Street. And by the sum of the taxes they paid us, by that exact amount the pockets of the people were spared. Do you follow me, Mr. Ingersoll?"

"I'm listening," said Cal. He was not only listening; he was much perturbed.

"Drive Wall Street from our midst—that was Governor Swift's slogan. His promise to his people. A fine phrase to catch votes. What did it mean? It meant that Governor Swift procured the repeal of all my father's corporation legislation; in its place and stead he put a law upon the statute books, a law that makes this state no longer an attractive abiding place. He taxed Wall Street so excessively that Wall Street has gone to Maine and Delaware. The result is that our annual income is depleted by millions of easy dollars. The people have to pay just so much more. The people do not know it, Mr. Ingersoll. They mouth an editorial phrase: He drove Wall Street from our midst. It listens well to them. But their pocketbooks have been depleted; they have been robbed while they listened and looked on. Will you explain why he did this to his people?"

"Go on," said Cal.

She went on. "Mr. Ingersoll," she said, "my father has been a political boss for many years. I hate a boss; I like my father. I have found out why my father has held his leadership for so many years. Frankly I don't know how much of the people's money went into his pockets. I do know what was done with the bulk of the people's money. I know that good roads were built with it, that good schoolhouses were erected everywhere. My father gave the people a run for their money. He did things for their profit, even though he did things for his own. Graft, maybe. But in the end, a good schoolhouse, a good hospital, a good road. Listen, Mr. Ingersoll. How many good things have been done for the people in the past three years? What kind of a run have the people had for their money? I'll tell you, Mr. Ingersoll. During the first year of his term as governor Jonathan Swift created seventeen hundred new offices in this state and filled those offices with his friends. That meant three million dollars a year in salaries; three million dollars extra. With Wall Street out. Millions less each year in income—millions more in outgo. Why? Seventeen hundred officeholders mean seventeen hundred families—thousands of relatives—hundreds of thousands of friends. Hundreds of thousands of people all over the state polling for the Hon. Jonathan Swift—singing his praises, chanting his phrases. Why? I'll tell you, Mr. Ingersoll, why he has done all this. He has taken more than Wall Street out of state politics. He has taken the political machine out of state politics."

"Ah," said Cal, "now you're talking! Go ahead."

"He has taken the machine out of state politics," smiled Lucy Lane, "and in its place he has set up an emperor—a czar."

That was all she had to say. She was through. Without another word—but with a bewildering smile, a dazzling flash of eyes—she left the room.

She left Cal stunned. He knew intuitively, as in a flash, that all these things were true. Lucy Lane had accomplished well her purpose. In that brief hour she had done to Calvin Ingersoll what Jonathan Swift in one brief hour had done to her. She had shattered Cal's idol; she had shaken Cal's faith in the everlasting righteousness of his cause. Unknown to herself she was a canny politician. She had made no appeal to him to save her father.

Cal couldn't save her father. He knew he was guilty. No man can vote all the men and women, cats and dogs in the county and get away with it. The senator had been indicted; he had pleaded not guilty. He must stand trial. He must be convicted. He must be sentenced.

"Make no mistake," the county prosecutor said to Cal. "Swift says we're out to railroad Major Lane."

Cal left no stone unturned; he dug with his fingers to the bone. Day after day well into each night he sat at his desk interviewing witnesses. He kept the highways hot with his machine, saw people in their homes, held conclaves in his office.

Two days before the trial Senator Swift quite unannounced, glided gently into Cal's desk.

"I have come to see," he said, "the progress you have made."

Cal handed to the senator a large basketful of depositions.

"I have sweat blood over these," Cal assured him.

The senator's eyes narrowed. "Not enough to sweat blood," he returned, "but what kind of evidence have you?"

In a few brief words Cal set forth the total strength of his position; he touched high spots, making it clear how strong they were. When Cal was through the senator slowly shook his head.

"Counselor," he said, "you have come within a mile of making out a case. Any member, you are charging this man with crime. Not anybody else."

Cal shrugged his shoulders. His nerves were feverish, his bones were tired.

"Senator," he said wearily, "I have obtained all the evidence there is."

"Not near enough," said Jonathan Swift.

"It's all there is," said Cal.

The senator rose and crossed the room and closed the door. Then he turned to Cal.

"Ingersoll," he said, "this man must be crushed!"

Once more Cal shrugged his shoulders. "He can't be crushed without evidence," he answered; "evidence incriminating. I tell you positively, senator, that is the evidence we have."

"Ingersoll," nodded the senator, "one of this man's mottoes is that the end justifies the means. You and I agree that he must be crushed. The people demands it. I demand it. He must be crushed by fair means—or by foul. We haven't got the evidence—that's the way."

Cal stared at him. "You mean to manufacture it?" gasped Cal.

"I mean exactly that," returned Senator Swift.

"You want me," went on Cal, "to convict this man on perjured testimony? Not in ten thousand years!"

The senator went to the door. The prosecutor saw Cal in person.

"Cal," he whispered, "this is a special case. We've got to stretch a point for Swift."

"Not in ten thousand years!" repeated Cal.

It was the prosecutor's turn to shrug his shoulders. "Very well," he said, "but you won't stretch a point for Swift. I'm very much afraid that Swift will find some one who will."

Fortunately Cal resigned here and there. Had he failed so he would have been removed for incompetency. Senator Swift was a rapid man. He pressed into service a man in the county who would do Jonathan's bidding.

This man rushed in boldly where Cal declined to tread.

The case came on for trial. Manufactured evidence, damnable evidence was produced. A River [illegible] listened calmly to this evidence, chewed gum imperturbably throughout. Imperturbably the jury strolled out to the jury room to consider their verdict. Half an hour later it strolled into the courtroom nonchalantly, and

The Sources of Extra Mileage

IT is natural that the car owner should assume, in buying Firestone Cords, that he will get extra mileage at no additional cost. He has been pledged Most Miles per Dollar by an organization of the highest responsibility.

Were he a tire expert watching Firestone production he would quickly see how Firestone is able to give so much.

He would recognize in such processes as air-bag cure, rubber blending, double gum-dipping and calendering of cords, as Firestone has evolved it, the practical sources of extra mileage.

And in the vast, smoothly operating Firestone plants he would discover the system, the elimination of waste and the efficiency that reduces Firestone production costs.

It requires not only determination but unusual facilities and ability to build tires that set a new standard for quality and mileage at the lowest prices in history.

A selection of the very choicest chocolates made by the Booth Candy Makers: every piece proves "True Blue." 20 ounces of Love Food.

Made For Candy Lovers

For twenty-seven years our constant thought and endeavor has been to make Booth's Chocolates the finest in taste and purity. The cream which goes into them is fresh daily from the Booth Dairy Farms. The butter is the finest creamery brand. The fruit centers are of ripe fruit—the nuts carefully selected. Every possible care is taken in the preparation to make Booth's Chocolates absolutely perfect in every way. Booth's Chocolates come in many assortments. All are delicious—the packages attractive.

If you fail to obtain Booth's Chocolates from your dealer, send his name and address and we will supply you by mail postpaid, upon receipt of the following prices: True Blue Chocolates, 20 oz., $2.00; Butter Chocolates, 1 lb., $1.50; Esther Chocolates, 1 lb., $1.25; Billy Chocolates, 1 lb., $1.00. Other sizes in proportion.

Leading Confectioners and Druggists in certain localities, can still obtain our Special Agency Proposition for their stores. Write for particulars on your business letterhead; state principal lines of candies now handled.

Booth's Chocolates, Elmira, N. Y.

Gifts for Graduates

Booth's Butter Chocolates: Centers made with pure creamery butter and fresh cream, also fruits, nuts and other delicious combinations, all covered with rich delicious milk chocolate. A wonderful gift package.

Booth's Billy Chocolates: Their memories linger. Popular with all. The perfection of candy delight.

Booth's Esther Chocolates: You are sure to like them. Each piece is a candy surprise. Covered with Dark Smooth Vanilla Chocolate.

(Continued from Page 36)

It found the major not guilty on every count charged in the indictment. It whitewashed the major until he was as white as his snow-white hair—whiter.

It was all over—just like that. Jonathan Swift should have foreseen it. A defendant brought to trial upon charges of political corruption is a hero. Major Lane was River County's martyr. He was beloved of every man and woman, cat and dog in River County. Long, long ago River County had convicted Major Lane, in its own mind, of many more heinous crimes than this charged in the indictment. It had forgiven him. It loved him as deeply as it hated Jonathan Swift.

The gum-chewing jury merely winked the other eye, and did the rest.

In other words, it was to laugh. It was a scream, and Senator Swift knew it for the thing it was. The senator gnashed his teeth; he gritted them. He cast about him for something upon which to vent his spleen. The major was beyond his reach. But Cal was not. He charged Cal publicly with having sold out to the major. He covered Cal with slime.

Cal, discredited, in the depths of despair, met Lucy Lane one day upon the street. She carried him home with her in her runabout.

"You're a life saver," said Cal. "I've got to talk things over."

He did, and at great length and to his own great relief. Lucy was a very feminine young person; she comforted him and petted him; she put new life into him. And before the talk was over the major intervened. Lucy introduced her father; it was the first time that Cal had ever met the major face to face. The major shook hands with Cal, donned his house jacket, produced some smokes, settled into the depths of his easy-chair, got Cal to stay to dinner. And at dinner the major looked across the table at his daughter and asked her a single question with his eyes.

"Is this—another hunch?" he queried silently.

"I don't know—but what he is," said Lucy, silently as well.

Cal was. When he left the major's house at midnight two things had happened. When Cal strode down the street he fairly reeled. He was drunk with the major's magnetism; he was permanently hypnotized by the major's powerful personality. So much for Cal. On his own part the major was no less excited. Cal was of the new school; he was young, he was resourceful. He was a man who concentrated on his job. More than all, Cal was an idealist, and the major was not. Cal saw visions, the major didn't even dream dreams. The major needed Cal; he had been looking for a man like Cal for years. Here was a man without a poker face; a man the major could know, could feel. At four o'clock in the morning the major drew a long sigh of relief and went to sleep. For at four o'clock in the morning Cal, all unknown to himself, had been irrevocably picked to be Major Lane's right-hand man.

Cal succumbed. He had to. He was no match for the major. Lucy helped, reluctantly enough—but helped nevertheless. She was sorry afterward she did. Her father's will was paramount. He never issued orders; he indulged in mesmerism. Against her better judgment she helped her father round up Cal. Why not? They had a common cause, these three. With widely varied motives they were out for blood—the blood of Senator Swift.

Cal succumbed. Inside of a twelvemonth the major had taught Cal all his tricks; inside of two years Cal had become something more than an understudy. He had all the makings of a new-fangled, up-to-the-minute political boss, next year's model. He had concentrated on his job until the time came when he saw nothing, thought nothing, dreamed of nothing but one-man power. Power—he was steeped in it. He was gloriously drunk with power.

In the midst of it all, another presidential year. And in the midst of this, with the major gone upon a brief vacation, Senator Jonathan Swift flung his hat into the ring. He made his bold, unlooked-for announcement that he was out to win the Presidency of the United States. Jonathan Swift's political successes had all been based upon a series of impudent claims. This was something more than impudence; it was a personal insult flung swiftly at Major Lane's neck while the major's back was turned. It stung the major to instant action; it was for him to strike the first fierce blow. He gathered himself together for the spring—and then he died.

Lucy wasted no time. She was still under the hypnotic influence of her father, and she knew it. She knew also that other folks must be. The day after the funeral she summoned to her home the seventeen ward leaders of the city, the big men in the committee. She told them of the manner of her father's death; told them how his words were ringing in her ears:

"You tell 'em Cal must carry on."

She was striking while the iron was hot. They caught her spirit, felt the urge. They called a special meeting. Cal was chosen in the major's place—to carry on.

Cal carried on. Senator Jonathan Swift, with his state delegates in his pocket, with the prestige of all his sensational political record to back him up, went to the convention with head in air. He was state leader; there was no Major Lane to say him nay. The news of his candidacy had been flung far and wide. He was, once more, the people's candidate; and once more he trod upon the people's platform: Drive Wall Street out of Washington. He was handsome, picturesque—he always got a hearing. In the convention hall, under the most auspicious circumstances, he was introduced to all the people of the nation.

Aside from that he had a secret ally. Wall Street backed him to the limit. Wall Street was perfectly willing to be driven out of Washington provided it could be left to its own devices in New York.

This was the condition that confronted Cal. He went to the convention to fight a losing battle. But he went there prepared; he had concentrated on this job. He was ready, fully ready, for the slaughter. He would give them a run for their money. He had much backing too. The major's sword was in his hand. A woman's kiss was on his lips. He went forth to do or die.

He didn't die. He dragged the state delegates out of Jonathan Swift's vest pocket. No matter how he did it, it was done. For six long days he hammered at them, traded with them, bartered to the top of his bent. He had an ax to grind; he ground it. He stole his way into the grace of other leaders. He learned the secret of the forces that, once put into play, would automatically nominate the successful candidate. With all the major's instincts and his own to guide him, he picked the dark horse destined to win. For that man and that man alone he polled; for that man he fought tooth and nail. And for that man he forced most of his state delegates to vote. That man was nominated. Cal's cleverness in picking that man in the first instance, in tying up to him, in fighting for him did one tremendous thing for Cal. In all the dispatches sent out from the convention hall to the press of the nation Cal was mentioned as one of the five great leaders who had accomplished the result.

That Jonathan Swift was defeated was a detail. On the final ballot the senator received a total of seven and a half votes. A slap in the face, these seven and a half votes. They roused him to the realization that he had a new antagonist worthy of his steel—worthy of his worst tricks and manners. Wrath-bitten and vengeful, Jonathan Swift went back to his desk in the Senate of the United States; went back to bide his time.

Cal went back to River County. A howling delegation met him at the station, almost carried him upon their shoulders. Cal could have anything he wanted now. He was the idol of the hour.

Flushed with success, Cal sought Lucy Lane. He did now what, for many reasons, he had never done before. He asked her, point-blank, to marry him.

But Lucy, a little weary with it all, merely shook her head.

"I can't do it, Cal," she said. "I'm through."

"Through," Cal cried, "with me?"

There was trouble, deep trouble, in her eyes.

"Cal," she said, "I can't help it. A girl who'd had a drunkard for her father—that girl won't marry another drunkard, no matter how much she loves him. She knows too well what it means. Cal, I'm sick to death of living with a boss. Sick of the bluffing, the wire pulling, the whispered conferences, the knives in the back. I can't help it, Cal. I won't go through the swindle of it, the disgrace of it; not again—not for any man."

"But I'm not a swindler," pleaded Cal, wondering; "I don't stick knives in people's backs."

"You will," she said, still wearily, "and you can't help it. You've got the ba... father taught you. And now it's g... didn't realize. I helped—helped ... to get you. I know the signs. Y... ting worse and worse. You're g... the point where, by hook or cro... determined that your will, and yo... shall be law. You are drunk, dr... with power. The dickens of it," Lucy Lane, "I love you, Cal—I..."

Cal caught her in his arms. ... great lover, was Cal Ingersoll. H... all his gentleness, his tenderness, ... ness to bear upon her. She felt ... his magnetism. But she only ... head and sighed. There was to ...

"But," pleaded Cal, "are we ... always—just like this?"

There was a little of the dev... Lane. Somehow she knew alway... she was about. She shook her ...

"Cal," she said, "I'm going t... kind of a life. I suppose most ... sider me a talkative little prig ... possibly, and vain. I know you ... And I've hopes that there are ... who don't. I've got my eye on ... I've got to marry somebody. C... children and live in a home ... star chamber. I've dreamed it ... must come true."

"Now, look here," cried Cal, ... "none of that kind of talk to ... you want me to knife the fat ... children in the back. If you ... marry anybody you're going to ...

"It takes two to make a ba..." she said.

He could see clearly that he ... tion merely strengthened as ... And at any cost he had to ha...

"All right!" he cried in abje... "Tell me what you want of ... anything you say."

I FINALLY must confess that my advertisements belong in the best seller class.

Evidence of their potency was recently presented to me by a repairman who wrote how a banker's better portion drove in her electric and was frankly disappointed when she discovered there really was no place where a set of Spencer-Smith Pistons could be installed in her chariot.

Of course, we might have draped one or two pistons near the flower beaker. But there are so many places that Spencer-Smith Pistons will do more good!

For instance, perhaps your motor has that tired feeling. Maybe it doesn't like to get started in the morning. Perhaps it's wheezy—quite asthmatic—with a cough that vaticinates a tour to the Southwest.

Now before departing upon a long and expensive journey of that kind, it quite often is advisable to undergo local treatment. Place your vehicle under a specialist's care. A stethoscopic examination will most probably reveal oil congestion. Further diagnosis will undoubtedly disclose ailing pistons and out-of-round cylinders. Of course an immediate operation becomes necessary—particularly if your pistons are burdened with unnecessary weight that causes your motor to tremble and quiver like a jelly fish when you ask it to negotiate a slight grade in high.

Remove the afflicted pistons without hesitation—or mental reservation—and insist that the doctor make a Spencer-Smith substitution after regrinding the cylinders.

You really will be surprised when you discover how motor vexations and irritations can be quickly suppressed and obviated with fine, light pistons.

We might go into detail telling you how Spencer-Smith Pistons are built so that every set is, though stronger, several pounds lighter than ordinary pistons; how we encircle them with an oil trapping and draining groove which really does stop oil pumping for good, or how we use super-precision methods of production and inspection. But you, perhaps, will prefer to have the boss give you the complete dope in his one lesson correspondence course, "Making Your Pistons Pay a Profit." Enroll now—writing me in care of the Spencer-Smith Machine Company, Howell, Michigan—and graduate with our incoming class. Matriculation costs absolutely nothing—not even return postage.

SpenSmith

P. S.

A Patented Oil Drain Groove

Notice that oil groove and oil holes. They stop oil pumping and prevent carbon troubles caused by burning oil. On the down stroke of the piston the oil is wiped into th groove by the third ring and is then drained through the holes back into the crankcase.

SPENCER-SMITH PISTONS

Built by the largest manufacturers of pistons exclusively

(Continued from Page 38)

"Joe," said his wife suddenly, "why don't you brace up and go to headquarters? Why don't you go to Cal?"

"Cal doesn't like me," returned Joe Stamler; "and besides, I don't know him very well."

"Joe," said Joe's wife with conviction, "you go to Cal."

Joe went to Cal. He saw him.

"Mr. Ingersoll ——" he started in.

"You know better than that, Joe," returned the boss.

"Cal," nodded Joe.

"Much better, Joe. What's eating you?" said Cal.

"Cal," said Joe miserably, "the minute I got out of school I went into the sheriff's office. They paid me ten a week. I've been undersheriff now for ten full years. I've got six children, growing up. They're paying me twenty-eight hundred and fifty dollars, Cal. I can't quit; I'm fit for nothing else. And I can't go on. That's all."

"Did you see Lafe Smith?" asked Cal.

"I've seen 'em all until I'm tired," said Joe. "I can't make any headway with 'em—not a soul. I don't know why not; it's a turn of a wrist to get a bill through the legislature. And I'm a good man, Cal."

"I know you're good, Joe," nodded Cal.

"I run that office, Cal," went on Joe Stamler. "Without me there wouldn't be any sheriff's business done. I'm the sheriff in everything but name."

Cal started suddenly. He placed his hand upon the other's arm.

"Say that again, Joe," he commanded. "I wasn't listening that time."

Joe said it again. Cal drank in every word. There was a new light in his eyes when he spoke.

"I'm on," said Cal. "I used to be the whole show in the prosecutor's office in my time."

"You sure did, Cal," said Joe.

Cal was silent for a moment, an uncertain flickering smile playing about the corners of his mouth.

"Joe," he said at length, "how much does Sheriff Gorley make out of his job up there?"

Joe knew; knew too well. "Ten thousand a year straight," said Joe, "and seven thousand in extra fees, besides. He makes from fifteen to twenty thousand, sure, a year."

"And now," smiled Cal, "just what does Gorley do?"

"He runs a bottling business," returned Joe.

"I know that," said Cal; "but in the sheriff's office—what does he do up there?"

"Nothing," said Joe.

"He has responsibility," said Cal.

"Does he?" grinned Joe. "He's under bond to the state. But I handle all the funds, and I'm under bond to him. I draw all the checks; he signs any check I put before him. A seven-year-old boy could do as much."

"And that's all he does?" demanded Cal.

"So help me!" returned Joe.

Cal investigated. Then he sent for Joe again. This time he saw Joe behind closed doors.

"Stamler," said Cal, getting down to business, "I want to help you if I can. But there's always *quid pro quo*."

"I'll do anything in reason, Cal," said Joe hopefully.

"You want a raise," mused Cal. "How much of a raise are you looking for?"

"I can get along," said Joe, "on thirty-five hundred dollars a year, and not a dollar less."

"Net," nodded Cal.

"Yes," said Joe.

"And that doesn't leave anything—for me."

"To tell the truth, it doesn't," returned Joe.

Cal drummed on his desk with his fingers. "Joe," he said at length, "suppose I get you five thousand a year—what then?"

Joe Stamler gazed evenly into Cal's eyes. "I'm on," he said. "You want all over thirty-five hundred. Am I right?" And then he shook his head. "Barkis is willin', Cal," he went on, "but you'll never get the legislature to vote me two thousand more than I'm getting now."

"The legislature," said Cal, "will do anything I say."

"You're way off," said Joe. "If they double my salary they'll have to double the salary of every under man in River County."

Cal started to his feet. "By gosh," he cried in the tone of a man who has made a great discovery, "by gosh, you're right! I never thought of that. The thing is big—far bigger than I dreamed."

"There's bound to be a howl," said Joe, forlorn and hopeless.

"That's neither here nor there," said Cal. "The point is this: If I get you a salary of five thousand dollars a year will you be satisfied?"

"And I'll pay you fifteen hundred out of that," said Joe.

"I don't want fifteen hundred out of that," said Cal.

"You mean," cried Joe, "that I get five thousand net?"

"That's all you get," said Cal.

"Will you kindly wait until I throw a fit?" said Joe.

"Don't throw it yet," smiled Cal, "until I'm through. There are some things I can do, Joe. This is one of them. But it's got to be done right. You do your part—I'll do mine."

"What's my part?" queried Joe.

"Your part," said Cal, "is paying me all over five thousand dollars that you get."

"My land!" said Joe. "How much are you going to raise me, Cal?"

"More than five thousand," nodded Cal. "I want your word that I get all over that."

"So help me!" said Joe.

"I'm going to raise you, Joe," continued Cal, "from a paltry salary of twenty-eight hundred and fifty dollars a year to a sum ranging from fifteen to twenty thousand dollars."

"You—can't—do—it!" exclaimed Joe.

"I can do it," nodded Cal. "I'm going to elect you sheriff in the fall."

The fall was far enough away. Cal had plenty of time, but he needed plenty to accomplish what he had to do. He spent weeks investigating conditions existing in River County; then he tackled River City. Then he sent for Chris Goss, the deputy county clerk. Chris Goss' chief, the county clerk, was a patent-leather man. He had a plant that was always running overtime. Cal saw Chris Goss behind closed doors; he made a solemn compact with Chris Goss. Chris Goss left this conference with eyes popping from his head. Then Cal sent for another man; another and another.

When he had finished with these secret conclaves Cal made up his slate. It was a simple task to make it up. It was a gigantic undertaking to force it through. When he flashed this slate upon his confidential confreres in the county committee there was a howl that could be heard from here to there. There was good reason for this howl. Cal had a ticket made up of men who had no qualifications for their respective offices save that of complete fitness for their jobs. The thing was raw; it never had been pulled before.

Cal pulled it. He had put River County on the nation's map. River County owed him something; his state owed him more. He demanded recognition, obedience; it was time for him to draw his pay. There was bluster, there were grunts and growls. But Cal was firm. He slapped his men upon the primary ticket, got them nominated. As a matter of course they were elected in the fall.

Four years passed eventfully. Cal, by virtue of a superhuman struggle, maintained his leadership. But he took on another boss—he married Lucy Lane. During those four years Lucy began to play the game of politics in a new way—with twins. Lucy was just the kind of girl to have twins—and she had 'em. As those four years closed, terms of office neared expiration. The time had come to act.

Cal acted. In his own way, with a fanfare of trumpets, Cal for the first time in his life called a mass meeting of the common people, the people that are always featured in cartoons. He spent hundreds on advance publicity. He announced that he was prepared to make a sensational disclosure that would hit the people where they lived.

He gave not the slightest clew to this sensational disclosure, but he felt sure the people would respond. There had been ugly rumors about Cal for some time now; rumors that he had taken no pains to quell. He guessed shrewdly that thousands would turn out to see and hear what a crooked boss might have to say.

He guessed right. The crowd was out in force. Five hundred people were packed about the entrance of the huge auditorium before the doors were opened. These five hundred saw something that roused their interest to the highest pitch.

At seven-thirty sharp three huge motor cars drew up at the side entrance of the auditorium. Fifteen stalwart plain-clo men emerged, each with a cocked rev in his hand. They formed two wed across the sidewalk, from the bigger c big cars to the door of the hall. Then more men stepped from this big car, ran the gantlet of the lines of men guns, slipped through the side entrance disappeared. These two men hugg suitcases into the hall. The door was

At eight o'clock sharp, in full view crowded house, these two men ap They stepped upon the platform, in hand; they seated themselves fifteen plain-clothes men, still with revolvers, closed in in a half circle the two.

The band stopped playing. Cal st blithely to the fore.

He was nervous, jumpy. The could see that. They pressed t eagerly to hear what Cal might have He said it forthwith.

"Neighbors," began Cal—"I h promised, a sensational disclosure t to you to-night. Before I make it I say that I realize as much as you d am standing in the presence of a m of overburdened people. The cost o high before, has doubled in four yea cost of running governments has There is no relief in sight. The peo forgotten how to save; in fact, th save if they would. All of which tude—old stuff—not sensational th But it brings me to my starting po starting point is Sheriff Joseph who sits there. I'm going to mak sational disclosure about Friend J

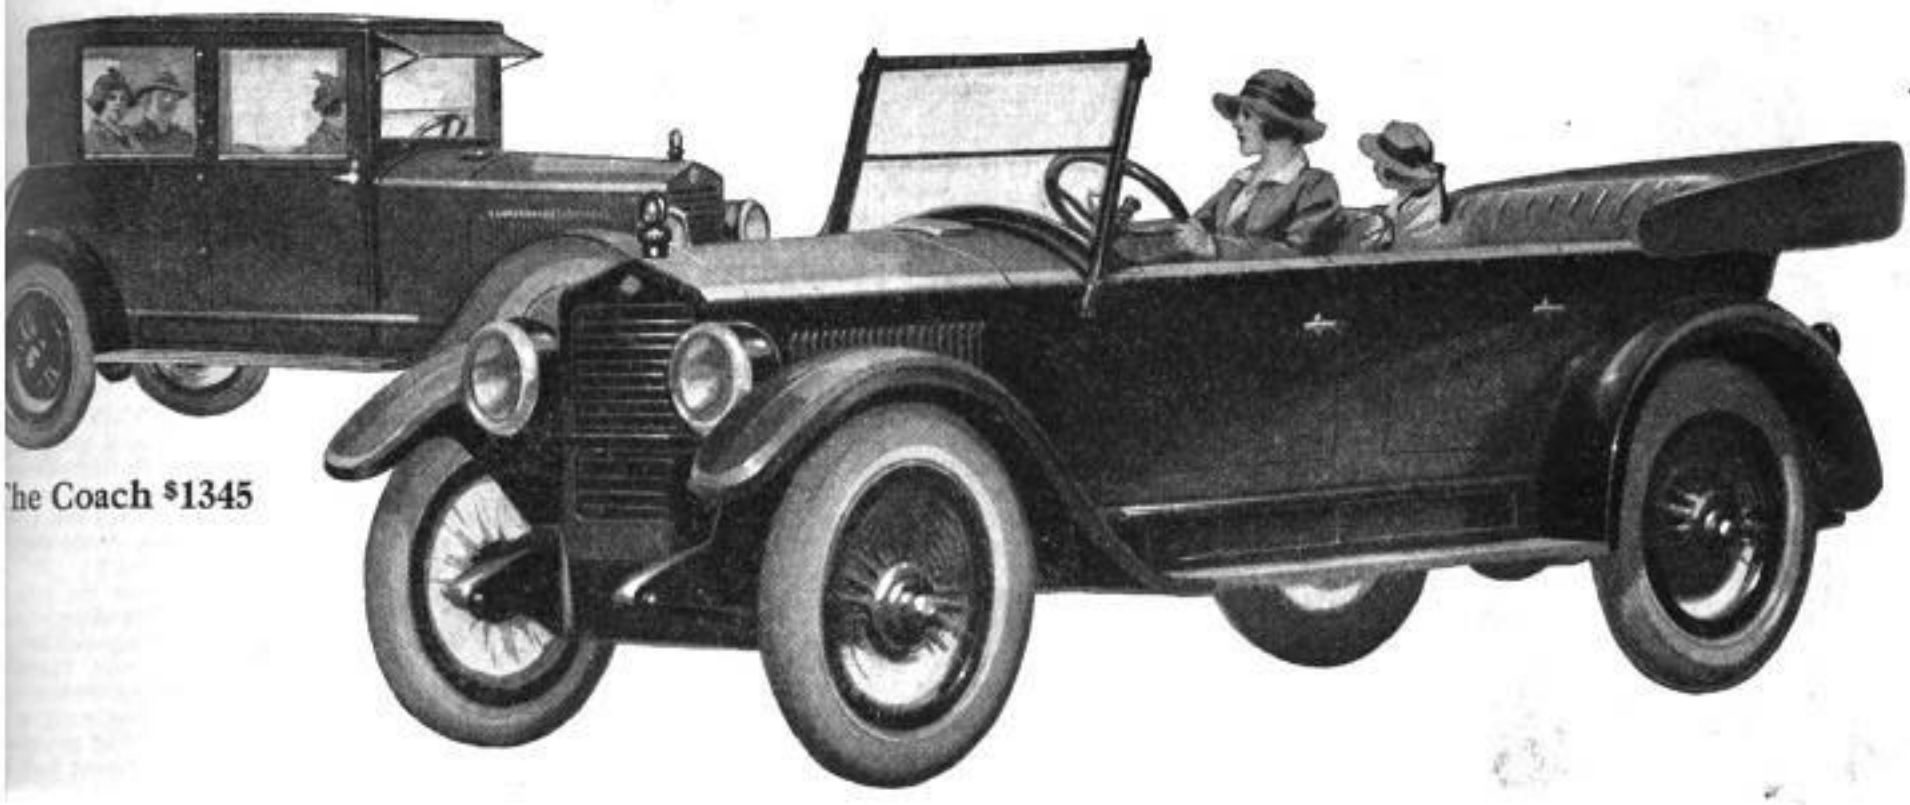
The hall was overcrowded. T paper table was surrounded by a assignment men. Two of these strangers; the rest of the din h seen them. They paid no attention neighbors. They took down ev that Cal was uttering; took it dow takingly, in shorthand notes. T were Senator Swift's men—the wanted to have a finger in this pi

"Four years ago last spring," "Joe Stamler came to me. Four last spring Benjamin Gorley sheriff. He is in this hall to-nig had full warning of what I was During that year Benjamin Gorley was enriched by sheriff's salary the tune of twenty thousand dol people's money."

"What do you pick on me f Ben Gorley from the crowd. "I It was mine."

"Ben Gorley didn't earn it," Cal. "There was another man t it and that earned it all. That m Stamler—undersheriff at less thousand a year. Joe Stamler w the work. Ben Gorley was get thousand dollars of your mone did no work at all. During the of his term as sheriff Ben G in seventy-five thousand dollars those four years he gave no re for."

Cal paused. He hesitated, as was not quite sure of what he w And then he said it—the thing than Swift's men took down particularity, the thing that Swift fastened on.



"Joe Stamler," went on Cal, five thousand dollars' worth of s He was getting twenty-eight hu fifty dollars for it. He came to him get his salary boosted to a f he could live. I investigated. you, at that time Joe Stamler ical nonentity; he could not h one vote out of this River City one, direct primaries and all. was the one man trained by years of experience for the job His friends could have worked to the bone for him. It was gone for naught. Joe came to made a bargain with him, a sec I agreed to elect Joe county sh condition only. That condition must account to me for all ha the five thousand dollars he

He paused. There was trem bub. Naturally so. The crowd with the intelligence of a crowd meaning of the words, but it g what Cal was driving at. The ever, mental arithmetician crowd.

"Cal's rake-off," grinned o puting in loud tones—"only year. Some rake-off, Cal."

The Coach $1345

This

ESSEX $1095

A Roomier Open Car—A Finer Chassis

You can have no appreciation of what this price buys until you examine and drive it.

To all that made Essex such a wonderful value in the past are added refinements and comforts never before offered in a car of its price class. Roomier seating, wider doors and greater riding ease, contribute something new in personal comfort.

The Result of Three Years' Experience

Back of the new Essex is all we learned in building 70,000 earlier Essex cars. Finer precision standards have resulted and Essex smoothness is even more pronounced. You will instantly note its greater beauty. Its care and attention are easier, cleaner, more convenient.

It will reveal a charm you never suspected in any except the large costly cars. Note how free it seems of usual limitations—how subdued all mechanical consciousness—how perfect its union with the driver's will.

It Improves In Service

And how rarely is an Essex offered for resale. Old owners tell you of a car so enduringly designed and built that its performance improves for thousands of miles. The fame of the Essex motor is not confined to its astonishing ability in speed, power, liveliness and endurance. More important is its freedom from annoyance and the exasperating little things that mar motoring pleasure.

Today's Essex combines advantages no earlier owner knows. Go see, and ride in it. It is the best Essex ever built, and at the lowest price.

Vider Seats.

Vider Doors.

ubricated with an oil can—no messy grease cups.

hief-proof Lock, reduces insurance cost 15% to 20%.

(Continued from Page 40)

Cal nodded. "In dealing with Joe Stamler in this wise," he went on, "I did a very dangerous and questionable thing. But I did it, nevertheless; and Joe has kept it mum, and so have I. I did it in the way I did because I saw no other way to do it—and get it over to you. I could have come to you four years ago with a great altruistic idea—with a vision of material benefit to you. I considered doing it—considered going about it in the way that a reformer naturally would go about it. I rejected the idea. You were weary of reform. You would have swept my scheme into the discard, as impossible, visionary; rejected it as rot. I knew there was not one chance in a thousand of putting over what I wanted to put over—except in one way. I had but one object in view. I couldn't see any earthly use in paying Ben Gorley twenty thousand dollars a year of the people's money when I could get the same results with five. I might just as well throw the extra fifteen thousand in the gutter—or pocket it myself. I did the latter. I put it in the bank."

Deep silence now. It was what Cal wanted. He went on to repeat his dangerous admission—an admission that could not be recalled.

"I kept my bargain with Joe Stamler, gentlemen," said Cal. "I forced his nomination at the primaries. I elected him sheriff in November of that year. I concede that fact willingly. And Joe Stamler kept his pact with me. He paid the shot."

Silence still—silence that could be cut with a knife.

"Gentlemen," said Cal, "what I did in the case of Ben Gorley and Joe Stamler I did in the case of nearly every officeholder in River County and in River City. I made a secret compact in the case of every man. I put my men upon the ticket; I elected them. They kept their pact with me."

He nodded to the men with suitcases. They slung their suitcases on two chairs, opened them. The cordon of plain-clothes men drew near, and nearer still. The men with the suitcases bent to their task. Rapidly they tossed bundle after bundle of greenbacks on the long table beside Cal until they had built two mountain peaks of money. The multitude drew a long, long breath. Most of them had never even thought of that much money; most of them had never seen so much as one per cent of it. There was a picture. Two mounds of legal tender, a bank man standing grim behind each mound. Fifteen stalwart guardians, each with a finger on the trigger of his gun. And Cal.

"Gentlemen," went on Cal, "I come to you with no vision—no altruistic nonsense. I come to you with no promise. I am seeking no office. I am asking nothing of you, nothing for myself. But I come to you with a task performed, come to you with the assurance that the thing has been done. For four years, gentlemen, in River City and in River County, the head of every office has been paid all the money that he's worth. For four years he has earned the money that he's worth. What's left is what you used to pay for nothing. Here it is."

Cal waved his hand toward the two mounds of money. "Gentlemen," he went on, "this is only a sample of what can be done—of what you can do. What I have done once you can do many times, for many years. What I have done in one particular, you can do in all particulars for all time. I want you to do it if you will. I want you to compel the legislature of this state to pass an act—I've drawn it—that will provide against your paying out your good money and getting nothing to show for it. I want you to do something more. I want you to put Joe Stamler and all the other men who've served you so efficiently—I want you to put them back into office once again. I want you to reëlect them in the fall."

The multitude had just begun to catch his drift. There was an attempt at applause. Cal stifled it.

"Is the county treasurer of River County here?" he asked.

He was; he had been already planted on the platform. He stepped to the fore.

"I want the city treasurer of River City," went on Cal.

That gentleman rose to his feet.

Cal once more faced his audience. "Gentlemen," he said, pointing to the mounds of money, "remember—this is but a drop in the bucket compared with the money you can save if you'll only take the pains. Mr. Outcault," he went on, bowing to the county treasurer, "this smaller pile is yours. It runs up to something more than an even million dollars."

"My Lord!" gasped a man in the audience. "What about the bigger one?"

"The bigger one," smiled Cal, "is for Mr. Jacobs here. It totals to two millions and a half."

After that the deluge. The thing was drama of the most thrilling type. The crowd went wild. Even the ennui-stricken lads at the reporters' table leaped to their feet and howled. This thing was news—news of the first rank. That night husbands waked their wives and told about it; men and women called up their friends at midnight, shouting the strange tidings over the wire. The papers went to press.

Next day Cal's sensational disclosure—a fulfillment, not a promise—swept the nation from Maine to Texas, from the Atlantic to the Pacific.

Cal set himself to work. He prepared his ticket for the primaries—with Joe Stamler's name at the head of all the rest. He drafted the referendum clause that he had outlined at the meeting. He girded up his loins.

The day for the primaries arrived. It was a damp day. The taxpayers didn't venture out to vote. They went to their offices of course. Some of them got soaked while going out to lunch. They left their homes in the morning, went about their business, came back in the evening, cheerful or otherwise, as the case might b night they went out in droves to the and the theaters. What equinoctial could interfere with activities like But it was too devilish wet to cra the corner to the polls.

Next day the votes were counte the taxpayers hadn't come out—b riffraff had. Cal's candidates, eve of them qualified to fill his offic defeated. The Swift nominees w Cal's referendum clause went by th entirely; nobody noticed it exce portion of the professional electo had voted against it under pos structions.

In River City Cal's ticket was by one hundred and thirty-two v one hundred and thirty-three m payers had opened up umbrellas an round the corner and cast that m lots—— But why should they, an such a night as that?

Two weeks after the primary another special grand jury was c indicted Calvin Ingersoll for a c tion of the Corrupt Practices specific crime being that he had to procure the election of a m men to office and had procured it

Once the indictment had be down Senator Jonathan Swift a visited the prosecutor's office.

"No fluke this time," he told cutor. "I want this upstart tram mud."

Cal showed the warrant to shrugged his shoulders.

"What's the use?" he said. they're after is my head. There my disgracing you, and little Mi Lucy, I'll go downtown to-day in my resignation as chair county committee. I'll get the to quash this indictment. I with politics. I'll slump back life and practice law."

"Not yet—not yet!" cried L

Something New in the Truck Field

$1245
Chassis
Complete as Illustrated **$1420**
Special Bodies For All Uses

For Loads of 500 to 2500 lbs.

Stewart "Utility Wagon"

A Speed Truck Built Entirely of Truck Parts

Take particular note that it is truck-built throughout—the product of a company that builds nothing but trucks.

It is fast, powerful and everlastingly reliable. Built for rapid delivery service on big loads, every part is designed for that special duty.

So of Course It Stands Up Better

It does not utilize any parts meant for lighter duty. That saves lots of troubles.

It is all business. It works more hours, turns in faster trips and keeps down costs at every point. Because 10 years of truck-building experience was put in it, with those exact aims in view.

Speed equal to any. Ready to go at all times, which is more important. As regular as a good clock, and keeps to schedule like a train.

The motor is a truck-type of latest design, with three bearing crankshaft and force feed oiling system. It gives astonishing fuel and oil economy. See how sturdy is each part—axles, wheels, heavy, rigid frame.

Your driver will like it, too. It handles as easily as a light passenger car. The springing is the best in any truck built for this service. The seat is broad and comfortable.

This is a truck you can depend on for years. See if it won't meet your requirements better and at lower cost than any other in the market.

Send the Coupon

Learn in a few minutes "The Sure Way to Buy the Right Truck." It tells what to look out for and how to buy wisely. A few facts will guard you against costly mistakes.

Systematizing the nation's wealth

OVER thirty-eight billion dollars ($38,000,000,000) are on deposit in the nation's banks.

Back of thousands of bank windows, from coast to coast, are the comprehensive methods that Library Bureau has developed for systematizing this wealth; to keep it commercially fluid and accessible; to help the banks record exactly the millions of transactions in connection with it.

Your bank account—commercial or savings—is probably kept on an L. B. Card ledger. Your cancelled checks are probably filed in an L. B. Check file. When you open a new bank account your signature is probably written on an L. B. Signature card. Today billions of dollars are handled with the aid of such Library Bureau systems as:

Filing systems	*Card systems*
Checks	Average balances
Correspondence	Commercial ledgers
Credits	Investments
Deposit tickets	Liability records
Foreign	New business
Statistics	Safe deposit
Transit	Savings ledgers
Withdrawal tickets	Signatures

Library Bureau's Bank Department consists of a staff of specialists who consult with architects when blueprints for a new building or addition are prepared; design new equipment; develop new systems; plan new records for the central information files that produce new business.

Other departments of Library Bureau are equally prepared to help *your* business.

Send for booklet, "The Newest Force in Business Building."

The Six Big Divisions of Library Bureau Service

1. Special Service

Analysis Service: Trained experts analyze your file and record needs and furnish full recommendations. Send for folder No. 612.

Indexing Service: Prepares and writes card records. Transfers accounts from books to card ledgers. Relieves you of the clerical burden of installing new card and filing systems. Send for booklet No. 822.

Statistical Service: A unique service to business executives. Prepares confidential statistics from figures supplied by any business. Send for folder No. 919.

2. Specialized Departments

Bank Department
Send for booklet No. 805.

Government Department
Send for booklet No. 818.

Insurance Department
Send for booklet No. 704.

Library Department
Send for catalog No. 812.

Schools of Filing
Send for booklet No. 503.

L. B. Service includes the planning of new systems, special and stock equipment, laying out filing and record departments, the preparation of confidential information.

3. Filing Systems

Alphabetic
Geographic
Numeric
Subject
L. B. Automatic Index
The Russell Index

Library Bureau installs the filing system that best suits the needs of any business. Send for book No. 709 or Russell folder.

4. Card Record Systems

L. B. Sales record—sales information at the sales manager's finger-tips. Send for folder No. 615.

L. B. Stock record—eliminates over-stocking or under-stocking. Send for folder No. 605.

L. B. Card ledger—saves space, time and money, over bound or loose-leaf ledgers. Send for booklet No. 711.

L. B. Visible record file—combines unit feature of cards with visible feature of the book index. Send for folder No. 713.

5. Cabinets—*Wood and Steel*

They are used by 125,000 businesses. L. B. quality is standard.

L. B. has originated many labor-saving devices:

Vertical units.
Card record desks.
Counter-hight units.
Card ledger trays.

Send for catalogs Nos. 707 and 708.

L. B. Record Safe. Send for folder No. 712.

6. Supplies

L. B. Cards—Over 2,500,000 a day. More than 1,000 stock forms. Known for their uniform quality, accurate size and smooth edges.

L. B. Folders include every kind; notably the famous L. B. Reinforced folder which saves valuable space in file drawers.

L. B. Guides include plain, printed, celluloided, removable label and metal tips.

tly it is a fact that the
eing complicated and
erroneous conception

which seems to have taken root and grown in the minds of many people.

It will not be many years before the preparation and interpretation of simple charts and curves will be taught in the public schools as a part of the general course in arithmetic. This is already being practiced in the schools of Newark and Trenton, New Jersey, where grammar-school pupils are gaining a useful knowledge of present conditions and recent developments in their own cities by a course in preparing charts and plotting curves indicating the growth, population, industry, and so on, of those cities. Rather complete courses in graphic methods of presentation are now included in the curriculums of various colleges and universities, especially those which contain departments for the study of business administration and methods. All this strengthens the opinion that before long most people will acquire an appreciation of the value of charts for presenting vital facts, and that the result will be the general use of graphic methods as a routine practice in the offices of all modern business firms.

One expert in industrial organization declares that it should be as uncommon for an employe in any concern to be in doubt as to the person in authority over him as for a child to deny the parentage of his father. No corporation that is earnest in its desire for maximum operating efficiency can afford to conduct its affairs without the aid of an organization chart. Such an instrument eliminates irritation and conflict of authority, for where it is employed each worker knows perfectly well to whom he must report. In companies where there is no proper distribution of authority and responsibility, high-up executives frequently go over the heads of officers under them and issue orders to the rank and file of workers, thus weakening the authority of the foremen or department superintendents to whom the general run of employes are responsible and look for guidance.

Graphic charts are generally used to show component parts, make comparisons, set forth interdependent relationships and reveal the relation of variable elements and quantities. Among the devices adapted to such uses are circles of different sizes, parallel bars, rectangles, squares and pictured objects drawn to different scales. When pictured objects are used, much care must be taken with their construction or they may misrepresent the case. If it is desired to show the increase in the number of passengers carried by a certain railway system during a month or a year, it is considered best to indicate the improvement by drawing the required number of figures of the same size rather than to make the comparison by placing the figure of one large man by the side of a small one. In the first case each uniform figure of a man may represent any desired unit, such as one thousand, ten thousand or even one hundred thousand passengers.

A rectangle can be used to show three different elements: If one side represents price and another side quantity, the entire area will stand for the value or the quantity times the price. It must always be remembered that the relative sizes of spheres, circles and cubes are not identical with the relative lengths of straight lines, and as a consequence the areas of these figures must be carefully calculated in order to insure accuracy of relationship.

The plotting of curves on backgrounds laid off in blocks made by intersecting lines is the simplest and most efficient method of portraying the relation of variable quantities. In this method careful judgment is necessary in selecting the units on both the horizontal and the vertical lines. For instance, if the base line is made to represent time units, and too much space is allotted to each unit, the result will be a flattening out of the curve and a consequent minimizing of the changes which have occurred in the months or years that have passed. As a usual thing it is best to plot all curves on coördinate paper already ruled in squares or rectangles to suit the purpose in hand.

One retail shoe dealer who had discovered the effectiveness of graphic presentation became annoyed by the constant reiteration on the part of customers that shoe

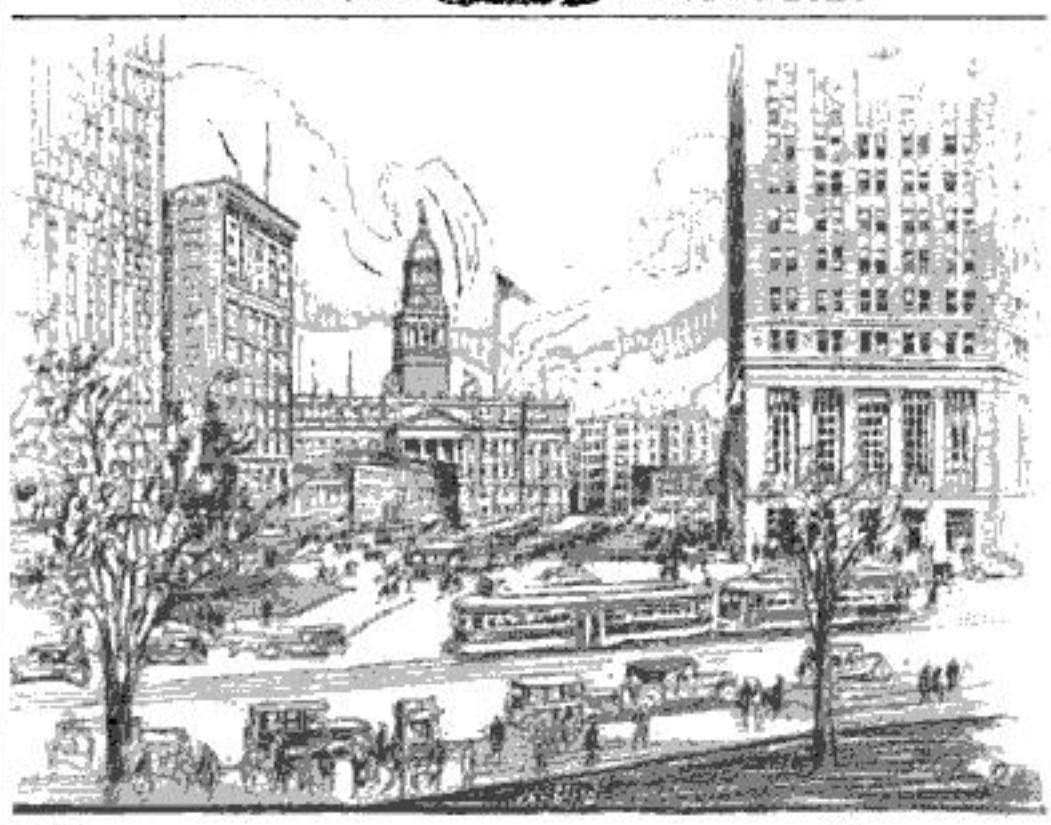
Busy executives will find what is known as the cumulative curve a valuable aid in business, for the last point on the curve gives the total output since the beginning of the period for which the curve was plotted. The angle of the curve shows the rate of output for any period of time under consideration. A cumulative or mass curve never trends downward. Lack of output is indicated by a horizontal trend of the curve. Cumulative or mass curves are particularly useful in the study of quantities in earth work, especially in road building or railroad construction.



Graphic charts known as frequency curves enable executives to study many industrial problems with greater rapidity and convenience than is possible by any other method. Frequency charts which are based on "the number of times a certain characteristic is found repeated in a large number of observations," have been used for many years to represent data relating to physics and biology, but it is only in recent years that the value of these charts has been recognized in the study of engineering and business problems. Frequency curves can be used effectively in such documents as annual reports of railroads, where they constitute a satisfactory substitute for tabulated statements, giving such data as the number of miles of different weights of rails in use at the end of any fiscal year. Frequency curves may be used to present problems such as the time required to answer telephone calls in different cities, and the like. Comparisons of wages are also shown clearly by these curves.

By means of careful designing of cards and plotting of curves the fiscal year of a business can be shown on a single four-by-six-inch card. Willard C. Brinton, an authority on the use of graphic methods, says that one sewing-machine company uses a four-by-six-inch card, and on this small area is able to show actual sales figures by months and quarters, leaving sufficient space for dates, inscription and other lettering. On the left-hand side of the blocked area appears the vertical scale of earnings running from zero to three hundred thousand dollars, and progressing in multiples of thirty thousand dollars. The base line of the chart shows the months, and to insure absolute clearness thirteen vertical lines are used, so that at the beginning of each card the last month of the previous year can be repeated. It can readily be perceived that the record of several years can be examined in this concise form, and variations from year to year noted by arranging the cards in chronological order. A number of firms find it advantageous to plot their pay rolls on four-by-twelve-inch cards. Data for fifty-two weeks can be presented in this way.

The statisticians of some large corporations bind their charts. However, several of the leading students of graphic methods believe that loose cards possess an advantage over the book system. They say that it is difficult in the case of the latter method to devise a system for keeping hundreds of curves in such a way that quick comparisons between any of them can be made. On the other hand, loose cards permit of instant comparison between different series of charts for a period of years, if desired. It should be emphasized that no system of curve records should be installed which does not permit of the quick comparison of any curve with any other curve in the whole system. Often an executive wishes to plan for the future, and in such a case it is helpful if at one time he can have before him a curve showing the record of sales and another curve for the same period of time giving a record of the company's expenses. When sales increase, expenses per unit should decrease, and vice versa. When any other condition exists the business is not on a sound basis.

It is a good idea in preparing the graphic charts to leave sufficient space at the left-hand side of the card for brief notations covering unusual conditions which have caused a marked rise or fall in the curves. It is undoubtedly true that after a couple of years have passed, the average individual is unable to remember the exact reasons for extreme fluctuations, even though at the time of the plotting they seemed unforgetable. The manager of a large telephone company was unable for some time to remember the reason for a drop in the curve of earnings of his concern two years previous. After much pondering and some search he recalled a blizzard of ten days'

PUBLIC LEDGER

The
DETROIT JOURNAL
publishes daily
PUBLIC LEDGER
Foreign News

"After a carefully watched trial of the Ledger Foreign News Service for several months I want to register for The Detroit Journal a very strong regard for what I am convinced is the most satisfactory cable service available for any American newspaper.

"Two facts stand out in the general excellence of the service: first, the authoritative character of the dispatches; second, the policy of the Ledger in concentrating correspondents where big news is breaking. Because of this policy the service rises above mere 'feature-quality' and becomes a great spot news service."

(Signed) Grove Patterson
Managing Editor
The Detroit Journal

The Detroit Journal is famous for the volume and general excellence of its foreign and domestic news. Though well served from various sources, its reputation for foreign news rests heavily on its exclusive rights to the full cable news service of the Philadelphia Public Ledger.

Hundreds of notable newspapers testify to the authority of Public Ledger news and features by subscribing for them regularly through the Ledger Syndicate.

In Berry Time

Remember Bubble Grains

Why shortcake?—why pie-crust?—why tarts?

Just because we all like fruits combined with flaky, flavory crust. Then add Puffed Rice to berries. Those are flaky, crusty tidbits, flavory and flimsy. They will make your berries doubly delightful. Try them.

Think what puffed grains add to summer

In the old days children lacked them.

Now breakfast brings these food confections—like snowflakes in their texture, nut-like in their taste.

Between meals children eat them like peanuts—crisped and lightly buttered.

At dinner they form wafers for your soups. Or nut-like garnish on ice cream.

At bedtime they form the ideal good-night dish.

And every serving means whole grains, wholly fitted to digest. Every food cell is blasted, so all the food elements can be assimilated.

Whole grains are made so fascinating that children revel in them. And that is what you want.

Puffed Wheat
8 times normal size

Puffed Rice
Steam-exploded grains

June Suppers

Puffed Wheat in milk.

This premier grain, when eaten whole, supplies 16 needed elements. Here those elements are all fitted to digest.

An ideal dish—a practically complete food—made so delightful that children never get enough.

Let no day omit it, for children need whole wheat.

duration, during which time the pay-station service was practically discontinued.

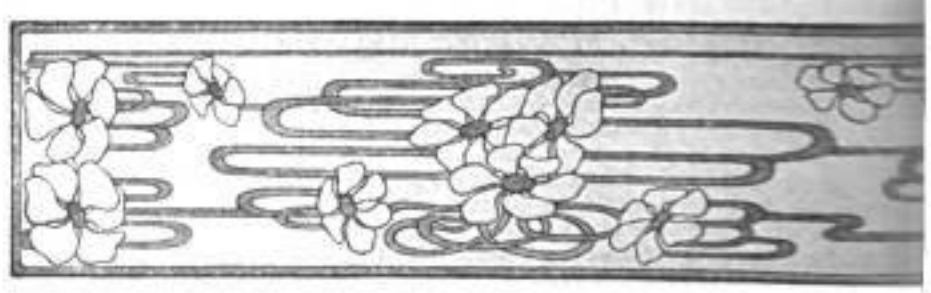
It is also a good practice to have each chart show on the left-hand edge of the sheet or card the initials of the executive authorizing it, with date of signing. It is always a good plan to fix responsibility for the authorization of a new curve, for some expense is involved in collecting data and plotting curves each week or every month.

Probably the most satisfactory scheme is to place one employe in charge of all curve plotting for the entire company. When this is done it is easy for this particular person to be ready for the new year with titles and scales properly placed upon the new cards that are to be used. At the proper time the new cards are handed to the various department heads, who have power to authorize the continuation of any curve for another year. The size of sheets, lettering of titles, and so on, should be standardized as far as possible. The ruling on the cards or sheets should be so designed as to leave a margin of three-quarters of an inch at the top and at the left, and one-quarter of an inch at the bottom and right of each chart.

Blue-printing is generally the most satisfactory and the cheapest method of obtaining copies of a chart. The ruled sheets should be translucent to permit of this. Some persons use onion-skin paper, either glazed or unglazed, but one well-known authority prefers a light-weight, high-grade bond paper, because it prints so well, stands erasure better and does not crack with age. This same expert recommends olive-green ruling, as it is easier upon the eyes, especially in artificial light. When no blue prints are necessary different-colored inks, or water-color paints used in a drawing pen, can be employed to distinguish one curve from another. In this latter method the chart should contain an explanatory note or legend, stating, for example, that red represents gross earnings; blue, expenses; and green, net revenue.

In the making of charts from which blue prints are to be produced it is advisable to use black drawing ink and to represent different elements or values by varying the lines in some such way as heavy solid, light solid, heavy broken, light broken and combinations of dots and dashes. Of course an explanatory key is necessary on each chart. Different scales may be used on the same chart. In using the typewriter to mark titles, tabulations, and so on, on charts, a much clearer blue print is made possible if a piece of carbon paper is placed with the inked side next to the back of the chart, so that a double printing is obtained.

When dealing with very large quantities it is not always practicable to use a scale which starts at zero and is carried up by even steps to a figure representing the highest peak on the curve. Such a chart would either be too large for convenient handling or else the scale would have to be condensed so that only very large fluctuations would be indicated on the curve. In such a case the best practice is to start the scale at zero and just above this point draw a wavy line across the sheet to indicate that the scale is broken. This line can be easily drawn with an ordinary serrated-edge ruler, as used by many accountants. The scale starts again on the upper side of the wavy line, at a figure a little lower than the lowest point on the curve, and is then carried up by even steps to a figure a little above the highest point to be shown on the curve. The efficient chart clerk will always endeavor to forestall questions regarding unusual points on curves by noting the reason for them on the chart before submitting it to his superior.



Not long ago some of our national engineering societies coöperated in establishing a joint committee on standards for graphic presentation. This committee has already made many valuable suggestions, which, though elementary, are fundamental in presenting business records in the form of charts. Here are a few rules worth noting: All charts should be arranged from left to right. Wherever it is possible represent quantities by linear magnitudes, as areas or ... umes are more likely to be misinterp... The changing point of view

Doubtless you have observed it yourself—this changing point of view. Thousands of persons *have.*

Constantly, since the inception of the industry, first one car, then another, and then another have seemed by common consent to occupy the foremost place in public esteem.

That the evidence points to the LINCOLN as the car now meriting this distinction is, of course, deeply gratifying to ourselves and decidedly pleasing to LINCOLN owners.

But isn't it perfectly logical; simple as A B C when you remember that it was the LINCOLN which brought into actual being the very qualities to which motorists of mature discernment had long looked forward?

When a new creation sets at naught all past conceptions of what a motor car should be, and do; when its mode of action is so much more captivating and motor travel made vastly more delightful; when it shows a degree of stamina and consistency of performance never experienced before, then what is more natural than that prevailing judgment should single it out for the highest estimate that can be conferred upon a motor car?

he Coal Controversy

By C. E. LESHER

ANY points in the coal controversy subject to opinionated discussion the operators and by the miners' hat particular attention should be o misstatements of fact whether y made or made by intent.

statement of The Coal Miners' THE SATURDAY EVENING POST of st, Mr. Ellis Searles, editor of the dine Workers' Journal, is guilty of a number of incorrect statements. les charges that the operators are r bound" to meet the miners in a conference and that their refusal ect, flagrant violation" of their and that the operators thus de- forced the miners to strike.

ntract of March 31, 1920, to refers and which provided for a reliminary to a joint four-state , was broken when, in August, miners went out on a strike which d not under a joint agreement rict and state agreements. Since s not existed either in principle

The miners' union abandoned act when they abandoned the mpetitive Field plan of negotiat- and reverted to state settlements get their rate of day wage in- m $6 to $7.50 for eight hours. the miners and operators have g under the various state agree- icated on the joint agreement of 0. The United Mine Workers ntract, not the operators. The striking to force the operators a joint agreement, a national contrary to the necessities and e operators.

s no doubt on the part of at that time as to the actual the Central Competitive Field. eadline Cleveland Conference Disruption of Interstate Joint ment, Because of the Compli- Developed in District 12, the e Workers' Journal of Sep- 920, concludes its account of gs with this significant state- its finality:

gret was expressed because of n of the interstate joint move- . The interstate joint move- great stabilizing influence in stry."

s makes light of the miners' six-hour day and a five-day that "every person with a e sense knows that this de- nothing these days." The the miners may know that d is impossible, but his con- ot. He fails to state that, ary 1, 1922, Section 3 of e constitution of the United reads:

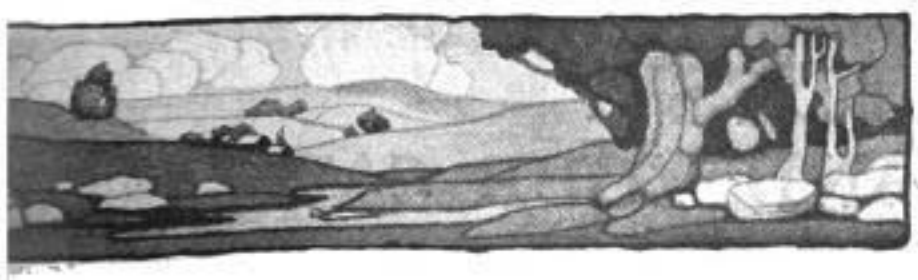
d, that not more than six nk to bank in each twenty- ll be worked by members of n."

article abounds in such ion busters among the coal "that element among the appears to be determined to miners' union." He makes nd determined effort to con- rs that the coal operators e destruction of the miners' absolutely at variance with ry important group of oper- g union coal-mine labor in year has made unsuccessful negotiations for a new wage mployes.

the joint interstate method ent, Mr. Searles says that way to negotiate a wage d that "this is the plan ollowed ever since 1898 by operators of the Central eld, with the exception of 1919." This is not correct. A notable exception was in 1906, when, following a strike of several months, state settlements were entered into without a Central Competitive Field joint agreement. It is significant that 1906 recorded the only wage reduction to which the miners' union has been subjected from 1898, when the first joint agreement was made. The other exception of course is that of 1920, to which reference already has been made.

Mr. Searles charges that the operator by "the same old trick" caused the strike, because they "had millions of tons of unsold coal on hand" which they could sell at "any old price." As regards anthracite it is true that the producers held large stocks on April first. But Mr. Searles throughout his article is dealing with bituminous coal, and he absolutely misstates the fact when he charges the soft-coal operators with having millions of tons of unsold coal on hand. An estimate of the United States Geological Survey shows the total quantity of coal unbilled in cars—that is, in the hands of producers on April first—was somewhat in excess of 1,400,000 tons of bituminous coal and 115,000 tons of anthracite. The 63,000,000 tons of stocks reported by the Government, as of that date, was in the hands of the consumers.

Excusing the high rate of $7.50 per day for common labor, which Mr. Searles says "may sound to some like a high price," he adds: "But $7.50 a day does not enable a man to earn a living for himself and his family unless he has reasonably steady employment. Soft-coal mine workers averaged only approximately 125 days' work in the entire year of 1921," which, he adds, would give an annual earning of $937.50.



Data published by the Illinois coal operators show that at fifty-two mines where the average days the mines hoisted coal was 159 in 1921, all day men averaged 118 days and earned $898.45 in the year. But that does not tell the whole story. Such an average does not show the adequacy of the wage. It is further shown that 51 per cent of these men averaged 198 days and earned on the average of $1502.85, and that 52 per cent of the day men earned over 88 per cent of the earning of this class.

In other words, Mr. Searles neglected to mention that in his averages of earnings he has included with the steady worker the loafer and unfortunate as well. With his average of $700 per year for all mine workers in the union soft-coal fields I have no quarrel. It but proves how unfortunate the union mine worker would be were he to be granted all that he demands. His high wage rate is of little use to him when he has no work, because the nonunion worker at lower wages is producing the coal.

In the matter of prices Mr. Searles has made two outright misstatements of fact for which there is no excuse. He states that J. D. A. Morrow, vice president of the National Coal Association, "testified before the Interstate Commerce Commission a few weeks ago that the average retail selling price of bituminous coal throughout the United States in October, 1921, was $10.41 a ton." The official record of the commission does not show that Mr. Morrow made any such statement.

Mr. Searles also states that "every time an increase is given to the miners the price of coal is boosted to absorb the increase. It is interesting to recall that when the anthracite miners obtained an increase in 1920 the anthracite operators added a dollar a ton to their selling price in anticipation of the increase, and later added another dollar to the price to absorb the increase that was granted."

There was but one increase in the circular price of anthracite in 1920, and that was one dollar a ton to cover the wage increase. It was added on April first. No other increase was made.

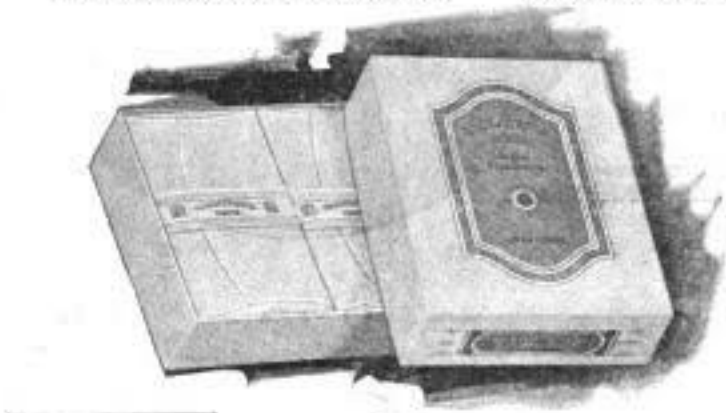
She has received a letter. When will she answer it?

IF SHE has no personal stationery, the chances are she will not answer this letter for weeks or months.

It's easier to remember to write letters when you have writing paper in the house. It's easy to forget to write when you have no social stationery.

HAMMERMILL BOND

Social Stationery



At drug stores, stationery stores, and department stores you can see Hammermill Bond Social Stationery in eight different envelope sizes, with sheets to fit. These sizes are for general family correspondence and for men's correspondence. The paper is made in three finishes—linen, bond, and ripple. The range of choice is interesting. The price is from 35c to 75c a box. The same papers are also supplied in writing tablets in all sizes, with serviceable blotter and sheet of guide lines.

To make it easier for you to choose the best personal stationery, we will send you samples of different styles and finishes for ten cents (stamps or coin).

Standard Double Bar Model, 19.

Single Bar Models priced from $11 to $18.

Increase in Western Prices.

Model 136, $8.50.
Model 163, 6.50.

Stewart Speedometer for Fords, $15.

Western Price, $15.50.

Ask for the Speedometer with the colored dials. Model 160-K.

DON'T wait to be bumped into buying a bumper. The most expert drivers are ofttimes victims of accidents they cannot avoid. Both rear and front of your car are in need of protection.

Save repair bills and dress up your car by equipping with Stewart Double-Bar Autoguards. Two beautiful, sturdy bars which run the full width of your car. Protects the entire front of your car—not just the center. Another bumper cannot slip over, under, or around the ends. Built to stand up under severe blows.

DISCONNECT your horn if you would know how much you depend upon it. Its successful operation means safety for you and others.

Suppose it failed to work just once in a situation similar to that pictured on the left. You can't always depend upon brakes or a quick turn on a slippery street.

There's a real motor in the Stewart Warning Signal that produces a loud, commanding warning. And it never fails you in a pinch.

"PULL over to the side of the road" are not pleasant words to the driver of a Ford or any other car. It's almost sure to mean $15 and costs. In some localities jail sentences are being given for speeding.

When His Honor asks "How do you know you weren't going that fast if you haven't a speedometer?"—you can't tell him you guessed your speed and get away with it. Put a Stewart on and be sure you're right.

There's a new feature in this Stewart Speedometer. Colored dials which appear at certain mileages tell when to lubricate the various parts of your car. A chart furnished with each instrument gives you lubrication instructions. Save repair bills due to lack of oil and grease. Increase the life of your car. Can you afford to be without a Stewart?

...gory talk one would have ... was a very fair golfer, but ... he actually never did the ...rse—and it is a short one—...ndred and ten. More and ...ecame convinced that he ...culiarly insufferable ass.

After breakfast Annabel took me by the elbow and led me unostentatiously to the veranda.

"Look here, Uncle Foster," she said firmly, "just why did George go to New York?"

"Business, my dear," I answered.

"Business—rot!" she exclaimed inelegantly. "Or if it was business I'll bet it was someone else's. Mine, for instance."

"Why, Annabel, what leads you to think that?"

"I'm not blind," said she. "You and George are planning something. You're going to pull off something very clever, you two. Well, listen to me! If I find that you're being clever at the expense of Bob Gregory, I'll marry him to-morrow."

"May God protect you!" I exclaimed fervently.

"That," said Annabel calmly, "is a very pious wish and does you great credit."

"Does your mother know of your infatuation?"

"She does not. I never tell mother anything until I have to. You should know that yourself. Just the same, mother is very fond of Bob."

"Yes," I agreed, "that's just it. That's why I think it's only fair that she should be told. I fancied she was flirting with him at breakfast, and—well, she's almost his age and at present unmarried."

Annabel started to lose her temper; but having, as I have pointed out, a naturally cheerful disposition, thought better of it and I detected a smile, nascent at the corners of her lips.

"You fool!" she said.

"She who saith to her brother 'thou fool' is in danger of hell fire," I reminded her.

"Besides," she continued somewhat irrelevantly, "Bob's only thirty-six."

I laughed.

"You innocent babe," I said, "he was thirty-six when you were living on milk! However, it makes no difference. His age, after all, is a mere detail; and as I myself am doubtless as old as he, I shan't condemn him. When do you intend to have the wedding?"

"That's my business," she said, and I sighed my relief.

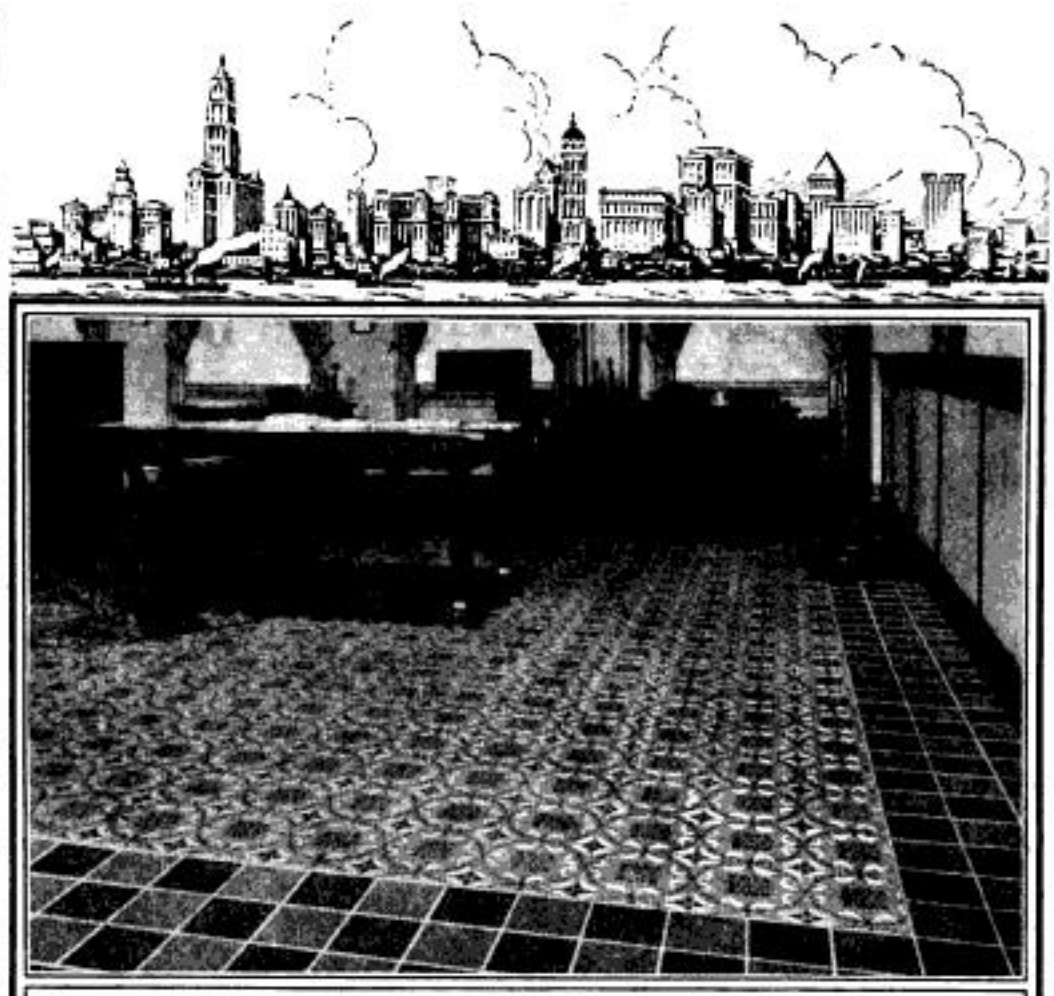
There seemed no immediate danger at any rate. George had asked for ten days only; and George, as I well knew, was capable of moving mountains in ten days. I remember once—no, I shall tell that story another time.

Gregory came stamping out to the veranda, looking irritated but majestic, the way a king probably looks when someone he doesn't approve of is talking in a corner with the queen.

"The car is waiting," he announced briefly, and drew out his initialed watch. Then he put his arm possessively through that of Annabel—he was forever touching her, pawing her, stroking her, and all other women, too—and led her away.

His hat was of green plush with a small feather in the back of it. *Satis quod sufficit.* I will say no more.

When they were well away I started out toward the village, my destination being the telegraph office. I purposed sending George a telegram, for we had agreed before his departure to keep each other posted on any new developments. The message was brief, well within the prescribed ten words.



He claims age thirty-six. Marriage not imminent.

I conjectured that George would be able to refute the fellow's lie about his age without great difficulty. It was a triviality, to be sure—a lie excusable enough had he been a woman—but it would be a beginning, the first stroke of the pick that was eventually to undermine his complacency; the Pelion—if I may vary my metaphor—upon which we intended to heap Ossa.

Having dispatched my telegram, I took my way in an optimistic mood to the reading room. It was too early in the morning for most of the readers, and the club was empty except for a gentleman called Mather, who was glancing through La Vie Parisienne. Mather knew no French, but he enjoyed the pictures.

"Hello, Mr. Langley," said Mather politely. "How does it go up your way? How's your lion?"

"Gregory?" I inquired. "Oh, he's roaring according to specifications."

Two Blabon inlaid linoleums (patterns 352 and 408) combined give color and life to this modern business office

Sound business judgment -and a Blabon floor

Men of affairs are quick to see the splendid opportunity Blabon Linoleum offers to liven up an office or store with cheerful patterns and harmonious colors, and thus make it more attractive.

The wide use of Blabon Art Linoleums in commercial life shows that business men recognize them as a good investment.

A Blabon floor is a good investment because it is both beautiful and durable. Its plain colors and inlaid patterns go through to the burlap back, and retain their beauty through the years that the linoleum lasts.

It is resilient, which makes it comfortable to walk and stand upon; and its noise-deadening feature is an asset for good work.

A Blabon floor is sanitary. Its smooth surface does not harbor germs. It is easy to keep clean and bright with the regular use of a damp cloth. Waxing and polishing now and then preserve its good appearance. Fabric rugs may be thrown over a Blabon floor, if desired.

The low cost of upkeep makes Blabon floors economical. When cemented down Blabon inlaid or plain Linoleum becomes a permanent part of the building. Any Blabon dealer can send or recommend an experienced man to lay Blabon Art Linoleums.

For genuine linoleum look for the name Blabon. Write for illustrated booklet.

Important Notice: Floor coverings (including rugs) made upon a felt paper base are not linoleum, and to describe, advertise, or sell them as linoleum is a violation of the law. Felt paper floor coverings have a black interior which is easily detected upon examining the edge.

Look for this label on the face of all Blabon Art Linoleums

Blabon Rugs of genuine linoleum

Beautiful, durable rugs at a moderate price. Moth-proof, sanitary. They lie flat without fastening. Ask your dealer for them.

THE RICE PROCESS WHITE

Before you buy white paint for walls and woodwork–

You should know this important fact

THE surface of ordinary flat finish white paint is not actually smooth. It is full of countless pores—tiny holes invisible to the naked eye, but plainly seen under the microscope.

These pores catch and hold dirt. That is why such paints become soiled so readily.

Barreled Sunlight is a white paint which produces a smooth lustrous surface. It offers no lodging place for dust or dirt particles. Smudges cannot sink in and become fixed. Even if soiled after years of service Barreled Sunlight can be washed like tile.

That is why this paint is being used today in buildings of every description—hotels, apartment houses, office buildings, stores, schools and industrial plants. Ideal also for woodwork throughout the home and for the walls of kitchen, bathroom, laundry, etc.

Made by the exclusive Rice Process, Barreled Sunlight is guaranteed to remain white longer than any gloss paint or enamel applied under the same conditions. Easy to apply. Flows freely and leaves no brush marks. Comes ready mixed in cans from half-pint to five-gallon size—barrels and half-barrels.

If your dealer does not carry Barreled Sunlight communicate with our nearest distributor. (See list below.)

Save the surface and you save all

"All the women in the harbor are neurotic about him," Mather volunteered. "They're all aglow. Would be, I suppose—actor and all that. Queer people, actors."

"Queer people, women," I said.

"Yes," agreed Mather, "absolutely inexplicable. But Gregory gets 'em every time. Like seeking like, I guess. All queer. I used to know Gregory's wife years ago. She was a nice little woman—quiet, you know; quiet and adoring. At least she was then. She probably's still quiet enough."

"His wife!" I exclaimed, endeavoring—but unsuccessfully, I fear—to conceal my surprise and my satisfaction. "Married, is he?"

"Oh, no; not now. Was, though. Doesn't boast much about it, I suppose, eh? Well, it was quite a while ago, and they've been divorced for about ten years. When I saw her last she was in Watch Your Step. Nice little woman—quiet, you know. Not much talent, but pretty and well made."

"What was her name?" I asked.

"Her name? Let me see. Hanged if I remember, it was so long ago. Lots of water gone under the bridge since, eh? It was an unusual sort of name, too; one of those tricky names, you know, that chorus girls invent for themselves and are frightfully proud of until somebody yanks them out of the chorus and puts up the money to star them in Camille. Oh, yes, I have it now! Danaë. That was her name—Danaë Delorme."

"Apt alliteration," I said, and to his evident surprise I thanked him effusively and rushed out of the club. A second telegram to George was clearly indicated.

v

I HAVE no doubt that there are certain days in the lives of all of us to which we look back with the feeling that they were merely part of a dream. Our actions seem to have been dream actions, our words dream words, our emotions dream emotions. The events themselves are often so illogical and nonsequacious that we can scarcely persuade ourselves they would have occurred during our waking moments. In dreams, of course, the most amazing things are accepted casually and as commonplaces. We are frightened but not surprised to find ourselves clinging with one hand to the cornice of the Woolworth tower; battling with assassins in a submerged submarine; cutting the throats of our nearest and dearest; appearing naked in a ballroom; or—I am no Freudian—making love to the cook.

All this is prefatory to the statement that I remember the week that followed George's departure from Fool Harbor as I might remember a dream. Unusual things happened with astounding rapidity—and continued so to happen—but I soon grew to accept the unusual with complete equanimity. Surprises ceased to surprise.

The opening gun was fired when George's answer to my two telegrams reached me at Fool Harbor. It read:

He is forty-four. Have copy of birth certificate as proof. Have traced his wife, but her name not Danaë Delorme. Doubtless that is stage name. She is Vera Carton and lives in Yonkers. His alimony to her six months in arrears. Everything splendid. GEORGE.

Inasmuch as this reached me on a Thursday, three days after George's departure, I concluded that my nephew had wasted no time in commencing his investigation. The results he had achieved during those three days were flattering evidence of his energy.

But the question that confronted me was, what use should I make of the information which I now possessed? Should I throw it bravely in Gregory's teeth and dare him to deny it? Or should I reveal it to Annabel and permit her to decide what was to be done? I determined finally on the latter course, since I foresaw that in any case Annabel would have to be told. Gregory, I knew, would be quite capable of refusing to leave the house until she should have ordered him to do so; or if he did leave it before Annabel knew the truth he might not improbably persuade her to go with him—a catastrophe to be averted at any price.

That evening before dinner I invited Annabel to assist me in mixing the cocktails.

"I wanted a word with you alone," I said to her, "and you are in such demand these days that I've had to resort to strategy to obtain it."

"Poor Uncle Foster!" she said commiseratingly. "Where's the vermuth?"

"Left-hand door of the sideboard. A bel, you told me the other day that Gre claims to be only thirty-six. Would it the slightest difference to you if I prove that he is actually forty-four?"

"Not the slightest," said Ann "Where's the ice pick?"

"In the top of the refrigerator, re on the ice. It makes no difference t then, that he has lied to you about his

"No, I can imagine nothing of les sequence."

"And," I went on ruthlessly, bringi my heaviest piece of artillery to shatt composure—"and I suppose that it is consequence, either, that Gregory wife—or rather had a wife who di him. I suppose he has told you that

"Yes, indeed," said Annabel, "h me that long ago. Isn't it a pity? W the cocktail shaker?"

There is no denying that I felt sh The shell I had fired from my big g proved to be a harmless dud. Ho ever started to tell what you fondly is a brand-new humorous story an informed by your audience that the heard it before? If you have you an of the distress and the annoyance experienced.

I seized the cocktail shaker an dished it furiously in the air, whereu cover promptly came off, and ice, g vermuth flew to the four corners pantry. Annabel, laughing sham stooped to clean up the mess; a then Gregory pushed open the s door.

"What is this—what is this?" manded. "Wasting nectar and a my good Langley?" It was not hi and, moreover, I was not his goo ley; but it was like him to ass ownership of both. "Mrs. McKni were wondering what had becom My dear Annabel, surely there is a why one of us men should not mop unfortunate mess."

"Thank you, Bob," said Annab malicious smile in my direction.

So that was the end of that inci I freely confess that I came out of best—perhaps only third.

But the following day—Friday—me reënforcements in the shape o telegram from George.

Vera Carton never known as Danaë There is a person of that name now Hello, Venus. Am hot on her trail. becomes interesting, my dear Watso

Bigamy! Well, perhaps not ex No doubt divorces had been obta each matrimonial venture. Even I fancied, would have been discr to see to that. The question w wife had the fellow admitted Carton or Danaë Delorme? Stu not to have asked Annabel when the opportunity; particularly s after last night's fiasco I should p be allowed another opportunity

But Gregory himself—unwitti certain—saved me a deal of approaching me before luncheo friendly manicured hand on m and saying: "Er—my good La give me a moment, please. A told me that you are taking a peculiar interest in myself and Now, my dear fellow, don't mis me, I beseech you; but I feel c suggest that if you desire to kno about me, why, I am the per you should naturally address yo follow me, I hope?"

"I not only follow you," sa will presently take advantage gestion. First, though, in justi I must point out that Ann father and no brother. I am male relative, but even I am her uncle. She is the daug stepsister. Nevertheless, I f responsibility in regard to her bility and a very deep affectio then, that interesting myself i I interest myself in the people is interested. You are one of

He bowed with the grace o "I rejoice," said he unctu so honored."

4½% on Savings

New U. S. Treasury Savings Certificates

offer an unusual opportunity to save systematically

IE United States Government, through the Treasury ıd Post Office Departments, has announced a sure way p men and women everywhere who want to save and make it earn more.

ry Savings Certificates, New Issue, are now added to the ıs offerings of Government securities for investment of . These new Treasury Savings Certificates will earn 4½ t a year, compounded semi-annually, if held to maturity.

The Certificates may be redeemed before maturity at redemption prices which increase from month to month, as stated on the backs of the Certificates, yielding about 3½ per cent interest, compounded semi-annually.

Issued in denominations within the reach of all. At present prices you can buy a $25 Certificate for $20, a $100 Certificate for $80, or a $1000 Certificate for $800. Each matures in five years from date of issue, earning 25 per cent for the full period of investment.

The New Way To Save

ıew and simpler way to save methodically, dearily for weekly or monthly savings. If you can er week or per month, these Certificates have l earning capacity.

less than $20 per month, you can accumulate ings Stamps at 10 cents each, or Treasury amps at $1 each, both non-interest bearing. ı open an interest-bearing Postal Savings acn you can convert your savings into a Treasury rtificate when you accumulate $20.

overnment offers the people an ideal system absolute safety, liberal interest, ready cash if

can and should take advantage of this opporearn how easy it is for savings to accumulate.

es Treasury Savings Certificates may be pur'ost Offices, Federal Reserve Banks, banks ımpanies, or direct from the United States Savings System, Treasury Department, , D. C.

Advantages

Liberal Interest

Treasury Savings Certificates present an ideal form of investment, fully protected, and with a liberal rate of interest. Each dollar saved earns 25 per cent in 5 years, which is at the rate of 4½ per cent a year, compounded semi-annually. If withdrawn before maturity you receive interest at the rate of 3½ per cent compounded semi-annually.

Safety

These Certificates are a direct obligation of your Government, the soundest investment conceivable—backed by the strength of the Nation. Your principal and interest are absolutely safe. Risk is eliminated. Certificates are registered in your name at time of purchase, protecting you against loss or theft.

Certain Value

The Certificates are not subject to market fluctuations and cannot depreciate in value. They are always worth what you paid for them plus the interest.

Payment on Demand

You can withdraw your money at any time, without waiting until maturity of the Certificates. This provides for any emergency. The Government, however, cannot call them for redemption before maturity.

Many Attractive Features

In addition to the advantages already listed, you will find many other attractions. For instance, any individual can buy Treasury Savings Certificates up to $5000, face value, of any one series. A new series is issued each year. Each member of the family can own up to $5000 worth; likewise corporations, partnerships, associations, and joint-stock companies; or trustees; or two persons in the alternative, payable to either person or to the survivor; or an infant or infant's guardian; or the Certificates may be made payable to a beneficiary, that is, registered in the name of one person and upon his death payable to another.

The Certificates are exempt from State and local taxation (except estate and inheritance taxes) and from the normal Federal income tax.

The Certificates are redeemable upon presentation and surrender, by mail or otherwise, to the Treasury Department, Washington, at the prices indicated in the table printed on the back of each Certificate.

ow Dollars Grow

I telegraphed George to

that effect, warning him that in order to convince Annabel he would have to bring with him evidence conclusive enough to persuade a very partial and opinionated judge.

When, therefore, on the following Monday I received a telegram from my nephew, advising me that Amelia had been inspected and had been catalogued under the same heading as Vera and Danaë, and that he himself was arriving at half past five on the following day, I feared that he might be leaving his task only half done. Annabel, I well knew, would simply decline to believe any accusation against Gregory based only on George's word for it.

But, as it happened, I need have had no fears, for George brought with him the most conclusive evidence possible—he brought with him Vera and Danaë and Amelia!

I went in the car to meet the late afternoon train and George. Fortunately I went alone with the chauffeur; for, as I have said, I met not only the afternoon train and George but also three undeniably attractive young women. Had Mary been with me I am certain that she would have swooned.

George, outwardly cool and businesslike, but inwardly, as he later confessed, pleasantly apprehensive, marshaled Vera and Danaë and Amelia—and a quantity of hand luggage—on the platform and presented me to them.

"Mrs. Vera Carton Gregory, Mrs. Danaë Delorme Gregory, Mrs. Amelia Nobel Gregory—my uncle, Mr. Foster Langley."

I bowed, bereft of speech. I bowed three times, while they murmured the usual banalities.

"Pile in," said George unceremoniously. "We're all good friends and this is my party."

His party! It might be his party, but it was his Aunt Mary's house; and, moreover, these three guests had been Robert Gregory's wives. Something of this flashed across me, but I made no demur, for I was still living in the dream.

During the ride to the house I had opportunity to survey the three Mrs. Gregorys. They differed among themselves as markedly as the three parts of Gaul.

Vera, who was probably the oldest—and she could not have been much over thirty—was a brisk, efficient-looking, tailor-made sort of person, neatly clad, neatly hatted, neatly gloved, neatly shod. She had black hair and eyes and white collar and cuffs. She said little, but what she said was to the point.

For example, she said, "I suppose our arrival will mean the devil of a row."

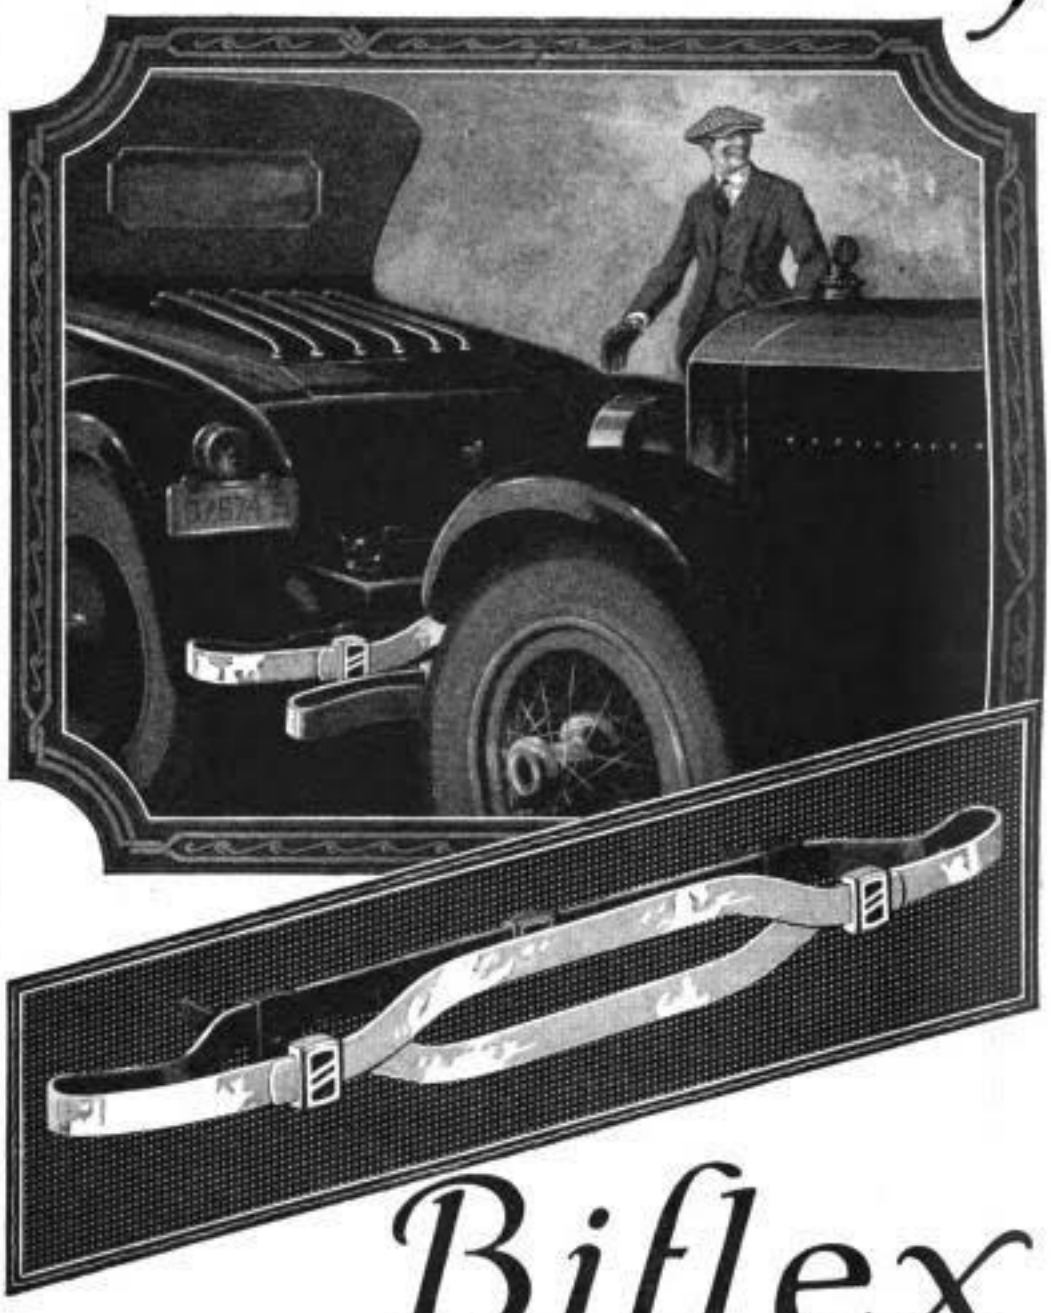
A woman of sense and perspicacity.

Danaë was, I judged, an experienced chorus girl, risen, perhaps, to speaking parts. She made conversation in the voice and manner which stage directors of musical comedy believe to be appropriate to young society women; and she did this, I am sure, to cover up her very real nervousness. It was a new part which she was about to play, and one which she had not rehearsed. She was plump and blond and highly perfumed.

Amelia Nobel was the youngest and the most beautiful of the three. She, as I guessed correctly, was a motion-picture actress, and very probably a motion-picture actress out of a job. I confess that my sympathies went out to her, for she was a frail, appealing little thing in her rather shabby blue suit and her worn-out gloves. She did not seem at all frightened, and yet I could not help wondering what had induced her to start on this ridiculous expedition. Indeed, I wondered what had induced any of the three to start. Curiosity? A sense of the dramatic? Hatred of Gregory? Love of Gregory? Or more probably, I thought, simply love of excitement.

We drew up at the front entrance to the house.

"I fear," I said, "that we are not exactly—er—exactly expected. Shall I go in and announce you?"



"Don't bother," said George airily. "We're not staying long, you see. Just an afternoon call—a purely informal afternoon call. I'm motoring them back to Portsmouth to-night in time for dinner. They think—and I'm inclined to agree with them—that they'll be more comfortable over there."

"Yes," I agreed—"yes, I see. Quite right, perhaps."

Flinging open the door, then, I called loudly for Mary.

"Visitors, Mary!" I cried. "George has brought some friends to tea."

Super-Protection

Biflex
Spring Bumper

"No Damage!" What a relief! Of course you didn't bump into his car intentionally but—a slippery street—brakes didn't hold—bang! Yet, not a scratch or a dent. Biflex Bumpers averted an embarrassing situation—absorbed the shock—prevented damage to cars—saved tempers and dollars.

Biflex Bumpers are keeping hundreds of thousands of motorists in a good humor. Motorists have no fear of collisions in traffic jams; they know Biflex gives super-protection to cars and passengers.

Biflex Bumpers are perfect—perfect in balance, construction and beauty. Their process of manufacture is marvelous for its precision and thoroughness. They are made of carefully selected, oil-tempered spring steel produced specially for Biflex Bumpers. Their strength is proportioned to the weight of your car. Fittings hold bumpers rigidly, never rattle.

The Biflex broad-faced, double-barred bumper was originated by Biflex inventors. Blocks bumpers of all heights. Its deep-looped construction at ends provides recoil; cushions all blows.

Your dealer proves his interest in your welfare and safety; also his confidence and pride in the cars he sells by recommending Biflex Bumpers.

Only the best is cheapest when safety of life and property is paramount. Priced from $21 to $28.

Your dealer will supply you.

I heard my stepsister's voice coming cooingly from the living room.

"How nice!" she exclaimed in the bliss of ignorance.

I heard the suave, patronizing barytone of Gregory saying something in reference to the return of the prodigal George; I heard Annabel order more tea and teacups and muffins; and then we entered.

The doorway to the living room is wide, so we entered almost abreast—an imposing line, the three young women in the center and George and I each on an end.

Mary, as was her custom, was shaking hands before she had heard their names. Even after she had heard their names she continued shaking hands—mechanically, I suppose, as a flywheel continues to revolve long after the motive power is switched off.

"My aunt, Mrs. McKnight," said George, "may I present Mrs. Gregory—and Mrs. Gregory—and Mrs. Gregory?"

There were murmurs—diminuendo murmurs subsiding into terrific silence. Mary, completely incompetent in any crisis, stood gasping, her arms at last limp at her sides, her startled eyes traveling like those of a hunted animal from Gregory to his three ex-wives. Annabel stood, silent, motionless, a little pale, behind the tea table.

Gregory, I hasten to admit, behaved more decently than I should have expected. At least he did not lose his temper, or even his drawing-room manner. He advanced gracefully to the center of the room, bowed and said: "In my case, dear friends, no introductions are necessary. I have had the pleasure—I repeat, the pleasure—of knowing all three of our charming visitors in former days. Vera, how do you do? Danaë, I am delighted. And Amelia—why, it seems but yesterday that we said good-by. You are all looking splendid—all of my wives, I may say, are looking splendid."

"You've taken on a little weight, Robert," commented Vera appraisingly.

"You handsome old dear," said Danaë.

But Amelia merely said "Bob!" in a voice that trembled a little.

Then Gregory, addressing himself to George, said: "I don't think that it is necessary for me to ask what your purpose is in bringing these three ladies here. Their purpose in coming is entirely another matter, and I must confess that I have no idea as to that. Perhaps, if Mrs. McKnight and Annabel will excuse us, we might discuss that in another part of the house. For Annabel, at any rate, the discussion may well be unpleasant."

Annabel spoke at last.

"I should prefer to stay, if you don't mind," she said quietly.

"That," observed George, "is the idea. There will be no unpleasantness, I assure you—only an unusual situation, and I think that Annabel should enjoy the benefit of being present."

"Of course," said Annabel; and seating herself at the tea table she asked brightly, "Who will have tea? Won't you please all sit down?"

We all sat down. I have seldom so admired Annabel.

Danaë began to giggle.

"My dear Danaë," said Gregory, "you seem to have something amusing in your mind; suppose you begin. Why did you come here? What do you want?"

Danaë patted her yellow hair, lowered her dress over her knees, crossed her shapely legs, lowered her dress once more, and said: "Why, Robert, I came here, I guess, for the same reason all of us came! I'm lonely, and I've missed you, and after thinking it over and taking things all in all I'm sorry I divorced you. I'd be willing to start again if you would."

"Good Lord!" exclaimed Gregory. "So that's the way the wind blows!"

"Well," said Danaë, "that's the way it blows with me, and I rather guess I'm not alone in the cyclone. But remember, I was your first wife."

"Yes," said Gregory grimly, "I remember. And you, Vera? You're my second wife. How about you? Are you here for the same reason?"

The efficient, businesslike Vera flushed a little, but maintained an admirable composure.

"I've tried to get in touch with you several times in the last few years," she said. "You never would see me. You never would answer my letters which I addressed to the theater. I tried to stop you once on Broadway when you were walking alone, but you pretended not to notice me. I divorced you, you remember, for n support. That was when you were o work and were too lazy to look for a That was before you were famous. the supporting on the thirty dollars I earned as a stenographer, and weren't too proud to share it. Well seems a good opportunity to tell you I'm not a bit too proud to share wha are earning now. I will say nothing the arrears of alimony that you alread me, and if you will remarry me I'm w to start again with a clean slate. fifty-fifty everything that each of us Is that fair?"

Gregory passed his fingers nerv through his hair. The strain, I fancied beginning to tell even on him.

"That is fair, I suppose," he said; I doubt if it's possible. I'm sorry abo alimony. That, of course, will be att to. My agent—my lawyer—very o of them. And now you, Amelia!"

She looked up at him slowly. Her were clasping and unclasping ther restlessly in her lap. She had man conceal her shabby gloves.

"I have nothing to say. I merel the first chance I could to see you You left me. I suppose you were t me. I wondered if you were still t me. I came to find out. That's all

"Poor little Amelia," said Gregor a tenderness which I believe w assumed.

She smiled, and when she smiled quite lovely.

"Poor old Bob," said she.

There was a brief silence. Anna pouring tea and George was pass and muffins.

"Well!" exclaimed Mary. "Thi upsetting! I was never so bewil my life. I'll have my tea quite s think, Annabel dear." And the perhaps for the first time how tr she was, she said, "Mr. Gregory, us an explanation."

"I owe you three, dear lady, a Annabel two. Annabel knew about you see. But unfortunately there be no further explanation pos young friend George has attended and everything that is claimed ladies is true. Everything. I rep fore leaving your house I can o my dear Mrs. McKnight, that I n ing concealed my marriages. possible excuse is that, having p self so frequently a failure as a h feared that I might be disqual future competitions."

"Lose your amateur standi suggested George.

Gregory bowed in acquiescen "Precisely, my dear boy," sai He drew his thin gold initia from the pocket of his black-silk consulted it and replaced it.

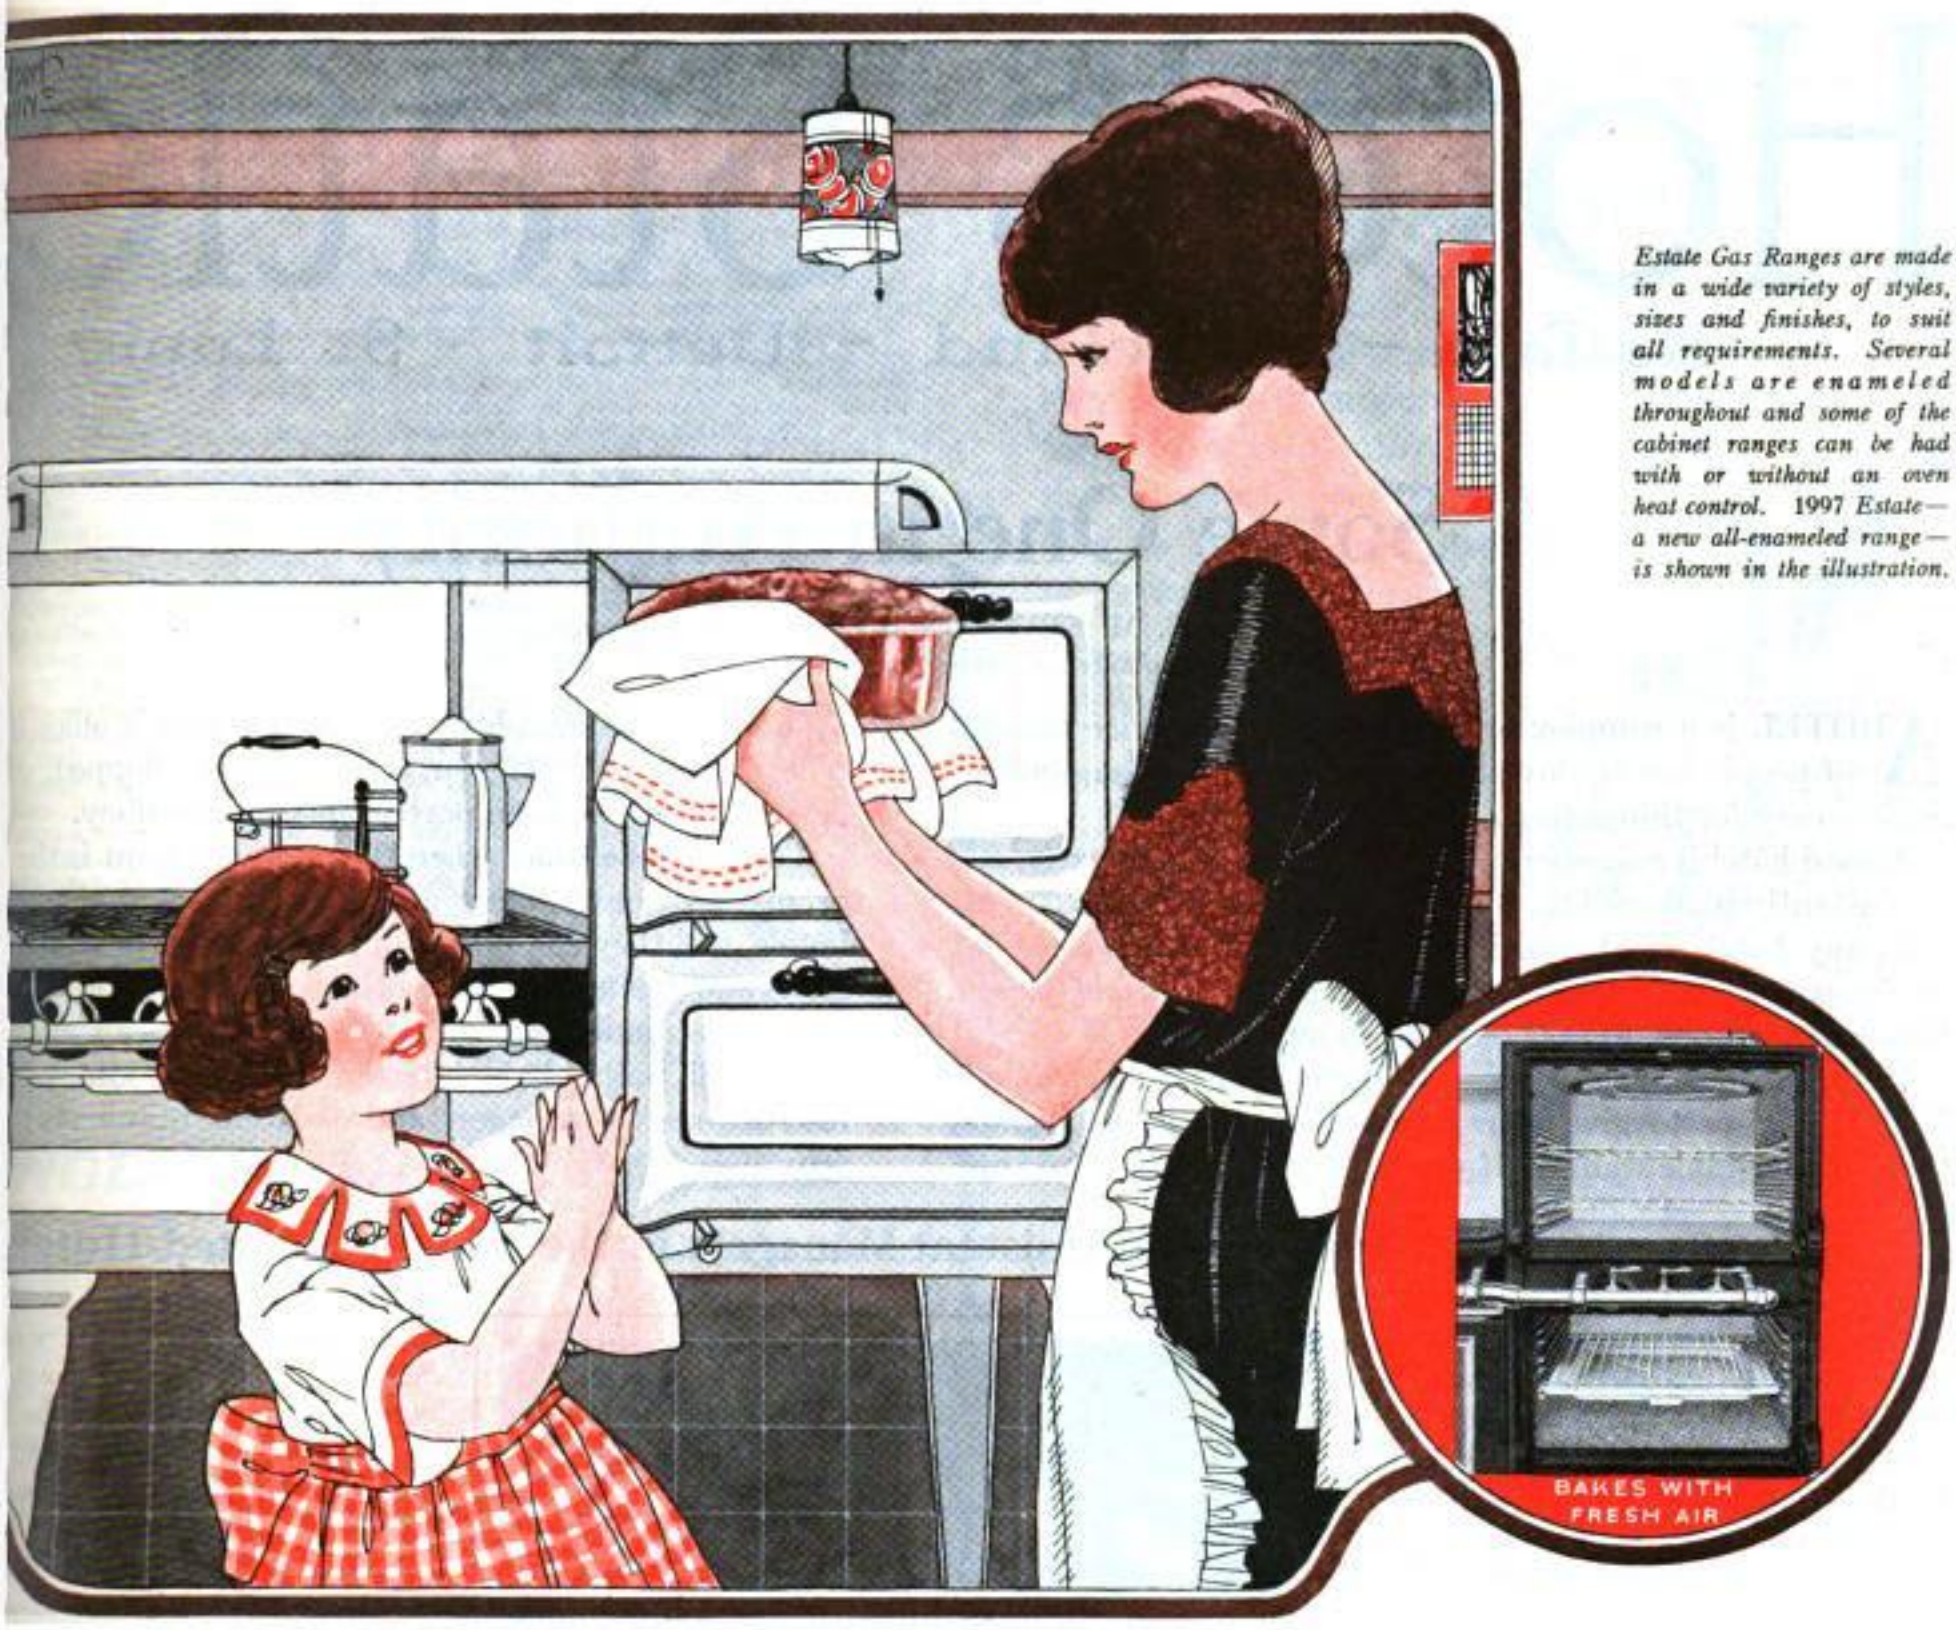
"I think," he said, "that I h time to pack up and catch the la Boston. It is a most unfortunat what would otherwise have bee ing visit."

"And what about me?" dem efficient Vera.

"And me?" echoed Danaë.

Amelia, I noted, said nothin

"You seem to be very po Gregory," said Annabel—"ver spite of the fact that you ex been a failure as a husband."



At this Mary reproved her, t that the remark was uncalled maidenly; but Gregory, all ti pose restored, smiled benign them both.

"Popular!" he exclaimed. Ah, dear ladies, what is popu mere fugitive waif of a breeze in our direction every once in a to veer about and turn against moment. Estate Gas Ranges are made in a wide variety of styles, sizes and finishes, to suit all requirements. Several models are enameled throughout and some of the cabinet ranges can be had with or without an oven heat control. 1997 *Estate—a new all-enameled range—is shown in the illustration.*

% Cook and 75% Oven!"

k and 75% oven"—that's the way a culinary expert recently interpreted f good cookery.

s make good cooks. And poor ovens cooks. Every woman knows how true

point to consider, when purchasing is the oven.

Bakes with Fresh Air!

Gas Range differs from all others in re *no openings in the sides* of the oven. *ucts of combustion cannot enter where ooking.* Only fresh, pure air can enter

ng and roasting, sweeter and more wholesome, are thus achieved. And absolute heat uniformity *in every part* of the oven is assured.

Additional Baking Capacity, Too!

Note, too, that an 18-inch Estate oven has the capacity of an ordinary 20-inch oven!

That is because baking can be placed closely against the walls. In the ordinary range, with openings in the side linings, there is at least one inch of oven space, at *each* side, which cannot be utilized.

But that, of course, is a secondary consideration. The important point is Fresh Air Baking—the exclusive feature that makes so amazingly for better cookery, and makes it unwise to purchase any gas range without first inspecting an Estate—"the range that bakes with fresh air."

Hotels Statler

Buffalo - Cleveland - Detroit - St. Louis

"Some One in Authority"

By E. M. STATLER—being one of a series of ads embodying instructions to Statler employees.

A HOTEL is a complex organization. The service of a lot of people has to dove-tail in every transaction, and it's mighty easy for things to go wrong sometimes.

A good hotel is one where things go wrong infrequently, and are instantly made right.

In any hotel, you'll find it a good principle to *ask for any service you want and aren't getting—but ask the right person.* Generally, it's best to ask some one in authority.

If, for instance, you're very particular about some article of food, it's wiser to give your instructions to the headwaiter than to your table waiter. If you want your room "made up" by a certain hour, phone the housekeeper's office inst telling the maid. If you want a parcel shipped, or a delivered, tell the head porter, and not a bellboy.

There will be times when the man you want is the m or his assistant. They are *the source of authority* i hotels, and they can be useful to you when the thing y is beyond the authority of others, or when you're not satisfaction in dealing with a department head.

You will probably be interested in seeing some of ou instructions to managers and assistant managers; h are:

Instructions to Managers and Assistant Managers in the Statler-operated Hotels

"Your biggest responsibility is to see that our policies are carried out and our promises to the public are kept.

"Most of your contact with guests will be with those who want something of you. You must always do everything you can to make their way smooth and pleasant.

"If his trunk hasn't come, or his ice-water doesn't flow; if he doesn't like his room, or has trouble at the mail desk—

"Whatever the reason for his seeking you, you are to take hold *interestedly* and give him the quickest satisfaction possible.

"In all your contact with guests (and, don't forget, with your associates, too), remember that the unforgivable sin, from our standpoint, is discourtesy. A close second is lack of interest; whet comes to you with a complain quest, he *must always* be gr listened to and *helped* with th ness and courtesy that are th our policies.

"You are the men at the t houses, you managers and assi agers. But you have no speci privileges over any other empl company in the literal carry these instructions from The Sta Codes: 'No employee is allowe lege of arguing any point with must adjust the matter at o guest's satisfaction, or call hi do so'."

E. M. St

A new Hotel Statler (1100 rooms, 1100 baths) is now building at Buffalo, to open early in 1923; 500 more rooms will be added later.

"Ladies," he said, "if you will permit me I will go to my room and pack my things. My wife and I are taking the last train for Boston."

"And what about me?" demanded the efficient Vera.

"And me?" echoed Danaë.

"Ah," said Gregory, "to be sure! Well, in the circumstances I can't very well offer either of you remarriage. I fear that you will have to be content with the alimony due you. That, I assure you, shall be promptly paid, now and hereafter."

And the amazing man kissed his two ex-wives paternally on their foreheads, and bestowed on them that radiant, kindly smile which is so irresistible that to witness it thousands of maids and of matrons have paid two-fifty a seat—matinées two dollars.

VII

"WELL?" I inquired of Annabel when they had gone, George driving Vera and Danaë to Portsmouth according to his promise, and Gregory and his almost tearfully happy Amelia taking the train for Boston.

"Well, what?" retorted Annabel.

"Is your heart broken?" I asked. "Gregory isn't such a bad sort after all—for an actor."

"No, he isn't," she agreed with a sideways smile that reassured me. "But I think three wives are enough—even for an actor."

"Well," said Mary, "I'll say this for him: He never had more than one at a time."

"No," Annabel admitted, "and neither did Henry VIII. There's a Shaksperean rôle that Bob ought to play famously."

"Yes," I murmured—"that or The Merry Wives."

In the sudden calm the
a Bunny snapped like the
cksnake whip. "Yo' who
n, whut dis talk?"
nger plowed halfway into
iring dancers to meet the
a.

"I sez my husban'—Vitus Marsden, whut folks calls Wilecat! Sez me! How come you so cravin' to know?"

"I shows you how come!"

Without preliminary the swing of Magnezia Bunny's heavy hand launched straight for the side of the veiled figure's head. Bam! The sawed-off one staggered a little and swelled up under the draperies in time to stop a swinging left.

"I learns you an' dat heart-breakin' houn'!"

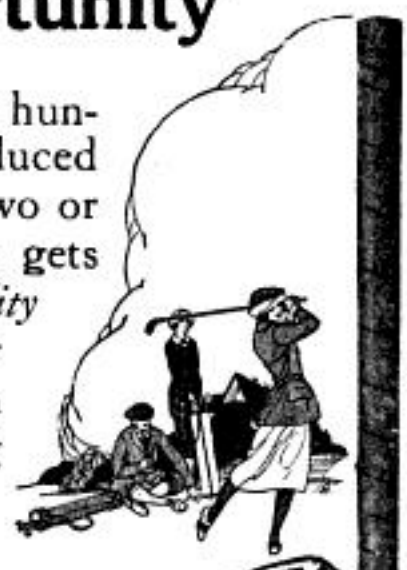
The skinny panther was upon the cloaked figure, and in an impromptu circle of popeyed bystanders a battle was staged with all the flurry and madness of an overdue cyclone. For a long thirty seconds the little combatant endured the flailing punishment meted out by the spindling Magnezia, and then, with a quick burst of unexpected energy, the tall member of the team found herself lifted head first over the surging shoulders of Missus Vitus Marsden.

Five feet above the floor, helpless and writhing, Mis' Magnezia poised for three seconds before she began her descent. She came down, aided and abetted by two strong arms, and her course was the diving course of an arrow, aimed at the starboard end of the paralyzed orchestra. Bam! Head first into the tight parchment of the drumhead. A quick recovery and Magnezia stood erect, weaving a little, but with her head still crowned and concealed within the interior of the drum. "Git me out! Take dat off my haid! Unloose me!"

Fumbling hands unloosed the captive. In her sudden freedom she looked about for her opponent.

The veiled Missus Vitus Marsden, taking advantage of the moment when Mis' Magnezia Bunny's predicament had attracted all eyes toward that drum diver, had vanished into the night. Various nerveless whuffers clustered around the tin dishpan, absorbing quick slugs of Sis' Eliza's nerve tonic.

The drummer inverted his instrument and tightened the snares on the one uninjured drumhead.



Kiss him farewell, you kin reach him by mail,
Jus' beginnin' dem lone Mournin' Blues.

IV

AT FOUR minutes to eight, through the shadows of the alley back of Captain Jack's house, stepping fast, came Missus Vitus Marsden, champion of the night's battle. In the obscurity of the high board

Gives Every Golfer Equal Opportunity

Experts say that out of each hundred hickory shafts now produced there are not more than two or three of *first quality*. Who gets these two or three *first quality* shafts? What about the other ninety-seven golfers? Then too, good hickory is growing scarcer every day.

Patented Nov. 22, 1910 Oct. 3, 1911

"Bristol"

Patented May 12, 1914 May 2, 1916

TRADE MARK REG. U.S. PAT. OFF.

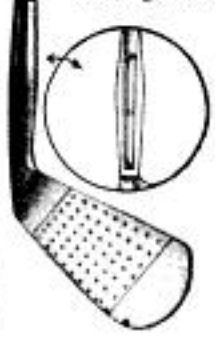
Steel Golf Shaft

NOTICE: Basic and Supplementary Patents covering Steel Golf Shafts are controlled exclusively by us.

Every Bristol Steel Golf Shaft is equal to *first quality* hickory. It is lighter than hickory. It makes a better balanced club in that it places the weight lower. The Bristol Steel Golf Shaft retains the same "whip" in all kinds of weather. It is rust proof, not affected by salt air. It is unquestionably more durable and stronger.

Get one new club equipped with the Bristol Steel Golf Shaft from your "Pro" or have him fit a Bristol Steel Golf Shaft to one of your old heads. Try this one club. You will like it.

Professionals: Write for Directions for Fitting Bristol Steel Golf Shafts to old heads. Let us tell you about this important source of revenue.



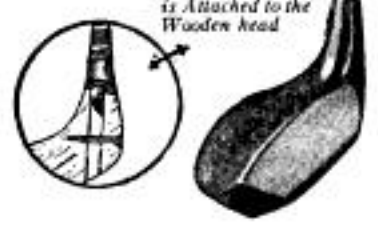
"Bristol" Steel Fishing Rods

If you like fishing, you want the best rod. You will want a Bristol Steel Fishing Rod. There is a style for every kind of game fishing. Every one is guaranteed to satisfy in every respect.

To make your fishing equipment complete get a Meek and Blue Grass Reel and a supply of Kingfisher Silk Fishing Lines.

No. 11 Cork Handle "Bristol" all-around Fishing Rod, 8 ft. 6 in. long, retails for $6.50. No. 27 Full Jeweled Bait Casting Rod retails for $12.00. These can be purchased from your dealer or they will be sent you direct by us post paid upon receipt of price.

Bristol, Meek and Kingfisher Catalogs mailed *free* on request.



How the Bristol Steel Golf Shaft is Attached to the Iron head

Golf Shops and Sporting Goods Dealers: The Bristol Steel Golf Shaft is having a big demand throughout the country. Write today for information.

Golfers: Write for descriptive literature and give us the name of your club and professional.

Golf Clubs fitted with Bristol Steel Golf Shafts can be supplied by The Crawford, McGregor and Canby Co., Dayton, Ohio, and The Hillerich and Bradsby Co., Louisville, Ky.

The Horton Mfg. Co.

fence that lined the dark side of the alley the figure reefed a double handful of flowing draperies, and in this new freedom the marching pace was accelerated to a trot. Opposite the door of Captain Jack's woodshed the rambler's raiment again swung free and a fumbling hand reached for the latch of the door.

"Bla-a!"

Lily, enjoying the rubber-flavored canvas of an old but luscious tennis shoe, expressed her surprise at the sudden invasion of her sanctuary.

Out of the darkness came a reply to Lily's startled bleating:

"Shut up, goat, befo' I knots yo' neck!"

The invader spoke, and where Missus Marsden's voice had been a high falsetto at Sis' Eliza's dance, now it was the voice of Demmy. The diminutive masquerader struck a match and with it he lighted the lantern hanging against the wall. Two minutes of fast work sufficed to free him of his borrowed costume. He rolled his draperies this time into one large bundle, and carrying it before him he marched toward the rectangle of light that marked the kitchen door. Arrived at the door, he kicked gently against the lower panel of the screen. From within the Wildcat answered:

"Who dat?"

"Dis Demmy."

The Wildcat addressed the cook:

"Go on 'long into de dinin' room, honey, an' see is I swept things right. Craves to 'range eve'ythin' to please you an' ol' Cap'n Jack."

The cook obeyed, and while she was absent from the kitchen the Wildcat opened the door to his laden associate.

"Lawd, Demmy, how come yo' nose bleed?"

"Stummled again' Ol' Man Trouble. Don't stop me! Got to git dis clo'es back."

Straight for the cook's room with the borrowed costume walked Ol' Man Trouble's associate, to return three minutes later to where the Wildcat waited for the verdict.

"Come wid me to de woodshed. Us talks free f'm folks listenin'."

Trailing his guide, the Wildcat gained the woodshed and closed the door behind him.

"Is I free?" He held his breath.

"You is. 'Ceptin' f'm yo' 'maginary fust wife. Dat Magnezia woman don't aim to create no big'my. Single, double an' trouble—you went through dem [illegible] stages, an' now you begins sing'e ag[illegible]

With a haste not explained in his w[illegible] Demmy sketched the process by wh[illegible] had freed the Wildcat of his bonds.

"Dey thinks you is married—all you[illegible] is announce a divo'ce an' stagger [illegible] thankin' Lady Luck dat you missed [illegible] a weddin' o' else a break-yo'-[illegible] ruckus. Dat's all—Ise gwine now."

"Demmy, dog-gone! Ise saved ag[illegible]

The Wildcat breathed deep and sought to prolong the recital of the m[illegible] of salvation.

"Whah you gwine? Ain't you [illegible] fo' de kitchen? Dey's some ham [illegible] de gravy is on de stove."

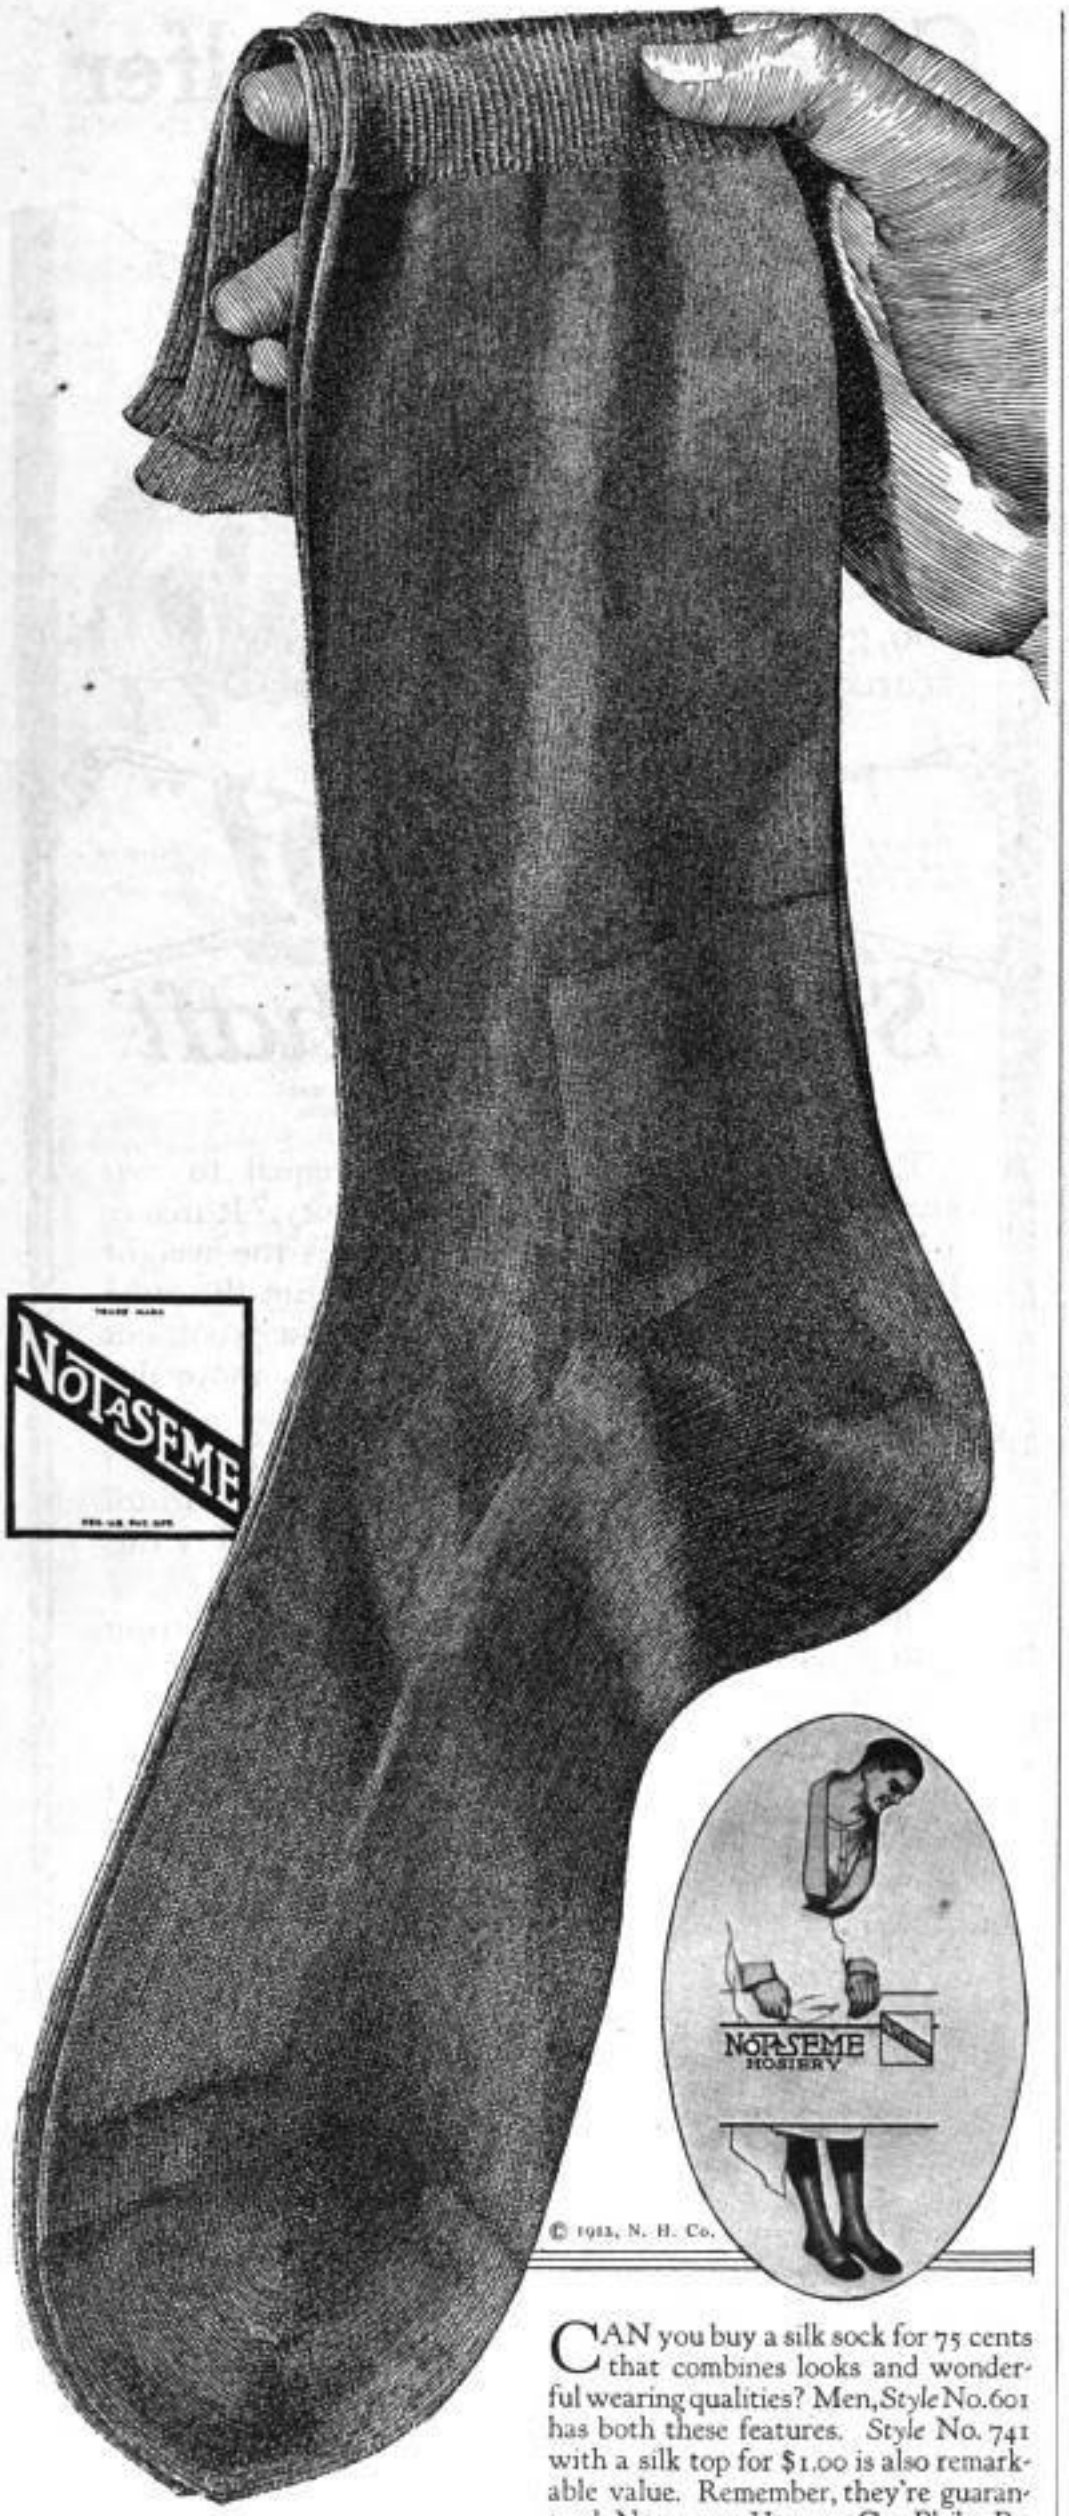
"Too busy to eat—sees you later."

Demmy was launched away on his [illegible] project of the night.

Sis' Eliza's party disintegrated at [illegible] o'clock. Mis' Magnezia Bunny, not [illegible] companied, reached her own yell[illegible] domicile at twenty minutes after [illegible] Her escort lingered at the door un[illegible] clock inside the house struck thr[illegible] out.

At half past three in the morn[illegible] Wildcat was awakened by D[illegible] heavy hand.

"Rouse up! Ise got mo' news [illegible] you. I been back at de party—op[illegible] dis time. Meets up wid yo' late f[illegible] Fust time I seed dat woman m[illegible] flopped. Dis time, Wilecat, when [illegible] eye landed on dat tall Venus I fall[illegible] her so. Me an' her uses dat [illegible] preacheh nex' Monday. Come ta [illegible] din' an' bring dat Lily whut's de [illegible] it all. You is named de bes' man!"



"Demmy, is I dreamin'? Does [illegible] member whut you said 'bout sin[illegible] double trouble?" The Wildcat ha[illegible] incredulous eyes. "You is crazy!"

"I is—wid de love itch. Git [illegible] Git dreamin' like I does—true[illegible] happy dreams."

"Huh!" The Wildcat grunted h[illegible] ment. "You ain't dreamin'. Yo[illegible] lirious above de ears and plain mu[illegible] Sunup you begin to bray."

The critic lay awake for ten [illegible] thereafter.

"Craves to have me be bes' m[illegible] de bes' man—shows dat mule w[illegible] bes' man befo' he gits hitched up[illegible] Luck, rally round! Us needs you h[illegible]

It wouldn't be the same . . ."

"If every woman on the street
Should make a loaf of bread,
They wouldn't be the same at all,"
The Master Baker said.
"Some loaves would burn and some would fall,
And some would not be good,
Though each one used the self-same flour
And did the best she could."

ND there's no secret about making Clicquot Club Ginger Ale. We tell t we put in it. Other manufacturers v all the ingredients we use. They buy most of them.

t they don't make Clicquot Club—more than a woman with good flour recipe can make bread which tastes her neighbor's bread made with the flour and recipe.

have one decided advantage in g our ginger ale. All the water we use is pure, cold spring water, drawn from the bed-rock. Nature has filtered and re-filtered it. The carbonation of this water and the flavoring with Jamaica ginger, fruit juices, and sugar make the happy blend that is never duplicated except by us. It is almost a universal taste.

Why, then, should you drink other ginger ales if you can get Clicquot Club?

Ask your grocer to send you a case. Keep a few bottles on ice or in a cold place. Serve it any time to any one. *They all like it.*

THE FREIGHT THAT FAILE

By FORREST CRISSEY

THE movie drama of The Freight That Failed is no piker among modern productions. The cost of putting on this piece in America is more than $100,000,000 a year. Oh, it's a whale of a production, and makes the most lavish release of the moving pictures look cheap.

But the sad box-office secret of The Freight That Failed is the fact that its production money represents almost a total loss and every shipper and consumer in the country is directly or indirectly called upon to chip in and meet the deficit. There are no nonassessable shares in this venture. The public is generally inclined to think that the railroads pay the freight claims; the fact is the roads are merely the fiscal agents for collecting the required assessments from the consumers. It's everybody's show, for a freight claim is usually an outright economic loss.

Naturally you ask, "If The Freight That Failed is such a rotten show, why don't they take it off the road?" That's precisely the point of this story. An organization of the ablest railway men in America is now on the job of administering reduction treatment to the freight claim and stripping it down to a state of skinny attenuation calculated to make it unrecognizable by its old associates. It's a huge task and a hard one, but it is being accomplished at an astonishing rate—and without music, too!

For example, one road, the Chicago and North Western, instituted a freight claim prevention campaign; and Mr. H. C. Howe, freight claim agent, told W. C. Johnson, one of his assistants: "Take hold of this job and see what you can do toward cutting down our freight claims $1,000,000 a year." He tackled the task under a full head of steam and did nearly four times as much as was asked of him.

Dangerous Nails Pulled From Freight Cars

The Cost of Carelessness

ALTHOUGH he began his offensive in the summer of 1920 his forces were not really mobilized until the beginning of 1921, and the results of this campaign brought about a reduction in the number of claims presented of 79,946, which is just that many less complaints against the carrier, and the money involved in this reduction was $3,742,292.

Of course other causes operated to secure this claim reduction of nearly $4,000,000. There was a material shrinkage in both the volume and the value of the freight carried. Again, the road was not badgered by a switchmen's strike in 1921 as it was in 1920. But give these elements full consideration and there is still a large remainder to the credit of the claim prevention drive.

Before sketching this admirable piece of constructive economy it is well to glance at the freight claim as a national institution, as a nation-wide assessment upon the consumers of this country. The class-one roads of the United States paid freight claims for loss and damage in 1920 to the amount of more than $120,000,000; in 1919 this drain was more than $104,000,000. The fact that this huge loss is ultimately borne by the consumers will not be questioned by any person having the most elementary knowledge of business practice. Therefore the new war on this insidious freight claim is literally everybody's business.

This is not a fight to discourage the filing of freight claims—it is a war on the practices that produce loss and damage in freight carrying. There is no apparent inclination on the part of railroad officials to pass the buck of responsibility for freight loss and damage to the shippers. It is admitted by a high official of the American Railway Association that not more than 15 per cent of all freight claims are chargeable to the shippers. But 15 per cent of $120,000,000 is quite a snug sum. Its saving should give shippers a healthy incentive for hearty coöperation in the effort to reduce the massive bulk of the freight claim to skeleton proportions.

Experts declare that the average freight claim is in the amount of about twenty-five dollars and that the average cost of handling a claim is about $1.60. Recently a claim agent settled a freight claim for four cents—which indicates that the race of careful people is not yet entirely extinct. Perhaps the largest freight claim of recent record is that covering the loss and damage at Ardmore, Oklahoma, caused by the explosion of a car of casing-head gas. This claim was settled for $1,20
Another road recently paid $1
for the loss, by fire, of fifteen c
gasoline and oil. These huge

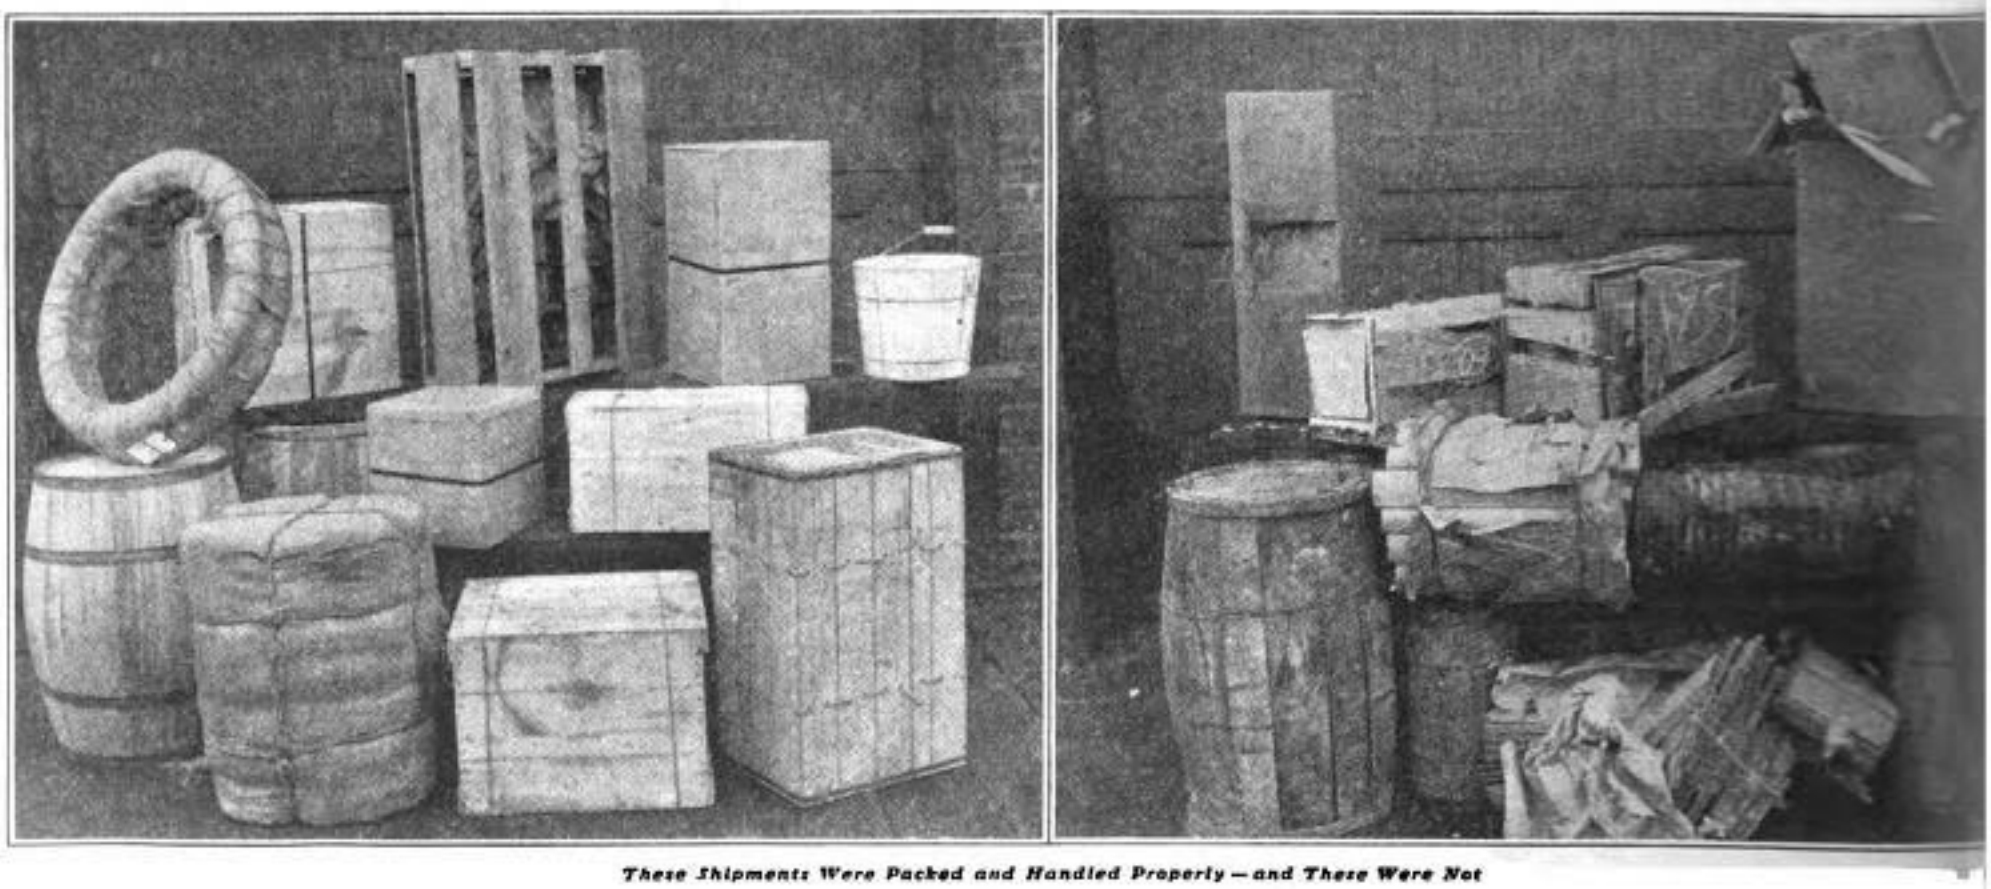
total paid out on this score amounts to the respect
of $1,600,000 a year. All of which indicates
commodity is obscure enough to escape carrying
toll in the account known as loss and damage.

Losses Distributed



BUT the most vital and interesting analysis o
dead-horse fund paid by railroads on freig
from the viewpoint of claim prevention, is from
of causes. Of these, unlocated damage is rated
ing 14.5 per cent of the total losses, and rough
runs second with 14.2 per cent. Together these
cover almost 30 per cent of all losses.

The separation of claims into their three grea
of causes shows that damage is the leader of th
consumes 53.5 per cent of the total; loss lags bel

armed air, which is also healthfully mois- ing through the Convector, spreads itself over the house, throughout every room, wn. The heat from the fuel burned is y circulating air. **It goes every place**

nethod of heating your home be more more certain? . . . . less apt to give he Convector gives you **every known** t, something many far more costly and ems cannot do, and it gives you all the simplest, most economical manner

The Convector's circulation of warm, clean air is constant; it continues throughout the house, day and night. There can be no spotty, uneven heating, no cold corners. And you can

Have All the Fresh Air You Need

Complete air circulation makes this possible. Fresh air in any amount desired can be allowed to enter any room at any time. It is immediately warmed and moistened and sent all over the house. Think what this means to health.

Perhaps you have been in a great modern hospital heated with a warm air heating and ventilating system. Physicians insist upon such systems for the health of patients. These great systems operate on exactly the same principle as the Convector, except that they must have pipes and fans to circulate the air because of the size of the building. The Convector, a simple, self-contained heating system in your basement, without a single pipe or fan, will give you the same practical results.

The advantages of the Convector system of heating are so marked that it would be the logical system to buy even though the cost of installation were more—**instead of less**—than for any other system.

Quick Temperature Change for All-Year Comfort

The temperature of the air in the Convector heated home is governed directly by the amount of fuel burned. The temperature of the rooms can be raised, not in hours, **but in minutes.** There is never need to burn more fuel than the weather demands.

This easy regulation makes the Convector the universal heating system for every climate from Alaska to Mexico—for every season, the dead of the winter or a chilly summer night. It enables every Convector owner to be **quickly** comfortable **any time;** no need to dread chill days in fall or spring—and think what fuel saving this will mean on mild winter days.

Your Convector Will Be Guaranteed

The Convector is positively guaranteed to heat comfortably every room in your house, upstairs and down, in any weather.

Practical tests in thousands of homes and buildings prove that it saves ⅓ to ½ on fuel over other heating types.

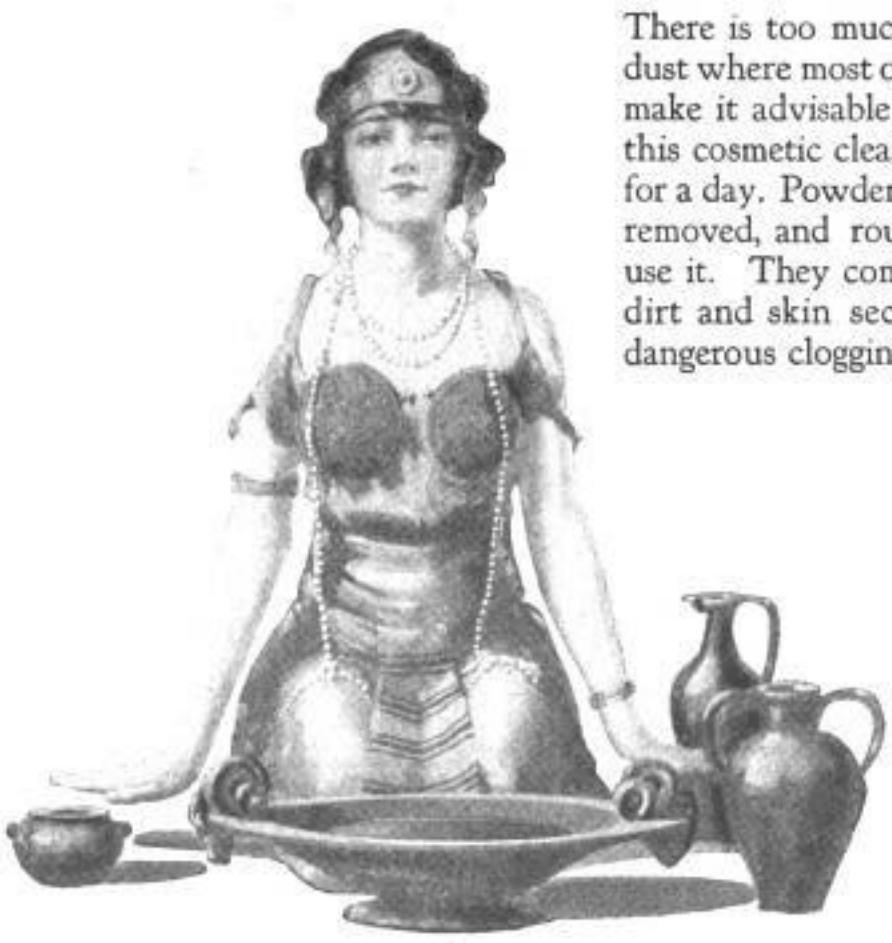
Better than jewels
—that schoolgirl complexion

THE girl with a clear, smooth skin, radiant with freshness and natural color, should leave jewels to those less fortunate, for she doesn't need them. The charm of a perfect, natural complexion attracts far more than elaborate dress and ornaments.

If your complexion lacks the beauty which women envy and men admire, don't depend on clothes and jewelry to draw attention from its defects.

Every woman can transform her bad complexion into a good one, for alluring freshness and clear color isn't a gift of Nature, but a matter of care.

How to have a perfect skin



No girl need be afflicted with a bad complexion, for improvement is simple and easy. Daily cleansing, gentle but thorough, is the secret. You must use soap, for nothing else will remove the dirt, oil and perspiration which collect in the pores and cause most skin trouble. Choose Palmolive, because its action is soothing. Harsh soap should never be used for washing the face.

Massage the smooth, creamy lather gently into the skin until it removes all clogging deposits. Don't forget your neck and throat. They are as conspicuous as the face for any lack in beauty.

Do this every day

There is too much dirt and dust where most of us live to make it advisable to neglect this cosmetic cleansing even for a day. Powder should be removed, and rouge, if you use it. They combine with dirt and skin secretions in dangerous clogging.

Take a lesson from Cleopatra

WITH a world of ancient beauty arts at her command, she depended on cleansing with palm and olive oils to protect, improve and preserve the freshness and smoothness of her skin. This beautifying was not confined to the face alone. The bath was a daily ceremonial with all ancient peoples, and palm and olive oils the cleansers used.

Use Palmolive for bathing and let it do for your body what it does for your face. Neck, arms and shoulders are as noticeable as the face for beauty or the lack of it. Keep them sweet and lovely with the palm and olive oil soap.

Blended from the same oils

Palmolive Soap is blended from the same bland soothing oils which adorned the sumptuous marble baths of Egyptians, Greeks and Romans.

Modern scientists, with all their research, have not been able to discover milder, more soothing or more efficient soap ingredients. But although very expensive, the gigantic volume in which Palmolive is produced keeps the price very low. Users profit by Palmolive popularity.

The Palmolive factories, working day and night, and the importation of the rare oils in vast quantities, allow you to enjoy this finest facial soap for the modest price of ten cents—no more than ordinary soap.

Engine Oil's Too Heavy 3-in-One's Just Right

Engine oil is all right in the engine and a few other places about your car, but it is too heavy to work into most places where squeaks originate.

3-in-One Oil is light enough to go right into the tightest places, seek out squeaks and squelch them. It's heavy enough to stay on the job and keep the squeaks away.

3-in-One is ideal for lubricating the light, fast moving mechanisms too—starter, generator, magneto, horn, Ford commutator. Won't burn out at high speeds. Never gums or dries out.

Tire changing is easier if rim lugs are oiled with 3-in-One. Use also on door hinges and latches, hood cover latches, joints of windshield and top supports, curtain buttons, steering wheel—and particularly the springs. 3-in-One is easier to apply than graphite and works wonders in stopping spring squeaks and preventing springs breaking.

3-in-One prevents rust and tarnish on all the nickeled parts. Cleans and preserves leather and imitation leather cushions and tops. Makes body and fenders shine.

A few drops in the wash water cleans glass easily, quickly. Produces a brilliant polish free from streaks.

Rain and snow won't stay on your windshield if the outside is rubbed with 3-in-One.

Tools that are oiled and rubbed with 3-in-One always look and act like new.

3-in-One does all these things for you because it's all pure oil of highest quality.

Keep a 3-in-One Handy Oil Can in your car and you'll find some use for it almost every day.

3-in-One is sold at all stores, in 1-oz., 3-oz. and 8-oz. bottles; also in 3-oz. Handy Oil Cans.

classed as purely physical ailure in many cases to atch upon shipments in ile cause of freight claim d paid a claim of $16,000 et spout of a tank car an oil was accidentally The train crew did not it until the car had been ed upon the right of way.

A New York line paid a claim of $20,000 on one case of silk which mysteriously disappeared. The investigation showed that the case had been loaded out of the ship's hold to the lighter. Then the trail was lost for a time. But a little quiet under-cover work among the stevedores disclosed the fact that, in transferring the cargo from the vessel to the lighter, one box had slipped into the sea and was not recovered. The members of the crew on the unloading job generously agreed the best thing to do was to forget the incident.

Robbery and pilfering cost the railroads a huge sum every year—not far from $12,000,000. This loss amounts to about one-tenth of the total of all freight claims. This brand of loss has been especially popular since the passage of the Eighteenth Amendment. In the first half of 1921 liquor robberies from the roads amounted to almost $100,000. The total of this loss is decidedly small, considering the peculiar pressure of incentive involved, but these robberies made a mighty noise in the newspapers.

An Ingenious Agent

Here is a typical example of what the spirit of claim prevention will accomplish. A certain agent in the Southwest became sincerely enthusiastic on the subject of preventing freight claims. One day a carload of sugar was received at his station for a merchant. The sacks of the top layer were found to be heavily coated with fine coal dust. The car had evidently carried coal on its previous trip.

Carefully opening one of the sacks the agent found that the dust had permeated the sugar to the depth of about an inch. The agent saw that the road was going to be called upon to pay quite a substantial freight claim. Instantly the agent asked himself, "Is there any way by which the claim can be prevented or materially reduced?" The problem seemed rather hopeless at first, but he was ambitious to prove that he was a practical preventer, and so he tackled the problem with determination.

At last he had an inspiration. From a store he rented a vacuum cleaner, attached its plug to one of the station light sockets, and then carefully massaged one of the damaged sacks. On opening it he found that virtually every trace of dust had been removed. All the affected sacks were given similar treatment before being disturbed. But the merchant, who was called to witness the work, decided that he couldn't afford to take a chance on sugar that had been once mixed with coal dust.

"All right," responded the agent. "Put in your claim for 73 sacks, and it will be paid. But I'm going to prove to you that the public will recognize a good job of sugar cleaning and will not be afraid to buy and use the sugar you reject."

He advertised the sugar for sale, with a full statement of the circumstances. Each purchaser examined the sugar in the opened sack. The average price that he realized in the salvage sale was above the invoice price. His net saving to the road by his adventure in freight claim prevention was about $438. But it brought him in a personal way much more than this. Not only did his resourceful act force his name upon the attention of the management of his road but he was praised in the offices of the American Railway Association. Naturally he became marked for promotion.

Now for a close-up of the campaign by which one road has been able to cut its freight claims to the extent of more than $2,000,000 in a year—the methods by which all the class-one roads of this country confidently expect to reduce this loss by $50,000,000 this year.

There is nothing casual, indefinite or conversational about this movement. It has both feet firmly planted on solid ground and both eyes sharply fixed on substantial if unpleasant facts.

This movement is singularly unmechanical; it recognizes at the outset that the major element with which it must deal is human nature as is and that its success is mainly dependent upon securing the interest, good will and hearty coöperation of the human beings out on the line who create or prevent freight claims. Human nature among the men who put freight over the road runs about 100 per cent strong.

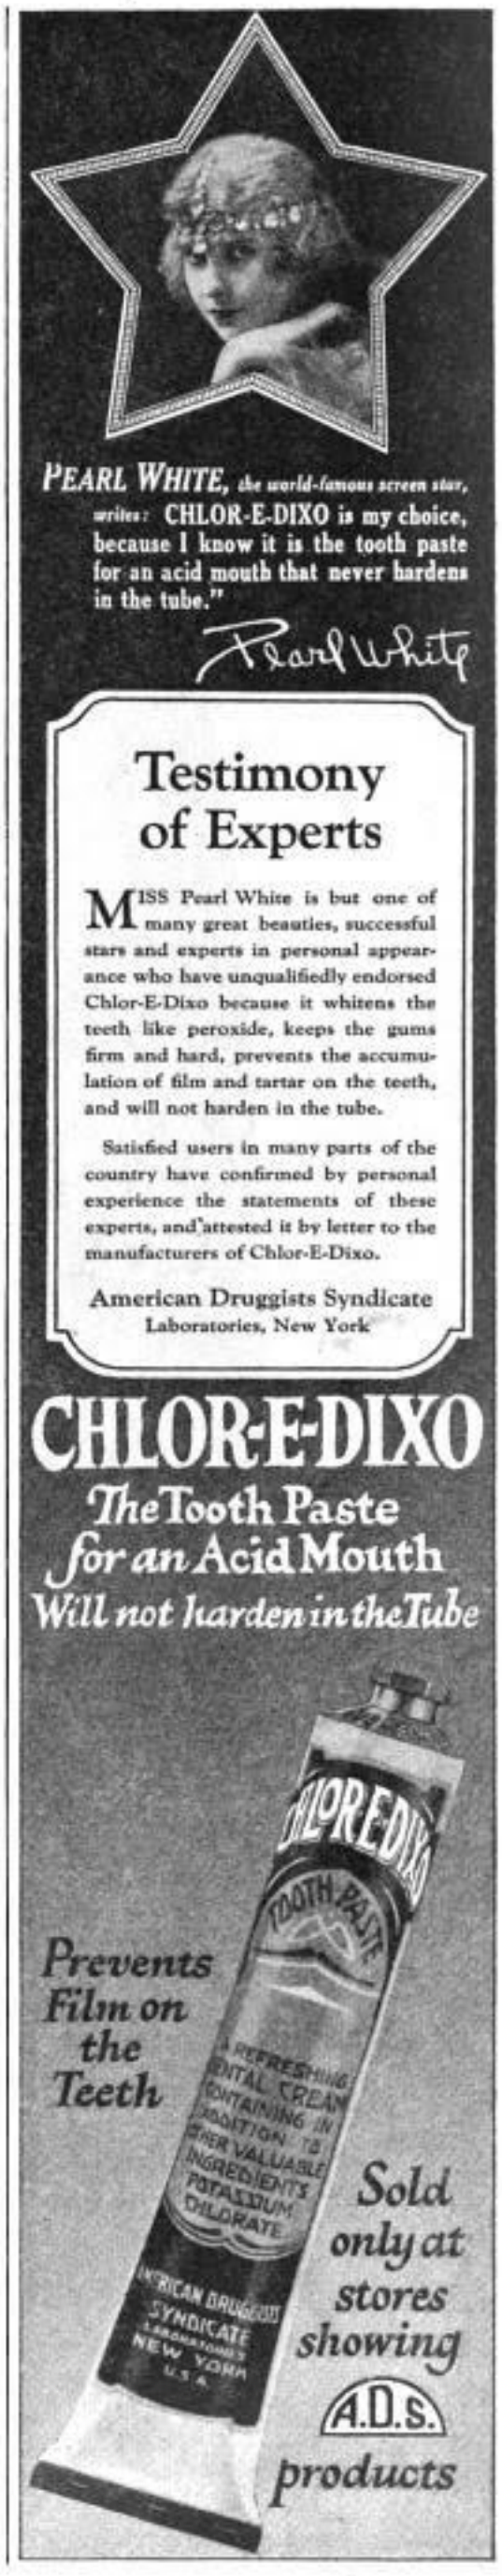
The North Western has about 40,000 employes, nearly all of them having something to do with forwarding freight. The task of so educating 40,000 men as actually to influence their actions every working hour of the day is quite some educational job. When this responsibility was placed on the shoulders of Will C. Johnson he was quick to recognize the fact that he would fall far short of this bogey unless he was able to make an active freight claim preventer of virtually every man on the road.

From this base it was an easy step to the deduction that every department of railroading at every freight-handling point must be represented in every unit of his educational organization. Consequently every local committee on the line is composed of men from all departments of railroad activities. Every problem of freight claim prevention on this road is considered from the angle of responsibilities of the departments of traffic, operation and construction and maintenance.

Mr. Johnson has placed meager dependence upon bombarding freight brakemen, conductors, engineers, stevedores and agents with technical literature. Instead, he has recognized the fact that personal human contact with the men who are doing the work of forwarding freight offers altogether the best and most effective means of getting the gospel of freight claim prevention into their systems and arousing their interest to such an extent as to stir them to put its principles and commandments into practical effect every hour when they are out on the job.

Of course it is very much cheaper for a railroad to send the missionaries of any movement to the men out on the line than to bring the men in to missionary headquarters at the terminal. But this shrewd apostle of the religion of higher economy and efficiency in freight forwarding has had the vision to realize that it is not enough to go to the station agent and the freight crew out at the west end of the line and tell its members how the different kinds of freight are handled after they reach Chicago; that if these men are taken to Chicago and shown the actual operation they will reach an understanding of many points that they could not visualize from the talk of the visiting missionary.

Object Lessons



Consequently all the freight claim prevention literature, bulletins, cartoons and talks to division and local committees have been followed by bringing these committeemen from every walk of railroad life into Chicago for a short course on the ground, where they see the final handling and ultimate delivery to consignees of the freight originating in their own territory. These operations are explained at first hand by the men who carry on their shoulders the responsibility of these concluding processes in the complex task of delivering into the right hands and in proper condition freight originating hundreds and perhaps thousands of miles west of Chicago. There is no doubt that this trip to the great eastern terminal is an educational knockout for the men out on the line. It is one thing to be told and quite another to be shown. The records fail to show a single instance of bringing a man from out on the line into Chicago for the final short course which has failed to convert him into an active and enthusiastic freight claim preventer. Almost invariably the men regard these educational expeditions to the big terminal as outings and substantial proofs both of the good will of the company toward them personally and of its deep interest in the subject of freight claim prevention.

As one of these pilgrims of the great freight Mecca of the Middle West put it:

"The company sure has given us a good time. We've been taken care of right—given the best eats going and treated like guests of honor at a home-coming picnic. I'd hate to pay the taxicab bill that the company has run up for us to-day. This company is run by a lot of hard-headed guys who are not spending the stockholders' money for any foolishness. You bet they're not—anyhow, not in these days! This business of freight claim prevention must look mighty important to them or they wouldn't go to all this trouble and expense. You can gamble that preventing freight claims is going to be a big part of my job from now on. They've certainly shown me!"

Recently I made the rounds of the North Western's Chicago freight terminals with a local delegation of freight claim prevention students from an Iowa division. Although motor busses and taxicabs were used whenever possible it was one of the most strenuous and exacting parties I ever attended.

nt stop of the visiting the B. & B. warehouse, refused and over freight this," remarked one of he greatest museum of d failures in existence." mains of an old buggy luseum explained: for every station agent s road hauled that old rattle trap 500 miles simply because a station agent did not have sense enough to write to Mr. Howe, the chief freight claim agent, describing the thing and asking instructions as to its disposal. Of course it was refused freight. You can sell ten buggies out in the country where this came from, to one in Chicago. The station agent who shipped this to the museum would have been instructed to destroy it if he could not sell it. A lot of fool tricks like this cost the road a heap of money. Money is mighty hard to get in these days, even for the best and the biggest railroad companies, and we all owe it to the company and the public to put a stop to this sort of waste."

The next place at which the little band of pilgrims paused was the Fortieth Street freight station, where the assistant agent gave a detailed account of the rather complex process of handling dead freight for connecting lines. When the speaker had finished his talk an agent from the west end exclaimed:

"Gosh! I didn't dream there was as much to it as all that. The checkers in charge of these gangs sure do have to use their heads. It's a man's job. A guy from headquarters once tried to tell us all about it back home—but seeing it is different. Now I'll never forget it. And I've learned a lot of things right here that I can do to make it easier for these men to get freight sent from my station into the right car and harder to get it into the wrong one. For instance, I've sent plenty of packages destined to Canada and foreign countries without a manifest. I'll never do that again."

Teaching by Cartoon

Two more stops were made by the itinerant students of better freight handling. On the way home one of these men, who had been in the service of the road for thirty years but had seen little of large cities, remarked to his seat mate:

"Good gosh, but I never knew before that the North Western owned about three-fourths of Chicago! It's some road—our road is!"

Hundreds of committeemen have been brought to Chicago and put through a short course such as I have very briefly described. Invariably these men go back to their homes out on the line and become enthusiastic lay missionaries of freight claim prevention. Not only is the stenographic report of their trip read at the local meeting but it is understood all along the line that the committeeman who has been given an instruction trip to Chicago is ready to answer questions regarding freight claim prevention.

There is scarcely any better indication of the fact that Mr. Johnson keenly appreciates the human element in his work than his use of the cartoon as a means of appeal to the men out on the line. These cartoons are the work of freight-department employes who understand how to hit the funny bone of the average railroad worker and at the same time get a lesson in freight claim prevention across to him. Some of the best of these cartoons are the work of a freight brakeman. This educational campaign is tight to the rails from start to finish, and is not over the heads of those whom it is intended to educate.

Though it is possible that not all the railroads in the country are doing this work quite so thoroughly as the North Western, all roads are certainly making a spirited drive in the same direction. In short, this intensive training in freight claim prevention is being pushed in much the same manner all over America.

The typical railroad operating executive is a hard-headed, hard-driving man, little given to theories. He thinks in terms of getting the load over the road. Remembering this, it occurred to me to learn the attitude of a North Western operating official toward the freight claim prevention movement. I was prepared to find a sense that any movement—except of freight and passengers—was a nuisance with which overworked operating executives ought not to be bothered. I picked on Mr. F. H. Hammill, assistant general manager of the North Western, and asked him: "How do you operating men look at this freight claim prevention movement?"

"I'm glad you have asked just that question," was his quick reply, "for I feel that I can give you an answer with which no real operating executive in this country will quarrel. The railroad's business is to sell and deliver transportation service; the business of the operating department is to deliver that service. Our department creates most of the freight claims. We owe it to the patrons of the road and the public at large to deliver good service. That responsibility rests squarely on our shoulders and no live operating executive will attempt to dodge it or to pass the buck.

"This responsibility to the public was never greater than to-day, when business of every kind is having to fight for its life. Now, 99 per cent of our employes want to do the right thing. True, some of them are a bit careless, but when they come to really understand the situation their inclination is to meet it like men. I never miss a chance to sit in on a freight claim prevention meeting or to go on one of their terminal-investigation trips. They see this thing as an operating man's job. More than that, they are ready and eager to put their shoulders to the task of cutting down the awful loss involved in freight claims.

"I've been on the road with division committees of the freight claim prevention organization and know the seriousness with which they take their responsibilities. For example, at every town at which we made a stop the members of such a committee visited the local merchants and business men to learn what complaints each one had to offer and how defective service could be changed to satisfactory service. In nearly every such interview the merchant, manufacturer or shipper turned the tables on his callers and asked for information as to how he could coöperate to keep down freight claims. One dry-goods merchant confessed that his own carelessness had been responsible for the creation of quite a substantial freight claim and that he had no doubt that his experience was typical of many other cases. He personally unpacked a box of fabrics and found that it was short a bolt of expensive silk goods. This resulted in the filing of a freight claim. The box was dumped into the basement along with others. Months later, when breaking up that same box for kindling wood with which to start the furnace fire, he discovered the bolt of silk hidden under the paper with which the shipping case had been lined.

"Another merchant told of finding an unopened case of fabrics among his empty boxes.

"A small manufacturer volunteered the information that he had created a very considerable number of freight claims by using a package that was not able to stand up properly under the strain of shipment. The number of freight claims he was forced to file finally moved him to make a careful investigation of his packages and containers, with the result that he changed them radically and found a corresponding drop in the number of freight claims he was obliged to file."

The Effect on Morale

"But to me the most interesting feature of these interviews was the effect of the committee's visit on the minds of the business men. Every last man of them was left with the conviction that the road was tremendously in earnest in its effort to deliver to them a transportation service that was 100 per cent good.

"One of the biggest influences of this nation-wide movement for freight claim prevention reaches entirely beyond the matter of freight claims. I refer to its effect upon the morale of railroad workers as a body. It is doing more than you would believe to stimulate the right kind of relation between the men and the management. Show me a freight brakeman, engineer, conductor, warehouse foreman or stevedore who is an enthusiastic and consistent freight claim preventer and I will show you a man who will stick by the road under severe test. The reason for this is obvious. Only a man of native intelligence and fundamental fairness has the vision and disposition to become an earnest freight claim preventer. In other words, he cannot get into that attitude of mind without giving careful consideration to the other fellow's interest—the interest of the road, the shipper, the consignee and the consuming public. By the same token this movement turns the spotlight on those who are too narrow, selfish, careless and shortsighted to help in the job of stopping a big economic waste."

Emphasizing the intensely practical nature of this peculiar educational movement, let us go a little further into this phase of the subject. Though highly technical dope is fed out to the men on the line in very sparing doses, the researches of the men at the head of the movement have developed volumes of scientific data of the most important and practical character.

Take the matter of freight claims for loss and damage in the shipment of fruit, for example. This commodity, as I have already indicated, heads the list on the score of creating freight claims. Melons and other fruits which are apparently in fine condition when loaded are frequently found, on arrival at destination, to be affected with a peculiar fungus rot. Claims amounting to millions of dollars have been filed and collected on losses of this nature.

The freight claim prevention committee and experts of the American Railway Association, working with the experts of the United States Department of Agriculture, entered upon a searching scientific investigation to determine the actual cause or causes of this staggering loss in fruit shipments. The railroad claim prevention men showed their practical shrewdness by loading melons in cars that had never carried a load of any kind before. Melons shipped in these cars developed the fungus rot quite as freely as those transported in cars that had seen previous service. This eliminated the contamination theory. Those who are conducting the investigation have arrived at the conclusion that the burden of these losses from fungus or stem-end rot is due to the forcing of the melons by the growers.

How Shippers Can Help

Another important investigation, which has involved much research and experimentation, relates to the impact of cars in coupling, starting and stopping freight trains, and the effect on the freight in the cars feeling the impact. Rough handling ranks high as a freight claim producer. An elaborate series of experiments with cars equipped with impact-measuring devices has conclusively established the fact that under average conditions injury both to package freight and to the railway equipment carrying it is likely to result from an impact delivered from cars or locomotives moving at a greater speed than two miles an hour.

"What can shippers and consignees do to cut down loss and damage?" I asked a freight claim prevention expert.

He replied: "Put the street number on all packages destined to cities.

"Where a shipment consists of several packages number them consecutively so that the contents of each may be listed in the billing.

"Do not abbreviate in marking addresses.

"Business houses should always use stencils in addressing—the larger the better.

"Large shippers should make records of all complaints, and study them.

"Advertising pasted on shipments often invites theft. The more valuable the contents of a package the greater the reason why it should be sent plain, without a tag or label indicating its nature.

"As to nailing boxes: For sixpenny nails or smaller, held in the side grain of the wood, there should be a spacing of one and three-quarter inches. For larger nails the spacing should increase a quarter inch for each penny.

"Fill all space in boxes solidly.

"When the record is lost the freight is lost. Regular shippers should:

"Maintain a separate file of all freight bills on which part of the goods checked short;

"Maintain a separate file of all freight bills covering freight delivered to them on proof of ownership;

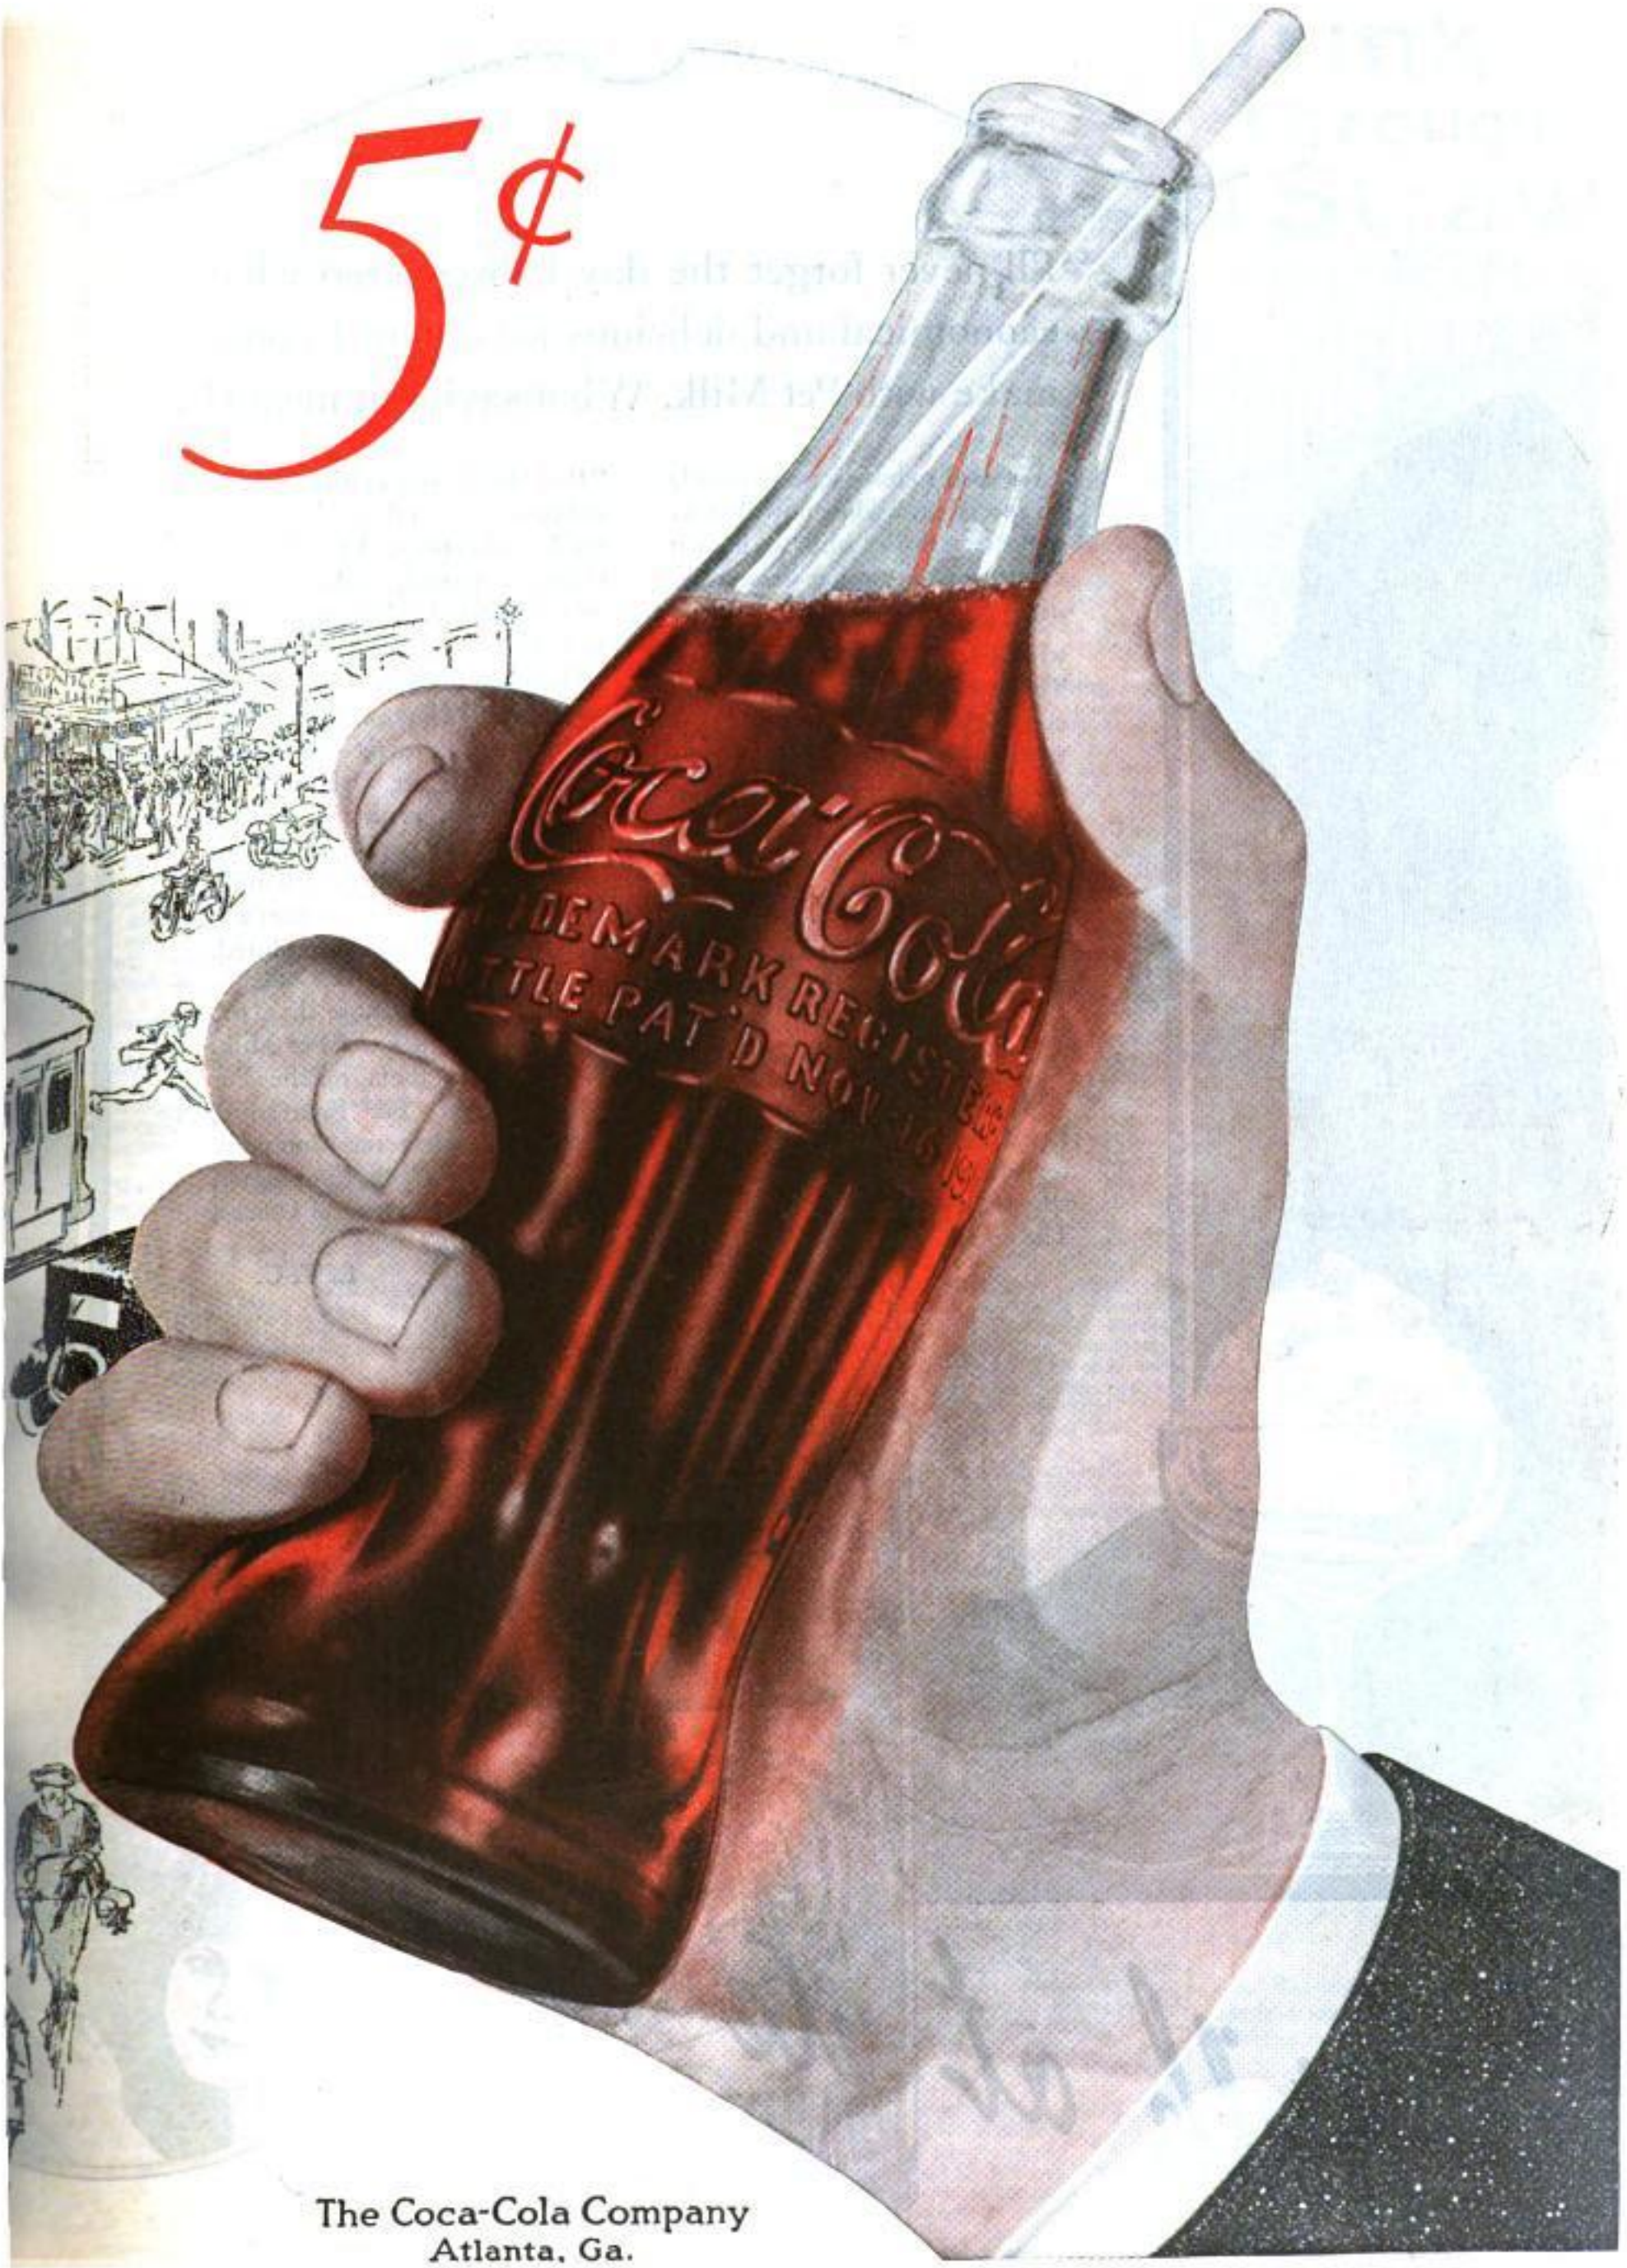
"After invoices have been checked into stock, check them against the freight bills on which part of the goods checked short;

"Maintain a memorandum freight-bill file on all invoices checked into stock on which a regular freight bill has not been received, showing shipping point and name of shipper, with description of shipment;

"As an alternative, maintain a book record—in the event that it is desired not to maintain a separate file of freight bills. A book record should carry name of road, billing point and date, with waybill and pro-reference, similar to the received record maintained in the average freight office.

"Those who receive merchandise freight should follow these rules:

"Remove the entire lid from every case.



"Turn every box upside down before sending it to the yard or the basement."

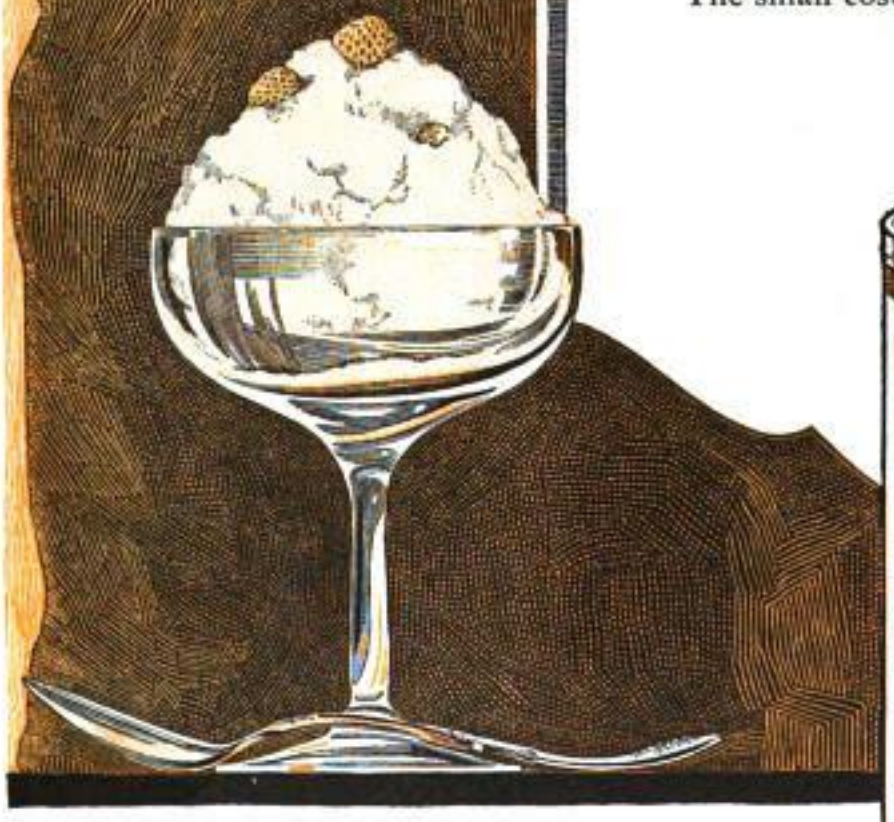
"I'll never forget the day I discovered what economical and delicious ice cream I could make with Pet Milk. What saving it meant!

"We used to have ice cream only on special occasions; now that we make it with Pet Milk we have it as often as any other dessert.



"Strawberry Ice Cream made with Pet Milk is especially fine. This is how I make it. Heat half cup of Pet Milk and half cup water in double boiler. Mix tablespoon flour and half cup sugar, and add to one well beaten egg. Pour on hot milk gradually and cook in double boiler until smooth, then strain. When cool, add two cups Pet Milk. Mash berries, sweeten with ¾ cup sugar, stir until sugar is dissolved, then add to other ingredients and freeze.

"Try it yourself. Be sure to use Pet Milk. The richness, smooth texture and delicious flavor of the ice cream will surely delight you. The small cost will surprise you.

"Pet Milk is one of the greatest conveniences and economies of my housekeeping. I find Pet the cleanest, purest, richest cow's milk, sterilized. Nothing is added to it. Only part of the natural water is taken from it. I use it in all my cooking. I have a supply in my pantry at all times ready for every use. I am never without milk. When I want ordinary cooking milk, I use one part Pet and two parts water. For extra rich milk, I use one part Pet and one part water. For coffee, I use it undiluted.

"I have prepared more than 100 recipes in which I use Pet Milk. You can get them in the Pet Recipe Book. For Free copy, write The Helvetia Company (Originators of the Evaporated Milk Industry), General Offices, St. Louis, Mo."

TRUST EMILY

(Continued from Page 7)

"Y' know," said Cyril with great sympathy, "great husky, innocent cannibals like you aren't fit to be trusted out alone with any woman who knows her job. You aren't, really."

"As if a man wants any one of those three hard-mouthed, hard-eyed, hard-voiced little dolls!" said Arthur fiercely.

"Yes, but y' see," said Cyril, "it must be one of them. And leaving out Angela," he added distantly, "that leaves Gwen and Mrs. Drelincourt. What are you going to do?"

"Nothing," asseverated Arthur.

"You must," said Cyril.

"I won't," said Arthur.

"She may come in any minute," urged Cyril.

"Who may come in?" said Arthur.

"Miss Gwennie," said Cyril testily. "Or Mrs. Drelincourt."

After a pause Arthur had a brain wave. "I hope it's Angela," said he.

"What a damnable thing to say," said Cyril heatedly, "when you know the girl belongs to another man."

"That's it," Arthur replied. "I wouldn't rob him."

"But," said Cyril uneasily, "you say she accepted you. And if it's Angela I think it's the most damnable ——"

"Oh, make your mind easy," said Arthur. "I tell you I'm not robbing him. If it's Angela I'm safe."

Cyril bit his nail. "I'm not so sure," said he restlessly; "girls do—do—er ——"

"Like money," said Arthur. "And if I'm richer than the other blighter I mayn't be so safe, after all. Oh, what a dog-gone crazy thing I've done! I wish I was back in Australia on my farm, and not a woman in sight!"

The voice from the deep dark garden began again. "Coo-ee!" it cried in a littlish way; and then louder: "Coo-ee! Coo-ee!"

Arthur started violently.

Cyril bit his nail. "Look here," said he, eying Arthur. "Something's got to be done, and you're the man who'll have to do it. Now what's it to be? You're answerable. You go out in the most sentimental mood, a reg'lar marrying mood if ever a man was in one, and you find a girl in an arbor, and she's so soft and nice and kissable and all that, and it's dark and a warm evening, and you start making love to her and ask her to marry you and all that; and then you get away and are sorry for it, and try to get out of it by saying you don't know who it was and won't try to find out and all that. But life isn't so easy ——"

The horn of a car tootled very near at hand, and the soft drum of its engine came to Cyril's and Arthur's ears.

"The car!" said Cyril, listening. "They can't be back already." He hurried to the open doors and looked into the night. "By Jove, they are!"

"Here!" cried Arthur. "Don't go! The girls may be in any minute!"

"Coo-ee!" called the voice from the dark.

"I must go!" said Cyril. "Lady Hunter always expects me to meet her. She wouldn't like it. I must go!"

He darted into a beam of light that was creeping up to the door from the two great lamps.

Then the door on the right which led to the kitchen quarters opened, and little Parks came in demurely. She stood near the door, fidgeting a little, eying Arthur.

"If you please, sir," said little Parks artlessly, "I think I hear the car."

Arthur turned and saw her, and was pleased. She represented to him comfort, safety and common sense. He did not consider her a woman at all. She brought his shaving water and his boots and prepared his bath. One put on no frills with her.

He nodded.

"Have you lost anything, Mr. Arthur?" inquired Parks softly.

"No!" said Arthur, growling. "Why?"

"You rather look as though you had lost something, Mr. Arthur," replied Parks softly.

"I wish I were lost, Parks," said Arthur.

Parks made a little sympathetic cry.

"But I may be going to lose something, too, Parks," said Arthur, appearing a little pathetic in spite of his prevailing sturdiness. "I may be going to lose my liberty. I can see it sort of flying off towards the horizon. And I tell you one thing, Parks, and that is: Liberty never looks so good as it does way off!"

"Oh, liberty?" said little Parks, blinking softly. "I was thinking of something that mattered, like your money or your handkerchief. But just liberty—do you think men had ought to have so much liberty, Mr. Arthur?"

However, Arthur was not even listening to Parks. One put on no frills with her. He was listening to a noise of much chattering outside, which he indicated with a sideways nod of the head.

"In two minutes from now," said he very grimly indeed, "the whole household'll know that I've got myself into a beastly engagement to-night."

Parks moved slightly towards him.

"Mr. Steers," she murmured artlessly, "was saying something about it to cook and me just now."

"Oh, was he?" said Arthur surlily. "The old fool! I suppose he told you I proposed to a girl in the dark, and don't know who it is?"

"Yes, sir," murmured Parks. She fairly exuded sympathy.

"The old fool!" said Arthur wildly. "I dare say you think me a lunatic?"

"All men are, Mr. Arthur, at times," replied Parks sympathetically. "You no more than most."

Lady Hunter came in, chattering, with Cyril at her elbow. Sir William brought up the rear, and was approached by Parks. She ministered to him; received his coat and hat, and smiled. Sir William sat heavily on the settle, and watched Parks' ankles tripping out.

"Take my cloak, dear boy," said Lady Hunter, dropping her cloak languishingly from her shoulders into Cyril's hands. "It's unfortunate that we have to come back, but it's the wrong night," she added to Arthur. "The vicarage was cutting the bread and butter for to-morrow, and most surprised to see us. Isn't it unfortunate?"

"Such a waste of your energy, dear lady," murmured Cyril.

Little Parks came in again glidingly, and Sir William leaned forward to get round the curve of Lady Hunter and watch Parks' ankles. He had been about to say "B-r-r-r!" to Cyril, whose laconic nature he despised; but Parks' ankles soothed him. Parks had disposed of Sir William's coat and hat, and now she took the beautiful cloak so tenderly from Cyril, and so tenderly she carried it away upstairs.

The voice from the garden upraised itself again. "Coo-ee! Coo-ee! Coo-ee!"

"What!" said Lady Hunter, kicking her spirally train about voluptuously—she had developed voluptuous tendencies during Cyril's secretaryship—before she sat down. "What! Are those poor girls still out there? Alone?" she said reproachfully. "Alone? Arthur! Arthur! Ar-thur!"

Arthur had not spoken since their return, but now he spoke.

"Tell 'em," he said wildly to Cyril.

Cyril moved forward a little between Arthur and Lady Hunter, who was getting her lorgnette up.

"Certainly," he said with a cautionary look at Arthur; "but tell 'em what?"

Arthur was beyond caution.

"Tell 'em something!" he said. "Tell 'em anything! Tell 'em the truth!"

Lady Hunter surveyed Arthur through her lorgnette.

"Eh?" said Sir William. "What's all this?"

Arthur looked at them all, one after the other. He opened his mouth reluctantly, and closed it again decisively. So without a word he went to the door leading to the kitchen quarters and passed out.

"Why's he gone to the kitchen?" said Lady Hunter. "And what's that?" She had seen the champagne.

"That's not my last bottle of Pol Roger 1905?" said Sir William, pointing at it too.

"'Fraid it is," said Cyril. "'Fraid old Steers exceeded his authority a bit, but as a matter of fact he was so pleased at what was happening—please wait; please let me speak—that, that he fetched it up to drink Netherby's health in."

Lady Hunter sat forward, breathing rapturously.

"Has anything actually happened, Mr. Wakefield?" said Sir William.

"Yes," he replied; "and no."

"Rubbish!" said Sir William. "Nothing can be 'yes' and 'no' at the same time, Mr. Wakefield? Rubbish!"

Lady Hunter turned her lorgnette upon him. "You can't engage the younger son

Drink it through a Straw

from chocolate soda to iced tea—

Your favorite drink tastes better through a *straw*. Full *flavor* in every sip. Always use straws at the soda fountain.

of a peer, William," said she, "and then talk to him as if he was a common person. Where's your savver faire? We're lucky to have Cyril."

"B-r-r-r!" said Sir William.

Cyril looked deprecatingly from one to the other. He played with his monocle. He smiled disarmingly.

"Oh, really!" he protested. "Really—ha, ha—I'm delighted to be at your service. But—er—what I was going to say was that Netherby really has left me in a bit of a dilemma in asking me to explain this to you. You see, rather a dreadful contretemps has occurred during the short time you were away."

"Oh, dear me!" said Lady Hunter. "And I did so hope he would engage himself to somebody before we came back."

"He has," said Cyril.

"Eh?" cried Sir William.

"Oh!" breathed Lady Hunter ecstatically. "Then never mind the contretemps. Oh, if only his poor mother could have lived to see this day!"

"'M," said Cyril feelingly. "'M. Well, I fancy the chap would willingly change places with his mother any time."

Cyril was interrupted by a sound from the garden. "Coo-ee!"—persuasive, soft and long-drawn-out. He indicated its direction.

"There you hear the girl, anyhow," he added; "fairly fed up!"

"Do you mean to tell me," said Sir William, rising from the settle and taking an attitude, holding by his coat lapels—"do you mean to tell Her Ladyship and me that he's left his fiancée coo-eeing for him out there? Bring her in!"

"Bring her in," said Lady Hunter.

Cyril looked desperately from one to the other.

"But, y' see," he said—"but, y' see——"

"Well," said Sir William testily, "which one is it?"

Cyril looked helplessly at them both.

"Y' see——" said he.

He paused. Women's voices sounded in the garden. They drew nearer. Laughter rose outside.

"The girls!" cried Lady Hunter.

"We shan't be long before we know now, I'll bet a fiver," said Sir William with fine irony.

Then Angela and Gwennie Harmony appeared out of the darkness on the threshold. They looked slim and nymphlike and up to anything; and one wore palest gold and the other wore palest silver. They looked reprehensibly extravagant. They were backed by Mrs. Drelincourt, extremely knowing in a perfectly wicked black frock. Their eyes roamed the room impatiently. They said "Tch! Tch!" and gritted their teeth. Then they came in.

III

THE girls entered an atmosphere of expectation, and they brought an atmosphere of expectation with them.

"Where is he?" said Mrs. Drelincourt, with an adorable wriggle of impatience that ran over her whole body.

"Everyone's here but Mr. Netherby," said Gwen—she was very little—pouting.

And Angela drawled, "What, dear Lady Hunter! Back already!"

Lady Hunter stood up and bashed her train about—for she had curled it sirenlike around her feet—and got her lorgnette busy. Her excitement made her chirp like half a dozen robins.

"Yes, dear! Back already! It was the wrong evening; they were cutting the bread and but—— But what does bread and butter matter? What does anything matter?" She gazed around her.

"Did you hear us coo-eeing?" said little Gwen, slinking across the hall in her gold frock, to Sir William.

"Oh, yes," said the old gentleman; "we heard you coo-eeing. Oh, yes! We heard you. Yes."

Lady Hunter stood, lorgnetting everyone brightly, very arch and cozy.

"And which of you dears," said she in a voice like a dove, "can tell me anything of Arthur while we've been away?"

She looked ready for any conspiracy, and most encouraging.

Mrs. Drelincourt yawned tinily. Unlike most people she had an attractive yawn. Her teeth were as lustrous as her pearls. She advanced and sank into the cushions of the settle beside Sir William.

"Why," she sighed, "we were looking for him, dear Lady Hunter. Not a man has been near us poor women all the evening."

She pouted.

Sir William leaned towards her, a sat on the settle together, and looked ingly into her face. Mrs. Drelincourt back from his inquisitorial gaze with of haughty surprise.

"Sir William!" she murmured.

The old gentleman shook a finger

"I wonder if you tell the truth."

He fixed an admiring look on Mrs incourt, for he thought her a v woman. He decided on her, and praised Arthur's taste. Then he Drelincourt still wearing the sur prise.

"Sir William!" she murmured.

Sir William looked more piercing ever into her face.

"We've been hunting for Mr. N everywhere," added Angela.

She slunk across to the mantel her silver frock, leaned her elbow manipulated a jade-colored fan. S a very pretty picture. Sir Willia at her, stroked his chin, and was about Arthur.

Lady Hunter turned smiling Angela.

"Ah, yes, dear," said she, "but you weren't hunting for together, now; were you?"

"Yes," said Angela, waving "We hunted for him all toget

"But——" said Lady Hunt from Angela to Sir William and back again.

Gwen settled herself on the settle close to Sir William's sh ran her fingers into the old hair.

"And then," said she, "we and went all through the orch solutely everywhere."

Lady Hunter nodded. "Ah!"

"These bushmen have the gi ing their tracks," said Mrs. playfully.

Cyril looked across the hall He approached her by a circu when Lady Hunter's eye was where.

Angela surveyed the youth wi coldness.

"Did you look in the arbor tensely.

"Of course I looked in the arb returned. She waved her fan.

"Oh, you did, did you?" tensely.

Mrs. Drelincourt looked rou

"I thought of the arbor, to fided. "I looked in."

Hope stole into Cyril's fa proached Mrs. Drelincourt.

"Oh, you looked into the said he eagerly.

"I must have looked into th the others," said Gwen, rum William's hair. "Somehow it place I thought of."

Cyril passed a hand over He stared at Gwen.

"You looked into the arbo "You!"

Gwen stared at Cyril.

"Me," she replied.

She separated Sir Willia strands, and commenced t spirally upward. The old g in a state of considerable pl

Lady Hunter turned her Gwen.

"You're no detective, Mr said Sir William crushingly.

"I—I'm so worried," said his nail and looking at Ang worried that I can't think."

"Worried, Cyril?" said moving towards him.

Angela gave a fine sneer, f telpiece.

"Yes, worried," said Cyr walking away from Lady E open door, where he took in

"Why has Mr. Netherby asked Gwen, finishing a sec hair very neatly.

"I think he's frightened Sir William, very dulcet und gers.

Mrs. Drelincourt laughed

"Oh!" said she. "Isn't I perfectly sweet about women

Sir William turned another upon her.

"So he is, dear; so he is, s Lady Hunter eagerly. "He I can't wait any longer! Yo on mystifying me, I see. Be bear—it!"

This Thermal Jar Holds a Full Gallon!

Ask Your Dealer to Show You Aladdin Thermalware

One Gallon Capacity—Eight times as much as old-style pint thermal bottles! Enough hot coffee, iced tea, or lemonade **for the whole party.** 16 big cups!

Four-Inch Opening—You can pack hot fried chicken, potato salad, baked beans, ice cream and have your dinner when and where you please. Holds 8 lbs. of food.

Unusually Sturdy—By means of a patent Thermalware Seal that **joins the glass and metal in one piece** we can use **heavier, thicker** glass. **Extra** outside steel jacket for additional protection.

Sanitary—Large 4-inch opening makes Aladdin Thermalware Jar easy to keep clean. Insulated sanitary glass stopper instead of cork.

High Thermal Efficiency—Maintains temperature for hours—piping hot or icy cold.

On Auto Trips
One jar for hot or cold drinks. One for food. Like having dinner at home.

For Sportsmen
Think what a whole gallon of hot or cold drinks means on a fishing, hunting, camping or yachting trip.

At Picnics
Hot baked beans or firm ice cream. Hot coffee or icy lemonade for all.

In the Home and Office
A constant supply of cool drinking water at any hour. Ideal for the sickroom. On the farm carry hot or cold drinks to the field. Fetch ice cream from town.

A Three-Purpose Thermalware Dish for the Home

—Cooking
—Serving
—Heat Retaining

Enables the busy housewife to prepare the food in advance, set the table, and have everything **piping hot** at mealtime. Keeps the food **hot through the entire meal.**

You can cook soups, stews, vegetables, puddings, desserts, in the insert dish on stove or in oven in usual way. Place insert dish in insulator and put on cover. **The three parts instantly seal by vacuum.** Released by touch of air-vent valve. Food is kept hot until ready to serve. If your dealer hasn't received his supply, write us direct.

Ask for Aladdin Thermalware Jars and Dishes at Leading Department, Drug, Jewelry, Hardware, Sporting Goods and Auto Accessory Stores.

If your family is irregular at meals, all can enjoy hot food from the Aladdin Thermalware Dish.

For luncheons or afternoon parties, prepare such foods as chicken à la King, flaked crabmeat, etc., in advance. Steaming hot when you're ready to serve.

A most acceptable wedding gift. In Satin or Polished Silver, Polished Nickel and Copper. 3 Pint Capacity.

To Dealers—Write us or your jobber at once for prices.

(Continued from Page 76)

Cyril returned from the open door to support Lady Hunter. He tucked a silk handkerchief languidly back into his cuff and looked terribly unnerved.

"Oh, my dears!" said Lady Hunter, excitedly addressing everyone. "Don't keep me any longer in this suspense! Which of you is it?"

Mrs. Drelincourt turned from Sir William's piercing look to Lady Hunter's, and on to Cyril's; and back again.

"Which of us is it?" she repeated, mystified.

Gwen completed a third spiral artistically to the topmost twiddle, and stopped, full of curiosity.

"I've just heard a piece of news," said Lady Hunter, looking at each girl in turn, "which has delighted me, but unfortunately ——" Lady Hunter paused to summon all her tact. She smiled delicately. "But unfortunately," said she, "I wasn't told quite enough."

"News!" cried Gwen.

Angela asked from the mantelpiece, on which she still leaned, fanning herself, "Is it exciting?"

"Very," said Lady Hunter, betraying emotion.

Cyril stood up behind the settle. He spoke clearly.

"Lady Hunter refers," said he, "to Netherby's engagement."

Angela took her arm from the mantelpiece, and Mrs. Drelincourt cast her eyes down, and Gwen stared swiftly at them both. There was a long pause.

Lady Hunter was busy with her lorgnette.

Sir William looked up at Gwen, and round at Mrs. Drelincourt, and across the hall at Angela. He appeared more startled than he really was, owing to the new arrangement of his hair.

Cyril took his handkerchief from his cuff again and wiped his forehead. He bit his finger nail.

Mrs. Drelincourt spoke first.

"Mr. Netherby's engagement?" said she in a very suave, quiet manner.

"Yes," said Lady Hunter, breaking forth again, "but I haven't been told which of you it is. Now!" said she winningly, looking around, "won't the dear girl tell me? After all, why this mystery with me?" Sentiment got the better of her. "Cyril will tell you, girls," she sighed, "that I'm psychic. The littlest hint, and I shall understand; and it shall be locked in my heart until you give me leave to tell everyone."

Then again there was a silence till Sir William, unable to bear it, coughed harshly.

Angela and Gwen were eying each other very hostilely indeed.

Again it was Mrs. Drelincourt who spoke.

"And what has Mr. Netherby said?" inquired she suavely and quietly, though perhaps with a hint of nervousness.

Angela and Gwen immediately transferred their hostile suspicion to Mrs. Drelincourt, but neither spoke.

"Cy-ril!" said Lady Hunter, waving her lorgnette at him.

Cyril understood that in spite of the turmoil of his mind—of which, of course, Lady Hunter was unaware—he was expected to clear everything up in a tactful manner. Tact was mostly what he was paid largely for, and was indeed his sole marketable attribute. He moved forward, tucking his handkerchief into his cuff, and tried to smile with his accustomed bonhomie.

"If it is left to me," said he, "to explain this rather difficult and—er—delicate—er—situation, why, I'll try."

"Difficult and delicate, dear boy?" said Lady Hunter.

Angela gave another fine unseen sneer at Cyril and Lady Hunter.

"You see," said Cyril, addressing everyone, "what actually happened to-night is—er—that Netherby went out to the arbor to think out a certain problem which he had spoken to me about earlier in the evening. What I mean to say is—Netherby's a marrying sort of man if ever there was one."

"B-r-r-r-r!" said Sir William.

"Though of course, poor chap, sadly hampered by his painful reticence," added Cyril.

"That's it!" said Lady Hunter, once more bubbling over with enthusiasm. "So reticent! So shy and reserved. So genuine. He'll make a splendid husband."

"And a splendid husband is just what the chap's longing to be," continued Cyril.

"B-r-r-r!" said Sir William.

"Let me see," said Cyril, dasg head. "Where was I?"

"The action of the story," said sarcastically, "is hung up in the a

Bitterness overcame Cyril for a moment.

"Oh," he said bitterly, "that's nothing to a girl if anything better turns up. Nothing. I assure you!"

"Tch! Tch! Tch!" said Lady Hunter. "But," she added, "there is something in it. When true love comes what is the mere fact of one's bond to another? I understand fully." She then gave the already unhappy Cyril a very dangerous look. "Nothing," she went on, "nothing would keep me from my lover."

Cyril pulled himself together.

"Oh—oh—really?" said he nervously.

"Really!" said Lady Hunter with fervor.

"B-r-r-r!" said Sir William.

Lady Hunter raised her lorgnette. "I have a very deep feeling for women who have made mistakes," she continued, looking at Sir William.

Then Gwen broke in upon these irrelevances.

"My candle, please," she stormed suddenly.

"Your candle?" said Cyril.

While no one was looking Gwen had struck an enigmatic pose by the bureau, and this she retained.

"Please," she replied.

Cyril went to the side table.

Lady Hunter considered Gwen. "Have you anything to confide, dear?" she asked faintly but still optimistically.

"Please wait!" Gwen replied.

Cyril brought the candle.

"Thank you, Mr. Wakefield," said Gwen, receiving it with an air of worldly composure wonderful in one so young, and small as well. "If you see Arthur again to-night please tell him that my beastly twin is evidently going to rag us unmercifully."

"Eh?" said Cyril.

"Eh!" cried Sir William, looking round.

Gwen began to go slowly upstairs. Her manner was every bit as good as Mrs. Drelincourt's or Angela's. Lady Hunter surveyed the progress through her lorgnette.

Gwen paused. "But tell him," said she with a confiding smile, "that I don't mind if he doesn't. Good night."

"Good night," said Cyril.

"Good night," gasped Lady Hunter.

"Good night," said Sir William feebly. "Little puss," he mumbled to himself.

The three remained for a moment or two after Gwen's departure in total silence. Then Lady Hunter gave her train a voluptuous kick and subsided on the settle beside her husband.

"Well, well!" said she faintly. "It's coming from Australia, you know."

"What is coming from Australia?" said Cyril.

"Nothing," said Lady Hunter. "It's come. Arthur. It's coming from Australia that does it."

Cyril looked at her exhaustedly.

"Girls love a man from Australia," added she.

"Life looks pretty good for Australians," said Cyril.

"They think he's savage, you know," said Lady Hunter; "rough. Untamable. All that." She gazed at Cyril, who had never appeared quieter. "It does not appeal to me," said she, "but perhaps I am exceptional. Some people tell me so."

"B-r-r-r!" said Sir William.

"Please give Sir William his candle, Cyril de-ar," said Lady Hunter very coldly.

Cyril went to the side table.

"What I want to know is," said Sir William, "which woman is it? Who's telling the truth?"

"No one's said anything yet," replied Lady Hunter with acerbity. "Oh, if only someone would give me the littlest hint!"

"You've 'ad three 'ints," roared Sir William, dropping the aitches to annoy her—the only form of revenge he thought it gentlemanly to take since his knighthood.

"What beats me," said Cyril very languorously in the background, "is the way they saw it. Saw that as long as Netherby doesn't know who it was, and there's no witnesses, anybody's word is as good as anybody else's."

"Tch! Tch!" said Lady Hunter. "So it is!"

Cyril brought the candle.

"Thank you, Mr. Wakefield," said Sir William, rising obediently to a look from Lady Hunter. He, too, paused on the staircase. "Mr. Wakefield, tell Arthur if there's any way his poor old uncle can help, it's done."

"I'm sure he'll be very glad, Sir William," murmured Cyril feelingly.

"Mum" is the word
that frees you from Embarrassment

Even in crowded gatherings, and in warmest weather, The Dainty Woman can always preserve the sweet daintiness of her feminine charm.

WOULDN'T it be a great relief at all crowded gatherings—at wedding receptions, dances, parties—to know that you are entirely free from the odor of perspiration or any other body odor?

You know how it is on such occasions. As the room gets warm, you notice a slight personal odor in some of those around you—and then you begin to suspect it in yourself.

You can be entirely free from even that suspicion.

"Mum" is the word. "Mum" is a dainty, snow-white cream that takes all odor out of perspiration and prevents all body odors from whatever cause. No matter how active you are, how crowded the gathering, how hot the day, or how freely you perspire, "Mum" gives you the comfortable assurance that you will not be annoyed all day or evening by any body odors.

"Mum" is the discovery of an eminent physician. It therefore cannot harm even the most delicate tissues of the body.

And it cannot injure the clothes—not even the daintiest waist or gown. You can dress immediately after using "Mum."

Yes indeed! "Mum" is the word. Get it at your store today.

While we're on the subject of daintiness, let us tell you about a new and distinctively feminine talcum powder. Amoray is its name—a lovely creation with a delicate yet exotic fragrance, richly suggestive of beautiful things.

And a clinging fragrance too that lasts all day! Really Amoray should not be called a talc, but a Powder Perfume. And yet talc it is, smooth and cooling and refreshing, as every fine talc should be.

Get these aids to daintiness today at your store:

"Mum" 25c. Amoray 35c. Or from us by mail postpaid upon receipt of price. See special offer below.

SPECIAL OFFER

TO introduce "Amoray" (Powder Perfume), the distinctive feminine talc, we make this special offer. Send us 50c and your dealer's name and we'll send you both "Mum" and "Amoray" postpaid. Use coupon.

Long-Bell

Trade-Marked LUMBER

EASILY IDENTIFIED—

Long-Bell Lumber is trade-marked with the name of the manufacturer. This means individuality, *unmistakable* identification—the same kind of a buying guide you demand on other merchandise.

RELIABILITY—

Long-Bell Lumber has back of it the reliability of a lumber concern that has been 47 years in the business.

GOOD TIMBER—

Long-Bell Lumber comes from exceptional stands of virgin timber. It is manufactured in mills equipped only with the very best of modern machinery.

SKILLED WORKMANSHIP—

Long-Bell Lumber is made by skilled workmen—men who have been with this company for years and who take a personal interest and a personal pride in a product that bears their company's name.

EXACTING SUPERVISION—

Each process of manufacture and each step in the grading is under the supervision of men who have had years of experience. Each log is cut for purposes for which it is best adapted.

—these are some of the reasons why you, too, should buy Long-Bell Trade-Marked Lumber.

ell Lumber Company provides a home plan service to ealers. There are more than 70 home designs to choose pictured above is Long-Bell Plan No. 398. Ask your f he hasn't it, write us and we will give you the l lumbermen in your community where you can see lan sheets.

Spark-C is
7¼ inches long

When you look at the battery, test the ignition too

IT is just as important to check the ignition as it is to put water in the battery. If the battery grows too weak, it will tell you itself. But if one plug misses firing once in a while, you'll never know you are wasting gas or losing power unless you do check the ignition.

The Westinghouse Ignition Tester—Spark-C—will detect any fault of an ignition system in a car, motor boat, or airplane.

Anyone can use it. It is as simple as writing your name with a pencil. Touch the point of Spark-C to the plugs or along the wiring to the coil or distributor and read the result in the window in the side of the Tester.

Get Spark-C. Test the ignition periodically. Any automotive dealer or garageman sells the Westinghouse Spark-C Ignition Tester, or can get it for you.

Sir William also disappeared along the gallery, and slammed his bedroom door.

IV

CYRIL was now alone with Lady Hunter. Lady Hunter leaned back in the settle, in an attitude which in a thinner woman would have been sinuous, but which now, as it were, made the configuration of the near view rather hilly and tussocky.

"Ah!" sighed she. "Relief! Relief from the uncongenial companionship of a man with a common soul!"

Cyril had really no wish to reply.

"Come and sit beside me," said Lady Hunter; and she gestured invitingly to the cushions that billowed around her.

Cyril seated himself gingerly beside her.

There was a pause, during which Cyril reluctantly knew that Lady Hunter experienced thrills.

"I wonder," said Lady Hunter rather coyly after a pause, "how it is that secretaries always fall in love with their employers' wives?"

Cyril ran a finger worriedly round inside his collar. He fidgeted. "It's often a *sine qua non* of the position," he replied apathetically.

"What's that?" said Lady Hunter with a thrilled look.

"A prerequisite," said Cyril, after thinking hard for a suitable translation.

"You are naughty, dear boy," sighed Lady Hunter.

The voice from the garden began calling again, a thought more stridently than before. The dovelike quality was absent from the coo.

Cyril listened.

"Who's that?" gasped Lady Hunter, starting violently.

"Another woman for Netherby," replied Cyril, listening.

"B-but they're all in bed," said Lady Hunter. "It can't be. No. I feel we may be watched, dear boy."

"You'd enjoy that, wouldn't you?" replied Cyril.

"We are being spied upon," asseverated Lady Hunter, gathering agitation.

"They wouldn't coo about it, y'know," said Cyril.

"I always fear that some day we shall be found out," said Lady Hunter.

"Well, we haven't incriminated ourselves yet," said Cyril haplessly; "and shan't, either," he added.

He was somehow feeling reckless of the consequences of any kind of speech to-night.

"Who knows," sighed Lady Hunter very truly, "what anybody may come to?"

"Hush!" said Cyril. "I heard something."

He rose and leaned nonchalantly on the back of the settle, his monocle turned upon the garden. Lady Hunter huddled, much struck by the situation, into her corner. Then the cook, a stoutish person in her cotton dress, apron and cap, appeared somewhat coyly in the open doorway. She was aghast at beholding Cyril and Lady Hunter.

"Ow!" said cook. "Ow! I'm sure I beg pardon."

Lady Hunter rose and fixed her through her lorgnette.

"Have you been instructed to watch me, cook?" said she heroically.

The cook regarded them both with a wary eye, and hesitated.

"Please," said she, "I'm looking for—for—for my cat."

Relieved at being able to undertake any sort of action save that expected of him by Lady Hunter, Cyril went down on his knees and looked under the furniture.

"Why!" said he obligingly. "Poor puss! Puss! Puss!"

No cat appeared. Cook stood fingering her apron in the doorway.

"Cyril!" said Lady Hunter. "You cannot ask the son of a peer to hunt cats, cook."

Cyril was on his knees before the settle. "'Fraid the poor animal is not here," said he sympathetically.

"I'm sure I'm much obliged," replied cook in a curious stifled voice. And she turned to withdraw.

Lady Hunter looked steadily after her. "Stay!" said she. Cook paused. "Do you truthfully mean to tell me that you were coo-eeing to a cat?"

"Well, why not, M' Lady?" replied cook, on guard but betraying a simper.

Cyril rose. "It doesn't seem altogether natural," he remarked, supporting Lady Hunter.

"Not na-ice!" said Lady Hunter besides, a liberty to coo-ee so that hear you, in my garden."

The cook paused for a weighty mo Then she replied darkly: "Well, M' I may be a cook—now; but per'ap ain't the last time I shall coo-ee garden."

The cook disappeared, leaving Hunter and Cyril gazing for explana each other.

Cyril took a turn or two up and the room.

"'I may be only a cook—now,' peated pensively. "'I may be only now.'"

"'But per'aps this isn't the last shall coo-ee in your garden,'" adde Hunter in staccato accents.

She made a rapid movement in t of the vanished cook, but Cyril h protesting hand.

"No, no!" he urged. "Keep he her! Let her yodel like blazes all place. Think of her savories."

"Yes, they do suit you, dea de-ar?" said Lady Hunter, relent

Lady Hunter was walking rat ously again towards Cyril, who w delicately away, when the doo right was opened discreetly.

Lady Hunter started violently

"Who's that?" she gasped.

It was Steers. He entered dep but looking reassuringly confide

"Only me, M' Lady," said s pardon. I came to see if I could the night."

"Certainly!" said Lady Hu tering guilty confusion. "Light please."

Steers went softly to the side

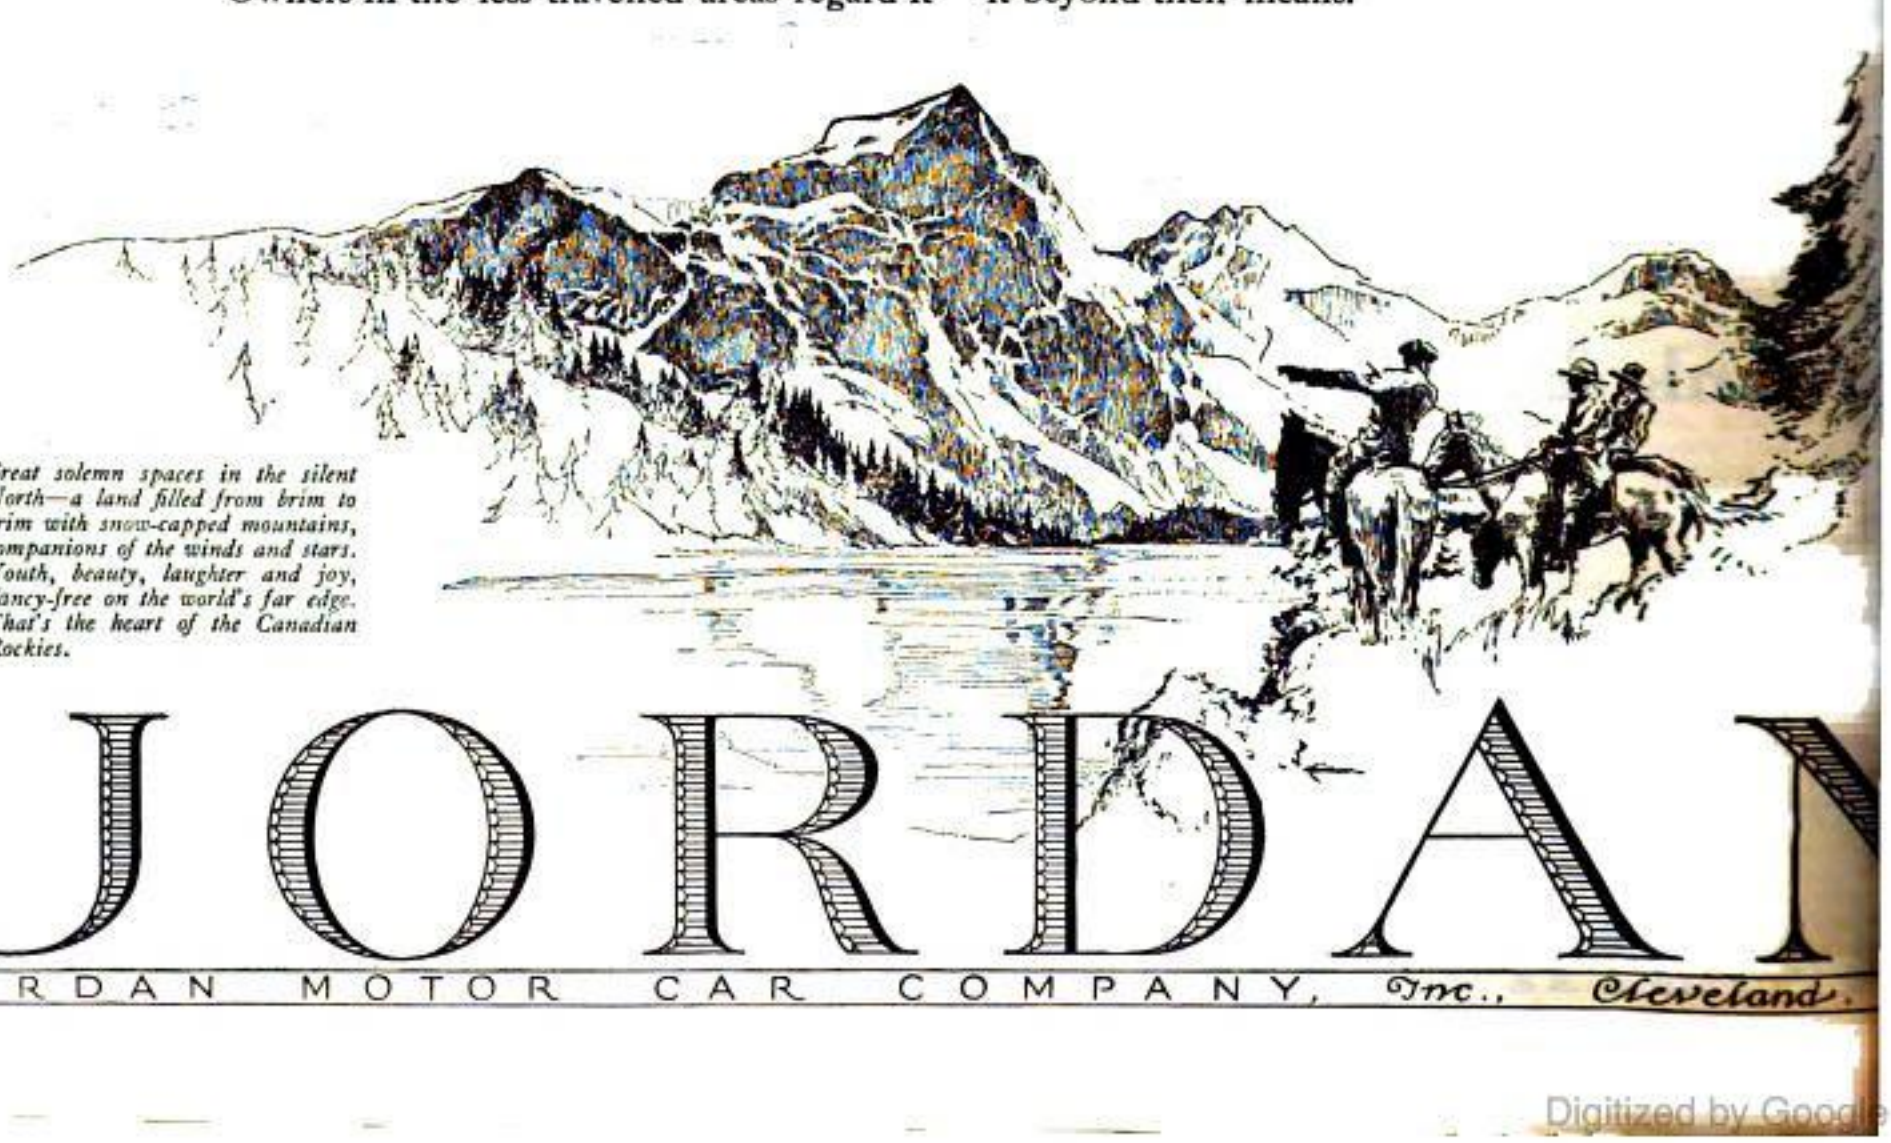
Sturdy and Good Looking—*but Light*

Everyone concedes the distinctive beauty of the Jordan car.

Thousands of owners know the charm of its fascinating personality — its gratifying comfort—and the satisfaction of its enduring quality.

Those who associate true economy with an expression of good taste, are gratified by the feeling of sturdy strength not usually the accompaniment of light weight.



The Jordan easily finds its place at the curb and moves nimbly through the crowded traffic. But it is not alone a boulevard car. Owners in the less travelled areas regard it as a faithful, reliable companion on the roughest highways.

The Jordan hugs the road, moving constantly forward — never swaying sideways.

There is a thrill in the new exclusive Jordan motor, a sense of satisfaction in the knowledge that point for point it excels.

Quiet and perfectly balanced, as a good motor car should be, the Jordan is taking the place of more expensive cars of the old fashioned, heavy type.

And it is attracting to the enviable group of Jordan owners many who once thought it beyond their means.

Great solemn spaces in the silent North—a land filled from brim to brim with snow-capped mountains, companions of the winds and stars. Youth, beauty, laughter and joy, fancy-free on the world's far edge. That's the heart of the Canadian Rockies.

"Oh, yes, madam," said Parks.

Mrs. Drelincourt retreated quietly upstairs. "Wait a moment," she breathed, finger on lip. Little Parks stood obediently below. Mrs. Drelincourt hurried into her room and reappeared with a hat; she came halfway down again and held it out, over the banister. "Have you any use for this hat, which I don't require any more? I'm sure you have!"

"Oh, madam!" said little Parks, receiving the hat.

"Take it! Take it!" said Mrs. Drelincourt playfully. "I dare say you walk out with Steers on Sunday, eh? I hope he'll admire you in it. Good night. And be sure you break the news for me after all this mystery."

Mrs. Drelincourt had nearly got unobserved into her room again when a second door opened, and Angela stepped into the gallery. She looked very nice and carefully disheveled in a cunning wrapper.

"Y-y-you!" said Angela, starting back on seeing Mrs. Drelincourt.

"Yes, dear, I," said Mrs. Drelincourt coolly. "And you?"

"I—I left a book downstairs," said Angela, recovering. "Who's that down there?"

Mrs. Drelincourt replied maliciously, "Oh, only the housemaid clearing up. Good night, dear."

She shut herself into her room. Angela looked down over the rail at Parks, and Parks looked up at Angela.

"Oh—oh—you, Parks?" remarked Angela rather feebly.

"Yes, miss, me," said Parks. She laid the hat very lovingly upon a chair. "Can I do anything for you, miss?"

Angela descended. "I think perhaps I left a book downstairs."

"What was it called, miss?" asked Parks, looking round.

"Oh, I don't know, Parks," said Angela distractedly. "I'm sure you'll understand that after the mental struggle I've been through I'm perfectly demented. But so happy, Parks! So-o-o happy!"

"Oh, miss!" said Parks with glad sympathy.

Angela came into the hall, and leaned dreamily against the settle.

"Yes, in spite of all, so happy! I must tell someone; and after all, you're a woman, too, aren't you?"

"Oh, yes, miss," replied Parks meekly.

"Give me your hand, Parks," said Angela in an emotional voice. Parks obeyed, and Angela squeezed the hand. "You're a perfect dear, Parks; so understanding; and you know what an awful thing it must be to fall in love with another man when one's engaged already."

"Oh, not awful, miss," said Parks. "Never awful to fall in love."

"You do understand so well," said Angela feverishly. "And how right you are! It's beautiful, only under the circumstances I—I hardly like to confess about it myself. I know you guess that it's I who am engaged to Mr. Netherby." She paused. "Parks! Will you spread the news? Take it right off my shoulders; tell people! Then—then my boats will be burnt."

"And Mr. Arthur's boats will be burned, too," added Parks thoughtfully.

"Exactly!" cried Angela. "That is—I mean—well, I had to tell someone! Good night." She squeezed Parks' hand once more, dropped it, sighed convulsively, and moved away. "Have you ever thought of bettering yourself?" she asked kindly.

"Yes, miss," replied Parks.

"You seem to me so superior," said Angela, more kindly than ever, as she crept upstairs.

But quietly as she crept, Gwen was opening her door.

"Ah!" said she spitefully. Angela was taken aback, but recovered herself swiftly.

"Good gracious!" said she. "Go back to bed, child!"

"What did you come down for?" asked Gwen spitefully.

"A book, darling," replied Angela.

"Well, I can't find my fountain pen," said Gwen. "Is that Parks?"

Little Parks was standing respectfully observing the scene from below.

"Yes, miss," she answered.

"Nonsense about your fountain pen!" said Angela. "It must be in your room."

"It isn't, you liar!" said Gwen with a ferocity appalling in one so young and at the same time small.

FROSTILLA

FRAGRANT LOTION

for Windburn and Sunburn

Frostilla Fragrant Lotion will prevent and relieve Sunburn and Windburn. It keeps the skin soft and smooth

Wind dries the skin and sun burns it. Both are injurious—they roughen and coarsen the skin. Before going out apply a little Frostilla Fragrant Lotion. It will keep the skin soft and smooth. It quickly disappears and leaves a feeling of cooling freshness. It gives your skin perfect protection against sun, wind, dust or hard water.

Frostilla Fragrant Lotion has many uses for every member of the family. As a base for powder it gives a natural appearance and holds the powder much longer. It is a wonderful cleansing lotion—it will clean the pores of dust which soap and water cannot touch. After using a depilatory a little Frostilla Fragrant Lotion smoothed on leaves the skin white and comfortable and prevents any sign of irritation. Try it when manicuring to soften the cuticle.

For the men Frostilla Fragrant Lotion is most delightful and soothing after shaving. A few drops on the wet soapy brush will help to soften the beard and give a more abundant lather.

Frostilla Fragrant Lotion has been very popular for almost half a century with people who desire a delightful toilet lotion to comfort and protect the skin. Its rare fragrance is delightful. There is only one Frostilla Fragrant Lotion and it is put up in but one size bottle, the regular price of which is 35 cents. Accept only the genuine and best; made solely by The Frostilla Co., Elmira, New York.

Frostilla Fragrant Lotion is soothing after shaving. A little on the shaving brush helps to soften the beard

ARNOLD
GLOVE-GRIP SHOES

Men's Sport Oxford
No. P499

The Glove Grip Feature makes a perfect sport shoe

THE principle of the sport shoe—any sport shoe—is comfort. Add to this, the distinctive restfulness of the Glove Grip feature and you have foot happiness that simply can't be beaten!

This Glove Grip feature gently supports your feet in their natural position and keeps them from spreading. It raises the arches instead of pushing them down. It is patented and cannot be duplicated in any other shoe made.

The men's oxfords illustrated above are *real* sport shoes. They are ideal for golf. Yet, their fine appearance makes them suitable for almost every summer wear.

Below is an extremely smart women's oxford in smoked elk with black calf trimmings. Both models have Glove Grip sport soles.

Ask your nearest shoe dealer for Glove Grip Sport Shoes. If he cannot supply you, write us. We'll send you the name of some one who can, together with an attractive miniature catalog of Glove Grip Shoes.

ARNOLD GLOVE GRIP SHOES

(Continued from Page 86)

She went out, catching painfully at her breath, by the door leading to the kitchen quarters.

So again little Parks was alone in the hall. She put a finger into her mouth and sucked it pensively. She looked around up at the gallery, and at Arthur's fast-closed door. Then suddenly she was across the hall, at that fast-closed door, knocking upon it softly, but with utter resolution.

"Mr. Arthur," said she urgently, *sotto voce*, and with utter resolution. "Mr. Arthur! Mr. Arthur!"

She knocked and knocked.

Arthur's door opened, and he appeared cautiously, in pajamas, holding the door. His relief at the harmless apparition of this kind girl was tremendous.

"Oh, you, Parks!" he kept muttering. "Just you! Only you! Thank God! I was afraid it was some woman."

"Oh, no, Mr. Arthur!" said Parks, smiling. "Only Parks. Dress yourself!"

"Eh?" whispered Arthur.

"Get dressed at once!" said Parks managingly. "I'll pack and send your things after you. Go home! Or there's three ladies and a woman who'll marry you out of hand."

"Eh, Parks?" whispered Arthur, agonized. "Eh? Eh?"

"Listen!" said little Parks managingly. "They all know it—that you don't know who you proposed to in the dark to-night; and they've seen the situation. And you're like baggage in a railway station—like a parcel in a lost-property office. Anyone can claim you who gives up the check. And they're all giving up checks—Mrs. Drelincourt, Miss Harmony, Miss Gwennie, and cook."

"C-c-cook?" faltered Arthur.

"Cook," said Parks, nodding. "And the young ladies have been down in this hall lookin' for you in negligys that would make a toad passionate."

"Help!" said Arthur in a lost voice.

"I'll help you, Mr. Arthur," promised Parks, very motherly. "Trust me."

"I do trust you," whispered Arthur.

"Never mind about your place not being ready for you," said Parks. "Home you go, quick!"

Arthur tottered back into his room, sank upon the bed and caught at a pair of socks. Parks followed him in to assist him. He did not mind her. She was all right. She had seen him unshaved, and prepared his bath. He began to put on his socks.

"I shan't wait to dress," he said.

"Better not," said Parks. She clasped her hands and looked at him. "Put on your warm coat. Take care of yourself."

"Get my boots, Parks," whispered Arthur with chattering teeth.

Parks placed his riding boots handy to his feet. "I'd call up the chauffeur," said she, "but I shouldn't rouse attention if I were you. What's a four-mile walk across country for a man in the hole you're in?"

"Nothing! Nothing!" chattered Arthur. "Only let me get away!"

He began to pull frenziedly at his boots.

Little Parks sank to her knees beside him, sat back on her heels and watched. A rucked-up pajama leg called for the attention of her neat fingers, and deftly she tucked it down into the boot top. Her eyes, turned away from Arthur, were dreamy. Her head felt full to bursting with many thoughts.

"Y' know, Mr. Arthur ——" said she softly and paused.

Arthur tugged feverishly at his second boot.

"Be quiet!" he said. "Don't talk to me!"

"No, Mr. Arthur," murmured Parks hurriedly. "Only I just want to say that—that—perhaps you'd like it if you could be persuaded to try it, Mr. Arthur."

Arthur stamped his foot down.

"What?" he asked grimly.

Parks swayed slowly a thought farther towards him.

"G-g-getting married, Mr. Arthur."

"Now," said Arthur grimly, "no more of that! I've had enough this evening to last me a lifetime. I've just had a glimpse of what might happen to a man if he let it. I've made a mistake to-night. Dunno what got me; but it hasn't got me now, that's sure. I'm not a marrying kind of man at all."

"Oh," said Parks, clasping her hands and rocking a little, half in a dream and the other half out of it, keeping a shrewd eye on Arthur. "Oh, if you were just managed properly, Mr. Arthur—if a girl was a good manager—why, she'd just twist you right round her little finger, and you'd surprised to find the kind of man you

Arthur's mouth dropped open wa looked at Parks. But she appeared w innocent, the complete altruist.

"No!" he said emphatically. "I you, no! It's all right talking to you used to you. You bring my shaving 'n' all that. But other women—I ca on with 'em at any price."

Little Parks sidled nearer. "S too, to get on with women if you Mr. Arthur," she remarked. "S easy."

Arthur rose, with alternate stam both feet. He was looking innocen sturdy again. He did not trus answer.

"A man didn't ought to be mad ened," murmured Parks, pursuing of thought.

She rose with a wriggle like an moved to the door.

"Here!" said Arthur. "Keep still look at you."

"Oh, Mr. Arthur," murmured "You look at me every day."

"No, I don't," said Arthur stur could, but I don't. Because I don't w

Parks pouted.

"You seem a darned capable sort said Arthur, ignoring the pout. "B you try to talk about managing m can't be done. The blinkers were bit; I'll allow that. But now th again, and they'll stay off. Giv coat."

Little Parks passed meekly ac hall to the recess behind, where and things were stored. Arthur her to and fro, with some dim feel the slenderness of her black stock returned, holding the coat out fo

"So you think you'll be able t for yourself, Mr. Arthur—to-mor

"To-morrow?" repeated Arth

"Well," said little Parks, qui tiptoe to hoist the coat on his "things are liable to happen t Mr. Arthur, aren't they?"

Arthur stood arrested. "You he said.

"Things," added Parks, "ca where they are. They won't st

Arthur stared forlornly at h realization of possibilities.

"Shall I come and look aft morrow, then, Mr. Arthur?" as smiling.

Arthur clutched at the straw

"Why, that's an idea!" he s used to you; you don't seem lik at all. If you can be spared —

"I'll manage that," she repli

"Promise," urged Arthur.

"Trust me, Mr. Arthur," sa

theirs, right here in Pekin'—this Chang Foo Low. God kape him from iver crossin' me path!"

The hawk laughed a sudden harsh laugh and dropped into the desk chair.

"So you believe the tales the ignorant coolies tell about that fakir?"

"Ignorunt coolies, is ut? Let me ask ye wan question: Phwat sort av a doctor now is the wan from New York over in the legation this minute, a little man wid a head on him like an owl?"

Among the Americans in Peking who had sought refuge in the legation at the beginning of the siege was a New York specialist with an international reputation.

"You mean Doctor Mossir?" said the hawk, naming this physician.

"Yis, sorr. Phwat sort av a doctor is he?"

"He's supposed to be one of the great nerve specialists of the world, Tim. Why?"

"Ye admit it!" exclaimed the sergeant triumphantly. "Phwat do ye suppose brought him to China? Not a thing but the wish to talk wid Chang Foo Low."

"Well," said the hawk, "most doctors are idiots, and I suppose this one is; but I'd hardly believe that about him."

"It's thrue, sorr; I have it straight as a shtring."

"How?"

"The doctor tells Captain Hays, who tells his shtriker, who tells Corporal Dolan, who tells Sergeant Anderson, who tells me. Straight as a shtring, sorr."

The hawk showed his teeth in a faint smile. "All right, Tim. You can deliver those now."

"Yis, sorr; an' if you'll deliver the bit av a message?"

"Tell her yourself, Tim. She'll be all right in a day or so."

"Don't I know it? She'll live to see the two av us dead an' buried."

The hawk's thin lips twitched slightly.

"No doubt. That's all, sergeant."

And the sergeant thought as he turned away, "Ye're a blunderin' fool, Tim Regan."

Alone once more the hawk sank back in his chair with an unaccustomed weariness. Not weariness of body—he still enjoyed immunity from that sort of thing. He had proved it during the recent siege when younger men had crumpled with fatigue all about him. It was a mental weariness that touched him now, touched him so strongly that his shoulders sagged with the weight of it. He turned brooding eyes to one of the black-and-gold screens, behind which was the door leading to his wife's room. His wife! Yes, his wife. The sag went out of his shoulders. He straightened in his chair. He had always believed in action. To hell with hemming and hawing. Why should he sit glooming like a timid calf? His wife! He got to his feet, walked quickly to the door and knocked.

"Yes? Who is it?"

"It's I—William."

"I'm still feeling badly."

A sudden flush darkened the habitual pallor of the hawk's face. He had an instinct to smash out the panels of the door with his fist. He waited an instant to control the instinct and his voice.

"I understand. I won't disturb you long. May I come in?"

"No, please; I'll come out."

Once more a flush, and then a shrug of the shoulders.

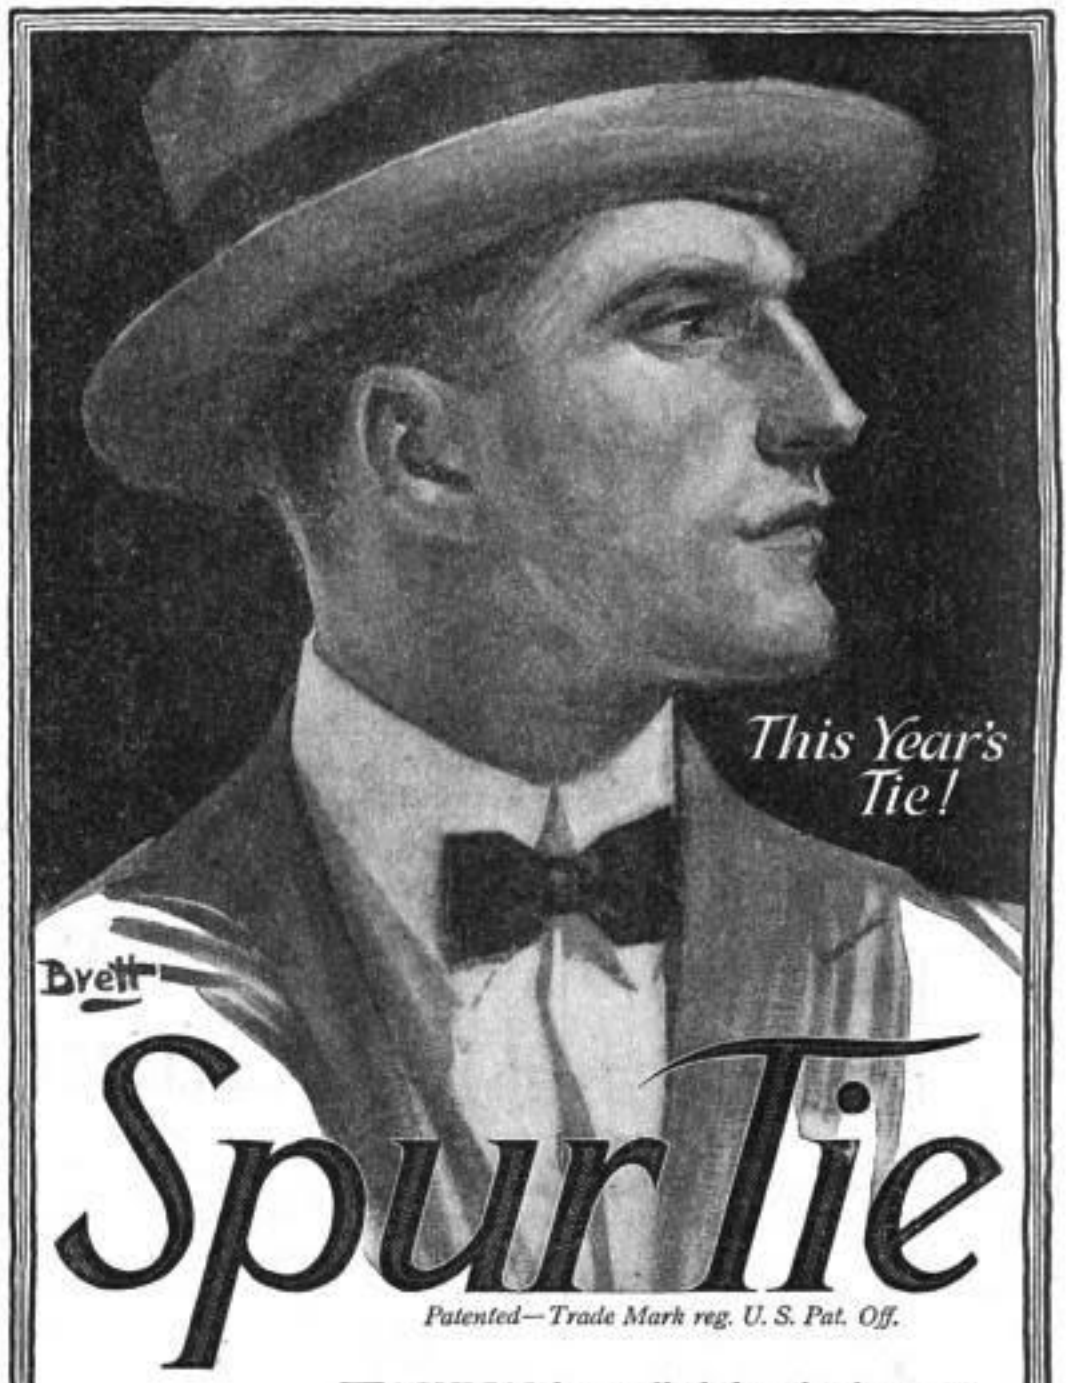
"Very well." He returned to the center of the room and waited. The door was unlocked and opened. His wife stepped from behind the screen and regarded him with great, dark, timid eyes.

"Well?"

How young she was! A child, a child! The hawk's assurance left him. It was replaced by a returning swarm of doubts and fears.

"Come and sit down—Elizabeth."

She took a few uncertain steps away from the screen.



"I've been lying down. I think I'll stand if you don't mind."

He took a cigarette from a lacquer box on the desk and lighted it. He found that his hand was trembling. This enraged him, but no sign of it was in his voice when he spoke.

"Now, my dear, I simply want to help you—you understand that."

She nodded.

Patented—Trade Mark reg. U. S. Pat. Off.

FASHION has called for the bow tie this year. It seems to team it off better with the new style in collars.

So exit four-in-hand—and enter the bow tie. But not the kind that you have been accustomed to that you had to tie yourself. Instead—the Spur Tie—all made up for you, ready to slip on.

Not like grandad's ready-to-wear bow, of course, but—new—natty—neat—its careless-but-dressy look retained by an exclusive **patented** feature that holds it in shape.

Your dealer will show you the Spur Tie in two attractive sizes, large and small—two styles—elastic neckband or slip-on-grip, guaranteed not to rust or soil the collar. Numerous patterns:—black, polka, fancy and many others. Get your Spur Tie today.

50¢ TWO FOR $1.00

If your dealer won't supply you, send $1.00 for two, 50c for one, specifying size, color preference and whether elastic band or slip-on-grip.

Why the Beauty of Silvore Endures

PERHAPS you have an old piece of silver plate that never has lost its lustre. Still glowing with a soft radiance when cleaned, it seems to grow even more beautiful with time. This enduring loveliness is due largely to the base on which much of the best silver plate is made—the lustrous manufactured metal called "Silvore."

Beauty of color and fineness of texture, extreme durability, resistance to corrosion, economy of cost, all are characteristic of Silvore.

Using it as a base, manufacturers of famous brands of silver plate are enabled to offer the public plated ware practically as lasting in attractiveness as though made of sterling, and at a very important saving in cost to the ultimate purchaser.

We want you to know about Silvore; to know that it not only puts permanence into the beauty of silver plate, but that unplated, it invests hardware and household utensils, furnishings and fittings with all the appeal of the more costly metal.

Of the same silvery appearance and texture throughout; so nearly like silver that they might readily be mistaken for silver, articles made of it or plated over it always wear white, thus retaining their original color indefinitely.

When a dealer or a salesman assures you that an article is made of Silvore, or on a Silvore base, you may be sure that it is of high quality and that the beauty you behold in the showroom will not become less in your home.

spoke.
he Number One boy?

"You? You—the Number One boy? Why, you are ——"

His hand rose and passed before her eyes. Once more she was in the dark and soundless chamber within her own brain.

"I am the Number One boy of this house," said a calm voice within that silent chamber.

"You are the Number One boy of this house," her lips replied.

"You have never seen me before."

"I have never seen you before."

Jimmy was still standing by the mantel, so utterly dazed that movement or speech had not occurred to him. Now he wrenched himself free from a sort of waking stupor and sprang forward.

"Look here," he cried, "you can't do that!"

The somber eyes of this unbelievable servant flashed upon him with the force of a blow. A quiet voice that had the quality of thunder in it beat in his ears:

"If you love this maiden and your honor do not interfere."

Jimmy faced the commanding eyes a moment longer with the feeling that this was another dream. Such things could not happen to people awake—and he was awake. He was in China. That was it! Things were different in China. Before him, dressed like a servant, was a super-Chinaman—Jimmy had found out all about the immortal Chang Foo Low—who with a wave of the hand had just taken away the mind of his lady of dreams. Well, such things could happen in China, evidently, and if he did not trust this mysterious Chinaman who had given him his only hope, who was there to trust? Jimmy bowed his surrender and fell back to the mantel.

"That is well," said Chang. Once more his hand lifted and waved. "Madam wishes to give an order?"

The girl of Jimmy's dreams gave a puzzled look about the room. Her eyes encountered Jimmy's.

"Oh, yes," said she, her face clearing. "Lieutenant Lee is going now. If he should call again I am not at home."

The Number One boy bowed respectfully.

"I hear your order, madam. But Lieutenant Lee has likewise heard an order. The colonel, your husband, told him to remain until he returned."

Even in the vast wonder in which his mind was floundering Jimmy was stricken by her sudden vivid blush, caused by the false position he had led her into. He had done it in a fit of anger at her feminine pretense of lightness when she had first spoken to him. Now he was sorry and ashamed.

"I came here on military duty to see Colonel Bradley," he explained contritely.

She turned to the Number One boy, her flush subsiding.

"There has been a mistake. You may go."

The Number One boy bowed and left the room.

Jimmy, without knowing what he did, followed to the door and stared, wondering, awe-stricken, after the tall figure. Dark and mysterious powers were fighting on his side—he knew that now—but how far could they, would they go? Had a genie entirely beyond his control been summoned to his aid that would stop at nothing?

"Why didn't you tell me?" a mortified voice demanded.

Jimmy, pondering by the door, was too deep in speculation to hear.

"I've asked you a question."

The voice was sharper now. It brought Jimmy to a consciousness of the present and turned him toward her.

"I beg your pardon. What did you say?"

"Why didn't you explain that you hadn't come to see me?"

"Well, I was angry," Jimmy admitted, "and I acted like a fool. You see, you pretended at first, and it made me angry."

"Pretended?" Her eyebrows went up. "Pretended what?"

"Exactly what you're pretending now—that there's nothing between us."

"There is nothing between us."

"That," said Jimmy, "isn't true, and you know it."

She picked up her cloak as if about to leave the room, but changed her mind and replaced it on the chair.

"I never expected to see you again," she said slowly. "But since you are here I think I should tell you how sorry I am for what I did, and ask you to forgive me."

"Forgive you for what?"

"For letting you talk to me—like that, and for—what happened."

SETH THOMAS

What time is it?

HIS WATCH gives one answer; hers another. And the clock disagrees with both. In the name of all important engagements, which one of the three is correct?

There is a simple way to remove such annoying discussions from the realm of family life. One hundred and nine years ago Seth Thomas began building accurate clocks.

Some Seth Thomas Clocks cost thousands, like the one on the tower of Independence Hall. But the clocks for the home cost very much less than you have probably been led to suppose. Their attractive appearance inspires your faith, and your Jeweler will tell you that your faith is more than justified by the mechanism inside.

An excellent clock—a fine movement in a hand-rubbed mahogany case, plain or carved. Strikes hour and half-hour on a rich cathedral gong. It is 21 inches long. Prices from $27 to $45.

The illustration at the right shows one of a group of mantel clocks made by Seth Thomas for over 40 years, practically without change, and still without a peer. Pendulum, lever or ship's bell movement; mahogany case; $40 to $60.

A Seth Thomas Clock is a welcome gift that becomes a life-long friend

Waiting in Line For Air!

The Trex Lock eliminates the burden of repumping tires. You pump them only once.

ACTUAL SIZE

All you need are your fingers, pair of pliers, and three minutes to attach a Trex Lock to your tire.

Simply take out the ordinary valve insides and throw away. Then attach the Trex Lock on to the regular valve stem.

Fits any tire; any motorist can attach.

Price $1 for each tire

Until recently the only way to keep proper inflation was the regular trip to the Service Station every week or two for air—waiting in line—half an hour's time—grease and dirt—washing up—and all the rest.

No wonder all this work was neglected. But the neglect meant soft tires, rim-cutting, and the early ruin of expensive tires.

Then came the Trex Lock. This wonderful invention is simple and effective. It positively locks the air in the tire.

It keeps perfect inflation, which adds greatly to the life of the tire. It affords all the increased mileage—but with no irksome duty for the motorist. There is nothing to take care of.

Put a set in your car today and eliminate the most disagreeable part of motoring. Sold by dealers everywhere. In sets of five, or singly if you desire—only $1 for each tire.

If your dealer has not yet put in his stock, write direct to us.

AIR VALVE LOCK

"You mean that you kissed me?"

"Oh, don't! It isn't fair. Please—just forget it."

"I wish I could."

"You must—you simply must!"

"Can you?" asked Jimmy.

She made a gesture of distress, half turned from him, and remained silent.

"You don't have to answer," said Jimmy softly; "I know already. I saw your face in the mirror when you came in and recognized me. Don't try to hide it any more—you owe me that much. I know why you married him. I found out about it all; and it's a crime—a wicked crime. He took advantage." His voice became a suppressed cry. "I found you just too late. That's what I don't understand about the whole hellish business. To find you at last—and then ——"

"Don't! Don't!" she returned his cry. "I'm so sorry—so terribly sorry for—you."

"For me?" said Jimmy savagely. "What about you? With your life smashed to pieces before it's begun. Don't be sorry for just me. We're both in this. What are we going to do?"

"I've told you," she said with some firmness. "We must forget it."

He gave her one look.

"I know," she went on quickly. "It seems impossible now, but time makes such a great difference. When my father died I thought I could never get over it, but I did—I did. It will be that way about this. Each day will make a difference. Soon—you'll be surprised how soon—it won't"—her hand went unconsciously to her breast—"hurt so much. You'll go back to your friends; and you'll meet another girl. I hope for your sake it will be soon. I hope—you'll be very happy. I—I ——" She suddenly turned her back to him.

Jimmy addressed an agonized whisper to his soul: "My sweetheart—my own sweetheart!"

When she turned to him again her lips no longer quivered. Her tight-closed fists had become hands, one of which she extended toward him.

"We must say good-by now."

"No," said Jimmy. "Just good night."

"But I shan't see you again before you leave."

"I'm not going to leave."

A sudden fear leaped to her eyes.

"You're not going with the troops in the morning?"

"A detachment from the Seventeenth was added to the guard here. I volunteered to stay with the detachment."

"Under Colonel Bradley?" It was a horror-stricken whisper.

"Yes."

"Why did you do that?"

"To be near you."

"Oh! Oh! Oh!"

"There's nothing for me anywhere else in the world; the other fellows wanted to get home."

"How can you think of them—when we—when you ——" She stared at him for a moment, then clutched his arm. "Go quickly now, before it's too late, and say you've changed your mind—that you want to go."

"Why should I do that?"

"You know; oh, you know!"

"But I don't. I can't bear to think what it would be like if I went. If I stay here I can see you now and then; perhaps hear your voice."

"No! No! No! You must go—you must!"

"But I can't," said Jimmy. "You see, I ——"

She cut him short with a feverish "You say you—love me."

This got a look from him that sent her plunging on.

"Well, love, if it's—the right sort—is—unselfish. I must tell you something. I couldn't have you stay. I couldn't bear it. Now will you go?"

This time Jimmy's whisper, as he seized her by the shoulders, could be heard.

"Sweetheart!"

She only shrank from him a little, but her face became so piteous that Jimmy came to himself. He, James Lee, was in the home of his commanding officer. This girl with the pleading eyes was that officer's wife. Those were the facts. To set against them were twenty years of dreams. Behind the dreams were—devils, judging by what he had been led into. Part of their devilishness was that the dreams seemed much more real than the facts. He could not explain about the dreams and devils to the world. He could not explain it to himself. The world of course would [illegible] him by the facts. His arms dropped [illegible] sides.

"I'd go if I could," he said dully. "[illegible] I can't. I volunteered for the [illegible] I can't withdraw."

"Isn't there some way?" she [illegible] Then in a sudden panic, "There [illegible] some way—there's got to be a way [illegible]

He shook his head.

"There's no way. I'm accept[illegible] Colonel Bradley. That settles it."

The smooth ivory of her brow [illegible] as she thought intently for a mom[illegible]

"What if you weren't accept[illegible] Colonel Bradley?"

"Why, if he didn't like me he'[illegible] I suppose, and ask for someone el[illegible]

"You must ask Colonel Bradle[illegible] for someone else."

"Ask him? What reason could [illegible]

"Make up a reason," she urge[illegible] can do it."

"He'd think I was shirkin[illegible] Jimmy.

This left her helpless so far as [illegible] went, but she fell back to a [illegible] appeal.

"Please, please, for my sake!"

Jimmy was moved by that ap[illegible] had a sudden youthful exultati[illegible] thought of sharing martyrdom [illegible] But it must be definitely brou[illegible] mutual renunciation. She owed [illegible]

"I'll try," he promised. "But [illegible] thing that will help me do it. Sa[illegible] you.' I want to hear you say [illegible] the truth."

The hawk had left the [illegible] sought his home by way of the p[illegible] was entirely unmoved by [illegible] beauty. He was still fuming at t[illegible] that he had been dragged into [illegible] argument over condensed milk [illegible] by a puttering old fool. The Verdict of The Greatest Experts

And records of thousands of other owners prove Marmon economy of upkeep and dependability

arney Oldfield

e Old Master," Says:

e used many makes of high ars, but none of them have al any harder service than o Marmons. The principal for this is that since using armons I have undertaken nufacture of Oldfield tires, I test personally. To get , personal knowledge of y tires stand up, I have ny Marmon Speedster only under most extreme con- –high speed on race tracks sad roads and hard going in untry trips. This car has served as a pacemaker for races during the past two ar has been driven across ntry from coast to coast nes, and on many trips Oldfield tire dealers every- the United States. It has a total of 36,000 miles and running as well as it was t left the factory.
ldfield has used the Coupé oss country trips and has arked as to the extreme riding and the great ease th she handled the car."

arney Oldfield

922.

AMERICANS are just commencing to realize that *ultimate* cost of operation is far more important than *first* cost. But in Europe, mileage cost has long been the chief consideration. Over here we are destined to adopt the same standards of economy. Extravagant mileage costs must end.

The greatest of international engineers have devoted themselves to the solving of the many problems for reduction of operating costs. They have agreed upon the type of motor—the one giving the highest fuel mileage, the one which eliminates destructive vibration, the one requiring the least attention, the one with the longest life.

They have all come to agree upon a simple, high-efficiency six-cylinder motor. Rolls-Royce of England, Renault of France, Fiat of Italy, Mercedes of Germany, Hispano-Suiza of Spain, Marmon and other fine cars of the U.S.A. —all have six-cylinder motors.

America's favorite fine car

In the sturdy Marmon are embodied the accepted principles which insure the finest form of transportation at the lowest cost per mile. Records of thousands of Marmons provide astounding proof of new-day economy.

Such evidence certifies Marmon supremacy among fine cars, first in performance, first in economy, first in dependability.

All this is not a mere claim. It is substantiated by the introduction of "Standardized Service," a nation-wide co-operative offering of Marmon distributors. This ends guessing at operating expense. A flat-rate cost system for the 16 major service operations, composing 85% of all upkeep cost, and for other items, now gives the Marmon owner the utmost economy in operation.

The opinion of such experts as Barney Oldfield and Tommy Milton is authoritative—read their statements and remember they are accustomed to hard driving. Thousands of Marmon owners offer similar testimony. It is such overwhelming evidence of Marmon superiority as to make it essential, in serving your own best interests, for you to give the Marmon first consideration.

May we explain fully the importance of considering ultimate costs as well as first cost? The facts are told in our new booklet, "Modern Transportation Costs," which should be read by every motorist. Learn how Marmon Distributors are able to offer a motor rebuilding of late models for $265* instead of the usual $450 to $800. Learn why the rebuilding of the Marmon motor is not necessary until after 35,000 or 50,000 miles, instead of the usual 20,000 to 25,000 miles.

A surprise is in store for you when this booklet is received. It is the latest and most advanced idea in motordom. Mail the coupon now.

** Prices on Pacific Coast, 10% additional.*

Tommy Milton

World's Speed King, Says:

"The fourteenth car which I have owned and driven is a 1920 Marmon. It is the first car I have ever been able to drive satisfactorily over 8,000 miles. To date I have driven my Marmon nearly 25,000 miles. This includes two transcontinental trips, which were most enjoyable, and many shorter trips from one race meet to another when it served as a truck for extra equipment and also as a tow car. I consider the work imposed on this car unusually severe and the results obtained have been most satisfactory. The car runs fully as well today as when new, and as there is no evidence of depreciation, I have no means of judging what the useful life of the car will be."

Tommy Milton

(Continued from Page 94)

want to get away because you've done something here you're ashamed of?"

"No, sir," said Jimmy, with a ring in his voice not meant for the hawk. "I've done nothing I'm ashamed of."

"Then what is it?"

Jimmy's sudden exultation died.

"I don't care to say, sir," he affirmed doggedly.

"I'll tell you," said the girl of Jimmy's dreams.

Her sudden interjection froze the blood in Jimmy's veins.

"The lieutenant has confided in me," she went on calmly. "He's told me that he's in love. He wants to go back to the United States because he loves a girl."

If Jimmy had been proud of her before he was now lost in admiration.

The hawk expelled his breath with a slight hissing sound.

"Oh," said he, "is that it?"

It was as though a little of the quiet peace of the Oriental garden had stolen into the charged atmosphere of that room of Occidental happenings and cleared it.

"And you thought my wife might help you with me?"

"Well, I wanted very much to get back, sir," admitted Jimmy.

"Yes, that's apparent," said the hawk dryly. He moved to the desk and sat down rather heavily in the desk chair. "Of course you know that someone has to stay and take your place if you leave?"

"Yes, sir."

"Others have homes and families and perhaps—girls, they want to get back to. You realize that?"

"Yes, sir."

"And yet you asked my wife to help you get out of your duty?"

Jimmy stiffened.

"It looks that way. Yes, sir."

She tried to rescue him.

"It wasn't the lieutenant's idea at all," she said eagerly. "He never thought of such a thing. I suggested it on account of the girl."

"You had no right to suggest such a thing to an officer, my dear—no right whatever. Lieutenant Lee bears an illustrious name, the name of a great soldier." His commanding officer whirled suddenly on Jimmy. "Do you wish to be relieved?"

Jimmy went red to the ears.

"No, sir, I ——"

He broke off. It was not the appealing clutch of her hands that stopped him. It was a revulsion against further scenes and nerve tension. Devils of some sort had gotten him into all this, and he'd get out if he could. It was all too unreal, too weird. That Chinaman was in it now with his mesmerism business and heaven only knew what else. No telling what might happen. Best get out of China quickly before anything else did happen.

"Yes, sir; I do."

"They've been together twice—alone," was the hawk's rapid thought. "She rushed to defend him just now." Aloud he said, "I shall ask Colonel Blair for another officer. The adjutant will assign your men to quarters when they come. Remain in officers' quarters here until you are ordered back to the Seventeenth."

"Thank you, sir." Jimmy saluted.

"Good-by, lieutenant." She was holding out her hand.

At her words Jimmy's heart strings tightened. She was all that counted on earth. A fine, quixotic fool he had been, to arrange to put an ocean between them. Things looked impossible for them, but there was always the future. They should have discussed that. They must discuss that! It was too late now, though; too late. He took her hand.

Their eyes clung together for an agonized instant. He bowed and was gone.

In the room he had left, the things of China still clashed irrevocably with the objects of a newer, harsher civilization. But the girl, standing nerveless, utterly undone, still looking at the doorway through which Jimmy had disappeared, did not know it. She seemed to be in a hopeless void in which nothing mattered, nothing could ever happen again.

Something did happen, almost at once. Her husband crossed the room, took her in his arms and crushed her to him.

"You're mine—mine!" he said.

She was startled by a piercing shriek, then another, and another. She was astonished to find that her mouth was wide open. She realized that she was the one who was screaming. She knew it perfectly well, although she had nothing whatever to do with it. For some reason shr shriek was pouring from her throat. some reason she could not close her to silence them. It remained wide as she continued to scream.

The arms which held her fell away denly.

"Good God! What's the matter heard.

She staggered away from that voi screaming.

Between the shrieks she heard a voice, shrill as the screams with wh words were interspersed. "I want I want to die!" It was her own v

A typical physician, after all, thought the hawk.

"So I gathered. What's the cause of this condition?"

"I am not prepared to say. It is hidden"—the specialist tapped his prominent brow with a slender forefinger—"here."

"Do you mean her mind's affected?" The hawk asked the question with a feeling of relief, almost of satisfaction.

"Not in a pathological sense. All nervous breakdowns are primarily mental. In your wife's case I feel that a shock of some sort is responsible."

"Shock!" The hawk leaped at the word. He had been clinging to the idea for the last four days. "Sit down, doctor."

He was presently describing the affair with the Boxers and the subsequent rescue in the temple.

"Why, they had a knife at her throat. A Chinaman was shot a few feet from where she stood. There you have your shock."

The physician seemed unimpressed by the recital.

"Well, perhaps," he said doubtfully. He got up from his chair and gazed about the room for a moment; then he, too, walked over to the mantel and, stooping, looked at the photograph. "Lovely," he murmured, half to himself. Suddenly he turned to the hawk. "Colonel Bradley," he shot out, "you are many years your wife's senior. You have seen fit to risk the uncertainties of such a union. Let me say to you that your chance for happiness—for peace of mind—can be utterly destroyed at this time if you fail to understand the psychology of the situation."

"Understand? I've been trying to understand her ever since I married her. Psychology? Rat! It's just a fine mouth-filling word. I've got a woman to deal with."

"Yes, I see," said the specialist softly. "Well, I'll be getting along. I must tell you before I go that Mrs. Bradley must have quiet and complete rest for some time to come. Every allowance should be made for her until she is entirely normal."

"Thanks," said the hawk dryly. "I'll remember. Will you have a drink?"

"No, I believe not. Thank you."

"Well, is there anything I can do for you while you are in China?"

The physician hesitated, then admitted that he had a problem. He had been trying all day, he explained, to see the lama, Chang Foo Low.

"The priests," he said, "tell me he is not in the temple, and either can't or won't direct me to him."

The hawk smiled.

"I remember now. Someone told me you had come all the way from the United States just to meet that Chinaman. Is it true?"

Doctor Mossir admitted that it was.

"I believe him to be the greatest mystic, hypnotist and psychic the world has ever seen," he added.

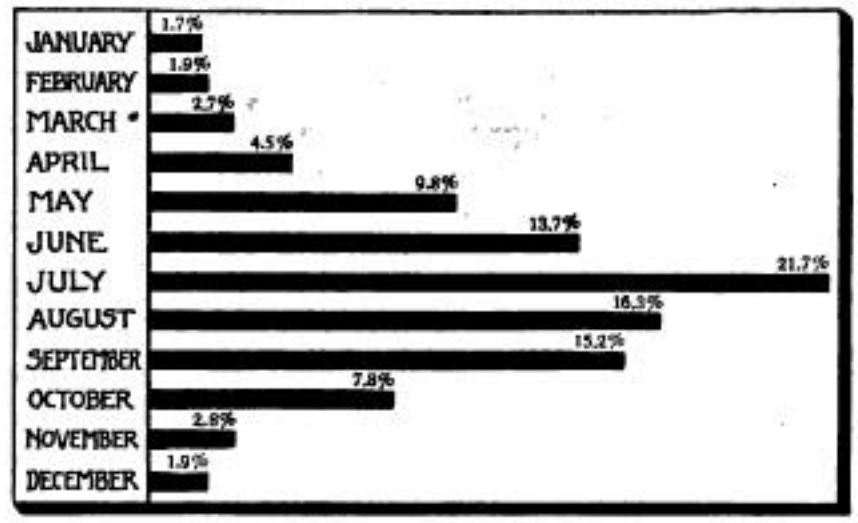
Folderol. Folderol with a vengeance, thought the hawk.

"Can a rational man, a physician of standing, be interested in that sort of thing?" he asked.

The physician returned to his chair. "I think I am a rational man," he said, "and I've come to see Chang Foo Low because I am a physician. Many intelligent physicians of to-day have given up pills. We rely on hygienics and mental suggestion. A few of us go further than that. We are trying to reach and treat the soul."

"Why not try to catch moonbeams?" suggested the hawk.

"You deny the existence of the soul?"



"Why shouldn't I? I am an animal. I have a sort of pudding in my skull called a brain. It is so arranged that I can reason with it better than the dog, but the dog's nose is a marvelous affair—much more effective than mine. I can think—he can smell. The worms get us both in the end."

The eyes of the physician grew thoughtful. He leaned forward in his chair and examined the bronze decoration on the desk lamp.

"The materialistic theory," he said, still observing the lamp's decoration, "works with the certainty of mathematics up to a certain point, but it belongs to the past. For a great many centuries man has been absorbed in establishing his material comfort. An age must come in which he must realize the futility of bodily security without security of mind. When that time comes he must tackle the riddle of the universe. He must find out his reason for being, and his ultimate destination."

How Ice Consumption Varies in Different Months

The following figures show an ice delivery in July over twelve times as great as in January. They are taken from the delivery records of a typical ice company serving the residential trade.

OF COURSE, people need much less ice in Winter than in Summer; but they need *some* ice the year 'round. The ice dealer, therefore, has to keep his plant going and his delivery wagons in service, whatever the demand. This is one of the largest items of expense in the ice business. During the five Winter months ice companies lose heavily on every ton delivered; in the Spring and Autumn months they rarely break even. To take care of the rush demand of June, July, August and September, it is necessary to make or have abundant ice and also the men and wagons to deliver it. This requires months of preparation—heavy investment for so short a season, and for four months all the effort which men and horses can endure.

Your car deserves one

OVER three million motorists have purchased this famous instrument and we have never heard of a dissatisfied user.

The BOYCE MOTO-METER prevents costly repairs by indicating approaching motor trouble in ample time to avoid it, and adds thousands of miles to the life of your car.

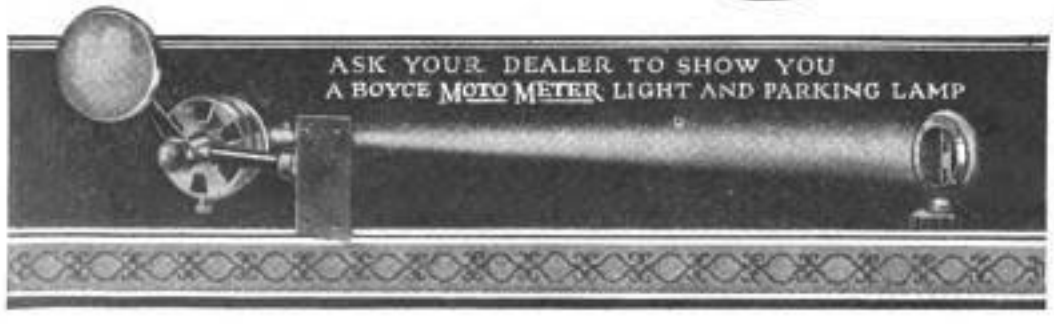
The more you know about your car, the more you need this instrument.

The BOYCE MOTO-METER, as its history shows, is the best buy of all motor accessories.

Your car deserves one *today*—tomorrow may be too late.

BOYCE MOTOMETER

"Your Car Deserves One"



Your garage or dealer carries the BOYCE MOTO-METER in stock, or can quickly obtain one for you.

Seven Models $2.50 to $15.

Trade with the dealer who offers service. Look for the BOYCE MOTO-METER Service Sign.

The instrument shown on the right is the Standard Model. Recommended for use on all high grade cars.

He raised his eyes from the lamp, their keenness supplanted by a look of dreamy speculation.

"You think that riddle can be solved?" The smile that went with the question was openly contemptuous.

"I think so," said the physician, the dreaminess of his look unabated. "Spiritual discoveries are ahead that will match the discovery of fire, iron, steam and electricity of the materialistic age. I believe the spiritistic age has dawned. I believe this Chinaman is far in advance of his time. I believe he already knows much that is hidden from the rest of us. Can you tell me how to meet him?"

The hawk intimated that he had been too busy of late observing the effect of rifle fire on the Chinese to know much about their dignitaries or how to get in touch with them.

"However," he added, "one of the servants might give you some pointers." He reached across the desk and struck the gong. "We'll see."

"I hardly think so," said the physician doubtfully. "This man is a sort of superbeing among the Chinese. They grow dumb if you mention his name." He looked up as a servant, a tall servant, seemed to float forward and become motionless.

"This is Ty Ming, my Number One boy," said the hawk. "You might talk to him."

The servant turned respectfully to the visitor.

Doctor Mossir sat up suddenly in his chair and frankly stared. At last, still staring, he spoke:

"You savvee English?"

The Number One boy bowed slightly.

"I come long way United States China," the physician went on to explain. "I likee talk with Chang Foo Low. You savvee?"

There came a voice like soft bells chiming. It was indubitably the voice of the Number One boy:

"Why should the great Doctor Mossir, of New York, waste his valuable thoughts on the ignorant heathen, Chang Foo Low?"

Observing the face of the great Doctor Mossir the hawk for the first time in many hours laughed aloud—a harsh laugh that crashed jarringly into the after tones of his servant's musical syllables.

"He doesn't seem to grow dumb, doctor."

The physician threw off his bewilderment and regained his poise.

"Pardon me," he said. "I didn't know you were an educated man."

Again the soft chiming of bells:

"Education is a bright pebble on the shores of wisdom for children to play with."

The black eyes of the specialist lit with the sudden fires of the born investigator. He turned eagerly to his host:

"This man has a mind! He interests me tremendously. Could I—may I ask him to sit down?"

Again the harsh laugh. "Go ahead and amuse yourself."

The physician indicated a chair to the Number One boy, who remained erect and motionless.

"It is the honorable privilege of those who serve to remain standing."

The hawk did not laugh as he saw his guest get promptly to his feet and with something of the eagerness of a boy confront his Chinese servant.

He settled back in his chair with a mixture of amusement and irritation, and was presently listening to a most amazing exhibition of folderol.

"Why were you sarcastic about my wish to see Chang Foo Low?"

"Your country sends missionaries to show us the way to God. Since you know God, what more is there to learn?"

"There are many ways to God. Surely if our missionaries point out the path they take, it does you no harm."

"I spoke without reflection. The fault was mine."

"In the United States we are immensely busy with the things we can see, and hear, and touch."

"Your country ——" The Number One boy left the sentence unfinished and turned to the hawk. "Is it the wish of His Excellency that I who am his servant speak to his honorable guest as one seeker to another?"

"The doctor is a seeker, all right, Ty Ming. Speak to him any way you like."

The Number One boy bowed and turned again to the physician.

"Your country is young. With come meditation and the desire to what is behind the curtain."

"Some of us already have that I am one."

"To what purpose?"

"I am a nerve specialist. I learned to cure through the waking mind. I went deeper and found the subconscious mind—the mind of dreams. Now I go deeper still and find the soul."

"It will avail you nothing."

"Why not?"

"A soul in torment is bound to the wheel of life. It will remain so bound until atonement sets it free. Just is the wheel."

"You think, then, that anguish of soul is retribution for past misdeeds, and that it?"

"There are no misdeeds, only errors. Those which do not affect the destiny of others are slight. Those which affect the destiny of others are grave. The soul which commits grave error is bound to the wheel of life. It cannot go on until it atones."

"But death may interfere with atonement."

"Death will not interfere."

"I don't follow you. At death the soul emerges from the body as the butterfly from the chrysalis leaves the cocoon."

"A free spirit leaves the body to begin its journey through the seven worlds. The soul that has committed grave error must return to a new body, again and again and again. No other mind can help. Just is the wheel."

"Can such a soul be helped by itself?"

"I do not know."

"Do you know the lama, Chang Foo Low?"

"I know the servant of Buddha."

"Does he credit these theories just expressed to me?"

"As Chang Foo Low believes. I believe."

"Do you think Chang Foo Low believes whether or not an earth-bound soul can be helped to free itself?"

A strange faint gleam flashed for an instant in the eyes of the Number One boy.

"He hopes to learn. Ask him the question to-morrow."

"But how can I meet him?" asked the specialist.

"Go to the lama temple at eleven. Give your name to the priest. Chang Foo Low will be there."

"Perhaps. But will he see me?"

"He will see you."

The hawk had been listening with extraordinary patience to this dialogue. He now spoke and brought it to a close:

"There you are, doctor. That is what you wanted to know, Ty Ming. You have my permission to go."

The Number One boy bowed and withdrew.

Doctor Mossir returned the bow mechanically and sank into a chair. His brows were knitted, his eyes unseeing.

"Well, doctor?" said the hawk. "You seemed interested."

The physician spoke almost to himself, coming from his reverie, when he turned to the hawk:

"We have scientific indications of migration—the Paris and Java experiments almost prove it. Why not? A further earth experience for enlightenment? Why not?"

He got to his feet, still talking, and moved toward the door. "Marvelous personality—marvelous! I shall see him about to-morrow."

"Going, doctor?"

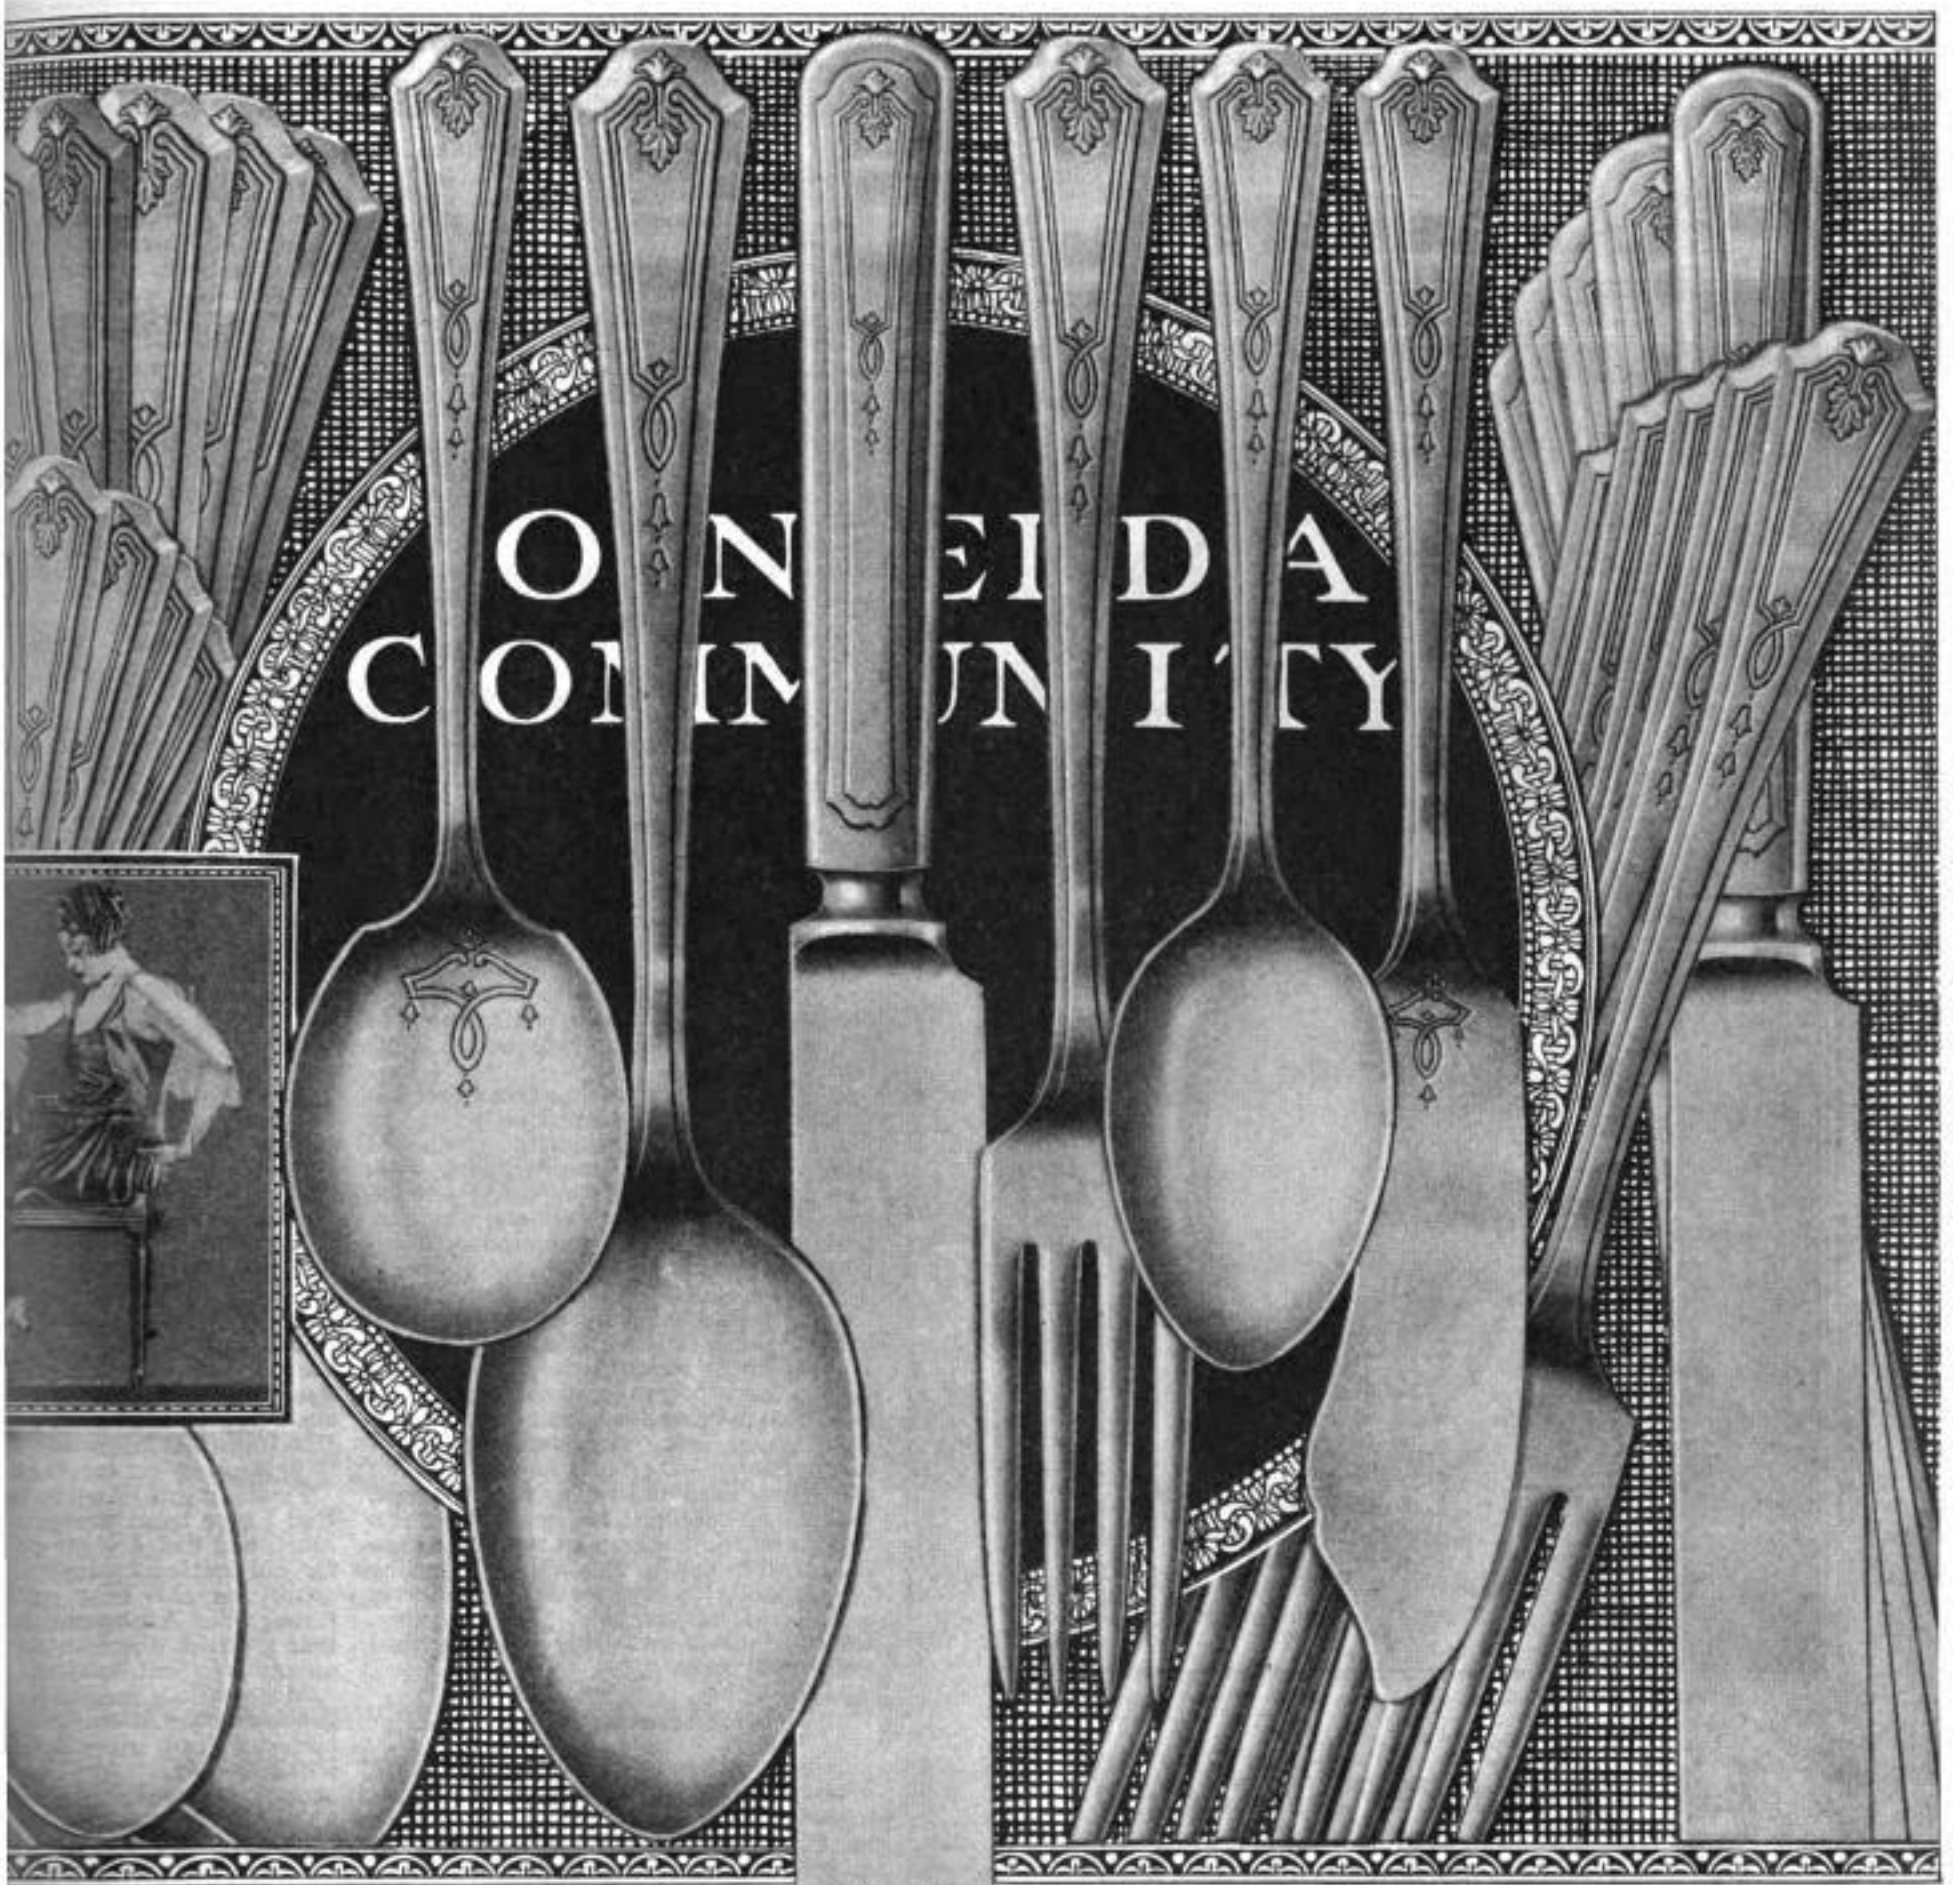
"Oh—er—yes."

"Through this door then, and across the garden."

"Er—yes, thanks."

The hawk watched a small white figure moving slowly in the distance, delegation through the moonlight.

"Why not?" he heard faintly, and again, "Why not?"



"Fool!" said the hawk. His mirthless laugh seemed to add to the stillness about him.

He frowned at the great moon now well above the garden wall, hardening to silver in its rays.

"Psychology! Humph! Plenty of time, though—he's right. I have made a mistake. Well, we shall see."

AN AUDIENCE WITH THE JAPANESE PRINCE REGE

(Continued from Page 4)

Hara thought he was establishing a precedent that would break up the military clique. He did more than this, for he was opposed to the custom of individual ministerial responsibility to the Emperor and sought to substitute for it a joint responsibility of the entire cabinet, following the British example. The whole Hara idea was for wider exercise of party influence on national affairs.

Though Hara's death was a deplorable political loss the process of transition in Japan was too well under way to be stopped. It gained momentum from the Washington conference. Viewed at first with suspicion and alarm by the Japanese bureaucracy, it proved to be a godsend to a country whose military obsession was driving it toward bankruptcy.

The conference put the spotlight on the whole Japanese plan of expansion and sterilized some of its undesirable features. It was another step toward what many Liberals call the emancipation of Japan from machine rule.

The passing of Yamagata was a further breach in the wall of reaction. The big question in Japan to-day is: "Has the Genro type of rule, which made for might at the expense of economic welfare at home and political peace abroad, declined?" This and many other problems of Japan, however, will be dealt with in succeeding articles. The task here is to place the Prince Regent in the moving picture of his times.

It is evident that he has taken over his responsibilities at a critical period in the nation's history, and when the menace is from within and not from without. It is also a time when the personality and resource of the head of the empire, whatever they may be, have an unprecedented opportunity for assertion.

No sooner had he assumed his new rank than he began to justify the hope that he would develop into more than a figurehead. He displayed interest in large affairs and, thanks to his trip to Europe last year, has been able to bring a larger world viewpoint to local questions. He attended meetings of the Privy Council and he now presides at a few choice and exclusive gatherings. He took up horseback riding and thus set a fashion for the Tokio smart set. Even in so mild a diversion as this he was breaking new ground, for no ruler before had ever established a precedent for anything. Court etiquette invariably has prescribed every daily task.

Ambassador Warren

I went to Japan to try to make some appraisal of the consequences of the Washington conference. I expected to find those inevitable changes born of a reversal of international policy. I not only discovered these but many more. While Europe is slowly beginning to stabilize itself after the wrack and ravage of the World War, Japan, who knew only profit in that great struggle, is facing a whirlwind due to inflation, profiteering and extravagance. Thus the empire is undergoing drastic economic as well as political readjustment.

Since Prince Hirohito, now as Regent and later on as Emperor, must stand as the symbol of authority in this new Japan in the making—a Japan that will continue to be the compelling influence in the Orient—this account of my meeting with him may be regarded as the prelude to the larger narrative of a changing East.

I left America early in February, determined to get an audience and if possible an interview with the Prince Regent. At that time it looked like a forlorn hope. When I mentioned the matter to members of the Japanese delegation at the Washington conference before I started I was told that it could not be done, first because of the inaccessibility of the royal family, and second because there was no precedent. Some of them who were more kindly disposed said that if I waited until the imperial garden party, held during the cherry-blossom season in April, I stood some chance of being presented with a group. Even that was regarded as a gamble. The war, as I had discovered, shattered a good many precedents, and I hoped that this kind of history would be repeated in Japan.

Immediately upon my arrival in T confided my ambition to Ambas Charles B. Warren, and here I got m encouragement. He not only appro it but said he would do everything his power to help consummate it. T tude in this delicate matter disclo secret of his success with the J Government in one of the most periods in the relationships betwe two nations. From the time of his he has employed a frank and open of dealing with a government that past has exhibited remarkable pro in the art of sidestepping. He ha the short cut in every negotiation audience was a good example of t ambassadors would have become in an interminable correspondenc would get nowhere. In this case n gotiations were verbal.

Within twenty-four hours after Japan I had been with him to see Takahashi, the Premier, and Coun the Minister for Foreign Affair this to show what can be done by diplomat in a country where indi speech and sometimes of method standing national characteristic.

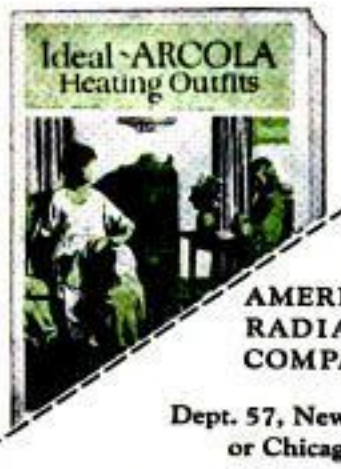
See what ARCOLA saved Mr. Fisher

WITH some misgivings Morris Fisher discarded his old-fashioned heaters and installed ARCOLA in his store at Union Hill, New Jersey.

At the end of the winter he wrote a letter:

"My fuel bill used to run $180 a season on the average," he wrote.



"Last winter with the store more satisfactorily heated, I burned only five tons of coal at a cost of $60.

"I know of no investment which pays such handsome returns as ARCOLA."

rhaps your fuel bill is smaller than Mr. Fisher's d ARCOLA cannot save you so much. But hunds of owners testify that the cost of ARCOLA nes back to them; that it pays for itself in the fuel it saves. If you plan to build or remodel, give yourself the lasting joy of *hot-water warmth*—the same perfect warmth which the IDEAL TYPE A HEAT MACHINE, CORTO RADIATORS, and our other larger heating plants give to mansions, cathedrals and fine buildings.

ARCOLA, connected with an American Radiator in each room, will bring it to you. Your Heating Expert will surprise you when he tells you how little it costs.

Your name on a postal card, mailed to either address below, will bring you a finely illustrated book about ARCOLA. For every heating problem we have a heating product.

HOW TO SHAMPOO—PROPERLY

A Simple, Easy Way To Make Your Hair Look Its Best

Use plenty of lather. Rub it in thoroughly and briskly with the finger tips

You can have beautiful hair—soft and silky, bright, fresh looking and luxuriant—if you follow this simple, easy method

The final rinsing should leave the h soft and silky in the water

THE beauty of your hair depends upon the care you give it.

Shampooing it properly is always the most important thing.

It is the shampooing which brings out the real life and lustre, natural wave and color, and makes your hair soft, fresh and luxuriant.

When your hair is dry, dull and heavy, lifeless, stiff and gummy, and the strands cling together, and it feels harsh and disagreeable to the touch, it is because your hair has not been shampooed properly.

When your hair has been shampooed properly, and is thoroughly clean, it will be glossy, smooth and bright, delightfully fresh looking, soft and silky.

While your hair must have frequent and regular washing to keep it beautiful, it cannot stand the harsh effect of free alkali, common in ordinary soaps. The free alkali soon dries the scalp, makes the hair brittle and ruins it.

That is why discriminating women, everywhere, now use Mulsified cocoanut oil shampoo. This clear, pure and entirely greaseless product cannot possibly injure, and it does not dry the scalp or make the hair brittle, no matter how often you use it.

If you want to see how really beautiful you can make your hair look, just follow this simple method:

A Simple, Easy Method

FIRST, put two or three teaspoonfuls of Mulsified in a cup or glass with a little warm water. Then wet the hair and scalp with clear, warm water. Pour the Mulsified evenly over the hair and rub it thoroughly all over the scalp and throughout the entire length, down to the ends of the hair.

Two or three teaspoonfuls will make an abundance of rich, creamy lather. This should be rubbed in thoroughly and briskly with the finger tips, so as to loosen the dandruff and small particles of dust and dirt that stick to the scalp.

After rubbing in the rich, creamy Mulsified lather, rinse the hair and scalp thoroughly—always using clear, fresh, warm water.

Then use another application of Mulsified, again working up a lather and rubbing it in briskly as before.

Two waters are usually sufficient for washing the hair, but sometimes the third is necessary.

You can easily tell, for when the hair is perfectly clean it will be soft and silky in the water, the strands will fall apart easily, each separate hair floating alone in the water, and the entire mass, even while wet, will feel loose, fluffy and light to the touch and be so clean it will fairly squeak when you pull it through your fingers.

When thoroughly clean, wet hair fairly squeaks when you pull it through your fingers

Rinse the Hair Thoroughly

THIS is very important. After the final washing, the hair and scalp should be rinsed in at least two changes of good warm water and followed with a rinsing in cold water.

When you have rinsed the hair thoroughly, wring it as dry as you can; finish by rubbing it with a towel, shaking it and fluffing it until it is dry. Then give it a good brushing.

After a Mulsified shampoo you will find the hair will dry quickly and evenly and have the appearance of being much thicker and heavier than it is.

If you want to always be remembered for your beautiful, well-kept hair, make it a rule to set a certain day each week for a Mulsified cocoanut oil shampoo. This regular weekly shampooing will keep the scalp soft and the hair fine and silky, bright, fresh looking and fluffy, wavy and easy to manage—and it will be noticed and admired by everyone.

When the hair is dry, always give it a good thorough brushing

You can get Mulsified at any drug store or t counter, anywhere in the world. A 4-o should last for months.

Keeping a Child's Hair Beautiful

CHILDREN should be taught, early i proper care of the hair is essential.

The hair and scalp should be kept perf to insure a healthy, vigorous scalp and a heavy head of hair.

Get your children into the habit of shamp hair regularly once a week. Put two or thre fuls of Mulsified in a cup or glass with a water. Then wet the hair and scalp with water. Pour the Mulsified over the hair a vigorously with the tips of the fingers. Th ulate the scalp, make an abundance of r lather and cleanse the hair thoroughly. I a few seconds to rinse it all out when thro

You will be surprised how this regular s pooing with Mulsified will improve the ap the hair; and you will be teaching your c that will be appreciated in after-life, for head of hair is something every man and mighty proud of.

s we drew up before the
alace proper. It was formerly the residential seat of the Tokugawa shoguns and originally was completed in 1456. For more than two hundred and seventy years it was occupied by the shoguns. In 1868, when the shogunate surrendered to the Imperial Court the sovereignty held in trust, the Emperor removed here from Kioto, where he had been living in retirement with his court. Up to that time Tokio was called Yedo. It then received the name it bears to-day, which means "eastern capital." The palace has been burned down repeatedly, the last time in 1873, when the Emperor and Empress removed to the detached palace at Akasaka and remained there until 1888, when the present structure was completed.

Like most typical Japanese buildings, it is low, rambling, built of wood, and has an overhanging tile roof. On the broad stairway was the traditional red carpet one always associates with royalty. Ranged in columns on the stairway and well into the reception hall were rows of flunkies wearing gorgeously brocaded coats and all the essentials of small clothes, with silver buckles on their patent-leather pumps. This costume, so familiar in European palaces and the homes of British nobility, looked rather strange in the somewhat medieval setting. The palace itself suggests a bygone era.

Once we divested ourselves of hats and overcoats we were led in solemn procession down a series of really noble corridors. The walls were a succession of those beautiful Japanese screens which provide the mural detail of so many Japanese houses. In front of us marched a chamberlain gorgeously attired, who was flanked by two subordinates in equally resplendent raiment, while four others brought up the rear.

Before long we were ushered into a magnificent hall. It was the famous Homeiden, which means Hall of the Phœnix. The phœnix has been regarded for many years as the imperial bird of good omen in Japan. It is always painted or embroidered upon the souvenirs of coronations, and figures prominently in most of the royal decorations. This hall is high of ceiling, and on one of the walls are immense paintings depicting scenes in medieval Japanese history. In the ceiling were what seemed to be enameled chrysanthemums, and on the massive lacquered doors the Japanese royal flower was impressed in brass. Through the windows we got glimpses of the imperial gardens, where the plum trees, then in the fullness of their rich blossom, provided a brilliant splash of color for the background of innumerable dwarf pines.

A moment later we received our first welcome. It was extended by Marquis Inouye, adopted son and heir of the great Genro of the same name, and Master of Ceremonies of the Imperial Household. After the greeting he said to the Ambassador, "His Imperial Highness will shake hands with you."

The Presentation Ceremony

I mention this because at ordinary presentations the ruler, or the acting ruler, merely bows. In Japan there is no handshaking among the natives. All greetings are in the form of low ceremonial bows. We were advised about the imperial handshake so as to be ready for it.

At this juncture one of the court chamberlains closed the door leading out to the corridor, whereupon the marquis said, "His Impesial Highness is about to pass on his way to the reception room."

There was also a definite reason for this. No one who calls at the palace is permitted to catch a glimpse of Emperor or Regent until the royal person is ready for the formal reception.

In a few moments the door was opened and we were told that all was ready. Preceded once more by the chief chamberlain, and again flanked by numerous attendants, we walked down another series of corridors and finally found ourselves at the entrance to the reception room. As we paused at the threshold to make our first bows—court ceremony in Japan as elsewhere dictates that you bow at the door, and again before reaching the royal presence—I got a swift bird's-eye view of a scene that might have come out of the pages of some romantic novel.

In the center of a chamber smaller than the Homeiden, but vying with it in beauty and dignity, stood the Prince Regent at almost rigid attention. He was attired in the buff-colored uniform and carried the sword of the Japanese infantry, in which he is a major. His cap was pressed tightly under his left arm, the hand of which rested on his sword hilt. The only decoration he wore was the star of the Grand Cordon of the Chrysanthemum, the highest of all Japanese orders. He is of average Japanese height, slight, almost spare of figure, with high cheek bones. There was an earnest and almost solemn look on his boyish face. He appeared much more matured than when I saw him in London a year ago. His speech is nervous.

Behind him stood General Uchiyama, his chief military aide. It was interesting to note that this grizzled old warrior, who looked almost patriarchal with his spectacles and gray hair, outranked as a soldier the royal person in front of him. The Regent will not become commander in chief of the Japanese armies until he is made Emperor. Forming a sort of hollow square into which we entered were frock-coated gentlemen in waiting. No one spoke.

After our second bow, in the center of the room, the Ambassador stepped forward, whereupon the Regent extended his hand. Mr. Warren then asked the conventional questions which must always be asked in Japan, whether you meet royalty or ordinary folk. They consist of inquiries about the health of mother, father and, when the occasion demands, wife and children.

These preliminaries disposed of, His Excellency asked if he might present me, continuing in English that I had been presented at the Belgian court, that I had had many interesting experiences with world personages, and desired to add to them by paying my respects to him. Let me say here that the Prince speaks only Japanese and that our whole interview was carried on through an interpreter. The Prince bowed assent and smiled. I stepped forward and was formally introduced, receiving a warm grasp of the hand.

Chatting With Royalty

Realizing the limitations set upon the conversation, I was curious to know what the Regent would say. Royalty, as most people know, always must lead in dialogue, and I have found, from experience with King Albert, for example, who is very slow of speech, that it involves a considerable nervous strain.

The first utterance of the Regent was: "I am glad that you have come to Japan to see things for yourself and I think it will be a good thing for both countries."

He then asked me how long I had been in Japan and when I expected to leave. When I told him that I was planning to depart within a fortnight he said, "I am so sorry that you will miss the cherry-blossom season. It is very beautiful."

I replied that though I was sorry to miss the cherry blossoms I had had the compensation of seeing the plum blossoms and the magnolias.

In expressing his regret that I would miss the cherry blossoms, the Prince Regent touched on a subject dear to every Japanese heart. During those few April weeks when those exquisite pinkish-white blooms flaunt their beauty everywhere, all Japan is filled with the carnival spirit. The cherry blossom seems to stir the national consciousness of beauty and sentiment. The country-folk flock to the towns; the most temperate celebrate with *sake*, and even old animosities are forgotten in the exuberance born of the season.

"How do you find Japan?" next queried the Regent.

I responded that I was pleased to find everyone apparently so busy and full of the spirit of endeavor. There were various other queries and replies, at the end of which I wished him good health and prosperity. He bowed, smiled again and extended his hand for a farewell shake. The Ambassador stepped forward, said his good-bys, we backed out of the room, bowing as we went, and the audience was at an end.

No one can meet the Prince Regent without carrying away the impression that he is sincere, earnest and eager to do his best. He has something of the quiet reserve of the Duke of Brabant, who will some day be King of the Belgians. In temperament and training he is the exact reverse of the blithe and buoyant Prince of Wales. This animated young hope of Britain was destined from the start to be a democrat among royalties, and he has lived up to the behest.

DUTCH BRAND
PRODUCTS

Prolong the Life of Your Car

The pride that you took in your car when it was new need not pass away with use. DUTCH BRAND Products keep cars new; the results they attain are often a revelation to the motorist when first using them. The little time and slight expense of applying them pay big dividends in longer and better service from your car. No skill is required.

Look for the package with the orange label checkered border and Dutch Girl's head.

To Renew Tops and Cushions

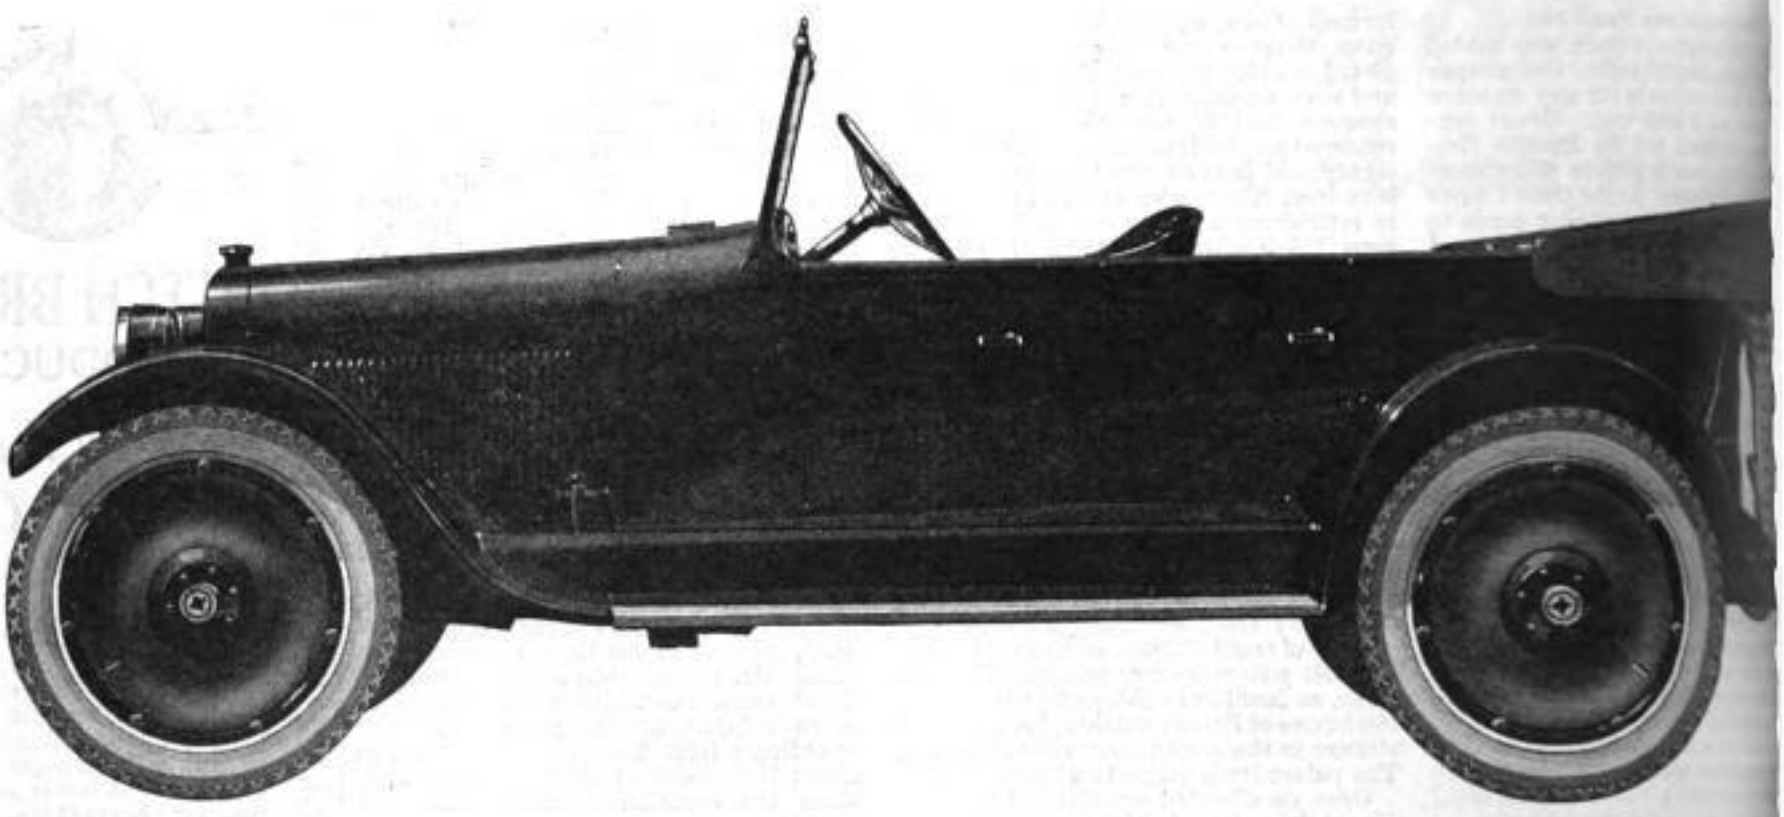
DUTCH BRAND AUTO TOP AND CUSHION COATING restores tops and cushion coverings as if by magic. Anyone can apply it easily and quickly. Dries in 10 to 20 minutes; completely covers faded or bare spots; does not stiffen mohair but leaves the mohair with its original finish. It imparts a fresh gloss to leather, Pantasote or similar fabrics; can be used to dye khaki tops black; waterproofs tops that are porous, and withstands weather; harmless. Pint can, 85c; quart can, $1.50.

To Get More Tire Mileage

DUTCH BRAND SURE SEAL COMBINATION REPAIR OUTFIT is made to give longer lease of life to tubes and casings. The 2-in-1 Cut-Filler seals casing cuts, prevents sand blisters and keeps the fabric from rotting; the patching rubber makes an instant and permanent tube repair. Medium size outfit, 50c; large, 75c; extra large, $1.00.

To Bind or Tape Almost Anything

DUTCH BRAND FRICTION TAPE has more uses, in and out of motor cars, than can be covered in this space. It helps out in emergency repairs, stops rattles, insulates wires, binds joints, wraps steering wheels, golf club grips, tennis rackets, ball bats, etc. A heavy, real rubber-treated, non-drying tape that sticks and holds. 2-oz. carton, 10c; 4-oz., 20c; 8-oz., 35c.



If your dealer is not supplied with Dutch Brand specialties, a trial assortment including all above products will be sent you postpaid on receipt of $2 and your dealer's name.

Dealers: Send for complete catalog, and order from your jobber.

Without Question—the Leading Success of the Year

From all indications the Rickenbacker Six is attracting more favorable attention than most of the popular priced cars now on the American market!

Exhibited first at the New York Automobile Show and at all of the other leading Shows from coast to coast it has continually been a center of attraction and always held large crowds!

In the words of many of the industry's leading engineers—"The Rickenbacker organization has given to the world a new creation in a fine motor car based on new fundamental engineering principles that have never before been incorporated in an automobile."

Do you realize, for example, that the Rickenbacker has no period of vibration? Rather a surprising statement—isn't it? Well, it's a positive fact nevertheless. Take this car at any speed you wish—start it at 2 miles an hour and put it right up to better than 60 miles an hour and never once will you feel or find the slightest bit of vibration!

You will be interested in looking over the Rickenbacker creation to see the reason for this. A new engineering achievement is the reason. Go to the dealer in your town and see for yourself.

Smooth! You never rode in such a smooth riding car in your life. At high speed or at low speed it just purrs or flies along with perfect precision, and an almost uncanny silence.

The design of the Rickenbacker crankshaft is a new and complete story in itself. So is the unusually deep frame which combines a rare combination of rigidity and flexibility.

Mind you, we do not want to bore you with a lot of "mechanics" but it's the new features not found on any other car that make the Rickenbacker the outstanding success of the year. The Rickenbacker chassis is literally covered with new features.

The bodies are perfect beauties. Bu and hung low, their grace, digni smartness make them the most st models you have ever seen.

Another important point! Associat Capt. Rickenbacker are some of dustry's most prominent men—m for years have produced some of th ing values in America. That's the this great car can be produced at very modest figure.

Orders are piling in from all sect the country. Public approval ha ably never before shown itself wi marked significance. We are in f production now—shipping to all the world.

Before you order your new car Rickenbacker. From stem to many conspicuously new featur it in the foremost ranks of the most advanced motor car design

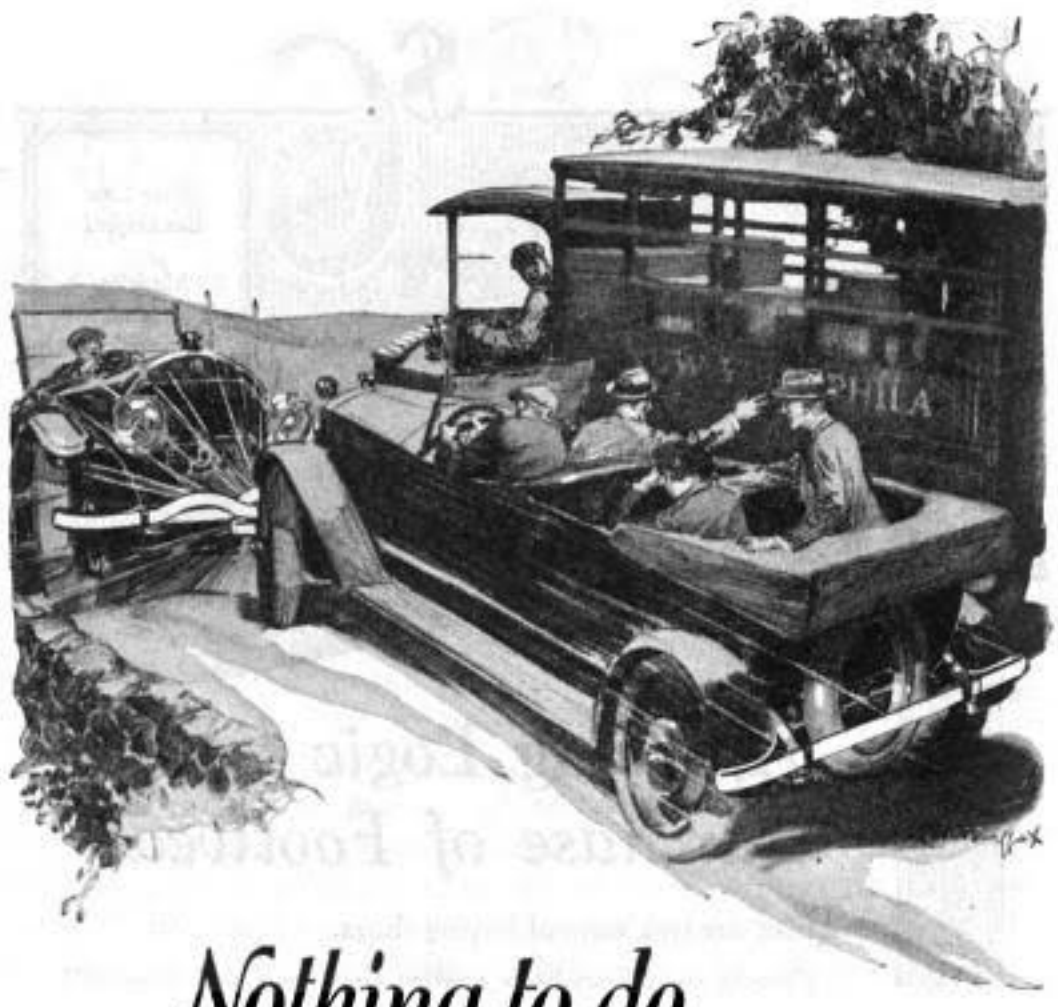
t six months abroad, he visited England, d Italy, where he was received by the Pope. He stopped at various intermediate ports going and coming.

In Paris he had an adventure which shows that he really has a democratic spirit. He desired to have the thrill of a ride on the subway, so he made the trip incognito. Upon entering one of the stations off the Boulevard Champs Elysées he retained part of the ticket, following the custom of Japan. He had never ridden on a train as a commoner in Japan, but he had been told of the system. The Paris wicket guard, however, called him down sharply, whereupon the Prince handed over the rest of the ticket with a polite bow. It was the first and only time that a member of the royal family of Japan was ever rebuked.

The Prince's return home was marked by a demonstration that in form and expression was another manifestation of Japan in transition. Under ordinary circumstances royalty is never cheered in the empire. Whenever the Emperor drove by, the way was lined with troops and the people bowed low. Prior to Hirohito's return there were only two occasions when the populace departed from this custom of silence. One was in 1889, when Meiji passed through the streets after promulgating the Constitution. For the first time the crowds shouted. The second occasion was when he returned to the capital from Kioto after the victorious conclusion of the Russo-Japanese War.

The Spread of Democracy

The ovation accorded Hirohito last year was far more tumultuous. At Yokohama and Tokio the police orders regulating the movements of the crowds stated that cheering was not forbidden. The result was that there was incessant yelling of "Banzai!" wherever the Prince appeared. The people were even allowed to make snapshots of him, a performance heretofore strictly forbidden.



Prince Hirohito returned to Japan on September seventh. During his absence his imperial father had failed perceptibly in health. He will never again appear in public. So along towards the middle of November at a conference of the imperial family it was decided to make the Crown Prince, Regent. This significant procedure, you will observe, emanated from a family council. In this respect the royal procedure was merely following the procedure in every Japanese family. In no nation is the family spirit so strong or powerful as in the Island Empire. One reason why you rarely see a beggar on the streets in Japan is because family pride makes it almost obligatory to succor needy relatives.

Although the Emperor is hopelessly incapacitated, the Empress, Sadako, is a strong and active person and still in the prime of life. She moves about the country and makes numerous pilgrimages to shrines to pray for her husband's recovery. When in Tokio she resides in the inner inclosure of the imperial palace where I had the audience with the Prince Regent. The Prince uses the outer palace as a sort of office and place to hold audiences and receptions. He resides in the Kasumagaseki detached palace not far from the imperial palace.

The imperial rescript naming Hirohito as Prince Regent was promulgated on November twenty-fifth and he immediately assumed the virtual headship of the Imperial Government. I have already indicated various expressions of the Regent's growing sense of democracy. My audience with him was merely another. Five years ago, or even two, such an event would have been absolutely impossible.

More important than these personal details is the larger connection of Prince Hirohito and his country with the evolution of the Orient, where during the past few years the clash of nationalistic and commercial ambitions brought about a crisis that threatened the peace of the world. Thanks to the Washington conference, this dangerous situation has been clarified and the friction between the United States and Japan eliminated. The naval holiday is but a phase of a larger respite from irritation that, at the moment, seems to mean a stabilization of the whole East. The Prince Regent can, in the years to come, by the exercise of the principles laid down at Washington, achieve for himself an enduring fame.

Editor's Note—This is the first of a series of articles by Mr. Marcosson dealing with the economic and political situation in the Far East. The next will appear in an early issue.

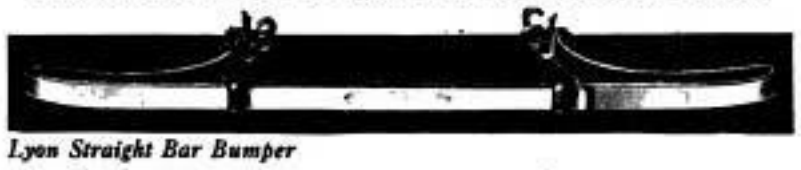
Nothing to do but SMASH!

No room to pass! No chance to stop. Nothing to do but smash—but not a penny's worth of damage is done to Lyon-protected cars.

Lyon Spring Bumpers *do* protect and they do resist collision damage. With your car Lyon-equipped—front and rear—you can drive with a feeling of safety and the assurance of having maximum collision protection.

The Lyon-patented two-piece overlapping front bar and the open "looped-ends" yield to every blow, like a spring. They absorb the impact and keep it from being passed along to the chassis.

Every Lyon Spring Bumper is guaranteed to take the full force of a blow at 15 miles an hour without injury to the car or its occupants. Insurance companies grant reduced collision rates on cars equipped with Lyon Spring Bumpers that will more than pay for the cost of the bumpers. So why risk collision damage?



Lyon Spring Bumpers are beautifully designed, strong and perfectly balanced. A special Lyon-patented hook bolt makes it possible to fasten them securely without altering or drilling the frame.

The Lyon trade-mark is on every genuine Lyon Spring Bumper. Accept no substitute.

Over a million in use. $10 to $23.

Applying Logic to the Purchase of Footwear

THERE are two ways of buying shoes.

One is to pay so high a price that your selection will be sure to possess a certain degree of merit.

The other is to go to a responsible merchant, pay a moderate price and look for some sort of plain, visible evidence that you are getting the value of your money. That is the logical way.

BEACON
THERE ARE NO BETTER
SHOES
FOR FIT • FOR STYLE • FOR WEAR

The Beacon oval trademark stamped on the soles of the shoes you buy is self-evident confirmation of their worth. For you know instinctively that when a maker identifies his product in so conspicuous a manner, he has good reason to be proud of that product.

With Beacon prices for Spring at $5 to $8, you have a logical basis to go upon.

Shoe buying should be a logical procedure. If it is done logically it will be done safely.

We are as Proud of the Prices as we are of the Shoes!

F. M. HOYT SHOE CO., *Makers*
MANCHESTER, NEW HAMPSHIRE

Knowing Beacon Shoes as we do and knowing what goes into them, we can unhesitatingly impress our trademark on every pair with the full knowledge that we have been logical.

WILD GAME

(Continued from Page 15)

given studious and intensive attention to matters of nutrition, and, while I'm not a scientist, I have been forced to pick up considerable knowledge along this line. This is precisely what anyone must do to make an assured success of raising pheasants and other wild game.

"This is a field of effort in which success lies in the observation and mastery of minute details. No matter how much business ability you may have, if you lack the capacity for taking pains, the patience to master an almost infinite range of details, you are always vulnerable to defeat. Personally I cannot see how any man who is not naturally fond of birds and wild game would attempt to go into this business, and I am sure that any such attempt would meet with failure. It is one of those callings in which the most important element of capital is an inherent fondness for the thing itself. Those who go into it without this essential element of equipment are certain to fail.

"Of course success in this peculiar line requires much more than a distinct liking for work with birds. It takes substantial financial capital and good business judgment. But one may have both of these in plenty, and still fail from lack of an instinctive fondness for the work itself. The fact is that thousands of pheasantries have been started, only to end in disaster because their owners lacked a natural liking for the work. They went into it because they wanted to make a little extra money on the side, because they thought pheasant raising was a light and agreeable vocation that could be followed at home, or because they had the notion that it could be made to yield large profits.

"Personally, I would prefer never to sell foundation stock to anyone who is not drawn into the work by a natural liking for it. I like the birds too well myself to get any satisfaction from a profitable sale which I know means the sacrifice of the birds as well as the failure of the enterprise. Of course I sell thousands of ringneck pheasants to states and gun clubs with the knowledge that they will be shot—but that is far different from knowing that the birds will die of disease or improper handling. In one case they serve their natural purpose; in the other they do not.

"There are really very few persons who are naturally adapted to the task of raising pheasants. I have already mentioned some of the major requirements for that work. Another is almost infinite patience. It would be difficult to name another calling which requires so much of this rare article. There is not an hour of the day that does not place heavy demands on this quality in the keeper of wild game birds."

Women as Pheasant-Raisers

"Patience in generous quantities and an unlimited capacity for taking pains are rather common feminine characteristics. In other words, the average woman is disciplined to dealing with small and fussy details and to the exercise of a degree of patience which the average man does not achieve. Therefore women have, as a rule, certain natural advantages over men in the difficult and detailed task of pheasant raising. The Belgian women proved this in the years preceding the World War. They were master hands at raising the fancy or aviary varieties of pheasants. What is more, they succeeded under severe handicaps in the way of a very limited range for their birds. Belgium is densely populated and ground there is in great demand. The average American living in a town or village has generous facilities for pheasant-raising compared with the Belgian.

"There is no reason why many American women should not be successful raisers of fancy pheasants. Thousands of them are naturally disposed towards it, have need of a home industry and have patience and a capacity for dealing with small details. But they should not expect quick results or immense profits. And they should realize that this is a business which must be learned. My own notion is that as a rule women are better qualified to raise pheasants than to sell them; that they will fail on the score of marketing and business management more frequently than on that of production. Therefore they should, if going into the venture, fortify themselves against this weakness and know where and how they are going to sell their [birds] they have raised them.

"Of course, the principal sale [of] pheasants is to parks, zoos and estates, where these birds are kept for beauty. In the Old World the [ornamental] value of these beautiful birds is [more] generally appreciated than in [America]. But the owners of many of the [large] especially on the Atlantic Seaboard beginning to realize how much [the] tures of brilliant plumage contribute the beauty and interest of a [park]. Therefore the demand for them is increasing and will, I think, increase ily for years to come.

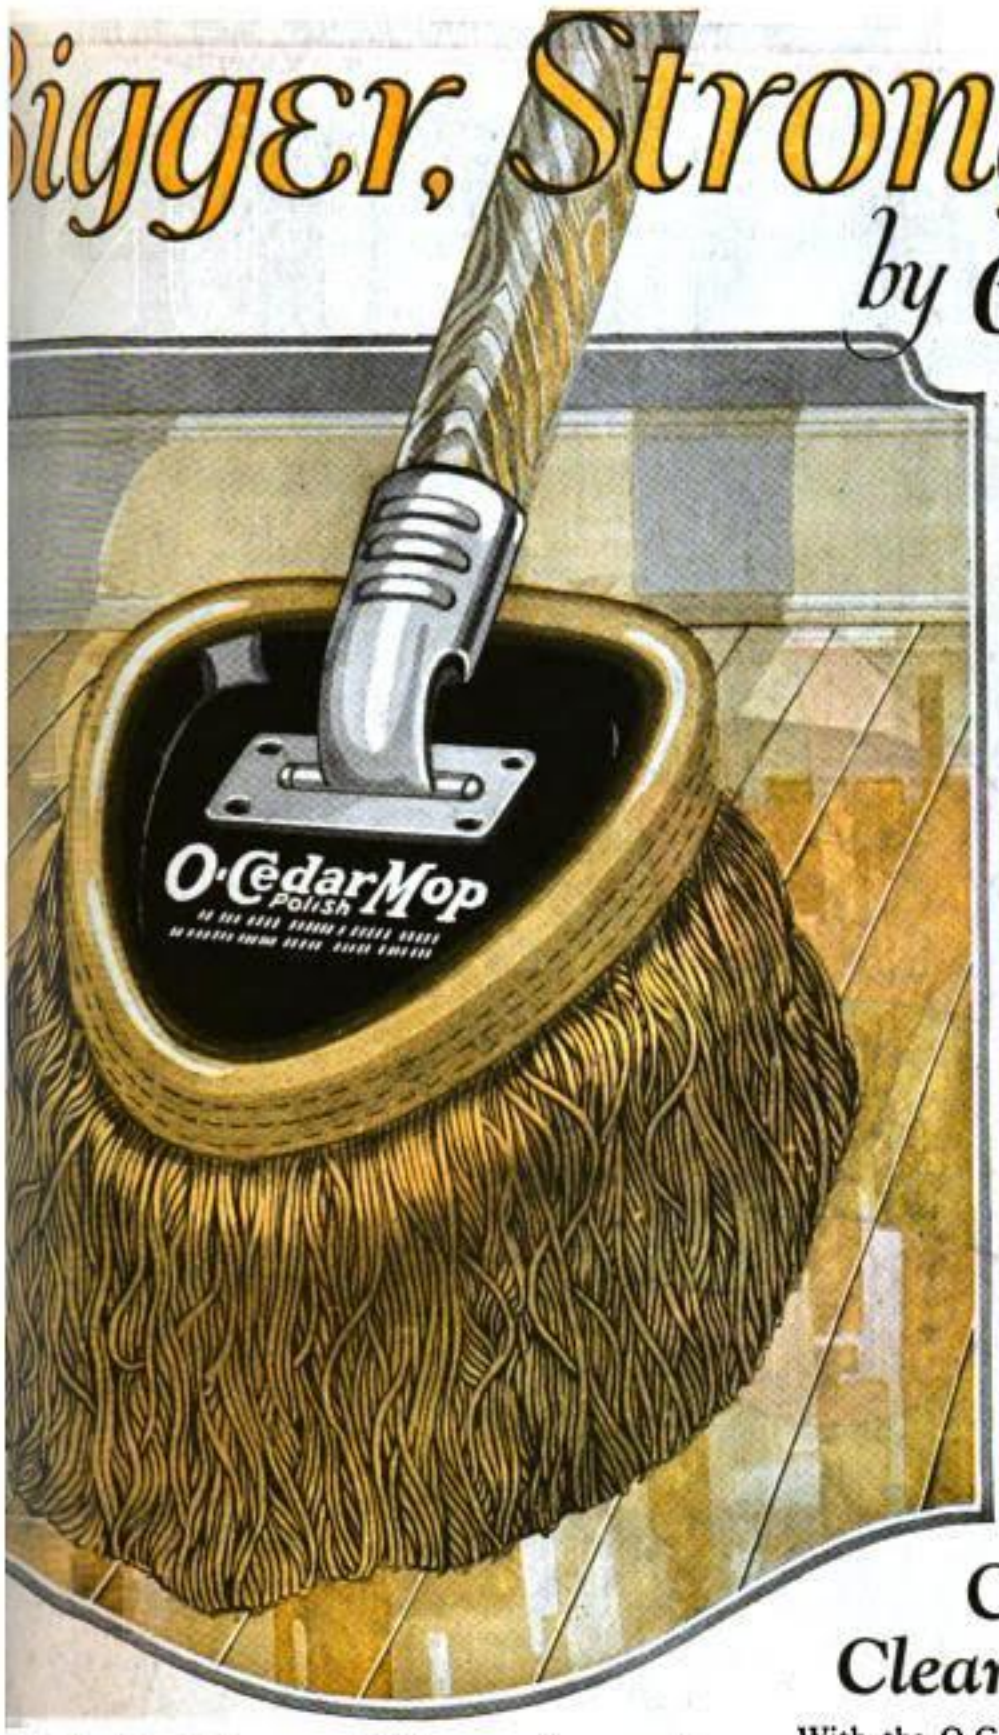
"And this observation applies rarer and the more attractive waterfowl as well as to fancy [pheasants]. There is, for example, scarcely [anything] nature more beautiful than a mature ican wood duck in full plumage, Australian sheldrake, the mandarin and the Egyptian goose make a picture which is attractive beyond thing possible without them. Now the owners of private estates and homes coming to appreciate them increasing extent, but so also are the intendents of small parks in towns. Those responsible for the tiveness of these public rest and places are realizing that a very ing of birds may be made under which would make the maintenance a small zoo impracticable. And find that children and even adults ciate the beauty of a brilliant bird than they do the mere novelty captive wild animal which has pellent appearance. These are for feeling that there is bound increasing demand for birds of acter and that women who like may find it profitable to specialize one species of aviary birds."

A Game Warden's Tr[ick]

How great a task is the shipping than a hundred thousand eggs cannot be understood without tion that it is impossible to use egg cases or anything like that purpose. Each egg must be protective coating of soft dead covering this grass from the [fields] and roadsides in the fall is [done] for nearly two hundred sacks must be put away for the use next year's shipments of [eggs] from this interesting farm.

Ordinary bushel baskets [are] packing. The bottom, sides thickly padded with a coarse springy grass. Wrapping a [pheasant] a rather delicate and deft process of the soft grass is cupped [in] the left hand; then the egg [is] this, and with a twisting [motion] right hand the packer completes the egg in its soft resilient [nest] the basket is filled and covered of coarser grass a tight [cover] sewed into place. Packed [in] the number of eggs broken negligible. The most [expensive] pheasant eggs known to [the] disabled soldier who wrapped as high as three thousand [dollars]

To learn how much a state plish in giving its citizens a [knowledge] an appreciation of its value for game laws and the men who them it is not necessary to [go] Ohio.



Early in the warden's [experience] ized that public sentiment was enforcement of the game laws warden was commonly regarded cious interloper.

"Just to illustrate the [change] public sentiment when we [started] job of making the game [department] asset to the state," declared warden, "let me give a typical I went down into the reserve some enforcement cases. Naturally to the hotel. But I didn't [stay] instant the proprietor discovered there for the enforcement of the he made it mighty clear that didn't want me about the [place] undertook to reason with him strated that it would be [useless]

Bigger, Stronger, Better
by 6 Decided Improvements

Now come the perfected polish mops. Your favorite O-Cedar vastly improved. These improvements are for your convenience and perfect satisfaction. Please study them. The cotton yarn is longer and stronger and more of it. (Improvement No. 1.) The new handle socket is stronger and permits better adjustment of the handle. (Improvement No. 2.) The pad is riveted to the steel center—it can not come off or be taken off. (Improvement No. 3.) The longer yarn and the new head give the mop a bigger spread, cover more space. (Improvement No. 4.) A better handle than ever before. (Improvement No. 5.) The double padding and the manner of riveting the mop to the head prevent the scratching of floors or the marring of furniture. (Improvement No. 6.)

All of these improvements mean easier, quicker and better dusting, cleaning and polishing and a mop that will last longer and do better work. Make sure your next mop is the new and improved O-Cedar.

Now at Reduced Prices

In spite of these improvements and betterments O-Cedar Polish Mops are now back to before-the-war prices. A bigger and better mop at less money. A double economy. The new prices: Large Triangle, $1.50; Cottage size, $1.00; Battleship shape, $1.50. (Prices in Canada $1.25 and $2.00.)

$1.00 $1.50
